Dwight grinned more broadly. 'Can I take it from that remark that you had your little problems with him?'

'Just a little. He got annoyed when I didn't show too much patience with his ozone-hole theory.'

'That's m'boy,' Dwight said.

'So tell me what this guy's really like.'

Dwight shrugged. 'You've read his reports, Clare. You already know he's a damned good physicist on an academic level. He's also dedicated, independent, and very outspoken, but then you've gathered that, also.'

'Wipe that grin off your face. I want to know what he's like as a human being. Is he emotionally stable? Does he drink? Does he beat his wife? Is he unusually imaginative?'

'He's more normal than he seemed to you,' Dwight said, 'and he's certainly stable. A decent husband and father, though a bit haphazard with it, if only because he lives for his work and rarely gets his nose out of it. He hardly knows what goes on around him - he works even at home - and because of that, he has a disorderly house and dissatisfied wife. But does he drink? Only normally. Does he beat his wife? Never! He's emotionally stable, at his very best when working, and though he's highly imaginative, I've never known him to let it impinge on his work. In fact, he's one of the best men I've got - and I don't say that lightly.'

'Do *you* believe what he says?'

'You mean regarding the ozone hole?'

'Yes.'

‘Tony’s my friend, but I have to confess that I view his interpretation of what happened with some scepticism. I know for a fact that just before leaving home to go on the expedition, he was told by his wife that she would leave him if he went. In other words, he was certainly under a certain amount of stress during the expedition; and that, combined with the thin atmosphere and cold he would have experienced during the flight, could have led to that particular hallucination. I think that’s what it was.’

‘*Did* his wife leave him?’ Clare asked before she could stop herself.

‘As a matter of fact, she did. She was gone when he got back. I certainly don’t think that helped his temper. And that was only a few days before you met him.’

‘Oh, God,’ Clare said, as if sympathising, but feeling hot with shame at the feeling of relief slithering through her.

I don’t believe this, she thought.

‘Tony insists,’ she continued, to distract herself from her own confusion, ‘that his aircraft was surrounded by some kind of unknown light, or even a craft, and that he could actually *feel* and *smell* his wife.’

Dwight shook his head from side to side. ‘Makes no difference, Clare. Hallucinations can possess a powerful reality, so I still think my explanation fits the facts.’

‘What about his belief that something other than CFCs is depleting the ozone layer?’

‘He didn’t tell me about that. He must have come to that conclusion only recently. And he probably didn’t tell me because I was so sceptical about his experience.’

‘Do you believe it’s possible?’

‘All things are possible, but it strikes me as being unlikely. Certainly the ozone is being destroyed much faster than we’d first anticipated, but we don’t have all the facts and figures in yet. Here at NASA we know exactly how much our SSTs and shuttle flights are destroying the ozone in the stratosphere; but we can’t be too sure of how much of a contribution is being made by European and Russian hypersonic vehicles and prototypes.’

‘But Tony claims that his calculations are based on computer analyses of the data collected worldwide by the Airborne Antarctic Ozone Expedition.’

‘He actually said that?’

‘Yes.’

‘Then we better have a talk with him,’ Dwight said, suddenly sounding

concerned. ‘He wouldn’t lie about that. I’m not saying his findings are sound - he could have misinterpreted the data - but he certainly wouldn’t lie about his source, which is what disturbs me. Let’s call him in now.’

Clare’s heart started racing, though she wasn’t sure why; she only knew that she wasn’t ready to see Tony walking through that door, to be trapped in this uncomfortably small room with him. The very thought of it made her burn, her emotions in turmoil.

‘Let’s wait,’ she said, trying to sound as casual as possible. ‘I’d like to discuss this with a colleague before taking it further. It goes beyond your department, maybe touches on national security, so I might have to talk to Tony alone, on behalf of the Department of Defence, rather than NASA. What do you think?’

‘I think you’re right,’ Dwight replied. ‘Tony went directly to you without consulting me, which could make for certain embarrassments in our working relationship. So it might be better if officially I know nothing about this.’

‘Right,’ Clare said. ‘Thank you.’

She shook Dwight’s hand and gratefully left his office, still feeling hot and bothered, realising that she was more disturbed by her growing feelings for Tony than she was by the terrible future he had forced her to contemplate.

Chapter Twelve

The sun was sinking when Clare arrived back in Washington DC. She decided to stop off, on the way home, at Jack Douglas’ apartment near Dupont Circle. Pleased to see his car in the driveway, she parked just behind it and rang the bell beside the door.

‘Yes?’ he said.

‘It’s me. Clare.’

‘Do you have an appointment?’

‘Let me in, damn you, before I get mugged.’

Hearing his soft, sardonic chuckle, then the buzzing of the intercom, she pushed the door open and entered. He was on the third floor, but she decided to walk - not exactly nervous, but wary of crazies in lifts - and found Jack standing by the open door of his apartment with a grin on his face.

‘You can come without an appointment anytime,’ he said. ‘This sure is a

pleasant surprise.'

They embraced and kissed in the hallway, then entered the apartment. Jack removed her coat and hung it up for her, while she sat on his leather sofa, facing his collection of modern art.

Tony Rydell, she thought, wouldn't have an apartment like this. His home would be cluttered, as untidy as his appearance, whereas Jack's apartment resembles *his* personality: cool and detached.

Just like she had been before meeting...

Tony... She kept thinking about him... even here, with her lover.

'I've just been to Goddard,' she explained to Jack, 'and thought I'd drop in for a quick drink on my way back to Georgetown.'

'Only a drink?' he asked hopefully.

She smiled. 'Only a drink. That and a little talk. I'm feeling a bit unsettled at the moment, not too sure of my bearings. A neat bourbon would help.'

Jack looked down at her, surprised. 'A bit unsettled? *You*? Clare Holton not too sure of her bearings? I can't believe my own ears!'

'Just get me the bourbon.'

He fetched her the drink, then sat beside her with his glass of beer. They touched glasses and Clare sipped some bourbon. When Jack placed his hand on her thigh, she felt oddly uncomfortable.

'Well,' Jack said, 'this *is* a surprise! The coolest, most pragmatic woman I know is feeling unsettled. So, what's the problem?'

'It's work,' she replied.

'I'm glad to hear *that*, Clare!'

'It's to do with what we discussed with the President. The hole in the ozone layer over the Antarctic.'

He sighed. 'Christ, not that again. It's becoming your obsession. I've already told you, these things always take time. The President agrees in principle with you - he knows what needs to be done - but even he can't change the world overnight and suddenly cut by half the country's use of insecticides, chemicals, oil, automobiles and aircraft. You're losing sleep over *that?*'

'Not just that,' she said. 'Something else entirely. It's possible that the ozone layer is being eaten away a lot faster than we've calculated - and by something other than CFCS.'

'It's no use trying this on, Clare. It's not going to work. Our own people have all the facts and figures, and what *you* say won't budge them - or, at least, won't

make them hurry up. The depletion of the ozone layer is an officially recognised problem; but it requires worldwide coordination, and that could take years. Nothing you say, no trick you can play, is going to change that.'

'It's not a trick, Jack. It's something I've been told since having my talk with you and the President. Have you ever heard of a NASA physicist called Tony Rydell?'

Jack thought about it for a moment. 'No,' he decided. 'But then my concern is with NASA's accounts, not with their personnel. And they have a lot of physicists on the payroll.'

'Okay,' she said, 'listen to this.' She told Jack about her meeting with Tony, about what he had told her, then added, 'And that's why I went to see his boss today - to sound him out on the matter.'

'I hope he kicked you out of his office.'

'No, he didn't. He simply confirmed what the records had revealed: that if Rydell's a little eccentric and something of a mouth, he's also an exceptionally gifted physicist, now specialising in climatology and, in particular, the depletion of the ozone layer, which he was instrumental in discovering in the first place. This guy isn't a fool.'

Jack grinned wryly. 'No, of course not. He just sees flying saucers and ghosts. No fool at all.'

'Jack, if what he says is true, we're in worse trouble than I'd thought.'

'Don't even whisper that,' Jack said. 'You'll just unsettle *me*.'

'It's started already, Jack. Already, most of these here United States have been devastated by the fiercest heat wave and drought we've experienced for fifty years. In Minnesota, animals died in their hundreds while corn and soy-bean production was only a fraction of what it should have been. On the West Coast and in the Rockies there were the worst forest fires in living memory. The Mississippi river is now at its lowest level since records began in 1872 - and severe water restrictions have been in force from Chicago to San Francisco.' She stared steadily at him, trying to drill her intensity into him. 'And that was just *this* country. Russia was also devastated by unprecedented drought. China was devastated by simultaneous drought *and* floods. More floods in Bangladesh and Brazil. In other countries, hurricanes and cyclones and typhoons, killing millions and shattering whole economies. That great hole in the ozone layer is *already* changing the climate, with the results I've just mentioned. So if, as Rydell thinks, it's changing even faster than we've calculated, then we have to

find out what's causing it and do something about it. And I mean *now.*'

But Jack remained unconvinced.

'So a guy with an eccentric reputation has come up with a theory based on *his* reading of the data. That data would have to be analysed by an awful lot more people before the Department of Defence, let alone the White House, would make a move on it. And I'm surprised that *you're* taking it so seriously at this early stage. What's convinced the great realist?'

It was a pretty good question: one she had asked herself.

'I'm not sure,' she confessed. 'There's just something about this guy. He's impressive - a bit cocky, but convincing - and he's certainly made me re-think this whole situation.'

'Yeah,' Jack said, 'I can see that.'

Something in the tone of his voice made her look at him. She saw only his cool, questioning gaze.

'What do you mean, Jack?'

'Why are you taking this outlandish theory so seriously when you have no proof for it, other than the words of a man who is, by your own description, a bit of a mouth? You're supposed to be a hard-headed realist, so why this sudden faith in a theory for which you've no proof? This just isn't you, Clare.'

That was true enough. It wasn't like her at all. She had known this all along, but refused to face it, and now she blushed to think of it.

'I'd planned to ring Rydell,' she continued nervously, 'and arrange to analyse the data with him and see what I come up with.

'Oh, did you, indeed?' Jack's voice was cool, his tone slightly mocking. He removed his hand from her thigh and leaned closer to her. 'And is that a necessity?' he asked her. 'Or just an excuse?'

Suddenly, she felt embarrassed and childish. 'What the hell does *that* mean?'

'It means you're showing unusual faith in a man you've just met. You're confused between the theory and the man, but don't want to admit it. What's this guy like, Clare?'

'For Christ's sake,' she said, feeling more confused, 'I don't know what you...'

'You're intrigued by him, Clare. That much I can tell. You already believe in his story, though you haven't checked his data, and you're using that data as an excuse to see him again.'

'That's nonsense!'

'I don't think so. I've never seen you like this before. I've never known you to

accept anyone else's theories before checking them out. Why this time, Clare?'

'Because it could make sense.'

'Because *what* makes sense? This guy tells you that something else, something *unknown*, is destroying the ozone, and you actually *believe* him!'

Feeling humiliated and angry, aware of the truth in his remarks, Clare stood up and hurried towards the door, saying, 'Damn it, Jack, I won't listen to this nonsense! You sound just like a...'

But she couldn't complete the sentence, so he did the job for her. 'Juvenile? I sound just like a kid? How the hell do you think you're behaving, Clare, coming here with this crap?'

'Goodnight, Jack,' she said firmly, opening the door, preparing to leave.

'Whether or not Rydell's theory has any validity,' Jack said, 'your interest in it is more than strictly scientific. Don't kid yourself otherwise.'

'Go to hell, Jack!'

She walked out and slammed the door, then hurried back down the stairs. Though shocked at her outburst and burning with shame, she was unable to return and apologise, just wanting to escape.

Darkness had fallen. The domes and spires of the capital looked eerily beautiful under moonlit grey clouds, as she drove to Washington Circle, turned into Pennsylvania Avenue, then crossed Rock Creek and entered M Street. She hardly knew where she was going, driving instinctively, thinking only of what Jack had said and ashamed of the truth in it.

An only child, too precocious by far, she had inherited from her parents a strong, independent nature and respect for the mind, rather than matters of the heart, which she had generally viewed with grave suspicion. Romantic or sexual love, which she had experienced only in adolescence, had always left her feeling helpless and distraught, betrayed by what had later seemed like foolishness. She had survived that adolescence, not liking it a bit, and thereafter had devoted herself to her education and work, just like her parents. The sex she had accepted - it was a therapeutic necessity - but the messiness of other human emotions she had left well behind her. That's why she normally felt comfortable with Jack Douglas: his pragmatism presented no threat to her. It was also why she felt so confused when she thought of Tony Rydell.

She couldn't think rationally about him. That was the first shock. When she forced herself to do so, she thought of him as a mess - a dishevelled,

undisciplined, ill-mannered, arrogant lout - but despite that she knew, without rhyme or reason, that she had to see him again.

Turning down one of the narrow streets off Wisconsin Avenue, lined with Federal-period homes and too many cars, she soon came to her father's house. Letting herself in, she hung her coat up in the hallway, then went into the lounge where, since the lights were still on, she expected to find her father. He wasn't there, which meant he was in bed, so she decided to ring Tony immediately and get this thing over with.

To her shame, she had to pour herself a drink before she could do it. Sipping her bourbon as she dialled, she forced herself to think in a rational manner and keep in mind that he was not her sort at all.

Someone lifted up the phone and yawned and then said, 'Yeah?'

'Mr Rydell?'

'Right. Yeah.'

'Mr Rydell, this is Clare Holton. We - '

'*Who*?'

'Clare Holton. You came to see me at the American Geophysical Union in Baltimore, Maryland. I'm the scientific liaison officer between NASA and the Department of Defence, and you spoke to me about - '

'Dammit, lady, do you know what time it is? It's nearly midnight, for chrissakes, and I've two kids and an old lady trying to sleep here. What *is* this? An *emergency?*'

Embarrassed that she had forgotten the time, glancing at her watch to confirm it, Clare said, 'I'm sorry. I didn't realise. I was so immersed in my - '

'Work. Yeah, right. I understand.' He sighed at the other end of the line. 'So what is it, Miss God-Almighty Holton who thinks I'm a crank?'

'You don't have to be offensive. I *said* I was sorry. And I'm calling because I'm concerned about what you told me and I want to go over the data with you.'

There was a brief, tormenting silence, then he said, 'Am I hearing right, lady?'

'Please don't call me *lady*. I think it's demeaning. Either call me Clare or Miss Holton. And, yes, you did hear correctly.'

'So what changed your mind... *Clare*?'

She closed her eyes, wanting to strangle him. 'I just thought it over,' she said, opening her eyes again, 'and decided that I should have at least offered to double-check your data. It's my way of apologising for my rudeness, so I hope you'll accept.'

‘When can you come over?’

‘Well, let’s see... I’m a bit busy this week. What if we make it..?’

‘The weekend. Let’s do it at the weekend. The other guys will all be at home and can’t look over our shoulders. Unless, of course, you think that being *alone* with me wouldn’t be kosher.’

God, he was impossible! Where the hell had he been raised? Probably in some godawful Western town with swinging doors and a tethering post.

‘Since I’m not Jewish, I’m not concerned with being kosher,’ she said. ‘Will Saturday morning do?’

‘We don’t *all* have servants! I do the shopping on Saturday mornings. What about Sunday?’

‘What time?’

‘Ten. In the morning.’

‘Fine. Goodnight, Mr Rydell.’

She dropped the phone before he could answer, almost slamming it down, and immediately poured herself another drink. Crossing the old-fashioned room with its imported Regency furniture, she noticed the note left on the writing desk. Puzzled, she picked it up and read:

My dearest daughter, my Clare

When you read this letter I will already be gone. I know that what I have done may be morally indefensible and will certainly wound you deeply, but I beg you to understand that it was done out of love and respect. I love you as I write this and that love helps m to do what I know I must.

A few weeks ago I was informed that I had an illness that will eventually render me helpless. I do not wish to become an invalid with you as my nurse. I do not wish to deprive you of the life you so richly deserve.

My suicide is an act of love.

I have taken some tablets. I will suffer no pain at all. It is the best, the only decent way out. At times like this, words cannot say enough. Farewell, dearest one.

Your loving father, Walter.

Clare's hand was shaking. She was blinded by her tears. Her heart was racing when she gently laid the letter back on the desk, then walked into the darkness of her dread, towards the light in her father's bedroom. That light fell into the hallway. She stopped just outside the door.

She could hardly bear to walk in. It was only the thought of her father's courage that gave her the strength to do so.

The room was fully lit. He had not wanted to frighten her. He had put on his pyjamas, stretched out under the sheets, folded his hands on his lap, and died quietly, with dignity. At some point, just before death's long sleep, he had opened his eyes again. Now he seemed to be smiling.

Clare was no longer frightened, but her grief knew no bounds. She walked slowly to the bed, looked down at her dead father, sat beside him, gently stroked his cold forehead, then closed his eyes.

She lay upon him, her cheek resting on his stilled heart, listening to his great silence.

Her tears fell for a long time.

Chapter Thirteen

The colours of her childhood were disappearing, bleached out by the sun. Suzy saw that it was happening, but she wasn't sure just why – didn't know if it was actually the weather or her changing view of things.

The weather certainly was unusual, too hot even for summer, and her father was complaining all the time that it was ruining the crops. That had something to do with the colours - the fabulous greens and golds drying out and becoming brownish - but she also sensed that it was the way she was seeing things, which was not so romantically. She still loved being home, talking to Mom, helping Dad, but even for her it was too hot, and now their talk was anxious, and she found herself thinking more of Maryland and shedding tears for her kids.

She really wanted to see them.

She'd received a letter from Tony, asking her to come back. If not for his sake, he'd said, then for the sake of the kids. It burned her up to read it, since it was so typical of him: she thought he'd at least write to say he loved her and missed her

- but, no, he only mentioned the kids, as if he wasn't concerned himself.

She wanted to scream when she read that.

She started going out in the evenings, mostly wandering about Des Moines. looking in on the old places where she and Tony used to fraternise, but mostly just hopping in and out of bars, hoping to find some friends. Of course she didn't see a soul - all her old girlfriends had moved away - and so she found herself drinking more and more, brooding on Tony and lost dreams.

He hadn't even said he wanted her back. Only mentioned the kids. What a sonofabitch he was! Literally speaking, considering his mother, whom her father admired some. You just couldn't credit it.

'You're staying out a lot these days,' her mother said. 'What do you do all night?'

'It's not all night, Mom. It's just the evenings. And I just walk around.'

'Looking for what?'

'Old faces, I suppose.'

'The younger folk are moving out,' her mother confirmed. 'I never see your old friends.'

'I like to have a drink and think.'

'About Tony and the kids?'

'Yeah.'

'You miss them?'

'I want my kids, at least, but I've got too much pride.'

'They didn't want to come, you said.'

'But they want me back, Mom.'

'Then go.'

'I'm not ready for that yet. Phew! It's real hot in here!'

She often went out to avoid the heat. It was even hot in the evenings. It was cooler in the streets of Des Moines than it was on the farm - and the bars, thank the Lord, had air-conditioning, which the farmhouse did not.

She drank alone in the bars, out of sight of the stars, thinking of Maryland and her kids in their beds, starting to convince herself that she couldn't go back because she didn't deserve them.

She'd deserted them - and any woman who did that, didn't deserve her kids.

Thinking that, she had to take out her kerchief and wipe tears from her eyes.

'Anything wrong?' someone asked her.

He was over six-foot tall and had lazy blue eyes and thick brown hair. His

muscles were bursting out of his short-sleeved shirt and he wore a white apron. He worked the bar and cleaned tables.

'No,' she replied, feeling a bit flustered. 'Just got a bit of dirt in my eyes.'

'Oh, yeah?'

'Yeah,' she said.

He nodded thoughtfully. 'Don't I know you?' he asked. 'Didn't you used to go to..?'

'High school!' She almost screamed it. 'You're Joe Wheeler! You and me used to... Lord!' She almost giggled.

'Yeah,' he said, 'we made eyes. Then you married..?'

'Tony... Tony Rydell.'

'That's right. The bright spark.'

'Yeah,' she said, 'real bright.'

He lifted her glass and wiped the table. 'You just visiting?'

'Yeah.'

'You bin gone for years, right? Since you got married. You went to..?'

'Texas.'

'Yeah, right.'

'Then to Greenbelt in Maryland.'

'Kids?' Wheeler asked.

'Two.'

'I never got married,' Wheeler said. 'Don't know why. It just never happened. Now it's too late to think of it.'

'Don't know why. You're an attractive guy.'

'Sounds like poetry, Suzy. You're here with your husband and kids?'

'No. All alone this time.'

'Really?'

'Yeah.'

'Just here seein' the folks?'

'Right.'

'I sometimes see your mother in town, though I don't think she recognises me. One helluva a fine dame, that woman. You oughta be proud.'

'I am.'

'You look good.'

'You think so?'

'Yeah. No kidding. You look like a goddamned million dollars.'

‘Stop it. You’re making me blush.’

‘That just makes you look prettier.’

Suzy laughed at that. She could never resist a compliment. Also, men could make you feel good in a way women couldn’t; they could reach in and pull out that part of you that too often stayed hidden. Without a man, she didn’t feel right, not whole, missing something, and she guessed that it came from her happy childhood, then marrying so young. First her Dad, then Tony, the two pillars of her life, her Dad as solid as a rock, though growing more anxious lately, Tony able to make her laugh and keeping her balanced on her toes, getting ready to sprint around any madness he raised - never boring, at least. Yeah, she’d liked him for that. She liked a man who could make her laugh. But somewhere along the line she’d stopped laughing, which is why she was here now. Laughing with this old flame, Joe Wheeler, and feeling good for it.

‘You want another drink?’ he asked.

‘Sure,’ she said. ‘Why not?’

The place was practically empty, so when he brought her the fresh drink, he also brought himself a beer and took the seat facing her.

‘Do you mind?’

‘Not at all,’ she said. It was good to have a man about her own age sitting right there in front of her. He had a nice, easy smile.

‘You been running this place long?’ she asked him.

‘*Too* long. About ten years. I took it over when my Dad died. As a favour to my Mom. She died about five years ago and now, here I am still - the sole owner and only member of staff. It beats some jobs I know.’

‘You see many of our old friends?’

‘Naw. They mostly got married and had kids. Scattered and went away. Those were some days, eh?’

Suzy smiled, remembering being a teenager; maybe wanting to be one again, without all these problems. ‘Yeah,’ she said. ‘You used to give me that heavy-lidded look - obviously thought you were Richard Gere.’

‘You used to like him. I remember that.’

‘I still do,’ she told him. ‘You look a bit like him, you know that? Same lips, the same long-lashed eyes.’

‘Gee, now you’re making *me* blush.’

‘It makes you look younger.’

‘Why don’t I close up and we’ll go eating?’

‘Yeah,’ she said. ‘I’d like that.’

Instead, when he closed the doors, they went up the stairs and somehow became undressed and climbed into bed. It seemed a natural thing to do, no embarrassment in it at all, and he was really very nice, very considerate, and everything blocked up in her poured out in a great wave of relief.

She stayed there all night, flexing her muscles, stretching her body, and he stroked her and licked her all over and made her purr like a cat. And what was nicer was when they weren’t making love, he continued to talk to her. She really liked him for that.

‘Smokin’ in bed,’ he said, ‘is a dangerous habit, but I really like doin’ it.’

‘And having bourbon in bed, too.’

‘Yeah, at four in the mornin’. Makes you feel you’re on an all-night party, gettin’ higher each minute.’

‘Makes you feel young, right?’

‘Yeah, Suzy, I guess.’

‘Marriage takes that away from you,’ she told him. ‘It just slips away quietly.’

‘It hasn’t been working out?’

‘We had something, but we lost it. He just doesn’t see me anymore. It’s like I’m there, but I’m not.’

‘You left home? Is that it?’

‘Yeah,’ she confessed. ‘I did. I asked the kids to come along, but they didn’t want to, so I left them as well. That’s what makes me feel shitty.’

‘You think you’ll go back?’

‘I don’t know. I don’t think so. I’m too proud to go back. I also think that a woman who leaves her kids deserves all she gets. I don’t deserve them, no more.’

‘That’s bullshit, Suzy.’

‘It’s kind of you to say so. And it’s nice to be with a man who knows how to look at me.’

‘And how’s that?’

‘With greed.’

‘Come here, honey. Let me hold you again. I wanna show you what greed is. You sure are some handful!’

‘Godalmighty, that’s good! That’s so good! Don’t stop, Joe. Take as long as you want. Keep me locked up in chains.’

‘Don’t tempt me,’ he said.

He asked her what she liked and tried to please her and made her smile, and when dawn broke, when she finally walked out of there, she felt like a new woman. She got back to the farm in Indianola just in time to miss breakfast.

'Where you bin all night?' her mother asked, as she cleaned up the table.

'With an old friend,' Suzy said.

'A girlfriend?'

'No, Mom,' Suzy confessed. 'It wasn't a girlfriend.'

'I don't think your Dad was pleased.'

'No, I don't suppose he was. You got any coffee in that pot?'

'Sure, help yourself.' Suzy poured some coffee. 'Who is he?' her mother asked.

'Joe Wheeler. I don't know if you remember him. He went to my high school.'

'I remember him,' her mother said. 'A nice kid, but never married. I hear he runs his dad's bar in town and retains an eye for the ladies.'

'He enjoys being a bachelor, Mom.'

'And you're on his list, right?'

'I need someone in my life right now, Mom, and he's kind and considerate.'

'You be careful, child. Remember you're still married. You've got things to work out.'

'Thanks, Mom. I'll bear that in mind.'

'Okay, then, let's drop it.'

And that was that. They didn't like it, but accepted it. Suzy saw Joe again, then it became a regular thing, and she soon spent more time in his bedroom than she did in her own.

She'd gone off her own room. It now seemed small and confining. She'd sit there on the bed and look out through the window and notice that the healthy sea of maize had turned a dark, dried-out brown. She saw her father standing shoulder-high in the dying maize, his eyes crawling all over it. He'd pull cobs off and drop them on the ground and then glance anxiously about him, looking unreal in that silvery light, a man no longer sure if the earth abides and would always sustain him.

Suzy knew he was frightened.

Chapter Fourteen

Coming out of sleep, Tony had his familiar dream. At first all he saw was a pinprick of light in a vast sheet of darkness, then a gleaming white eye, but then it expanded, flaring out in all directions, and raced at him and exploded around him, obliterating the real world.

He was sucked through space and time, hurled into another dimension, spiralled down through the cascading voices of history and cast forth into silence. He looked up from Europa, across the valleys and frozen mountains, and saw the vast golden globe of Jupiter, its Great Red Spot a bloody wound. Around it were the satellites, thirteen, maybe more, and all of them, the enormous apple and its seedlings, were drenched in the stars…

He usually woke up then, but this time it was different. This time the enormous apple somehow drew him towards it, changed shape as it did so, and gradually became a human face in a dazzling white haze. He was sucked in, surrounded, perhaps even ingested, and when he saw the face again, the teasing smile, the mocking green eyes, he recognised it as Suzy's.

She was very close to him, giving off heat and light, at once extraordinarily sensual and frightening, her smile chilling his blood.

His lust for her dissolved into terror and he screamed and...

Awakened.

'Goddammit!' he whispered, rubbing the sleep from his eyes, naked and sweating beneath the sheets, his heart racing uncomfortably. He glanced around the bedroom, taking in the real world, still caught in the web of his dream and working out what it meant.

He had been dreaming for years about flying to Jupiter - it was a simple yearning for escape - but the recent addition of Suzy to the dream was extremely disturbing. She was so vivid in it, almost palpable in her reality, that she made him remember, with a shudder of dread, what had happened when he had flown through the hole in the ozone layer.

Had that creature been an hallucination, a ghost, or some other form of life disguised as his Suzy? He was convinced that it was the latter... But why Suzy?

Because she had left him. Because the thought of her had filled him with guilt and recrimination, shame and rage and frustration, all of which had obviously been preying on his subconscious and would not let him go. Certainly that had been part of it, but it didn't wholly explain his bizarre experience. Nor did it

explain why, ever since that fateful day, his dreams of Suzy had made her seem different from the Suzy he knew. In his dreams, though she certainly *looked* like Suzy, she was inexplicably frightening. Not Suzy at all.

Bewildered, sighing, he swung his legs off the bed, rubbed his face with his hands, listened to his kids shouting and his mother barking at them, then wandered into the bathroom to wake up with a shower. He took it cold, feeling brave and triumphant, emerged feeling far more alive, then dried himself and got dressed.

'Groaning in your sleep again,' his mother said when he entered the kitchen. 'It's not a good sign, son.'

'All right, Ma, no analysis.'

'You've been sick ever since that Suzy left you. You've hardly had a good night's sleep since then - all that moaning and groaning.'

'I have bad dreams, Ma.'

'So do I,' said Don, looking up from the dining table where he was sitting with Grandma and Ronnie. 'I have terrible dreams all the time. It's 'cause I'm neglected.'

'*I'm* neglected,' Ronnie added, staring pugnaciously at his brother in that way he'd developed lately. 'I bet I have more bad dreams than you do - and real bad as well!'

'Crap!' Don replied.

'Watch your tongue!' Grandma snapped.

'Okay, cool it!' Tony said as he sat down with them. 'I want no fights this morning. How are you, Mrs Gomez?'

The question was directed at the portly Mexican woman where she stood at the cooker, dressed in a plain dress and apron, pouring sweat as she fried eggs and flapjacks.

'I feel real bad,' she said as toast popped out of the electric toaster and the coffee boiled noisily. 'I don't feel good since I get here. I only been here for five days and already I'm done for. This place is a zoo, *Señor*!'

'And we all know who the animals are,' Grandma said. 'We certainly know *that* much, at least!'

'See, *Señor*? You hear how she talk to me? This old crow, she has a tongue like a razor and I bleed all the time.'

Grandma smiled with grim pleasure, making Tony's heart sink. He'd had to bring in Mrs Gomez because Grandma was chaotic, and the latter had displayed

her resentment by picking relentlessly on the former. Now Mrs Gomez, whose exhausted face had once been suffused with kindness, was pouring sweat over the cooker and looking distraught.

'Oh, yes,' she said, glaring fiercely at Grandma. 'She looks innocent now, smiling sweetly and saying nothing, but she picks, picks all the time, sniping here, backbiting there, and she encourages the kids to do the same, like making fun of my accent. It is too much, Señor!'

The boys burst into laughter while Grandma smiled smugly and Mrs Gomez, still working automatically, tossed the flapjacks.

'Shut up, you two,' Tony said, glaring at them. 'And you can stop that goddamned smirking, Ma. You've got nothing to smile about.'

His mother smiled even more broadly, as if at an invisible friend sitting by the far wall. 'I'm American and speak the language,' she said. 'Others still have a lot to learn.'

'Godammit, Ma!' Tony exclaimed in exasperation.

'You hear?' Mrs Gomez exclaimed, her large brown eyes tearful. 'That old crow is a racist from the Midwest. She is evil and mad!'

'Sticks and stones!' Tony's mother trilled, her voice musical with pleasure, while the boys covered their mouths with their hands to stifle their laughter.

'And all the time she criticizes!' Mrs Gomez was almost hysterical. 'I don't clean the house proper. I don't do the food good. She shows me dust on her finger and moans that the meat is under-cooked and complains that my chilli is too hot and my coffee too cold. She follows me everywhere, sniffing at me like a dog, and she holds the dishes up to the light to find invisible dirt. And these kids, they do the same. She encourages them to do so. They also play stupid tricks - they try to frighten and confuse me - and when they succeed, she cackles with pleasure and rewards them with money. I can't take no more, Señor!'

Mrs Gomez threw more flapjacks onto the plates and then simply stared at them, paralysed by the weight of what she was saying, visibly shaking with outrage.

'She also takes her time serving us,' Grandma noted. 'That's why the food's always cold.'

'Grandma!' Tony snapped.

Mrs Gomez let out a wail. 'Aye! Aye! That's enough! This is the last abuse I take!' She threw down the spatula, breaking a plate, then hastily untied her apron and flung it to the floor. Tony pushed his chair back and stood up to talk

to her, but was distracted by his mother's snort of mirth.

'Godammit,' he snapped, 'shut up! Mrs Gomez, please wait a minute...'

'No!' she said with magisterial dignity. 'I leave this madhouse right now!'

'*Please*, Mrs Gomez! I just want you to try...'

But Mrs Gomez cut him short by pointing a finger at his frail, silvery-haired, smirking mother. 'That woman,' she said, jabbing her finger at her own temple and twisting it like a corkscrew, 'is as mad as a starving coyote - and just as unpleasant. And these,' she continued, removing her finger from her temple and pointing at Tony's two boys, 'are more delinquent than the wetbacks *she* says are ruining this country. *Adios*, Mr Rydell. You're a good man, but your family is terrible. You can mail me my money.'

Having regained her lost pride, she glared at Tony's mother, stuck her tongue out at his giggling boys, then marched from the house.

The boys fell about laughing, Grandma smiled at the wall, and Tony, who hadn't had even a coffee, suddenly found himself lunging across the table, his hands slapping wildly. The boys kicked their chairs back and rushed out of the room, their footsteps making a racket in the hallway. The back door opened and slammed shut, then the boys were gone, leaving Tony alone with his mother. She was nodding at an invisible friend across the room, her smile one of triumph.

Tony loved her, but she wasn't herself these days, which had made for some trying times.

'Happy, are you?' he asked her.

'What do you mean, son?'

'You know damn well what I mean. Mrs Gomez was a really good housekeeper, and you've driven her out.'

'*I* didn't drive her out. I didn't do a thing, dear. The woman was just a bit hysterical, as most Mexicans are.'

'You *made* her hysterical.'

'What an awful thing to say. 'Specially knowing that foreigners, *her* kind, aren't like us at all.'

'She's an American, just like you.'

'She's *Mexican*, not American.'

'She's an American citizen, born and bred, but let's forget that for now. The point is that she's gone, she certainly won't be returning, and that puts the ball in your court. I mean, I got her to get all this off your back and *now* look where we

are. Again, there's no-one to look after the house and kids; just you and me, Ma.'

His mother stopped smiling. 'You and me?' she said. 'Oh, no, I don't think I can do that. I'm exhausted already.'

'Exhausted?'

'Yes, exhausted. Those two boys are so trying. You left Suzy to look after them, Suzy was inadequate, and now they're like a pair of juvenile delinquents, almost out of control. I *always* said Suzy was useless. I said it a lot, but no-one listened. That Suzy, I said, she's as pretty as a little bird, but she doesn't have the sense of a rabbit and just isn't a housewife. And now the proof, God help us, is in the pudding and those two boys need discipline.'

'That's why I asked you to come back. I needed someone to impose a little discipline and I thought you could do that.'

'I couldn't with you,' she reminded him. 'Just look at the state of you. *You're* as unruly as your kids - and that's saying a lot, son.'

Tony couldn't believe his ears. But when he thought about it, he realised, with a shock, that she was speaking the truth. He *had* been an unruly child, was *still* a bit unruly, and knew only the disciplines of his work, which didn't help much in daily life. It certainly hadn't been good for Suzy and the boys - that much was clear.

'It's all your fault,' he said. 'I'm *your* son, after all. You brought me up. You made me what I am.'

'Don't blame me,' she replied. 'You've blamed me all your life for all your problems, but I wasn't responsible. Now I'm too old and feeble for all this. I wanna go back to the rest home.'

'Dammit, Ma, you can't leave me now!'

'I have to. I have a migraine. In fact, I think I'm gonna faint.' She placed her hand on her head, swaying slightly on her chair, looking faint. 'Lord, I'm going to have to lie down.' She stood up, preparing to lie down. 'Please ring the rest home - '

'Menopause Manor,' Tony interjected sarcastically.

' - and tell them to come and collect me this evening. I should feel better by then.' She started to leave the room, still holding her hand to her head, but stopped when she reached the kitchen door. 'But don't worry about me, dear. You go on to work. I know you have to do that, even on Sundays, and that's okay with me. Just make sure the children stay outside. At least tell them to be

quiet. When I wake up, no matter how bad I feel, I'll make lunch as usual.'

'You don't have to.'

'And after that, I'll pack my own suitcase and wait for the ambulance.'

'I'll be home by then, Ma.'

'You don't have to be.'

'I will be.'

'Okay, Son. I have to lie down now. Have a good day, dear.'

'You have a good sleep, Ma.'

She sighed. 'I'll try, Son.'

He grinned when she walked out, amused despite himself, then he thought of Mrs Gomez's departure and knew he had problems. Still, he rang the rest home, not having much choice, and arranged to have his mother collected that evening. He was about to get his jacket when a car-horn honked repeatedly outside.

Don and Ronnie called out excited greetings... then Tony heard Suzy's voice.

'Jesus H. Christ!' Tony murmured.

He didn't go out straight away. Instead, he went to the front room window, pulled the curtain back, and looked out furtively to see a dusty red Ford parked by the sidewalk, with a shadowed, unrecognizable man seated behind the steering wheel. Suzy was hugging the boys on the front lawn, all three of them so excited it made him resentful.

Eventually Suzy straightened up, patting her blonde hair into place, chewing gum, and adjusting her sunglasses as she glanced at the house. She was wearing a tightly belted, open-necked shirt and high-heeled leather boots which, combined with her skin-tight denims, emphasised her long legs. She sure as hell didn't look like the mother of two boys. She looked too damned attractive.

'Okay, Tony,' she said, lowering her sunglasses and staring right at him. 'You might as well come on out.'

'Why not come in?' he responded, feeling embarrassed.

'I don't want to,' she said.

Letting the curtains drop back into place, cursing softly at his own stupidity, Tony walked out onto the porch, closing the front door quietly behind him and then leaning against it. Suzy slid her sunglasses back up her nose and stared solemnly at him, looking too sexy for her own good, flanked by their sons, each one holding a hand of hers.

'Hi, Tony,' she said.

'Hi, Suzy.' He glanced over her shoulder, at the car by the sidewalk, and saw

the man seated inside it, smoking a cigarette, his fingers drumming lightly on the steering-wheel, his face hidden in shadow. 'Who's that in the car?'

'Just a friend,' Suzy replied.

'It's not your car,' Tony noted.

'It's a rented car. We've just come from the airport.'

'You flew here from Ohio?'

'Yeah.'

'Your folks pay for it?'

'I know what you're implying,' Suzy said, 'and you're totally wrong. My folks paid for me; Joe paid for himself.'

'Joe! You've got a boyfriend named Joe. Did you know him before you left?'

'Sure, I knew him, but not the way you mean. I didn't leave you for that.'

'You know him that way now, right?'

Her grin was defensive. 'Yeah, Tony. Right. Nothing lasts forever, you know? We all have to move on.'

It was definitely his Suzy. There could be no doubt about it. He wasn't frightened by her appearance, only angry and wounded, but he did think of that vision in the cockpit of his ER-2 and wondered, as he had done so often, just how real it had been. As for Suzy, the real Suzy on his lawn, she was certainly still capable of disturbing him, but for very real, human reasons.

It hurt just to see her.

'Hey, kids,' he said, 'go inside for a minute. I have to talk with your Mom.'

'Aw, gee!' Ronnie exclaimed.

'She just got here!' Don complained.

'It's okay, kids,' Suzy said, releasing their hands and pushing them towards the house. 'I'll see you before I leave. Go inside and let your Dad and I talk and then we'll call you back out again.'

'You promise?' Don asked, looking grave.

'Yeah, I promise. *I promise!'* She grinned and stomped her boot on the lawn and the kids reluctantly ran into the house, not looking up at Tony as they brushed past him. When the kids had gone, Suzy stopped grinning.

'You're obviously not coming back,' Tony said, 'so what the hell are you doing here?'

Suzy shrugged, an oddly forlorn gesture. 'I just wanted to see you and the kids. You know? Just a visit.'

'Are you here to make trouble?'

‘Whatya mean, Tony?’

‘If you want to see the kids, you must miss them. Do you want them back, Suzy?’

She lowered her head, kicked distractedly at the lawn, then looked up again, still chewing her gum. ‘No,’ she said, ‘I don’t. I mean I do, but I know I can’t. I mean, I miss them -you know? - I really do, but I left them and that’s that.’

‘They need a mother, Suzy.’

‘More than you need me, right?’

‘I needed you, dammit, in my way. I just had my work, that’s all.’

‘Yeah,’ Suzy said. ‘Work.’

‘Why not come back?’ he said.

‘For you,’ she asked, ‘or the kids?’

‘Godammit, Suzy, for all of us. We all need each other.’

‘You don’t need me, Tony.’

‘Okay, dammit, for the kids.’

‘No,’ she said. ‘For you. You want someone to do the housework and cooking while you get on with your work. Isn’t that true, Professor?’

‘Just stop this shit, right?’

‘Still foul-mouthed, I note.’

‘Given the kind of company you keep, it shouldn’t shock you too much.’

He couldn’t resist looking at the guy she had picked up. He couldn’t see his face; just the shoulder and arm that were framed by the car’s window, suntanned muscles bursting out of a short-sleeved shirt, fingers drumming the steering wheel.

‘That’s some ape you’ve got there in the car,’ he said. ‘Where did you pick him up? On the farm or in some honky-tonk?’

‘He’s no ape,’ Suzy said. ‘He owns his own bar in Des Moines and he makes more than you do.’

‘Gee, whiz, I’m impressed. He owns a bar and earns more than me! That sure makes him something, right?’

‘You used to know him, Tony. His name’s Joe Wheeler. He went to our high school and...’

‘Yeah, yeah, I remember. He was built like a gorilla, imitated Richard Gere, and had eyes that you thought were soulful and I thought were dumb. Don’t let’s have a class reunion on the lawn. My stomach’s churning already.’

Suzy sighed. ‘Let me say goodbye to the kids.’

‘What the hell did you come here for?’

‘I came to say hello to my kids, but I want to leave now.’

‘Aw shucks, I’ve hurt your feelings!’

‘I’m immune to your sarcasm. Now do I get to say goodbye or not? Just let me know where I stand.’

‘What’s the matter? You got a *conscience* or something? You wanna pretend you still care? Go to hell, Suzy! Clear off!’

‘You’re a shit, you know that?’

‘I didn’t leave my kids, Suzy. I didn’t leave them, then turn up at the house with some stud in my car, like you did with Joe Wheeler.’

‘He loves me!’

‘He loves your sweet ass. Now waltz it back to him.’

Suzy sniffed back her tears. ‘I don’t deserve that,’ she said.

‘Don’t bring your boyfriends back here again. Now goodbye, Suzy. *Adios*.’

Before she could respond, he turned away and walked back into the house, slamming the door, his heart beating too fast. Don and Ronnie rushed up to him, but froze when they saw him. They glanced at the closed door, then at one another, and only when the car outside roared off did they rush to the window.

They watched the car departing and that made Tony feel worse. He knew that he’d behaved badly and that the boys knew that too. Unable to move, paralysed by shame, he leaned against the door to let his racing heart settle as the sound of the car faded away.

The boys turned towards him, Ronnie more bewildered than hurt, Don reaching out to place his hand on his arm, trying to show understanding.

‘You fought again, didn’t you?’

‘Yes,’ Tony confessed, ‘we did.’

‘It’s okay, Dad,’ Don said, his eyes wounded. ‘We know you didn’t want that. We understand. It’s okay.’

Tony couldn’t believe it. The generosity was too much. He pulled both boys against him, hugged them passionately, kissed their heads, then released them and hurriedly left the room.

He was still wiping tears from his eyes when he walked out of the house, aware that he was going to be late for his meeting with that hard-case, Clare Holton.

Chapter Fifteen

Even though Tony was late, Clare didn't act like a hard-case when he met her this time. In fact, she seemed unusually subdued, maybe even sleepless, and merely smiled wanly at him when he walked into the reception lobby of the NASA-Goddard Space Flight center in Greenbelt.

'Sorry I'm late,' he said.

'It's okay. It doesn't matter.'

'No, really,' he said, taken aback by her manner, 'there's no excuse for...'

'I wasn't checking the time,' she said, 'so really, it's okay.'

'That's decent of you, Miss Holton.'

'Clare - please call me *Clare*. Now shall we get down to business?'

'Yeah, Clare, let's do that.'

He took her straight to his office in the environmental physics department of the Institute for Space Studies. Since this was a Sunday morning, most of the offices were deserted, and Tony felt oddly intimate with her. More aware of her, he found himself glancing frequently at her, though he tried not to do so.

'Would you like a coffee?' he asked, as he switched on the computer monitors that were on a shelf along the wall facing his desk.

'No, thanks,' she replied. 'I'm fine. If I want a drink, I'll help myself to water.'

'Very healthy,' he said, pulling up another chair. He placed it beside his own and indicated that she should sit on it, behind the desk, facing the flickering monitors. 'Okay,' he said when she was seated, 'here we go. What I'll do first is show you the climate model figures on which we calculated what the ozone-depletion rate *should* be. Then I'll show you the comparison figures between the climate-model summaries and the actual ozone depletion over the Antarctic, as assessed from that last Antarctic expedition. As you'll then be able to see for yourself, there's a hell of a difference between how fast the ozone layer *should* be disappearing and how fast it's *actually* disappearing. And the difference, believe me, is dramatic and, so far, inexplicable. Okay?'

She nodded.

He accessed the required file on each of the computer monitors until every screen looked like a brilliantly coloured, abstract painting composed of phosphorescent whirlpools, irregular black patches, and other streams and

islands of blue, yellow and crimson, with windows of complex printed data overlaid onto them.

'What you're seeing,' he explained, 'are the computer enhancements and analyses of the Earth's atmosphere, taken from the principal climate modelling centers, namely, our own Goddard Institute for Space Studies in New York, the Geophysical Fluid Dynamics Laboratory at Princetown University, the National center for Atmospheric Research in Boulder, Colorado, the British Meteorological Office in Berkshire, England, and even the Soviet Hydro-Meteorology center in Moscow. Do you know what climate models are?'

'Yes,' she replied without irony. 'Since it's impossible to represent the Earth's atmosphere, in its entirety, in the detail necessary for atmospheric analysis, the climate, or greenhouse, models are a way of dividing Earth's surface and atmosphere into so-called numeric "boxes". Each box covers a surface area of up to a thousand kilometres square and the atmosphere into ten or twenty layers. By doing this, you can mathematically reproduce the changes that are presently taking place in the atmosphere, as well as calculate more accurately the expected changes up to approximately the next hundred years. Am I right?'

'Yeah, you're right.' He was pleased that she knew so much. 'And the data in those windows on the computer screens corresponds to the visual representations of the Earth's changing atmosphere on the same screens. As you can see, according to the calculations, there should be a depletion of ozone of about fifteen to twenty-percent over the next ten years alone.'

'I know this already. I also know it's too much. That's why I've been trying to get the White House to sit up and take notice.'

'Right,' Tony said, impressed by her tone of certainty, 'it's already too much. Yet those figures don't match up to the figures gained from that last expedition. According to *those* figures, the speed of depletion is twice what it should be.'

'Dear God,' Clare murmured.

Pleased that she was taking it seriously this time, Tony exited the climate models and accessed the files obtained from the Antarctic airborne expedition. He noted that Clare was jotting down notes. That further impressed him. She examined each monitor screen in turn, scribbling in her notebook, sometimes using a calculator, cross-checking the TOMS and SBUV readings that had been taken during the last expedition and relayed back to the numerous tracking stations, then on to here, via NASA, Houston. When she had finished, she checked her results against the figures that she had taken off the climate-model

analyses. Having studied them at length, she finally looked up, clearly shaken by what she had concluded.

'I apologise,' she said.

'There's no need,' he replied, pleased. 'But are you willing to take a stand on what you've seen?'

'Yes, Mr Rydell, I am.'

'Call me Tony,' he said.

She sighed nervously. 'Yes, Tony.' She glanced around her, as if in shock. Her gaze wandered over the separate monitor screens, as if hypnotised by them, but eventually came back to focus upon him in a slightly blind manner. 'Let me get this straight. The ozone is disappearing at twice the rate we anticipated and nothing in our knowledge of the atmosphere can account for it.'

'That's it. You've got it. And if nothing in our knowledge can account for what's doing it, then it has to be something unknown.'

'But what is it? And where did it come from?'

'That's what we've got to find out.'

Feeling more excited, forgetting his domestic problems in the thrill of exploration, Tony picked up another diskette and slotted it into one of the hard disks.

'My prize possession,' he said. 'I had this information transferred from the analysis system of Project Skywatch International, in Phoenix, Arizona. It's the most reliable UFO tracking organisation in existence - no, don't say a word! - and it's run by Rick Polanski, the former NASA physicist who worked on the SETI project, before leaving NASA in disgust at their lack of commitment.'

'I've read about him,' Clare said. 'It was before my time.'

'Lucky you,' Tony replied, then accessed the file named *UFO Related Materializations from the Subconscious*. Scrolling down the list of case histories, he said, 'Have a good look.'

He watched her as she read the screen. She had a fine profile, a high forehead, full lips, and the dark hair falling over her shoulder matched her luminous brown eyes. She was serious, too sophisticated for him... but he was secretly drawn to her.

When she had finished reading, she sat back in her chair and smiled at him.

'Okay,' she said, 'other people have had experiences like the one you had over the Antarctic. What does that prove?'

'You missed something,' he replied, unable to prevent a grin of pleasure as he

jabbed his finger at the list on the monitor screen. ‘You should have checked the dates. Hallucinations are common - but *palpable*, or even *physical* manifestations of the kind I and all those people experienced are a relatively new phenomenon... and it started in 1979.’

She was quick on the uptake. ‘Which was the year that the hole in the ozone layer appeared and the greenhouse effect began.’

‘Exactly,’ he said.

‘Which you’re taking as proof that the physical manifestations are being caused by the unknown something that’s gobbling up the ozone over the Antarctic.’

‘It sure seems to be that way.’

She gazed thoughtfully at him, but with that odd, slightly stunned look that he’d noticed before. Then she stood up and restlessly paced the office, letting him see how slim she was, her legs long and curvaceous in the high-heeled shoes. Eventually, as if the silence was unbearable, she stopped and looked down at him.

‘So *what* is it?’ she asked.

Tony shrugged. ‘There’s only one way to find out.’

‘To make another flight through the hole over the Antarctic?’

‘Right,’ Tony said.

She smiled at him. ‘Very clever, Tony. I *wondered* what you were after. And now I can’t say no, can I?’

‘Not if you face the facts.’

She smiled again. ‘You’ve hooked me. But what you’re asking for won’t be that simple. The President’s scientific financial advisor, Jack Douglas, is already concerned about the money being spent on the ozone problem, and the President himself is more concerned with his own period in office than he is with anything happening in the future. I should also point out that Jack Douglas is extremely sceptical about you - and has been ever since the media had a field day with your UFO theories. Given that, it’s not going to be easy to persuade them to finance another airborne expedition.’

‘You’ve got to try, Clare.’

‘I will - on one condition.’

‘What?’

‘That if I manage to pull it off, I go with you as part of the team.’

‘I don't think...’

‘Wait a minute,’ she said, raising her right hand to silence him. ‘I’m not just an executive. I *was* an astronaut, I *am* an experienced pilot, and my particular branch of astrophysics is biotechnology. I’m just what you need.’

‘I’m not sure I understand.’

Now Clare was looking excited, as if released from the private torment that had clouded her eyes. ‘What’s up there?’ she asked. ‘What’s eating the ozone layer even faster than the CFCs? Whatever it is, it’s invisible to the naked eye and hasn’t been picked up by our scientific instruments. Whatever it is, then, it’s not something real in any sense that we know.’

‘I’m with you so far,’ Tony said, caught up in her growing excitement and wanting to hug her.

‘Since 1968,’ she continued, ‘many of the molecules basic to chemical evolution - water, carbon dioxide, ammonia and hydrogen cyanide - have been found spectroscopically in outer space. Organic molecules, including amino acids, have also been found in meteorites. Because of this, a lot of physicists, including myself, believe that alien life doesn’t have to be carbon-based and organic. We believe that space could in fact hold two other forms of life - plasmodes and radiobes - the former evolving within suns, the latter in interstellar space. And that, Tony, is what we could have up there at the top of the ozone hole: either a plasmode or radiobe form of life.’

‘The fourth state of matter,’ Tony said, excited. ‘An electrically neutral gaseous mixture of positive and negative ions, or charged particles.’

Clare smiled again. ‘You’re showing off,’ she said, ‘but you’ve certainly got the message. That unknown factor feeding off the ozone layer could be a plasmode or radiobe form of life, possibly borne to Earth’s stratosphere by some passing meteorite or in the tail of something like Halley’s comet.’

‘Not Halley’s comet. That passed over in 1986 and the hole in the pole was first observed well before that. In 1979.’

‘Damn!’ Clare exclaimed in frustration. She paced the room, then stopped and excitedly snapped her fingers. ‘No!’ she said, arguing with herself. ‘The journey that brought Halley’s Comet back into the path of Earth was the one in 1910. That was the year the Earth actually passed through part of the tail of Halley’s Comet. And that tail contained the cosmic dust of the Orionid and Eta Aquarid meteor showers that travel in Halley’s orbit. So our assumed plasmode or radiobe life form could have attached itself to that cosmic dust and then spread itself around the globe of the Earth, with most of it settling over the Antarctic.’

Tony was so excited, he couldn't stay seated. Standing up, he was directly in front of Clare, staring into the brightening depths of her lovely eyes.

'Could be,' he said. '*Could* be...' And then faltered, disappointed. 'But we still have this goddamned year of 1979. The ozone didn't start disappearing until that year - sixty-nine years *after* the Earth passed through the tail of Halley's Comet.'

Clare didn't miss a beat. 'According to the panspermic hypothesis, the seeds of life are in the form of spores, which can survive prolonged intervals in vacuum - outer space - as well as conditions of extreme cold. However, on return to more favourable conditions, such as a warm climate, they return to their particular form of life again. The same could be true of a plasmode or radiobe form of life contained in the cosmic dust of, say, Halley's Comet. It survives in a kind of sleep throughout its cold journey through space, is cast off in the Earth's stratosphere, and is gradually revived by Earth's warm climate.'

'A climate growing even warmer as the alien life form feeds off the ozone layer.'

'Yes. And the more it devours the ozone layer, the warmer the Earth becomes and the stronger the alien life form becomes. In short, the Earth dies to feed it.'

Tony suddenly felt unreal, as if divorced from his body, all his senses focused on Clare's brown eyes, with their luminous, far-flung depths. He was looking into her soul, but also into the depths of space, and he wasn't too sure what it was that he'd eventually find there.

'You've got to arrange that Antarctic flight,' he told her.

'I'll try my damnest,' she said.

She glanced vaguely around the room. As she did so, she changed, the excitement fading from her eyes, giving way to the oddly stunned look he had noticed before.

'I'd better get moving,' she said. 'I'm going to have a hell of a lot to do.'

'Are you okay?' he asked.

'Yes,' she said and shrugged. 'Sure. Why do you ask? Do I look any different?'

'As a matter of fact, you do. At least, you *seem* different. You're not as high-stepping as when we first met. You seem slightly... *exhausted*?'

She smiled in a weary manner. 'Yes, maybe that's it. You're an exhausting man, Tony.'

She said it with good humour and it pleased him, making him smile. Then he led her back out of the building and across to the parking lot, aware as she

unlocked her car that she had him in a state of agitation. Confused by this, he placed his hand on her shoulder. Her brown gaze seemed opaque.

'You haven't been an astronaut for years,' he said, 'and haven't practised astrophysics for a long time. So why do you want to go back to basics by flying into that hole?'

She stared steadily at him, though her gaze seemed focused inward. Eventually, she took a deep breath, puffed her cheeks out, released her breath and said with quiet simplicity, 'I buried my father last week and now I need an escape. You've just given me that. Thanks. I'll be seeing you.'

Then she slipped into the car and drove off in a cloud of dust, leaving him alone in a silence broken only by the church bells pealing out over Greenbelt.

Chapter Sixteen

Still in a state of shock and grief over her father's suicide, Clare was also in a state of emotional turmoil over her growing feelings for Tony Rydell. Only he could crowd out of her mind the awful events of the past few days: the discovery of her father's body, the reluctant acceptance of his death, the awful business of arranging the funeral and, finally, the grim ceremony itself. She had endured it automatically, in shock's merciful trance, but was haunted constantly by the same recurring images of death and only escaped them when thinking about Tony.

'I don't understand it,' she confessed to her best friend, Nicola Tyler, when they had lunch in the baroque splendour of Clyde's, at Tyson's Corner, Virginia. 'He isn't my kind at all. He's the kind that should drive me mad. And yet I can't get him out of my mind and keep wanting to see him. It just doesn't make sense.'

'That's your weakness,' Nicola replied. 'You believe in commonsense. Then, when that somehow eludes you, you don't know how to deal with it. Put it down to infatuation, honey, and pay your dues to the devil.'

'Oh, God, don't even say that! It can't possibly be that. More likely I'm just compensating for the loss of my father. I need someone, something new, in my life. I think that explains it.'

Nicola's laughter was raucous. '*That's* a good one!' she exclaimed. 'If you can't find one reason, you'll find another. So why not Jack Douglas? Why didn't the death of your father push you closer to *him*?'

'He isn't *new*,' Clare responded, feeling distinctly foolish. 'Because he's part of the life I was living before the death of my father. Tony Rydell represents something *different*, for sure, and I think that's why, even if he's not my type, I've got him under my skin.'

Nicola grinned, shaking her head, and said, 'Mind if I smoke?'

'Of course not.'

Nicola lit a cigarette, exhaled a cloud of smoke, and smiled winningly at a couple of the well-dressed men in the expensive restaurant. She was big-boned, twice divorced and filthy rich,

'Why don't you just admit you've got the hots for him?' she asked.

'I don't believe in having the hots, as you crassly put it. I don't think of him that way.'

'I'll bet,' Nicola said.

While her worldly friend stared sardonically at her, Clare couldn't help but remember her meeting with Tony at NASA-Goddard. He had convinced her of his theory - and, if it was true, it was history's greatest story - and yet, even knowing that, it was *him*, much more than his work, that she was constantly dwelling upon. She was certainly getting her priorities mixed up and this knowledge disturbed her.

'Talking about the hots,' Nicola said, 'it's a real relief to be in this air-conditioning after being outside. This is one hell of a summer!'

'Yes,' Clare agreed, still brooding on her meeting with Tony Rydell and what he had told her. 'Too hot for comfort.'

'But not too hot for love. So what's this new man of yours like?'

'A bit rough,' Clare said without thinking. 'Well, not rough actually - more like a brilliant schoolboy. He's one of our best physicists, but says too much too loudly, and he's certainly not the most sophisticated guy you're likely to meet.'

'But cute, eh?'

Clare sighed helplessly. 'Yes, sort of.' She avoided Nicola's knowing grin by glancing around the busy restaurant and nodding at the friends and acquaintances seated at other tables. Most of those she recognised were agents from the Central Intelligence Agency headquarters at Langley, with a smattering of Pentagon and Capitol Hill politicians, as well as some wealthy Georgetown

residents out for the day. The sophisticated ambience had always appealed to Clare, but when she tried to imagine being here with Tony Rydell, she came to a blank wall. Likewise, when she thought of her home in Georgetown - that lovely Federal-period house that now seemed so large, empty and haunting - she could not imagine entertaining Rydell there. He wouldn't feel comfortable. She and Rydell came from very different worlds and that's all there was to it.

'You'd probably like him,' she told Nicola. 'You'd probably find him unpredictable, entertaining, and a little bit rough around the edges. Just your type, really.'

'Are you accusing me of liking rough trade, Clare?'

'You know what I mean.'

Nicola laughed again and glanced around the restaurant, trying to pick out her old flames or set her eyes on a new one. Born and bred in Georgetown to wealthy, party-loving parents, she had inherited their lust for pleasure and devoted most of her days to having a good time. Though overweight from eating and drinking, she was a natural sensualist and had led a life of what seemed, at least to Clare, to be good-natured, life-affirming chaos. Inheriting her wealth, she had only married wealthy men, but she had always gone for the rougher kind - self-made tycoons and entrepreneurs - which had virtually guaranteed violent quarrels, emotional reconciliations, and eventual divorce. Currently between husbands (she would certainly find another), she was socializing widely and having a good time. Clare was appalled by her emotional chaos, amused by her conversation, and increasingly envious of her ability to throw herself wholeheartedly into life. Clare only wished she could do the same.

As if sensing what Clare was feeling, Nicola leaned across the table to take hold of her wrist and squeeze it affectionately.

'So how *are* you faring?' she asked with genuine concern. 'Are you able to deal with it?'

'You mean my father's death?'

'Yes.'

Clare shrugged. 'I'm okay,' she lied, still feeling like hell. 'Not great, but okay. I find the silence of the house oppressive, I have trouble sleeping at nights, and sometimes I'm haunted by the feeling that he's still in the house.'

'That's natural,' Nicola said.

'Yes, I suppose so, though it's also the worst part of it - that and the constant recollections of the previous week, which just seemed like a bad dream. I felt

better once he was buried - at least the worst of it was over - and of course I went straight back to work, to help me forget it. So, I'm okay. A bit shaky, but surviving. There's just this sudden, shocking awareness of being totally alone for the first time, an awful feeling of isolation, and that's what I have to learn to deal with, one way or the other.

'Make it the other,' Nicola said. 'This new man you have the hots for. You *do* need something different in your life and he sounds just the ticket.'

'I think he's *too* different,' Clare said.

'That difference could give you new life,' Nicola told her, 'so why not give it a try?'

'It's not my style, Nicola. Anyway, I've to get back to work now, so let's get up and go.'

Having already paid the check, they were able to leave immediately, walking around the gushing fountain, waving or smiling at friends, and then making their escape by the crowded bar facing the front door.

Outside it was hot and humid, definitely more so than usual, and as they walked to their parked cars, Clare thought of the greenhouse effect and what it was doing. It was like a bad dream, not quite real... yet the world seemed so normal.

'So what about Jack Douglas?' Nicola asked, as they were opening the doors of their respective cars, parked side by side. 'Are you still seeing him?'

'Yes. As a matter of fact, I'm going to see him right now, though this time about work.'

'Don't tell him about the other guy,' Nicola said with a broad, wicked smile as she slipped into her car. 'He might react badly.'

'There's nothing to tell him,' Clare insisted. 'I'm not *involved* with Tony Rydell.'

Nicola slammed her door shut and then rolled down her window. 'Oh, yes, you are,' she said firmly. 'You may not know it, but you are. You hardly talked about anyone else during lunch and that's not normal for you. You're infatuated, whether or not you accept it, and I'm delighted to see it.'

'I'm not listening,' Clare said, then impulsively leaned down to kiss Nicola's forehead. 'Drive carefully,' she added, straightening up. 'And let's meet again soon.'

But before she could walk away, Nicola reached out to grab her by the wrist and pull her back down again.

‘Will you take a word of advice from an old friend?’ she asked.

‘Sure.’

‘Beware of Jack Douglas. I’ve been hearing talk for months now, and I don’t think the man is what he seems.’

‘He’s always had a reputation for being ruthless,’ Clare began, ‘but that doesn’t bother - ’

‘No, Clare, it’s more than that. Rumour has it that his marriage actually broke up because of his relentless domination of his wife, which included slapping her around. Finally, she’d had enough and got out - though Jack never tells the tale that way. Also, according to Capitol Hill gossip, his political ambitions are more extreme than he lets on and have caused some concern amongst the doves in the White House and Pentagon. Reportedly, he’s obsessed with the threat of Chinese, Japanese and even European economic dominance. And that’s the word, Clare: *obsessed*.’

‘Oh, God,’ Clare said, suddenly feeling flushed. ‘I knew the President was thinking along those lines, but I didn’t believe that Jack...’

‘He has the President’s ear,’ Nicola said, ‘and whispers into it day and night.’ She tugged at Clare’s hand, wanting to gain her full attention. ‘What I’m trying to say is that Douglas isn’t what he seems. He’s a violent man who likes to control and manipulate; he’s also more virulently right wing than you’d care to imagine.’

‘Christ!’ Clare whispered.

‘So be careful, Clare, not to cross him over Tony Rydell. Because Douglas, if he decides to go for you, will go all the way. You understand?’

‘Yes, Nicola. Thanks.’

‘My pleasure, sweetheart.’

With those parting words, Nicola reversed out of her parking space and drove off.

Clare followed Nicola out of the parking lot and then headed for Capitol Hill and the Old Executive Office building, west of the White House, driving through the dazzling light of a premature summer and unusual heat wave. The closer she came to Washington DC, the more nervous she felt - not only because of what Nicola had told her, but also because she knew that Jack Douglas wouldn’t be pleased when he heard what she wanted. He would think she had gone mad.

Once parked under the massive French Second Empire edifice that had formerly been the State, War, and Navy Department building, but now, as the Old Executive Office building, accommodated a presidential 'hideaway' suite and most of the President's White House staff, she tried to conquer her nervousness by avoiding her own office and walking resolutely to the Department of Management and Budget, then into Douglas's surprisingly spartan office. He was sitting behind his expansive desk, leaning back in his chair, tapping his perfect teeth with a pencil and not smiling at all.

'Where have *you* been?' he asked her.

'Pardon?' She glanced automatically at her wristwatch, checking if she was late.

'I don't mean this morning,' Jack clarified. 'I mean all of the past two weeks.'

She knew what he meant and was instantly embarrassed. Then, recalling what Nicola had told her, she felt a spasm of resentment, perhaps even a touch of fear.

'Are you going to ask me to sit down?'

'Sorry,' he said. 'Pull up a chair.' As she sat in front of the desk, he stopped tapping his teeth with the pencil and gazed steadily at her. 'I haven't seen you since the funeral and it's bothered me greatly. Particularly since I've left messages on your answerphone and haven't had a single call back.'

'I thought you'd have understood,' she replied. 'Some things you have to face alone - and this was my time for it.'

It was a lie, of course. Or at least half a lie. She *had* wanted to be alone, to adjust to her father's passing, but she had also deliberately avoided Jack because of Tony Rydell.

'And that was it?'

'Yes, Jack, that was it. And I don't think you should even have raised the question. After all, you've no claims on me.'

'No,' he said, 'no claims at all. It's just that I expected you to lean on me during this bad time.'

'I'm not the sort to lean on anyone, as you know.'

'I just forgot,' he replied, then he sighed and let his chair fall forward until he was leaning over the desk, his chin in his clasped hands. In doing this, he moved out of the sunlight and became less resplendent. 'So why am I blessed today, Clare? You *did* say it was business.'

Clare took a deep breath. 'It's about Tony Rydell's theory,' she said as calmly as she could manage, 'concerning the depletion of the ozone over the Antarctic.'

Jack's face hardened immediately. 'Yes, I remember. The theory you were willing to believe on his word alone. I *should* remember, since that's when I last saw you, except for the funeral. We had a fight, did we not?'

'Please, Jack, let's stick to business.'

'Okay. Give me business. You were going to visit him and cross-check his data. I take it you did so.'

'Yes.'

'And?'

'I'm forced to conclude that what he suggests is substantially correct.'

Jack wasn't thrilled, but he straightened up a little; not back into that halo of sunlight, but far enough to at least let her see that his face had suddenly turned into granite. 'And the data's in that file on your lap?'

'Yes.' She handed the file to him. 'You can have it cross-checked again, but I'm willing to stand by my findings. Rydell's not talking nonsense. The ozone is being depleted at a terrifying rate, and unless we find out what's doing it and somehow stop it, we're going to have a major global crisis within the next two years.'

Douglas looked at the closed file as if it contained a bomb, then gently placed it on his desk without opening it.

'I'll certainly have it cross-checked,' he said. 'I'm sure we'll find a rational explanation. But on the unlikely assumption that you're correct, what do you want?'

'Since it's vital that we find out what's devouring the ozone in the stratosphere, I want you to finance another airborne expedition. And since, as the report reveals, the mostly likely cause of the problem is a plasmode or radiobe form of life, the solution can only be found through biotechnology, which is my special field.'

'You want to go with him.'

'Yes,' Clare confessed.

As if trying to control his temper, Douglas covered his face with his hands, remained like that for a short while, then removed his hands and stared angrily at her. His eyes, always bright with cold intelligence, now looked like cut diamonds.

'Are you losing your mind?' he said. 'You *know* that's not possible. NASA's already overdrawn on its credit and is no longer popular with the administration. As for this extraordinary theory, how can I take it to the President? He's already

wary of your insistence that we dramatically reduce the production of anything involving CFCs. Now you want me to go back to him with the possibility of an *alien entity* up there. I can't do this, Clare - and probably wouldn't if I could. I think the whole thing's cock-eyed, I'm convinced your judgement is askew, and I'm not sure if it's being caused by your father's death or something to do with you and that lunatic, Rydell... Is this *personal*, Clare?'

She felt that he had slapped her face. It was the shock of the truth. Humiliated, confused, ashamed even as she spoke, she spat out, 'Of course it's not personal! How dare you even imply it! We're faced with the possibility of alien contact and you're saying it's *personal!*'

'Contact with what? With some kind of cosmic dust? Do you want me to take *that* to the President and keep my face straight?'

'Yes, dammit, I do!'

'Well, I won't do it, Clare. I won't encourage your foolishness. What we have here is the theory of a physicist noted for controversy; and, even worse, a theory supported by a woman formerly noted for her scientific objectivity. But you're not being objective in this case.'

'Examine that file, damn you!'

'You're not being objective because you *want* to believe this theory and have almost certainly, in your cross-checking, made only the selection of facts that will support your belief. A lot of scientists do it, Clare, when they become too emotionally involved with their work. And in my view, given my knowledge of you, this is just what you're doing. You *want* to believe Rydell. That alone will distort your judgement. And since you're so bright, you'll be able to present a case that would take us months to crack. So I'll have your file cross-checked, but I'll ensure that it's done properly, and in the meantime, you'll just have to wait and hope we find in your favour. This should take at least three months.'

'We can't afford three months!'

'Nothing is that urgent, Clare, and you damn well know it. Now is there anything else?'

She was shocked into silence and just stared at him, feeling helpless, defeated by his insight, until the anger that was hiding her embarrassment made her walk to the door. She stopped there, burning up, almost out of control, then turned back to glare at him and say, 'Damn you! This is just irresponsible!'

'*I'm* not irresponsible, Clare. *You're* the irresponsible one. You didn't want to get married because you didn't want to be enslaved by your emotions or

demeaned by dependence. You took pride in your emotional health and in your pure, scientific objectivity. I admired you for that, Clare. It was something rare in a woman. But now you're making a fool of yourself, because you've let your personal interests interfere with your work. You're obviously besotted with Rydell and you're behaving irrationally.'

'Go to hell,' Clare replied, humiliated, blind with rage, feeling stripped bare and loathing him for his perception. Then she left his office, slamming the door behind her, and hurried out of the building.

She had to call Tony.

Chapter Seventeen

Tony was in the middle of a domestic crisis when Clare called him.

With his mother and the Mexican housekeeper gone, he had to deal with the boys on his own and he wasn't really cut out for the job. To make matters worse, ever since the brief visit by Suzy, the boys had become more resentful of him, often blaming him for her departure and insisting that they wanted her back. Tony told them it wasn't possible, that Suzy didn't want to come back, but that only made them more resentful and rebellious.

Don had taken to sulking in his room, refusing to eat, and bullying his younger brother, Ronnie, who, in his turn, began wetting his bed, complaining constantly of various illness, and playing truant from school. The school complained about Ronnie's truancy; the cops twice brought Don in after catching him vandalising the flower beds in Greenbelt Park. So, in their different ways, the boys had become near impossible. When not fighting each other, they were quarrelling with the harassed Tony - and it was in the middle of such a quarrel that Clare rang with her bad news.

'You're going to school!' Tony was bawling at the sobbing Ronnie while the sullen-faced Don played with a yo-yo and studied the TV. 'Don't tell me you've got pains in your goddamned stomach! You've pulled that one too often!'

'It's *true* this time! My stomach hurts!'

'Crap!' Don exclaimed.

'Shut up, Don!' Tony said as the telephone started ringing. 'This is none of

your business. You can switch off that TV and stop playing with that yo-yo and pick up your schoolbooks and leave right now while I sort this kid out.' And then he picked up the telephone.

'I've got a headache,' Don said.

'You're a liar!' Ronnie shouted. 'You're just saying that 'cause I've got stomach pains. You always copy what *I* do!'

'Shut up the both of you. Yes?' Tony said into the telephone.

'Tony?'

'Yeah, right. Don, turn off that TV!'

'This is Clare.'

'Clare?'

'Yes, Clare Holton.'

'Sorry, Clare. Hold on a moment. Let me fix something here.' He grabbed a telephone directory and hurled it across the room at Don; it bounced off his shoulder and hit the TV set, making him jump up and switch the set off and, grabbing his schoolbooks from the table, hurry out of the house, followed immediately by the galvanised Ronnie, who was not without commonsense. 'Okay, Clare,' Tony said, 'I'm with you. I'm all ears. How did it go?'

'He didn't buy it,' she told him.

'Who?' he asked, not concentrating, still agitated because of the boys' behaviour and observing them through the front window, quarrelling violently as they waited for the bus that would take them to school.

'Jack Douglas. At the Department of Management and Budget. He refused flatly to mount another airborne expedition. He was adamant, Tony.'

Outside, little Ronnie lunged at the bigger Don and started swinging wild punches at him while Don held him off. Tony's instinct was to bawl abuse at them, but the windows were closed.

'What the hell do you mean, he was adamant? Didn't you show him the file?'

'Of course I showed him the file! I gave him the file, I told him what was in it, and he said he would have it thoroughly checked, but that it would take at least three months in all.'

'Three months!'

'He also insisted that there had to be a more rational explanation than the one we'd suggested, and that I was letting my scientific objectivity be distorted by some kind of wishful thinking. I had a terrible time there.'

The bus pulled up outside. Don pushed Ronnie away from it. When Ronnie

rolled on the lawn and jumped back up, screaming something, Tony felt like screaming as well, but started shouting instead.

'So what?' he shouted at Clare. 'So you had a terrible time! You shouldn't have walked out of his goddamned office until he'd agreed! You *know* how important this is! You should have impressed that upon him. How the hell do you have the nerve to ring me and say he just didn't buy it?'

'Hey, hold *on* a minute, Tony!'

'You should have told him he *has* to buy it! You're supposed to know how to talk to those guys, so why didn't you do it?'

'I tried my best, damn you!'

'Then go back and try again!'

'There's no point. Even the President's against it! What can I do against that?'

'Go back and argue, for chrissakes!'

'I *did* argue! He was adamant! And your involvement in this matter didn't help me, since he thinks you're a dreamer.'

'That goddamned UFO business.'

'Your scandal, not mine.'

'So you let him use that against our case and you didn't kick back.'

'I did!'

'Not enough.'

'Damn you, Tony – '

'I won't accept this.'

'You can't fight Jack Douglas *and* the White House.'

'You can't, but I can.'

Tony slammed the phone down. He watched the school bus moving off. Ronnie was flopping into a seat inside, well away from his brother. The bus disappeared and Tony sighed with relief, then he poured himself a cup of coffee and turned on the TV set. What he saw didn't register. He simply wanted the flickering image. He could hardly believe what he'd said to Clare and felt ashamed of himself.

It was because of the kids. It was because of all the hassle. It was because he was obsessed with what was devouring the ozone layer and, to his astonishment, also increasingly obsessed with Clare Holton. He couldn't accept that he'd fallen for her, felt confused and out of his depth, and so he'd flown off the handle. She'd tried to help, and he'd slapped her face in return.

Pretty neat, Mr Rydell.

Yet he had meant one thing: he wouldn't accept their refusal. Politicians only cared for the present, for their own term in office, and were ruthless in turning their backs on anything that posed a threat to it. That's what was going down here with that bastard, Jack Douglas: he was supporting a President whose sole concern at the moment was to keep the US economy healthy during his own term in office, irrespective of the long-term cost to the country, let alone the whole world. For that reason he would ignore the increasing use of products that released CFCs into the atmosphere... and for that reason he would actually suppress the knowledge that an unknown factor, possibly an alien life-form, was feeding off the ozone in the stratosphere.

Jack Douglas, on behalf of the President, would ruthlessly bury what could be the most important discovery in history.

If he, Tony Rydell, didn't do something to stop him.

Tony stared at the TV set, thinking of what he had said to Clare, understanding that what he was about to do would give her even more trouble... But he just had to do it.

Ashamed, but grimly determined, he picked up the telephone.

Chapter Eighteen

Suzy couldn't sleep at nights without Joe Wheeler beside her. She wasn't in love with him, at least not as she recalled the feeling; it was more that she needed to be filled up to help her forget. She wished she'd never gone back to Maryland to see Tony and the kids, to be humiliated and hurt and forced to hurry away in shame, and now she needed to be filled up by Joe Wheeler in order to forget it, at least for a while. You could do that with sex.

She liked Joe. He was kind and considerate and filled her up beautifully. She just didn't love him.

'Thing is,' she told her mother, 'that he gives me what Tony didn't - a little love and a lot of attention and respect for my person. A woman needs that.'

'Tony gave you that,' her mother said, preparing dinner at the kitchen table. 'He just did it in a different way. He wasn't obvious about it, since he's not the obvious type, and he took it for granted that you'd know and wouldn't worry

about it. He's always been a man involved with his work, but that don't make him neglectful.'

'Oh, *I'm* to blame, right?'

'I didn't say that, Suzy. I'm simply trying to point out that you can't compare Tony to Wheeler; that one's a married man with two kids and important work, while the other's single, runs a bar in town, and has all the time he needs to be attentive. That's all I'm sayin'.'

'Joe's busy as well, Mom.'

'Only with his other women.'

'We're not married. He's entitled to play the field.'

'You sure hold yourself cheap that way.'

'I just wanna have some fun. I don't wanna be involved. I've had enough of involvement with Tony and now I just want my freedom. I can have that with Joe.'

Her mother sighed. 'Here comes your father. Let's change the subject.'

'Yeah, Mom, let's do that.'

Her father came through the door, bringing rays of sunlight with him, was framed there in the sunlight as he kicked the earth from his boots, looking like a big tree with roots as he took his boots off. Then he entered the kitchen, a big man somehow diminished, and wiped the sweat from his face with grubby hands as he took a deep breath.

'It's still hot as hell out there,' he said. 'I just don't believe it.'

He didn't smile at either of them. He'd forgotten how to do that. He just went to the fridge and pulled out a can of beer and cracked it and drank it real quick, like it might be his last. Then he gasped and wiped his lips with his free hand and took a seat by the table. He glanced at the food his wife was making, but his eyes had a dulled look.

'If we don't get rain soon,' he said, 'we're not gonna make it.'

That's all he talked about these days - the state of his crops - and it made him seem less than he had been when she'd first come back here. Then he'd been just like the country, big and healthy, filled with life; but now, when he complained about the weather, he was somehow diminished.

'Crops is dyin',' he said. 'Too much sunshine, no rain. Ain't never had a summer like this one an' never want one again. It ain't natural, I tell you. There's a plague on this goddamned land. This was once the bread basket of America and now it's a dust bowl. I don't know what we're headed for.'

Suzy loved him, but he'd changed. The changing landscape had changed him. Now, when Suzy looked out her window, she saw what he was talking about. The greens and yellows had turned to brown, the sun had painted the blue sky white, and the dust, which in the daylight drifted lazily in the breeze, was so dense it even obscured the stars at night and made them less magical.

She could no longer recapture her childhood.

What had been, would be no more.

'It'll get better,' she said, trying to make her father smile. 'Any day now, you'll hear a clap of thunder and the land will be drenched. It'll all come out right then.'

'If that happens,' her father said without a smile, 'it'll be Noah's flood. The land's cursed. I can tell that.'

The conversations were all like this, filled with gloom and foreboding, and they drove Suzy out of the house and back into Joe's bed. He always welcomed her with open arms, big arms, the muscles bulging, and lay beside her, on top of her, below her, every which way, helping her to lose her bad thoughts and feel valued again.

'You're a treasure,' Joe told her. 'Your skin shines in the moonlight. I just have to feel your warm breath to get hard again. I wanna make you breathe quicker then, and see your pretty tits stiffen. I wanna make you part of me.'

'I believe you,' she replied, ''cause I can feel you. That's why I sound breathless.'

'Jesus, Suzy, let's do it!'

She loved him in heat, when he could hardly stop himself. She liked to spread across the bed like a sheet and let him be her blanket.

You could do that when you had air-conditioning, which her own bedroom didn't have.

'It's so hot there,' she told him. 'That house is like a furnace. I like it a lot better here, with the air-conditioning an' all. You can't enjoy this in the heat. You have to be cool to get hot. When you're hot - I mean hot all the time - you just want to cool down. That's why I like it here. It's so cool and you make me burn. We lie on crisp sheets and roll about and leave 'em soaked with our sweat. I feel so alive here.'

'What about me? Do I get credit?'

'You're some kinda man, Joe.'

He had his vanity, of course, but she didn't mind that at all. He was fairly

modest with it, just begged now and then, and she only had to feed him some sugar to make his tail start wagging again. He was decent, but not too bright, thoughtful, but not too sensitive, but bright enough, and with enough sensitivity, to give her more than his body. He took her out a fair bit, got her into the fresh air - trips along the river on the *Mississippi Belle*, the Boone and Scenic Valley Railroad, thrills and spills in Adventureland - but he also drew her out of herself by letting her talk and by talking back and not acting deaf. He was surprising that way, as well.

'It's all changed,' she told him. 'It's nothing like I remember. When I came back, I thought it was the same, but I only imagined it. Nothing lasts, that's the truth.'

'It *was* the same,' he told her. 'It's all changed since you got here. This place has changed more in the last few months than it's done in my lifetime. It's the weather, honey. We've never had weather like it. The crops are dying, the land's turning to dust, and the sun just gets hotter. This summer's lastin' forever.'

'I think my father's farm's in trouble.'

'A lot of farms have already closed.'

'If the farms close, this place will be hell on Earth.'

'You can bet on it,' Joe said.

Sometimes they made love in the fields, in the tall, dust-covered grass, and then lay side by side, their clothes a mess, to drink beer and talk even more. It was something she needed.

'I still miss them,' she told him.

'Your kids?'

'Yeah, that's right. When I have you inside me, I feel good, free as air, but when you stop, I think about them again and come over all guilty.'

'You'll go back to them in time.'

'I had my chance and refused. Now, if I try to go back, I think Tony might stop me.'

'You could be surprised,' Joe said.

'I'm too scared to take the chance. I don't think I could bear the humiliation of being worked over twice.'

'Tony sure was rough on you. I remember. You were crying.'

'He made me feel that I'd behaved like some kinda whore. Like I'd abused my own kids.'

'He was just angry, Suzy.'

‘No excuse.’

‘I think it is. When we’re angry, or even feeling betrayed, we do all sorts of dumb things.’

‘Tony’s not dumb.’

‘But he’s angry and feels betrayed. That’s exactly how you felt when you left him, so you should understand that.’

Suzy sighed and wiped the dust from her skirt and stood up in the dead grass.

‘Yeah,’ she said. ‘I see what you mean... but I still can’t go back. I won’t risk being rejected again. I couldn’t take it a second time. Come on, let’s get going.’

Joe drove her to Des Moines, where she picked up her own car and headed back to the farm, driving through the afternoon’s dazzling light and clouds of fine, drifting dust. The fields rolled away to the horizon and merged with the silvery sky, but the colours of the landscape had been bleached out, leaving it ominous. Suzy hardly recognised it, kept imagining she was somewhere else, and was glad to see the old, white-walled farmhouse rising out of approaching fields. She turned into the driveway, parked outside the house, noticed that her father’s truck wasn’t there and then went inside. Her mother was wearing her apron and preparing the dinner.

‘Dad still out?’ Suzy asked her.

‘Yeah,’ her mother said. ‘But he should here any minute now. He’s always real punctual.’

There was a pitcher of chilled lemonade on the table and Suzy poured herself some.

‘Had a good day?’ her mother asked.

‘Yeah,’ Suzy said. ‘Terrific. We cooled down by taking the boat along the river, then went for a picnic. Now I feel parched, but healthy.’

She drank some lemonade and it felt good, wetting her dry throat.

‘And you?’ she asked.

Her mother shrugged. ‘Same as always. I just felt the heat a lot more. It must be my age.’

‘It’s hot,’ Suzy said. ‘Hot as hell. Even *I* feel it these days.’ She glanced at the TV. The news was showing stormy weather. Europe was being hammered by storms and floods of unprecedented ferocity, with many lives lost. From where Suzy stood, in the kitchen’s claustrophobic heat, it didn’t seem possible. ‘The world’s weather’s going crazy,’ she said.

‘It sure is,’ her mother said.

The truck pulled up outside and Suzy looked at the front door. She was waiting for her father's entrance, that oak-like presence in striated sunlight, and when he didn't materialise as expected, she went to the open door and looked out through the wire mesh.

Her father had walked away from his truck and was at the far end of the lawn, kneeling in the shadows by the edge of the cornfield and scooping the earth up in his right hand.

Suzy went out, down the steps, across the lawn, and reached her father as he opened his right hand. He let the dry earth fall out between his fingers, then turned to look up at her.

She saw in his deeply shadowed eyes the gleaming pain of betrayal.

'You were right,' he said. 'The land sometimes turns on you. We're finished. We're done for.'

Then his eyes filled with tears.

Chapter Nineteen

When Clare heard the tone of Jack Douglas' voice she knew that something was wrong.

'Please come to my office right away,' he said with no preamble over the phone. 'And I *mean* right away. Drop whatever you're doing and come here now. This subject can't wait.'

He dropped his phone before Clare could reply, leaving her stunned.

To get where she was going she had to pass the packed, busy offices of the Vice President, assistants of the President and Presidential commissions, and by the time she reached Jack's office, she was breathless. She was also filled with the uncomfortable conviction that she was going to see the side of Jack Douglas that Nicola had warned her about.

When she entered his office, he was restlessly pacing the floor, his face as grim as she had ever seen it. When he saw her, he stopped, glared at her, then picked a copy of the *Washington Post* off his desk and shoved it brusquely into her hands.

'Have you seen this?' he asked her.

An article had been encircled by a black felt marker pen, with what was

obviously Jack's angry exclamation mark slashed beside it. The article had been written by Art Tabori, the same journalist who had hassled her at the American Geophysical Union in Baltimore, and sensationally entitled, THE GHOST IN THE OZONE HOLE.

Her stomach turned when she saw that, but she felt even worse when she read the article, which was a thorough, reasonable summary of everything that she and Rydell knew about the ozone hole over the Antarctic and the 'something unknown' that was devouring the ozone at a frightening rate. The article concluded with the information that the complete obliteration of the ozone layer would now take place within five years, instead of decades, and lead to an unprecedented global crisis, including flood and famine; that the only way to prevent this from happening would be to discover what was devouring the ozone and somehow counteract it; and that the United States government, concerned only with the immediate cost, was refusing to mount a vitally necessary second Airborne Antarctic Ozone Experiment.

Clare's hands were shaking when she placed the newspaper back on Jack's desk and then faced his angry gaze.

'Did *you* speak to that journalist?' he asked her.

'No,' she replied truthfully.

'Then it had to be that bastard, Rydell. No one else knows about this.'

Clare felt hot with guilt and rage, because she knew that Douglas was correct and that it had to be Tony. She had been angry with him anyway, because of his ungrateful outburst over the phone, made worse by his hanging up on her; but now, knowing what he had done, she felt used and betrayed.

'I'm sorry,' she said. 'I didn't have anything to do with this, but I suppose I'm responsible.'

'Damned right, you're responsible. If you hadn't encouraged that lunatic, he wouldn't have done this.'

'I didn't encourage him.'

'You lent your support to his crackpot theory. In doing that, you encouraged him to think he can do what he likes. Now, in doing this, he's virtually blackmailed our department into financing another airborne experiment. Thanks a lot, Clare!'

He turned away from her, marched around his desk, fell heavily into his chair, then glared fiercely at her.

'You're going to finance the expedition?' she asked him.

‘We don’t have a choice. Rydell knew just what he was doing when he blew that story to the *Washington Post*. He’s embarrassed the President, as well as this department, and now we either finance his expedition or stand accused of cynical neglect.’

He kept opening and closing his right hand, as if wanting to slap the desk - or someone’s face. His gaze remained coldly furious.

‘You think *I’m* ruthless? Then what about your precious Rydell? He’s outfoxed us all, the ruthless bastard, and now he’s got what he wants. Thanks for being so cooperative, Clare. I’m sure Rydell loves you for it.’

‘I’m sorry. I didn’t think he would...’

‘Just remember this.’ Douglas jabbed his finger at her. ‘I don’t know what it is between you and that damned physicist, but he *is* a troublemaker, he *has* caused a furore here, and *you're* now implicated with him in this sordid affair. He’s won this first round, but the President isn’t happy - not with him and not with you - and *I’m* certainly not going to forget what he’s done with your help. He’s got permission for his expedition and you can go along with him, but if nothing beneficial springs from it, God help the pair of you. Do you understand, Clare?’

‘Yes, Jack, I understand.’

He stared searchingly at her, his gaze relentless, then asked bluntly, ‘Are you having an affair with this guy?’

‘No,’ she replied, more urgently than she’d intended.

‘Are you going to have an affair with him?’

‘Of course not,’ she said.

‘I don’t believe you,’ Jack said, ‘so here’s some advice for you... You’ve finally let your emotions take precedence over your intellect and already the results have been disastrous. Think about it before you get more seriously involved. Now get out of my office.’

‘Jack, please...’

‘Just get out.’

She did as she was told, feeling shocked and humiliated, at once wounded by Jack’s rejection and outraged at Tony’s betrayal, torn between the two men in her life, between her mind and her heart.

Hurrying back to her own office, she gave in to her rage, which protected her from the shame, and dwelt with an almost murderous intensity on what Tony had done. He could not have failed to know that in giving their confidential information to the *Washington Post* he’d be betraying her trust, exposing her to

shame and humiliation, and possibly even damaging her career - and yet he'd gone on and done it. Yes, he was ruthless.

Convinced that her doubts about him had been confirmed, she stomped into her own office, determined to have her revenge. Sitting behind her desk, she picked up the phone and dialled his office at NASA-Goddard. His voice rang in her ear.

'Rydell here.'

'Tony, it's Clare.'

There was what she assumed was a nervous pause at the other end of the line, before he said, 'Oh. You read the newspapers?'

'Yes,' she said.

'I had to do it, Clare. I didn't want to, but I had to. This is too big an item to be buried, so there wasn't a choice. Don't be mad at me, Clare.'

'I'm not mad,' she lied, trying to sound as excited as possible. 'I think it was a great idea. In fact, I'm ringing to tell you it worked. I've just come from Douglas' office and he told me that the expedition's been approved. He was hopping mad, but clearly didn't have a choice. The expedition's going to be financed and you and I will go with it. I'm so excited, I can hardly wait to go. Congratulations, Tony.'

'Gee, that's terrific news,' he replied. 'Thanks for calling to tell me. And I'm sorry about how I spoke to you the other day. I mean, I wasn't myself that day. I was having some trouble with the kids and...'

'Don't apologise,' she said, sounding as pleasant as possible. 'I wasn't bothered at all. I know the kind of strain you must be under. Anyway, why not get together to celebrate your success and maybe talk about what we plan to do once we're in the Antarctic?'

'Oh, sure,' he said. 'That sounds terrific. What's your suggestion?'

Thinking it typical of him that he'd ask *her* to arrange something, but in this case finding it convenient, she said, 'Are you free this evening?'

'I can get away, I think.'

'Then why not come over to my place, about eight, and we'll have some drinks and... see where the evening leads us?'

Having deliberately added a sensually teasing element to the last phrase, she wasn't surprised when he paused again, before saying, 'Yeah, that sounds terrific. Where do you live?' When she gave him her address, he said, 'Georgetown! I might have known! Trust you to live with the nobs. Do I have to

enter through the servants' quarters?'

'Just ring the front-door bell.'

'Okay, then, I'll see you at eight.'

'I look forward to it.'

She put the phone down with a smile, now genuinely looking forward to the evening, and spent the rest of the afternoon at her desk, trying to distract herself with work while contemplating revenge.

That evening, she drank a bourbon while in the bath, then dressed as sexily as possible, wanting to tempt Rydell as much as she could before slapping him down. She had sensed that he was attracted to her, no matter how his aggression hid it, and she was determined to use that against him when he came for his good time. She felt angry, vengeful and *very* feminine. She really wanted to hurt him.

As usual, he did not arrive on time. In fact, he was forty-five minutes late, by which time Clare had drank two more glasses of bourbon and was feeling drunk. Tony seemed distracted. Instead of being seduced by the sight of her, he wiped sweat from his forehead, ran his fingers through his untidy hair, cast his eyes around the living room and gave a low whistle.

'Oh, boy,' he said, 'you really live in style! This sure is some joint.'

'You're late,' she said, already starting to lose the seductive poise she'd been practising. 'By forty-five minutes.'

'Yeah, right.' He avoided her gaze, taking in the decor. 'Sorry about that. I had a bit of trouble with the kids, but it's all sorted out now.'

'Trouble? What trouble?'

'Now that Suzy's gone, they resent me going out in the evenings. They say they'll get molested or murdered and it'll be on my conscience. A real cute pair I've got there.'

'Can't you get someone to look after them?'

He finally looked at her, at the bourbon in her hand, and she hastily placed it back on the table as he said, 'Well, it's been a bit difficult, you know? I mean I've tried it once or twice, but it doesn't seem to work out. No one's ever returned for a second bout - not even my mother, though I'm hoping she'll change her mind soon. Am I allowed to *sit down*?'

God, he was rude! And his children sounded like little horrors. A case of 'like father, like son', all happy in their menagerie.

'Don't bother,' she said as coldly as she could manage. 'You'll only have to get up again.'

'*What*? I thought we were having drinks and a talk. Maybe even a meal. Why the hell can't I sit down?'

He was trying to be offhand, but instead he wasn't sure how to behave. It made him more appealing to her, even though she was angry. For the first time since she had known him, he seemed insecure, almost like a teenager, and she felt a rush of warm feelings that she had to suppress.

'You're not having a drink, a talk or even a meal,' she informed him. 'I've only brought you all this way to tell you exactly what I think of you - and that isn't much. I didn't think much of you originally, but I certainly didn't think you'd be as self-centerd as you've turned out to be... Excuse me. I have to have a drink. Just stand there and wait awhile.'

She picked up her bourbon, had a sip and placed the glass back on the table

while Tony licked his dry lips.

'You're a shit, Mr Rydell. A regular little shit. That's the first time I've sworn in my life. I trust it lends the word extra weight.'

'It sure does,' Tony said.

Clare studied him in bewilderment, wondering why he had obsessed her, since in truth he was too short, overweight, with unhealthy skin, his brown hair and beard equally untidy, his clothes not in the best possible taste. Yet undeniably, even as she raged against him, she felt herself succumb to him.

'And *why* are you a shit? Because you don't *give* a shit! Not about me, probably not about your family, and certainly not about much outside of your work. You only care about what you want, not about how you get it. You don't care about other people's feelings - you hardly know they exist. You're rude, aggressive, unpunctual and inconsiderate, a dishevelled, scatter-brained man with no sense of morality - and that makes you a shit.'

'Are you finished? Am I allowed to sit down now?'

He was trying to be flippant, but it didn't quite come off. He looked pale and the hurt showed in his face as he took a step forward. Clare was held by his brightening gaze, transfixed by his intensity, and then realised that her anger was a futile attempt to stifle the growing feelings she had for him.

'No, damn it, I'm *not* finished! And you're not allowed to sit down! You'll stand there like a good little boy until I tell you otherwise.'

'Why?'

'Because I despise you. Because you betrayed my trust. Because apart from being rude and ungrateful and thoughtless, you showed indifference to my position and the damage your ploy might cause when you gave my information to the press to suit your own ends.'

'You've no proof of that, Clare!

'*What*?'

'You've no proof. Art Tabori didn't say where he obtained his information - and believe me, he won't say.'

'It could only have been you. When I phoned you today, you admitted that you'd given that interview.'

'That doesn't necessarily mean that I passed on your confidential information.'

'If not you, then who?'

'There are industrial spies, Clare. There are hackers who get into computers and steal the material. Have you thought about that?'

‘It was you and damned well you know it, so don’t try denying it.’

‘It *could* have been a hacker and I could be as innocent as a turkey, plucked clean for Thanksgiving. The fact that Jack Douglas has *accused* me of doing it, doesn’t constitute proof. So I’m denying it, Clare. And since no one can blame you without proof, I didn’t betray you. All I did was get you what you wanted: that trip to the Antarctic. Now do I get to sit down and have that drink or do I get hung unjustly?’

She stared at him, amazed, taken aback by his cheek, then a bubble of mirth burst inside her as he stepped closer to her.

‘You’re outrageous,’ she whispered.

He took another step closer, leaving only inches between them. She felt his body’s heat, the electric charge of his secret longing, and she suddenly brimmed over with the emotions she had tried to suppress. Tony’s eyes were bright and glistening, as if about to shed tears, and she realised that she had shared one thing with him: the fear of feeling too deeply. Now she let that fear go and felt it taking wing, releasing her, leaving her unencumbered by doubt and ripe to receive him.

She reached out instinctively, hardly knowing she was doing so, to touch the light that glowed beneath his skin and illuminated his features. He closed his eyes and she kissed his eyelids, his forehead, his nose and lips, then felt his hands sliding down her spine as his body pressed into her.

She didn’t remember what happened next. Most of the details were vague. She only knew that her clothing was stripped off her on the bed to which, by some magical means, they had painlessly travelled.

‘Oh, God,’ she whispered breathlessly in his ear, ‘I just don’t believe this!’

He didn’t reply - at least, not immediately. He was too busy beside her, above her, inside her, making love as if he knew her instinctively and could make her flesh sing. And while her flesh sang, she purred, stretched herself, coiled about him, and finally lost her senses in a spasm that seemed to go on forever.

Recovering, but still breathless, her emotions in disarray, she kept her eyes closed and traced the contours of his face with her fingers, trying to learn more about him. His presence filled the darkness behind her closed eyes and made her feel whole.

‘You don’t have to believe anything,’ he said. ‘You just go with the flow.’

Those words set her free.

Chapter Twenty

Rydell and Clare were in Punta Arenas, Chile, for three days before the converted DC-8 airliner had been prepared for its flight. To Tony's disgust, Dwight refused to let him or Clare take the single-pilot ER-2 research plane because of Tony's officially reported 'inexplicable behavioural patterns' during his previous solo flight through the top of the ozone hole. Instead, he and Clare would journey through the bottom of the ozone layer, with a group of other scientists, at an altitude of a mere twelve kilometres while another pilot ventured in the ER-2 through the top of the hole.

'Anyway,' Dwight told him, 'if you've finished with your bitching, you might as well know that the DC-8 won't be equipped for another three days, so you and Clare can enjoy the scenery and have a good time. That should settle you down, pal.'

Delighted that Dwight had picked up on the new relationship between him and Clare, and that he seemed to approve, Tony took his advice and had what amounted to a three-day vacation with Clare. At ease in the knowledge that his mother had agreed to leave Menopause Manor once more and return home to look after the two boys during his two-week absence, and transported to new heights by the love he felt for Clare, he was able to show her the surrounding countryside of magnificent lakes and mountains without suffering guilt – indeed, with a great deal of pleasure.

He and Clare shared a room in the Cabo de Hornos hotel, in the Plaza de Armas in downtown Punta Arenas. During their three days together, Tony showed her the race tracks, tennis courts and golf course of the Club Hipico, impressed her with his knowledge of Indian culture when in the Salesiano Regional Museum, and then really surprised her by showing her that he could ski when he led her down the snow-covered slopes of the Patagonian Andes, just four miles from Punta Arenas, but very much like another world.

'You're full of surprises,' she told him later, 'but skiing I still can't believe!'

'I learnt it during all those trips to Europe,' he explained, 'which were financed by NASA. I've never skied in America. I'm kind of a different person when I'm away; I wear my old skin back home.'

He was certainly a different person with Clare, less frazzled, more assured,

much closer to the self he had lost in a life shared with Suzy. He and Suzy had shared little - he had lived for his work; she had lived for pleasure - but with Clare, who superficially seemed his opposite, he felt he had found his true identity. Of course, he couldn't tell her that. It would seem too goddamned *soft*. Instead, he made her laugh a lot, slept with her, made love to her, and let her know that if he was a bit of a shambles, he was not without merit.

'You have your charming side,' she replied to that suggestion. 'It's not much, but it's something.'

Their final day of freedom was spent on a boat cruise to the San Rafael Lagoon: eerily majestic beneath imposing glaciers, the sun flashing off the blocks of broken ice drifting around the boat and turning them into fantastic colours. Later they returned to the Plaza de Armos, to its vibrancy and colour, where Clare kissed the foot of the statue of Magellan, then laughed and kissed Tony, then got mildly drunk with him at a table outside the bar, and finally fell into his arms in their bed in the hotel, where they made love, in between short bouts of sleep, for most of the night.

The next morning, when they returned to the airstrip, they were surprisingly fit.

'Welcome back, boys and girls,' Dwight greeted them. 'Now let's go to the briefing.'

Leaving his office in the prefabricated hut at the edge of the airstrip owned by the Chilean Air Force, he took them into the briefing room, which was not as full as it had been during the previous mission, with a mere half-a-dozen men, all wearing bulky flying outfits, scattered through the otherwise empty seats. When one of the men looked over his shoulder and gave Tony a wide, beaming smile, then walked up to him, he was surprised to see that it was his old buddy, Rick Polanski.

Rick slapped his large hand down on Tony's shoulder and shook him affectionately. 'Dwight kept me as a surprise for you,' he said. 'You evil sonofabitch!'

'A surprise? Evil? What *is* this?'

Polanski, a big man, looked enormous in his flying suit and actually seemed about to topple over when he chuckled with all his flab quivering. 'You evil little bastard,' he said, revising his first remark. 'I don't get the *Washington Post* in Phoenix, but I *did* get a visit from some of Jack Douglas's pals, and they

kindly brought a copy of the article to help keep me up-to-date. That was some stunt you pulled, kid.'

'I didn't have a thing to do with it,' Tony lied. 'It was some hacker, believe me.'

'Some hacker, my ass! It was you and we all know it. But Jack Douglas, who wouldn't even trust his mother, thought it *might* have been me - something you intended, no doubt.'

'Jesus, Rick, would I do that to you?'

'You would and did.' Polanski obviously admired him for it. 'Anyway, Douglas's men insinuated that any further info I picked up should be treated as classified and that any more breaches of security would bring heavy penalties raining upon my tender head. Then they escorted me to Washington DC, where, with Jack Douglas, I discussed the possibility of my coming on this expedition. So, here I am - for reasons that you're about to find out. Now let's take a seat.'

'This is Clare Holton,' Tony said. 'The scientific liaison officer between NASA and the White House, via Douglas's office, but here as a biotechnologist.'

'Pleased to meet you,' Polanski said, glancing admiringly at Clare's face, since little of her slender body could be observed inside her bulky flying suit. 'Well, it's showtime, folks.'

They took their seats as Dwight, wearing corduroy trousers, an open-necked shirt, and a leather flight jacket, walked onto the small stage and stood with his back to a large artist's impression of the mountain-shaped hole in the ozone layer. The flight paths of the ER-2 and DC-8 were both marked on the drawing, showing the former's planned flight through the top of the hole, the latter much lower down, at an altitude of twelve kilometres.

'Good morning, ladies and gentlemen,' Dwight said smoothly. 'You can all breathe easily this morning, since this particular briefing *will* be brief.'

When his small audience had stopped laughing, Dwight touched the large drawing with his pointer and gave them the same flight information that Tony had heard during his briefing with the first expedition. Then, when that was clarified, Dwight said: 'The purpose of the previous expedition was to ascertain the rate of the depletion of the ozone around that widening and deepening hole over the Antarctic. You, gentlemen - and Clare Holton, of NASA - have been brought together, under the supervision of our old friend, Rick Polanski, for a very different purpose altogether.'

Here, he paused, grinned at Tony, then continued, 'According to our reading of

the previous TOMS and SBUV experiment data, the ozone over the Antarctic is being depleted much faster than the CFCs in the stratosphere can account for. This means in effect that something else, something *unknown*, is devouring the ozone at what appears to be a dangerous rate. Since previous expeditions through the ozone hole failed to reveal anything unexpected or unknown in the stratosphere, we can only assume, at this point, that what we are faced with is an unknown organism that may take the shape of cosmic dust, bacterial spores, or charged particles, such as plasmodes or radiobes.'

'Are you talking about an *alien life form*?' Polanski asked, with deliberate, loud emphasis on his last words and a slight, victorious grin on his face.

Dwight gazed steadily at him, then returned the slight grin. 'No,' he said carefully, 'I didn't quite say that - though I'm not about to stop anyone here from forming their own opinion.'

'Gee, thanks,' Polanski said.

When the chuckles had subsided, Dwight continued, unperturbed: 'Our mission is to ascertain if anything organic - or, to please Mister Polanski, *living* - actually exists within the ozone hole. The search for cosmic dust or bacterial spores can only be done with balloons or, more likely, the exo-biology facilities of a space station; so initially you'll concentrate on the charged-particle hypothesis and try to discover whether *anything* of an unknown quality, possibly ion-based, is having an effect on the ozone hole.'

'This sounds like something alien to me,' Polanski said with another broad grin.

Dwight merely smiled slightly, then said, 'Mister Polanski is obviously enjoying himself because this is his field. Indeed, most of you are here at his recommendation. You had to wait three days for the DC-8 to be prepared because the ozone-reading instruments had to be removed from the aircraft and replaced with the instruments you know and use when trying to locate and identify unidentified flying objects. Why? Because what we're trying to find is certainly unidentified and, if it exists, of an unknown nature. If there's anything up there, whether visible or invisible, we want to hear it, see it, or at least get some kind of reading from it.'

Someone gave a low whistle, which Dwight ignored.

'If we come back with nothing,' he said, 'this project will be aborted. If, on the other hand, we get even a hint of something unknown, we'll be talking about a whole different ball game.' Saying that, he grinned at Tony and the beaming

Polanski. ‘Oh, one last thing. According to certain reports, whatever is up there, if it exists, can have strange effects on human beings, notably by creating hallucinatory states of mind. Should anything like that occur, try to stay calm, remember you’re not alone, and assess as much as possible of what you’re experiencing. Okay, any questions?’

There were no questions as such, but the half dozen scientists glanced in a bewildered manner at one another, as if they couldn’t believe what they had heard.

‘Okay,’ Dwight said, ‘let’s get going.’

Five of the other six men wearing flying outfits pushed their chairs back, then stood up and left the briefing room. The sixth man approached Dwight when he had jumped down from the platform, then stopped with him in front of Tony, Clare and Polanski.

‘You two don’t have to look so smug,’ Dwight said without malice to Tony and Polanski. Then, offering Clare an easy grin, he said, ‘You’ve got two Cheshire cats on your tail. The best of luck, Clare. Tony,’ he said, indicating the man beside him, ‘this is Group-Captain Matthew Horowitz of USAF. He’s going to make the same flight you previously made in the ER-2. You two are going to be in radio contact as you fly separately through the hole, so each of you will know what the other is experiencing at any given time. Naturally both conversations will be recorded.’

‘Sure,’ Tony said. ‘Fine. Nice to meet you, Captain.’ He introduced Clare and Polanski, then Horowitz said, ‘Dwight was telling me about your weird experience during your previous flight up there. You got any advice to pass on?’

‘Yeah,’ Tony said. ‘What you see, or what you feel, could be disorientating to you - it might even frighten the hell out of you - so just try to keep your wits about you. Try to distance yourself from the phenomenon and think about it as objectively as possible. Finally, keep reminding yourself that it’s not real and can’t possibly hurt you. We’re gonna be in radio contact anyway, and that might be a help. Okay?’

‘Okay, Tony.’

‘Well, let’s get going. There’re all waiting out there.’

‘Yeah, right,’ Dwight agreed. ‘On your way... and good luck.’

With Clare on one side of him and Polanski on the other, Tony followed the Group-Captain out onto the runway. A fierce wind was blowing and dark clouds threatened rain, so he was glad when they parted from Horowitz and made their

way into the relative shelter of the DC-8's fuselage. Its engines were already roaring as Tony followed Clare up the steps and then into the aircraft.

The fear began then.

It was as if, by merely stepping into the aircraft, he was reminded in detail of just how frightening his previous experience had been. The aircraft seemed longer and darker than it actually was because most of the seats had been removed to make way for the mass of scientific instruments. Looking along it, Tony felt oddly trapped, beyond the point of no return. The fear wasn't severe at first - more like a sudden attack of nerves - but although he managed to control it, he still felt badly shaken.

'Where do I sit?' Clare asked him.

'Beside me,' Tony said. 'You've got nothing to do here but observe, so you'll sit beside me in the pilot's cabin while I'm on the radio. Polanski here, he's in charge of these men and all this equipment. At this point we can't check for cosmic dust or bacterial spores, but Polanski's team can take readings of any electronic, orgone, magnetic or gravitational anomalies inside the hole, and also, if we have a miracle, take monochrome, full colour and infrared photographs and films. Naturally they'll also record any infrasounds, if such exist. Now follow me, Clare.'

He squeezed Polanski's broad shoulder, gave him the thumbs-up, then led Clare along the interior of the aircraft, past the scientists with their radar and laser systems, magnometers and gravimeters, ambient and parabolic microphones, various recording devices, and the video, motion-picture and still cameras that had been placed in front of various windows on both sides of the fuselage. The doors of the aircraft were closed as he led Clare into the pilot's compartment. He indicated that Clare should sit beside the pilot, then he strapped himself in at the other side of her.

When the DC-8 took off a few minutes later, Tony's throat felt uncomfortably dry.

Once more he watched the ground falling away, though not so fast this time, to let a vast landscape of lakes, fjords, lagoons and mountains unroll below great swatches of white and grey clouds. The rivers ran towards the sea, the land gradually disappeared, then the sea became a vast bowl of black-shadowed, silvery ripples, filled with rainbow coloured blocks of ice and glittering glaciers.

'It's fantastic!' Clare shouted against the roaring of the plane. 'It was worth it just to see this!'

Tony grinned and put his thumb up, but he didn't feel that happy. He kept staring straight ahead, to where the cloudy sky met the sea's concave horizon, thinking about what he was flying into, which was what caused his fear. Ashamed, he silently chided himself for being stupid, but he couldn't help remembering his hallucination, that ghost, the Suzy who should not have been there, and as more clouds gathered in around the aircraft, his fear grew inexorably.

He dreaded seeing the Antarctic, but eventually it glittered on the horizon, its frozen mountain ranges and ice shelves growing higher and wider as the aircraft crossed the Bellingshausen Sea and approached Ellsworth Land. Then the snowy wastelands were below, the white wilderness spread out around him, and he saw jade icebergs covered with algae and plankton, sheet ice and ice falls, polar plateaux and sheer snow-banks and lakes reflecting towering glaciers: a general whiteness that swept out on all sides to a stunning blue sky.

It filled him with dread. He was inside the ozone hole and that knowledge knotted in his guts, making him reach out for Clare's hand and a touch of reality.

She jerked her hand away. Startled, he looked at her. She was staring straight ahead, out of the cockpit, at the sky, and the skin on her face was deathly white around her widening, frightened eyes.

Tony looked out as well, saw white clouds striated with sunlight, glanced back at Clare and saw her trembling and breaking out in a cold sweat. He reached for her again, but felt only an icy presence. He jerked his hand back as something materialized in front of Clare…a ball of darkness near her feet, spreading out, rising up, taking the shape of a human figure, a ghostly silhouette... then a silvery-haired man in a pinstripe suit.

Clare watched the man materializing. She seemed torn between love and terror. When the man smiled and reached out to her, she twitched and then groaned.

'Oh, my God!' Tony murmured.

A flash of light filled the cockpit and faded away in a second. Looking away from the apparition in front of Clare, Tony saw a silvery disc, a flying saucer, fly away towards the east, stop abruptly, hover briefly, then rise vertically at incredible speed before abruptly disappearing, leaving nothing but empty sky.

Tony blinked and rubbed his eyes and looked out again.

The sky was empty... No, it wasn't. Something flashed past and was gone. The sky was empty and then there were more flashes and they changed into silvery

discs. They were crossing the DC-8's flight-path, rising and falling, criss-crossing, connected by streams of silvery light and shimmering heat waves.

They were vivid, yet unreal.

Clare was sobbing, muttering incoherent words, her knuckles white where she was gripping her chair, her tears falling freely. Tony saw that the man in front of her, whose hand was on her shoulder, had been joined by a woman roughly his age, whose gentle smile seemed all wrong.

Then the pilot saw them also. His eyes widened in disbelief and he started to say something, but instead glanced down at his own lap. He screamed when he saw a giant tarantula crawling between his legs.

'Oh, Christ!' he cried. 'Jesus!'

He swiped at the tarantula, but his hand just went through it, and as he stared down, gibbering, obviously losing his senses, Tony shouted, 'Don't panic! It's not real! Put the plane on autopilot and get a grip on yourself!'

The pilot shuddered and closed his eyes. '*Do it now!'* Tony bawled. The pilot opened his eyes as the tarantula disappeared, and then he reached out, turned on the autopilot and sank back, breathing heavily. When he looked up and saw the ghosts in front of Clare, he shuddered, closed his eyes again, and let out a helpless groan.

'Oh, no!' Clare sobbed. 'Please no!'

She was trying to twist sideways in her seat, away from the apparitions, but was being held back by the safety strap and didn't think to unbuckle it. She was trembling, pouring sweat, opening and closing her eyes frantically, and again, when Tony tried to touch her, an icy cold almost burned his fingers and made him jerk his hand back.

The apparitions remained there. The radio was crackling dementedly. When Tony looked out of the cockpit he still saw the flying saucers, some far away, the size of dimes, others much closer, the size of aircraft, shooting back and forth, up and down, stopping and starting abruptly, with a speed and manoeuvrability that made a mockery of science.

Then Tony felt Suzy.

She was there before he saw her. He smelt her scent and felt her body. He knew immediately that she was sitting on his lap with her hands on his neck. His heart raced and he started choking. The space before him dissolved to darkness. Suzy materialised out of that darkness, giving shape to her substance. She was sitting on his lap, leaning back in a teasing manner, wearing the clothes she had

worn when she had visited the house, her smile slightly mocking, seductive, and somehow terrifying.

Yes, Tony was terrified.

'Suzy?'

She didn't reply. She just smiled at him, chilling him. Then, as if hearing Clare's sobbing, she turned and looked at her. She registered nothing, just stared at her, as if staring through her, and remained that way, clinging to Tony's neck, staring blindly at Clare.

'Jesus Christ!' Tony whispered.

The plane continued flying, guided by the autopilot, heading deeper into the ozone hole.

Someone behind Tony screamed - someone in the main cabin - and then someone else cursed loudly, a man bellowed a woman's name, and then the pilot at the other side of the sobbing Clare let out a strangled groan.

A snake was sliding up between his legs and curling over his belly.

He screamed and slapped wildly at it and started kicking his legs while Clare continued sobbing and the main cabin, behind them, turned into bedlam.

Trying to keep calm, Tony reached down between himself and the ghostly Suzy, felt her belly against his hand, unbuckled his safety belt and lurched forward, hoping to adjust the radio and get something more useful than static.

Although he could feel and smell Suzy, he appeared to pass through her.

It made him feel nauseous.

He tried to contact the ER-2, but received only static. When he tried to contact the Antarctic land bases, the static increased. Cursing, he sat back, pressing his spine into the seat. Suzy instantly reappeared in his lap, leaning back, smiling at him.

That smile chilled his blood.

'Christ!' he whispered. 'Jesus Christ! Don't panic! Stay in control!' But he couldn't take it anymore - the ghostly Suzy, the weeping Clare, the groaning pilot, the spiders and snakes - so he jumped out of his seat, passing through Clare's apparitions, and hurried back into the main cabin to see what was happening there.

The whole damned place was haunted.

The gloom in the long, narrow cabin was filled with streaks of silvery light linked to spinning discs that bobbed magically in thin air and glided gracefully to and fro, particularly around the stunned Rick Polanski. Some of the scientists

were weeping, others were clearly shocked, and all of them were looking at people who should not have been there. The ghosts seemed human, though they wore clothes of different periods, and two of them, kneeling in front of a weeping scientist, were no more than ten years old.

The video, movie and still cameras at the windows were unattended, as was the rest of the scientific equipment.

It was a living nightmare.

Mentally prepared for it and keeping a grip on himself, Tony realised that the plane, on autopilot, was taking them deeper into the ozone hole... and that the deeper in they went, the more vivid the apparitions were becoming.

Returning to the cockpit to get the pilot to turn back, he was blinded by a flash of brilliant light. Stopping, he rubbed his eyes, adjusted them to the light, then looked into the cockpit.

What he saw horrified him.

The pilot, now covered in snakes and spiders, was paralysed with fear. Clare was leaning forward slightly, her face hidden in her hands, trembling uncontrollably as the two elderly people, now kneeling, embraced her, smiling with a frightening, glacial kindness. And there, beside this chilling tableau, was another Tony and Suzy.

The latter was on the former's lap, still clinging to his neck and smiling, as the skin on her face stretched tighter, revealing the bone beneath.

Beyond her was a sky that should not have been there: black as pitch and filled with stars, above and below, all around, offering only eternity.

Time stood still at that moment.

Chapter Twenty-One

'Let me go over these facts again,' Dwight said softly. 'When you returned to the cockpit, you...'

'For Chrissakes, Dwight, we've been over it a dozen times. I'm getting goddamned tired of this crap. Let's just call it a day, right?'

'Please, Tony, just one more time.'

Exasperated, Tony glanced at Clare, who was staring down at her clasped

hands, her face still pale and drawn, her shoulders slumped in defeat. Disturbed to see that, he glanced around the briefing room, which was empty apart from him and Clare. It was also decidedly bleak and too cold for comfort. Sighing, he returned his gaze to Dwight and raised his hands as if praying.

'Okay,' he said. 'One more time.'

Dwight nodded and smiled, then glanced down at his notes and looked up again.

'You returned to the cockpit and...'

'The pilot was covered in snakes and spiders. Clare's two apparitions - as she says, her mother and father - were kneeling in front of her, as if consoling her. I saw an apparition of myself, sitting exactly as I'd been sitting when I left the cockpit, with Suzy on its lap, just as she had been - except that the skin on her face was stretching tighter and tighter, revealing the bones beneath, as if about to peel off altogether, or maybe just melt away.'

Clare shuddered beside him, so he reached out to squeeze her shoulder reassuringly. This time he could touch her.

'And outside the plane?' Dwight asked him.

'I still can't believe it. Instead of the sheer blue sky over the Antarctic, there was nothing but a great darkness filled with stars. No sign of the Antarctic. No trace of the normal sky. Just this great darkness filled with stars, like being in outer space.'

'And the flying saucers?'

'No sign of them either.'

'And the DC-8 was still on autopilot?'

'Right. And according to the instrument panel we were keeping to our course and should have been, at that point, directly above the Vinson Massif, in Marie Byrd Land - not surrounded by goddamned stars in what seemed like outer space.'

'We lost contact with you long before that,' Dwight said. 'Five minutes after you crossed the Antarctic Circle, to be exact. We lost contact with you and the ER-2 at exactly the same time, but at least you returned.'

Clare shuddered again and Tony knew what was bothering her: according to Dwight, shortly after crossing the Antarctic Circle, the pilot of the ER-2 had started screaming dementedly, then apparently lost control of his aircraft and crashed. Tony wondered just what the pilot had experienced before going down.

'Yeah,' he said, 'at least we returned. I guess I was able to control myself better

than the others because I'd had my previous experience and was more prepared. Anyway, when I saw that according to the instrument panel we *were* still on course - and that what was outside was probably as much an hallucination as what was going on inside - I realised that the deeper we flew into the ozone hole, the more varied and vivid the hallucinations were becoming. So, ignoring what was going on around me in the pilot's cabin, I took the plane off autopilot and turned us back towards the Antarctic Circle. I also tried to make radio contact, first with the ER-2, then with ground control. I failed on both counts.'

'You got nothing but static.'

'Right. But the static was really weird. I was convinced I could hear hundreds of voices, all distant, ghostly, and overlapping, but definitely voices. Then I thought the voices were actually in my head, which made me feel crazy.'

'And you report that they weren't all speaking English.'

'Correct. I'm pretty certain I heard English words mixed in there, but there seemed to be an awful lot of other languages. I recognised bits of French, bits of German. I'm not sure of the others.'

'You don't personally speak any language other than English?'

'Only high school French.'

'Okay, Tony, continue.'

'Well, like I said, the closer we got to the Antarctic Circle, the more normal the static began to sound...'

'The voices gradually faded away and were replaced by normal static?'

'Right. And I also noticed that the skin that had appeared to be stretched so tight on the ghostly Suzy's face began returning to normal, the apparitions of Clare's mother and father actually stood up to take their previous positions, and the snakes and spiders on the pilot started fading away. Then, just as we approached the Antarctic Circle, they disappeared altogether and the pilot recovered from the trance he'd been in. As we flew back across the Antarctic Circle, first my own doppelganger disappeared, then Suzy, and finally the two apparitions in front of Clare... and as you know, everything returned to normal at the same time back in the main cabin.'

Dwight nodded thoughtfully, glanced at the distraught Clare, then stood up, walked to the window, and looked out at the airstrip as he spoke.

'Well, we know at least one thing. All of the hallucinations were related directly to the most prominent emotions or concerns of the individuals involved. In your case, the major anxiety of the past few months has been the fact that

Suzy left you - and it was Suzy you saw in both cases. Clare, here, recently lost her father - and lost her mother not too long before that - which may explain why she saw them both in the pilot's cabin. As for the pilot, we checked his psychological profile and learned that while he's in excellent mental health, he has a phobia about snakes and spiders. As for the scientists in the main cabin, one of them saw his two children, who drowned together eighteen months ago; another saw the fiancée who'd ditched him for another man; the others saw various relatives and friends, alive or dead. Rick Polanski saw only the flying saucers - *his* major concern in life.'

'So,' Tony said, 'the hallucinations are obviously drawn from the individual's subconscious, but once given shape, they become so real that they can be observed by others, as well as giving off human smells and being almost physical.'

'*Almost* physical,' Dwight emphasised. 'You could feel Suzy on your lap and you felt her hands around your neck, yet when instinct made you jump up without thinking, you appeared to pass through her.'

'Christ, yes, that's right.'

'So the extent of their physical reality is, in a sense, dictated by the will of the individual creating them.'

'Right. And the question is...'

'Who, or what, is controlling the mind of the individual?'

'The unknown factor that's feeding off the ozone - whatever it is.'

Dwight sighed. 'Jesus!' When he looked out the window as if, by studying the sky over Chile, he would somehow solve the mystery.

Tony placed his hand on Clare's shoulder and let it rest there. She raised her head and smiled at him, but her eyes were filled with grief, and he knew that the apparitions of her parents had severely disturbed her.

'Are you okay?'

'Not too good,' she said, 'but I'm getting over it slowly. I'm just convinced that I'll never forget the experience, and I can't bear the thought of that.'

'You'll forget it in time,' Tony said reassuringly, though he wasn't sure that she would, since he didn't think that *he* would. 'So what happens now?' he asked Dwight when he walked back to their chairs and sat down.

Dwight raised his hands in the air, as if praying for clemency. 'Well, something's happening up there - that much is for sure. Your first experience has now been corroborated by the experiences of Clare and all the others, and we

know that *something* is effecting those who fly into the hole in the ozone layer. We also know that though your experience wasn't shared by those flying through the bottom of the hole during the first flight, during the second, your experience *was* shared by all the others; while the pilot flying through the top of the hole suffered an experience so dreadful that it made him lose control of his aircraft and crash. So whatever it is that's causing the phenomenon, it's obviously extended its presence most of the way down the hole, from the top to the bottom, and is now coming dangerously close to Earth.'

'So what happens now?' Tony repeated.

'We're preparing a report on what happened to both airplanes; we'll submit it to the White House, through Jack Douglas. We're also waiting for the analyses of the readings of the scientific instruments on board - we hope they continued functioning throughout the whole event - and the results will be included with the main report. What happens then, depends on what the instrument readings tell us, but clearly, given what happened to you guys, we can't examine that unknown organism - if it *is* an organism - with a manned space station. We can only use payload-carrying balloons, which I'm planning to recommend.'

'And when will we have the instrument readings from the DC-8?'

'Tonight,' Dwight said. 'I'll call you at the hotel. Meanwhile, pack your bags, since no matter what readings we get, you two, Polanski and the others will be flown back to the States tomorrow morning. You can do nothing else here.'

'Are you staying on here?'

'Just to finish my report. I'll fly back in a day or two. Now go and have a good rest.'

Driven back to the hotel in Puntas Arenas by a solemn-faced Chilean Air Force corporal, Tony and Clare sat close to one another in the Jeep but didn't say much. Tony had his arm around Clare's shoulders, her head resting on his chest. She was leaning against him, her cheek pressed to his chest, and he felt her bewilderment, fear and grief as if it was his. He also knew that she would be haunted by what she had seen for the rest of her days.

The dead had returned to her.

For him, it was much easier, since his Suzy was alive and well, yet even he would never forget what he had seen or felt in that airplane. Nor would he ever look at the real Suzy as he had done before

Once in the hotel in the Plaza de Armas, he and Clare retired to their shared room, went straight to bed, and fell asleep without making love. Tony had a

restless sleep, his dreams based on what he had been through, and was awakened, in the early hours of the evening, by Clare's lips.

She was silently weeping. Her tears dropped onto his chest. She kissed his lips and throat, his chest and belly, and then rolled upon him.

'I can't sleep,' she whispered. 'Make me forget. Damn, *I have to forget!*'

Later, satiated, they dressed and went downstairs, had a light meal in the restaurant, drank too much wine in the bar, and then walked hand in hand to the shore where, as the sun was sinking, they gazed out over the Strait of Magellan at Tierra del Fuego.

'My father and mother,' Clare said. 'I still can't believe it. They were so real - I could touch them and was touched - and now I feel that they're still alive.' The sinking sun had set the sea on fire, filled the sky with bloody ink, and a crimson light veiled her windblown hair and finely-etched profile. 'I can't live at home anymore,' she said. 'It would remind me of what I saw. I'd be haunted by the expectation of seeing them and the pain that would cause me. I'm going to move out, rent the house, try to put this behind me. And God help me, but I'm in love with Tony Rydell. Do you think he would comfort me?'

'As best he could,' Tony answered, as if speaking about someone else. 'But bear in mind that he lives for his work and has difficult kids.'

'I need that,' she said, finally smiling. 'It'll give me a challenge. And that's what I'm going to need if I hope to forget this.'

'Something different, eh?'

'Yes, something different. A new life with someone new.'

'Move in anytime,' Tony said.

They waited until the sun had set, then wandered slowly back to the hotel, had another drink in the Winter Garden, then went up to their room. This time, Tony made the first move, pulling her to him in the darkness, aroused by the image of her in his home and so needing to have her. He made love with surprising skill, surprising himself by so doing, and when she wept he kissed the tears from her cheeks and then watched her fall asleep. Her sleeping face was like a painting, solemn and mysterious, and he closed his eyes only with reluctance, not wanting to lose it.

He was just about to drop off to sleep when the telephone rang.

'There's something up there,' Dwight said.

Part Two

Chapter Twenty-Two

‘There’s something up there?’ the President asked, as if he hadn’t heard properly or simply couldn’t believe what he had heard.

‘Yes, Mr President,’ Jack Douglas said, placing Dwight Collins’ report on the desk that had been given to the country by England’s Queen Victoria. ‘The data’s all here. There’s not too much of it, and what there is isn’t great, but it’s enough to have convinced NASA’s top scientists that something is up there.’

The President glanced left and right, as if frightened of being overheard, then, obviously remembering that he’d already despatched his aide, he leaned forward a little and said, ‘Just what are you saying? Do you mean..?’

‘Something unknown,’ Douglas said, trying to avoid the word ‘alien’ and feeling less calm than he looked. ‘We don't know what it is - we only know what it *does* - but we now know that something’s definitely there.’

‘Where, exactly?’ the President asked.

‘It was originally at the top of the ozone hole over the Antarctic, but since the last airborne expedition, four months ago, it’s spread down to the bottom and is now dangerously close to Earth.’

‘*Spread* down to the bottom?’

‘Yes, Mr President. It hasn’t *moved* down from the top to the bottom. It’s *grown*. And now it extends from the top of the ozone hole to the bottom, practically into Earth’s atmosphere.’

‘You mean it’s some kind of... *substance?’*

‘We don’t know yet. Whatever it is, it’s invisible. The video, motion-picture and still cameras on board the DC-8 recorded nothing. But highly irregular fluctuations were recorded on the magnometers, and the helium neon laser system picked up what further analysis may reveal as unique infrasounds.’

‘Pardon?’

‘Sounds below the normal frequency range.’

‘Oh, I see.’

‘And there were instrumented recordings of what appear to be shock-wave emissions. Naturally, all these readings were taken from the DC-8, which was flying through the bottom of the ozone hole at an altitude of about twelve kilometres, which proves that this...’ Douglas shrugged, feeling inept... ‘That whatever affected Rydell during his flight across the top of the same hole, at an altitude of twenty kilometres, had extended down to an altitude of twelve kilometres.’

It was an unusually hot day and Douglas wiped his face with a handkerchief, thinking of the greenhouse affect and wondering if it had started, as Clare had suggested. When he thought of Clare, he also thought of her affair with Tony Rydell and quietly burned up inside.

‘Since the ER-2 crashed without revealing what its payload recorded, how can you be sure that this...’ and here the President groped for a suitable word... ‘this, *whatever*, didn’t actually *descend* all that way, rather than spreading down that far?’

‘Naturally,’ Douglas said, feeling surprisingly impatient, ‘since the ER-2 crashed deep in the Antarctic, probably somewhere in the mountains of the Vinson Massic, we’re unlikely to ever find it or its instruments. However, I think it’s safe to say, from what the land base picked up over the aircraft’s radio before contact was lost, that the pilot, one of our best, experienced something that was frightening enough to make him lose control of his airplane. In other words, a more dramatic version of what Rydell experienced during the first flight.’

‘The... apparitions.’

‘Yes, Mr President.’

‘And this... this *thing*...’ The President was obviously still having difficulty in fitting the word to the situation. ‘This thing that makes humans hallucinate in an extraordinary, dangerous manner, is also eating away the ozone layer even faster than Earth’s CFCs.’

‘Yes. And at the rate it’s doing so, the ozone layer will be depleted within the next five years - which will lead to a hotter Earth. This in turn will lead to flood, famine, and other catastrophes; and that unknown organism, if such it be, might well keep spreading around the globe, with who knows *what* results.’

‘Dear God,’ the President said. Looking like a man having a bad dream, he studied the Oval Room, as if seeking reassurance, then, gazing at the silver-

framed photograph of his wife and children, asked, ‘And we’ve no idea what this thing is?’

‘No, sir, we don’t. According to Clare Holton’s report - she is, you may recall, a biotechnologist by profession - it could be composed of plasmodes or radiobes...’

‘I’m sorry, Jack, I don’t – ’

‘Electrically charged particles, or ions.’

‘Ah, I see.’

‘However, Miss Holton also postulated the possibility that it could be composed of bacterial spores, possibly transported here in the tail of some meteorite, such as Halley’s Comet. She also offers the novel suggestion, gleaned from the former NASA astrophysicist, Richard Polanski - now a committed UFOlogist, I should warn you - that we could be faced with etherea, or ether, an invisible substance that possibly pervades space and functions as the medium for the transmission of radiant energy, perhaps orgone energy. Electrically charged particles and ether could both account for the unusual magnetic fluctuations recorded during the flight. As for the panspermic hypothesis...’

‘What?’

‘Bacterial spores.’

‘Oh, yes, right.’

‘The only way to check if this is the case, is to send up the relevant recording devices in stratospheric balloons. Either that or we send up a manned space station, but that still leaves the problem of the hallucinations, which would seem to kill that idea. The balloons, then, are clearly the best way of finding out what’s up there and discovering an antidote.’

‘You make it sound like some kind of virus.’

‘It sure seems like one.’

Obviously being used to more earthly problems, the President tried not to look bewildered and nodded affirmatively.

‘And what do you think, Jack?’ he finally asked.

‘I think we have to tread cautiously,’ Douglas said, thinking of Clare and Rydell with a clean, icy hatred. ‘I think that what we have here *is* something unknown, but that those involved, notably Rydell and Polanski, both wishful thinkers regarding UFOs, are convincing themselves, and are trying to convince us, that what’s up there is *alien*.’

He had avoided using the word until he could turn it to his own benefit. Now

he knew how to do that.

'You mean...?' the President started to ask, then stopped, clearly flustered.

'Yes, Mr President. I think that if we're not careful, they'll have us publicly supporting their view that what's up there is some kind of alien entity. This would not only make us look extremely foolish, but could also lead to widespread public panic.'

'Yes, of course. I can see that.' The President's face was clouded with doubt. 'But if it's *not* something alien, then what the hell is it? And if it didn't come here with the cosmic dust of some meteorite, then where did it come from?'

'Mr President,' Douglas said, moving in on his favourite theme, but coating the pill with sugar, 'as you know, I want to believe as much as you do in world peace, but CIA reports suggest that this... *phenomenon*... could originate from some foreign power and is being used to penetrate our defence systems, violently change our weather, and in general cause mayhem to our infrastructure and, therefore, our economy.'

'I know this theory of yours, Jack, and I have to say I don't necessarily agree with it.'

'I appreciate that, Mr President, but you should bear in mind that even the Russians, no matter the mess they're presently in, have been experimenting for years with cloud-busters and other so-called atmospheric weapons, some of which have been pretty successful at altering weather around the globe, to the disadvantage of the West. And what's up there could be an extension of that kind of research, even if it doesn't emanate from Russia.'

The President chuckled indulgently. 'That wouldn't make sense, Jack. If, as you say, the destruction of the ozone is going to lead to a hotter Earth, with widespread famine and the flooding of many cities, including Leningrad, what would the Russians gain from such a weapon? In fact, their own agricultural crisis is surely ample proof that it's in their own interest to strengthen their commercial ties with the United States, not sever them, which they would do with this weapon. So in both senses, your theory doesn't hold water.'

'I think it does,' Douglas said, secretly despising the President's wish to create a lasting bond with those countries now threatening the economic superiority of the United States. 'At least it will in the long term. I'm not suggesting that we should resurrect a new kind of Cold War with our so-called allies, including Europe and Japan, but I have to emphasise that what the world is engaged in, whether consciously or not, is a war for *economic* superiority - and our potential

enemies include all those I've just mentioned.'

'Okay, Jack, I'll buy that.'

'Well, Mr President, accepting that, we have to accept, also, that the only way to reduce our production of CFCs - which will at least slow down the rate of ozone depletion and give us breathing space - would be to dramatically reduce our industrial and agricultural output.'

'That's what's been recommended by Miss Holton and other greenhouse theorists.'

'Yet to do that, Mr President, would badly effect our economy, which in turn will eventually aid our enemies, both here and abroad. I therefore feel that Miss Holton's call for a reduction in the use of CFCs would diminish US influence worldwide, with a simultaneous increase in economic power for those countries that quietly ignore their own production of CFCs. There'll be quite a few, doubtless.'

Now it was the President's turn to take out his handkerchief and wipe the sweat of his forehead. He glanced back over his shoulder, squinted against the brilliant light beaming in through the french windows, then turned back to Douglas and sighed.

'So you're suggesting that even if we reduce our use of CFCs, the other advanced countries will make promises, but actually do nothing.'

'Yes, Mr President. Their industrial and agricultural output will increase while ours diminishes, eventually making us dependent on *them*.'

The President glanced at his sweat-soaked handkerchief, folded it neatly, then placed it back in his jacket pocket. 'Well,' he said in a hesitant manner, 'that *could* be true, but it still leaves the problem of the depletion of the ozone layer, not only by CFCs, but by that other... *something* up there. So what are you driving at?'

Douglas knew he now had the President exactly where he wanted him and that he could, while advancing his own interests, also get Clare and Rydell under his indirect control and ensure that they didn't step out of line in the future.

'It's my belief that we can *use* the alien element that's depleting the ozone layer. We should *not* reduce our production of CFCs, as we've promised. Instead, we should encourage Clare and Rydell to identify what's up there and then find some way of controlling it, or preventing its growth. It's possible that with such knowledge we could actually create other ozone holes that we could open or close anywhere in the stratosphere, as we wished. In this way, the

United States could manipulate the Earth's atmospheric conditions and weather, and indirectly, surreptitiously, control the whole world. What's up there, Mr President, is a gift. We have to accept it and use it.'

The President was lost for words and glanced around in confusion, then stood up and went to the french windows. There, between the two flags, he looked over the sunlight splendour of the Rose Garden. He was taking the weight of the world upon his shoulders and wanted Douglas to know it. Eventually, after what seemed like an eternity, he turned around again.

'Can I place you in charge of this?' he asked.

'Yes, Mr President.'

Chapter Twenty-Three

'This is Clare,' Tony said, nervously enough to make Clare feel uneasy. 'She's coming to live with us, as I told you. Clare, this is my mother...'

'Howdedoo,' the beady-eyed, grey-haired old woman interjected keenly.

'And my sons, Don, who's thirteen - '

'Practically fourteen,' Don interjected sourly.

' - and Ronnie, who's twelve.'

'Eleven,' Ronnie corrected him. 'You don't even know my age, goddammit. That's 'cause you're never at home these days.'

'Blasphemy!' Tony's mother said. 'That boy needs a good hiding!'

'Right,' Tony said. '*Eleven*. Ronnie's a bit sensitive about his age because - '

'He's so small,' Don informed her.

'I'm not!'

'You are!'

'Okay,' Tony said. 'That's enough. A bit of quiet from you two. Say *hello*, for chrissakes!'

'Hi,' Don said to Clare, bouncing his words off the floor and blowing a bubble of gum.

'Hi,' the much smaller Ronnie said, playing with a yo-yo and studying her with a frank curiosity that did not include warmth. 'Do you know my Mom?'

'No, she doesn't,' Tony said hastily. He could see that Clare was disconcerted

by the reception she was getting. ‘Clare and I work together at NASA and that’s all you need to know.’

‘It’s nice to meet you all,’ Clare said.

‘Yeah, right,’ Don said sarcastically.

‘You must have more spunk than sense,’ Grandma said, ‘to come and live here. The last housekeeper fled.’

‘I’m not a housekeeper,’ Clare said.

‘She’s living with *me*,’ Tony said tactlessly.

‘I hope she can cook,’ Ronnie said. ‘Grandma’s food is like vomit.’

‘Tony’s told me so much about you,’ Clare said desperately to Tony’s mother, then tentatively extended her hand. ‘It’s nice to meet you at last.’

Tony’s mother clasped her blue-veined hands together, then flexed her fingers. ‘Arthritis is a terrible thing,’ she said, ‘though I’m not the complaining kind. Which room are you sleeping in?’

‘She’s sleeping in my room,’ Tony said, ‘and damn well you know it. Now why don’t you make a cup of coffee while I show her the house?’

‘I was just about to do it,’ his mother whined. ‘You don’t have to boss me around.’

While the frail old woman reluctantly stood upright, Clare glanced around the living room of the tract house and was shocked at how small and cluttered it was. Having lived most of her life in the immaculate elegance of her parents’ spacious house in Georgetown, she was already feeling slightly claustrophobic in this small, low-ceilinged room and, even worse, was taken aback by its remarkable untidiness. There were books all over the place - on the table, on the chairs, piled up on the floor - and, to her distress, many of the albums around the music center were out of their covers, lying on the floor, covered with dust.

‘They’re mostly my books,’ Tony explained, when he saw her wandering gaze. ‘Mostly books on science. I like to have them all within reach, so I keep them around the place.’

That didn’t explain the albums, the sight of which made Clare’s teeth grind, but she didn’t think it wise to complain at this early stage.

‘I collect vinyl,’ Tony said, as if that explained the mess. ‘I’ve always gone for the covers and the great liner notes. Come on,’ he added, picking up her suitcases, ‘I’ll show you the bedroom. Then we’ll get organised.’

The bedrooms, which were at the back of the house, seemed as small and untidy as the lounge. Tony hadn’t even made his bed that morning.

‘Excuse the mess,’ he said. ‘I was in a hurry to get to work. And my mom’s not wildly reliable when it comes to house-keeping.’

‘You lost your housekeeper?’ Clare asked him.

‘More than one,’ he replied. ‘I’m not sure if it’s the boys or my mom, but I know that neither’s an easy task. Hey,’ he added, seeing the look on her face, ‘it’s an experience, right? You want something different from what you’ve had and that’s what you’re gonna get. Come on, give me a kiss!’

When she kissed him, she felt better, her love for him surging back, but then he led her out of the bedroom, back into the cluttered house, and she saw his peculiar mother and sullen sons and again felt confused.

She had not forgotten the Antarctic, that dreadful experience in the airplane, and was still feeling badly shaken by it, as if living inside a dream. Now she had to face Tony’s home, the messy life of the man she loved, and she wondered, in an odd, distracted way, if her love would sustain her. Her love for Tony certainly didn’t make her adore his children, neither of whom seemed too pleasant.

‘I’m hungry,’ Don said.

‘I’m bored,’ Ronnie added.

‘Thank God for your health,’ Grandma said, ‘which is something I’ve lost.’

‘That’s why I’m hungry,’ Don said.

‘’Cause he’s healthy,’ Ronnie explained. ‘We haven’t had a thing to eat since breakfast, and that was just cereal.’

‘Don’t blame me,’ Tony’s mother whined. ‘I didn’t have *any* breakfast. My asthma almost choked me, my arthritis was crippling, and then, when I crawled into the kitchen, I found nothing to eat. This place just isn’t organised.’

‘*You* were supposed to organise it,’ Tony said. ‘That’s why we let you out of that funny-farm known as Menopause Manor.’

‘It’s not a funny-farm. It’s a rest-home and you know it. And I had to go back there for a rest after living with you lot.’

‘But you returned! You came back, Mom!’

‘And I still can’t get you organised, since you’re all so unhelpful.’

‘Okay, let’s get organised,’ Tony said, beaming brightly at Clare. ‘Let’s you and I go to the supermarket and bring back the works. We’ll have a new life from now on. Okay, Clare?’

‘Okay,’ she said, in desperation to get out, not realising that he would invite his two sons to keep them happily occupied. They didn’t appreciate the gesture, wanting to watch TV instead, and when Tony forced them to come along, they

weren't happy and decided to show it. They fought noisily in the car, went wild in the supermarket, and in general made Clare, who wasn't used to shopping anyway, feel that she was shockingly ignorant of the ways of the real world.

'She can't even push the trolley,' Don said. 'You'd think she'd never used one.'

'I never have,' Clare replied.

'Were your servants as dumb as you?' Ronnie asked, 'or did they go to good schools?'

'*Ronnie!*' Tony snapped.

'What's the matter?'

'Don't be rude!'

'He's just making conversation,' Don explained, 'but she never replies.'

'Okay,' Tony said! 'That's enough. Here, Clare, give me that trolley.'

Tony pushed the trolley while Clare collected the food, feeling confused by the endless rows of tins and packets, more so because the two boys were so noisy and distracted her terribly. Tony seemed more at home here, telling her what to collect, but he had a haphazard way of shopping, buying purely on impulse, and by the time they reached the checkout gate, the trolley looked like a mountain.

And Clare was exhausted.

She knew it was purely emotional, a product of disorientation, and tried to fix that firmly in her mind as she stacked their many purchases into boxes in an urgent, haphazard way. Don and Ronnie didn't help - they were too busy insulting each other - and Tony was too busy flirting with the girl at the till. Clare felt like screaming, wanting to flee from it all, but then Tony slid his arm around her waist and kissed her flushed cheek.

'Okay,' he said. 'You did really good, Clare. Now let's get back to the house.'

As they drove back to Greenbelt, with the boys hollering in the back seats, Clare looked out at the suburban scenery, the neat rows of tract houses, and thought longingly of her family home in Georgetown, which she had recently rented, with deep regret, to an English diplomat and his family. The regret had been caused by her love of the house and all the memories it contained; the necessity to move had been caused by the knowledge that since her frightening experience over the Antarctic, she would always feel that the house was haunted by the ghosts of her parents. She had decided to move in with Tony because she loved him and needed him, but also because, as he had reminded her, she now needed something different in her life. However, as she studied the sleepy

suburbs and their blandly pretty tract houses, while being deafened by the squabbling of Tony's two undisciplined children, she realised bleakly that she hadn't begun to imagine the extent of the differences between the life she had led and the one she had let herself in for. She could still hardly accept that she had fallen in love with Tony; now she had to accept that she had inherited his wild boys, possibly crazy mother and untidy, cramped house. It didn't seem real, somehow.

Already secretly yearning for silence and privacy, for the abiding pleasures of the intellect, instead she found herself struggling up the path and into the house, carrying two heavy boxes of groceries while the boys, still hollering in an earsplitting manner, chased one another and kept bumping into her.

'Excuse me,' she said to Don as he started turning on the garden hose, 'but it'd help if you opened the door for me.'

'Just kick it,' he said as water gushed out of the hose and he aimed it at the shrieking, retreating Ronnie.

'Ronnie!' Tony admonished as he came up behind Clare, carrying more groceries. Clare managed to kick the door open and stumble into the house, where she immediately placed her two boxes on the nearest table.

'That's it,' Grandma whined from where she was sitting beside the table. 'I've just managed to tidy this place up and already you're dumping that rubbish the first place you see. The kitchen's out back, my girl.'

'I was just resting,' Clare explained, trying to get her breath back, glancing around the room and noticing that it was just as messy as before.

'There's no rest for *me*,' Grandma said. 'I'm used here like a nigger servant. I'm too old and fragile for all this work, but no one thinks about that.'

'Stop that, Ma,' Tony said, carrying his boxes straight to the kitchen. 'We can do without your redneck remarks and moans about overwork. Clare!' he shouted as he disappeared into the kitchen. 'Let's prepare dinner!'

Grateful to get away from Grandma and the two boys shrieking outside, Clare carried her boxes into the kitchen and let Tony embrace her. She felt good in his arms, as if born to be there, and only wished they could be alone together instead of in this menagerie.

'Don't mind my mom,' he said. 'Her bark's worse than her bite. As for the boys, they've been unmanageable since Suzy walked out, but I'm pretty sure your presence here will make a difference, given time.'

'I wonder,' she replied. 'I mean, I think they resent me.'

‘Kids forget their resentments pretty quickly, so just play it by ear. Now kick your shoes off and put your feet up and let me cook dinner. I’m the burger king of Greenbelt!’

‘That sounds wonderful, but I’ll settle for a salad, which I’ll make myself.’

‘Terrific,’ he said. ‘You do the salad, I’ll do the burgers and French fries, and we’ll open a bottle of wine right now and get drunk as we’re cooking. Do you think that’ll help?’

‘It sounds like music to my ears. You pour and I’ll drink it!’

Getting drunk helped. When the food was ready, Clare went onto the porch to call the boys in, and when they said they didn’t want to eat, she had the courage to challenge them.

‘You think we did all this work for nothing? The food’s cooked and you’ll damned well eat it. Now come in right this minute, wash your hands and comb your hair, then sit down at the table like civilised people and eat with your mouths shut.’

‘You can’t give us orders,’ Don said.

‘You’re not our mom,’ Ronnie added. ‘We only take orders from mom or dad, and you don’t look like either.’

‘Would you like a good hiding?’

‘*What*?’ Ronnie said, stepping backwards.

‘One more word out of you - or you, Don - and I’ll take you straight into your bedroom and give you a hiding. Now come in, wash your hands and comb your hair, and sit down at the table. And I mean *right now!*’

They did as they were told. They even ate with their mouths shut. Tony’s French fries looked soggy, his burgers were burnt, but Grandma tucked into Clare’s salad with great relish, saying, ‘I’ll probably suffer for this later, but I’m too polite not to eat.’ Tony opened another bottle and even Grandma had a sip, saying, ‘If the Lord Jesus Christ could sip wine, then I don’t see why I can’t.’ Clare had to laugh. She felt drunk and more at home. When she laughed, Grandma gave her a sly smile and the boys, after staring tentatively at one another, also grinned at her.

‘Are you a scientist?’ Ronnie asked her.

‘Yes,’ she said, ‘just like your dad.’

‘But she was also an astronaut,’ Tony said. ‘One of the few female astronauts.’

‘An *astronaut?*’ Don asked in disbelief.

‘Yes,’ Clare said, ‘a few years back.’

‘Did you fly to the moon?’ Ronnie asked, his eyes wide.

‘All the way there and back,’ she said.

They were as impressed as all hell, suddenly seeing her in a different light, and because she was drunk and starting to feel more at home, she answered their many questions, filled them with awe, and won their hearts over that long, drunken, leisurely meal.

‘And you’ve come to live with us?’ Don asked her.

‘If you don’t mind,’ she said.

‘*I* don’t mind,’ Ronnie replied. ‘Boy, just wait till I get to school and tell my buddies.’

‘Yeah,’ Don said, just as excited as his younger brother. ‘It’ll knock them out of their socks!’

They all laughed at that and Tony poured more wine. Then someone shouted through the front door, saying, ‘Anyone in there?’

‘Come on in,’ Tony said and Dwight Collins entered, wearing a gaudy shirt and shorts, carrying a couple of six-packs, followed by an overweight blonde woman, who was holding up a bottle of champagne and smiling attractively.

‘We’ve come as your new neighbours,’ Dwight said to Clare, his grin broad and mischievous. Indicating the cheerful blonde, he added, ‘This is my wife, Maggie. Maggie, meet Clare, who used to be a sensible woman before she met Tony.’

Maggie laughed and shook Clare’s hand, then waved the bottle of champagne. ‘We live just around the corner, Clare, so if you need anything, drop in. Meanwhile, if one of these so-called men can open this bottle, we’ll celebrate your arrival. Here, Dwight,’ she said, handing him the bottle. ‘You do the honours.’

Clare liked her immediately, and liked her even more after they’d both had a couple of glasses of champagne. Clare’s home had been formal, her parents loving but less demonstrative, and in Tony’s small tract house, though it was hot as hell and cluttered, she felt a certain loosening of inhibitions and lack of constraint. The conversation was loud and careless, argumentative, spontaneous, and in Maggie - a less sophisticated version of her wealthy, rumbustious friend, Nicola - she felt that she had found a shoulder to cry on, a witty and good-natured friend.

‘Just look at them,’ Maggie said, indicating their two drunken men. ‘If they weren’t so goddamned intelligent, you’d think they were cowboys. That’s cause

they’re NASA men, right? They live for their work. Or, as *they'd* put it, they play as hard as they work, which is pretty much seven days a week, one running into the other. They’re not bad, I suppose - they’re too *busy* to beat their wives - and a guy who loves his work is less trouble than one who’s plain bored. Even Tony -let’s face it, no gentleman! - has a certain, weird charm. Now isn’t that right, Tony?’

‘Right!’ Tony said agreeably.

Grandma watched the TV, sipping wine, muttering constantly, and the two boys, Don and Ronnie, having inherited a former astronaut, took turns at topping up Clare’s glass as an excuse to talk to her. Then she sent them to bed. She was drunk enough to try it on. She said, ‘Tomorrow, if you behave, I’ll bring back lots of photos from NASA, some of which, being signed by the astronauts, you can sell in the school yard. Now how about that?’ They were thrilled into obedience, even kissing her goodnight, then followed Grandma’s wavering, frail form into the back of the house, where, as Clare remembered in a dreamy manner, the bedrooms were located.

‘Gee whiz!’ Maggie exclaimed. ‘I don’t believe what I’ve just seen! She’s got those uncontrollable kids eating out of the palm of her hand!’

‘That’s why she’s a liaison officer,’ Dwight said. ‘I always wondered about that.’

‘The more we drink, the more we learn,’ Clare responded, then had a fit of the giggles. ‘God, I just don’t believe this!’

‘You’re in love,’ Maggie told her.

Which was the truth, after all, the only thing that made sense, the inviolable reality that washed her clean, purified her, when Dwight and Maggie had gone and she and Tony went to bed and there, in that small, humid room, burned against one another in sensual fever. Clare took confidence from that, chucked her fear off and breathed, at least briefly forgetting that airplane in the Antarctic, the ghosts of the dead, and instead regaining her lost faith in the love she gave and received.

Then at last, she slept soundly.

Chapter Twenty-Four

‘I don’t give a goddamn about the weather,’ Suzy’s father said, slumped lethargically in a dusty armchair and drinking beer from the bottle. ‘I ain’t gonna move out. I was born and raised on this farm and here’s where I’ll die.’

They were all sitting in the living room on a Sunday afternoon, having just finished lunch and now having drinks and watching the news on TV, which as usual was not good. It was mostly about catastrophes being caused by the changing weather. Europe was still being devastated by fierce winds and floods, the Antarctic ice was melting at an unprecedented rate, the oceans were rising and many rivers flooding their banks, and while Russia’s agricultural wilderness was becoming unexpectedly rich, the American heartland, including Iowa, was turning into a dust bowl.

‘No talk of help for the farmers,’ Suzy’s father said. ‘Just this scientific gobbledygook about holes in the atmosphere. What the hell’s goin’ on here?’

He’d just come back from Des Moines, where he’d been talking to his bank manager, and was looking incongruous in his old-fashioned, rarely worn, grey suit with a white shirt and tie. Now he loosened the tie, unbuttoned his shirt-collar and gave a loud sigh.

‘Godammit,’ he said, ‘who wants science? What about us out here?’

Since he was talking to himself there was no need to reply, but Suzy glanced at him, surprised at how changed he was, aware that he had never before drank beer from a bottle, uttered a blasphemy, or looked as diminished as he did in that awful grey suit. Then she realised that he was so tuned to the land, he was fading away with it. He had thought that the land would endure forever and now it was failing him.

The shock and grief were destroying him.

‘The Lord works in mysterious ways,’ Suzy’s mother said, doing her knitting and sipping lemonade. ‘Praise be, he’ll protect us.’

Not sharing the faith that her mother had in abundance, Suzy returned her gaze to the TV in time to learn that the weather wasn’t the year’s only bizarre offering. Not since the 1950s had there been so many reports of UFOs and other unusual phenomenon. The reports, which were worldwide, were believed to be the products of hysteria caused by the uncommon weather. Certainly, so far, no concrete evidence had been produced to support the contention that the reports were based on anything other than emotional and mental disturbances. It *was* pretty weird.

‘Flying saucers!’ Suzy’s father exclaimed in disgust. ‘I don’t believe what I’m hearing! The bread basket of America - the bread basket of *the world!* - is being destroyed by the goddamned weather, and all *they* can do is try to distract us with news about UFOs and ghosts and other so-called unexplained phenomena. Is this a public service or is it not? We oughta write and complain!’

He had another slug of beer, wiped his lips with his hand, then leaned forward and switched the TV off.

‘I can’t stand it,’ he said.

‘Neither can I,’ Suzy said, glad of an excuse to get out for a while, so standing up and stretching herself. ‘I think I’ll go into town for a while. Go and see Joe.’

‘It’s time you went to see your husband,’ her father said. ‘That might be more profitable.’

‘I’m sorry, Dad, but I’m not ready for that yet, so let’s drop the subject.’

He just shrugged and slugged some more beer. ‘Have it your way,’ he said.

He didn’t really care. He was too concerned with the weather. His crops were dead and he was running out of money and there was no sign of rain. Feeling sorry for him, suddenly seeing the child in the man, Suzy kissed the top of his head, then left the room. She put on a light jacket, then went out and climbed into her car and headed for Des Moines.

It was the middle of the afternoon and the sun was a fiery ball, its light dazzling where it fell on the fields that had turned brown and barren. Suzy felt drained just driving, suffocated by lack of air, but luckily the dust churned up by the car was blown out behind her.

She was glad to get to Des Moines, even though, once verdant, it was now as barren as the fields of maize. Driving straight to the Court Avenue District, she parked near the office towers. From there, she walked through the skywalk system and on to Joe’s bar, located amongst the restored vintage buildings, art galleries, restaurants and fancy shops of this formerly bustling entertainment district. Since the drought, though, people were spending less and the area was already starting to look seedy.

Entering Joe’s cosy, colonial-styled bar, Suzy was glad to feel the chill of the air-conditioning. Most of the tables were empty, as they usually were these days, but a few men were strung along the bar and Joe was there, cleaning glasses. His muscles were bulging out of his short-sleeved shirt and he looked pretty cool.

He smiled when he saw her, so she smiled back and took a stool at the far end of the bar, well away from the other customers. Joe poured her a bourbon on the rocks and brought it along to her.

'You look like a million dollars,' he said. 'The prettiest woman in here. So have one on the house.'

Suzy, the only woman in the bar, smiled and picked up her glass and tilted it towards him. 'Here's looking at you,' she said, before taking a sip.

'I wasn't expectin' to see you today,' Joe said. 'Anything happening?'

Suzy shrugged. 'No,' she said, lighting a cigarette, 'I just had to get out. My dad's been to the bank and started drinking beer from the bottle. It's not a good sign.'

'You weren't expectin' good news.'

'But we live in hope, Joe. He's been told that he has to sell the farm, but he swears he won't do it.'

'Give him time to adjust,' Joe advised her. 'He'll face up to it soon enough. It's happenin' all over the damned place: they're sellin' up, movin' out. He musta seen a lot've his friends goin', so he isn't alone.'

'He's lived there all his life.'

'So did most of the others.'

'I think his heart's broken already.'

'Broken hearts can be mended.'

There was a sudden roaring sound from the TV above the bar and they both looked up to see the torrential rainfall over most of southern Spain. People were sitting on red-tiled rooftops, on the walls of Moorish villas, looking down at the water sweeping under them, carrying furniture and beach umbrellas and other debris, even people spinning slowly on make-shift rafts and rubber dinghies, through streets that had once been dry as bone. Then the scene changed abruptly: from howling wind and pouring rain to burning heat and parched farmlands, with Americans piling their furniture onto trucks and moving onto the dusty roads. Wiped out by the drought, they were leaving their farms and heading for the cities, desperately hoping to find work.

'Turn that shit off,' a man along the bar said. He was wearing muddy dungarees and had a burnt face, his weathered hat resting beside his beer-glass. 'I came in here to pick myself up,' he said. 'Not to be reminded of why I'm drinkin' at three o'clock in the afternoon. Turn it off, Joe, godammit.'

'Sure,' Joe said. 'I'm sorry.' He turned the TV off and no one else complained.

‘The farm he worked on’s just been taken by the bank,’ Joe explained. ‘He’ll have to hit the road soon. No family, no more work in this area, and he’s fifty-eight years old. Hard times ahead, right?’

‘Goddamn!’ Suzy said. She finished off her bourbon, pushed the glass towards Joe, and said, ‘*I'm* drinking at three in the afternoon, and now I know why. Fill ‘er up, Joe.’

Joe grinned and filled up her glass and brought it back to her. She blew smoke rings of different sizes and watched them drifting away.

‘Strange times,’ Joe said, maybe just to fill the silence. ‘Hot places turnin’ cold, cold places turnin’ hot, and here, in Iowa, the bread basket of America, the land’s turnin’ into a dust bowl. Folks are sellin’ up and takin’ to the road, just like they did back in the Thirties. We’re right back with the Okies.’

‘But it ain’t the Thirties,’ Suzy said. ‘It seems like it, but it ain’t. You know that when you turn on the TV and switch through the channels, avoiding the weather reports, and always come, sure as Jesus, to a program about the increase in UFO sightings and apparitions and other weird happenings. ‘Course, officially they’re denied, but the reports can’t be stopped and are comin’ in from all over the world. You didn’t get *that* in the Thirties, Joe, and I think it’s real weird.’

‘Yeah,’ Joe said, ‘it is.’ He gave her that grin that could make her glow inside. ‘There’s even talk of airline pilots startin’ to see things - strange lights in the sky, flying saucers and so on - though most of the reports aren’t made official. But I hear things, pick ‘em up in this bar, and lotsa folks are havin’ lotsa strange experiences. I put it down to this weather, which can drive some folks crazy, and to the fact that the land’s bein’ wiped out, with all that entails. Folks are under terrific pressure, feelin’ haunted, and so they start seein’ things.’

‘What about you, Joe?’

He shrugged and grinned again. ‘I’m suffering a little bit - business ain’t as brisk as usual - but so far the only visions I have are of you in my bed. Real pity I’m workin’ right now. You sure do look invitin’.’

Suzy glowed inside again. He could always make her do that. In fact, the longer she stayed away from Tony, the more she needed that feeling. Joe had been good for her, making her feel alive again. She’d even started thinking of moving in with him and bringing the kids here. He’d be good for them, she felt. He had the kind of strength they needed. He wasn’t chaotic and undependable like Tony, and he obviously loved her. And now, with the blight on her parents’ farm, there were other reasons for staying.

‘Hey, Joe,’ she said, feeling pretty drunk, ‘just how much do you love me?’

‘You’ve had more than one demonstration, honey, so you’ve no need to ask.’

‘No, I don’t mean that. I don’t mean sex. I mean, how much do you *love* me?’

‘One whole heap, m’darlin’. ’

He poured himself a beer, had a drink, kept hold of the glass.

‘What’s one whole heap, Joe?’

‘You want me, I’m yours.’

‘How much?’

‘Whatya mean?’

‘I sometimes think we should live together, Joe. It’s not right, bein’ apart like this.’

‘You mean married? You’re already married, Suzy.’

‘I just mean livin’ together, Joe. I mean, just to get closer to each other... to give it a try.’

He had another gulp of beer, wiped his lips, played with the glass.

‘I dunno, Suzy’ he said. ‘Why spoil a good thing? I mean, we got a pretty good thing goin’ here, so why risk it with that?’

‘With what? Livin’ together?’

‘Yeah, Suzy, I guess. I mean, lovin’ is one thing, but livin’ together is another. I’ve been livin’ on my own a long time an’ I’m kinda fixed in my ways. You know? A man gets like that...’ He trailed off in an uncertain manner, slugged more beer to cover confusion, then offered a crooked, nervous grin. ‘Besides,’ he said, ‘sooner or later, you’ll go back to Maryland, to your husband and kids. I don’t see the point, Suzy.’

Even drunk, Suzy started feeling as nervous as Joe looked with that smile of his. It almost sobered her up.

‘That’s the whole point,’ she said. ‘I’d only go back for the kids. And instead of doing that, why not bring ‘em back here? Then you and I can stay together and not be broken up. You understand what I’m saying, Joe?’

Joe finished off his beer, then went to pour himself another. When he came back, he didn’t look too thrilled and his gaze was evasive.

‘Listen, Suzy,’ he said.

‘Yeah?’

‘I love you one whole heap, you know that... But this thing, this business with the kids... Well, I mean, I don’t know... I mean, I’ve never been married, Suzy. That’s a whole different ball game. And livin’ together... Well, that’s marriage,

no two ways about it. So there's that and the kids. I mean, okay, they might be nice kids... But a man like me, never bin married, might find some problems there. You're talkin' responsibility. A whole heap of it as well. You're talkin' about a really big commitment for kids not my own... I dunno, Suzy. I mean, I won't say no outright. I'm only sayin' it needs a lotta thought and a lotta time for the thinkin'. I mean, a man has his ways, you know?'

'You don't want my kids.'

'I didn't say that, Suzy. No.'

'So what if I say, forget about the kids, let's just you and me share things?'

She really had him rattled there. He drank more beer and stroked the glass. It was like he wanted to dive into the glass and swim down to Australia. She wanted to die when she saw that.

'Gee, Suzie,' he began. He sounded just like a goddamned school kid. 'I love you - '

'A whole heap.'

'Right! But lovin' and livin' together are two different things and... You know, you've bin married - *are* married - and can deal with certain things. But I've never shared anything with anyone, or had kids or anything. So... you know... I'm not sure I could look after them properly, or...'

'I've got parents as well,' Suzy said. 'You know all about them, don't you? They're gonna lose their farm and everything that gives them dignity and have to do an awful lot of things that they're not used to doing. In short, they're gonna need my help and I'll need help in helping them.'

'Yeah,' he said. 'Right. I mean, I understand that, Suzy. It's just that I don't know that I'm really equipped to deal with...'

'Yeah,' she said. 'I understand perfectly. Goodbye, Joe... and good luck. When I say my prayers, after I've made my wishes, you're going to need that luck.' She said it correctly, speaking proper English, no longer wanting to sound like him. 'You're going to need that luck because I'm going to curse you to hell and back. Go fuck yourself, Joe.'

Then she walked from the bar.

Of course, she couldn't stop crying and drove the car while blind with tears. She drove across the Des Moines River as the sun was going down, her heart hammering with outrage, the shock making her sweat more, and headed into the dust-wreathed, crimson twilight in a state of dreadful despair. She was angry

and disappointed, disgusted and pained. She felt like a victim of her own dreams and vain, childish hopes.

Tony would never have responded that way. Give it to him: he wouldn't have done it. Tony, no matter what his private fears, would have stood up and been counted. He'd have proved his love with something, not eloquently, but with sincerity. He wouldn't have wriggled like a worm on a hook, with his eyes slipping sideways. You had to give it to him: despite his faults, he rose above them. Yes, Tony, who had almost driven her crazy, had never failed her that much.

That's why she still loved him.

She cried more when she thought of that. Damned near went off the road. The sun was sinking and the fields of maize were ruined and the crimson light was unreal. Maybe that contributed to it - what it was she thought she saw - that sudden vision of her children, Don and Ronnie, plain as day, standing there in the headlights of her car as she raced straight towards them.

'*God, no!*' she screamed.

There was no time to brake. She was through them in a second. They were there, plain as day, then she shot through them and saw only the road again.

She couldn't believe it. When she looked in the rear-view mirror, she saw nothing at all, but then, when she looked sideways, she saw a disc-shaped light flying over the rolling hills. It was a dazzling, silvery plate, gliding beautifully in the crimson twilight. It flew from the horizon, ascending as it approached, and passed over the car like a flickering light-bulb, then abruptly disappeared.

Suzy almost crashed the car. Later, she didn't remember much about it. Screaming brakes and a howling engine. Billowing dust and her own pounding heart as the car groaned and settled down. It was a living thing dying, first shuddering, then subsiding. When it was still, and when the swirling dust had settled, she looked out at the sinking sun.

Nothing there but the parched fields. No Don and Ronnie, no flying saucer. Nothing out there except the rolling plains and a vast, blood-red sky and a darkening, sinking sun.

Suzy was terrified. *It's just shock*, she thought. She rationalised that she'd been upset, thinking of Tony and the kids, and that the tension caused by Joe, as well as the news on his TV, had caused her to conjure up that experience as some kind of catharsis.

She liked the sound of that word: *catharsis*. It helped her rise above her

feelings. It didn't stop the pounding of her heart, but she drove on home anyway.

She was concerned for her parents.

Chapter Twenty-Five

'Clare seems to be settling in well,' Dwight said, as he drove the car out of his driveway, just around the corner from Tony's house. 'In fact, she seems to be blossoming. I just couldn't imagine her living here - not in Greenbelt, not in a tract house, and not with you and your mother and kids - certainly not after the life she used to lead in Georgetown. Yet it seems to be working.'

'That's 'cause I'm a really swell guy,' Tony replied, as the car turned into the Greenbelt Road. 'You just never saw it, Dwight.'

Dwight grinned. 'I guess not. But I'm still damned surprised.'

'Pleasantly so, I hope.'

'Absolutely. Clare's not only been good for you - she also seems to have tamed your kids and kept Grandma in order. She should get an award.'

That was true enough, Tony thought. In the month that Clare had been living with him in Greenbelt, she had not only managed to put the house in order - even his record albums were in their sleeves - but had charmed his two kids into some kind of disciplined behaviour, as well as getting his mother onto her side. What was most surprising about it all, was that she had done it without prior experience - having no children of her own and previously living only with wealthy parents - but certainly she had brought into his life the sense of order that had never been there when he had shared it with Suzy. Now the house was tidy and clean, the boys were better behaved, and his mother was so taken in with her new 'daughter' that when Tony and Clare had to leave home together for a few days, usually on NASA business, she willingly looked after the kids.

'It's still exhausting,' she had said to Tony, 'but not as bad as it was before. And besides, I don't mind if it's for Clare. She's worth her weight in gold, that one.'

'Why didn't Clare come with us this morning?' Dwight asked, as he drove past the fences of the Goddard Space Flight center in the rolling Maryland countryside. 'I asked her to come.'

‘You asked her too late,’ Tony replied, squinting into the sun and realising that they were in for another uncomfortably hot day. ‘She’s already there, Dwight. But she’s in the Laboratory for Extraterrestrial Physics, checking on the progress of the balloons that were sent up into the hole from the base at McMurdo Sound.’

‘Any results yet?’

‘They’re analysing the data right now. That’s why Clare’s there so early. Like a mother with her new-born baby, she just won’t let it go.’

‘She’s the NASA type,’ Dwight said with undisguised admiration. ‘A woman who loves her work and is relentlessly thorough at what she does. That’s why she became one of the first of the female astronauts and ended up liaising between us and the White House - she has the skill *and* the gumption. I just hope that her new domestic situation doesn’t make her lose that.’

‘I don’t think it will, Dwight.’

Still, as Dwight turned the car through the guarded gates and into the sprawling complex of NASA’s Goddard Space Flight Center, Tony couldn’t help wondering if he was right. Like him, Clare loved her work and could not live without it, and although superficially she appeared to have adjusted to her new life in Greenbelt, he sometimes wondered how long it would be before the trials and tribulations of domesticity took their toll on her. At the moment, she seemed happy, intrigued by the novelty of being a surrogate mother and housekeeper, but right now she was also excited about the ozone project. What would happen, Tony wondered, when that project came to an end and she was given time to dwell on the difference between the life she had left in swanky Georgetown, to live here, in more humble circumstances, in the suburbs of Greenbelt. It made him nervous to think of it.

‘Another day, another dollar,’ Dwight said, parking the car in front of the Institute for Space Studies. ‘Let’s get to it, Tony.’

As he climbed out of the car, Tony noticed how hot and bright it was.

‘Christ,’ he said, gratefully entering the air-conditioned Institute for Space Studies, ‘the weather really *is* getting warmer.’

‘Right,’ Dwight replied. ‘And if we don’t stop that hole in the ozone from growing, it’s gonna get warmer and warmer, until...’ He shrugged his shoulders helplessly.

‘The ice caps start melting,’ Tony completed his sentence for him. ‘Which they’re *already* doing.’

‘You’re kidding!’

‘No, I’m not. Jack Douglas recently sent Clare a report from the Laboratory of Oceans. It said that their most recent ocean and cryospheric science experiment has revealed a slight rise in the sea level of the South Atlantic Ocean. This is already spreading to other seas and oceans, which explains the rise of many rivers and the dramatic changes of weather around the globe. It’ll get worse as the ice-caps continue melting.’

‘Jesus Christ,’ Dwight said. ‘It’s happening quicker than I’d expected.’

‘Exactly,’ Tony said, glancing idly at the people in the offices they were passing. ‘According to our climate-model calculations, we were expecting, by the year 2030, the equivalent of a two-hundred percent increase in carbon dioxide. That would induce a global warming of between 1.5 and 4.5. degrees Centigrade. That, in turn, would cause a catastrophic drying of the world’s chief wheat and corn belts, as well as sea-level rises of twenty to forty centimetres, eventually leading to the flooding of major land masses. However, with the present, unexpected rate of ozone depletion, all of this has already started and should, at the rate it’s progressing, lop about thirty years off our estimate.’

‘*How* much?’

‘You heard me. Based on the hole over the Antarctic alone – in other words, ignoring any other possible areas of depletion - we can expect even more damaging climatic changes within the next decade: say, by the year 2,000.’

Dwight stopped walking and stared at him in shock.

‘Did you say those calculations hadn’t taken into account any other areas of ozone depletion?’

‘Right.’

‘Shit!’ Dwight exclaimed softly, then shook his head from side to side in a despairing manner and started walking again. ‘You’re in for an interesting morning,’ he said as he entered his office. ‘You better believe it. Here, take this chair.’ He pulled a chair up to the front of his desk, and when Tony was seated offered him a coffee.

‘Sounds like I might need it,’ Tony said.

‘With some Valium, old buddy.’ Using the intercom on his desk, Dwight asked his secretary to bring in Captain Mantell, along with three cups of coffee.

‘Who’s Captain Mantell?’ Tony asked.

‘A USAF pilot from the Wallops Flight Facility in Virginia, recently returned from a tour at our base in Thule, Greenland. He was sent home after ejecting

himself from his aircraft during a research flight across the North Pole. I'll let him tell you the rest.'

He was just about to kick his chair back and swing his feet onto the desk when the telephone rang. Picking it up, he listened a moment, then grinned and said, 'Hi, Clare! Yeah, he's with me right now. Why not speak to me instead of him? I'm a much better listener.' He waited for the response, grinned more widely and then passed the phone to Tony. 'She wants only you, handsome.'

Tony took the phone. 'Hi. Where are you?'

'I'm in the Science Information Systems Center,' Clare said, 'assessing the data we received from the experiment sent up from McMurdo Sound last week. The balloons' payloads took external readings both at the top and the bottom of the hole in the ozone layer. The data was then interfaced to the Information Processing Division of NASA for processing and evaluation by the Laboratory for High Energy Physics, which concentrated on the origin and structure of any particles, electronic or otherwise; the Laboratory for Atmospheres, which focused on the ozone balance of the stratosphere; and the Laboratory for Extraterrestrial Physics, which looked for charged particles, magnetic and electric fields, and plasmas. The separate findings of those three laboratories were then passed on to the SISC, right here, where the numerical simulations of data produced what may be the answer.'

'Which is?' Tony couldn't hide his impatience.

'What we appear to be dealing with,' Clare said in a suddenly quiet, deliberately controlled manner, 'is something that isn't organic or carbon-based, but *is* alive in some way or another.'

'Jesus,' Tony whispered.

'We're talking plasmodes,' Clare said. 'The analysed payloads have produced what appears to be some kind of organised motion of plasmodes created by the interaction of electrons and ions. We've defined the plasmodes as being alive in the sense that they appear to have a definite structure, are feeding on the energy of the stratosphere and atmosphere, including the ozone layer, and are constantly reproducing by magnetically converting random particle clusters into non-random ones. In other words, the basic trinity of life: structure, feeding and reproduction. Whatever it is, it's alive, feeding off the ozone layer and other elements of the atmosphere and stratosphere, and constantly reproducing its own kind... It's alive and... *growing!*'

Tony studied the wall, feeling stunned, not sure if he should feel exhilarated or

terrified.

An alien life-form... It was there, above Earth... It was growing as it travelled down through the atmosphere to...

'Are you still there or have you fainted?' Clare asked.

'I'm still here,' he replied.

'A bit of a shock, eh?'

'Yeah, Clare, a bit of a shock. I don't know what to say.'

'I don't blame you. Anyway, obviously we don't know if it's conscious or self-aware, though we're inclined to believe it's been dormant for a long time, is gradually coming awake, or back to life, and is responsible for the hallucinations being created inside the ozone hole.'

'How?'

Clare sighed. 'I don't know. No one knows. We only know what we've seen: that it manifests life-like images from the individual's subconscious. Whether or not it's actually *aware* of what it's doing, we can't say. We can only say with certainty that it's alive and has some kind of consciousness.'

'Christ!' Tony exclaimed.

At that moment, Dwight's secretary ushered into the office a well-muscled man in a short-sleeved white shirt and pants. He had short-cropped brown hair, looked every inch a pilot, but was oddly tentative in his movements, as if uneasy. He smiled painfully at Dwight and then, when Dwight nodded, took the chair beside Tony and glanced in a distracted manner around the office.

'I've got to go now,' Tony said to Clare, 'but thanks for the phone call. I'm pretty shaken, as you might expect, but it sure was worth hearing. I'll see you tonight.'

'Okay. Love you madly.'

He hung up on her sweet voice as Dwight's secretary, the leggy, good-humoured and efficient Joanne Woods, brought three coffees into the office, set them on the desk, gave a wave of her hand and walked out again.

'Tony,' Dwight said, indicating the man in the other chair, 'this is Captain Joe Mantell, the USAF pilot I mentioned. Joe, this is Tony Rydell, one of our best physicists. I think he'll find your story pretty intriguing. Do you mind repeating it again?'

'No, not at all.' Mantell stood up to shake Tony's hand, He was tall and very broad, yet oddly lacking in vigour. 'Hi,' he said. 'I've heard a lot about you and it makes me feel better.'

‘Why?’

‘Because you’re taking this business seriously. When it happened, I thought I was hallucinating or had maybe gone mad. When it was over, when I was making my report in the debriefing room at the base in Thule, I thought *they’d* think I’d gone mad and they probably did. So it’s a relief to know I’m not alone. Like I said, it makes me feel better.’

Dwight offered Mantell a coffee, but he said he was too nervous to drink.

‘You don’t look the nervous type,’ Tony said.

‘I wasn’t – at least not until this business happened. Now, shit, yes, I’m nervous. Night and day. Every hour. I can’t go back in an airplane. Jesus, man, it was awful.’

‘So what happened?’ Tony asked.

‘I’ve told this so often, I...’

‘Just tell me.’

Mantell shrugged forlornly. ‘Okay,’ he said. ‘I’ve been a pilot with the Wallops Flight Facility for years, specialising in payload-carrying flights for upper atmospheric research, most of them across the Arctic Circle from our base in Thule, Greenland. I was good at my job, right? Highly experienced. No hassles. Then, last week, when I was flying my customary research version of the ER-2 - which I believe you're familiar with…’

‘Right,’ Tony said.

Mantell grinned mournfully. ‘Okay. So when I was flying my ER-2 across the Arctic Circle, passing over the Lincoln Sea, heading towards the North Pole, at an altitude of fifteen kilometres, I suddenly felt very strange, disorientated… then I saw an unidentified flying object.’

‘A flying saucer?’

‘Well...’

‘You can tell me.’

‘Well... I wouldn’t say it was a flying saucer, exactly. More of a brilliant light, a sort of shimmering, pulsating light, that spread out around the airplane, filling my cabin, until I couldn’t see a goddamned thing - not the instrument panel, not my own hands or legs - just this dazzling light.’

‘Any sound?’ Dwight prompted him.

‘Yeah, right, sound...’ Mantell grew even more nervous, just remembering... ‘Most sounds were cut off when the light appeared, leaving nothing but what seemed like static. I tried to contact Thule and got nothing but more static, then

the light became so bright, I couldn't see the control panel, and then the static seemed to fill my goddamned head and made me come close to screaming.'

'It was static?' Tony asked him.

'Sort of,' Mantell replied. 'I mean, it sounded like static at first. Then it got louder, too loud to be real, and seemed to be something *inside* my head... a *collision* of sounds, maybe voices... I don't know... It was just this godawful, fucking noise that nearly drove me insane... So I took the plane down to my lowest recommended altitude of twelve kilometres, hoping for peace and quiet.'

Mantell glanced left and right, as if being spied upon, then wiped sweat from his forehead with his hand and took a deep breath. He was dissolving in sunlight.

'I had a brother,' he said. 'We were real competitive as kids. Our dad was a USAF pilot and we wanted to be the same, but I was the one with the talent, so my brother lost out. When I won my wings, he started drinking. His career and marriage were a disaster. The better my life became, the worse his became, and eventually, when he was still only twenty-eight, he committed suicide, leaving a note saying he hadn't had a hope as long as I was alive. Yeah, that was my brother.'

He took a deep breath, puffed his cheeks, then let his breath out. He seemed like a lost child.

'I was haunted by that for years. I secretly blamed myself. I often dreamed about my brother, felt haunted by him... and then, in that strange light in the ER-2, my brother materialised...'

He stopped talking and looked at the floor, then glanced up at Tony. He had the gaze of a drowning man.

'Go on,' Tony said firmly.

Mantell shrugged. 'It was goddamned awful. He was so real, I could smell him. He was sweating and I heard his heavy breathing and then he reached out and touched me.' Mantell shuddered. 'I *felt* his touch. There's no doubt about that. I felt him and smelt him and heard him and then lost my self-control. Jesus, yes, I just lost it...' He shuddered again and pressed his fingers into his eyes, as if trying to blind himself. 'I couldn't stand it,' he said. 'He was so real, he was alive. I knew that the heavy breathing I was hearing was the sound of his dying breath. He had killed himself over me. Yes, I knew that I was hearing his accusation in the sounds of his dying. He died again right in front of me - he dissolved as the airplane nosedived - and I nearly went mad...'

Mantell sucked his breath in, then let it out in a stricken sob. ‘I ejected from the plane,’ he said. ‘I shouldn’t have done it, but I had to. I just couldn’t bear to stay in that cabin, re-living my brother’s death. So I ejected and let the plane go down and then I had to be rescued.’ He wiped the tears from his eyes, shook his head, then sniffed and looked up again. ‘In that moment, I destroyed my career. I’ll never fly again... Never!’

‘Yes, you will,’ Tony lied.

Mantell smiled, grateful for the lie, then stood up wearily and placed a heavy hand on Tony’s shoulder.

‘No,’ he insisted, lowering his gaze, ‘I won’t fly again and we both know it. But I want you to keep pursuing this thing and find out what’s happening. Whatever happened to me, whatever’s causing this to happen, it can’t be good for me or anyone else, for the country, the world. There’s something up there, man, something unknown, and it’s like nothing else. Please find out what it is.’

‘We will,’ Tony said. ‘Thanks.’

Mantell nodded and hurried out, as if running away from a nightmare. Tony stared across Dwight’s desk and met his cautious gaze.

‘It didn’t happen in the Antarctic,’ Dwight reminded him. ‘This one took place over the Arctic... at a very low altitude.’

‘Yeah,’ Tony said, sweating profusely even though he felt cold. ‘As Clare said, it’s alive and it’s growing. What the hell do we do now?’

‘We pray,’ Dwight said.

Chapter Twenty-Six

‘I don’t want you to go,’ Clare insisted after Tony had kissed her goodbye on the doorstop.

‘Stop worrying,’ Tony said. ‘It’s business, pure and simple. I wanna check on her apparition - whether or not she senses it or is in any way aware of it - and I also want to discuss the divorce. So it’s purely business - personal as well as NASA. Besides, she called and insisted on seeing me, so maybe *she* wants a divorce, which would solve a lot of the problems I see looming. So I’m going. Okay?’

Clare sighed. ‘Okay. But don’t linger if she starts coming on to you. Just get

out that door again.'

Tony grinned. 'Godammit! Clare Holton, the fierce pragmatist, is jealous. I just don't believe it!'

'Believe it,' Clare said.

Knocked out by her grace and beauty, Tony kissed her again, then walked along the path to his parked car, got in and drove off. He saw her waving from the doorstep and he quickly waved back, then drove out to the Greenbelt Road, turned left towards the Parkway, and eventually took the road to Annapolis.

According to what Suzy had told him when she called, she was still living with her folks in Iowa, they weren't doing too well, and she had flown to Maryland to talk to him about 'something important.' When Tony had pressed her on exactly what that meant, she had refused to elaborate, saying only that she wanted to talk on neutral territory, rather than the house. She was spending her three days in Maryland at the Annapolis home of her best friend, Caroline Blackwood, but she and Tony were going to meet in a bar in the town.

Since he was now in love with Clare, Tony was hoping that Suzy was more seriously involved with Joe Wheeler and therefore going to ask for the divorce that he now believed *he* wanted. However, he sensed that the meeting wasn't going to be that easy, and that what he'd be faced with would be more angry demands that he let the kids return with her to Iowa, which he wasn't prepared to allow. Merely thinking of the meeting to come therefore filled him with dread and he prayed silently that it wouldn't be too unpleasant.

Just let it be over quickly, he thought. *Please God, no more scenes*.

Reaching Annapolis, he parked his car down by the waterfront. As he walked through the hot, blinding sunlight towards McCarvey's Saloon & Oyster Bar, where he was to meet Suzy, he thought of her ghost, or doppelganger, and felt a kind of clammy unreality falling upon him and wondered who or *what* he could expect when he walked into the restaurant. Perhaps the Suzy he was going to see might not be the real one.

In the event, she was real enough, waving at him from the bar, her blonde hair framing a face still sensually provocative. She was wearing a loose white T-shirt that fell off her full breasts. Tight denims and stiletto-heeled shoes emphasised her long legs. She looked, he thought, like a saucy teenager. He had forgotten how cute she could look.

Slightly shaken to find that he still had strong feelings for her, he returned her wave as he approached the bar, aware that more than one set of eyes was

studying him enviously. When he reached her, she turned her head aside to blow a thin stream of smoke.

'Still smoking,' he said.

'My only vice,' she replied. 'Right now, I'm as pure as a nun, which should make you happy.'

Ryell took the stool beside her, almost kissed her, changed his mind. 'It doesn't make me anything,' he said, then glanced at her empty glass. 'What are you drinking?'

'Bourbon on the rocks.'

'It's only lunchtime.'

'I'm obviously a born liar,' she said. 'You've just discovered my second vice.'

She looked at him with bright eyes, her smile gently mocking. He shook his head from side to side in disgust and ordered more drinks: a bourbon on the rocks for her, a beer for himself.

'You wanna eat?' he asked her.

'Can we afford it?' she replied.

'There's no *we* anymore, Suzy, just you and me; and at the moment, at least before our conversation, I can afford to buy lunch.'

'You think I called you just to discuss money?'

'Yeah.'

'You're a real bright boy, Tony.'

Yet she was visibly wounded, which explained her sardonic tone, and it made him ashamed of what he had said on the spur of the moment. Disconcerted, feeling ambushed by his past, he glanced along the bar, saw businessmen and boaters rubbing elbows at the counter, eating oysters and hamburgers and eggs Benedict, drinking bourbon or beer.

'A busy joint,' he said, returning his gaze to Suzy.

'Yeah,' she replied. 'I like it 'cause it's friendly and informal. We used to come here a lot.'

'Who?'

'You and me, Tony. Remember? We used to come here at least once a month and take a boat out. We both loved to do that.'

'Oh, yeah,' he said, remembering with some embarrassment. 'Right.'

' I'm staying with Caroline.'

'Yeah,' he said, knowing Caroline well, since it was with her and her husband, Ron, that he and Suzy had spent so many weekends here. 'I haven't seen her or

Ron for a long time. How are they doing?'

'They're fine. They send their regards. They said you should come see them sometime and not mind about us.'

'Terrific. I'll do that. So what made you decide to stay in Annapolis?'

'I just wanted a break. A friend to talk to. See water after the parched plains and rusting tractors of that dust bowl, Iowa.'

'Things are bad there, eh?'

'Yeah. Real bad. My folks' farm is done for. The bank's trying to force my dad to sell but he refuses to do it.'

'He was always a stubborn man.'

'It runs in the family.'

'Yeah,' Tony said. 'I guess it does, Suzy.' He had a sip of his beer. 'Still shacked up with Joe Wheeler, are you?'

He regretted the remark immediately, though she didn't seem too offended.

'I was never *shacked up* with him, Tony. We just met occasionally. It was good while it lasted, but it's finished.'

'Why?'

She shrugged and blew a few smoke rings, watched them drifting away from her. 'Something happened that made me think a lot less of him. I was real disappointed.'

'That guy was all muscle and no brains. He never had any class.'

'I've never been very bright when it comes to men,' Suzy admitted. 'I married *you*, didn't I?'

Tony had to grin at that. He felt surprisingly affectionate towards her. 'So, do you want to eat or not?' he asked.

'Not really,' she said.

Tony nodded. 'It's too early for me as well.' The barman brought their drinks. 'Anyway,' Tony said, 'it's good to see you. You're looking great, Suzy.'

'You're looking pretty good yourself. She must be taking good care of you.'

'Who?'

'The woman you've moved into our home.'

'How did you know about that?'

'The kids and I talk on the phone,' she said, 'and they think she's a knockout. I could choke just saying that.'

'Don't choke, Suzy. Have a drink instead. Here's to the future.' They touched glasses and drank. 'Jesus,' Tony said, licking his lips, 'I sure do like my beer. So

what do you want, Sue?'

'You know I hate being called that.'

'Okay, Suzy, I'm here and I'm waiting. What do you want?'

'I want to know if you miss me.'

He was taken aback by that and suddenly remembered the other Suzy, the apparition in the ER-2. Abruptly feeling that he was tumbling backwards into a dark well, he had another sip of his beer, then wiped his lips with his hand.

'Miss you?' he said. 'Why do you ask me that?'

'Why do you think?'

'You're suddenly bored with your freedom?'

'You really demand your pound of flesh, don't you? Don't look so smug, Tony.'

'I'm not looking smug and I certainly don't feel it. I just want to know why you're suddenly so concerned about whether or not you've been missed.'

'I'm not concerned,' she said. 'I'm just curious. I always felt that you were never that concerned, and so, you know, I just wondered. Not that I should have asked. The fact that you've moved some bitch into the house is all the answer I need.'

'She isn't a bitch.'

'She's in my house with my kids.'

'You left both of your own accord, so you can't complain too much. What I wanted to ask,' he said, quickly changing the subject when he saw her cheeks flush with anger, 'is if you had any special reason for suddenly wanting to know if I'd missed you. I mean, apart from the trouble with the farm, are things going okay?'

She shrugged, had a sip of her bourbon, kept her eyes on the glass. 'Not bad,' she said. 'I mean, I get a bit lonely sometimes. I miss the kids. I even miss you, dammit. So a lotta times I wanted to come back, but couldn't do it - you know? Woman's pride and all.'

'Yeah, Suzy, I know.'

'Anyway, I couldn't do it. I wanted to, but I couldn't. Then Don told me on the phone that you had this other woman in the house, so I figured there wasn't a chance of my coming home.'

'No,' Tony said, 'there isn't.'

Suzy nodded solemnly. 'Yeah, I understand. Anyway, knowing that, I went and got myself a job - I serve in a diner in Des Moines - and that helped me feel

better. I mean, it may not be much, but it's something. It helps me and my folks.'

'If I can help you with money…'

'No, I didn't come here for that...' Her words trailed off nervously.

'I wanna ask you something,' Tony said. 'Since you left me, have you ever felt strange in any way? Or seen or felt anything strange? Have you had *any* kind of experience that seemed weird or mysterious?'

'Whatd'ya mean?'

'Ever feel..?' He hesitated, hardly knowing how to phrase it, searching for the right word. '*Haunted*?'

She stared solemnly at him for a moment, then burst into laughter. 'Haunted?' she said, when she'd stopped laughing. 'What way do you mean? By the memory of you, or what?'

'No,' he said, realising how stupid he sounded. 'I'm not suggesting you couldn't forget me. I mean haunted in the proper meaning of that word. Did you see or *sense* anything weird or even unusual?'

She stubbed out her cigarette, her brow furrowed in thought. 'You mean by ghosts?' she asked him.

'Yeah,' he said, feeling embarrassed. 'Something like that. Have you ever felt another presence around you, inside you? I don't know... just... anything strange.'

She shook her head from side to side, breaking into a helpless smile. 'No, Tony, I didn't. I felt miserable at times, often guilty, but nothing ghostly or weird. Why the hell are you asking me this?'

'No real reason,' he said too quickly.

'You must have had a reason.'

'Nothing important,' he lied, recalling the ghostly, more frightening Suzy who had materialised magically in his ER-2 airplane. 'It's just a private research project of mine. I'm asking lots of people that question. I mean, I'm wondering if this unusually hot weather is affecting people in any way. That's all there is to it.'

She furrowed her brow and looked sceptically at him, then grinned and shrugged. 'You always *were* a bit kooky,' she said, 'and that obviously hasn't changed.'

'No,' he said, 'I guess not.'

Suzy stubbed her cigarette out in the ashtray, had another sip of bourbon, then

turned serious and said, ‘You know, there *was* something funny, come to think of it.’

‘Oh? What?’

‘You’re interested in things that may be caused by the weather?’

‘Right.’

‘Well, I guess you already know that there’s been a lot of reports of people in Iowa seeing strange things...flying saucers, ghostly figures, and so on.’

‘I read about it, yeah.’

‘Well...’ She hesitated, as if embarrassed, then continued: ‘The day I broke up with Joe Wheeler, when I was all upset and driving from his bar in Des Moines, back to our farm, I had this sudden vision of Don and Ronnie standing together in the road right in front of my car. It was a real vivid vision. I nearly fainted when I saw them. I didn’t have time to brake, so I drove straight into them. Not into them - through them. Or I *seemed* to go through them. Then, when I got out of the car to approach them, they just disappeared. Damn, I was scared!’

Tony was scared just to hear that, but he tried not to show it.

‘Anything else?’ he asked.

‘Yeah, there *was* something else...’ She had another sip of her bourbon, as if to steady her nerves. ‘Immediately after that incident, when I was still drivin’ and lookin’ around for the kids, I saw what looked like a flying saucer coming at me from the east at terrific speed. It shot across the car, right above me, then disappeared like the kids. It was so real, I went into a skid and almost shot off the road. When I stopped, my heart was pounding, I can tell you. I was so scared, I couldn’t breathe.’

‘Anything else?’

‘Well, when I recovered, I looked around, but I couldn’t see anything unusual, so I just started the car and drove on home. I’ve seen nothing since then.’

Recalling Clare’s contention that the alien virus could be manifesting lifelike images from the subconscious of the individual, Tony asked, ‘And this occurred immediately after you’d broken off with Joe Wheeler?’

‘Right. I mean, the word around Des Moines is that a lot of the so-called visions are due to the anxieties and traumas caused by the destruction of the land... troubled people imagining things... That might have been the case with me, ‘cause when I broke off that day with Joe, it was over our kids. He’d made it clear that he wasn’t interested in looking after them or my folks, so I was thinking of Don and Ronnie when I had that vision of them.’

‘That could make sense,’ Tony said, secretly delighted that Wheeler hadn’t wanted to look after Don and Ronnie, but also disturbed that Suzy had even considered the idea. ‘But it doesn’t explain your sighting of a flying saucer.’

‘Well, it might,’ Suzy said thoughtfully. ‘I mean, earlier that same day, when Dad returned from the bank and we heard his bad news, we were all feeling real low, sat down to watch TV, and saw a program about the increasing incidence of flying saucer sightings and other strange happenings. So, there was that on my mind as well. Then, when I went to see Joe in his bar in Des Moines, we discussed the very same subject before discussing the boys.’

‘Did you ever feel anything odd regarding yourself?’

‘What do you mean?’

‘I mean, did you ever get the feeling that you were somewhere else? Or that there were two of you and *one* of you was somewhere else?’

‘Hell, no. That’s crazy!’

‘Are you sure?’

‘Absolutely!’

Satisfied that she had been in no way connected to the apparition he had seen in the ER-2 and that it had therefore been released from his subconscious, Tony decided to steer the subject back to more immediate concerns.

‘I’m enjoying this little reunion,’ he said, trying to sound more unconcerned than he felt, ‘but I’ll really have to be going soon, so what did you want?’

‘I want my kids,’ she told him. ‘Since I can’t come home again, I want the kids to come with me to Iowa. They’ll be better off with me and also good for my parents. Besides, I don’t want them being brought up by that woman of yours.’

‘You’ve no right to ask for the kids back when it was you who walked.’

‘I didn’t intend leaving them for good. I just had to be alone for a while, to sort myself out. I was feeling sorta bruised, hurt that you’d ignored my threat to leave, and I wanted to think about that before deciding what I should do: either go back home and beg forgiveness, or stay away for good and send for them. Since that choice has been taken from me, since that woman’s in my house, I want you to give the kids to me, to live in Iowa.’

‘You’ve just told me that your folks’ farm is finished, so where will my kids live?’

‘When we sell the farm to pay the debts, we should have enough left to buy a small house near Des Moines. I’ve already got a job, Dad can maybe get something else, and the boys will at least have their real mother.’

‘Some mother!’ Tony said.

‘I was fine,’ Suzy retorted. ‘It wasn’t until you started ignoring me that I went off the rails.’

‘Iowa’s gonna be wiped off the map,’ Tony said. ‘I’m not sending my kids there.’

‘It’s not that bad, Tony. It’s only the farms. Des Moines is still okay, a lot healthier than here, and with good schools and universities and lots for the kids to do.’

‘I’m sorry, Suzy, you can’t have ‘em. They’re both doing fine here. Besides, you’re bound to end up with another boyfriend. Let’s not forget that.’

‘So what? A woman’s entitled to her relationships. It’s not gonna do the kids any harm to see me with another man. And after all, you’ve got that woman in our house.’

‘You gotta be joking!’ Tony exclaimed, feeling affronted.

‘What do you mean?’

‘I hand over my kids to be looked after by you and your goddamned boyfriends? I won’t buy that,’ he said. ‘You must think I’m crazy. You walked out on us, Suzy, leaving nothing but a lot of problems, but now the kids are happy again - they think Clare’s great - and you want me to start the disruption all over again? No way, Suzy. No chance! And now I’ve got to be going.’

He started walking out of the bar, but she slid off her stool and followed him, catching him just as he stepped outside, into the blinding light.

‘Hey, wait a minute,’ she said, jerking him around by his shoulder and glaring at him. ‘Those are *my* kids, godammit, and I still love them and want to care for them. Just as I once cared for you, even when you ignored me.’

That took his breath away, since he saw the truth in it, but he managed to shut the truth out, saying, ‘You’re not going to get the kids back, Suzy, and that’s all there is to it.’

She looked hurt and angry at once, which made him feel even more guilty.

‘If I don’t,’ she said, ‘I’ll make your life a goddamned misery. I’ll file for divorce and I’ll fight about money, and if nothing else, I’ll bury you in legalities that’ll drive you insane.’

‘You wanna see the kids, come see them,’ Tony said, ‘but believe me, you won’t get them back. I’ll see you around, Sue.’

‘Don’t call me Sue!’ she shouted behind him, as he walked to his parked car.

‘Right, Suzy!’ he called back, sounding sarcastic, not feeling it, surprised to

discover that he still cared greatly for her, and aware that the guilt he was feeling had its roots in his carelessness. Then he climbed into his car and drove off, only looking back long enough to see Suzy, her shoulders slumped forlornly, dissolving in silvery light.

It was as hot as hell out there.

Part Three

Chapter Twenty-Seven

'He's only been gone a week and I miss him already,' Clare confessed to Dwight when she had drinks with him and Maggie around Tony's garden table, out back of the house in Greenbelt. 'He's more of a nuisance than he's worth, but dammit, I miss him.'

'I don't,' Grandma said, sitting beside her in the shade of the umbrella, knitting a pullover, and keeping her rheumy eyes on the boys, who were playing in the inflatable pool. 'It's a regular vacation with him gone - no more migraines or headaches. That boy of mine, he'll be the death of me someday, so I'm enjoying this break.'

Maggie threw her head back and laughed in her appealingly raucous manner. 'Come on, Grandma,' she said, 'tell us another tall tale! You *dote* on that boy of yours!'

'I do not!'

'Of course you do!'

'Well, *I* dote on her boy,' Clare said, smiling, 'though he doesn't deserve it.'

'That boy of mine has a heart of gold,' Grandma reminded them. 'He's just easily distracted. That's why he's gone off on another trip - he always has to be on the move.'

Clare knew that Tony's latest trip was based on more than restlessness - it was truly important - and she thought of it with a feeling of deprivation, as well as helpless envy. This was their first anniversary: she had been living here for a year. In that time the ozone layer had thinned dramatically in many places, the

mean temperature had risen dangerously, and the effects were being felt around the globe in unexpected, frightening ways. Now Tony was in the Amazon, one of the worst affected regions, officially in order to check out the more bizarre results of the ozone depletion, unofficially to get a break from the recent outburst of legal warfare with his wife. He was dealing, then, with a public and private crisis, and she wanted to be with him.

'I appreciate you dropping in like this,' she said to Dwight and Maggie. 'It's nice to have some company when Tony's not here.'

'Anything for a free drink,' Dwight replied, grinning and holding up his glass of beer. 'It's all in a day's work.'

The remark made Clare smile, but she did feel grateful to both of them. Sitting here in the backyard, in the dazzling heat of an unnatural summer, she was reminded of the fact that she had lived with Tony for a year now, and that it had been the strangest year of her life, for more reasons than one.

Having come from a society of pragmatic, ambitious and often powerful people, in Washington DC, she had been forced to adjust her way of thinking in order to settle into this more commonplace environment. As she had soon come to realise, she was now living in a relatively insular colony of NASA scientists, technicians, computer operatives, test-pilots and administrators, most of whom were employed either by NASA's Goddard Space Flight Center, right here in Greenbelt, or at the Navy's Surface Weapons Center in nearby Whiteoak. Most of them were intensely involved in their work and few seemed to have any major interests. Thus, whereas Clare had formerly socialised mainly with politicians, journalists and high-ranking military personnel, she now spent most of her spare time with 'cowboy' test-pilots, often eccentric scientists and technologists like Tony, and a lot of hard-drinking men and their women at boozy parties and barbecues, or in noisy bars. To her surprise, she liked it, enjoying the informality, released from the constraints of her intellect in sensual pleasures. She was no longer merely a creature of the mind, but a woman of flesh and blood. The transition had been made a lot easier because of the unobtrusive support of Dwight and Maggie, who lived just around the corner from Tony and were clearly his best friends. Now they were her best friends, too.

'I swear you've blossomed,' Dwight said in his casual manner, gazing steadily at her. 'You look younger than you did a year ago -and you looked pretty young then. This new life must be good for you.'

‘Love and passion,’ Maggie explained, her smile broad and mischievous. ‘She’s come down to Earth, to the basics, and it’s made her temperature rise.’

Clare felt herself blushing. ‘Stop it, Maggie. You’re just trying to embarrass me. I know you love doing that.’

‘I hope you have a strong bed,’ Dwight said.

‘We can hear the noise in our house,’ Maggie added.

‘You two have filthy minds,’ Grandma said, glancing up from her knitting, ‘but this gal’s looking healthy because she’s found a healthier way of life: looking after her man and his children and taking pride in the home. That’s a woman’s place, when all’s said and done.’

‘A woman’s place!’ Clare exclaimed.

‘Oh, my God!’ Maggie added.

‘That’s it,’ Grandma said. ‘Make fun of me, the pair of you. But a woman’s place is in the home, always was, always will be. And that’s why Clare’s blossoming. She’s found that there are more important things in life than independence and money. Go on, Clare, admit it.’

‘Definitely not!’ Clare retorted, though aware that she had done what she had sworn she would never do: give up her independence for a permanent relationship. And in the case of Tony, her charmingly dishevelled and undomesticated workaholic, the relationship, while undoubtedly real enough, had been bought at a high price. She had given up most of her luxuries, turned her back on security, and accepted the burden of Tony’s children, slightly loopy mother, and ostracized wife, who, over the past few months, had displayed a real talent for making life hell on Earth. Clare hadn’t met Suzy yet, but felt that she knew her. At least through her solicitors.

‘I’m tired,’ Grandma said. ‘I can’t take this heat. I’ll go inside and check how lunch is doin’ and give you a call when it’s ready.’

‘Thanks,’ Clare said.

‘No need for thanks,’ Grandma replied. ‘I’m not the kind to accept favours. As long as I’m here, I'll earn my keep.’

‘Let me help you,’ Maggie said.

‘No need. I’m perfectly capable.’

‘I know you are,’ Maggie said diplomatically, getting out of her chair, ‘but I want to help anyway. I need something to do.’

‘Of course you do,’ Grandma said. ‘You're a woman in the prime of her health with a lot of energy to burn off. Well, all right then, let's go.’

The boys whooped in the pool, having a good time together, while Grandma and Maggie retreated into the kitchen to prepare a late lunch. Clare had a sip of her orange juice, then looked across the table at Dwight

'What's Tony doing in the Amazon?' Dwight asked her. 'Checking on more ghosts?'

'That's it, Dwight. That's exactly what he's doing. Since the hallucinations, or ghosts, caused by whatever's eating the ozone layer, started materialising on Earth, the Amazon's become one of the most strongly effected areas. Tony's gone with a bunch of other physicists to check it out.'

And not just there, she thought with a feeling of deprivation. In fact, over the past three months, with members of British, European, Canadian and Indian government-sponsored research teams, all cooperating to solve the mystery of the alien virus, Tony had been to the Arctic and Antarctic, New Zealand, Bali, Great Britain, and even Tucson, Arizona. Clare missed him and envied him, but unfortunately she had to stay in Maryland or, more specifically, Washington DC, to deal with Jack Douglas and the President.

'Tony has all the fun,' she said.

Dwight grinned. 'He's a busy boy, all right. And at the rate that thing's spreading around the Earth, he's going to be even busier. That virus, for want of a better word, is starting to cause chaos on a worldwide scale. It's pretty damned frightening.'

Clare knew what he meant. The unknown, alien 'virus' was spreading around the globe and eating its way down through the thinning atmosphere in many different locations. Even before reaching the lower atmosphere, it had started altering the face of the Earth with melting ice caps, rising sea levels, the blighting of crops, increased skin cancer in humans, and numerous related diseases in animals, affecting food and other resources.

Also, during the past three months, when the virus had seeped down through the thinning atmosphere, aircraft pilots had started reporting that during their flights they were being tracked by UFOs and harassed by hallucinations or ghosts. Such reports had been submitted with increasing frequency all over the world, causing alarm and growing concern, until eventually what had been feared actually occurred: pilots started either ejecting in terror from their aircraft or actually crashing.

Luckily, only individual pilots had been so effected, but many governments were now concerned that sooner or later, the crews of passenger-carrying

airliners would be similarly affected, with dire consequences. What could happen should the virus spread to other forms of transport, defence installations, or even the general populace?

Wide scale destruction and death.

Already, in certain parts of the world, for reasons of safety, commercial airline services had been cancelled and the citizens reduced to travelling either by boat or overland. The possibility of that happening in the United States was not too far away.

'Yes,' Clare said, 'it's frightening. That's why we've got to stop it. We have to find out more about it and then neutralize it.'

'What do you have so far?'

'Damn little, Dwight. We're still analysing it. We only know that it's some kind of plasmode life-form, based on the interaction of electrons and ions, and that it's constantly reproducing itself, or growing, by feeding off the ozone in the atmosphere. We believe it was somehow transported here from somewhere else in the galaxy, most likely in the cosmic dust of a meteorite, such as Halley's Comet, and that it's been dormant for a long time and probably brought back to life by the heat generated by the depletion of the ozone layer.'

'A depletion actually started by us.'

'Right,' Clare said. 'We started the depletion of the ozone layer with our irresponsible use of CFCs, then, once we had awakened the sleeping giant, the virus, it began eating the ozone layer even faster than the CFCs had been. Now it's spreading all over the damned place, gobbling ozone wherever it goes. That's all we know about it at the moment, but it's enough to cause sleepless nights.'

'It's causing *me* sleepless nights,' Dwight said, 'that's for damned sure. From what I hear, there's been a sudden spate of so-called "ghost" reports from as close as Andrews AFB, with one case of a pilot ejection prior to crashing. That means the virus has seeped down over this area.'

'No one's going to admit it,' Clare said. 'Just as there's been no official mention of the virus anywhere in the world. It's the world's best-kept secret.'

'They're frightened of panic,' Dwight said. 'Just as I secretly panic when I think of the virus seeping down over here.' He waved his hand to take in the whole of Maryland, Washington, DC, Virginia... 'This area's filled with air force bases, national defence establishments, and numerous research facilities, including NASA. A lot of them come under my command. Now I lie awake at

nights, with Maggie complaining beside me, wondering when the first materialization is going to appear to a NASA employee engaged in highly sensitive or dangerous work. I keep imagining that man going crazy and then *doing* something crazy - and possibly damaging - as a consequence. That's my new nightmare, Clare.'

'Lunch is on the table!' Maggie called out from the kitchen, 'so get yourselves indoors!'

'We hear you loud and clear,' Clare called back. 'Kids, get out of that pool!'

The boys did as they were told and Clare helped them to dress, then the four of them trooped into the house to sit down to lunch. Grace was not said in this house, but when Clare glanced around her, at Dwight and Maggie, Grandma and the boys, she thought of the invisible virus spreading out above Maryland and wanted, for the first time in her life, to offer a simple prayer.

She would pray for salvation.

Chapter Twenty-Eight

It was raining in the Amazon jungle, a torrential downpour, as Tony huddled with the others beneath the high canopy of the trees, his boots buried in mud.

'Shit!' Polanski complained, huddled up beside him in his rubber cape, like a rock in a waterfall. 'Constant humidity, goddamned gloom and mud, spiders and bugs the size of your fist and now this goddamned rain! It's a real bitch, I'm telling ya.'

'Yeah,' Tony replied, wiping the rain from his eyes and squinting into the dripping forest, 'I feel like a worm wriggling through slime. I'd like to go home right now.'

'How much longer?' Polanski asked their guide, the handsome Brazilian, Antonio Bozzano, who was squatting beside them, unconcerned.

'Not much longer,' Antonio replied, then shrugged, as if time was irrelevant. 'Once the rain stops, perhaps thirty or forty minutes. It depends on whether or not the Indians have moved again - and since this started, they've moved a lot.'

It was because of what had started recently that Tony was here, with Polanski, two of his paranormal scientists, Larry Curtis and Ray Maneer, and some heavy equipment. The systematic, ruthless destruction of the Amazonian rain forests

by the Brazilian government had made it one of the areas where the depletion of the ozone in the atmosphere was the greatest. Because of this, there had been more reports of the 'virus hallucinations' made here than anywhere else, with an attendant, dramatically high number of accidents involving airplanes, trains and even road transport. All were due to a loss of control on the part of crew or drivers, reportedly caused by the sudden materialisation in cockpits and cabins of ghosts, doppelgangers and other bizarre materializations.

The majority of the reports had come from the most devastated areas of the rain forest, above which the ozone layer would be thinnest; and according to reports submitted to the authorities in Manaus, the Indian tribe that Tony and his team were hoping to meet up with had been most severely affected by unexplained phenomena, to the degree, indeed, where it was threatening to destroy the tribe's whole way of life. Reportedly, half of the tribe's people had gone mad because of what they had experienced. Tony, Polanski and his two paranormal specialists were here to try to record as much as they could of the disturbing phenomena.

The other two scientists, Larry Curtis and Ray Manner, were sitting under a tree facing Tony and Polanski, surrounded by their equipment and three of Antonio's Indian bearers. They were all covered in mud, as drenched as river rats, and looking as miserable as Tony felt.

Tony was an urban man, not used to the wild, and as he sat in the mud, hearing the relentless, heavy drumming of the rainfall, he thought longingly of his warm, cosy tract house in Greenbelt, and of Clare, who would be in bed right now, hopefully yearning for him.

'Shit!' Polanski exclaimed again. 'Even Manaus, when I think of it, is starting to seem almost civilised, maybe even appealing. Just put me back in that sleazy hotel with a hot bath and clean sheets, and I'll never complain again.'

The remark made Tony grin. The journey to the rain forest had, in terms of comfort, been one of diminishing returns. Now, he found himself thinking back yearningly to their first few days in the exotic splendour of Rio de Janeiro, staying in a suite in the Copacobana Palace, overlooking the famous beach, and given a tour of the famous sights by the urbane Antonio Bozzano. After a few pleasurable days they had taken an airplane to Belem, located at the mouth of the mighty Amazon river, surrounded by lush islets and dense jungle. The hotel in Belem had been less luxurious, but they had been charmed by the town's Portuguese colonial buildings, *Belle Epoque* houses, and streets lined with

mango trees, leading to elegant squares, serene parks and busy markets. Then another flight to Manaus, the chief inland port of the Amazon basin, a seedy but exotic town on the bank of the Rio Negro, just above the confluence of the Amazon. Their hotel had been down town, a decaying, ramshackle place, its rooms too seedy for comfort, its lobby filled with pimps and whores, and with cockroaches and spiders emerging from the many cracks in the walls. They had been there only one night, but that was one too many for Tony, and he had been relieved when, the next day, they had boarded a paddle-steamer for their journey to the confluence of the Amazon, where the coffee-brown of the Amazon met the inky black of the Rio Negro in a magical manner, though the waters appeared not to mingle, the line between them visible for miles. From there, they sailed another fifty miles upriver where, at a wooden jetty that was shadowed by soaring trees. There they had been met by the three Indian bearers. Since then they had been marching north, ever deeper into the rain forest, for what seemed like eternity.

In fact, they had only been marching for two hours, but Tony felt exhausted, drained and disorientated, as if he had awakened in that alien planet which he had so often dreamed about.

'I think the rain's stopping,' Antonio said, holding his upturned palm out to catch some drops. 'We can start off again.'

'I'm not sure I can do that,' Tony said. 'I think I'm too numb to move.'

'Get your ass out of the mud,' Polanski said, grinning as he clambered to his feet. 'Just pretend you're a boy scout.'

'Another day, another dollar,' Larry Curtis joked. 'And we're earning it, brothers.'

'Aye, aye,' Tony murmured, rearranging the straps of the rucksack on his back as the Indian bearers picked up the rest of the equipment and started into the forest. They were followed by the two scientists, who were swallowed up by the trees, then Antonio motioned Tony and Polanski forward and fell in beside them.

Tony hated the rain forest. It overwhelmed and confused him. As they marched deeper into it, he felt more oppressed and nervous. He had imagined it as being beautiful - the greenery lush in brilliant sunlight, the flowers blooming in a profusion to dazzle the eyes - but the sunlight rarely penetrated as far as the forest floor, the constant dampness and humidity encouraged claustrophobia, and the ghastly, pervading silence made even the greenery seem threatening.

‘It’s like a fucking bad dream,’ Polanski said, breathing heavily beside him. ‘I can’t wait to get out of here.’

‘Are we close?’ Tony asked Antonio.

‘Yes,’ the guide replied. ‘We’re nearly there. And if what I hear is true, if the tribe is breaking up, we should find them scattered throughout this area, so we must be careful.’

‘Why careful?’ Polanski asked.

‘If it’s true that the manifestations have caused the tribe to break up, the Indians could be unpredictable - and possibly dangerous. Also, if, as you’ve informed me, we could experience what they do, then we, too, might become unpredictable and be equally dangerous.’

‘Yeah, we have to watch out for that,’ Tony said. ‘We have to try to keep a grip on ourselves, no matter what happens.’

‘Right,’ Polanski said. ‘You got it. I wish we were there, though.’

Rubbing sweat from his eyes, Tony saw the scientists up ahead, the native bearers in front of them, machetes rising and falling, creating a path through the dense foliage.

Green, all green, now deepening in the gloom. Tony had to look carefully to see the other forest colours: the shadowed brown of the tree trunks, the whitish brown of the dangling lianas, the yellowish white of the fungi that covered the entangled branches, the dark clusters of Cannon-Ball fruit, the red petals and silvery-white fruit of the heisteria flowers that occasionally lent colour to what seemed, at first glance, to be colourless. Tony hadn’t expected this - he had expected a riot of colours - but now he knew that most of the colour was high up in the forest canopy, up there near the sun, with the true wealth of forest wildlife: the insects, monkeys, snakes, and great variety of birds. Yes, the beauty was all up there, breathing the air, warmed by the sun; down here was the gloom, the damp mud and silence, with stinging flies, poisonous spiders and eighteen-inch rodents, brown moths and sloths and large cats and giant, deadly snakes. Down here, where he stumbled and sweated, was a world to make the flesh creep.

And even as he thought this, feeling dizzy and unreal, he heard, between the hacking sounds of the machetes, a noise, nearby and also unreal, that really *did* make his flesh creep.

A high-pitched, ghastly wailing.

Tony stopped with all the others, glanced around but saw nothing. He caught

Polanski's startled gaze, then again looked about him.

The ghastly wailing continued.

'What the fuck…?' Polanski whispered.

'It's an Indian woman,' Antonio said. 'I know that sound. It's the wail of someone in mourning. They must be here, all around us.'

The woman's wailing continued, echoing eerily through the gloom, before another sound, the whip and slap of parting foliage, heralded the approach of a shadowy, painted figure, emerging from the forest.

The Indian, almost naked, his body as brown as a berry but painted in gaudy colours, stopped when he saw the white men, stared at them with mad eyes, then looked back over his shoulder as his double appeared and stopped, exactly as he had done, to do what he had done.

The first Indian stared at his double, let out a cry of fear, then plunged sideways into the forest and was lost in the foliage.

The second Indian disappeared on the instant, as if by a conjuring trick.

The three Indian bearers, who had placed their equipment on the ground, started gibbering amongst themselves, their eyes wide with dread, then raced back the way they had come, scared out of their wits.

The woman in the forest continued wailing.

'Jesus Christ!' Polanski whispered. 'It's enough to freeze your blood. Did you see what that Indian was running from?'

'Yes,' Tony said. 'His double.'

'Like in that airplane, right, Tony?'

'Yes, Polanski, the same.'

'And they're creating those doubles from their own minds, right?'

'You're a bright boy, Polanski.'

'The flying saucers,' Polanski said, 'the ones I saw in that airplane...'

'You created them out of your own mind because you wanted to see them.'

'And what the others saw - the dead relatives and snakes and spiders - were also created out of the minds of the individuals present?'

'Yes,' Tony said, not wanting to discuss this, recalling Clare's stricken face as she stared at her two dead parents and the airplane travelled on into infinity, 'I think you've got it, Polanski.'

The distant, ghastly wailing continued.

'Holy shit!' Polanski said.

'What happens now?' Curtis asked, looking excited, rather than frightened.

‘Do we go on or not?’

‘I didn’t come all this way just to turn back,’ said the other scientist, Ray Maneer, looking challengingly at each of them in turn, ‘so let’s divide the equipment between us and head for that woman.’

‘Right,’ Tony said.

After dividing the portable equipment between them, they marched on into the forest and soon came to the woman who was wailing. She was squatting cross-legged in the mud, beside a mound that looked like a grave, rocking a baby in her arms. The baby looked slightly unreal, oddly transparent, but she was sobbing and hugging it like someone demented. When Antonio knelt beside and spoke to her in Portuguese, she looked up at him, startled, then spat out a stream of words, burst into tears and started wailing again.

‘It’s her dead child,’ Antonio explained to the group. ‘That’s its grave she’s sitting beside. The child died a month ago and was buried right there, but a few days ago, while others were also being haunted, she awakened from normal sleep to find the child kicking in her arms. She came here immediately, expecting to find the earth dug up, but seeing that the grave was untouched, she couldn’t bear to leave. So she sits here with the child, going crazy, and refuses to move. She also told me that the village is haunted and that most of those who lived there have either fled or are mad. Come on, let’s get going.’

After that it became a nightmare. As they moved deeper into the rain forest and approached the Indian village, they repeatedly came across Indians, men, women and children, all of whom had obviously run away in the hope of escaping their individual demons, sprung from their subconscious. Most often their demons took the shape of people - either doubles of themselves or the reincarnation of lost loved ones or enemies - but frequently they were manifested out of fears and phobias, taking the shape of spiders, snakes, alligators, piranha fish, and other demoniac creatures from bad dreams.

Some of the Indians writhed moaning on the ground, scratching and slapping themselves; others clung to ghostly loved ones, cowered from ghostly enemies, or simply stared, rendered helpless by terror, at their equally terrified doppelgangers, who, not knowing they were unreal, didn’t know who the real ones were.

The rain forest was dark and humid, a dream of shadow and shifting light, and at the base of the enormous tree trunks, beneath the giant lianas, the Indians, isolated from one another, sobbed, smiled, sang, screamed, and were destined

either to starve to death or succumb to insanity.

Their own thoughts were destroying them.

Tony stumbled with the other scientists into the village clearing with the feeling that he was escaping from a nightmare. Instead he entered another one. All around him, in front of the thatched huts, in the rain-soaked mud, more Indians, men, women and children, were either wailing, giggling hysterically, or gibbering dementedly.

Shocked, Tony focused on a patch of sky high above the soaring trees and used that as his hold on reality. Then, when eventually he lowered his gaze, he saw Polanski staring intently at him.

'Are we really seeing this?' he asked of Tony. 'Or are we just fucking dreaming it?'

'I don't know,' Tony said.

'Lord have mercy on all of us,' Antonio said, now clearly rattled. 'May His light shine upon us.'

'This is sensational!' Larry Curtis cried out, as he excitedly unpacked the instruments. 'This is the greatest paranormal event in history - and we're here to capture it.'

'Damn right,' said his partner, Roy Maneer, taking in, with his cool, opportunistic gaze, the madness surrounding them. 'It's the opportunity of a lifetime. I can't believe what's going down here. It sure is something to see.'

'It may not be UFOs, but it's hot,' Polanski said, as he helped set up the portable magnometer, ambient and parabolic microphones, and video and motion-picture cameras. 'It's *fanfuckingtastic*!'

He was just fixing the video-camera onto its tripod, when, as if answering his subconscious desires, a pulsating, disc-shaped light materialised in the visible portion of sky directly above the clearing.

'Holy shit!' Polanski exclaimed softly. 'What the hell's *that?*'

'A UFO,' Tony said. 'A flying saucer, Polanski. It's what you've been searching for all your life - you and half of the world. The virus is feeding off your mind, ingesting your subconscious thoughts and deepest desires, then recreating them right before you eyes. What's willed, will be done.'

Polanksi squinted up at that brilliant light, watched it bobbing and weaving, then shook his head from side to side in denial.

'We've been searching the skies for years for these things,' he said, 'and they were all in the mind. There it is, a goddamned flying saucer, yet without us, it

can't exist.'

'You got it,' Tony said, jerked out of his mesmerized state by the sound of his own voice.

Glancing up at the flying saucer, he was almost blinded by it, so he lowered his gaze and looked at the men around him. They were shading their eyes to squint upward, trying to see the flying saucer in more detail, but like Tony, they lowered their gaze to glance about them once more.

At that moment, Tony heard Clare's voice whispering his name.

He jerked his head around and saw her. She was squatting by a thatched hut, wearing the shirt and slacks she had worn when they said goodbye. She was looking up at him with a warm smile.

That warm smile chilled his blood.

'Oh, no!' he heard himself whispering. 'Please, God, I can't bear this!'

He had to look away. That ghostly Clare was too much for him. The sun was burning down through the clearing, turning the rain to steam that coiled and spiralled over the earth to form a silvery mist. A nut-brown Indian uncoiled from mud-brown earth, spitting foam, his eyes mad, and drew from his belly his poisoned entrails, which he proceeded to eat.

Larry Curtis stared at him, too stunned to operate his camera, while beside him, Ray Maneer, being embraced by his dead mother, wept the tears he had been unable to shed when she was buried six years ago.

'Clare?' Polanski whispered. 'Am I seeing right? Is that *Clare* over there?'

He was staring at the thatched hut. Clare ignored him, but continued smiling at Tony, chilling his blood.

'Control!' Tony bawled, feeling insane. 'Keep control! Stand outside it and see it and treat it for what it really is! Bear in mind that it's not real!'

Polanski looked down at his feet, which were buried in green slime. He shuddered and gasped. The slime coiled around his legs, slithered up towards his groin, developed tentacles and icy eyes and a slobbering mouth as it dragged him down to the ground.

Polanski screamed as he fell, but Maneer and Curtis ignored him, the former weeping, still being embraced by his dead mother, the latter still too stunned to work his camera, just standing there as if shell-shocked, dissolving in the silvery, pulsating light that beamed down from above.

'*No!*' he suddenly screamed.

There was nothing happening to him - he was just denying what he was seeing

- but the sound of his voice whipped Tony raw and made him turn back to Clare. She stood up and walked towards him, passing the Indian with dripping entrails, and as a flying saucer glided overhead, casting its eerie light upon her, she held her hands out and smiled as if she wanted to drink his blood.

Tony's heart broke.

'Lord have mercy!' he heard Antonio exclaimed. 'We must flee from here! *Now!*'

Then Antonio grabbed his shoulder, tugged at him, slapped his face, and Tony blinked and looked above him and saw the pulsating light, then lowered his gaze to see Polanski being swallowed by that green mass with many tentacles, icy eyes and a slobbering mouth.

Polanksi had often joked about his greatest fears, making light of his nightmares: his belief that an alien life-form, if highly advanced, could have transcended the physical body and become a protoplasmic, pitiless intelligence. He was now being devoured by the manifestation of his most deeply rooted fear.

'Oh, Christ!' he sobbed. 'Jesus!'

'It's not real, Polanski!' Tony bawled, carefully keeping his gaze away from Clare's double. Then he reached down and grabbed hold of his friend and jerked him up from the mud. '*Let's get the hell out of here!'*

That did the trick. Polanski cursed and jumped upright, grabbing Tony by the shoulders, kicking at the nightmarish creature at his feet and making it disappear as he did so. He then bawled at Maneer and Curtis, who also jerked back to reality, and then, alongside Tony and the others, they fled from the village.

'The equipment!' Curtis shouted.

'To hell with it!' Antonio responded as he ran. '*We must get away from here!'*

Tony didn't have to be told and kept running, refusing to look back, passing the many Indians who were scattered throughout the forest, writhing, groaning, clawing bloodily at themselves, some smiling beatifically and waiting to die, to join the dead that they had brought back through love. Tony ran past them all, past the dying and the demented, away from the flying saucers and Polanski's monster and his ghostly Clare, thinking only of what was here - that invisible presence from the stratosphere, the mysterious, alien offspring from the hole in the ozone layer - and wondering how they could ever defeat while it did these things to them.

He ran around the towering trees, clambering over the giant lianas, fell in the mud and got up again and kept running until there were no more haunted

Indians, no flying saucers, no ghostly loved ones, and a breeze from a lake in a nearby clearing cooled his hot, sweating skin. *Then* he fell down - they all fell down as one - and gasped in anguish for breath.

'We left the equipment,' Curtis gasped.

'We got nothing,' Maneer said bitterly.

'We got out with our sanity,' Polanski said, 'which is more than we might have done.'

'We failed,' Tony said.

No one replied to that. There was nothing to say. They just lay there in silence, gradually getting their breath back, sinking into the mud, surrendering to the forest gloom, expressing with the eloquence of the dumb their dread and despair. Then they all climbed wearily, reluctantly to their feet and started the long trek back to the river.

Tony thought of Clare's double smiling at him and was chilled to the bone.

She had smiled like the living dead.

Chapter Twenty-Nine

The way it happened, you couldn't believe it because it didn't seem possible. Suzy thought she knew when it had started - that vision of Don and Ronnie and the flying saucer shortly after - but then she decided that it had begun before that, when she'd lain awake all those nights, brooding about whether or not she was guilty of deserting her children, had betrayed Tony or not with Joe Wheeler. She'd had lots of visions, then, those awful dreams, lying in bed, but whether or not that was the start of it, she still couldn't say.

Certainly the kids on the road. Now *that* hadn't been a dream. It might have been an hallucination, or just vivid wishful thinking, but certainly, with that saucer-shaped light, it had been *some* kind of experience.

You just never knew.

Well, you did.

She knew now.

The first time she knew that the visions were for real was the evening her father didn't come in to dinner and she went to the window to look out for him. He'd gone out to check his fields, as he did so often these days, trying to

convince himself that the dried crops would somehow get better, that the rain might eventually fall. So, she looked out the window, wondering why he hadn't come back, and saw him kneeling at the far end of the lawn, looking up at another man in dungarees. The other man was her father's age and looked a bit like him. He was standing there as still as a rock and just gazing down, smiling. Suzy saw him clearly, illuminated in the crimson twilight, and didn't think for a second that he wasn't real, though something about him seemed strange.

Then, with a shock, she realised what it was.

The man had no shadow.

Hardly able to believe her own eyes, Suzy turned cold in the heat, then burned up with a flush of panic. She rubbed her eyes and looked at the man again.

No shadow.

No movement.

That was strange as well. The man was too still to be real. He looked just like her father, was about the same age, and he stood in that unreal, crimson twilight, smiling down at her father who, kneeling there and looking up, was crying and wiping the tears from his eyes with the back of his hand.

With her heart racing, Suzy left the house and hurried across the lawn. She felt terrified, in a kind of wide-awake dream, but she managed to cross the lawn and, before reaching her father, called out his name.

When her father jerked his head around to look at her, the other man vanished.

Just like that... into thin air.

Shocked almost witless, Suzy froze where she stood, blinking repeatedly and looking around her, until she got her senses back. Then she noticed that her father was also glancing about him, as if trying to find the missing man, and he was sobbing, which he had never done before, and wiping the tears from his eyes.

'It was my father!' he cried out.

For days after that event, Suzy's father talked obsessively about the manifestation, saying his father had been as real as night and day, that he'd even heard his breathing, and that he'd looked exactly as he had been about ten years ago, just before he died. He talked himself to exhaustion, then became listless, and would spend hours on the porch, just looking over the barren fields, obviously waiting for his father to return and maybe give him a sign.

Nothing else happened out there. It took place in the house next time. It

happened a couple of days later, when Suzy's mother was preparing dinner. Suzy heard her loud gasp, then the clattering of the pan dropped in shock.

'Oh, dear God!' Suzy's mother whispered.

Looking up from the sofa, Suzy saw her mother framed in the kitchen doorway, her hands across her mouth, her brown eyes widening as they focused on the big kitchen table... Then Suzy saw the three people at the table... Her father, the man he'd claimed was his father, and a woman who looked the same age and wore old-fashioned clothes. They were sitting facing her father, at the other side of the table, smiling silently at him.

Her father, staring at them, mesmerized, had tears on his cheeks.

Suzy thought she could see faintly through both people, but she couldn't be sure of that.

They filled her with terror.

Her mother started weeping, finally breaking the dreadful silence, and her father, jerked out of his reverie, looked up. When he did so, the people sitting opposite him became vaporous, transparent, then gradually faded away, just like smoke rings.

Suzy's father and mother clung to one another, both weeping profoundly, while Suzy sank back into the sofa, feeling weak, shaking badly.

She was seeing her father's hallucinations - and so was her mother.

She was seeing inside their thoughts.

'Yeah,' her father told her, 'I'd been thinkin' about them a lot. As I watched the farm die, when the bank said I had to sell, I started thinkin' more and more of the good ol' days, when my folks ran the farm and we ate well an' had a good life. I was yearning for that, see? I wanted it back. And so I thought a lot about that, about my younger days, my folks, and so must've willed them back into existence. Praise the Lord, it's a miracle!'

'It's the devil's work,' Suzy's mother said fearfully. 'We have to get out of here. It's a sign that we got to sell up and move somewhere else. This place is haunted, I'm sure of it.'

'I ain't movin', darlin'. No way. I was born and raised on this land and I'm gonna die here. It's a miracle, I tell you. A *good* sign. The Lord be praised, we'll be saved!'

But they wouldn't be saved. Suzy knew that for a fact. The land had died and their debts were piling up and the bank was growing impatient. Half of the

county had been forced to move, selling up, hitting the road, and Suzy knew it was just a matter of time before her father would be forced to face the facts and do exactly the same. She dreaded that day, the heartbreak it would cause, and maybe that's why she also started seeing things, just like she had that first awful night, after breaking it off with Joe Wheeler.

An awful lot of people were seeing things.

The whole damned county was haunted.

Suzy saw her dreams come true. Her troubled thoughts were given life. She hadn't been quite the same since her last meeting with Tony and now, on top of the worries she was having about her parents, and after the disappointment she'd had with Joe Wheeler, she was pining to be back home where she belonged, with Tony and the kids. So, she thought about them, too much for her own good, and then started *seeing* them, like her father had seen his folks: by the side of the road, in her bedroom, out there in the ruined fields.

When she saw them, she was filled with a combination of terror and longing.

A lot of folks in this particular, blighted area were reporting similar visions. At first people were shy of talking, but then too many things happened and gradually, when it all became too much, the word went around. People confided in one another, saw psychiatrists, took sedatives, but soon even the most reliable of witnesses were reporting strange visions. The visions were discussed at home, then from the pulpits in the churches, then in the revivalist tents that soon sprang up all over the place to deal with the newly converted. A lot thought it was the Second Coming, that the visions were signs from God, and every kind of religion, good and bad, was given a new lease of life.

'When I see them,' Suzy's mother said, referring to her own hauntings by her dead parents and a sister, 'I simply get down on my knees and pray. Seeing them sometimes breaks my heart - it's as painful as the day they died - but other times I feel a rush of love that washes me clean. I used to think it was the devil's work, but now I say praise the Lord, 'cause I know, as sure as they're in front of me, that we'll meet again soon.'

Others claimed it was due to the changing weather, the destruction of local agriculture and commerce - just folks driven mad by debt and the loss of their farms - but there were also whispers about the atmosphere, the pollution and thinning ozone layer, affecting people's brains and making them hallucinate...

'I wouldn't praise the Lord too soon.' Suzy's father was slugging beer. 'They had that case on TV - the local farmer who killed his family. They'd been

known as a happy family, no problems at all, then he picks up his shotgun, slaughters his wife and four kids, then sticks the barrel of the gun in his mouth and blows his own head off. Was losin' his farm, of course - that could've been part of it - but they say that most likely he saw somethin' and was driven insane. I'm inclined to believe that.'

The local media picked it up, then the national media, and although it then became known that other parts of the country were similarly affected, Iowa was clearly the worst hit so far.

After a few weeks, you took the hauntings for granted, even if frightened by them.

'You have to will them away,' Suzy told her folks, 'but that can take time. Sometimes you see them too suddenly and at the wrong time. When that happens, *anything* can happen and that's how you get tragedies.'

Being awake was like dreaming, which meant it was dangerous. It was easy to crash your car when you suddenly saw something; easy to run over a pedestrian; easy to get a heart attack or burn your house down by accident. Folks were doing it more and more. Though it was officially denied, there was an alarming rise in traffic accidents and crashing aircraft. And too many people were found dead from heart attacks brought on by shock. Either that or they committed suicide.

It was caused by the visions.

There was that and the cancer.

No one talked loudly about diseases, but whispers carried a long way, and besides, you just had to look around you and you couldn't deny it. It wasn't just the crops (though Lord knows, they'd surely died) but also the animals dying in the fields, before your very eyes, from infections of the skin caused by parasites, which, according to the TV programs, were caused by the sunshine.

'The Earth's atmosphere's getting thinner,' Suzy explained to her dad when he slumped deeper in his chair in front of the TV after yet another ecological program. 'We've polluted the atmosphere with all our spraying and dust-cropping and supersonic aircraft and so on; now the atmosphere around the Earth is getting thinner, even disappearing some places, leaving us unprotected from the rays of the sun.'

'The sun's *good* for you,' her father retorted. 'It's like Vitamin C.'

'Only when it's filtered by Earth's atmosphere,' Suzy explained. 'There are these rays, you know? They contain something called UV-B. We're all exposed

to UV-B - like when we get a suntan - but now we're getting too much of it and it's causing real problems. Cattle suffer from ailments such as cancer-eye and pink-eye, which lead to blindness; fish and other forms of marine life will die out for lack of larvae and phytoplankton - '

'What's that mean?'

'Some kind of food, I guess. And human beings will suffer from an increase in all kinds of diseases, including herpes, hepatitis, cataracts, various infections of the skin caused by parasites, and two forms of skin cancer. One can be cured by surgery, but the other, malignant melanoma, is incurable.'

'You mean fatal?'

'Yes, Dad.'

'So we have to get out of here,' her mother said, looking twice her age, sipping lemonade and repeatedly wiping sweat from her face with the sleeve of her blouse. 'Go somewhere not so bad. Iowa seems to be worse than most other places, at least so far, and since we can't keep the farm going anyway, we might as well move on.'

'Move on where?' her husband asked, crumpled deep in his seat, looking diminished, slugging beer from the bottle. 'We ain't *got* nowhere, honey.'

'Yes, we have,' Suzy said. 'We can go to Maryland. The problem isn't near as bad there. In fact, so far it hardly exists there and I've got good friends there. And Tony, though he won't have me back, will certainly help us. So let's go to Maryland.'

'You mean give up the house,' her father said.

'Yeah, Dad, that's what I mean. We're gonna have to do it sooner or later, so let's do it now.'

'I ain't movin' until they throw me off,' her father said. 'Take that as a fact, gal.'

Suzy lit a cigarette. She smoked an awful lot these days. She knew she wasn't helping the Earth's atmosphere, but she just couldn't help herself.

'Why wait till they throw you out? Why suffer that indignity? When they decide to do it, they'll come here with state troopers and you'll just have to go. So why not go now?'

'Because I won't have it said I cut and ran. I wanna make my protest.'

Suzy sighed in frustration. 'We may not get out then,' she said. 'That may be too late. These visions have caused a lot of accidents, including crashing dust-croppers, and there's talk that if a passenger plane crashes, the commercial

airlines will be closed down. If that happens, we'll revert to bein' a nation on wheels and the roads are gonna be crammed with refugees. Yeah, Dad, the roads'll be packed with *Okies* - 'cause that's what we'll become.'

'This ain't the Third World, Suzy. It's the United States of America!'

'It was the same America in 1934, but they still had the dust bowl and the Okies. So if we wanna get out as best we can, we've got to go now.'

'I ain't shiftin',' her father said.

In despair, Suzy went to bed early, feeling older than her years, then, feeling the need to be a child again, she cuddled up with a teddy bear. She cried herself to sleep, dreamed about the house in Greenbelt, was about to prepare breakfast for Don and Ronnie, prior to school... then she realised that it wasn't a dream, that her eyes were widen open.

They weren't sitting across the table in the kitchen-diner in the house in Greenbelt, but in the moonlight coming in through the window at the end of her bed. They were wearing their normal clothes and staring at her and smiling unnaturally. She swelled up with love and fear.

'Go away!' she hissed.

Their unnatural smiles broadened.

'Go away!' she repeated. 'You're not real! Godammit, you're just my imagination. You don't exist. *Go away!*'

Though terrified of the apparitions, they made her yearn for the real thing, and Don, as if sensing this, turned his head to give Ronnie a ghastly smile and place his hand on his shoulder. Ronnie, with the deathly grace of a somnambulist, stood up and stepped forward.

Suzy sucked in her breath.

Ronnie stopped when she did that, as if whiplashed by the sound. His smile wavered as her yearning for him, for the *real* child, was obscured by her fear. Then, when she remembered that she'd created him, she slid off the bed.

'Don't come near me,' she said.

It was a ridiculous thing to say (they couldn't hear her, after all) but it made her feel calmer and in control. She tried to will them away, to shut them out of her mind, but since they remained there, she opened the room door and stepped into the hall.

She walked down to the kitchen, where the lights were still on. Her father and mother were sitting at the table, holding hands and silently weeping at the

ghosts of themselves.

They had created what they wanted back - the better past that had sustained them - and were looking at themselves ten years younger, at the other side of the table. When they trembled, the others did. When they wept, the others wept. When they laughed hysterically, which they did more than once, the others mimicked them perfectly.

Both couples looked the same and you had to study them closely to see that one couple wasn't quite real. You could tell they were apparitions because the light went straight through them, leaving no shadow at all, faintly revealing what was beyond them. At least it *seemed* that you could see what was beyond them, though you couldn't be sure of that.

Suzy held her breath. She wasn't too sure what she should do. She knew that if she interrupted - made a noise, walked up to them - the illusion created by her yearning parents would be broken and the apparitions would abruptly disappear. She was going to do that, but felt immediately, oddly guilty, sensing that her parents, in their despair, were having a moment of bliss.

It was in the nature of the hauntings - they brought either bliss or dread - and since in this case they were obviously bringing bliss, Suzy returned to her bedroom.

Don and Ronnie, or the apparitions she had created, had gone when she left, leaving everything normal. The moonlight beaming obliquely through the window fell on an empty floor.

Suzy knelt there. She felt as if she was at an altar. She closed her eyes to the light, bowed her head and clasped her hands, then whispered the prayers she had uttered every night of her childhood.

She asked for forgiveness and mercy.

She begged for release.

'Please let me go home,' she said.

Chapter Thirty

'I thought I'd meet you here for lunch,' Jack Douglas said, 'to remind you of the world you gave up for life with Rydell.'

Raising her eyes from her crab cakes and glancing around at the wealthy political diners in the Jockey Club, Clare knew what he meant.

'I'm not denying that I'm enjoying this unexpected lunch,' she said, 'but frankly, I'd be happy enough without it. This really isn't my scene anymore'

'Is that true, Clare?'

'Absolutely.'

'I just can't imagine it. You out there in Greenbelt, the little obedient housewife, dining on hamburgers and beer on his lawn with the neighbours. You belong here, not there.'

'I belong where Tony is,' she said firmly, 'which means Greenbelt is home to me.'

'You said you'd never surrender your individuality for the love of a man.'

'That remark was probably based on the calibre of man I knew at the time.' She saw his cheeks redden with suppressed anger, but she pressed on regardless. 'In fact, I feel that I've discovered my individuality by moving in with Tony, and that what I was before wasn't the real me, just some kind of pretender. As for being an obedient housewife, that's not remotely true. I'd remind you that I'm still working for NASA, the Pentagon and the White House. I'm not *just* a housewife.'

He sat back and stared at her without warmth. 'No,' he said, 'not just a housewife. A hot little mistress.'

'I certainly hope so.'

His cheeks turned red again, his lips forming a grim line. 'So does your beloved Rydell know you're having lunch with me today?'

'Of course.'

'He doesn't mind?'

'Why should he? He knows I have to meet gentlemen like you as part of my work for NASA and, more importantly, as part of my campaign to protect the ozone layer. He knows I'll return safe and sound.'

'I can't even steal an hour, then?'

'No, I'm afraid not.'

'Just think, Clare, it would be almost like adultery - with all the excitement that holds.'

'I'm not interested in that kind of excitement, so put it out of your mind, Jack.'

'I have to confess, I'll never forgive you for dropping me for Rydell.'

'I know. And it shows.'

‘God, Clare, you’re still one tough lady.’

‘No, Jack, not with Tony.’

His eyes flashed when she said that, his clenched knuckles turning white, but he soon regained his cool composure and superficial charm.

‘Do you mind if I smoke?’ he asked.

‘I’d rather you didn’t,’ she replied.

‘You’ve joined the anti-smoking lobby, have you?’

‘I can’t let people smoke in my presence, given what I’m involved with.’

‘The hole in the ozone layer.’

‘Exactly. I won’t encourage further contributions to our current rate of production of CFCs.’

His smile didn’t reach his eyes, which were icily curious, and she wondered how she could ever have lain beside him, her naked skin touching his. He had been her lover, certainly, but never someone she could have loved - and that possibly explained her attraction to him before she met Tony.

‘Well,’ he said, ‘since, as you believe, an alien presence is devouring the ozone, why the hell should we worry about our relatively minor contribution to the depletion?’

‘Very clever, Jack, but not clever enough. While it’s true that the unknown entity is destroying the ozone even faster than the CFCs, it’s also true that our continued use of CFCs isn’t helping us to slow down the rate of depletion. In fact, as long as the West continues to contribute CFCs to the atmosphere, it stands guilty of aiding that unknown entity. To discover the nature of that thing and find a way of stopping its growth, we need all the time we can get and smokers don’t help us. Not that your office is helping much either, but then who would expect it to?’

Douglas heard her sarcasm, but refused to be rattled by it. ‘What do you expect? You ask us to believe that something alien is in the atmosphere, but even you and your friends don’t know what it is.’

‘We know it’s some form of plasmode or radiobe life-form that organises itself, and communicates with itself, by means of electromagnetic forces. We just don’t know exactly where it came from or how to stop it from spreading.’

‘That’s not much to go on. And the Russians - or anyone else for that matter - could have created it in a laboratory.’

‘It’s true that scientists have created primitive plasmoids and radiobes in laboratory experiments, proving that they could exist under certain conditions,

but we've a hell of a long way to go before we can create anything capable of lasting more than a few seconds and surviving in normal atmospheric conditions. So your theory is nonsense.'

'In the meantime,' Douglas said, as if he hadn't heard her, 'any dramatic reduction in the use of CFCs would weaken us economically and, therefore, politically. Sorry, Clare, we can't wear that.'

'But you know that something different's entered our atmosphere and is causing chaos. Why do you refuse to face up to the fact that we have to do something to stop it?'

'The President and I are in agreement that something has to be done, which is why we're financing your work with Rydell. However, it's our belief that this new presence in our atmosphere isn't an *alien* presence, but more likely some kind of new atmospheric weapon being produced, most likely, by the ever more desperate Russians. They have, after all, previously used cloud-busters to alter the weather where it suited them, so this new element could very easily be no more than an extension of that work. We haven't heard, for instance, of any reports of similar hauntings taking place in Russia. This suggests that the virus hasn't reached them yet, which it wouldn't if *they* were controlling it.'

'That's nonsense, Jack.'

'That's what was said about cloud-busters, but the first droughts in the United States since World War Two were caused by the primitive cloud-busters of the former Soviet Union.'

'You can't be certain of that.'

'We're almost certain. At least in the sense that we know for a fact that the Russians still possess cloud-busters that actually work.'

'Is that why you're now committed to supporting the agricultural and industrial lobbyists in the White House?'

'Correct,' Douglas said without shame, perhaps even with pride.

'And that's also how you've managed to convince the President that this whole thing is a Russian plot to weaken the economy of the Free World.'

'Who are you to say what the Russians are, or are not, doing?'

'Come off it, Jack!'

'It's my duty to convey to the President what I honestly believe, particularly regarding matters relating to the national and international economy. And I certainly believe what I've just told you regarding foreign intervention in the atmosphere.'

‘That sounds like a pretty pompous mouthful, apart from being nonsensical.’

‘You always *were* a lady with a sharp tongue.’

‘Why don’t you just tell the truth, Jack? You don’t believe a word of that crap. You’re only using it as a cover-up because you have strong financial ties with many of the companies responsible for the CFCs, notably those involved with airlines and oil.’

‘Who told you that?’

‘An old friend. A *Washington Post* journalist.’

‘His name?’

‘That’s my business.’

‘An old friend of Rydell’s, most likely. The same old friend who leaked this story in the first place.’

Clare smiled. ‘Are you going to deny your personal financial interests?’

‘Naturally. Would you care for dessert?’

‘Since it’s free, I’ll have the cheesecake.’

‘An excellent choice,’ Doulgas said.

They ate the cheesecake in silence. Clare didn’t know what to say. She glanced occasionally at Douglas, aware of how much he had changed, and realised, if she had ever had any doubts, that he resented her affair with Tony and was letting it cloud his judgement regarding the growing holes in the ozone layer. Possibly because of this, he had also changed in other ways: his normal anti-communism had become more strident and, regarding his influence with an ailing President, positively dangerous. Finishing her cheesecake, she put her spoon down and stared boldly at him.

‘What you’re telling me,’ she said, ‘and what you’re implying to the President, is based on the most pitiful form of self-deception.’

‘I think I’ll pick up the check and pass on the brandy,’ he said, nodding at the waiter.

‘The fact that the Russians haven’t reported any manifestations doesn’t mean a damned thing,’ she said. ‘The Chinese and Japanese haven’t reported any manifestations either - but they, like the Russians, aren’t as free as the Western World with this kind of news.’

‘I think I get your drift, Clare.’

‘I’m sure you do, but I’ll make it clearer anyway. What I’m suggesting is that the Russians - or the Chinese and Japanese for that matter - wouldn’t necessarily report such a phenomenon, even if they were experiencing it. That they haven’t

officially announced it doesn't mean it's not happening.'

'If it was happening, we'd know about it, Clare. We have good intelligence.'

'It's good, but it gossips. I have it on gossip picked up in Clyde's restaurant at Tyson's Corner, Virginia - a favourite CIA hangout - that since the Arctic and Antarctic ice caps are already melting and causing a rise in sea levels, thus beginning the process that will eventually lead to the flooding of Leningrad, the Russians certainly wouldn't be engineering it themselves. In fact, as you well know, in 1985 Gorbachev and Reagan signed an agreement to cooperate in the protection of the environment. Since then, Russia and the US, despite their continuing differences, have been working together on global warming problems.'

'Scientific cooperation doesn't necessarily go hand-in-hand with politics,' Douglas insisted as he hastily signed his credit slip, returned his card to his billfold, then pushed his chair back to stand up. 'And since global warming will dramatically increase agricultural productivity in the central region of Russia, as well as Europe, while dramatically decreasing it in the US, their scientific cooperation in this case could be superficial.'

'Nonsense!' Clare snapped. 'The Russians are well aware of the fact that the increased agricultural productivity in the regions around Moscow is hardly likely to compensate for the flooding of cities such as Leningrad. In fact, if anything, they've good reason to have doubts about us, since according to certain of their scientists, we in the US, either accidentally or by design, may have altered the atmosphere by using our satellites. And even those Russians who *don't* believe we've a political motive, suspect that we may have started this business on a purely experimental basis and have since lost control of it. In that sense, then, they believe it's our fault.'

'Bullshit,' Douglas said as the waiter pulled Clare's chair back. 'I haven't heard a damned thing about this. I think you've invented it.'

'You've heard about it, all right,' Clare said, walking out of the restaurant with him. 'You've known about it a long time, but you're trying to blame the Russians for it, in order to unburden Western multinationals of their responsibilities and enable them to keep up production and line your pockets. Isn't that true?'

'This conversation is finished, Clare.'

They parted on the sidewalk and walked off in opposite directions, no longer friends.

Clare drove back to Greenbelt with a feeling of great sadness and trepidation, sensing that Douglas would now turn more resolutely against her. As she drove along Greenbelt Road, past the familiar fences of the Goddard Space Flight Center and the houses of those who worked there, she became aware of the sunlight, too bright for this early afternoon, and felt slightly suffocated in a heat that should have gone by this time of year. Though bright, the light was hazy, an ever-shifting, silvery mist, making the houses of Greenbelt seem unreal as they slid past the moving car. The weather was changing, she knew, though not many people did, and she wondered just how long it would take for the alarms to ring worldwide.

When she arrived at Tony's house, she was surprised to see him standing on the porch, shading his eyes with his hands, squinting into the bright light. She was even more surprised when, as she emerged from the car, he hurried towards her. When he reached her, he took hold of her shoulders and squeezed gently but urgently, his normally good-natured face grim.

'There's just been a news flash item on TV,' he said. 'A packed PANAM 747 crashed into the Atlantic shortly after taking off from Kennedy Airport. So far there's no reason to believe it was a malfunction. According to ground control, everything seemed perfectly normal, until suddenly, without reason, the flight crew started screaming hysterically. The 747 went out of control and crashed into the sea. There were no survivors.'

Clare stared at him, too shocked to speak, then fell into his arms.

'It was the virus,' she whispered.

Chapter Thirty-One

The man who climbed out of the car in front of the house in the silvery light of the afternoon wore a finely cut grey suit, an immaculate white shirt and tie, and expensive black, patent-leather Italian shoes that already were covered in dust.

Suzy's father was sitting beside her in his rocking chair on the porch, his shotgun resting across his knees, his gaze steady on the man as he stood beside the squad car, leaving the door open, and patted down his windblown silvery hair and started fixing a nervous smile. The driver's door opened and the county Sheriff, Jack Baker, got out, adjusted the Stetson hat on his head, tugged at the holster belt around his heavy hips, then nodded at the neatly suited, nervous man.

They both walked to the house.

Suzy's father gently kicked his booted heel against the floor, starting his chair to its gentle rocking, and ran his fingers lightly along his shotgun without moving his body. He seemed very relaxed.

When Sheriff Baker and the city guy reached the steps of the porch, Suzy's father, still rocking gently in his chair, said in a neutral tone, 'Put one foot on that porch-step, Jack Baker, and I'll blow you to Kingdom Come.'

The sheriff stopped and raised his hands as if surrendering to the enemy. He glanced at the man beside him, grinned nervously, then said, 'Okay, Abe, we don't want no quarrel. We just came to deliver.'

'I figured that.'

Relieved, the man in the suit put one foot on the porch and started withdrawing a paper from his jacket pocket. Suzy's father lifted the shotgun off his knees and the man immediately stepped back again.

'Suzy,' her father said, 'what do you see in front of you?'

'I see a man with a paper in his hand, Dad. Some kinda document.'

'That's right,' her father replied, stroking his shotgun. 'That's just what I see. What you got there, Mister?'

'What we've brought, Abe,' Sheriff Baker began, 'is - '

'I asked the city gentleman,' Suzy's father said. 'I'm sure he can answer for himself.'

'You know what I've got, Mister Winger. You know I'm from the bank. You refused to sell your farm and you've run out of funds and now we're gonna ask you to move. This farm belongs to us, sir.'

'No, it doesn't,' Suzy said. 'We don't owe you that much.'

'If he won't sell, M'am, we'll have to sell for him and take what we're owed.'

‘You’ll sell real cheap, right?’

‘No demand these days, M’am. Just look at the weather, at the fields, and you’ll know what I’m sayin’. We don’t want this, M’am, no more than you do, but facts are facts and business is business, so this farm has to go.’

‘The only one’s gonna go is you,’ Suzy’s father said, ‘if you place one goddamned foot on my porch. And that goes for you, too, Jack.’

The sheriff, an old friend, remained right where he was, toying idly with the pistol on his hip, but looking embarrassed.

‘Listen, Abe,’ he said, ‘we gotta deliver these papers. If you don’t take ‘em, we’ll just drop ‘em on the ground and that makes it legal. You’ve gotta go, Abe. The law’s the law, after all. The farm’s dead and you’ve got a lotta debts an’ someone’s gotta collect. That’s the bank, Abe. That’s what banks are for these days. Mister Peters, here, he’s just like you and me - he just does what he has to do. It’s all over here, Abe. Everyone’s movin’ out. You just gotta cut your losses and go and try somethin’ else, somewhere else. That’s it, Abe. I’m sorry.’

‘I ain’t givin’ my house to no goddamned bank. The farm - yes. Not the house.’

‘The house is part of the farm, Abe,’ the city gent said. ‘Right now, the most valuable part. It’s the house and the land the bank wants. And if they want it, they’ll get it.’

‘Think you’re smart, don’t you?’

‘No, Mister Winger, I don’t. I’m just a man that has to do a dirty job ‘cause I can’t afford otherwise. You should understand that.’

Suzy glanced at her father. His handsome face was like granite. It was only the way he stroked the shotgun that made you realise how mad he was.

And he was hurting real bad as well.

‘Get off my land,’ he said. ‘Get off or I’ll blow you off. They’ll be pickin’ the pieces up in Des Moines and I won’t give a damn. You’re trespassin’ an’ that gives me the right and this is America. Go to hell. Goodbye, gentlemen.’

Sheriff Baker sighed and raised his hands even higher. ‘When we come tomorrow,’ he said, ‘we’ll come with a lot of help. That means shotguns and dogs and even bulldozers, to raze this place to the ground if we meet with resistance. Don’t be crazy, Abe. You can’t fight this. Just pack up and go.’

‘I’ll think about it, Jack. I’m thinking about it. I’ve thought about it. Get goin’.’

‘Abe - ’

Suzy’s father, a deeply religious man, turned the shotgun in his hands until it

was aimed at his old friend, Sheriff Baker.

'You better get going, Jack.'

The sheriff dropped his raised hands to his sides and shrugged in defeat.

'Okay' he said. 'You win. At least for today. Harry,' he said to the man in the neat suit, 'just drop those papers on the ground at your feet. This is still Abe's land, so by dropping 'em you've delivered 'em legally. Okay?'

'Okay,' the city gent said and opened his hand and dropped the papers. They lay in the dirt of the lawn and everyone stared at them. 'If you're not gone by tomorrow morning,' the man said, 'it's gonna turn really nasty. I'm sorry, but that's all I can tell you. Now you folks have a good day.'

He got back into the car. Sheriff Baker shrugged and followed him. The car was backed out of the driveway and disappeared in a cloud of dust.

Suzy looked across the land, at what had once been golden plains, and saw the brown desolation of the blight and the clouds' shifting shadows. These days you often saw other things - flying saucers, ghostly lights, all the things that you'd dreamt about - but what you never saw in the sky anymore were real-life airplanes. There'd been too many crashes of airliners and private airplanes, so now the only people allowed to fly were those in the Air Force. Iowa had gone back to the wheel, to the long dusty roads, and other states were gradually going the same way, one after the other. It was like the Third World: blighted crops and primitive transport. The country had changed virtually overnight and gone back to the past.

'Sun's goin' down,' her father said.

'Yeah,' Suzy said.

'It looks different when you see it through all that dust.'

'It doesn't seem real, Dad.'

The door behind Suzy squeaked open and her mother came out. She'd just been doing the dishes inside and was drying her hands with the dishcloth. She looked awfully old these days.

'We got the order to move, right?'

'Yeah,' Suzy's father said. 'The papers are lyin' there on the lawn if you wanna dirty your hands.'

'I just cleaned them, Abe.'

Abe chuckled. 'Good woman.'

'We've gotta go, Dad,' Suzy said. 'We can't fight the law.'

'You don't think so?'

‘No.’

Her father sighed. ‘I guess you’re right. It’s just that I won’t give them the house. It’s mine and I’m keeping it.’

‘It’s mine as well,’ Suzy’s mother said.

‘I know that, Gladys. I ain’t forgettin’ that. When I say somethin’s mine, I mean it’s ours, and darn well you know it.’

‘Stop rockin’ that ol’ chair of yours, Abe. Sit still when I talk to you.’

‘Okay, Gladys. I’m listening.’

Suzy felt a hand lightly brushing her cheek as her mother passed her and sat in front of her father, on the steps of the porch. You could tell she was gazing down at the papers on the lawn, but she didn’t move to fetch them, wouldn’t dirty her fingers, and instead just cupped her chin in her hands and gazed out at the dead fields.

‘I can’t take it no more,’ she said. ‘There’s no reason for this, Abe. The land’s dead and gone and it ain’t comin’ back and we’re haunted so much we can’t sleep, so we might as well go. We get these visitations - that’s a biblical word, honey - and I say they’re as biblical as the word, a sign from God that we’ve got to go. We can’t live with the past. The visitations are from the past. We get my parents and your parents and our grandchildren and dead friends - and we get ‘em ‘cause we’re yearning for the past that was killed by the weather, by the sun, by the atmosphere. Suzy knows all about that.’

‘I know she does. I’m still listenin’.’

There was a moment of silence. Suzy watched the sun go down. The very mention of her mother’s grandchildren, her children, had made her go all weak at the knees and feel lonely as hell - and she knew that if she let that feeling grow, the kids would appear magically right in front of her.

That could be heaven or hell and you never knew which.

It was best avoided, most times.

‘What I’m sayin’,’ her mother said, having gathered her thoughts together, ‘is that we’ve held out as long as we can and reached the end of the line. I know you love the farm, Abe - dammit, I love it too - but when land dies, it’s just like a human bein’ - it rots and gits buried. Let’s bury it, Abe. We got no reason to stay here. As Suzy says, an’ has said for so long, you can’t fight facts forever. They’re gonna come tomorrow for sure. They’ll have the weight of the law behind them. We can leave on our own or get thrown off, and I say, let’s have dignity. I say let’s leave tonight.’

‘And everything that’s inside the house? You wanna leave that as well?’

‘I don’t want it, Abe. These visitations are enough. All that’s inside the house is the past - and the visitations are enough of the past to last for our lifetime. Let’s take what we can carry. Pile it up on the truck. Anything that don’t fit, don’t go, which is a good way of doin’ it. We gotta take the truck anyway. There’s no airplanes flyin’. Like the TV said, the whole country’s back on wheels, so we ain’t got the choice. We take what we can take and then we go. Don’t let pride make you blind, Abe.’

‘A man has his dignity.’

‘There’s a way to keep that, Abe.’

‘If I let ‘em take the house, I’ll be lettin’ ‘em kill me.’

‘You just have to leave, Abe.’

‘And the house?’

‘I’m just walkin’ away. What I don’t see, I don’t know.’

‘Okay, Gladys. Let’s do it.’

Suzy felt like someone else. She couldn’t believe what she was hearing. These were her parents, decent, law-abiding folk, but they had their own language, a morality carved in rock, and if they couldn’t keep their dignity one way, they’d do it another. She knew what they were talking about, what would happen, what it meant, and while it shocked her, making her feel like a criminal, it also made her exultant.

‘They’ll be here as soon as sun comes up,’ she said, ‘so let’s start straight away.’

Her mother stood up in front of her, silhouetted in fading light, and glanced down at the piece of paper on the lawn, but made no move to touch it.

‘It’s bin a long time,’ she said.

‘Yeah,’ Suzy’s father replied. He stopped rocking in the chair and laid the shotgun on the floor and stood behind his wife and embraced her like a sixteen-year-old. ‘A long time,’ he repeated.

Suzy looked at them standing there, silhouetted by the sinking sun. She wanted to see the golden fields, the brilliant sky, the crystal stars, but her folks were posed against a background of parched earth and dust-darkened twilight, facing World’s End.

‘Praise the Lord, we had a good time.’

‘What we had, He took from us.’

‘I’ll wash your mouth with iodine, Abe Winger, if you say one more word.’

‘I feel broken, Gladys.’

‘You won’t when you say goodbye.’

‘I’m not stealin’. I’m just refusing to let *them* steal.’

‘That’s why I’m lettin’ you, Abe.’

It took a long time to pack. It took half the damned night. First they had to make choices - do we take this or that? - then they had to load the truck and choose what to discard and then, when even the suitcases were bulging, they had to discard more. Suzy worked hard to help them, but also watched and listened, and learnt a lot about the silence of dignity and the pain it could hide. She never heard them crying - she only saw the glint of tears - and then, when the pain increased, when it became close to unbearable, it released what they needed to replace it and help them endure.

They packed their things in a house filled with the ghosts of the loved ones they’d lost.

The house filled up with the dead.

Suzy saw her grandparents. She’d last seen them as a child. They were sitting around the kitchen, in the gloom of sunset, and they glowed with an almost imperceptible light and seemed a little transparent. They were apparitions - she knew that - but you could see them and hear them breathing... and when you reached out to touch them, your hand went through them, though they stayed where they were.

They were there, yet not there. Real, yet not real. You could have called them reflections, but they didn’t do what you did. They sometimes did what you *wanted* them to do, but they did it all on their own.

They could fill you up with love or terrify you. They could drive you insane.

Suzy’s folks were healthy people who’d received love and given it. What they saw, then, and what Suzy saw, only strengthened that love.

They saw God in the walking dead.

When you saw Him you cried and her parents cried a lot, but they wept out of love and were renewed and did what they had to do. They loaded their best things on the truck, packed the suitcases to bulging, and then, before dawn, when the stars were dressed in pink light, they fell to their knees in front of their relatives - parents and grandparents and grandchildren and old friends - and clung to one-another and wept profusely and reached out to touch the dead.

The dead could not be touched. They were there, but not there. You could hear them and smell them and know that they existed, but when you tried to touch

them, to actually *feel* them, your hand just went through them. And invariably, when that happened, they disappeared, as if violated.

You had broken your own spell.

Suzy's parents did just that. They touched their relatives and let them go. Then, wiping tears from their eyes, they both looked at Suzy.

'You okay?' her father asked.

'Yeah,' she replied.

'Then let's get going,' her mother said. 'We got a long road ahead of us.'

They walked out of the house, down to the truck beside the lawn. Suzy glanced up at the sky, at the stars obscured by dust, then across the dead fields lit by dawnlight and shadowed by passing clouds. It wasn't what she had known - that magical place of her childhood - and so she climbed up into the truck with a sense of relief. Her mother climbed up the other side and then slid in beside her.

It was real quiet at dawn.

Suzy stared at the old frame house, its walls white in the predawn darkness, and saw the lights from inside beaming out onto the porch containing the rocking chair. Her father wasn't on the porch - he was inside the house - and sometimes his silhouetted form was framed by the windows. He was in there a long time, doing what he had to do, but eventually he backed out of the house and down the steps of the porch. He was shaking a can up and down, a man who knew what he was doing, and he'd obviously used more than one can and left the rest stacked inside. He kept backing towards the truck, splashing the porch, then the steps, and eventually threw the empty can aside and straightened up and spread his hands in the air.

No, he wasn't praying. He was just stretching himself. Then he walked up to Suzy and smiled at her and said, 'You know what I'm doin'?'

'Yes, Dad. And you do it.'

His smile broadened like the dawn light. 'I won't give 'em the house,' he said. 'I won't let 'em sell it off and give me dimes and then ask for my thanks. I'll keep what's my own.'

'If they don't get it,' Suzy's mother said, 'then it's always your own.'

'Right,' Abe Winger said with pleasure. 'You're a woman worth knowin'.'

That was his name. Abe Winger. Her father. And the name made her think of him as someone as strong as a redwood tree. She had thought of him that way for years, ever since she was a child, and had only changed her mind in recent months, when the dying land had diminished him. Now he showed her what he

was made of - yes, dammit, he broke the law - when he lit a match and threw it onto the kerosene he'd emptied onto the lawn, all the way from the house.

The morning's darkness was filled with flames.

Yellow flames and black smoke. The flames moved with the speed of light. They raced away towards the house, eating up the kerosene, then danced up the steps of the porch and straight through the front door. There was a rushing, roaring sound. God was taking a deep breath. God let his breath out with a mighty roar and set the whole house afire. It was so fast, it was shocking. First the white house, then a furnace. A ball of fire, white, yellow and red, ballooned up to the starlit sky. The stars disappeared. The flames ate away the darkness. The house crumpled as the sun started rising beyond the dead fields. The fire became a great spectacle.

'Godammit,' Abe Winger said.

'You did right,' his wife responded. 'It's okay to cry, it don't matter. We kept what was ours. Okay, Suzy, start drivin'.'

Suzy wiped the tears from her own eyes and drove into the dawn light. She saw a column of dust not far ahead and knew what it meant... more people in flight.

'Lord have mercy,' her mother said.

Chapter Thirty-Two

'The other night I woke up to find my dead parents by my bedside. I am the President of the United States, Mr. Douglas, and that's what I experienced. We must put an end to this.'

Douglas knew what he meant. In the few months since he'd had his unpleasant lunch with Clare, everything he had tried to keep hidden had dramatically surfaced. Now, as he gazed with a feeling of hopelessness at his ailing President, he thought it a bitter irony that the accident that had unlocked Pandora's box had occurred even as he and Clare were having that lunch - the crash of the PANAM 747 en route from London to New York.

That airliner had crashed because the crew had been driven temporarily insane, or at least out of control, by what they had experienced on the flight deck. Worse: they had all gone berserk while full contact was being maintained

between them and Ground Control, thus ensuring that their experience did not remain a secret and, even worse, eventually was leaked to the media through the release of pirated tapes of the transmission.

Within days of that event, the whole world had confirmation that something strange was happening in the atmosphere, and that the many unofficial reports or unsubstantiated rumours of bizarre occurrences around the globe, most concerning apparitions, ghosts, doppelgangers and flying saucers, were really taking place and had been caused by something that was rumoured to be an alien 'virus' that no government had as yet officially acknowledged.

'I agree, Mr. President, that we must put an end to it,' Douglas said, 'but it isn't as easy as it sounds.'

'I'm not saying it's easy,' the President responded, 'but I want to know what's been happening. You said earlier that those physicists, Tony Rydell and Clare Holton, who've been investigating the phenomenon, have finally completed their work and submitted a report through NASA's Space and Earth Sciences Directorate. Have you brought the report?'

'No, Mr. President. The report is being edited - '

'I beg your pardon?'

'Not censored, Mr. President,' Douglas said too quickly. 'The report, which is written in scientific jargon, is being edited into a comprehensible format and will be on your desk tomorrow morning.'

'Well, since the comprehensible format will probably be as incomprehensible as its predecessor, perhaps you could tell me, right now, in plain language, just what it says. I mean, what *is* this alien entity we're all being haunted by?'

Douglas glanced down at his notes. 'According to the report of Rydell and Holton...'

'You mean, they're not officially representing NASA with this report?' the President interjected in a short-tempered manner.

'Of course, they are, Mr. President. I'm merely suggesting that this is *their* opinion...'

'An opinion officially endorsed by NASA? I mean, it *is* an official NASA report?'

'Well, of course, Mr. President!'

'Then we must accept the report as valid, must we not?'

'Yes, Mr. President.'

'Good. Let me hear it.'

Humiliated, Douglas glanced down again at the notes.

'According to the final analyses by NASA of the international research material collated by Rydell and Holton, the so-called virus is formed from two alien life-forms - plasmodes and radiobes - that were picked up in interstellar space and transported in the tail of Halley's Comet as part of its Orionid and Eta Aquarid meteor showers. The alien life-form was left behind by the comet, in the shape of a cosmic dust, during its flight of 1910, when Earth actually passed through the comet's tail. In summary, therefore, the cosmic dust is an inorganic intelligence which organises itself, and communicates with itself, by means of electromagnetic forces.'

The President, perhaps because he was ailing, remained very calm. 'Did you say... *intelligence?'*

'Yes, sir. And that intelligence is growing stronger in the increasing global warmth caused by the thinning ozone layer, and, worse, taking even more strength - and many physical shapes and forms - from the most intense thoughts of human beings.'

The President leaned forward on his desk, looking even more anxious. 'Let me get this straight. The virus has lain dormant since 1910, when the Earth passed through the tail of Halley's Comet, including its meteor showers, and picked up this intelligent, but sleeping, cosmic dust.'

'That's correct.'

Pleased with himself, the President nodded and continued: 'The sleeping plasmoid life-form was then initially brought to life, or returned to consciousness, by the warming temperature caused by mankind's use of CFCs, which depleted the ozone layer and let in the sun's more harmful ultraviolet radiation.'

'Also correct.'

The President nodded again, then clasped his hands, sage-like, under his sagging chin. 'And once the virus had come back to life, or returned to consciousness, it realised that it needed Earth's warmth to survive. So it started devouring the ozone layer even faster than our CFCs had been doing.'

'Yes. I believe...'

'And now,' the President continued, ignoring Douglas, 'having devoured most of the ozone layer, it's somehow feeding off the more intense thoughts of individual human beings and materialising as the physical embodiment of those thoughts - dead relatives, feared enemies, various phobias such as spiders and

snakes, and so on... Is this what we have here?'

Douglas took a deep breath, almost shaking, thinking of how he had sneered at Clare and Rydell and now humiliated because they had been right. 'I fear so, Mr. President. And now Earth is becoming populated with living ghosts - the phantasms of the dead - and doppelgangers - the phantasms of the living - as well as other apparitions, such as flying saucers.'

'Why would they see flying saucers?'

'Wishful thinking is one reason. Since the manifestations are created from the minds of the witnesses, they're obviously seeing what they'd like to see: the spacecraft of the superior beings who've come to protect them. Another theory, first propounded by Jung, is that flying saucers are the manifestations of the racial memory of primitive mankind, which believed that all the gods came from the sky. So, for one reason or the other, that's what people are seeing now.'

'And these various manifestations are causing increasing worldwide havoc by haunting pilots and astronauts, train, bus and automobile drivers, vital computer operators, and the controllers of national defence systems - not to mention causing fear and derangement in normally sane citizens.'

Douglas sighed, unable to answer, and then nodded affirmatively.

'So the world's practically falling apart,' the President said.

'Yes, sir, it is. In some places, worse than others. And right here, in the United States, we're suffering more than most and becoming, as near as damn it, a Third World country, with no commercial airlines running, some states cancelling train services for reasons of safety, and most of the country suffering from severe drought and, in some places, famine. The Midwest has been devastated and thousands of people are on the move, most of them heading for the cities, where they hope to find work. And because of that, the land's filling up with gangs of scavengers and the general crime rate is rising. It's one hell of a mess.'

The President stared steadily at him, as if trying to reach into his mind and pluck the truth out.

'So all this is happening, but you still don't accept that it's being caused by an *alien* virus.'

'No, sir, I don't.'

'You believe it's a man-made catastrophe, maybe caused by the Russians.'

'There's no proof that it's an alien virus,' Douglas said, thinking only of his vested interests in chemical and oil producing companies, since the banning of

commercial airline flights had made his shares in those companies plummet to rock bottom. 'NASA only has proof that it *exists*, but it could have been man-made.'

'Why would the Russians - or any other foreign power for that matter - create such a thing, since it also puts them at risk?'

'I can't speak as yet for any other foreign powers, but we know that the Russians, certainly as the Soviet Union, were attempting for years to manipulate the weather with the aid of cloud-busters. It's the belief of the CIA...'

'Rarely reliable,' the President interjected impatiently.

'It's the belief of the CIA,' Douglas repeated desperately, 'that the Russians continued with the experiments of their Soviet masters, managed to advance their research in so-called atmospheric warfare, then attempted to expand their power over the atmosphere. That experiment, while wreaking havoc on the West, then went out of control, backfiring on them to create mayhem in Russia as well.'

'I have to say, Jack,' the President said sardonically, 'that while you're blaming the Russians, they're blaming us; the Israelis are blaming the Arab States and vice versa; South East Asia is blaming Japan, which is blaming the Chinese; and the Chinese are blaming everyone not massacred in Tiananmen Square. Most of those laying the blame on others are politicians, of course. According to my FBI reports, our own scientists are now notably reluctant to support our claims and are leaning more towards the theory of an unnatural, or alien, phenomenon. So given these contradictory theories, I'm not sure *what* to think.' He paused, as if contemplating his own confusion, then asked: 'What else do we have to deal with? Please leave nothing out.'

'I think you know the rest, Mr. President,' Douglas said with a sinking heart. 'The depletion of the ozone layer is dramatically changing Earth's atmosphere and climate. On a global level, once fertile areas are suffering from famine, former areas of constant drought are now being flooded by torrential rainfall and rising tides caused by the melting ice caps, and the increasing lack of protection from the sun's ultraviolet radiation has led to widespread skin cancer in human beings, including malignant melanoma, as well as a dramatic rise in herpes, hepatitis, cataracts, and numerous infections of the skin caused by parasites.'

'Mostly white people.'

'Yes. And this, in turn, is leading to unpleasant social developments, including those I've already mentioned with regard to the US.'

‘Of course,’ the President said dryly.

‘And apart from the agricultural devastation caused by drought and flooding,’ Douglas continued, ‘there’s been an economically ruinous degradation of the health of domesticated food animals, fish, and even the uncultivated vegetation that could otherwise have replaced the crops destroyed by the droughts.’

‘An unprecedented catastrophe,’ the President said.

Douglas sighed. ‘I’m afraid so.’

‘Dare I ask about the political implications?’

‘Another disaster for us,’ Douglas confessed. ‘While we suffer from drought, the central agricultural region of Russia, around Moscow, is having more rain than ever and a consequent fourteen per cent increase in grain produce. Longer growing seasons and faster growth rates are also increasing agricultural production in most of northern Europe. Even Japan is having a massive agricultural boom. Now those nations are wealthier than we are and that makes them dangerous. Already, Europe and Russia have put their heads together and are increasing their charges for the grain importations we now require. They’re going to suck us dry, Mr. President, if we don’t do something about it.’

‘What do you propose, Jack?’

Douglas knew exactly what he was going to propose and why. He’d been angry with Clare for surrendering to her emotions, for falling in love with Rydell, but now he knew that his anger was caused by primitive jealousy, the knowledge that Clare had given him up for another man and, worse, the very man who had made a fool of him with that story leaked to the *Washington Post*. Now Douglas was forced to accept that he was as petty as other men, that his need for revenge against Clare and Rydell was as strong, if not stronger, than his desire to cast his shadow across the world. It was as strong as his greed. Thus he burned with a passion as fierce as his ambition to make Clare and Rydell pay the price for what they had done to him. Obviously it was senseless - more senseless, to his mind, that Clare’s love for Rydell - yet with all the will in the world he could not rise above it. So, when he spoke to the President, he chose his words with care.

‘We sit tight. There’s not much else we can do. Whether or not this thing is alien or man-made, sooner or later those two physicists, Tony Rydell and Clare Holton, will find a way to stop its growth. They might also find a way of controlling it and actually using it. When they do, no matter who originally created it, we can turn it to our benefit.’

‘To *our* benefit? How?’

‘We’ll be able to control the atmosphere and the weather.’

‘To what end?’

‘Right now, Mr. President, the Soviet Union, Europe, and Japan are enjoying an unprecedented agricultural boom while we slide into a pit of drought and accumulating debt. This is making us increasingly dependent upon them. This trend *must* be reversed and it *can* be reversed. If we can control that alien virus and actually learn to use it to change weather conditions wherever, whenever, we choose, we can totally reverse the present trend and become the superpower that we used to be. As I see it, Mr. President, this isn’t political aggression, but the ultimate responsibility for which this great nation was destined.’

‘I have doubts about that, Mr. Douglas.’

‘I don’t, Mr. President.’

‘I’ll have to take your word for it,’ the President said, perhaps too ill to argue. ‘Okay, Jack, we’ll sit tight.’

‘I think that’s wise, Mr. President.’

Chapter Thirty-Three

Driving home in the early evening from the Old Executive Office Building in Washington DC, Clare found herself glancing nervously at the other cars on the Baltimore-Washington Parkway, fully expecting some driver to go crazy and cause a murderous pile-up. It was not a paranoid fear, but one based on a new reality: the spreading effects of the alien virus seeping out of the atmosphere. It had seeped down over Virginia, Washington DC, Maryland, the whole damned country, and for the past few months had been causing havoc. The hauntings, now so-called, drove a lot of people crazy and were making daily life increasingly dangerous. Recently, for reasons of safety, following the practice in those states affected earlier by the alien virus, all flights of the last operating commercial airlines in the United States had been banned; and it was rumoured that soon even trains and bus services would be cancelled.

Pretty soon, Clare thought, *we’ll be back to travelling by wagon-train, just like the pioneers*.

She recalled what she’d seen recently on TV... all those farmers from

Oklahoma and Iowa and Illinois, moving in their hundreds, in automobiles and trucks and trailers, all piled high with belongings, from the farms and onto the dusty roads that led to the cities... just like the Okies in the Thirties, dispossessed overnight.

It was a whole different world these days.

Taking the Greenbelt turn-off, she squinted against the silvery twilight, reminded by it of how the weather had changed to make the summers seem endless. The sun was that much hotter, the light stung the eyes, and she thought of the American heartland, which was stricken with drought. Yes, it was a new world, unprecedented, inexplicable... Parched crops here, unexpected floods elsewhere; strange diseases in animals and humans, as well as sorrow and madness... Clare died a little, just thinking about it, wondering if it would ever end.

She and Tony were working on it and knew more or less what it was; what they didn't yet know was whether or not the alien virus, which undoubtedly was conscious, had reasoning, self-awareness or motive. Because he was convinced that it had consciousness, but no self-awareness; that it was essentially some kind of etherea, Tony had just finished another week with his friend, Rick Polanski, at the latter's UFO organisation, Project Skywatch International, in the burning hell of Phoenix, Arizona. He and Polanski had recently discovered that the areas with the highest incidence of hauntings were those with the greatest magnetic deviation - the same areas where previously many UFOs had been witnessed - and they now believed that the alien virus, a plasmoid life form, was also a form of orgone energy, acting through the medium of magnetic current. In the desert heat of Phoenix, which had greatly increased in the past year, they had a lot of phenomena to examine. Tony was due back later this evening, and Clare, who missed him terribly when he was gone, looked forward to seeing him.

Darkness was falling as she parked the car in the drive of Tony's tract house. The lights were on inside, falling over the lawn, and she looked up automatically at the sky, but saw nothing unusual. Then she locked the car and walked inside, looking forward to having a shower, dressing herself up for Tony's return and settling down with a drink.

When she stepped inside, she heard both boys sobbing in a choked, frightened manner.

That sound chilled her blood.

She stopped just inside the front door, in the bright light of the living room. When she saw that the cluttered room was empty, she took another step forward.

She stopped when she heard that the boys were sobbing out back in the kitchen.

The living room and the kitchen were divided by a short hallway, now bathed in the striations of pale light beaming in from the kitchen. The boys were sobbing like demented creatures. There was no other sound. Clare looked left and right, hoping in vain to see Grandma, then crossed the front room, practically on tiptoe, and nervously entered the hallway. She stopped again, frightened by the unseen, temporarily paralysed by the sound of the boys' sobbing, feeling unreal. She wanted to call out their names, but was too frightened to do so, and instead, after taking a deep breath, walked through the hallway and stopped, where the light was brighter, to look into the kitchen.

She burned hot and cold.

The boys were, as she had suspected, sitting at their normal places, facing Grandma. They had obviously been sitting down to dinner, but the food was untouched. Something had happened to stop them eating and they were frozen with fear. They were sitting side-by-side, sobbing loudly, but not moving at all.

They were too frightened to move.

According to what Tony had told Clare, both boys had always had a phobia about spiders. That phobia had been released from their subconscious and given hideous reality.

The spiders covered the table in front of them, as well as the floor around them, too large to be real, yet vividly realistic: silky-furred tarantulas, black-widow spiders, and other monstrosities, forming a seething mass around the boys. And because the boys were too frightened to move, the spiders just watched them.

Clare felt her flesh crawling.

Grandma was there as usual, sitting opposite the boys, and, apparently oblivious to the seething mass of spiders, was staring upward, in a trance of delight, at a man wearing coveralls. Though grey-haired, he looked like an older Tony.

Clare thought of the photograph of Tony's father that Grandma had in her bedroom and realised that the man in coveralls was Grandma's dead husband.

'Dear God,' Clare whispered.

The boys saw her and took heart, their eyes widening with relief, but the

spiders, as if reflecting what the boys were in fear of, closed in, in a quietly seething mass, as if about to devour them.

The boys quivered, then froze again.

Grandma was oblivious. She was smiling up at her dead husband. There were tears on her cheeks and she wiped them away, wept more tears, tried to sniff them back and kept smiling beatifically.

Her dead husband returned her smile.

Clare thought she was suffocating. She saw Tony in that dead man. She understood that the dead man, though real, was *not* real, and that although he could have touched her and she could have felt him, she would, if she tried to take hold of him, simply pass through him. She understood that, yes, but it didn't help much, because in him she saw the ageing of Tony and she didn't want to face that.

'He's not real!' she said aloud. 'Nor are the spiders. *Grandma, look at me!*'

Grandma looked at her, smiling. 'Hi, sweetie,' she said.

'Grandma...'

'Yes, honey?'

'Are you all right?'

'I'm in heaven. I always knew Sam and me would be reunited and here we are, bless the Lord.'

'He's not real, Grandma.'

'Don't be a bitch, Clare. I swear, child, you're sounding just like Suzy - another bitch to be sure.'

'He's not real, Grandma.'

'Stop it, Clare! That's downright nasty!'

'He's just a dream and you're just dreaming, Grandma, so stand up and walk to me.'

Grandma stared at her, bewildered, then became visibly frightened. 'What do you mean, he's not real? Have you gone crazy, Clare?'

'*Please,* Grandma...'

'Of course he's real!' Her ghostly husband placed his hand on her shoulder - or seemed to do so. Grandma, though careful not to touch him, returned his dead smile. 'Why,' she said, 'he's the spitting image of his son and...'

'*Don't say that!'* Clare snapped.

The boys stared at her again. She covered her face with her hands. Her heart

was racing and she felt crushed by terror and incomprehension.

'God,' she whispered. 'Dear God.'

'We've been reunited by God,' Grandma said, 'and we won't let you part us. You don't even belong here.'

Shocked, Clare looked up. She saw Grandma's crazed eyes: the eyes of someone staring into the grave that she had secretly yearned for since the death of her husband. And her husband was inviting her, smiling at her in a deathly manner, confirming that what she had desired was now being offered.

Grandma glared at Clare, resenting her intrusion, then smiled again at her husband.

'I'd die before I'd go with that floozie,' she said to the apparition. 'When do we leave, dear?'

Her husband's deathly smile widened, forcing Clare to look away - which made it impossible to avoid the boys surrounded by spiders. Still sitting side-by-side, not touching, they were trying to choke back their tears.

'Don,' Clare said.

He didn't reply.

'Ronnie!' she called out.

He stayed silent, also.

'Those spiders aren't real,' she told them. 'They look real, but they aren't. You can probably smell them, you can possibly even feel them, but if you have the guts to just walk right through them, believe me, they'll disappear. Now get up and walk to me.'

They glanced at her, then at the spiders, shuddered, then froze again, so she took a deep breath, held it in and walked straight towards them. She tramped on some of the spiders and they disappeared, but the others remained. Ignoring them, she grabbed both boys by the shoulder.

'*Get up, damn you!'* she screamed.

And as if whipped by an invisible assailant, they promptly obeyed, kicking back their chairs and racing with her out of the kitchen, clinging to her and sobbing and breathless as they crossed the brightly lit living room. Clare kept going, pushing them out of the house ahead of her, saying, 'Don't stop! Keep going! We're going to Dwight's house. Keep running and don't look back!'

She was holding them by the hand, racing them over the dark lawns. Don wiped tears from his eyes and said, almost sobbing, 'It was Grandpa! Grandpa's dead! We were about to have dinner when he appeared in Dad's chair and

smiled at Grandma! But he's dead, Clare! *He's dead!'*

'It's okay,' Clare said, still running. 'Calm down. He wasn't real. I'll explain to you later.'

But then Ronnie started crying. He was sobbing as he ran. 'We were scared!' he said, weeping. 'So scared we couldn't move. Then the spiders suddenly appeared all around us and that made it worse. They were real. *We could feel them!*'

'They weren't real! Now be quiet!'

She ran even faster, desperate to put it all behind her, and was relieved when they reached Dwight's house, around the corner from Tony's place. She frantically rang the bell, then tried to compose herself, but when a surprised Maggie opened the door, she heard herself blurting out like a demented person, 'Is everything okay in here?'

'Clare!' Maggie exclaimed, squinting into the evening's darkness at her and the boys. 'What..? Sure, everything's okay in here! Why? What's up, Clare? Has something..?'

'It's okay, no one's hurt,' Clare said, pushing the boys past Maggie and into the house, then brushing past her to follow them in. 'God, I'm so glad you're home,' she said. 'Okay, kids, settle down now.'

The boys had managed to stop their crying and were now merely sniffing as they stood undecidedly near the door of the living room. Dwight appeared in the doorway as Maggie slammed the front door shut. He glanced down at the boys, motioned them inside, and said, 'Take a seat, kids.' When they did so, facing the flickering TV, he asked, 'What's going on, Clare?'

'I need a drink real bad, Dwight,' she told him.

'Bourbon?'

'Right. On the rocks.' As he poured her the drink, she told him and Maggie what had occurred in Tony's house. 'Obviously,' she concluded, taking the drink offered by Dwight, 'Grandma conjured up her dead husband and then the boys, terrified by seeing that, unwittingly conjured up what they dreaded the most: spiders. In other words, they created their worst nightmare out of their terror.'

'Lord have mercy,' Maggie whispered, glancing down at the boys, who, though still visibly frightened, had calmed down a little.

'The virus is here,' Dwight said. 'We already know that. There *have* been other hauntings in Greenbelt - as well as illness and even death caused by virus-induced diseases, including skin cancer. Godammit, it's here!'

‘You boys want a drink?’ Maggie asked.

They both replied with a nod.

‘The cat got your tongues?’ Maggie asked them in her winning, mock-stern way.

‘No,’ Don replied.

‘I’ll have a coke,’ Ronnie added.

‘You want a coke as well, Don?’

‘Yes, please.’

‘Okay.’

Maggie went into the kitchen. Clare sipped gratefully at her bourbon, then walked to the window of the living-room and looked across the darkened lawn to the back of Tony’s house. She could see the light beaming out of the kitchen, though she couldn’t see Grandma. Shivering, she turned back to Dwight and said, ‘I can’t take the kids back there for at least a day or two. They’ll be too scared to go back there. Can you put them up for a few days?’

‘Sure,’ Dwight said. ‘We can do with the company. Is that okay with you kids?’ They smiled and nodded assent. ‘Okay, that’s settled. The boys are staying here for a couple of days,’ he told Maggie when she returned with the iced cokes. ‘Is that okay with you?’

‘My pleasure,’ Maggie said, smiling reassuringly at them as she gave them the drinks. ‘I could do with some new men in my life. Things are looking up, kids.’

The boys smiled gratefully again, sipped their drinks, looked at the TV, as Dwight unobtrusively led Clare and Maggie back into the kitchen.

‘So,’ he said, ‘the boys are taken care of. Now what about Grandma?’

‘I’ll have to go back,’ Clare said, shivering just to think about it. ‘Her haunting won’t last forever; it’ll probably disappear when she gets tired or falls asleep. And if she shows no signs of doing either, I can probably make the apparition disappear by slapping Grandma out of her reverie.’

‘But according to you,’ Dwight said, ‘she *wasn't* in a reverie. In fact, according to what you told us, she became aggressive when you said her dead husband hadn’t actually returned to her, that she was only seeing an apparition.’

‘Dammit, yes,’ Clare said, remembering with another spasm of dread. ‘I forgot about that.’

‘She could be dangerous,’ Maggie said. ‘There’s been a lot of cases like that recently. As the virus spreads, it seems to grow in strength. The materialisations are becoming more real and, in a lot of recent cases, the victims of the hauntings

have turned violent, rather than let themselves be awakened, if that's the right word, to the degree where their ghosts or doppelgangers can be dematerialised. If it's a ghost of someone they love, as it is with Grandma, they'll fight to keep the goddamned thing with them. And by the sound of it, Grandma's close to that condition, so you'd better be careful.'

'Where's Tony?' Dwight asked abruptly. 'Is he still in Phoenix?'

'Oh, my God,' Clare said, thinking of Grandma and her ghost, dreading how it would effect Tony if he entered the house and saw an apparition of his dead father. 'He's due back any minute! We can't let him enter the house without preparing him first. I've got to get back there and wait for him and tell him what's inside. *I've got to go back right now!*'

'I'll come with you,' Dwight said.

'And I'll stay here to look after the boys,' Maggie said. 'Now you better get going.'

Clare kissed her on the cheek, then left the house with Dwight and hurried back across the darkened lawns, toward the end of the street. Her heart was racing, her blood pounding, as she turned right at the end of the street and looked toward Tony's house.

'Oh, shit!' she whispered, stopping when she saw that Tony's car was parked in the driveway. 'Oh, God, we're too late!'

'Come on,' Dwight said, taking hold of her arm and starting to run again, over the lawns, toward the house. 'He must be inside already!'

Clare couldn't bear to think about it, yet her head was filled with it, imagining what Tony would be feeling as he stared at the father who had died eight years ago. Feeling his shock and pain, his disbelief and heartache, she was near to tears as she raced into the house, close behind Dwight. She called out Tony's name as she rushed through the living-room and into the hallway, where Dwight, stopping abruptly, let her pass into the kitchen.

Tony's back was turned to her. He had not heard her call. He was breathing harshly as he stared across the table at his mother and father.

His mother was still in her chair, looking up at her dead husband, holding his hand, enraptured by his fixed smile.

'Oh, God!' Tony said, his voice breaking, his body shivering in spasms. 'Oh, Jesus! Oh, no!'

Clare placed her hand on his shoulder and he stared at her, his eyes tearful, then looked back at his father and mother and shivered again.

‘No!’ he bawled at his mother. ‘He’s not alive! *Stop thinking about him!*’

His mother turned her head, stared at him in surprise, then said sweetly, ‘Your dad’s returned to us, Tony. I prayed to God and He answered.’

‘*No!’* Tony bawled.

And even as he denied the existence of his father, that ghostly figure seemed to quiver, becoming brighter, then darker. Then, as Tony’s mother looked up in shock and grief, it began to dematerialise magically, fading and shrinking.

‘No!’ Tony’s mother cried out in terrible grief, her hand clawing desperately at the air where the apparition had been standing. ‘Don’t go, Sam. Come back!’

‘Go!’ Tony bawled. ‘*Go!’*

And as if obeying him, his dead father faded and shrank simultaneously, until he was no more than a cloudy shape the size of a child.

Tony’s mother wept. Clare was filled with grief and fear. She kept staring at that childlike shadow, that amorphous spectre... Then, to her horror, she saw it changing again, gaining shape, definition and distinct, haunting features...

‘Oh, Jesus!’ Tony cried out as the cloudy substance took the form of a child.

The boy was about ten years old and looked just like Tony. He had dishevelled brown hair, a gravely intelligent face, and was staring at Tony as if bewildered by what he was seeing.

Tony stared at himself.

‘Oh, my child!’ Grandma exclaimed, her face radiant with joy, then she rose from her chair, reaching out to embrace the boy, her face flushed unnaturally. ‘Oh, please let me hold you!’

‘*No!’* Tony exploded, hurling himself forward, propelled by fear and outrage. He clawed at the boy and passed through him and crashed into the wall behind.

The boy vanished abruptly. Grandma cried out and fell. She was clutching at her heart and writhing on the floor as Tony and Clare knelt beside her. She moaned softly, then shuddered and died.

‘Oh, God, no!’ Tony sobbed, cradling her grey head in his arms, rocking her gently back and forth, his tears wetting her face.

Clare looked on, feeling helpless.

Chapter Thirty-Four

The fires were burning in the darkness of America. All over the land there were camps just like this one, sprawling collections of tents and sleeping bags and automobiles and trailers, with the people huddled together under the stars, around open fires, boiling coffee and making baked potatoes and trading experiences.

It wasn't safe to travel by night, since gangs of scavengers were all around, and the camps were usually formed outside of the towns because the townsfolk didn't want the new 'Okies' cluttering up their environment. So the Okies huddled together for safety, not wanting to travel by night, though even being together didn't necessarily guarantee their safety.

Apart from the outlaw scavengers, there were the vigilantes to deal with, recently formed gangs of local groups who despised the new Okies, didn't want them even near their town, and came out in darkness, wearing masks and carrying weapons, to harass them, abuse them, and often fire upon them, wanting them to pack up and move on, which they usually did.

Still, the camps formed anyway, being better than nothing, and at night their fires burned all over the land, illuminating the new, disordered America with the eerie glow of the lost.

'Who'd have thought,' Suzy's father said, 'that we'd end up like this? Livin' off the land like hoboes and bein' treated like bums. It sure makes you think some...'

He was kneeling in front of a fire in a field outside Clarksburg, West Virginia, resting up with Suzy and her mother before making what they hoped would be the final leg of their journey to Greenbelt, Maryland, where they hoped that Tony would help them out. Looking at her mother, who seemed older every day, Suzy hoped they would make it, since they'd already been on the road too long and were starting to feel it.

The journey this far, which by airplane would have taken about an hour and by road, under normal circumstances, a couple of days, had taken them three arduous, hellish weeks.

'If we'd known it was goin' to be like this,' Suzy's mother said, 'I don't think we'd have started.'

'Nope,' her father replied. 'I guess not. But we can't turn back now.'

He said it with quiet pride and Suzy understood why; when she thought of what they'd been through these past few weeks, she could scarcely believe it.

You never really thought of how big the country was until you had to do

without airplanes, take to the road, and get blocked and harassed at every turn by townsfolk who couldn't bear the sight of you.

She and her folks had started this journey, thinking they'd just drive straight to Maryland, not knowing that thousands like them had already clotted the roads, that townsfolk despised them and thought them a tide of hoboes, now called the 'new Okies', and that around every bend in the road, beyond every hill, gangs of outlaw scavengers or local vigilante groups would be waiting to ambush them, terrorize them, or, if they were lucky, just turn them back.

When turned back, they'd gone another route, cutting across country or making great, looping detours, and while that worked, while it helped them advance that much farther, it took a hell of a lot longer and didn't save them from running into more trouble.

They'd travelled by day and camped out at night, but their progress during the day, because of the constant harassment and having to turn back so often, had been made at a snail's pace, Nevertheless, they'd been lucky even managing to get this far, and now, when Suzy thought about it, the journey seemed like a bad dream.

They'd joined the first weary travellers just outside Des Moines, latched on to the tail of that great, dust-wreathed column of automobiles and trailers and trucks piled high with furniture, and stayed with it until they were stopped that first evening, outside Davenport, by a gang of townsfolk carrying shotguns and clubs and insisting that they couldn't even rest up inside the city boundaries. A fight broke out, shots were fired and people were screaming, so Suzy burned out of there and headed south, towards St. Louis, even though it was completely in the wrong direction.

She managed to head east again when she passed around Fort Madison, but ran into another column of Okies on the road to Peoria. They saw their first camp there - a great sprawl of automobiles, caravans, trucks, tents and sleeping bags - and because it was sunset, they were forced by the police to go into it and camp there for the night. In fact, they were kept there for two days, treated almost like prisoners, and only let out in rotation, as part of a group of about a hundred, which is how the police guards were doing it - one group at a time.

They hit the road again, but didn't get very far, being turned back at Bloomington, forced to go all the way to Springfield, and only managing to cut across Illinois after spending a couple of days in another camp.

There was a long tail-back at La Fayette, Indiana, and it was attacked by a

gang of scavengers - about twenty men and women who swarmed out of the woods on either side of the road, wearing ragged clothing and firing pistols and swinging machetes, to grab what they could from whoever was closest and, if they weren't shot or wounded themselves, run back into the woods with their booty. There was a lot of firing and screaming, but it was all over quickly, though by then a lot of Okies had been killed or hurt badly, while one of the scavengers had been wounded and captured. Some of the Okies, enraged, beat him to death with sticks and rifle-butts, then left his battered body at the side of the road and continued their slow, forward progress, towards whichever city they had set their minds on, whether or not it would welcome them.

At Kokomo, Indiana, the police arrived in force to arrest those responsible for the killing of the scavenger at La Fayette. When no one would admit to the killing, the police used it as an excuse to imprison the whole group in a make-shift camp just outside town. That evening, a local vigilante group, many of them drunk and hollering, drove wildly around the circular barbed-wire fence in their cars, firing indiscriminately into the camp, killing and wounding many men, women and children. The police, who'd been guarding the camp, had mysteriously disappeared by then, and when the vigilantes had gone and the Okies had buried their dead and loaded their wounded up onto the trucks, they smashed the gate down and drove off, scattering into small groups that headed into the darkness in all directions.

You only travelled at night if you had to - and that night, they had to.

Near Dayton, Ohio, they were in another long column of Okies that was attacked by more scavengers, these ones sweeping by in open-topped trucks and on motorcycles, firing pistols, grabbing valuables from the Okie vehicles, and even snatching up a couple of teenage girls and racing away with them.

The girls were not seen again and everyone knew why.

By the time they reached Springfield, Ohio, Suzy and her folks had learned that they belonged to a despised group - the dispossessed, the new Okies - and that people more fortunate than themselves, less affected by the changing weather, feared and loathed them as some other kind of species.

They also realised that they had been passing through the landscape of a dramatically changed United States, with barren fields, empty granaries, closed factories and silent skies, in which rising unemployment and a breakdown in communications - all mail now delivered overland and the mail service overburdened - was leading to increasing lawlessness and localised, vigilante

justice.

A more dangerous country.

Now, in another camp in Clarksburg, West Virginia, their thoughts set on Baltimore, which they'd heard was the least dangerous route, Suzy and her folks were just three amongst thousands, dispossessed and looking for somewhere to lay down their weary heads.

Suzy wanted to lay her head on Tony's pillow, but she didn't think that would happen.

She leaned towards the fire, spreading her hands, feeling the heat, and sniffed to take in the smell of smoke and baking potatoes. Her mother, who could not lose the habits of her kitchen, was holding the potatoes over the flames on a long, blackened fork. She looked awfully old.

'I can't wait,' she said to Suzy. 'I keep thinkin' of your kids. When you get old, you look to the kids to give you the strength to go on. That's all that's kept me goin', Suzy. When it got rough, I thought of them. I willed them to appear and they appeared and became the raft I could float on. The visitations are good that way. They frighten some, but not me. I see them as affirmations of life and it gives me my strength. The visitations are blessings.'

Damned right, the world had changed. Suzy thought that by the fire. She thought of the journey they'd made from Iowa to here and realised that the hallucinations, or visitations, had become commonplace. You looked around and saw them. You looked upward and saw them. Even now, by the camp fire, glancing up at the night sky, Suzy saw flying saucers, lights that dazzled and tormented, faint images of faces and events through which the light of stars shone. Others saw the same things and reacted in their own ways, some dropping to their knees and praying to what they witnessed, some screaming and falling down and going into fits of panic, others simply sighing or shrugging and lowering their gaze.

It was dealt with on an individual basis and you couldn't predict that. What you could predict was what it had done in a general sense: created a lot of lunatics and bizarre religious cults; made the real world and the world of dreams merge; made daytime like night.

'We've gotta go,' Suzy's father said. 'We can't hang around here. I've got a feeling about this place and the feeling ain't good and what it tells me is that the people runnin' this place don't know truth from bullshit. Excuse me, Mother, I'm sorry.'

‘It’s okay,’ Suzy’s mother said.

She was on her knees, leaning forward, turning the potatoes in the flames, refusing to give up her kitchen, even here, in the open air. There were flying saucers streaking across the sky above her, but she didn’t look up. She was too busy cooking.

‘What I mean,’ Suzy’s father said, ‘is that this place don’t smell good. Those policemen at the gate and that sheriff who put us in here, they seemed nice enough, they acted decent, but they smiled like dead animals. We ain’t here as guests, I tell you. We’re here as prisoners, sure as dammit. Come tomorrow, when we try to drive out, we’re gonna find those gates locked. That, or somethin’ else. Maybe somethin’ a lot worse. Those people, they don’t have farms, they haven’t lost, and they fear those that have. I don’t know - I could be wrong, I know that - but I just have this feelin’.’

‘So do I,’ Suzy said.

She had lots of feelings these days. They were all wrapped up inside her. They were feelings about Tony and the kids and the love they’d shared, and the feelings, when too intense, became visions that had a life of their own. She’d lived with them night and day, taking succour from them, frightened by them, and now she just wanted to get her family back and know the real from the unreal.

That was the good in the visitations - they could remind you of what you valued - but in the end, what you wanted was the *real*, to protect you from ghosts.

As for this camp... yeah, her dad was no fool... it had the feel of a prison.

‘You both have these bad feelin’s,’ her mother said, forking the potatoes and pulling them from the flames and placing them, nicely blackened and blistered, on the cloth by her knees, ‘but what do we do? We can’t sneak out tonight - the gates are heavily guarded - and even if we managed to get out, we’d be helpless alone. You know what those scavengers do - they rob and rape and kill - and if we didn’t get picked off by them, the vigilantes would get us. So I say we stay put. I say we’ve no choice. These folks is all we’ve got now. We can only move out when they move on, and that’s a hard fact of life.’

Suzy glanced around her. There were lots of fires burning. The flames flickered in the night of America and made the starry sky smoky. Not the country she knew - no golden fields of maize, no blue skies, no green hills - but another country, a foreign land, an alien terrain, where the dust of blight was the

norm. These fields weren't farmers' fields, but the barren soil of imprisonment, containing automobiles and trailers and trucks piled high with possessions and tents that had originally been bought for pleasure and, inside and around the tents, people stripped of their dignity. They still had their pride - you couldn't take that from real people - but the changing weather had changed their lives, destroying their livelihood, and overnight they'd become the pariahs of the country, not wanted anywhere.

No wonder they took the hauntings as commonplace. It was the *real* world that frightened them.

Right now, for instance, there were real people and apparitions, and unless you were experienced, and looked carefully, you couldn't tell which was which. Of course, you could if you checked them out - the apparitions had no shadows, seemed a little transparent (you had to look real hard to see that) and moved little and slowly, like puppets on a string - while the real people, the ones creating them, were either gibbering like fools or shedding tears or smiling beatifically.

The world of dreams had become real.

'Okay,' her father said. 'We stay. I guess we've got to. I'm just sayin' that I don't know what will happen come the dawn and it's time to go. I'm not too sure we'll be goin'. There's somethin' brewin', I'm tellin' you.'

'Here,' Suzy's mother said. 'Have a potato. It's the best I can do.'

'Your baked potatoes are the best in the country, even when they're charred black.'

'You never *were* good with compliments.'

Suzy had to smile at that. It did you good to see love shining. She picked up a baked potato, which smelt of earth and ash, and bounced it from one hand to the other because it was so hot.

'I feel like a kid again,' she said. 'Like we're all camping out.'

'You remember that?' her father asked.

'Yeah,' she said, 'of course I do. You and Mom and me. We'd all go out on a Sunday and have us a picnic.'

'You were real cute in those days.'

'I'm not now?'

'Now you're beautiful.'

'I take back what I said,' Suzy's mother said. 'He *is* good with compliments!'

'I know my women,' Suzy's father said.

‘You learnt the easy route, Abe.’

‘It takes a man with sense to take that route, Gladys, and you sure look good on it.’

Suzy loved it when they talked that way, bantering easy, their words lingering, but it didn’t make her think her mother looked good. Even kind words had limits.

In three weeks, her mother had aged thirty years.

It scared Suzy to look at her.

Scared her more when the shots rang out.

She would never be able to piece together exactly what happened, except that at first she thought it was outlaw scavengers, then realised, when she saw the masks and decent clothes, that it was a group of vigilantes from the town, hell bent on getting rid of the Okies or just having some vicious fun.

They’d surrounded the camp quietly, driving their cars without lights, but they all switched on their lights at the same time and started firing their weapons.

The sudden roar of the guns was shocking, followed immediately by people screaming, then the cars outside the fence roared into life and started racing around the perimeter with the vigilantes still firing.

The apparitions vanished the instant the guns fired, when those creating them were jerked from their reveries by the godawful noise.

The Okies scattered for cover, women sweeping up their children, but a lot of them cried out and fell down, sometimes right on the fires. Sparks showered into the air, the cars’ headlights were blinding, and then some of the vigilantes started letting off fireworks that hissed and whined into the sky to add to the chaos.

Dropping her baked potato, Suzy jumped up and grabbed her mother’s hand and said, ‘Come on! Let’s go!’

Her father was already moving, holding his shotgun across his chest, and together they ran to their truck and clambered inside. There was a loud crashing sound, then the shrieking of twisting metal, and Suzy saw a vigilante truck smashing into the main gate, tearing the posts from the ground, and then bringing the whole gate down and bouncing over it. The truck just kept coming, racing into the camp, and the men in the back were firing rifles and hollering like crazy. More fireworks were going off and exploding in the night sky, the sparks and coloured streamers arching back down to blend with the smoke.

Suzy pressed her foot on the accelerator and headed straight for the fallen gate.

People were running every which way, ducking bullets, falling down, and more vigilante trucks came bouncing over the smashed gate, with the men in the back hollering and firing as if at a funfair. The police had conveniently vanished, as they did every time, and it was clear that these particular townsfolk were going all out, no limit. Men were spilling off the trucks, swinging clubs, grabbing women, and as Suzy gunned the engine and raced towards the fallen fence, Abe stuck his shotgun out the window like a man who meant business.

'Sonsofbitches!' he said.

He fired the shotgun at someone. Suzy just kept on driving. She had to swerve out of the way of an oncoming truck, and as she passed it she glimpsed sweaty faces and hot, hungry eyes. Gun barrels spit fire. Bullets ricocheted off the truck. Suzy gripped the wheel tightly as the truck hit the fallen gate and bounced up and rattled its way across it and bounced down the other side. She heard women screaming, kids crying, men laughing, then an explosion, probably a petrol bomb, as she turned right and headed along the road, away from the bedlam.

'Lord have mercy,' her mother whispered to herself, 'but these are terrible times.'

Her father slumped in the seat beside her, taking deep, faltering breaths, then laid the shotgun across his knees and pressed his hands to his belly.

'God, it hurts,' he said quietly.

He removed his hands and held them up and they were covered in blood. Satisfied, he placed them back on his stomach and said, 'Keep drivin', Suzy.'

She felt a great, swooping fear, but kept her voice calm. 'We're gonna have to stop and bandage that wound, Dad.'

Her mother's head jerked around, her eyes widening in terror. 'What..?'

'It's all right, Gladys,' Abe said. 'It's not as bad as the blood suggests. Keep drivin', Suzy, until we're well away from that camp and those crazy townsfolk. Don't worry 'bout me none.'

'We stop now!' Suzy's mother said.

'No, we don't,' Abe replied. 'We don't stop till we've put a lot of miles between us and Clarksburg. It's too dangerous for you two.'

'Pull over, Suzy!' her mother snapped.

'Keep goin',' her father insisted.

'You pull over right this minute, Suzy!'

‘Okay, Mom,’ Suzy said.

She pulled over to the side of the road and cut the engine when the truck was under the trees. He father turned to open his door, then gasped and sat back, pressing his hands tighter to his stomach and starting to sweat.

‘Someone’s gonna have to help me down,’ he said, his voice hoarse and shaky.

‘Oh, dear God!’ Suzy’s mother said, then opened the other door and clambered down. Suzy put on the hand-brake and stared at her father. He was sweating and biting his lower lip and trying to smile.

His breathing was anguished.

Suzy’s mother opened the other door and reached up to Abe. ‘Okay, Abe,’ she said, ‘take a deep breath and then turn towards me. You’ll just have to bear it, Abe.’

He took a deep breath, gritted his teeth and turned towards her. He shuddered, as if whiplashed. Suzy took hold of his shoulders, steadying him and wanting to hug him as he edged off the seat. He took another deep breath, held it in and then slid to the ground. He groaned aloud as he slipped out of the cabin and into his wife’s arms. She held him for a moment, supporting him, kissing him, then helped him down to the ground. He sat there, propped up against a tree, with his hands on his belly. When he removed them, the blood squirted out and splashed on his legs.

‘Oh, my Lord!’ Suzy’s mother said.

She tore his shirt away and looked at his belly, then closed her eyes briefly.

‘Suzy,’ she said, as Suzy dropped onto the grass, ‘get a towel from that bag in the truck. Make sure it’s a clean one.’

Suzy did as she was told. Fear was flapping its wings around her. When she passed the towel on, her mother ripped Abe’s shirt away and wrapped the towel around his belly and tied it real tight.

Abe groaned aloud again.

‘I’m sorry, Abe,’ Gladys said, ‘but it’s got to be tight. It might hold the blood in till we get help, though I don’t guarantee it.’

‘We ain’t gonna get help,’ Abe said. ‘You can’t move me again.’

‘You’ll be all right.’

‘No, I won’t, Gladys. My insides are all torn up.’

Gladys bit her knuckles, but couldn’t stop her tears. ‘Don’t you go and take that attitude, Abe Winger. You’ll be all right. You know you will.’

‘Hold my hand, Gladys.’ She did as she was told. ‘Suzy,’ he said, ‘kneel down

behind your mother and put your arms round her.' Suzy knelt on the grass and put her arms around her mother. 'Let's just stay awhile like this,' her father said, 'and stop all this snifflin'.'

But Gladys kept crying and Suzy soon joined her, feeling a blanket of fear settle upon her to blot out the stars. She held onto her mother. Gladys held her husband's hand. The breeze crooned through the trees, made the brown leaves dance and rustle, and Abe closed his eyes and whispered, 'Glory Road! I see a light in the distance. All the way down the line, there.' His breathing became heavier. He coughed and spat blood. He shuddered and Gladys tightened her grip as Suzy pressed closer to her.

Gladys murmured the Lord's Prayer. Abe muttered something and then went silent. Gladys finished her praying and Abe opened his eyes. He whispered, 'What the hell? I don't know...' and then closed his eyes again. He shuddered and offered a light, profound sigh, then he passed on to Glory Road.

Gladys fell against him, embracing him, sobbing with grief, and Suzy just knelt there on the grass, looking at them in disbelief.

Her heart was breaking. Her whole body was constricted. She heard another noise, something besides her mother's sobbing, and glanced back the way they had come, to see what it was. The distant lights were blurred by her tears, but approaching at good speed. She thought it was probably the vigilantes, but she just didn't give a damn.

The sound of her mother's weeping filled the night and that's all that concerned her.

Chapter Thirty-Five

Tony awoke in the dawn with a dreadful sense of foreboding. He had dreamt about his mother's funeral, which had taken place three months ago, as well as suffering visions of Suzy and what she'd been through. He hadn't been himself since then, had felt constantly haunted by death, and now, when he lay in the bed beside Clare, staring up at the streaks of sunlight that were fanning across the ceiling, he felt oddly dislocated from the real world, as if dreaming himself.

He recalled seeing the child that was himself the day his mother had died. That child had never returned and so far, at least, Tony hadn't been haunted by his

dead parents. Yet others were being haunted, all over the world now, and he knew that any day he could awaken to find someone standing there. The thought filled him with dread.

Hoping to distract himself, he turned into Clare, explored her with his hands, awakened her and took pleasure from her smile, but didn't make love to her. He wanted to, but this morning he felt too guilty, so he just gave her a hug. Then he slid out of bed.

'Can you take the kids to school?' he asked, when he had showered and was getting dressed. 'I have to have an early meeting with Dwight and then go and meet Suzy.'

Clare rolled over in the bed. 'Sure,' she said. 'That's no problem.'

'You really don't mind me seeing Suzy?'

'No, Tony. I think you *should* see her. She's obviously been through one hell of a time, so it's the least you can do.'

'Yeah,' he said, 'I guess so.'

But he felt pretty bad, torn between love and duty, filled with guilt because he knew that seeing Suzy was hurting Clare, while not doing so would be just as hurtful to Suzy, for whom he still had deep feelings. He'd never thought too much about feelings until his marriage broke up; now his feelings were all over the place and threatening to swamp him.

Christ, it was awful.

'Thing is...' he began.

'You don't have to say it, Tony.'

'Yes, I do. I've gotta say it. She didn't only come back - she came through hell to get here - and while I'm pretty sure what she's gonna ask for, I've still got to go. I owe her that, at least. It's a simple matter of respect. Her father's dead and she's got a sick mother and she's there in Annapolis, so I've got to go.'

'I know all that already,' Clare said. 'You don't have to repeat it.'

She wasn't angry, but he knew she was exhausted and that could be the reason.

'She was in Annapolis six weeks,' he said, 'before she even picked up the phone. She came from Iowa by road and lost her dad and now she has a sick mother - and she still didn't phone. She said she just didn't have the nerve, but that now she needs help.'

'I know,' Clare said. 'You told me.'

'So you're angry.'

'No, I'm not. You're feeling guilty, but I'm not angry. I just wish you'd accept

the situation without getting so emotionally confused. You owe her a lot, Tony, you really do, and I don't resent that. It's *you* who feels guilty.'

'Yeah,' he said, feeling pretty damned foolish, 'I guess that's what's bugging me.'

'Go and see her and you'll feel better.'

'You don't have to worry...'

'I'm not worried about that at all. I'm just very tired, Tony.'

He leaned over the bed, kissed her, and said, 'Are you going to work today? You should take a day off.'

'I think I will,' she replied. 'I feel like giving myself a break. I've worked every damned weekend for the past month and now I'm feeling exhausted.'

'You *look* exhausted,' he told her. 'You've looked that way for weeks now. I've told you before, you shouldn't let this project obsess you. You're working too hard.'

'We have to crack it, Tony.'

'A *lot* of people are trying to crack it, but they're not all working themselves to death, as you seem to be doing.'

'I'm okay.'

'You're wiped out. You fall asleep in front of the TV. You can hardly get out of bed in the mornings - and when you do, you're still tired. You should take a day off now and then. At least one a week. My woman needs her rest.'

She smiled at him. 'Okay, Tony, I'll try. Now you better get going.'

'Yeah,' he said. 'I guess so.'

Sitting in his car during the short drive to NASA he hoped that Clare would take him seriously and try to rest up. She *had* been extremely tired recently, not her usual self at all, and he was convinced that it was a combination of the shock of his mother's death and her growing obsession with the alien virus that was changing the face of the Earth.

Her exhaustion was clearly caused by overwork, which was something he knew about.

Him and Suzy, for instance...

Suzy had left him because he'd worked too much and spent too much time away from home. He'd ignored her resentment, or at least treated it lightly, and in the end, she'd simply felt neglected and looked elsewhere for recognition. In a sense, then, he was guilty of having driven her out; and he'd done so because of his obsession with nothing other than work. No mistresses. No one-night

stands. Just goddamned work... And now Clare was obsessed as he had been and was becoming exhausted. He'd have to keep his eye on her.

When he had settled into his office in the NASA-Goddard Space Flight Center, he put a call through to Dwight. 'Rise and shine, sleepy head! Here I am, bright and bushy-tailed.'

Dwight chuckled and said, 'Get your ass down here and let's have our talk. Then you can go and see Suzy.'

'I'm really looking forward to that.'

'I bet you are,' Dwight said.

Tony grinned and put the phone down, then went to see his friend in his office in the Institute for Space Studies. The windowless walls of the office had formerly been covered in charts and maps relating to atmospheric phenomena and worldwide pollution; now they were related solely to the hauntings caused by the alien virus. Tony noticed that the many coloured pins now covered the whole world.

'It's no longer just America, is it?' he said, glancing up at the charts and maps.

'Nope,' Dwight replied from the other side of the desk upon which rested a small, gold-framed sign announcing, *Dwight Collins: Energy and Environment Program Director*. 'It's now a global phenomenon. Even the people Jack Douglas said were responsible for it are now suffering from it - the Russians, the Japs - which should have left him with egg on his face.'

'*Should* have?' Tony asked, pulling a chair up.

Dwight grinned laconically. 'Douglas is a consummate politician who just thunders ahead.'

'And how's the great man doing that?'

'By responding to each new development with a brand new political philosophy that blandly ignores the one that's gone before. And the President, now pretty ill and tired, just nods and hops when his strings are pulled.'

Tony grinned at that, but Dwight leaned forward, placed his elbows on the desk and, with his chin resting on his hands, suddenly looked serious.

'I wanted to see you,' he said, 'because I want to know why you think Douglas is being so generous with us.'

'You mean in financing our ozone-hole research?'

'Exactly.'

Tony shrugged. 'Search me. I can only assume that he's after the glory he can steal if we manage to crack this.'

Dwight nodded. ‘Maybe. And then again, maybe not. I think he has bigger fish to fry and that you have to be careful.’

‘Why?’

‘You stole his girl, Tony, and he’s known as a vengeful man.’

‘I don’t think he’s a schoolboy,’ Tony said, ‘and that’s what you’re suggesting. He’s hardly likely to use this extraordinary business for a personal vendetta.’

‘You don’t think so?’

‘No. He’s a mature man, not an idiot.’

‘There are no mature men in love or war - and we’re dealing with both.’

‘It’s been a few years, Dwight.’

‘Vindictive men have long memories. And if Douglas can pay you back *and* profit by it, I think he’ll try it on.’

‘Well, maybe you’re right, but what can he do?’

Dwight sighed. ‘I’m not sure. I only know that for the past few years the whole world’s been in conflict over the virus in the atmosphere, with each country thinking it was the secret weapon of the other and assholes like Douglas using it as gung-ho American propaganda. Now, since the rest of the world is also suffering from the climatic changes and virus-hauntings, we know it isn’t a secret weapon created by a foreign power, but a real phenomenon of a dangerous, alien nature. Yet...’ Dwight shrugged and turned his hands upward, as if appealing to God. ‘Human nature being what it is, the presence of the alien virus, instead of uniting the world against it, has simply changed the balance of power in the world and made the United States practically a Third World country. We’ve had a crippling drought, our exports have been halved, and given the speed of the rise in the world’s mean temperature, I think it’s safe to assume that New York will be flooded within five years. In which case, we might as well pack up and go live in Calcutta.’

‘All of this I know,’ Tony said. ‘So what about Douglas?’

‘This is off the record,’ Dwight said.

‘For chrissakes, Dwight...’

Paranoia was in the air. You inhaled it when you breathed. Tony knew exactly how his friend was feeling, since he felt the same way: frightened by the changing world, by how it was changing politics, and by the demons locked up in his mind and preparing to spring free. He was frightened of giving his thoughts to the virus and becoming its victim. It was himself he was frightened of.

‘Shit,’ he said, ‘let’s get it over and done with. Just spit it out, Dwight.’

Dwight didn’t spit it out. He took a deep breath and spoke with deliberation, trying to sound even-handed.

‘As you know, a few years back the European Economic Community and the former Soviet Union signed a formal agreement designed to combat the devastation caused by the changing climate through the opening of doors to the free exchange of commerce and scientific ideas. Right now, they’re exchanging crops, industrial and chemical products, and any research material they’ve so far found on the alien virus, but they’re not including us in this brave new form of *glasnost* - they’ve left us out in the cold.’

‘Right,’ Tony said. ‘I know that.’

‘Douglas loves it,’ Dwight informed him. ‘It’s right up his street. He’s been trying to shift power from the Presidency into economics and now, given the fact that the United States has been isolated, he’s been able to convince the President, no bright spark, as we know, that the new Russian-European-Japanese alliance is using the ecological disasters and hauntings to further degrade US influence in the international business community. In other words, we grow weak, while they grow strong.’

‘I believe you,’ Tony said. ‘Douglas likes to play power games. But where the hell do I fit into this? Even Douglas can’t...’

‘Off the record, right?’

‘For chrissakes, Dwight...’

‘Okay.’ Dwight took a deep breath, letting it out as he spoke. ‘There are whispers that Douglas, in convincing the President that the recent cooperation between the aforenamed is increasing our problems, has also convinced him that you - who’ve done so much work on weather engineering with foreign scientists, including some in Europe and Japan - were instrumental in making conditions caused by the ozone hole worse here than they are anywhere else. In short, you’re a traitor.’

‘What bullshit,’ Tony said.

‘Not according to Douglas,’ Dwight replied. ‘According to him you’ve spent half of your professional life in Europe, working closely with European, Russian and Japanese scientists, whereas you have, in your *own* country, done nothing but antagonise those you work with, as you did with your theories about UFOs and other paranormal subjects. Then, of course, when your beloved Europeans, Russians and Japs advanced from simple cloud-busting to more

advanced weather engineering, you, Tony, were right in there, helping them. Therefore, according to Douglas, if not totally responsible, you certainly helped create the weather conditions now destroying these here United States. He's about to try that story on the President to turn him against you.'

'Jesus,' Tony said, scarcely able to credit what he was hearing. 'So what do I do?'

'Well, it'll be a few months before Douglas makes his move. He'll have to prepare his case against you with a great deal of care. In the meantime, since I think his plan is to have you drummed out of NASA, you'd better double your efforts to stop the spread of the alien virus and, while you're doing it, keep looking over your shoulder and preparing to duck.'

Tony sighed and stood up. 'Thanks, Dwight.'

'Remember: this is all *off the record*.'

'No sweat. Now I'm going from one problem to another.'

'Suzy?'

'You got it.'

'Best of luck.'

'Thanks. I'll see you.'

Driving to Annapolis, he had to squint against the heat haze, scanning the sky for flying saucers created by the virus and giving careful attention to the other drivers, any one of whom could suddenly be 'haunted' while driving and lose control of his vehicle in panic. It happened a lot these days, as could be seen by the many wrecks scattered along the roadside - now too many to be towed away by the local authorities.

The psychologist, Carl Jung, had turned out to be correct in his belief that certain UFOs were psychic projections resulting from man's need to believe in the existence of a higher power. Because the virus created realistic images from men's minds, from wishful thinking, imagination, it was now creating flying saucers that harassed aircraft, automobiles and even pedestrians, thus causing accidents. So Tony drove with care, checking every passing car, and was relieved to reach Annapolis without incident and walk unharmed into the bar, where Suzy was waiting for him.

'Why am I always the first?' she asked him with a nervous smile. 'Do you arrive late on principle?'

'You're living in Annapolis,' he replied, feeling distinctly uncomfortable, 'but I

have to drive here.'

'I hate driving these days. It's become so damned dangerous. The last time I drove to Washington, those flying saucers crossed the road and caused a godalmighty pile-up. I was lucky. Real lucky. Can I get you a beer?'

'Yeah, Suzy. Thanks.'

She was looking surprisingly well, considering her recent experience, and wearing formal, less sexy clothes, which made her seem more mature. She looked really attractive.

Feeling guilty that he should even think that way about her, Tony waited until she'd ordered his beer, then said, 'I'm really sorry about what happened to your dad. It must have been pretty rough.'

'It's always rough, Tony.'

'If you'd told me I'd have gone to the funeral. I felt bad, being left out.'

She glanced down at the floor. 'I should have told you. I know that. It's just that I couldn't bear to face you at that particular time. I wasn't ready for that. So there was just me and Mom and Caroline and Ron, who took us in when we got out of the hospital in Annapolis.'

'You ended up in a *naval* hospital?'

Suzy chuckled and shook her head, as if she didn't believe it herself. 'Yeah. We were real lucky. When Dad died of that gunshot wound by the side of the road, we saw headlights coming towards us and thought it was some of the vigilantes who'd attacked the camp we'd escaped from. In fact, it was a bunch of cadets on their way back to the Naval Academy at Annapolis. Real nice kids. They helped load Dad back up onto the truck, then stayed with us until we reached Annapolis, where they took us straight to a naval hospital. Dad's body was taken away and we were looked after for the night. Next day, I phoned Caroline and she and Ron came to collect us and took care of Dad's funeral. Me and Mom, we were too shocked and exhausted to even think straight.'

'You're still staying with Caroline and Ron?'

'No. We only stayed there at first because we had no cash. The farm was wiped out completely. That's why we were originally coming here to see you. I was hoping you'd help us out for a time and, more important, help Dad's wounded ego by finding him some decent work to do.'

'I'd have done that, Suzy.'

'Yeah, Tony, I know you would have. Now, of course, Dad doesn't need a job. And Caroline got me fixed up as a waitress in a friend's restaurant near the

waterfront. It's nice, it pays well, and Mom and me are now in our own apartment. So, you know, we're okay now.'

'Your mother's recovering?'

'She took it real hard, but she's okay. A lot older-looking these days, but she's out and about.'

'Listen, if there's anything I can do to help...'

'I just want my kids back.'

Tony sighed in exasperation. They were back to it again. He really sympathised with her, and felt guilty as hell about her, but he still wouldn't let her have the kids, no matter how much she tormented him. Which she'd been doing for the past six weeks, through her solicitors.

'I'm getting exhausted with all this legal business, Suzy. I wish you'd give it a break.'

'I can't,' she replied with no sign of animosity, just stating a fact of life. 'I want my kids back and I'm gonna get them and that's all there is to it.'

'You won't get them, Suzy. You left us, after all. Besides, they're perfectly happy where they are. Clare looks after them well.'

'I'm not arguing against that - I mean, I've nothing against Clare - but no matter how nice she is to them, she isn't their mother.'

'You're making my life hell on earth, Suzy.'

'I told you I would.'

'Aren't you ever going to stop?'

'Not until I get my kids back.'

'It must be costing you every cent you earn.'

'It is, but it's worth it.'

A mother's love, he thought. *You can't fight it*. And then, maybe in frustration, he said what he hadn't planned to say at all. 'I want a divorce, Suzy.'

His words seemed to cleave the air. She stared at him with widening eyes, visibly shocked, making him feel like a louse.

'You want a... *divorce?'*

'I think it's time, Suzy.'

'Gee, I only want my kids back. I never dreamed of *divorcing* you.'

'But we don't live together. It's been nearly two years, Suzy! And since then, you've had your boyfriends, so why do you want to stay married?'

'*You're* living with another woman. I've just had some boyfriends. I've never let one of them move in, like you did with Clare. And now you want a divorce!'

She turned her head away, sniffed a little, then sipped at her drink, making him even more ashamed of himself.

'Goddammit, Suzy!' he exclaimed, glancing along the crowded bar, inhaling a lungful of smoke from the cigarette of the big guy beside him. 'We haven't lived together for two years! Why *not* get a divorce?'

She looked back at him again, her green eyes threatening tears. 'I left you, sure, 'cause I thought you'd come after me. When you didn't, I felt even more hurt, but I couldn't crawl back. So I stayed with my folks. I had boyfriends, but that was all. I lived that way, goddamn you, 'cause I couldn't believe that you wouldn't actually come and drag me home, sooner or later. But you didn't! Instead, you got another woman. And even then, I kept thinking it would end and that you'd then want me back. You understand, Tony? It's something called love. I always had it for you and damned well proved it, but you didn't return it. Instead, you neglected me, let me go without a fight, then rearranged your goddamned life without once looking back. A divorce? I don't believe in divorce! I believe in our marriage. Goddammit, I loved you and still do. Are you that blind, you damned fool?'

She didn't wait for a reply, but quickly slid off the stool and hurried out of the bar without paying the check. Too stunned to think clearly, his cheeks burning with shame, Tony started after her, was called back by the barman, paid and then hurried out, into the afternoon's blinding light.

He looked left and right, but he didn't see Suzy. He walked up and down the street, looking into the side-streets, but he still didn't see her. Assuming that she had shot off in a taxi while he was still paying the check, he wandered down to the waterfront and looked out, beyond the anchored sail-boats, at Chesapeake Bay.

He felt like drowning himself, but of course he didn't do that. Instead, he sat on a bench, let his racing heart settle down, and realised that Suzy had filled him with shame for the way he had treated her. He was now in love with Clare, so there could be no turning back, but Suzy had reminded him of the love he'd once shared with her and of how - and this he now accepted - his neglect was the cause of their break-up. His children had lost their mother and Suzy was now alone, but throughout it she'd continued to love him and want him back, while he, too blind to see, as usual, had built himself a new life. Though he was now in love with Clare, he felt responsible for Suzy's suffering and knew, even as he faced this fact, that he still felt love for her. Certainly not the kind of love

he felt for Clare, but love all the same.

Confused and badly shaken, he drove back to NASA-Goddard and put in an unsatisfactory afternoon's work. He couldn't concentrate properly and instead kept drifting off into painful, tormenting thoughts about Suzy, Clare, the hole in the ozone layer, and the plot that Jack Douglas was hatching against him. His forebodings of the morning returned to haunt his afternoon, making him forget the time and stay on longer than usual.

Because of the 'hauntings' most people tried to avoid driving by night... and now it was night time. Cursing to himself, he hurriedly locked his office, left the building and climbed into his car, to start the drive home. He pulled out of the car-park, drove between the guarded gates, then started the short drive along Greenbelt Road. The stars in the sky were brilliant, the moon was a mottled cheese, and he noticed that the road was deserted, which made it less dangerous.

Then he saw the woman standing far down the road in the beam of his headlights.

Instantly filled with dread, he put his foot on the brake-pedal, slowed the car down, then started flashing his headlights to warn the woman to move.

She didn't take any notice. She didn't move at all. She was wearing a familiar black dress that fluttered in the breeze, and she stared directly at him, into his headlights, as the car raced towards her.

'Godammit!' he muttered, pressing harder on the brakes and feeling a sick lurching in his stomach because that ghostly figure standing in his headlights was somehow familiar.

It was Clare.

He slammed on the brakes and went into a skid, just missed her and came to a shuddering halt.

Shocked, frightened, he gazed out the window and noticed that she hadn't moved an inch and was facing in the same direction, her back now turned towards him, the breeze rippling her black dress.

He opened his door, calling her name as he did so, practically falling out of the car. Clare turned towards him. He was just about to ask her what the hell she was doing there, when he saw the deathly smile on her face, illuminated by moonlight.

'Oh, no!' he whispered.

It wasn't Clare. It was her double. She had Clare's smile, but a deathly one. Tony shivered and glanced left and right, desperately wanting the real Clare.

Then he looked back at her double. She was walking towards him. She was smiling and raising her hands in the air as she tried to embrace him.

She passed through him and vanished.

Tony was briefly paralysed, then he suddenly felt nauseous, and he hurried to the side of the road and vomited onto the tarmac. When he had finished and was straightening up again, he knew that something was wrong.

Something to do with Clare.

In a sudden panic, he jumped back into his car and drove home as quickly as he dared. The lights in the house were on, but in this case gave no comfort, and as he hurried up the path to the front door, he felt frightened and feverish. He opened the door with his key, filled with dread at what he might find, but when he stepped inside the kids, looking normal, were in the living-room, watching TV.

His kids, not their doubles.

'Where's Clare?' he asked.

Don jerked his thumb in the direction of the kitchen, but kept his eyes on the TV.

'Thanks,' Tony said and hurried into the kitchen to find Clare, the real Clare, but wearing the same black dress he had just seen on the road and sipping a mug of coffee in a strange, unnaturally calm manner.

When he walked up to the table and smiled at her, his smile was returned, though in a weary, pained way.

'I saw your double on the Greenbelt Road,' he said, 'and knew that something was wrong. What is it, Clare?'

'You'd better sit down,' she said.

He took the chair facing her and looked directly at her, tremendously relieved that it *was* her, but still shaky with fear.

'Well,' he said, 'here I am, sitting down. So what's wrong, sweetheart?'

She reached out and took his hand. There were tears in her eyes. She raised his hand and kissed it, her lips lingering over it, then lowered it back to the table, but kept holding it, squeezing it.

'This morning I lied to you,' she said. 'I didn't take a day's rest. I've been feeling so bad lately, much worse than I told you, so this morning I went to the hospital to have myself checked out. I've since become another statistic on the growing list of diseases caused by the alien virus. I'm suffering from malignant melanoma. Yes,' she clarified. 'Cancer.'

Chapter Thirty-Six

‘Until this happened,’ a distraught Tony said a week later to Clare, ‘I desperately wanted to make contact with the virus in some way or another - learn about it and maybe communicate with it - but now I hate it and want to destroy it. That’s all I can feel.’

Clare was lying in a hospital bed, looking surprisingly healthy and rested, waiting to have radiation treatment, though she didn’t believe it would help at all. She was being brave about it, really cool, and that made him hurt more.

‘You shouldn’t feel that way,’ she said, squeezing his hand reassuringly. ‘As a scientist, you should disregard what’s happened to me. The virus, after all, though alive in some way, doesn’t actually know what it’s doing to us, if indeed it knows anything at all, so you have to keep me out of the picture and retain your scientific objectivity.’

‘That’s impossible,’ Tony said, feeling bitter and unable to hide it.

She smiled at him and squeezed his hand again. ‘No, it’s not,’ she said. ‘Difficult, but not impossible. And it’s your duty as a scientist, as a father, as my lover, to find a bridge between us and the virus, between the known and the unknown, just as you and I have found a bridge between us. If *we* can build a bridge between us, Tony, then *nothing’s* impossible.’

It was a joke with serious undertones and it got a smile out of him, but when he looked at her lovely face and thought of how quickly its light would fade, he was filled with unutterable rage and fathomless grief. He had suffered the grief all week, often feeling numb with shock, and at times felt awake in a nightmare that he couldn’t shake off. The virus had done for his mother and now it was killing Clare, giving her the cancer it had given to thousands of others. Clare, however, had noted sardonically that this hardly made her a special case.

Maybe not in global terms, but she had certainly been special to him and it filled him with grief, hopeless anger and a burgeoning hatred of the growing alien virus, now seeing it as a great darkness covering the Earth and creating out of its mysterious, frightening depths a world peopled with only the living dead or those doomed to die. He shuddered to think of it.

‘I don’t know how you can adopt that benevolent attitude towards it,’ he told

her. ‘I’ve tried, but I can’t.’

‘Maybe because you take for granted what I only received as a gift. Our life together. Your children.’

‘Some people would call that a penance.’

Clare smiled at that. ‘It was a gift to me, Tony. I never had to give that much before, so never knew just how much I could get back in return. And what I got back from you and the kids was a hell of a lot.’

‘I don’t understand that. I thought you had loving parents.’

‘Yes, I did. I was lucky that way. My parents *were* loving, but not in the way you’d know it, so what they gave me, more than love, was respect and belief in myself. They didn’t teach me to *feel*; they taught me to *think*; and so for years I was ruled by my head and not by my heart.’

‘Very sensible,’ Tony cracked.

‘No,’ Clare said, ‘it’s not sensible. It’s a form of denial, a rejection of a part of yourself in the hope that life will be simpler. But then I met you, fell in love against my will, and in accepting the differences between us, I conquered that cowardice. I also learned to love your kids, and that still makes me feel good. It also makes me concerned for the future they’ll have if we don’t manage to stop the virus spreading. That’s why you’ve got to try it, Tony. It’s something you owe them.’

He knew what she meant when he tried to visualise Earth’s future. He saw a world of fire and flood, of drought and famine and phantasms, with ultraviolent rays travelling all the way from the sun to light without resistance on Earth, causing cancer and death. He saw the dead returning, materialising out of thin air, to torment those they had recently left behind in a literal hell on Earth. He saw a world in which the line between life and death, between dream and reality, would no longer be definable to the living: a world in which the dead would be as real as those who perceived them.

It was the world his children would inherit if he didn’t try to prevent it.

‘Right,’ he said, feeling more determined. ‘I’ll give it a try, at least.’

‘That’s my boy,’ Clare said, smiling. ‘You do it for all of us. Do it particularly for the kids and I’ll feel a lot better, no matter what I have to go through. And do it as quickly as possible, before Jack Douglas goes too far.’

‘Too far?’

‘Two years have passed since we became involved with the hole in the ozone layer, the greenhouse effect and the virus. Thankfully, during that time, most of

the developed countries have stopped thinking of the virus and its effects as a secret weapon created by some other country and instead accepted it for what it is: an *alien* entity.'

'Yeah, right,' Tony said, thinking of that other alien entity inside her, the tumour already spreading to her lymph nodes and liver, and hiding his urge to scream or weep with a sardonic grin. 'I already know that, Clare.'

'But human nature being what it is,' she continued with admirable equanimity, 'instead of uniting the world against it, the virus has simply changed the global balance of power.'

'With all that implies for their political clout when it comes to dealing with us,' Tony said. 'And your old boyfriend, Jack Douglas, is growing ever more paranoid about that.'

'Yes,' Clare replied, not embarrassed by his jibe and possibly pleased by his unconscious display of jealousy. 'And according to what I heard on the grapevine, he's convinced that if these climatic trends continue, the US will be forced to take dramatic steps to keep the wolves from its door.'

'What steps?'

'It's Douglas's belief that northern Europe, Japan and the Russians, now united in their economic strategy and becoming more arrogant as their wealth and power increase, will try to starve the US of the imported agricultural product it now needs and thus reduce it to a state of total dependence upon them. If that happens, Douglas believes, the United States should take over at least some of the territories of Europe by force.'

'Jesus Christ!' Tony exclaimed. 'Politicians!'

'I also picked up a rumour,' Clare continued, 'that although Douglas was, in a sense, forced into backing our project, he's also hoping that our research will lead not only to a way of stopping the growth of the virus, but to a means of actually controlling it, as well as the ozone depletion. That would give the US control over the world's weather, thus indirect control over the whole global economy. Jack's no Good Samaritan.'

'Shit,' Tony said, 'I don't believe it. That guy's a well that runs deep.'

'That's right,' Clare said. 'He'll sink as low as he has to go. That's why we've got to stop the spread of the virus and return the Earth's climate to normal, without giving Douglas a way of then using it to his own ends. So you have to stop hating the virus, Tony, and instead find out what it is and then find either a bridge of communication between it and Earth or a way of getting rid of it

altogether. And you have to do it before Jack Douglas or someone like him does something catastrophic.'

'I agree,' Tony said. 'I just find it difficult not to hate the virus when you're here in this hospital.'

'The virus is conscious in some way we can't imagine and appears to want only one thing. It wants to live – as *I* want to live and you *want* me to live. Why should that be a crime?'

Tony sighed. 'Well, I guess in that sense it's not a crime, but I *still* hate the fucking thing.'

'You shouldn't,' Clare said. 'We shouldn't even be calling it a *virus*. A lot of people now call it "Dream Maker" and I think that's better. It reproduces our dreams and nightmares and makes them seem real. That's a gift or a penance, depending on what you see, but it's certainly what Dream Maker does.'

Tony glanced out the window. He saw silvery lights flying across the white sheet of the sky, given life by the minds of wishful thinkers all over the land. The flying saucers were beautiful, the products of romanticism, but dark dreams and horrors were also created out there, leading to heartbreak and tragedy and all kinds of madness. The world had become a hall of mirrors where the images were not reflections, but the hopes, enchantments and furies of the unlocked subconscious. It was a world of bizarre splendours, of demons and ghosts, and you had to keep your wits about you to judge what you were seeing. You could learn to control it - at least most of the time. You could learn to sense them coming, to feel your mood creating them, and to blot them out of your thoughts before they took shape. You could do that sometimes, but not always, so you could never relax.

Now, thinking about that and strangely moved by it, Tony leaned across the bed, raised Clare's hand to his lips, kissed it, then lay his head upon her breasts and tried to hear her heartbeat.

It was beating for him.

She ran her fingers through his hair, kissed the top of his head, whispered, 'It's all right. I'll be fine,' and then, her body trembling with emotion, held him passionately, longingly.

'Oh, Christ,' he whispered.

The door behind him opened and he knew without looking that the nurses had come to take Clare for her treatment. He straightened up reluctantly and tried to look composed, but felt his heart breaking with love when he saw her slight,

tender smile.

'I'll be here, waiting,' he said. 'Don't you worry about that.'

'I'm not worried. I'll let you do all the worrying. You'll worry enough for both of us.'

He kissed her smiling lips. They weren't as warm as they should have been. He stood up and nodded at the nurses, then gave a quick wave of his hand and fled from the room.

He waited outside the hospital, in blinding sunlight, torn between pain and rage.

His love and grief knew no bounds.

Chapter Thirty-Seven

Leaving his ailing President in a decaying Oval Office, Douglas didn't know whether to laugh or cry. Wiping sweat from his face and silently cursing the fierce heat, he saw the cracks in the dried-out walls of the corridors of the West Wing and was reminded that the walls of the Oval Office had not been much better. The heat was destroying the walls, plaster insets and window-frames quicker than they could be repainted, and the White House, once immaculate, was running to seed.

Just like the President. The man Douglas had just left was a sad reflection of his former self. Humiliated by the steep decline in United States' economic and political influence on the world, shattered by the recent death of one of his daughters by a cancer apparently caused by the depleted ozone layer, haunted by her repeated appearance, he was gradually, wearily, surrendering his authority to Douglas and his economic administrators.

Douglas wanted to weep when he thought of how the mighty had fallen; but felt like laughing when he thought of how easily, surreptitiously, he had taken command of the White House. He had succeeded in doing this simply by convincing the increasingly distracted, grief-stricken President that his former allies were exploiting the ecological disasters that had beset America during the past two years and, by so doing, were waging a successful economic war against the United States.

Because of this, Douglas had told him, it was imperative that the White House

decision-making apparatus be shifted away from the Department of Defence and instead placed under the authority of the Department of Management and Budget, headed conveniently by Douglas himself. Now Douglas, as he walked through the West Wing, could not resist the thought that at last he was more powerful than the President.

For the purposes of intimidation, he had deliberately arranged for NASA's Energy and Environment Program Director, Dwight Collins, to wait for him in the lonely splendour of the West Wing Reception Room, or Appointments Lobby, rather than his own office. As he opened the door and entered, he was expecting to find a nervous, overawed victim.

'You're late,' was Dwight's lazily acidulous greeting when he looked up from the antique sofa, under the mid-19th century American landscape painting, beside a late 18th century English library bookcase filled with porcelain birds. 'I've been burning my ass here for twenty minutes and I'm not amused, Douglas.'

'I'm sorry,' Douglas said, taken aback by Dwight's lack of humility. 'I've just come from the President and...'

'I'm a busy man,' Dwight replied, obviously unimpressed by the mention of the President, 'and when the person I'm meeting suggests the time, I expect them to stick to it.'

'Okay,' Douglas said, feeling flustered and not liking Dwight for it. 'I'm sorry. I didn't mean to be late.'

'No,' Dwight said sardonically, 'I'm sure you didn't. Now what do you want?'

Studying Dwight, who was large-boned and handsome, Douglas realised that he could not easily bluff him or in any way frighten him. The man was a former astronaut, which meant he was Clare's friend, and when Douglas realised that, he thought once more of Tony Rydell and was consumed with hatred.

Douglas hadn't given up his marriage for Clare - they had met after his separation - but his affair with her had certainly encouraged him to turn his back on his family. Then Clare had fallen for Rydell, that sloppily egocentric physicist, and Douglas, being left out in the cold and not thrilled with his bachelor life, had tried to get back in with his wife and family. Rejected, he had turned toward his work, growing ever more powerful as his hatred for Clare and Rydell became a ruling obsession. He was aware of this obsession, loathed its grip on him, but couldn't resist it. He had to have his revenge.

'What I want,' he informed Dwight with pleasure, 'is for you to drop Tony

Rydell from the National Ozone program.'

'Why?'

'That's not your concern.'

'I'm the Energy and Environment Program Director and Rydell happens to be my best man, so this *is* my concern. Now why should I drop him?'

'Rydell's a notoriously controversial character whose public utterances have been an embarrassment to this administration and politically damaged NASA in particular. That's reason enough, I think.'

'No, it's not,' Dwight said. 'Rydell first got into trouble for stating publicly that the UFO phenomenon should be officially investigated - he didn't even claim that they existed - but since millions of people are now being haunted by flying saucers, I think it's safe to say that his stand has been vindicated. He got into trouble again when someone informed the press of the existence of the alien virus in the atmosphere, but since there's no actual proof that he's the one who blew your cover, I can't use *that* as grounds for his dismissal.' Dwight spread his hands in the air in a mocking gesture and shrugged his broad shoulders. 'So why should I dismiss him?'

'Because your President wants you to.'

'Then my President has to give me a reason that I can convey to the press. And so far, he hasn't, through you, even come close to doing so.'

Douglas forced a smile, even though he felt enraged. He sat in the white chair by the table opposite Dwight.

'Can I get you a drink?' he asked.

'No,' Dwight said. 'I'm working.'

'And honourable NASA-men don't drink while they work.'

'No, sir. They might get dismissed. It's always best to be safe, right?'

'You're an arrogant shit,' Douglas tried for a reaction.

'I'm the product of my training,' Dwight replied. 'And you people financed that.'

Douglas knew then, without doubt, that this man was Rydell's friend and would do everything in his power to protect him. He envied Rydell that, which just made him loathe him all the more.

Sighing, trying to hide what he was feeling and instead act like a man with deeper concerns, he said, 'Okay, let's forget Rydell. Let's not be so personal. Let me put it to you plain and simple, no matter how much it hurts.'

'Please do,' Dwight said.

Douglas could have strangled him, but instead he just smiled bleakly and said, 'Rydell was just our excuse because, as you've just confirmed, he's your best man. In fact, what we really want is the dropping of the complete National Ozone program. No more and no less.'

He had thought it an inspired lie, but again it didn't work, since Dwight simply leaned forward on the gold-coloured sofa and calmly repeated the one word that Douglas couldn't bear to hear:

'Why?'

'Pardon?'

'Why should we drop the program?'

'Because it's costing a fortune,' Douglas said, 'and hasn't produced a damned thing. It's a complete waste of time.'

'I don't think so,' Dwight said. 'In fact, I think we've solved the mystery of the virus and can actually stop it, thanks to Rydell and Clare. Am I allowed to continue?'

Dwight's smile was like a razor-blade, cutting cleanly into Douglas, making him realise that he was the victim of a carefully planned coup. This bastard, Dwight, in cahoots with Rydell and Clare, had obviously set him up, and now, no matter how hotly he burned, he had to look cool.

'Of course,' he said. 'Why not? By the way,' he added, unable to resist retaliation, 'how's Clare these days? I believe she isn't feeling too well and has been off work a lot.'

'She's contracted a virus-induced malignant melanoma,' Dwight said.

Douglas suddenly felt chaotic. 'Cancer?' he asked stupidly, his heart racing with a blend of shock and fear for himself.

'Yes,' Dwight said. 'You heard me. A skin cancer caused by the virus you don't want to stop.'

'Malignant?'

'What do you think?'

'Oh, Christ!' Douglas said. And felt a spasm of anguish, a brief flickering of real compassion, before surrendering to self-concern and wondering fearfully when the virus would encircle *him* in its invisible claws. He was terrified of it, as were most sensible people, but he feared anonymity even more, since the very virus that was haunting the world was giving him power. 'Unbelievable. Even Clare, for God's sake!' He nodded judiciously, as if forced to be brave. 'Well, we owe it to Clare and all the others to defeat this damned virus - and

contrary to what you've just said, I *do* want to defeat it. So continue. I'm listening.'

'The research program headed by Rydell and Clare has proven conclusively that the alien virus takes its energy and consciousness from heat and is invading the Earth for that very purpose: to feed off its warmth. So, the way to stop the virus is to freeze it back to sleep and then somehow replace the ozone that's been destroyed.'

'And how do you intend doing that?' Douglas asked.

'While the virus has spread over most of the globe and is feeding off its atmosphere *and* the energy of human brain-waves, thus reproducing human consciousness in life-like form, it's still a single entity or, more precisely, one giant brain, or consciousness.'

'I'm following you,' Douglas said impatiently, nodding to indicate that Dwight should continue.

'So,' Dwight explained, 'if we can somehow perform a lobotomy on the consciousness, or brain, of the virus, we believe that the rest of it, scattered around the globe, will then gradually die off, or at least return to its former dormant state... its long sleep.'

'A neat theory,' Douglas said with soft sarcasm, 'though it raises the question of how you perform a so-called lobotomy on such a virus. Have you solved that one also?'

'Yes,' Dwight replied without hesitation, unable to resist another smile. 'Tests undertaken by the Laboratory for Extraterrestrial Physics at the NASA-Goddard Space Flight Center, in Greenbelt...'

'Under Clare's supervision.'

'Correct. As I was saying, the results of those tests have led us to believe that we should fly a plane through the major ozone-hole over the Antarctic and spray it with liquid oxygen cooled to at least minus 200 degrees centigrade - just below the so-called "safe" point for cryonic preservation. That should make the virus retreat from the ozone-hole, back into the relative warmth of the unfiltered sunlight just above the stratosphere, before freezing the bacterial spores of the virus back into insensibility. The spray will have been mixed with an artificial gaseous matter composed of water, carbon dioxide, ammonia and hydrogen cyanide: a combination that forms the molecules essential to chemical evolution and the creation of ozone. We hope that in this way the depleted ozone will be replaced and again act as a shield between the Earth, the sun and, more

importantly, the once more sleeping alien virus, letting the world's climate gradually return to normal. We think it will work.'

Douglas thought he might be right, but took no pleasure from the fact, since he had personally profited from the misfortunes created by the virus. The threat of the destruction of the US economy had removed power from the Oval Office and placed it in Douglas's department; and no matter the long-term danger to the Earth, he could not bear to lose that power. On the other hand, faced with this fait accompli, he could hardly say no.

'Well,' he said, trying to buy time and think of a way out, 'you've certainly given me something to think about. Obviously, if you think it'll work, we have to try it. On the other hand, it's not the kind of decision I can make alone, and I think that any unforeseen dangers should be discussed.'

'There's one obvious danger,' Dwight said.

'What's that?'

'The hauntings. Anyone attempting to fly into the ozone-hole over the Antarctic, where the virus has its strongest influence, could go insane by being exposed to the most extreme form of the hauntings: an experience that could possibly destroy his sanity, no matter how objective he tried to be. That's Rydell's greatest fear.'

'*Rydell's* greatest fear? You mean Rydell is the chosen pilot?'

'Of course,' Dwight said. 'What better choice is there? Rydell knows more about the virus than anyone else. He also has a personal commitment that could help him combat the virus's hauntings, if that's at all possible.'

'Do *you* think it is?'

Dwight lowered his gaze, studied his hands, then shrugged and raised his eyes again.

'I don't know,' he said.

Douglas thought of the bizarre hauntings that were causing chaos, destruction and madness on a worldwide scale. Having himself experienced their awesome reality, he could imagine the hell that would be created in the very heart of the virus.

No, he did not think that Rydell or anyone else could defeat that, but if he did, he would then bring back with him the secret of control over the virus and the ozone itself, which is what Douglas wanted.

'Well,' he said, trying to sound as neutral as possible, 'if Rydell wants to try, we'll have to let him. I'll set the wheels in motion immediately and pray that it's

worth it.'

'Thanks,' Dwight said drily.

Chapter Thirty-Eight

Suzy saw the fires burning in the American night. They were burning across the land to let the people know that the new dispossessed were on the move, looking for a place to lay their weary heads. The smoke from the thousands of fires billowed up from the dark fields and mingled with the clouds and then formed a hole in the atmosphere that now was even bigger than the United States and an awful lot taller than Mount Everest. There was something living in that hole, growing bigger every day, and Suzy knew in her dream that it was called the Dream Maker and was feeding off her dreams and the dreams of others to make those dreams real.

Suzy dreamed that she was inside the Dream Maker and making real what was unreal. She somehow knew she was dreaming.

The bedroom was in darkness. She knew that without looking. She opened her eyes, awakening, and saw that she was right, then recalled the dreadful journey from Iowa to Maryland and let the eerie pale glowing take shape at the end of her bed.

Her dead father came back to life.

He just sat there and stared at her. He seemed to be in a chair. At first he was motionless, then he smiled a little, but there was certainly something odd about the smile, as if it wasn't quite making it. She could see him and hear him breathing, watched his hands open and close, but his eyes, which had always been filled with kindness, had an uncertain, blind look.

'Hi, Dad,' she whispered. 'Can you hear me?'

But he didn't reply.

You always wondered what they experienced, if they saw or heard anything, and although if he sat beside her, she'd be able to feel him, she knew that if she actually tried to touch him, her hand would go through him and, most times, make him disappear again.

At first the apparitions had been frightening, like you expected a ghost to be, but after a while you got used to them, learned to take them as you pleased, and

even learned to call them up or blot them out with the power of your mind.

Suzy had learned to do that - she had a special facility for it - and it made her feel more in control of the world of mirrors outside.

'I've been invited,' she told her dead father. 'That makes this day something special.'

He still didn't reply.

The pain of losing him filled her up, like a mournful bell inside her, and she threw the sheets back and crawled forward to reach out and touch him. When she reached him, she saw through him, the faint shape of the cupboard behind him, and his eyes, when she saw them up close, were looking through her. She shivered, then, and tried gripping his shoulder, but her hand slid through space.

He dissolved into nothing.

Suzy slid off the bed, stood where her father had been, thought that it was colder than where she had been, so stepped forward and felt warmer air, then stopped by the window. The apartment was high in the hills, with a view of Chesapeake Bay, and the rising sun was laying its light on the water and making it glitter.

Most of the town was still asleep and the dawn was filled with peoples' dreams: Suzy saw the disc-shaped lights gliding gracefully across the bay, rising and falling in silent motion, hovering over the rooftops of Annapolis, as if protecting those sleeping.

She saw other visions as well: a white-robed man walking on water, a flower becoming a tree, houses bathed in the imagined light of God, a lawn covered in stars.

She saw what people were dreaming, what they yearned for in sleep, and although there were nightmares as well, she deliberately shut them out. She had learned that she could do that. She would feel them coming and stop them. When she felt the fear trickling up from the dark depths, she just closed her mind.

She had that facility.

Turning away from the window, she left the bedroom and went into the one next door. Her mother was in bed, studying the brightening light in the window, a dreamy, inward smile on her face, which now seemed old and wise. When she saw Suzy standing there, she looked up and smiled even more lovingly.

'The kids are sleepin' soundly in their beds,' she said. 'I just saw them clear as day.'

‘That’s good,’ Suzy said.

‘Why?’

‘I’ve been invited.’

‘Yeah, Suzy, you told me. You were in a bit of a daze when you told me, but you told me last night.’

‘Dad’s alive and well,’ Suzy said. ‘He just passed over, but he’s there all right. He came to the foot of my bed this morning, and I knew he was okay.’

‘Yeah,’ her mother said. ‘I often see him myself. I see him an’ my folks an’ they’re all okay and I might soon be joining them.’

‘Don’t talk that way, Mom.’

‘It’s the truth and you know it, Suzy. I’ve got that illness the Dream Maker gives to a lot of people, skin cancer, but now I know there’s nothin’ to fear, that it’s just passin’ over. What did Abe call it? Glory Road! And that’s what it is. It’s just a road to the other side.’

‘I haven’t told Tony.’

‘You did right in that. In your circumstances, it wouldn’t be fair to tell him. You’d get him back the wrong way.’

‘You mean he’d feel more guilty.’

‘He’s that kinda man, Suzy. He feels a lot more than he shows. He loves you, but he’s blind as a bat and too distracted for reasonin’. So, no, you can’t tell him yet.’

‘You want breakfast, Mom?’

‘No. I want to dream. I guess I’ll go back to sleep. When’s it all gonna happen?’

‘This morning. Ten this morning.’

‘I’ll be awake when you get back.’

Suzy left the room, went into the kitchen, made breakfast. When she’d finished, she had a shower and dressed and then left the apartment. The sun had risen fully and flooded the bay with light. The hills around it, once verdant, were now parched and brown. The boats seemed to float in the heat haze above the water’s flat surface. It was an illusion, of course - the boats were actually in the water - but the heat haze could fool you.

The apparitions could fool you, too, and you had to drive carefully, which Suzy did when she drove away from her apartment and down the hill to Annapolis. The town tumbled around the bay, looking as pretty as a movie set, and the silvery saucers gliding over the water were serene in their beauty. They

never looked quite real - the clouds sometimes showed through them - but they glided silently to and fro, rising and falling, sometimes hovering, and a lot of people had already gathered around the bay to spend hours looking at them.

Some people worshipped them.

Suzy turned away from the town and took the road to Washington DC, keeping a close eye on the other drivers and avoiding the sky. Being on the road was dangerous, as the many wrecks testified; drivers would lose their concentration and let the Dream Maker get to them and suddenly find themselves with ghosts and apparitions inside the car, then panic and lose control and crash into other cars. They would see the ghosts of the dead or the manifestations of their phobias - snakes and spiders and giant ants and cockroaches - and, unprepared, they'd go crazy behind the wheel and that was the end of it. It was those or things outside their vehicle - the apparitions of loved ones suddenly standing in the road ahead; flying saucers suddenly flying across and blotting out your vision; the road seeming to split open or bridges falling down - and those, also, would make them do the wrong thing and cause terrible accidents.

That's why you had to learn control, concentrate on feeling them coming, blot them out of your mind before they took shape and still handle the car. Suzy could do that now, though a lot of others couldn't, and that's why, as she drove along at a safe speed, she passed the many wrecked vehicles, too many to drag away, that littered the roadsides and fields.

Wrecked cars were now commonplace.

She felt more nervous about the invitation than she did about the apparitions, but she still keep firm control of her thoughts and a keen eye on what others were creating.

Just before reaching Greenbelt, she saw an enormous flying saucer racing out of the east, shooting over the freeway, and causing a driver ahead to swerve across the road, into the oncoming traffic, ending up in a tangle of shrieking metal, hooting horns, screaming people.

Suzy didn't stop. There was nothing she could do. As she passed the crashed cars she felt a wave of pain and terror, sensed something in the car beside her, blocked it out of her mind with her will and managed to lose it.

She was glad she could do that.

Not that it was easy with the things she had on her mind. She kept thinking about the kids and Tony and Clare, and those thoughts kept crowding in upon her and threatened to weaken her. She could be thinking about them and maybe

forget about all the rest and then the apparitions would take her by surprise and make her do something stupid.

Still, you had to do it. You had to balance your thoughts somehow. You had to focus on the apparitions while also dealing with your own thoughts and somehow keep them all apart and under control.

She was doing that when she took the turn-off to Greenbelt and became even more nervous.

'I've been invited,' she said aloud.

Suddenly, she had a flash of Don and Ronnie standing in the road right in front of her. She almost slammed on her brakes, which could have led to an accident, but she checked herself just in time, shot on through her ghostly kids. When she glanced in the rear-view mirror, she saw nothing but the car on her tail.

Thank God, she hadn't braked.

She was on the long road that took her straight to their house, driving past the endless fence of the NASA-Goddard Space Flight Center, and it made her fill up with emotion over all she had lost.

She kept her eyes on the other drivers, braced herself for the flying saucers, but she also thought of her kids and Tony, of her neighbours, Dwight and Maggie, of the good times they'd had and the troubles they'd shared before she and Tony lost touch and she felt all that hurt.

Again, Don and Ronnie flashed up ahead, but she closed her mind and willed them away, gripping the steering wheel so tight she almost lost control and went off the road. Then she thought of Iowa, the land's beauty, its destruction, and remembered that hellish journey to Maryland, during which she had grown up. Yeah, she had matured, learnt about life and death, and knew that even the passing on of her father had taught her to live again.

'Glory Road!' her father had whispered.

In death there was new life.

Her tears came straight from her heart, brimming up in her eyes, and she felt the pain and love and despair and wondered where it was leading her. She turned off the Greenbelt Road, drove between the tidy houses, looked at all the dried-out, dead lawns and welled up with yearning. Stopping in front of her own house, she cut the engine and sniffed back her tears. She was nervous as hell and all confused, but she wouldn't show that.

She was here for a very good reason.

She had been invited.

Chapter Thirty-Nine

The radiation treatment hadn't worked, the surgery had also failed, and now Clare felt like an old woman, her inner light dimming. Sitting in the rocking chair by the window in the front room of Tony's house, looking out at the silvery mid-morning, she yearned to join her father and mother in death, where pain and humiliation couldn't reach her.

Yes, humiliation... She touched the wig on her bald head, then ran her fingers down her browning skin and gave a faint shudder, wondering when it would end.

Please let it be soon, she thought.

She was alone in the house. The children were at school. Tony was at NASA-Goddard, clearing his desk before his trip, and Suzy should be arriving any minute for the meeting that Clare had arranged without Tony's knowledge.

She felt compelled to sort this matter out before facing the other thing. It was a form of repayment.

Gazing out the window, waiting to see Suzy's car, she thought of how much she owed Tony for what he had given her: his love and the love of his children, a less lonely life, the knowledge that she was better than she had thought and had a meaning beyond work. He had helped her break loose from her constraints and become a free woman. She owed him for that.

Looking out at the silvery haze, which represented a changing world, she realised that it was the virus, that the virus was *in* it, and that it could manifest itself at any moment through even her thoughts. She would see her father and mother, talk to them, feel them, as she had done so many times since that first time in the airplane over the South Pole. She hadn't told Tony about it, hadn't wanted to disturb him, but now, with her initial fears led to rest, she actually wanted to see them. Since the cancer, she wanted to join them and escape from this hell on Earth.

It would all come in good time...

A car drove out of the heat haze and stopped just outside the house; a woman climbed out, blonde and slim, sedately dressed. She squinted across the lawn, at

the house, then walked up the path. Clare sighed and stood up, reaching the door as the bell rang. When she opened it, she saw the face of a sad, world-weary, lovely child... and a tentative green gaze.

'Suzy?'

'Yeah, right. You're Clare, I suppose.'

'Yes.'

'Gee, I still can't get over this. A call from my husband's live-in woman! I feel really weird, you know?'

'Yes,' Clare said, liking her immediately. 'I know what you mean. I feel foolish inviting you into your own home, but please, Suzy, come in.'

She stepped aside to let Suzy enter, watched her standing uncertainly in what had once been her own living room, then closed the front door behind her and said, 'Relax. Sit wherever you like. Can I get you a drink?'

Suzy stared wonderingly around the room, as if reliving old memories. 'Yeah, thanks. You got a beer?'

'Sure.'

'A beer would be okay.'

Clare went into the kitchen as Suzy sank into an armchair. She returned with a beer, handed it to her, then took the chair facing her. Suzy stroked the wet rim of her glass, then licked her finger.

'It must feel pretty strange with me here,' Clare said.

'Yeah, it does.' Suzy sipped at her beer and her artfully painted, sensual lips broke into a smile. 'I thought you'd be younger,' she said innocently, without malice. 'I mean, you look a bit older than I'd... Whoops, sorry!' And she covered her mouth with her hand as her cheeks burned bright red.

Amused, Clare said, 'Don't be embarrassed. 'I know what you mean. In fact, I'm not as old as I look. I'm just pretty ill. Which is why I called you.'

''Cause you're ill?'

'Yes, Suzy.'

Suzy glanced around the house again, then sipped more beer. Resting the glass in her lap, she sighed and said, 'Well, here I am. What do you want?'

It was a simple, direct question, compelling Clare to compose her scattering thoughts and troubled emotions.

'You still love Tony, don't you?' she asked, feeling a little embarrassed.

'Yeah,' Suzy replied, rolling her big green eyes and offering a sigh. 'I guess that's my problem.'

‘You’ve been giving him hell over his application for a divorce. You’re not going to agree to a thing, are you? You won’t ever let him go.’

A flush brightened Suzy’s cheeks and her gaze showed resentment. ‘Why should I? It’s *my* kids you’re looking after. And besides, I *belong* here.’

‘But you walked out,’ Clare reminded her.

‘Yeah, right, I walked out. That doesn’t mean I didn’t want to come back. I walked out ‘cause I thought he’d drag me back, but he didn’t, the bastard. Instead, he met you and moved you in and wiped the slate on his past. He broke my heart when he did that.’

‘He didn’t mean to do that.’

‘But he sure as hell did it.’

‘He thought you really wanted to leave him and that hurt him badly.’

Suzy shrugged and glancing longingly around the room, then studied her glass of beer. ‘Well, I guess it’s all over now... but he can’t keep my kids.’ She looked up again, her gaze angry, her lips pursed defiantly. ‘And I suppose that’s why you wanted this private talk? To persuade me to stop my legal claims and let you have my kids!’

‘No, Suzy. That’s not why I brought you here. I know you won’t give the kids up and I don’t want you to.’ She wasn’t too sure how she should continue, so just came out with it. ‘I’m seriously ill, Suzy. That’s why I wanted to see you. In fact, I don’t have much longer to live...a few weeks, maybe days.’

‘Oh, Jesus!’ Suzy whispered, turning red and glancing about in confusion, as most people did when confronted with that statement. ‘Oh, hell! I mean, I don’t... I...’ Eventually she regained her composure and asked simply, ‘Does Tony know?’

‘He knows, but he thinks I still have a lot of time. He doesn’t know it’s going to happen soon and I don’t want him to know.’

‘So why tell me?’

‘Because I love Tony *and* the kids and I know they love me...’

‘Yeah,’ Suzy said bitterly. ‘Right!’

‘But they also love you more deeply than me and they’re going to need you back when I’m no longer here.’

‘Are you kidding me?’

‘No. Tony still loves you.’

‘And you?’

‘What he feels for me is something entirely different, partly based on his need

for company and having a woman in his life. But I know that he's always felt guilty at letting you go without trying harder to get you back. He feels deeply for me, yes, but I could never replace you, and when I'm gone, he and the kids are going to need you. I love them enough to want you to come back to them. And now I'm glad to know just how badly you want to do that.'

Obviously finding it hard to take in what she was hearing, Suzy clasped her delicate hands together and distractedly studied them.

'Gee,' she whispered, 'I don't know what to say. I mean, I don't know if it's right that we're discussin' this now, you being so...'

'It's right, Suzy. It's proper and fitting. Now I want you to promise that when I'm gone, you'll get in touch with Tony. I'm sure you'll find him responsive.'

Suzy turned her hands in her lap, then sighed and nodded. 'Okay, I promise.' She sucked in her breath, released it as a sigh. 'Is that all?'

'Yes, that's all.'

'Okay.' Suzy stood up and glanced around her. 'I guess I better be goin', before they all come home.'

'Yes, I think that's best.'

Suzy nodded distractedly, moving from one foot to the other. Eventually, after reluctantly opening the front door, she turned back for a moment.

'I want you to know,' she said, 'that I think you're a fine lady. My kids told me how nice you were and you've looked after them better than I did, and I think I've learned a few things from that. I was pretty immature and didn't know what I was doin', but if I get 'em back, I'll do better than I did before. As for Tony... God knows, he's not the easiest, but that doesn't excuse me. He owes me some, but I owe him some as well, and we'll just have to work it out. I'm sorry, but I don't know what else to say. I'm not good at this kinda thing.'

'Neither am I,' Clare said.

Suzy smiled, then looked embarrassed again. 'You got skin cancer from the hole in the atmosphere?'

'Yes.'

'My mom's got it as well, but don't tell Tony; he'd just be bothered. An awful lot of people are getting it these days.'

'I know I'm not alone, Suzy.'

'I didn't mean it like that.'

'It's commonplace, but we can't discuss it. No matter what words we use, they always seem the wrong ones.'

‘My mom discusses it. I think she almost welcomes it. She says that the virus, the Dream Maker, is beneficial, that the diseases it gives have their purpose, and that dyin’ is just a simple passin’ over to where our loved ones are. That’s why we see dead folks a lot these days. The Dream Maker’s lettin’ us see them as a form of welcome. At least that’s what my mom says.’

‘It’s an interesting theory,’ Clare said, feeling slightly better.

Suzy scuffled her feet and looked at the floor. ‘Well,’ she said, ‘it’s been nice to meet you.’

‘Nice to meet you as well.’

‘Goodbye, Clare.’

‘Goodbye, Suzy. And good luck.’

Suzy smiled in a hesitant manner, then nodded and stepped out, closing the door quietly behind her. Clare watched her through the window, feeling relieved to have talked to her. She sat on until Suzy had driven away, then got out of her chair. Going into the bedroom, she lay on the bed and instantly fell into the sleep of exhaustion.

She was awakened by the sound of the boys in the kitchen. Opening her eyes, she saw Tony staring at her, his gaze filled with concern.

‘Hi, honey,’ he said. ‘You okay?’

‘Yes, I’m fine.’ She sat up and rubbed the sleep from her eyes. ‘Just resting, that’s all.’

‘Can I get you a coffee?’

‘No. Just hold my hand.’ When he had done so, she asked, ‘Have you told the boys they’re moving in with Maggie while you and Dwight are away and I’m in the hospital?’

‘Yeah. They’re thrilled. I think they treat Maggie’s house as a summer camp. I packed their bags this morning and Maggie’ll take them back when she comes over to say goodbye to you. Then I’m gonna take you to the hospital and drive on to the airport after that. Dwight left this morning.’

‘Back to the Antarctic,’ Clare said, ‘for your greatest adventure.’

‘Let’s hope it’s a *successful* adventure.’

‘I’m sure it will be,’ Clare said with less confidence than she felt, well aware of what Tony was going to and what could happen to him.

She thought of that great hole in the ozone layer, of the mysterious heart of the alien virus, and was filled with a terrible dread that she had to conceal. Tony

would have to fly into the unknown and might never return; and even if he did survive, she would be dead before he returned home. This was their final farewell, though Tony still didn't know it.

'Dammit,' he said, squeezing her hand, 'I just wish it wasn't happening right now. I don't like being away when you're having that treatment.'

'Stop worrying. Maggie's going to visit me every day, so I won't feel too lonely.'

'That's something,' he said, as the front door opened with a bang and Maggie called out their names. 'In here!' Tony called back and Maggie entered the bedroom, her plump face, surrounded by blonde hair, filled with good cheer.

'Hi,' she said, standing in the doorway. 'I've come to say goodbye and take the boys back with me. How are you feeling Clare?'

'Fine. A bit tired, that's all. It's probably emotional.'

'All these farewells, eh?'

'I guess so, Maggie. First the boys, then Tony here. It's one of those days.'

Maggie walked across to her, leaned down and kissed her cheek. 'We'll both feel ten years younger,' she said, straightening up again, 'by just getting rid of these guys for a few days. We'll have us a lazy time.'

'Right,' Clare said.

'Shame on the pair of you,' Tony added.

'So, Tony's taking you to the hospital...'

'Right.'

'And I'll drop in tomorrow afternoon, after the treatment.'

'Thanks, Maggie.'

'And right now I'll take the boys away and let you both have some peace.'

'A real sweetheart,' Tony said.

Maggie ran her fingers through his hair, then walked back to the door and bawled for the boys to come and say goodbye. They appeared almost immediately, crossing the room to stand by the bed, where Tony was sitting. They knew that Clare was ill, but had been told it wasn't serious; nevertheless, they were both a bit shy when they looked at her drawn face.

'All set?' Tony asked them.

'Yeah,' Don said.

'Clare's going into hospital this afternoon, I'll be flying off a few hours later, and both of us should be back the same time - about ten days from now. In the meantime, I want both of you to behave yourselves and not drive Maggie crazy.

Okay?'

'Okay,' both boys said simultaneously, looking uncomfortable.

'Give me a kiss,' Clare said, 'and then you can go.'

The knowledge that she wouldn't see them again made her brim over with an emotion she didn't dare show. She embraced each of them in turn, holding them too tightly, kissed them and maintained her composure with gentle sarcasm.

'Okay, you pair of trouble-makers,' she said, 'you can now torment Maggie. Take your baggage and *go!'*

'See you, Dad!' Don said, embracing him.

'In a week,' Ronnie said.

'Right,' Tony said. 'In a week. And meanwhile, behave yourselves.'

'Okay,' they both said at the same time, then hurried out of the room.

Maggie kissed Clare again, patted Tony on the head, and said as she left, 'Give that man of mine my regards when you get to Antarctica. And I'll see you tomorrow, Clare.'

'Right,' Clare said. 'Tomorrow.'

Maggie waved one last time and disappeared through the doorway, leaving Clare and Tony alone, still holding hands.

'I want you to do me a favour,' Clare said on an impulse.

'Oh? What's that?'

'I want you to leave now and go straight to the airport. I don't want us to say goodbye in the hospital. I want us to say goodbye in this house, where we've shared so much together.'

'You wanna go to the hospital *alone?'*

'Yes, I'll take a cab.'

'I'd feel lousy if I let you do that, so don't ask me, Clare.'

'Please,' she insisted. 'I'd prefer it this way. I want to say goodbye here and now, in this room we both loved so much.'

'You make it sound so final, Clare. I'll be coming back, I promise you. That virus won't make *me* go insane. I'll fly in and out again.'

'I don't know about that,' she said. 'What you're doing is really dangerous. Jack Douglas has only given you permission because he's convinced you won't make it back. He has no other motive.'

'I don't give a goddamn about Jack Douglas. I'll come back, believe me.'

'I still want you to leave now. I won't say goodbye in a hospital. I want to say goodbye here, where we shared so much, and I want to do it right now. I don't

want it dragged out.'

He gazed steadily at her, then squeezed her hand. Finally, he kissed her on the forehead and whispered, 'Okay.'

'I'll come and see you to the door.'

'Man and wife,' he replied.

She thought of Suzy, but didn't say anything; instead, she got dressed properly while he called for a cab, joined him in the front room until the cab arrived, then clung to him until he opened the door.

There were tears in his eyes.

She had never seen him cry before and the shock rippled through her, tearing at her heart, making her cry as well, and forcing her back into his embrace for one last, desperate moment. They kissed repeatedly, clinging to one another, before Tony dried his tears and walked out, deliberately not looking back.

She watched his departure through the window, her tears falling silently.

The cab turned the corner at the end of the street, taking Tony out of her life for all time. She stood on, staring into the silvery heat haze, as if inside her own dream.

Then she sat down in the silence of the empty room and contemplated her own demise.

Chapter Forty

Tony was flown out that November, which was the austral summer, on an ancient Military Air Command C141 cargo plane from Point Mugu Air Force Base in California on a sixteen-hour flight to Christchurch, New Zealand, with stops in Honolulu and Pago Pago, American Samoa, in between. After losing a day crossing the International Dateline, he landed, as it were, in the past, at the Christchurch International Airport, then flew on a New Zealand Air Force cargo plane for another eight hours towards the American base at McMurdo Sound, on Ross Island, Antarctica.

Strapped into his seat in the rear of the ever reliable four-motor propellor plane, with nothing to look at but the huge stacks of freight chained to the deck, he couldn't help recalling his last flight over Antarctica, when the airplane had been harassed by UFOs, Clare had been haunted by her dead parents, the pilot

had been terrified by spiders and snakes, and the rear of the aircraft had been turned into an insane asylum, in which even the redoubtable Rick Polanski had been terrified. Such hauntings were now part of everyday life, a commonplace terror, but nowhere more powerfully alive than in the Antarctic, over which the heart of the alien virus mysteriously beat. And so, as the airplane flew above the black peaks and vast white plains of Cape Adare, then across the Ross Sea, he was not surprised to see, above that water filled with ice, the remarkably graceful flying saucers.

He was now convinced that the saucers were no more than the creations of the common, subconscious yearning of Man for something beyond his grasp. Tony thought they were wonderful.

He willed them out of his consciousness as the plane descended over the Ross Ice-Shelf and had managed to lose them completely before the plane landed on the ice runway of McMurdo Sound.

He had not been personally haunted on the plane, for which he was grateful.

Dwight was there to greet him and drive him back through the deceptively ramshackle complex of buildings, storage yards, muddy streets, garbage dumps, trucks, bulldozers and forklifts of McMurdo Station, on the southern extremity of Ross Island, surrounded by ice-filled grey water and gleaming white glaciers.

'About a mile from here,' Dwight told him, 'is Observation Hill, where the New Zealanders erected a cross in memory of Scott and his buddies, who died on their return from the Pole. If you fail, I'll erect one to you, right here on Cape Armitage.'

Tony grinned at that. 'When do I make the flight?'

'The day after tomorrow,' Dwight told him. 'When you've caught up on your sleep.'

'Good thinking, pal.'

Tony caught up on his sleep that same evening, but awakened in his bunk bed to find the room, which he was sharing with Dwight, filled with an unearthly light in which faint figures quivered.

Dwight was still sleeping, but tossing and turning restlessly, and Tony guessed that the faceless figures in that ghostly white light were the people in his dreams made manifest. It was a shivery experience, but one he was now used to: sharing the subconscious thoughts of one's fellow human beings. When he slid out of his bed and shook Dwight awake, the light receded back through the walls and the faceless figures disappeared.

When Tony told Dwight what he had seen, the latter grinned ruefully and admitted that he had been dreaming that he was dying and his bed was surrounded by grieving relatives. 'It's just a foretaste of what you're going to be in for,' he added, 'when you fly into the ozone-hole. Best brace yourself, pal.'

'I'm already braced,' Tony replied. 'I saw a lot of flying saucers when we flew in; then this business in here. I've heard reports that the Antarctic has become a huge fantasy land, with more apparitions per square mile than anywhere else on Earth. Is that true?'

'Hell, yes, it's true. It's just too bizarre, man. If you want to work here, you have to accept magic as the norm. Which is another reason we're not letting you fly until tomorrow: just being here will form a kind of preparation for what you'll find in the ozone-hole. Whether or not it'll be enough, we can't say; but at least it'll help.'

This proved to be true. That morning, Tony saw many small flying saucers gliding serenely under the azure sky, across the glittering ice peaks, as well as many human apparitions who constantly haunted the hundreds of administration, maintenance, transportation and communication personnel of McMurdo Base. Most of the men treated the hauntings with indifference or idle curiosity, though occasionally someone would break down in tears and have to be comforted. It was a world of flying saucers, visionary lights and spirits, coexisting with the real, physical world of the base, with its rusty buildings, machines and garbage dumps, its muddy streets and snow-covered surroundings. It was very bizarre.

To fill in Tony's time that afternoon, Dwight took him on a visit, first to Shackleton's hut at Cape Royds, twenty-five miles farther north on Ross Island, then to Scott's hut at Cape Evans.

Nothing happened at the former, but when outside Scott's hut, studying the surviving bales of hay for Scott's ponies and the pony harnesses still hanging in the open stalls adjoining the hut, Tony thought of the great explorer and then suddenly saw him materialising magically, initially as a dark shape rising out of the snow, then as a clearly defined man, wrapped up in his Antarctic clothing, with frost on his beard, standing clearly in front of the empty kennel, near which lay the mummified remains of a dog, its leather collar with a rusted chain still fastened around its shrivelled neck. The skin of the dog's head had shrunk away, exposing the skull and the white teeth in a frozen snarl, but the ghostly Scott, as if not seeing this, knelt down to stroke the animal, then turned away and entered

the hut.

Intrigued, Tony and Dwight followed him in. In the gloomy interior of the hut, they found Scott's ghostly companions lying on the two-tier bunks in their original sealskin, fur-lined sleeping bags. Their breathing was audible. Scott, or his apparition, had gone to the far end of the large room and was standing motionless, but with a bewildered expression on his bearded, frost-covered face, by the cast-iron stove, near the shelves that still contained dishes, preserved foods, and spices of all kinds.

Glancing at Tony and Dwight, as if not sure what he was seeing, Scott went to the table in front of the window, examined its assortment of chemical equipment - alcohol burners, glass-stoppered reagent bottles, test tubes and stands - then went to the other table to study the corroding components of a primitive wireless set. When he reached down to touch it, his hand went right through it, so he frowned and glanced across at the framed photograph of King George V and Queen Mary, which hung against the partition near the center of the room, but was beginning to fade. As Scott gazed at that fading photograph, he too started fading away. When an airplane passed overhead, breaking Tony's concentration, Scott abruptly disappeared altogether, as did the men lying in the sleeping bags, which now were all empty.

'Jesus Christ!' Tony whispered.

'Get used to it,' Dwight advised him. 'You'll get a lot more tomorrow.'

Whether a dream or an hallucination, Tony couldn't be too sure, but that night, as he was sleeping, he saw Clare vividly, having her radiation treatment in the hospital and looking distressed.

Opening his eyes, feeling as distressed as Clare had looked, he saw only the room's gloom. He thought he might have glimpsed a fading light, but he couldn't be sure of that.

The next morning, feeling more tired than he should have been, he prepared to take off.

In the early hours of the morning, Dwight drove Tony in a pick-up truck to Williams Field, an airport on the Ross Ice-Shelf, five miles from McMurdo Base. The artfully redesigned ER-2 was waiting on the airstrip, dwarfed by the soaring ice-cliffs, its new payload packaged in different pods, one under each wing. Escorting Tony from the pick-up truck to the airplane, Dwight said, 'Please be really careful, Tony. Try to keep control of yourself. What you've

seen here so far isn't a tenth of what you're going to see up there; and once you enter the heart of the alien virus, at the top of the ozone-hole, you'll probably lose radio contact, which won't help you at all.'

'I'm aware of that,' Tony said.

'And another thing. I'm particularly bothered by that last experience you had when you looked out the cockpit and saw nothing but a great darkness filled with stars, like being in outer space or some other galaxy, when you should have been directly above the Vinson Massif in Marie Byrd Land. We don't know what that was, but it certainly proved that the deeper into the ozone-hole you fly, the more varied and vivid the hallucinations are likely to be.'

'But I *did* make it back,' Tony pointed out.

'Yeah, you made it back, but you hadn't gone as far as you intend going today. What we don't know is what you'll experience if, after seeing that same phenomenon, you keep on flying, as you'll have to today. What I'm saying in effect is that if the hallucinations don't get you, that starry darkness, whatever it represented, might get you instead. You understand?'

'Yeah.'

They stopped by the ER-2, studied the white pods containing the cooled liquid-oxygen, then faced one another and shook hands.

'Good luck,' Dwight said.

'I was *born* lucky,' Tony said, trying to smile, but instead choking up when he looked at Dwight and thought of his wife, Maggie. He was so grateful to them both for taking on Don and Ronnie, as well as visiting Clare at the hospital.

The hospital... Radiation treatment... The hope of remission...

Hope Clare did not share.

Tony was shaken suddenly. When he dwelt on Clare, he thought of death. And in thinking of death, he was led on to the alien virus, which could bring the dead back to life and make dark dreams come true. Then he thought of Clare's double on the Greenbelt Road that evening, and his love for her turned into a fear that made his heart lurch.

Clare's double had smiled like the living dead.

He knew, then, that there would be no remission for her, and that the treatment she was receiving back in Maryland would serve no real purpose. She was dying, knew that this was so, and had hidden it from him.

Tony filled up with grief.

'If I don't come back, Dwight...'

‘Don’t say that, Tony.’

‘If I don’t come back, tell Clare and Suzy and the kids I was thinking about them today.’

‘They all know that, Tony.’

‘But tell them I *said* it.’

‘Okay, Tony, I’ll tell them you said it. Though you’re definitely coming back, so stop all this bullshit.’

This dismissive remark was good for Tony, making him pull himself together, but he couldn’t help thinking that this could be his last trip, his final day on Earth, and it made him well up with emotions that tugged him first this way, then that.

‘Clare’s dying, isn’t she?’

‘Nonsense,’ Dwight said.

‘She’s dying, and you and Maggie know it and want to protect me.’

‘Jesus, Tony...’

‘Don’t let her die alone.’

‘Maggie’s on her case, Tony. And don’t even ask me about the boys; I’m their godfather and guardian.’

‘You’re also the best friend I’ve got.’

‘Just get in the airplane.’

They embraced emotionally, then Tony climbed into the airplane. A few minutes later he was in the air. There was no going back now.

Suzy was watching him, protecting him with her will. She saw him in the dimming light of her mother’s eyes as he flew into the unknown.

Her mother was on her bed in the apartment in Annapolis, fading away into death’s darkness, her eyes fixed on that distant light. It was a long road into darkness - Glory Road, as Abe had called it - and the light shone helpfully at the far end, like a beacon at sea. Suzy could see that light, the flicker of hope in her mother’s eyes, illuminating her twin reflection, drawing her into herself.

‘There’s nothin’ to fear,’ her mother said. ‘It’s no distance at all. I feel Abe waiting for me.’

Suzy used her facility to see what there was to see, falling into the bottomless well of her mother’s gaze to find what she most wanted. Her father was there, Don and Ronnie, even Tony’s mother, all doing whatever they had to do in the world she knew well. The kids were playing on the lawn, Tony’s mother was

watching TV. Abe was on the porch in the house in Iowa, his steady gaze fixed on the sunset as he rocked in that old chair. Then Suzy saw Tony, in the cockpit of an airplane, his face covered with an oxygen mask, his eyes filled with confusion. She *saw* what he was thinking: about her and the two boys, about Clare, about his mother and father. They were all there with him in the cockpit, bound together by love and pain and the need for commitment.

Tony saw them as well.

Suzy's heart went out to him, her love wrapping itself around him. Exhausted, she lay on her mother's breast to hear the last of her heartbeat.

'Glory Road!' she heard her mother whisper as her dimming eyes widened. 'As God is my witness!'

Then, as her mother passed on, Suzy reached out to Tony.

He flew over the Ross Ice-Shelf and the Beardsmore Glacier, then the frozen peaks of the Transantarctic Mountains came into view. He flew farther and higher, above dark peaks embedded in white and blue ice, cascading ice falls, smaller, more scattered peaks, glistening expanses of virgin snow, until finally, about an hour's flight from the South Pole, the awesome, featureless, seemingly endless Antarctic ice-sheet was spread out below him..

He was farther south than he had ever flown before, yet nothing had happened.

During the flight he had been keeping contact with McMurdo Base, but suddenly, just as he was wondering why nothing had occurred, as he was checking the illuminated digital display of the navigation computer, radio contact was lost and replaced with static.

He checked the control panel. He was at latitude 89S. He began his steep ascent into the heart of the ozone depletion, where the alien virus thrived most healthily at an altitude of 20 kilometres. As he did so, the static's volume increased and the control panel blinked out.

He was flying blind.

'*Don't worry*,' Clare said.

She had spoken out of the static, but her voice was loud and clear, and Tony nearly lost control of the airplane, so great was his shock. He looked left and right, fully expecting to see her, but saw only a panorama of blue sky and endless white plains curving across the horizon.

He felt his heart racing, but kept ascending, flying blind, and cursed that he didn't know how high he was nor when to release the cooled liquid oxygen into

the atmosphere.

'*Yes, Tony, I'm dying.*'

He saw Suzy's face, but it was Clare he heard speaking: '*I'm doing this for you. I won't let it drag out*.' She was right there in front of him, speaking out of Suzy's lips, and he almost screamed when Clare's face emerged, superimposed over Suzy's vanishing image. The last he saw of Suzy were her green eyes wreathed in smoke rings, which vaporised, leaving nothing but stars in what seemed like boundless space.

Tony didn't make a sound, but he plunged down through himself, retreating from Clare's dying by seeking his essence and emerging to that place in his subconscious where time and space had no meaning. He was in the past and the future, Here and There simultaneously, and when he tried to break free by looking out of the cockpit, he saw only a vast inky darkness filled with stars and strange moons: a vertiginous cosmos.

He tried to release the liquid oxygen, but couldn't find the control, and groped blindly across the dead control panel, wondering where it had gone. Then Clare impressed herself upon him, writhing against him, melting into him, and the living heat of her alien body set a torch to his senses. He heard the scream of his breaking heart, a sound so physical he could touch it, then the darkness of the cockpit filled with light that beamed down from above. Looking up, he saw an enormous flying saucer, descending upon him.

'No, damn you!' he cried aloud, and tried to will it out of existence, to squeeze it out of his mind, though did nothing but drain himself of energy and set free his spinning thoughts.

He was in the heart of the virus, in a cosmos created by it, and he felt the airplane diving (or was it actually ascending?) and then the flying saucer above him (or below him?) multiplied and divided and became many smaller saucers, glowing, spinning particles which, interacting, formed the magical, dazzling consciousness of the Dream Maker.

Tony found himself racing towards himself in the creation of time.

Passing through the Dream Maker, he went back through his past, through his life, to his origins: first Clare, then Suzy, then his boys, Don and Ronnie, then his mother and father. Here the dead had dominion. They were spread out all around him. The myriad ghosts of his subconscious: his loved ones and heroes, his closest friends and bitter enemies, his dreams (those great leaps through the mind!) and his nightmares: giant spiders and centipedes, entrails writhing like

worms, his fear of drowning or being buried alive, decapitated or burned to death... he saw them all, *felt* them, was exalted and terrified, until eventually he was drawn magically back into his mother's womb, then ejaculated in water and blood to the thunderous noise of the living world.

His mother heard his first cry. His umbilical cord was cut. He was dangling upside-down, kicking furiously in God's strong grip, then tumbled through an unfamiliar radiance and fell upon soft flesh. He gargled and sucked, demanded and was fed, was nurtured and grew into a child, forgetting what he had been. He remembered only his recent past, existing in an eternal present (always past) and looked forward to the overlapping, hopeful futures that might never be, existing only in dreams. He glimpsed this timeless vision of himself in the heart of the virus, the Dream Maker, and having glimpsed it, he fought to escape from it.

While the spinning, pulsating lights swept past on either side, he only knew that he was either plunging towards Earth or ascending toward the stratospheric heights were the alien virus's heart beat. Yet even as he groped again for the control to release the liquid oxygen, the alien virus, the Dream Maker, filled his mind, drank from it, recreated it, and hurled him beyond his precarious present and its fears, into that future that had haunted his dreams ever since his childhood.

Tony saw it coming.

At first it was just a pinprick in a vast sheet of darkness, then a gleaming white eye, but then it expanded, flaring out in all directions, and raced at him and exploded around him, obliterating the real world.

He was sucked through time and space, hurled into another dimension, spiralled down through the cascading voices of history and returned to his constant dream.

Space folded in upon itself. The sudden silence was stunning. He looked up from Europa, across the valleys and frozen mountains, and saw the great golden globe of Jupiter. It hung above the white mountains, covered eternally in deep ice, and it was streaked with yellow and gold, its Great Red Spot a bloody wound. Around it were the satellites, thirteen, maybe more, and all of them, the enormous apple and its seedlings, were drenched in the stars.

Tony knew where he was - close to the Jupiter of his dreams - and realised that the dream had been telling him about this moment in time. Throughout his life

he had dreamed about the future that had now come to be.

Finally understanding this, he understood the alien virus: that it encompassed the past, present and future simultaneously, consuming them as one, regurgitating them at will, taking its sustenance and sense of reality from the collective mind of humanity, which had become, since the alien's awakening in Earth's stratosphere, its sole source of self-knowledge, its only known past and future.

The collective humanity of Earth was the alien's God. Without Earth, it could not be.

'Yes,' Clare said, loud and clear, repeating the words she had spoken to him, 'the virus is conscious in some way we can't imagine and appears to want only one thing. It wants to live – as *I* want to live and as you *want* me to live. Why should that be a crime?'

And when he heard her, he saw her.

Clare was looking right at him. He grew strong as she grew weak. He emerged out of the ether, that oddly glowing white light, and took shape at the end of her bed until he seemed almost solid. He looked a little confused, as if not sure of what he was seeing, but she sensed that in some way he could perceive and would know what was happening. That made it easier.

She had planned it meticulously, to save him and the children pain, and there, in the hospital, on her bed in the private ward, where the nurses would find her and be able to deal with her, she followed the example of her father and swallowed some pills.

'I won't be humiliated,' she said, speaking to Tony's double, 'and I refuse to make you or the children suffer by letting it drag on. I do this for love, Tony.'

And then, as Tony's double looked on, she washed the pills down with water.

After that, it was easy.

He was there, after all, in the airplane over the South Pole, but he was also here in the ward, standing beside her father and mother, between Don and Ronnie, to share their love and concern as she faded away. She knew they would stay with her during the journey she had to make, along the dark road to the light that led to the other side, perhaps in the living heart of the alien virus, also known as Dream Maker. Perhaps the dark road was Glory Road and she would find resurrection there.

Fading away was easy: you went just like an apparition. You focused on those

you loved and their smiles were like the sun and you dissolved into the light of the spheres and drifted out of your pain. You knew exactly who she was. She was Clare, loved by Tony. She loved Tony and his children and her parents, where they stood in her radiant dreams.

The children were at home with Maggie. Her parents were waiting for her. Tony was in the airplane over the Antartic wilderness, exploring the heart of the alien virus, his own heart, the world's center, and he would venture forth into the great unknown, but always return to her. She was Clare and she was dying, yet could not die because Tony loved her.

You were Clare.

I am Clare.

When Clare died, she joined...

Tony survived the ozone-hole, doing so through his love, taking the faith and courage he needed from what others gave to him - Clare's selfless sacrifice, Suzy's abiding need and loyalty, Don and Ronnie's dependence upon him, his own need to make amends. The lines of light that bound them all together were the feelings that saved him.

Taking the airplane up about as high as it would go, into the mysterious heart of the alien virus, the Dream Maker, above the vast and desolate beauty of the Antarctic wastelands, he sensed the dying of Clare and Suzy's mother. He shared the experience with them, gave himself to Clare and Suzy as he had never done before, and felt more concern for their feelings than he did for his own fate...

Which is why he survived.

His ascent into the heart of the ozone-hole was a journey into the light-flecked mind of the alien virus and, since the virus had soaked up his thoughts like a sponge, it was also a journey into his own forgotten self. He was drawn down through his center, through the labyrinth of his inner being, travelling into the boundless cosmos of his subconscious to find his own source. There he discovered his past and future, both at one with his present, in the shape of his father and mother, Suzy and the children, then found himself face to face with Clare, whom he touched and made whole.

At that moment, she was as real as he felt.

And at that moment, she died.

He knew she had just died because the virus told him so. It also told him that

the love he was losing would always be with him.

Clare wasn't dead. She was only sleeping. She was here, like him, in an eternal present, and would always exist for him.

And in knowing this, he understood that the alien virus, the Dream Maker, was not an enemy, that it was destroying the world through innocence, having no awareness of original sin or the pain it had caused. The alien virus was male and female, Man and Woman, in the Garden of Eden, an innocent babe, naked and crying, hungry only for life.

Tony survived his countless hauntings, the terrors and splendours of a world beyond him. He was hurled into a bizarre voyage through space and time, beyond the finite world, into the infinite, where nothing was remotely what it seemed and all things were possible. He had no sense of direction, no idea of where he was, but he felt that he was tumbling down through an immense well of dream-haunted darkness.

First the darkness was flecked with lights, silvery pinpricks on a black sheet, then the lights expanded to become saucer-shaped craft and immense, glowing moons. They shot upward, out of sight, and were replaced by glittering stars, rising silently, majestically, forming great waves of luminescence that curved over him and swept him away. He was cast through spinning space, a kaleidoscope of colour and sound, living every moment of time simultaneously, hearing the incoherent babel of restless humanity, before flying along a darkening tunnel with a light at its far end.

He thought it was death's door.

The light expanded and flared up, became a radiant, blinding sun, and he went through it and was scorched and consumed, then was spat out the other side, into the ultimate darkness.

He heard a silence so complete it was terrifying and he broke it by screaming.

That scream, reverberating throughout the universe, was the beginning and end of life.

Tony died, was reborn, burst back into time and space, crying out in exultation and dread before becoming a full grown man again.

He was in the cockpit of the airplane, the sky above, the land below. Finally back in the real world, given strength by his love and faith, he released the gas created by Clare, starting the process that would make the alien virus, the Dream Maker, retreat beyond the stratosphere, letting the ozone layer renew

itself and return the real world to normal. Flying back and forth, inviolate, he sprayed the heart of the ozone-hole, also the heart of the Dream Maker, ignoring his doppelgänger and the phantasms of the dead, refusing to let spinning moons and voluptuous suns intimidate him, viewing the flying saucers and cascading stars as benevolent visions, responding to Clare's and Suzy's doubles with love instead of fear. He kept going until the tanks beneath the airplane's wings were empty and he could, without guilt, with pride, head back to the base.

He turned the airplane around, caught the sun, was dazzled by it. He blinked and saw Clare disappearing, followed by Suzy and all the others, until only the clean sky remained above the boundless, white wilderness.

And having done that, he flew back to McMurdo Sound where Dwight Collins, his best friend, pale-faced and distraught, welcomed him back. Then he told him that Maggie had just phoned to inform him of the deaths of Suzy's mother and Clare.

'Yes, I know,' Tony said.

Chapter Forty-One

Clare was buried in the parched fields of Maryland in the heat of the afternoon. Even as her coffin was lowered into the earth, dead grass mixed with dried mud, the love and grief of those gathered around her was made manifest in the shape of the flying saucers flying serenely overhead, under the cumulous clouds and a silver-streaked azure sky.

Those flying saucers, Douglas knew, would gradually disappear as the Earth, now freed from the alien virus and its attendant apparitions, returned to what it had been a few years ago, when he and Clare had been lovers.

He had lost her before she died, as he had lost his wife and children, and now he had nothing left but ambition and the power it would give him. He would use that power to get at the man who had made him lose all the rest.

That shit, Tony Rydell, now looking shocked.

He was being comforted by Dwight and Maggie Collins while his two sons, dressed neatly in dark suits, clung to their mother. Suzy Rydell was dressed demurely in a dark skirt and jacket, but Douglas, who had heard a few stories,

wasn't fooled for a minute.

As common as mud, just like Rydell. Water finds its own level.

Taking satisfaction from this thought, Douglas waited patiently for things to end, just biding his time, still smarting from Rydell's success and looking forward to crushing him. He watched the coffin being lowered into the ground, felt a twitch of guilt, which he instantly disowned, then played his part in the subsequent rituals of mourning, shaking hands, patting shoulders. Eventually, when the funeral was over, he nodded coolly at Dwight Collins, smiled sympathetically at the chaplain, then walked up to Rydell, where he stood, dry-eyed but clearly shaken, with his wife and children.

Rydell stared at him, startled.

'Hello, Rydell,' Douglas said.

Rydell sighed. 'Hi, Douglas. I'm sorry if I look a bit surprised. I didn't expect to find you here.'

'Why not? I was one of her oldest friends. Surely you know that.'

'Yeah, right,' Rydell said.

Douglas studied him carefully. He was bowed, but not broken. He had obviously taken a certain amount of strength from his wife's return. Douglas, now examining her closely, found her attractive. She was holding the hands of her two sons and studying him with candid, green eyes.

Douglas introduced himself. 'I'm the President's aide,' he said.

'Before or after he fell to pieces?' Suzy replied. 'Did you help him with that?'

Douglas was taken aback by the remark. Feeling humiliated and outraged, realising that the little slut was not the fool she seemed, he refused to commit himself to a reply and instead turned back to Rydell.

'I'm really sorry about Clare,' he said.

'Sure,' Rydell replied, doubtfully.

'She would have been proud of what you did in the Antarctic. I mean, you've practically saved the world.'

'Thanks, but that's not strictly true. A lot of people around the world contributed to solving the problem; Clare and me, we just collated their work and supervised the analyses. Of course, Clare's the one who found out how to control the virus; I just did what was necessary.'

'And succeeded,' Douglas said, remembering how humiliated he had been when Rydell had done that, but now gaining pleasure from the forthcoming rewards which he thought the physicist, in cooperation with Clare, had

inadvertently given him.

'From what I heard,' Rydell said, in his customarily blunt manner, 'you *didn't want* me to succeed, because the problems being caused to the country by the virus were actually enhancing your career.'

Douglas grinned, barely able to conceal his pleasure, moving in for the kill.

'Well,' he said, 'it's certainly true that the problems caused by the ozone hole and a dramatically altered climate changed the country's political priorities and placed my economic considerations ahead of those of the Department of Defence.'

'I dig,' Rydell said, with soft sarcasm.

'On the other hand,' Douglas continued, unperturbed, bearing down with all his might, 'the destruction of the alien virus - '

'It's just asleep,' Rydell corrected him.

' - will eventually return our climate to normal,' Douglas continued enthusiastically, 'thus returning economic power to agricultural and industrial America. It's *also* true that the method you used to put the virus to sleep could be used in reverse, I believe, to awaken it whenever, or wherever, we desire. In other words,' he continued, expressing his fondest hope, 'the gas that Clare created has shown us how to *control* the hole in the ozone layer, opening or closing it at will, thereby also controlling Earth's atmosphere. In short, you've given this government unprecedented control over the Earth's weather. This means we can control worldwide agriculture and thus the whole global economy. I'm back in business, Rydell - and it's all thanks to you and Clare.'

He felt victorious when he said it, flushed with pride, excited by vengeance... Then he saw the glint of humour in Rydell's eyes.

'You're daydreaming,' Rydell told him. 'We'd never give you that opportunity. We knew damned well you were trying to use us and ensured that you couldn't.'

'But I can!'

'No, you can't.' Rydell grinned in a manner that suddenly made Douglas nervous. 'The opening of an ozone-hole anywhere in the world would reawaken the dormant virus - as I said, it's not dead, it's only sleeping - and let it back in through the thinning atmosphere. And once in, it would spread again in an unpredictable manner, which means *you* wouldn't be able to control it any more than anyone else. You're fucked, Mister Douglas.'

The obscenity was offered deliberately like a slap in the face and Douglas almost recoiled from it. Turning away, looking neither left nor right, he walked

to the limousine that had been supplied by the White House and let it take him back to a future he could not bear to face.

He had been foiled by Clare and her lover, Tony Rydell. Now his future was bleak.

When Clare's double materialised eerily beside him, her smile like ice and fire, her dead eyes mesmerising, he knew he was damned and would certainly be haunted, with or without the alien virus, for the rest of his life.

Chapter Forty-Two

Clare was dead in body, but not in spirit. Her spirit lived on in the fact that Earth was returning to normal, the ozone layer was back in place, and the alien virus was locked outside the stratosphere, again dormant, or sleeping.

In time the world's mean temperature dropped, the ice-caps stopped melting, the crops and animals became healthy again, and, most importantly, at least to those who had personally suffered, the increased incidence of skin cancer and other ailments caused by the sun's unchecked ultraviolet rays fell back to a more normal level.

Suzy's mother was also buried, returning to the earth she had loved, and then Suzy moved back in with Tony to start a new life. She knew that she'd changed, was more mature, aware of suffering, and the love she felt for Tony was different and somehow more meaningful. Without him and the kids, she'd been empty, incomplete, but once home, with the comforts of the familiar, she felt like someone redeemed.

As for Tony, he was still dishevelled, distracted and work-obsessed, but now he thought enough to glance occasionally over his shoulder and check how she was doing. He'd changed in other ways, too, was more considerate of her feelings, and when he touched her in bed it was like being drawn back to adolescence. They were both like kids again, making love tenderly, slow and easy, and they slept arm in arm as real lovers, not as bored man and wife.

It was like being reborn.

What relieved Suzy the most was that Clare didn't intrude. Her presence was in the house - she turned up with their other loved ones - but that just helped them both accept that it was okay for Tony to think about her without feeling

embarrassed.

Clare usually appeared around the house when Tony was open to his grief: sometimes on the moonlit lawn, wearing that black dress, her hair windblown, other times at the table in the kitchen, just smiling at them. She never came when the kids were there - Tony wouldn't have let that happen - but she materialised when he let his guilt or grief pour out to create her.

He sometimes wept when he saw her, his tears falling against his will, and when that happened, Suzy would take him in her arms and rock him just like a child.

'It's alright,' she'd say. 'It doesn't matter. It's doing you good. That's what she's here for.'

You could share life with the dead the way you couldn't with the living; their impermanence made it easier to trust them and hold them in good stead.

Clare never materialised in the bedroom, which Suzy took for a good sign, and gradually, as the weeks passed into months, she came less and less, was increasingly insubstantial each time she did appear, and eventually faded away altogether and never returned.

Just like all the others.

The apparitions were disappearing, all over the world. As the hole in the ozone layer shrank and Earth's temperature returned to normal, the hauntings tapered off and gradually became few and far between. A lot of people no longer saw them, even when they were present, and only those with a special facility, like Suzy, could still summon them up at will.

For as long as possible, she clung to her folks that way, seeing her father in his rocking chair, her mother right there in the kitchen, sometimes even seeing herself as a child in the old white-painted house... but gradually they also faded away and failed to return.

Suzy sure as hell missed them.

'Some day,' she said to Tony, who was sharing a beer with her in the living room, 'we're gonna look back on what happened and not be able to believe our own memories. We're gonna think we've gone senile.'

'I'm senile already,' Tony replied, 'and it's a good way to be. Just think of my mother.'

'Menopause Manor.'

'It's right there on your doorstop. We're all heading for Menopause Manor, one way or the other.'

He sounded more like her father every day and that made her feel good.

'Are you happy, sweetheart?'

'I have my moments,' he replied. 'If you mean, am I happy being back with you, the answer is yes.'

'You love me, don't you?'

'I always did, Suzy. I just have a forgetful disposition, though I'm trying to fix that.'

'You're never gonna fix that, Tony, but now I know how to handle it. You and me, we're a team for life.'

'Amen,' Tony said.

He took her hand and squeezed it and she glanced through the window and saw a white light with a tail streaking across the vast, starry sky. At first she thought it was an apparition, something wrought from her beating heart, but realising that it couldn't be that, she sank back into her chair.

Shooting stars were a natural phenomenon, even though they looked magical.

That thought, though neither new nor original, filled Suzy with wonder.

She might stay young forever.

One evening, a few years after his great experience over Antarctica, shortly after celebrating the anniversary of Clare's death and the rebirth of the natural world with Suzy, Don and Ronnie, and their best friends, Dwight and Maggie, Tony climbed into his car and drove alone to the long road that ran between the suburbs of Greenbelt and the high fences of the NASA-Goddard Space Flight Center. He stopped halfway along the road where he had once seen Clare's double, then got out to stand all alone in that still, moonlit darkness.

There, in the night, in that vast bowl of silence, he thought about life and love, about marriage and children; about how Suzy had returned to him, a different person, as he was; and, especially, about how Clare, before her suicide, had left him a note saying that Don and Ronnie needed their real mother, thus teaching him that love has many faces and is filled with surprises.

The three of them, he, Clare and Suzy, had been touched by the Dream Maker. They had all been redeemed by it.

He thought of Clare with the pain of loss, brimmed over with love for Suzy, then gazed up at the lustrous, star-bright sky, at the pale eye of the moon, remembering that the alien virus was not dead but simply sleeping, and that some day, some way, it might reawaken and return to the Earth.

In what form? To do what?

Awed by that knowledge, but also strangely uplifted, he held the image of his loved ones up before him like a beacon as he drove back, in the dead of the night, to his modest, untidy home.

W. A. Harbinson is the author of many novels, including the bestsellers, *Genesis* and *Revelation*. Information about his books can be found at:

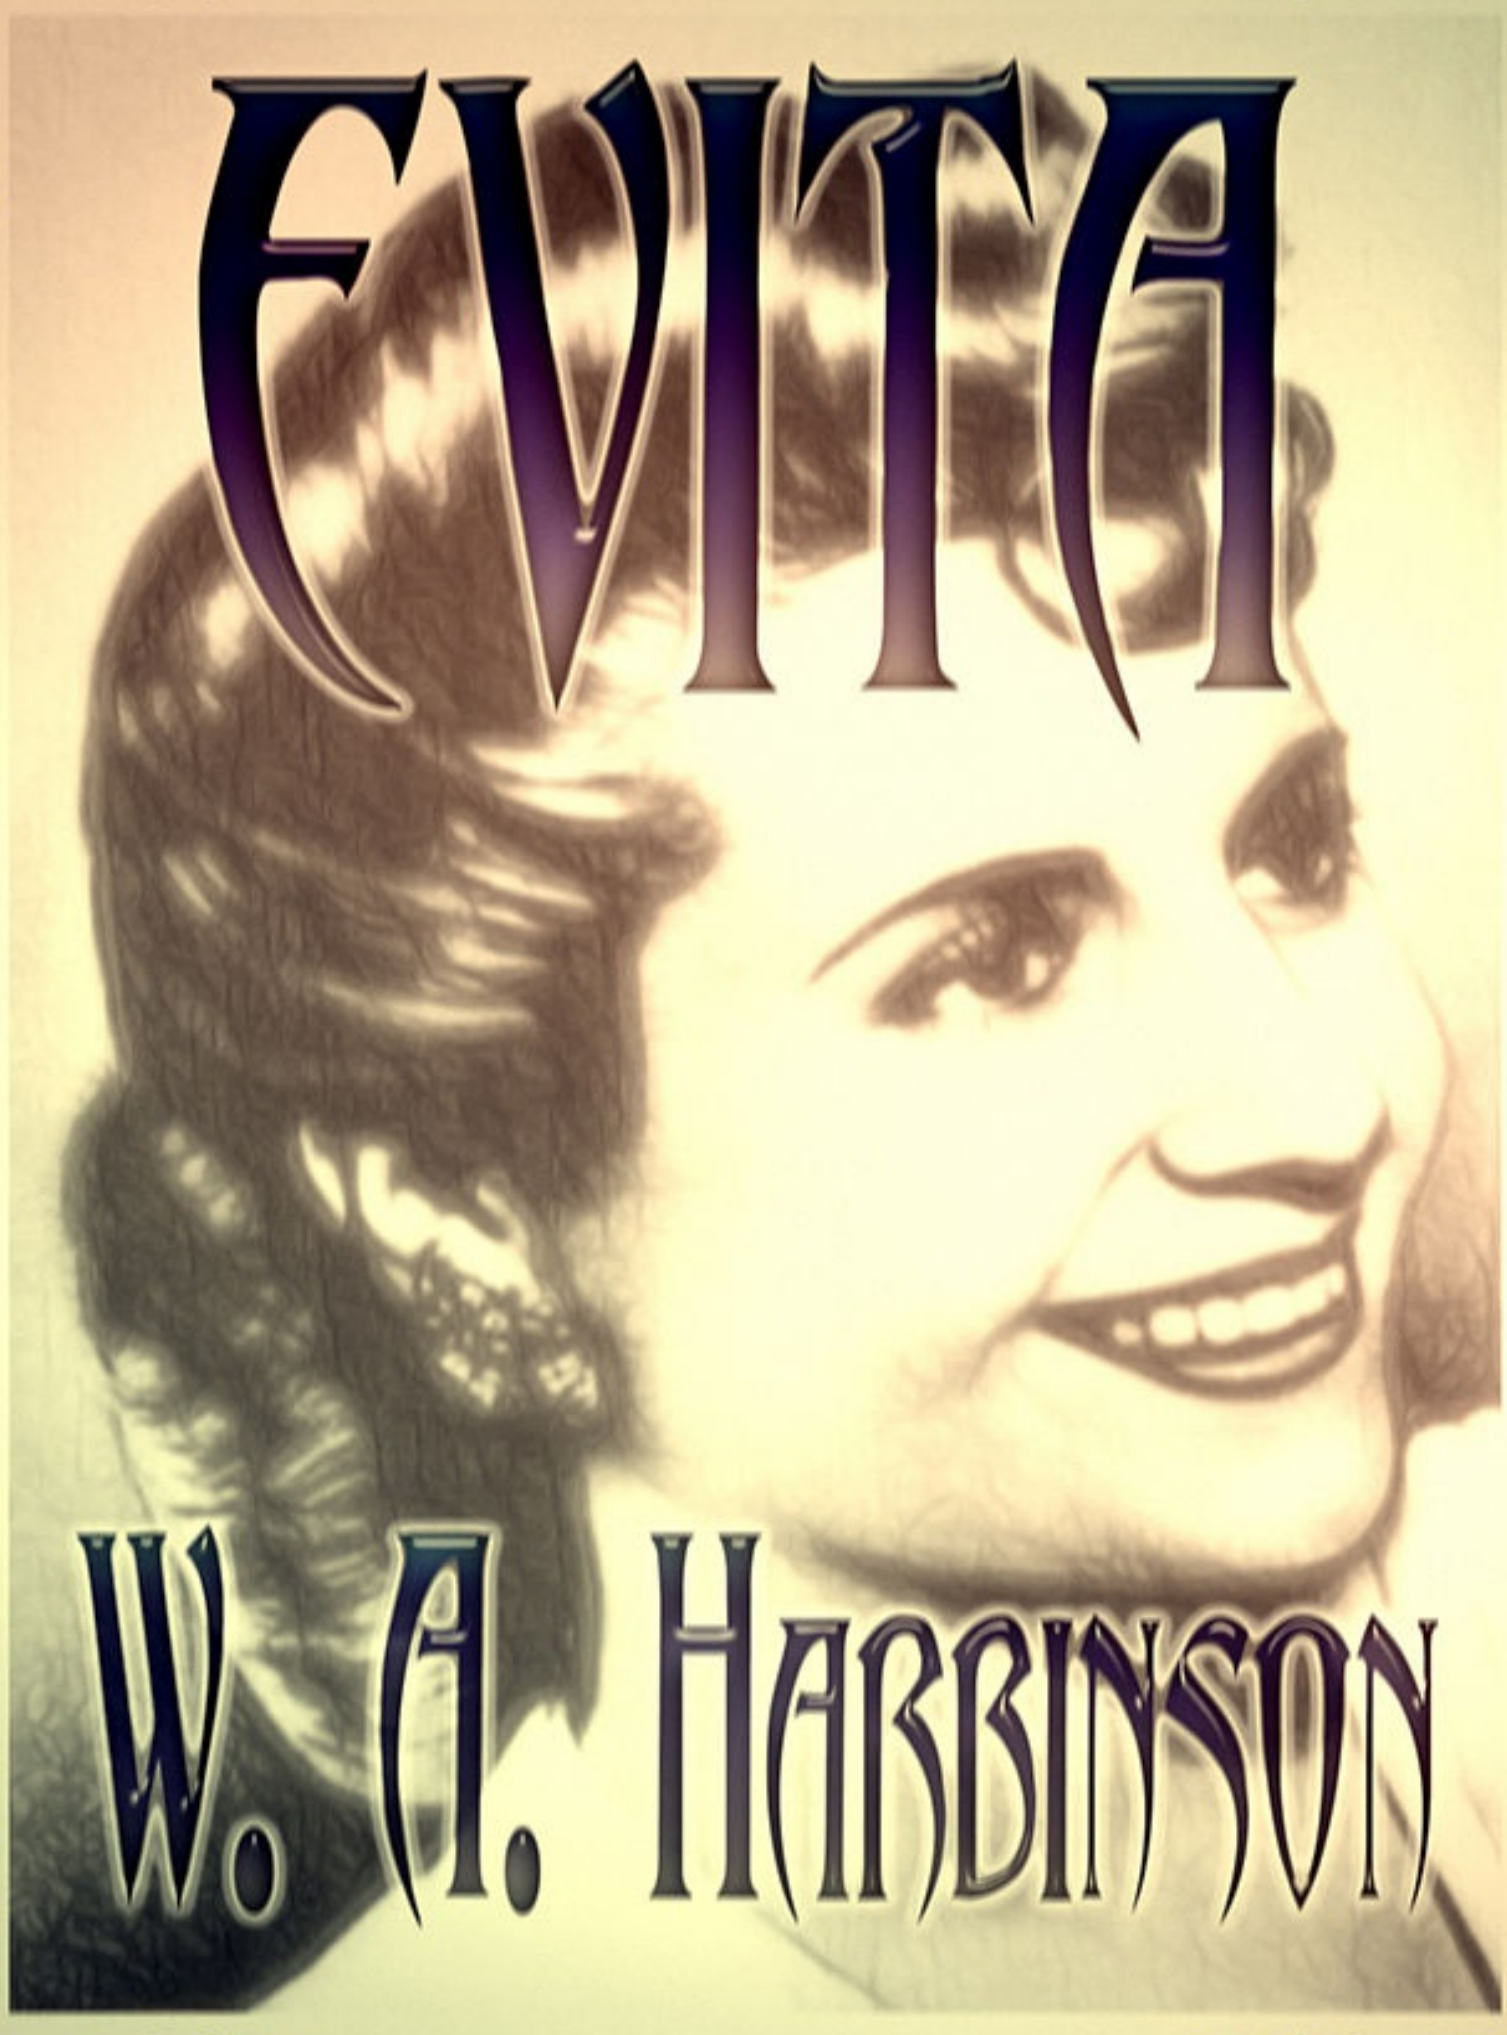
EVITA



W. A. HARBINSON

‘I will return and I will be millions’

So said ‘Evita’ Perón, who rose from obscurity to become one of the most powerful, adored and reviled women in the world. The death of Evita in 1952, followed by the mysterious disappearance of her body, led to almost forty years of intrigue and intense speculation that only fuelled her legend and made her even more mythical than she had been in real life. But what, exactly, was she in real life?

W. A. Harbinson, author of a Number One US bestseller, *The Illustrated Elvis*, *Beauty and the Beast: The Story of Nastassja and Klaus Kinski*, and the explosively controversial *Iconic Voices*, attempts to answer that question in what may be the definitive text on the most famous female figure of her time.

‘Riveting… No novelist could have dreamed up a heroine like this.’

Evita

Part One: Death and Deification

Without fanaticism one cannot accomplish anything.
-Evita Peron

Chapter One

When one of the world's great lovers, Rudolph Valentino, died in the summer of 1926, the then unheard-of sum of 50,000 mourners turned out in Manhattan, New York, to pay their final respects.

When another of the world's great lovers, Dona Maria Eva Duarte de Perón – better known to the people of Argentina as Evita, the Lady of Hope, the Lady of Compassion, and officially named Spiritual Chief of the Nation – died in the summer of 1952, some 700,000 Argentinians turned out in Buenos Aires, demonstrated passionately in the streets, and lost themselves so completely in their grief that sixteen of them were killed, 3,900 ended up in various hospitals, and thousands more had to receive first aid.

To feed these multitudes, the army had to set up twenty-four field kitchens, giving away sandwiches, oranges and coffee. In an attempt to quell the mobs that howled and crushed one another in the Avenida de Mayo, other soldiers were forced to offer batons instead of nourishment. In the Avenida de Mayo itself, placed there at an estimated cost of $2 million, approximately 8,300 wreaths had been laid, some of them piled thirty feet high.

Argentinian newspapers, normally limited to six or eight pages daily by newsprint shortages, were told by the government that they could now use all the paper they wanted in reporting the career and death of the beloved Evita. Radio stations cut their scheduled programs and played solemn music instead. The Argentine Press Office rebroadcast the announcement of Evita's death at fifteenminute intervals. More first-aid stations sprang up in the streets for the many jostling, weeping multitudes.

The following day, Evita was exposed to her people. In a flowing white tunic, her blonde hair (dyed) splayed over a white pillow, she lay in state in a silver-trimmed cedar coffin with a full-length glass top, in the National Congress Hall. Day and night, often in torrential rain, miles-long queues waited in the black-shrouded streets to see her.

Two million filed past Evita's bier in the first few days. They filed slowly past the beautiful blonde hair, past the once delectable body now shrunken in death, past those brightly painted lips that on posters and hoardings had suggested fellatio to the fevered imaginations of her most macho subjects. These macho subjects now shuffled past, holding their caps

in their rough workers' hands. They gazed down at the 'little whore', the glamorous actress, their benefactress; at the poor girl who had emerged from the desolate pampas to enrich their poor lives. And, shuffling past her, they also shuffled past Juan Domingo Perón, the President himself, now the bereaved husband, big and bulky, wearing a black tie and armband, his dark, overfed, ravaged schoolboy's face lowered to gaze down upon his deceased other half.

The *descamisados*, Evita's poor 'shirtless ones', shuffled past with their heavy wives trembling by their sides. Dressed all in black, these women were wringing their hands and sobbing and holding on to each other. They glanced with awe at the President and saw the tears on his cheeks. They saw the people around him, but these people were not so familiar. Amongst them were Evita's mother, her three sisters, the Governor of Baires, the Minister of Communications, the Minister of Technical Affairs, the Minister of Political Affairs, and Raul Apold, UnderSecretary of Press, and Atilio Renzi, Evita's personal assistant. The *descamisados* possibly also saw Jose Espejo, the boss of Evita's unions, who would soon be arrested by Perón and never be seen again; and Evita's dissolute brother, Juan Ramon Duarte, who had been her personal aide and who would soon resign suddenly and 'commit suicide' in a manner not easily explained. No matter: the *descamisados* shuffled past. They saw their 'madonna' in the coffin, the public grief of the President, and then they moved back out into the streets, to rejoin the other massed thousands.

Two million grew to three million. The queues seemed never to end. In the chaotic streets some were actually crushed to death and many more were injured. In the open- air clinics people lay on camp beds, pale and bewildered, many covered in blood, succumbing to exhaustion or starvation after days of being ignored by over-worked medics. And at night, beneath the huge, black-draped portrait of Evita that dominated the Avenida de Mayo, the blaze of countless torches held aloft by the mourners illuminated the stacked, garish flowers.

The mourning continued. The country came to a virtual standstill. Factories, slaughter-yards, offices and schools stood silent and empty. Across the nation they were renaming streets, institutions, an entire county and the city of La Plata in Evita's memory. Buildings and lampposts were draped in

black and Masses were celebrated, until, after two hysterical weeks, Evita's body was transferred via a gun carriage towed by fifty men and women in a pageant reminiscent of Cecil B. Demille, along a one-mile funeral route packed with weeping thousands, to the headquarters of the General Confederation of Labor (CGT) where, resting in the glass-topped coffin in an immense horseshoe of white and mauve orchids, *Santa* (Saint) Evita's body was to remain until a mausoleum, 150 feet taller than the State of Liberty, could be built in downtown Buenos Aires. So great was the grief of Evita's husband, President Juan Domingo Perón, that on October 17, the anniversary of the Perónist revolution, he dedicated the day to Evita. Argentina subsequently exploded with an avalanche of commemorative busts, medals, pictures, records, pennants, key rings and postage stamps. Thousands of copies of Evita's book, *La Razon di mi Vida* (*The Reason for my Life*) were distributed. More streets, schools, squares, even rivers and mountains were named after her. And every evening, on the radio, the main news bulletin was preceded by the words: 'It is now 20.25, the hour when Eva Perón entered immortality.'

Drawings for her tomb were submitted. The exterior was to be adorned with sixteen statues of the 'deity' reposing in the silver sarcophagus inside. A 140-foot-tall statue of a *descamisado* (its construction to be financed by the extraction of one day's earnings from every lowly paid 'shirtless one' in employment) would tower on the roof.

Plans were made to have the body embalmed.

The religious fervour of the mourning continued. While the people still wept in the streets, the Minister of Public Health, Ramon Carillo, ordered a 220lb candle, the same height as Evita (5ft 2in) to be installed in the Ministry and lit for an hour on the 26th day of every month, thus ensuring that this symbol of Evita's death would remain for posterity. Not to be outdone, the Union of Workers and Employees of the Food Industry cabled a request to Pope Pius XII to canonize Evita. The request was denied.

While schoolchildren were receiving prizes for poems and essays praising the deceased and being told that Evita, like Christ, had died because she had 'kissed the ill, the lepers, the consumptives', the newly formed Association of Friends of Evita was basing its organization's principles on the simple credo: 'What would Christ have done without His disciples?'

Not content with this, various senators in the Congress were waxing eloquent as to how the First Lady of Argentina had combined the best virtues of Catherine the Great of Russia, Queen Elizabeth I of England, and Isabella of Spain. Having thus aligned Evita with both Christ and three of the greatest ladies in history, the government then announced that July 26, the day of her death, would be observed for 'the rest of history' as a day of national mourning. And good *Perónistas*, the party ruled, would wear black ties at future party meetings… *forever*.

It did not pass unnoticed that both Evita and Christ had died at thirty-three years of age.

Nor that Evita, like Christ, had achieved sainthood.

Chapter Two

Three years later, President Juan Domingo Perón, still wearing black in mourning for his deceased wife, was banning photographs of himself and a group of high-school girls of the Union de Estudiantes Secundarios, the 124-acre presidential estate he had turned over to them for their games. The reason for the banning was that one of the girls, then only sixteen years old, was rumored to have become his mistress two or three years earlier – a story that the 'shirtless ones' were all too willing to believe, given their fondness for the memory of Evita, their conviction about Juan Perón's singular sexual proclivities, and the rumor that Perón had, earlier that year, secretly married the nineteen-year-old Laura del Solar.

At roughly the same time, the esteemed but, in this instance, certainly naive Herbert L. Matthews of the *New York Times* was assuring his readers that the Argentine President's fondness for playing games with adolescent girls was nothing other than a 'normally innocent and politically astute policy to gain more popularity' and that, since the death of his beloved Evita, 'there have been no other women and there surely will be none'. Matthews went on to inform his readers that Perón's popularity was undiminished by Evita's passing, that his power was 'supreme' and that his position as President of

Argentina was ‘unchallengeable’ – an unfortunate claim.

For some time Perón had been quarrelling with the church, the military clique and the wealthy. His argument with the church soon made him the first, and so far only, twentieth-century head of state to be excommunicated by the Vatican. Worse was to come, however. On July 16, 1955, three years after Evita’s death, elements of the navy bombed May Square and the presidential mansion (the Casa Rosada). Perón’s supporters started burning churches in retaliation. By September the military were in power again and Perón, hiding on a Paraguayan gunboat on the Plata River, was scribbling to his sixteen-year-old sweetheart: ‘You are all I have left now the workers have deserted me… I miss you every day… Many kisses and many desires…’ and signing the note, ‘Papi’, Argentine for ‘Daddykins’.

While Perón, still hiding on the gunboat, was scribbling this adolescent nonsense to his adolescent mistress, the more divisive passions within the country had reached the state where everything that bore the name ‘Perón’ or ‘Evita’ was being destroyed, including posters, statues, and Evita’s beloved Children’s Palace. Meanwhile, investigators working for the new regime were exposing Perón as a sixty-year-old libertine who, in the acidulous words of *Time*, ‘liked his girls young, his gadgets golden and his plunder plentiful’. Included in the rather sordid revelations about the ‘people’s’ President was the fact that Perón had stashed away enormous wealth in various overseas banks and had led a private life of extraordinary luxury.

Evidence of the lifestyle of the supposed protector of the *descamisados* came in the shape of at least five properties, including the presidential estate at Olivos, an exclusive Buenos Aires suburb where Perón (‘Just call me Poncho!’) often went to join his adolescent girls in basketball, sailboat racing and skating; or to award wallets containing 500-peso notes to graduates (all female, all adolescent) of the classes in dancing, gymnastics and drama.

Among these pupils was Nelida Rivas, the fourteen year-old, green-eyed janitor’s daughter, whom Perón made his mistress and to whom he gave jewels from his late wife’s collection, as well as ‘poodles, perfume, and a nice little concrete house in the suburbs with her folks’.

Also found by the investigators was a third holiday residence in the pampas south of Buenos Aires, fitted out with bearskin rugs and a fencing court. A fourth residence was an apartment atop an eight-storey building

where, in ‘boudoirs lined with mirrors’, the President enjoyed himself with the now seventeen-year-old Nelida. Closets were crammed with suits, uniforms, jackets and riding boots.

The fifth house, a two-storey Buenos Aires bungalow at 2102 Teodora Garcia Street in the fashionable suburb of Belgrano, turned out to be a veritable gold mine. Included in the collection were cigaret, jewellery and bonbon boxes, clocks and watches, coins of various countries, spoons and bowls, toilet sets, ashtrays, and a gold-plated telephone with ivory ear-and-mouthpieces. The house had at least ten television sets. Dozens of mink, sable and other luxurious fur coats were found in a deep freeze. There were two hundred suits and over eighty pairs of shoes. Downstairs was a well-stocked bar under the lewd motto: ‘Someone always gets assaulted when a poor man has some fun.’ Also downstairs was a huge gold elephant with an enormous emerald – said to be the second largest in the world – embedded in its forehead. Other treasures included precious rugs, tapestries and pictures, as well as an extraordinary collection of paintings, including works by Rembrandt and Velázquez. The basement garage held two of Perón’s sixteen cars of every high-priced foreign make. In various safes, vaults and drawers the investigators found close to $20 million in cash.

Obviously conscious of the politics of Argentina and of his own, always precarious, part in them. Perón also had a bomb shelter, which was joined by a secret panel to the ground-floor press room of his own downtown publishing house. An underground vault lined with rosewood, the bomb shelter contained a bedroom, numerous pairs of silk pyjamas, an emergency supply of oxygen, and a ‘wall safe big enough to walk into’. Behind one of the walls was another long underground escape tunnel, which led to the office building next door.

While all of this was being uncovered, and while revolution still raged in the streets of Buenos Aires, Juan Domingo Perón, the recent President of Argentina, lover and husband to the revered Evita, was allowed to leave the gunboat on the Plata River and fly off to political exile in Paraguay.

Chapter Three

In 1956, when the new Argentine regime's National Investigating Committee had submitted its report on corruption during the Perón era, it revealed, amongst other items withheld for possible future court proceedings, that Perón had cheated his mother-in-law out of half of her bequest from the late Evita Perón; that he had probably arranged the assassination of Evita's brother, Juan Duarte; that he had arranged the arrest and subsequent disappearance of Jose Espejo, the boss of Evita's beloved unions; that he had lavished millions on the clubs of his Union of High School Students, favoring teenage girls in all such cases; that he had given car import licences worth thousands of pesos to various of his friends; and that both he and his revered wife, Evita, Spiritual Chief to the Nation, had stashed away a mass of pilfered wealth in unnamed Swiss banks.

By 1962, ten years after the death of Evita Perón, the keys to a Swiss bank vault in which Evita had deposited cash and jewels worth $25 million had been hunted on and off by both the investigators of the new regime in Argentina and the indefatigable Juan Perón himself.

The assassination of Evita's brother, Juan Duarte, was directly related to this chase.

Shortly after Evita's death, Juan Perón had learned that his wife had for three years been systematically dispatching suitcases full of jewellery, cash and *objets d'art* to Switzerland, using for this purpose two women, the first an unknown secretary, the second Delia Parodi, a Congresswoman. Evita's dissolute brother, Juan Duarte, at this time still trusted by Perón, was sent in company with Hector Campora, a Perón Congressman, to Geneva, to find out exactly how much Evita had hidden in the bank vaults and what had happened to the missing keys. Reportedly, they both returned without success.

In April 1953, Juan Duarte was betrayed by Maliza Zini, one of many mistresses whose company he had kept in Buenos Aires. It was never known what she had said, but some days later Duarte was found with a bullet in his brain. Although the death was treated officially as a suicide, a police surgeon later let it be known that the bullet had been fired from such a distance as to rule this out. Also, some of Perón's agents had ransacked Duarte's apartment and it was common knowledge that the object of the search was the keys to Evita's vault in Switzerland.

Those keys were never located.

In exile, Perón did not starve. When the Revolution came and forced him out of Argentina, Perón was in possession of £430,000 sterling belonging to the Eva Perón Foundation; a ranch worth £261,000; two apartment buildings in Buenos Aires; a £38,000 house; a smaller country estate in Cordoba; shares worth £230,000 in a ranch near Buenos Aires; and £19,000 in shares in Uruguay.

All of this came from the *descamisados*, who had revered Juan Perón and, even more so, the saintly Evita.

During the eighteen years following the death of Evita, the deposed Juan Perón wandered restlessly across Paraguay, Nicaragua, Venezuela, the Dominican Republic, and Portugal, eventually settling in Madrid with another woman much younger than himself, the flamenco dancer Isabel Martinez. With her he dreamed and schemed of a return to glory.

While Perón was thus engaged, his dead wife, Evita, was being resurrected and again deified in the hearts and minds of the people of Argentina.

A bizarre fate had overtaken the corpse of Evita. Embalmed at an estimated cost of 100,000 pesos, her body, in its silk-lined coffin, was stolen from its temporary resting place in Labor Confederation headquarters in 1955 by agents of the new Argentine president, General Pedro Aramburu, placed in a coffin, dumped in the back of an army truck, and driven off into the night.

From that moment on, the whereabouts of Evita Perón, now *Santa* (Saint) Evita – whose remains could be used as a powerful symbol for or against any existing government – became a subject of almost feverish concern and conjecture throughout the Argentine and the whole of Latin America. There were rumors that she had been incinerated and that her ashes had been strewn over the Plata River; that the body was in Chile with Evita's widowed mother and two sisters; that Evita was not in fact dead, but had been kidnapped by Juan Perón and now lived with him in exile in Paraguay. For eighteen long years such rumors proliferated until eventually Evita, once a poor girl and 'little whore', became a legend and a memory of hope to the suppressed of the Argentine.

In April 1971, when the body of Evita Perón reappeared and was delivered with great ceremony to the then 74-year old but still ambitious Juan

Perón, there was only one mystery left unresolved.

What made Evita, the cause of so much corruption, intrigue and violence, a legend of such saintly proportions?

Part Two :
The Rise and Fall of Evita Perón

For many years I have had a limitless quantity of illusions and dreams. I felt most deeply that the anguish, the grief and the sadness of our people could not be eternal. -Evita

Chapter Four

To be a saint one must first be a human being. The one room brick house in Los Toldos is now a wreck being used as a store room. The corrugated iron walls are gradually collapsing over the patio at the back and grass sprouts wildly from the flat roof. Back in 1919 it was habitable but hardly much better. The most desolate of pampas small towns, Los Toldos was built on the site of an Indian camp, 150 miles west of Buenos Aires, the low, flat-fronted, dusty houses symmetrical with the flat monotony of the prairies and surrounded by dirt streets and whitewashed *paraiso* trees.

Into this vast silence, in the early morning of May 7, 1919, was born the child Maria Eva Duarte, the fifth of the five illegitimate children of Juan Duarte and Juana Ibarguren, who lived in the *estancia* La Union. Since this was Tragic Week, when striking workers were massacred by the army, there was perhaps a certain aptness to the birth.

Eva's father, Juan Duarte, rented a ranch at La Union, close to Los Toldos, and lived there with Juana, a local peasant girl. Shortly after Eva's birth, her mother took the family to live in Los Toldos and it was there, in an adobe farmhouse, with chickens and goats and earthen floors, that Eva was to

spend her growing years.

Stretching 600 miles from the city of Buenos Aires, the pampas is an area of sandy hills, fertile prairies and marshy lowlands criss-crossed by rambling rivers. Though its wide variety of climates and soils enables it to produce an abundance of wheat and corn (maize), sugar cane, olives, tobacco, tea and cotton, it was, until the middle of the 19th century, a poor region, given over to cattle and mule breeding. However, with the coming of the railway, progress in ocean transport, and the introduction of British beef cattle – Aberdeen Angus, Hereford and Shorthorn, as well as French Charolais – the raising of livestock became the main source of the country's wealth and the farmers of the region did not suffer. Though the labor performed by these men was hard and isolating, with little to distract them during the long, lonely days, when they rode with the herds or worked the land, the money was there for the taking and many of them prospered.

Eva's father, Juan Duarte, was not one of them. Initially, however, he was certainly not poor. Renting the farm at Los Toldos, he had peons – members of the landless agricultural classes – working for him and was proud of the fact that he possessed the most up-to-date, expensive farm machinery. Another sign of his relative prosperity is that, though living on the farm with Juana Ibarguren and her children, including Eva, he had a legal wife, by whom he had other children, living in another farm in the nearby market town of Chivilcoy.

Described as an 'indolent, agreeable, attractive' man, he tended little to the farm, gradually let it deteriorate, and eventually accrued more debts than he could handle. First the peons went, then the machinery, until eventually, sadly, there was nothing left. The indolent Juan Duarte now had to search for a poor living in a very bleak landscape.

Thus it was that early in her life, Eva Duarte learnt the nature of humiliating poverty, acute boredom and grinding frustration. The days were long in Los Toldos, the land was flat and empty, and the silence that surrounded the household made it seem like a prison. Few people departed, visitors rarely arrived, and the richness of the pampas was now beyond the reach of the unfortunate Duartes.

Nor were they helped by the rigid Argentine caste system that divided the wealthy from the poor. The Duarte offspring were not only poor: they

were also bastard children, the fruits of Juan Duarte's unsanctified liaison with the peasant girl, Juana. In the eyes of the other villagers, Juana was a *casa chica* (the 'other wife') and someone to be pointedly avoided. For this reason, Eva and her four sisters were looked upon as 'brats' and often prevented from associating with the other children of the village.

The sense of rejection that was instilled in young Eva by this was something she would never forget and certainly never forgive. Indeed, she would always nurture a secret resentment and the need for revenge, as eventually the Oligarchy, the ruling classes of Buenos Aires, would find out to their cost.

Young Eva's awareness of the privileges of the rich could only have been heightened by the sight of the *estancia*, the village squire's home, with its 'cool courtyard and magnificent rooms' filled with music and laughter. The owner of the hacienda, who also owned great herds of cattle, hired and fired the gauchos, or cowboys, and had total power over the village, must have seemed godlike to the small girl. Given that this particular god appeared not to recognize Eva's existence, that he and his family would only sneer at the sight of her, it is reasonable to assume that at a very early age, her awe would have been mixed with resentment and the need to right the wrongs being done to her. Indeed, she came to hate the rich with a venom that stemmed from the humiliations of her childhood and eventually warped her every emotion.

'I believed that poor people existed as naturally as grass and that the rich were as natural as trees. Then one day a laborer told me that the poor existed because the rich were too rich; and this revelation had a very strong impression on me.'

The other poor were the gauchos, who rode constantly through the village. Wearing nothing but ponchos and moth-eaten trousers, with jangling spurs strapped to their bare feet, these sun-scorched, laconic, tough 'cowboys of the pampas' were the first 'shirtless ones' that Eva ever knew. Locally they were known as '*los paisanos'* and they worked from dawn to dusk for practically nothing. Now obsolete and romanticized in Argentinian literature as men of nobility, selfless and courageous, they were, when Eva was a child, widely scorned as heavy drinkers and shiftless vagabonds. Given their rough, chauvinistic nature, that insularity bred from their long, lonely days on the

prairies, it is likely that they, too, either ignored or mocked the little bastard, Eva Duarte. Certainly, in later years, when Eva had found fame and fortune, she would not so much feel sympathy for the poor as blinding, abiding hatred for the rich.

'There are rich and there are poor,' she would say, 'and the odd thing is that the existence of the poor pains me less than the knowledge that at the same time others are rich.'

The flames of Eva's rage would be fanned by her mother. While Eva's father was a conservative, accepting the status quo despite his dire circumstances, her mother was instinctively a radical. Independent and strongminded, she was resentful of her position in this country that treated women as second-class citizens and she therefore instilled in Eva her own drive and self-conviction, a refusal to give in to negative circumstances. It was this maternal influence, combined with the awareness of her illegitimacy and low standing, that turned Eva into a determined, self-serving force.

Another feeling of resentment, this time against men in general, sprang from the fact that her father had a legal wife and children, that they were more respected than the Duartes, and that he was often away from home in Los Toldos, visiting his 'real' family in the town of Chivilcoy. From this, Eva would come to see that the Argentine male was inclined to view women as mere chattels, to be used for physical pleasure and moral support while being denied personal freedom and pride. This, also, was something she would never forget.

Thus, at a very young age, she developed hatred for the rich and contempt for male chauvinism. She also learned early that people could use and could *be* used and decided that she must not be one of the latter. Certainly, though Eva was the youngest of the five sisters, the second youngest girl, Erminda, felt that Eva had always been older than her years and was in many ways the strongest, most matured member of the family.

'She had a much stronger personality,' Erminda says, 'and people thought we were twins, even though I was two years older than her… Her temperament made up for my years… She always had this thing: she always gave orders. Everyone was glad to obey her. She knew how to make herself obeyed, either by being nice or being tough.'

This trait – getting what she wanted by being nice or by being tough –

would stand Eva in good stead in the future.

At primary school in Los Toldos, Eva was a relatively bright but unexceptional student. Though seemingly bored with her studies, she adored appearing in the school plays and, like most of the other girls, was obsessed with film magazines and the exciting world beyond the pampas – in Buenos Aires and Hollywood. Her desire to become an actress began then and was nurtured by the movie magazines that she begged, borrowed and stole from her friends because her father could not afford to buy them. She spent hours poring over the magazines, mesmerized by the glamorous pictures, and imagining herself living the life of the movie stars. She could do it, she was absolutely convinced, if only she could make her escape from Los Toldos and the vast, desolate pampas. It was a thought to sustain her.

The dream of becoming an actress, preferably a movie star, could only have been heightened by the increasing poverty of her existence (the family resources, not good to begin with, were now dwindling rapidly) and out of the need to escape from the seemingly hopeless future represented by the world's end of Los Toldos. This drab 'island in a rolling ocean of grass' would have encouraged her large brown eyes to search the horizon for escape and adventure.

Rafael Reta, who at that time lived on a small farm on the edge of what was once the Duarte ranch, recalled that for some years things had been going well for the Duarte family, but that in the middle of the '20s, just before Juan Duarte's death, there was a drought which, combined with Duarte's increasing lack of interest in the farm, robbed him of his few remaining pesos. The family's poverty was now absolute, there was no light on the horizon, and each day little Eva must have gazed at the nearby hacienda and burned with her growing resentment of the wealthy.

In the event, a change of scenery came sooner than expected, though in a most brutal, unexpected manner.

In 1926, when Eva was only seven, her father was killed in a car crash. As Duarte had been an 'agreeable, attractive' man, his loss must have been a considerable shock to her. Her pain would not have been eased by the fact that his body was not brought home, but instead was delivered for burial to the legal family in Chivilcoy. To make matters worse, when Eva, with her mother, sisters and brothers, attended the funeral, they were greeted as the

‘bastard family’ of Juan Duarte, herded apart, kept out of the cemetery until the burial was over, then rudely snubbed by the legitimate offspring.

Again, this was something that Eva would neither forget nor forgive – another grudge in her lengthening list of grievances against the contemptible middle classes.

With Juan Duarte’s death, life became more difficult for the whole family. Luckily, because Duarte had been a member of the local ruling conservative caste, Señora Duarte received financial aid from the local party. They also found employment for the eldest daughter, Elisa, in the post office in Junin, the nearest town in the province of Buenos Aires.

It was then common in Argentina for single or widowed women to accept the ‘protection’ of a man of means, becoming his *casa chica* in return for financial security. It was therefore no accident that Señora Duarte was eventually aided by a wealthy ‘protector’ of the local Radical Party and, with his help, was soon able to open a boarding house in Junin. Determined and capable, she turned the boarding house into a profitable venture and married off two of her daughters: Elisa to Major Alfredo Arrieta, an officer in the Argentine army; and Blanca (an attractive girl with the blonde hair that dark-haired Eva bitterly envied) to Justo Rodriguez, a promising lawyer. When Erminda, Eva’s favorite sister, then married Orlando Bertolini, who operated the lift in the Town Hall of Vincente Lopez, Eva’s future must have seemed even more bleak than ever.

Just reaching adolescence, Eva is described as being, at this time, ‘a small but buxom girl, brown-eyed and with dark brown, tousled hair’. She is also described as ‘vain and moody, much given to the reading of film magazines’. If her sisters had been known for their relative docility (being fatherless and rejected repeatedly as bastards, docility might indeed have come naturally to them), Eva and her brother Juan were to make up for it. In fact, Juan had become known as a ‘lad of the village’, or a bad boy (a reputation he would take with him into adulthood), and Eva, while charming when she had to be, could display a ferocious temper and wilful nature.

Certainly, at fifteen, she was more determined than ever to escape the dreary provincialism of Junin. Also, by this time, she was willing to use her body as a means of escape.

For an illegitimate teenager in Argentina, particularly an attractive

‘buxom’ girl, life could not have been easy. Already what the Argentinians term a *resentida*, a resentful one, Eva was aware of the crushing limitations imposed upon women in this country of relentless male chauvinism. Her mother, now widowed, had been compelled to use at least one ‘protector’ and Eva would have been aware of the situation and, most likely, deeply resentful of it. Now spending her days in the boarding house, surrounded by macho males, fetching, carrying, dusting, scrubbing and fighting off the inevitable advances of the boarders, she must have realized that her only hope of escape lay in the desires of such men. It was the men who had the freedom and earned the money to use it. And it was the men from Buenos Aires who could offer her the means of escape.

The vanity of the Argentinian male was such that he would sacrifice a great deal to have a young mistress who could pleasure him without making him feel that he was committed. However, the majority of such men, though proud to boast about their *casa chica*, felt only contempt for any *casa chica* not their own. It was into the steamy waters of this ripe hypocrisy that Eva would have to leap if she was to find an escape from dreary Junin – and she was able to make that leap because her growing contempt for men in general was her psychological protection.

Little is known about Eva at the time she first met the professional guitar-player and tango singer Agustin Magaldi, and it is possible that her subsequent liaison with him, at the tender age of fifteen, was her first sexual experience. It is, however, likely that she had already dipped her toe into those dangerous waters in Junin itself, learning, as she would have done, that an unattached girl must make herself of some use to men if she was to gain anything remotely worth having. Certainly, in the enforced intimacy of a boarding house for males, she would not have been able to avoid the more obvious manifestations of her sexual allure to the men she was servicing as a maid.

She was ‘buxom’ and ‘vain’. She would, therefore, have attracted the men and, given her vanity, taken a certain amount of pleasure from their attentions. However, she was not dealing with the kind of men she had read about in her movie magazines and secretly yearned to meet – the famous, the glamorous, the rich. Rather, she was in a boarding house that catered to passing trade and those men would have been low on the ladder: traveling

salesmen, small farmers, lonely soldiers on leave, poor, frustrated bachelors living out of suitcases. Cleaning up after them, seeing their stained bed sheets and often filthy toilet bowls, learning of their secret vices and base desires and pathetic needs, would in no way have enhanced her affection for them. On the other hand, given her vanity and the growing awareness of her sexual power, it is safe to assume that overtures were made and, eventually, accepted.

What we *do* know is that she desperately wanted out and understood that she couldn't escape without the help of a man who had an interest in her. Also, aware that two of her sisters had been married off to lodgers and that her mother now wanted her to stay in Junin and run the boarding house, hopefully to marry a lodger and settle down in Junin, Eva must have been filled with despair and, perhaps, growing panic.

It is therefore not surprising that in 1934, when she was fifteen and saw Agustin Magaldi, at least ten years older than her, but a professional nightclub performer, handsome and debonair in his flashy suit and bow-tie, playing his guitar and singing in a nightclub in Junin, she was overwhelmed by his glamor (her first 'celebrity', after all) and, when she saw his interest in her, cold-bloodedly used it to her advantage.

Either way, she certainly met Magaldi after that first show, embarked on an affair with him, and eventually made her escape from Junin with him, adopting him as her 'protector' and guiding light. Whether she was victim or exploiter, it is a tribute to her iron will, to her already highly developed sense of survival, that at fifteen, still a raw and relatively ignorant country girl, she packed her bags, sneaked out of her mother's boarding house, and fled on the arm of her elder lover, Agustin Magaldi, to seek a new life under the bright, bewitching lights of Buenos Aires.

Chapter Five

Buenos Aires, the capital of Argentina, is the fifth biggest city in the world, with flea markets, jockey clubs, polo clubs, nightclubs, cinemas and numerous theaters. French is the second language. In the 1930s, the wealthy

sent their children to Paris or London to be educated. They also emulated the leisured, affected, luxurious lifestyle of Europe in the 1920s, and, convinced that the wealth of the pampas would never dry up, were the biggest spenders in the days of big spenders.

While the beef and corn were shipped out of the magnificent harbor, making many Argentinians millionaires, the city also attracted the poor, who flooded in to search for work. As the city became more industrialized, so the demand for laborers was growing. The needs of industry were drawing the workers from the land, but those workers did not share in the wealth they produced. Thus, within this city of extravagant living and glamor, there were thousands who existed in dire poverty.

'On arriving there,' Eva says, 'I discovered it was nothing like I had imagined. On the outskirts I saw the deprived areas, and looking at the streets and houses, I realized that rich and poor did exist in the cities too… I have only experienced sadness that matched this disillusion on one other occasion in my life; that was when I discovered that the Three Wise Men didn't really come on their camels bearing gifts.'

It is hardly likely that at fifteen years of age, with the sophisticated Agustin Magaldi by her side, Eva would have shown concerns that were so altruistic. If disillusionment there was, it would have been of a more personal kind, based on the harsh realities of personal survival. She had just fled her home, she was living with an older man, a professional entertainer, and having already acted in a school play, *Arriba Estudiante* (*Students Arise*) and been stirred by the experience, she was determined to find fame as a star. Given this, her obsessions would not have been about the inequalities between rich and poor, but about how to find success and security for herself.

Though often described as buxom, Eva, with her peasant girl's speech, her country girl's taste in clothes, and her heavy, adolescent calves and ankles, was not particularly striking when placed alongside the beauties of Buenos Aires. Nevertheless, she had indomitable courage, the faith of the desperate, and so she had publicity pictures taken of herself and then did the rounds of the theatrical agencies along the Avenida Corrientes, the Shaftesbury Avenue, or Broadway, of Buenos Aires.

Eva's growing contempt for men would be fuelled by this experience. Already haunted by the memory of her mother's hard life (her humiliation as

a *casa chica* on the ranch in Los Toldos, bearing Juan Duarte's five children, all out of wedlock, then suffering the contempt of his legal family and the other villagers), she would find that the journey recently embarked upon with Magaldi (he using her body; she using his connections; a rancid alliance growing ever more bitter) must continue if she was to climb the slippery slopes of Buenos Aires show business.

Although the city then had three film production companies, thirty-five theaters, nine radio stations and a considerable number of independent producers, acting jobs were not easy to find. But, if things were hard, Eva was not about to be defeated and, well armed with Magaldi's list of names and personal introductions, as well as her iron determination to succeed, she went out to suffer what she would for what she wanted so badly.

'At first, when she started work, things were hard for her,' Erminda says. 'I missed her a lot. I used to tell her, "Come back, Eva, come back home." She used to say, "Listen, sister, I will come back when I have conquered Buenos Aires.'

Given the casual sexual blackmail rampant along the Avenida Corrientes, very few were the women who rose unscathed to success. Indeed, the 'casting couch', whether a myth or a reality in Hollywood, was almost a way of life in Buenos Aires show business circles. Eva and others like her would have been faced with a simple choice: lie down on the casting couch or get out. Eva didn't get out. Once she had learnt the rules, she simply dropped Magaldi and started climbing up the ladder, through a succession of men, never looking back to count the cost.

Later, when she became *Santa* Evita, it was this part of her life that the Oligarchs, the aristocracy, could neither forget nor forgive.

Nevertheless, it was the life she led then. For a number of years she wandered the streets of downtown Buenos Aires, haunting the theaters and the offices of the big producers, making contacts where she could, being obliging when necessary, smiling readily when the call came, and generally doing what she felt she had to do, no matter how distasteful.

Eventually noted along the Avenida Corrientes for her provocative skin-tight dresses and insatiable ambition, she was also known, particularly in the old port area, Boca Gorda, where she lived for a while, as a girl with 'a tongue to skin a donkey'. Indeed, Boca Gorda was a rough, colorful breeding

ground for the *chirripos*, the spivs who gathered together in the narrow, crowded streets, their trousers of 'special masculine cut', their eyes ogling the passing women, their sharp tongues slicing the air with a stream of bawdy invective. Against such tongues only a rapier could advance and Eva sharpened her tongue accordingly. She also learned to protect herself when traveling on the notorious Buenos Aires underground system, which holds the world record for male soliciting, and to handle herself well when riding on the notorious *colectivo* buses to and from the city center.

Such experiences could only make her cosmopolitan. No longer the gauche country girl, now slim and longlegged and crafty, she was developing that hardness, that protective veneer, which was her only shield against the humiliations of her low station in life. Her brightly painted red lips, which would later glisten on posters and hoardings all over Argentina (thus giving rise to rumors about her artistry in fellatio), were doubtless finding their covert uses in these teeming, amoral streets.

Nevertheless, while Eva, during those early years, starved on occasion, she gradually picked up modeling work for fashion houses and hair stylists, gained small parts in sponsored plays put on by Radio Argentina and Radio El Mundo; and, more importantly, frequented such Buenos Aires nightclubs as the Gong, the Golden Gate, and the Embassy, where tenth-rate actresses like herself, apart from making useful contacts, could supplement their low wages by selling their sexual favors to wealthy men.

Eventually, through sheer hard grind and ruthless, amoral determination, she began to find better work. She did it mostly through men – it was men who ran the business – and, although she despised them for how they were using her, she was not known to have many women friends either, perhaps viewing other aspiring actresses as competition. (How ironic, therefore, that she would later defend women's rights with a genuine passion.) One female friend, however, was the popular comedy actress, Señora Pierina Dealessi, who gave Eva her first professional acting job on the stage.

* * *

'Here, in this little theater, in 1935,' says Dealessi, 'a thin little girl came to see me. "I want to work," she said. "My name is Eva Duarte." So I gave her the opportunity… Eva worked for many seasons here with me. Later she left my theater. She worked for other companies. She did radio, cinema, and lots

of other things. Step by step, she kept progressing in her career. Then, later on, I used to see her and ask her: "Are you the same little girl I knew? From where did you get the fire? That strength?" She used to smile and kiss me. That's how she was.'

Sympathetic to the struggling Eva, Dealessi first gave her a small part in *La Señora de Perez*, produced for the Comedia Theater in 1935. A soon-forgotten domestic comedy, it starred Eva Franco, one of Argentina's most popular actresses, and the actor Pascual Pelliciota. Eva (Duarte) was soon having a professionally helpful affair with Pelliciota and, though *La Señora de Perez* ran only a few weeks, by July that year she was acting in another, *There's a World in Every Home*. By June 1936 she was touring with *The Mortal Kiss*, a play about 'the evils of sexual promiscuity'. Thereafter, the promiscuous Eva took everything she could get.

It is difficult to judge just how much she achieved through talent and how much on the casting couches or in the beds of her various 'protectors' – but most reports of the time suggest that she was dreadful as an actress, lacking warmth and emotion, though she was supremely good at persuading producers, all male, to give her opportunities. ('A very, very poor actress,' said Cesar Marino, head of production at Radio Argentina. Nevertheless, like other men who thought little of her talents, Marino was instrumental in finding her acting jobs.) As for the 'fire' that Señora Dealessi remarked upon, this was more the fire of brute ambition, of steely self-conviction, than any great blossoming of histrionic ability.

Indeed, Eva's entry into films came about when, in 1937, she was interviewed by the theater and movie magazine, *Sintonia*, and instantly embarked on an affair with its owner, the former racing driver Emilio Kartulovic. Given good exposure by Kartulovic, she was soon acting in her first movie, *Seconds Out of the Ring* (1938) and engaging in an affair with its star, Pedro Quartucci. She followed it up with a string of other, equally mediocre movies, including *The Charge of the Brave* (1939), *The Unhappiest Man in Town* (1940), and *A Sweetheart in Trouble* (1941). In none of them did she show the slightest shred of talent.

One is an actress or one is not. Eva wanted to be an actress for all the wrong reasons: because actresses were 'stars', led glamorous lives, had money and were admired by the whole world. The true actress has to empty

herself and reconstitute herself as someone else; but Eva Duarte, haunted by her impoverished past, motivated by resentment and the desperate need to be successful by any means, could not possibly imagine being anyone else, let alone feel emotions not her own.

'She was terrible, cold as an iceberg,' said Pierina Dealessi, 'incapable of stirring an audience.'

To put it mildly, Eva was a blank on the screen, and, although she picked up work, it was not for her talent. Thus, instead of glamor, she found only the hard, demeaning slog of a bit player who has to spread her legs in order to feature briefly in trash. In this sense, she did it all – frothy comedy, high drama, too many costume epics – and we see her in the stills as a dark-haired, reasonably pretty, anonymous face that will leave no deep imprint on the memory. Nevertheless, she continued to work and, to her family back in Junin, she must indeed have seemed like the glamorous star she wanted to be.

Still envious of her sister Blanca's blonde hair and, also, because she revered American movie stars like Lana Turner, to whom she bore a passing resemblance, she dyed her dark hair blonde and moved closer to what she wanted to be: a wet dream for the masses.

Certainly it helped. By the time she had made *Le Cabalgata del Circo* (1944) her photograph was featured on the advertising poster and she was eighth on the cast list. She was blonde and bare-shouldered.

However, she was hardly the 'star' that she had wanted to be and she must have suffered her fair share of humiliations, sexual and otherwise, to get where she was. She despised these movies and the men who had put her in them, but she continued to be an actress while scheming to go on to bigger things and become her own woman. She didn't know quite how she would do it, but she was ready for anything.

In the event, it was two members of her family who led her onto the right road.

* * *

Eva's brother, Juan Duarte, was working in a bank in Buenos Aires and already gaining a reputation as someone with few scruples. (He was soon fired for stealing money from the bank.) Handsome and dissolute, enjoying women and the night life, he mixed with a lot of people, some with dubious reputations, and had many valuable contacts in show business. After

introducing Eva to a soap manufacturer who sponsored radio shows, he stood aside while Eva courted the man and seduced him into giving her work on Radio Belgrano, mainly in sponsored, weepy soap operas. Given regular employment and paid 150 pesos per month, Eva was soon renting an apartment in a more fashionable section of the city and, combining her radio work with the movies and bit parts in stage comedies, she started living a relatively good life. Since as an actress she was shallow, whereas her voice had its own resonance, eventually she was given her own radio slot, delivering gossipy news.

The second family member to help was Eva's sister, Elisa, who often visited with her husband, Major Alfredo Arrieta. It was through Arrieta that Eva met other army officers, notably a Colonel Anibal Imbert, who, as Government Director of Posts and Telegraphs, was coaxed into helping Eva move higher up the ladder by forcing Radio Belgrano to pay her more money and give her more air space. Before long she was better known as a radio celebrity than she was as an actress.

Eva's relationship with Colonel Imbert was her first step on the road to a fame far beyond that of show business – and almost certainly, by this time, she was astute enough to know just what she was doing. While Argentina was then being run by a conservative coalition headed by President Ramón Castillo, the government was strongly (some would say almost totally) supported by the military. Army officers of senior rank were therefore men of enormous influence and authority. Introduced to such men by her brother-in-law, Major Arrieta, Eva saw how they could help her and, in particular, how Colonel Imbert, who as Director of Posts and Telegraphs had such a strong influence on radio broadcasting, could advance her career. For this reason, Colonel Imbert became the first, though certainly not the last, of the many military officers who would be used and then cast aside by her as she continued climbing the ladder.

There can be little doubt that Eva was, at this time, using men in a cold-blooded pursuit of her goals. It is very likely that from the moment of her seduction by, or of, Agustin Magaldi, she had started to view her relationships with men as purely functional. They wanted her body and she needed their connections; each was therefore using the other in a pragmatic transaction.

Eva managed to use her woman's wiles to open many doors, even though there was a coldness to her beauty. It was the kind that promises everything but real affection or warmth: a carefully made-up, alabaster, photogenic prettiness that goes no deeper than the paper on which it is printed. Nevertheless, her painted lips spoke to many of the whore's expertise at fellatio, her brown eyes had learnt to flash with a feigned sensuality, and her body, now slimmed down by constant, ruthless dieting, was seductive in its tight-fitting clothes. She had long legs and showed them off.

She was, however, always working. She had the soul of a model so divorced from her own body that she could view it as no more than a tool, to be temporarily lent out and then reclaimed. Thus, there was a smooth, hard sheen to her beauty. It was all in the make-up, in the delicacy of her bone structure; it was not a beauty that sprang from within to capture the heart. Just as, much later, Evita would learn to subtly alter her appearance to suit the occasion (either modeled on a specific movie actress or on a famous historical figure), so, now, she was learning to split her personality and offer the separate pieces to her own advantage. Certainly there is little evidence that she ever had a relationship with a man who could not advance her career.

'*Todos me acosan sexualmente*,' she is quoted as saying of her actress days. 'Everybody makes a pass at me.' Naturally they did. But if it is in the nature of the Latin-American male to make a pass at a woman like Eva, it was certainly in Eva's nature to respond to such a gesture only if the propositioning male was of some use to her.

The rumors, or truths, of Evita's history as a 'little whore', as an artiste in fellatio, would spring directly out of the national memory of her early struggles in Buenos Aires. Argentinians love rumors. They also firmly believe that all rumors are based on facts. And in Evita's case, they certainly believed that the facts spoke for themselves. In her early years, Evita, Eva, was not a professional prostitute. She simply used what she possessed. She used it with men she had secretly come to despise and, in so doing, she had to also secretly despise herself.

Not for nothing would she, much later, when broadcasting as '*Santa* Evita' from her sickbed, open up with the sublime Freudian slip: 'Ladies of Argentina, I am speaking to you from my old workbench!' If the dying Evita had been blind to her own remark, nevertheless it had sprung out of genuine

recollections of her early, hard years in Buenos Aires. Eva's bed in Buenos Aires was undoubtedly the 'workbench' upon which her grand future was shaped.

Giving herself to those men, who by the nature of the transaction would treat her contemptuously, Eva came to despise them (and their wealth and their power) and withdrew into a deeper, more feverish self where dreams of conquest and vengeance could sustain her.

As we have seen, her cultivation of members of the military sprang from her awareness that the ruling junta would always have a great deal of sway over broadcasting. And, just as she had taken up with Colonel Imbert in order to further her broadcasting career and exact larger wages from Radio Belgrano, so now she was about to drop Imbert and move on to the higher echelons of the most recent regime.

* * *

Argentine politics, which had, after the military coup of 1932, settled down into a vague form of democracy, were again being torn apart by conflicting ideologies. Indeed, after Pearl Harbour, the turmoil inside Argentina had been such that President Ramón Castillo was forced to proclaim a state of siege. This had come about because the government was split between the pro-Axis Argentine Army and his own conservative coalition, which believed in an Allied victory and so wanted to side with the Allies. The army generals, who favored Hitler and Mussolini and were fed up with the vacillating policies of Castillo, had decided to make up his mind for him.

So it was that on June 4, 1943, General Arturo Rawson, Commander of the Cavalry School, led the small garrison down from the Campo Mayo and along the Avenida of the same name. Before they completed their march to Government House, President Castillo fled to a waiting gunboat on the Plata River. Consequently, General Rawson, who had merely carried out the plans of the Group of United Officers (GOU), announced from the balcony of the Casa Rosada the 'resignation' of President Castillo and the appointment of himself as Chief Executive.

However, the GOU had other ideas and, after two days as President, General Rawson was forced to stand down and was sent off as Ambassador to Brazil. General Pedro Ramirez, the War Minister, was proclaimed the new President, with a certain Colonel Juan Perón named as Secretary of Labor and

Social Welfare.

In fact, Juan Perón was the real architect of the Revolution of June the Fourth – and his revolutionary ambitions were not yet quenched.

At this time, Eva Duarte was still working at Radio Belgrano (for something considerably more than 150 pesos per month) and, conscious that the ladder to success might be compounded of the military junta's mattresses, she kept her attention focused in that direction. Already notorious for her flamboyant attempts to bring herself to the notice of producers and other influential people (and consistently rejected by Hollywood, for which she despised the Americans), she now surprised even those closest to her with a piece of steel-nerved histrionics.

One night in July 1943, a month after the revolution, Eva went to a telephone in a room in Radio Belgrano and, turning to an actress friend, told her to listen. Picking up the phone, she dialled a number, announced herself as Eva Duarte of Radio Belgrano, and asked to speak to President Ramirez. Obviously enamoured by a call from the charming and popular actress, Ramirez decided to speak to her.

'Is that you, Pedro?' Eva said chirpily. 'This is Eva speaking. Yes, I'll be delighted to have dinner with you. Tomorrow evening. *Buenos*.'

The insolence – and the success – of this bold gesture soon reached the ears of Señor Jaime Yankelevich, the owner of Radio Belgrano. Though despising Eva as a pushy woman and rank opportunist, he was not a man to miss an opportunity when he saw one, so he promptly raised her salary to 5,000 pesos per month and gave her her own radio show.

Eva went on to have her dinner with President Ramirez and became his 'close friend', but eventually, on the advice of Señor Yankelevich, she turned her attention to one Colonel Guilbert, another of the leading revolutionaries whom Yankelevich felt would soon be of even more importance than Ramirez. A few months later, towards the end of 1943, on the set of her latest movie, *La Prodiga*, Eva was introduced by Colonel Imbert to Colonel Juan Domingo Perón.

By now, Eva had the well-earned reputation of being able to spot, and catch, the coming men; her choice, therefore, of Colonel Perón as a suitable target for her attentions (against the advice of Señor Yankelevich, who would later have cause to regret that he had been wrong) would suggest that she

knew of Perón's activities in the new government and was aware that he would soon be going places. Subsequently, she discarded Colonel Guilbert and turned her inviting gaze upon Colonel Perón, a 48year-old widower with a reputation for political ruthlessness and a passion for younger ladies, especially actresses.

Eva Duarte, a well-known actress and radio personality, was twenty-four years old.

Chapter Six

Like Eva Duarte, Juan Domingo Perón was born in the pampas in the province of Buenos Aires. Also, like Eva, he was not one of the aristocratic *estanciero* (big rancher) class. A Creole, he was a descendent of families that had settled in Argentina for years, but he also had Italian and French ancestors, as do most Argentinians in this land filled with immigrants. His grandfather was Dr Thomas Perón, a general practitioner well known and greatly respected in his district, but his father, Mario Perón, just like Eva's father, had no talents or ambitions and worked on the ranch of the Guerrero family for many years. There he met and married a *chinita* (a country girl with Indian blood in her veins) working on the *estancia*.

Juan Domingo Perón was born on October 8, 1895, in the town of Lobos, sixty-five miles south of Buenos Aires. When he was five years old the family moved to Patagonia in the south, a desolate, cold, windswept terrain where, as he grew up, he was forced to live like a gaucho, learning to ride almost before he could walk, breaking wild horses, lassoing ostriches, and eventually riding the stony, freezing *mesa*, wrapped only in a poncho and with silver spurs strapped to his bare feet. Like many upwardly mobile, lower-class, male youths, he entered the Army Military Academy in Buenos Aires in 1911, at sixteen years of age, became a sub-lieutenant two years later, and was promoted to a full lieutenant at twenty. A fine athlete, muscular and full of energy, he distinguished himself in boxing, fencing, marksmanship and skiing, as well as excelling at German, Italian and, to a

lesser degree, English. At a relatively young age he married Aurelia Tisson, a schoolteacher of French descent, and was presented with a daughter, Maria Inez. There would be no further children and his wife would die (like Evita) of cancer in 1938, rarely to be mentioned again.

Perón was often to say that his great-grandfather was a Sardinian senator; and, while this may or may not have been true, he could have been Italian on his father's side, as a few of the older residents of Lobos recalled a time when the Peróns were called Peróni. Since, on his mother's side, there was supposed to be Argentine Indian blood, the fullgrown Perón could well have been of unusual character. Certainly the Italian side of Perón had always been evident in his grandiloquent gestures, his hearty (and frequently false) laughter, and his tendency to greet and leave friends with a crushing *abrazo*, or embrace.

If this more public side of Perón was evidence of his Italian descent, his more private nature, which was in fact humorless, might have sprung from the pragmatizm of his French blood. However, Perón was harder than that. Like Eva Duarte, he was impelled by the need for domination and absolute devotion from those around him. He also possessed a total ruthlessness and lack of morality when pursuing his goals.

Noted at both school and the Army Military Academy more for his brawn than for his brains, he was frequently involved in brawls because of his inflammable temper. That he rarely lost such fights might be due to the fact that he rarely fought with only his fists, but instead would throw anything that came to hand before closing in on his victim with terrifying ferocity. Although, as with his schooldays, he did not distinguish himself as a scholar, he *was* distinguished by his Latin-American good looks, by his 'film star' smile, and by the fact that for a number of years he held the Army Swordsmanship Championship and was always in the top bracket of expert riflemen.

After being promoted to full lieutenant, he was assigned to the General Arenales Infantry Regiment. Two years after his unremarkable period as an infantry officer, he received an appointment to the General Staff. The following year, he was transferred to the Ministry of War as Private Secretary to the Minister, but, when the Minister became dissatisfied with his performance in this undemanding position, he was appointed Professor of

Military History at the Senior School of War (*Escuela Superior de Guerra*). After five years as a captain, he received a routine promotion to major.

Though Perón prided himself on his macho image, there was a slight feminine streak to his make-up. This had been noticed at the Army Military Academy and was also noticed at the Senior School of War. His feminine streak took the form of a certain childishness, a girlish petulance when things went wrong, and a distinct, overweening vanity. Later there would be widely circulated stories about Perón's extracurricular activities with both young girls *and* young boys, but there is no record of any particular incidents at the Military Academy beyond the fact that he was a womanizer with a noted fondness for 'very young girls'. Given his dashing good looks and his total lack of morality, it is safe to assume that he rarely suffered a lack of willing partners.

In 1930, when thirty-five years old, he took part in the military revolution led by General Jose E. Uriburu, an event now seen by many as the first step on the downhill path of Perónism. Returning to his duties at the Senior School of War, he wrote several books on military strategy in which his admiration for Hannibal, Julius Caesar and Napoleon was clearly evident. Intent on paying tribute to the genius of German military might, he plagiarized Clausewitz, blamed the loss of the First World War on the ABC Conference (Argentina, Brazil and Chile), and assured his readers that, the next time around, the Big Three would agree and moved together against the Allies. Because of this, he was recommended to the Nazi government as Argentina's coming man.

Perón's ability to bend with the prevailing wind was most evident in his complicity with the Nazis. In 1938, when Hitler was sending vast sums of money to Argentina to suborn the notoriously hard-up officers of the Argentine Army into sympathy with the Third Reich, Juan Perón, now promoted to lieutenant-colonel, was appointed Military Attaché on the staff of the Argentine Embassy in Chile – one of the two countries (the other was Uruguay) strongly opposed to Hitler's proposed *Bloque Austral*. Shortly after arriving to take up his position in the Embassy, Perón was accused by the Chilean government of being the head of an espionage ring backed by the Nazis.

Added to this indictment was a protest at his conduct with teenagers of

both sexes.

Displeased with Perón's bungling, the Nazis promptly disowned him. He was, however, reinstated in their good books when he cultivated the friendship of General Freidrichs Wolf, the Nazi agent, and became infamous for the golden handshake he received for his protection of many other Nazis. Eventually he solicited Mussolini (whom he revered) and had himself appointed Military Attaché to the Argentine Embassy in Rome. While there, he never missed a speech by Mussolini, closely studied his style of oratory, and adapted it for his own future use. He also studied the way in which Mussolini controlled all of Italy from Rome and he resolved to do the same in Argentina.

When not engaged in these more serious matters, Perón picked up a reputation as an insatiable party-goer, embarked on a brief but intensive tour of the other dictatorcontrolled countries such as Germany, Hungary, Albania, Spain and Portugal, and dallied with playful Nazis in Paris. It was in Paris, in 1939, that gossiping French tongues spread the news that Juan Domingo Perón shared with the Nazis certain aberrations of a kind not strictly political.

In 1941, still ambitious and still committed to the army, he was placed in charge of troops in Mendoza and started a 'crusade of spiritual renovation.' This was actually a scheme to staff the Argentine government with idealistic, hard-working and deeply nationalistic young army officers. This idea soon crystallized into the GOU, an organization of officers below the rank of general. The letters stood for *Grupo de Oficiales Unidos* (Group of United Officers) and were later idealised as *Gobierno, Orden, Unidad* (Government, Order, Unity).

Back in Argentina, Perón formed his GOU by using blackmail to force the resignations of those officers who dared to disagree with him. Since most of those officers had borrowed money from the German bank in Buenos Aires, when Hitler was generously buying their support, Perón, who was in possession of the recorded transactions of all those who had made withdrawals, had no problem in either enlisting them or getting them to sign their resignation papers.

In 1943, the GOU, of which Perón was now the acknowledged head, launched the Revolution of June the Fourth, which sent the unpopular President Ramón Castillo running for the gunboat on the Plata River and

briefly installed General Arturo Rawson as President. Two days later, General Rawson was replaced by General Pedro P. Ramirez, and Perón, after a brief period as Secretary of Labor and Social Welfare, became Vice-President and Minister of War.

Thus, by the time Perón met Eva Duarte for the first time, ironically on the set of her movie, *La Prodiga*, his acceptance of corrupt methods to obtain his own ends was an ineradicable part of his nature.

The future *Patron* and the future *Santa* Evita held hands.

Chapter Seven

A week after their first meeting, Eva Duarte and Colonel Perón were to be seen wining and dining at El Tigre, a riverside resort of shaded creeks and restaurants just outside Buenos Aires. Within days of this meeting, Eva began arriving at Radio Belgrano in a War Ministry car and her salary soon spiraled accordingly. Rumors then spread that Eva had marched around to Perón's apartment in the Calle Posadas and thrown out his teenage mistress. Whether or not this was true, Eva certainly moved into the apartment directly adjoining Perón's and was soon spending as much time in his apartment as she was in her own.

News of the liaison spread like wildfire through the gossipy streets of Buenos Aires and was soon filling newspapers nationwide. If other members of the military junta were quietly uneasy about the relationship – aware of Eva's reputation as a 'little whore' who had used other military officers to get where she was – the general public, particularly the 'shirtless ones', had no such qualms. Indeed, they loved the idea of their beloved Eva Duarte, well-known radio personality and minor movie actress, getting together with the flamboyant army colonel. Eva was tiny and Perón was tall; Eva was slim and Perón was broad – a veritable brute of a man – and many excited *descamisados*, in the bars and cafés, in the slaughterhouses and docks, bartered lewd jokes about how he and she, the long and the short of it, went about doing what they did when the lights were turned out.

‘Put the bull onto a mouse,’ some would say, ‘and what’s left on the bedsheets?’

They said such things, in particular, because of Eva’s reputation – her colorful days in Boca Gorda, the rumors of expertise in fellatio, the many men who had been and gone, including other military officers – and they said such things because they had wet dreams about her and envied Perón. But the ‘shirtless ones’ admired Perón, just as they fantasized about Eva: he was a true Argentinian, a real macho man, while she was a poor girl who had fought her way up from the pampas to become a successful, glamorous creature who could mix with the likes of him. So the ‘shirtless ones’ followed the affair with great interest and discussed it endlessly.

Within weeks, the relationship between Eva and Perón, played out boldly before the public, had turned Eva, once a minor celebrity, into an object of feverish speculation – a star in her own right.

Now she was under the patronage of her new ‘protector’, Colonel Juan Perón, the politically powerful Secretary of Labor and Social Welfare, Eva’s career suddenly soared to dizzying heights. Described by many drama critics as a ‘cold’ and ‘inexpressive’ actress, she nevertheless found herself in as many movies as she wanted and with an authority that was irresistible to her. (‘We had to put up with her dominating everybody,’ said Juan Jose Miguez, the nominal star of *Spendthrift*.) Already beginning to live out her grandiose fantasies, she was soon interviewing leading members of the junta for her radio programs and being photographed with them in the Radio Belgrano studios and on her film sets. Before long, she had persuaded, or bullied, Señor Yankelevich (who now dreaded the sight of her) into letting her star in a series of plays inspired by the lives of great women, including Catherine the Great, Lady Hamilton, Queen Elizabeth I, Madame Chiang Kaishek, and so forth. In none of these roles did Eva show signs of greatness. However, the Radio Association of Argentina was founded during this period, and Eva, to no one’s surprise, was nominated as President.

There were many in those days who saw Eva’s affair with the much older Perón as no more than a ‘little whore’s’ bid for the pot of gold. Certainly there could be no doubt that Perón was infatuated with her (he had always chased actresses, particularly *young* actresses, and Eva was precisely half his age), but whether or not this infatuation was returned in kind was the

question that many asked themselves. Eva's reputation for deliberately pursuing influential men made many doubt the sincerity of her feelings for Perón. It was widely felt that she was using him, exploiting his infatuation with her, in order to further her career; and, since Eva had never had an affair with a man who could not help her, there was certainly strong grounds for so thinking.

Yet if Eva was not in love with Perón in the normal sense of the term, it is possible that she *was* infatuated with his unbridled ambition. Perón wanted to be President. He had *always* wanted to be President. He lived for the army and the army represented the country. Perón's ambitions knew no limits. He was totally fearless. Like Eva, he had a need to succeed that was almost abnormal.

It was possible that Eva could not truly love anyone – yet she *could* feel infatuation. She had been infatuated for years with her dreams of great achievement, and Perón, in his own way, shared that dream. It is likely, therefore, that she became infatuated with him, or with what he represented, and was swept up, beyond love or even affection, into their binding relationship. Her own words, which cannot always be trusted, do at least suggest this.

> We loved each other and we loved each other because we both had the same aim, we both wanted to do the same thing; he, knowing exactly what he wanted to do, while I only felt it in my bones. He had intelligence; I had my heart. He was prepared for the struggle; I was ready for anything. But I knew nothing. He was educated and I was unsophisticated. He was huge and I was tiny. He was the teacher and I was the pupil. He was the figurehead and I was his shadow. He was sure of himself and I had extraordinary confidence in him.

Even propaganda has its buried truths. If not loving Perón in the normal sense of the word, Eva certainly loved what he represented and could offer to her. Her infatuation was therefore genuine. She was truly obsessed with Perón. He was educated and he would guide her; he had power and he would use it to unshackle her from all the old chains.

How could she not be infatuated? What other man could so clearly reflect her self-image? Perón was moved by ambitions beyond mere sex and other sensual pleasures: like Eva, he had a larger role to play. His very presence made her think this. His restless energy gave her strength. Despised, humiliated, Eva had stored up her resentments and now believed in nothing but the will to succeed. To succeed, one must fight. Not to succeed was unthinkable. There were only the rulers and the ruled and she could not be the latter.

Eva saw life in those terms. Creativity was conquest. She could not love the poor, but she could certainly hate the rich, and she confused the one emotion with the other.

Confusing her contempt for the rich with her sympathy for the poor, she felt a great spiritual awakening that would not be denied.

Eva and Juan Perón complemented each other. He wanted power and she would guide him to its source and capturing it would weld them together. Yes, Eva loved Perón. Her fevered emotions told her that. She would be but his shadow, she would encourage his every step, and she would nudge him to the fountainhead of power, where he might then unveil her and show her to the nation. She in turn would gain everything.

Eva knew where the power lay. It lay with the workers, the *descamisados*, the 'shirtless ones', who had been sleeping for centuries.

* * *

While Colonel Perón, as the publicly known Secretary of Labor and Social Welfare and the shadowy head of the GOU, was surreptitiously juggling assignments and slipping his own men into all the important government posts, he was also quietly adding to his duties the Directorship of the National Labor Department and loudly persuading the more timid President Ramirez to elevate the same department into a Secretariat of Labor and Welfare, which would make it more powerful, with himself as Director. By November 1943 he had succeeded.

By now, Perón was coming under harsh criticizm from the press, the universities and the Labor movement. He had not previously thought of the potential in organized labor support and it is likely that he first started thinking about it after his girlfriend, Eva Duarte, in one of her onthe-spot broadcasts from a riverside slum, gave a gushing eulogy to 'this new genius

[Perón] who will become a father to our poor.' Certainly it was shortly after this that the lawyer, Juan Atilio Bramuglia, a great friend of Eva's and barrister to the Union of Railwaymen, joined the Perón gang and persuaded the railwaymen, who had the strongest and best-organized trade union in the country, to become the first Labor supporters of the future dictator.

Subsequently, on November 27, 1943, Perón officially opened his Secretariat of Labor and Welfare with an impassioned and (for him) unexpected support for the suppressed *descamisados*.

There can be little doubt that the driving force behind this sudden love of the 'shirtless ones' was Eva Duarte. Now a celebrity in her own right, but despised by the snobbish middle classes of Buenos Aires as a 'little whore' who had found success on her back, on the 'workbench' of her bed – obsessed also with her past, her memories of poverty and humiliation – Eva genuinely saw the workers as her (and the country's) salvation. If Perón, on the other hand, had rarely thought of the workers, but had instead cherished his belief in the purity of the army, he was now listening more and more to the public broadcasts and the private conversations of his mistress.

Eva used this brilliantly. Aware of the slumbering power of the workers, she was now specializing in a brand of propaganda, put out over the radio, that heaped vilification on the ruling classes and espoused Perón as the saviour of the country. Because of this, and particularly after Perón's cunning November speech, when he had formally opened his Secretariat of Labor and Welfare, President Ramirez was growing worried. Having foolishly gone on holiday over the Christmas period, he sent an order forbidding Perón to make any more public speeches without permission, then he, President Ramirez, hurried back to Buenos Aires.

He was too late. A devastating earthquake had hit San Juan, and Perón, as head of the new Secretariat of Labor and Welfare, raced to the scene of the disaster, where he organized a San Juan Relief Fund of £4 million and drenched the country with so many heart-rending speeches that he became, virtually overnight, a national figure, hailed as the 'Saviour of San Juan'. This event was also publicized by Eva Duarte on her evening radio programs (during which she repeatedly mentioned 'the handsome colonel' and 'his good deeds') and was puffed up even more when, in Buenos Aires' Luna Park, the Actors' Association organized a benefit festival in aid of the

victims. It was midway through this festival that Colonel Perón and Eva Duarte were 'formally' introduced – and this very public occasion not only cemented Perón's popularity with the *descamisados* but also marked the start of the 'official' relationship between Perón and Eva.

(No satisfactory account was ever made of the disposal of the £4 million San Juan Relief Fund contributions. With the earthquake quickly forgotten, only the survivors were to know that little more than a token reconstruction of San Juan had been undertaken and that even this was subsequently dropped. Shortly after, Perón supervised and financed the construction of a special 'home' for a number of 'attractive' teenage orphans. It was widely believed that he did so with the money originally donated for the reconstruction of San Juan.)

Events now progressed with bewildering speed. All too aware of Perón's popularity with the *descamisados* and of his intention to eventually become President himself, President Ramirez ordered a thorough investigation of the Ministry of War and the Secretariat of Labor and Welfare. When the investigation revealed that all the major posts in the Ministry were held by Perón's GOU officers, Ramirez, on February 23, 1944, declared the GOU formally dissolved and then called for Perón's resignation.

That night, six of Perón's GOU officers entered Ramirez's study and forced him, at gunpoint, to sign his own resignation. By the following morning a new government had been formed, officially headed by Ramirez's Vice-President, General Edelmiro Farrell. Since everyone knew that Farrell was no more than Perón's trained seal, there could be little doubt in anyone's mind as to who held the real power. By May 4, Perón was Minister of War and by July 7 he was the Vice-President of Argentina.

* * *

Eva Duarte was now showing her fangs – both as a revered public figure and as a private, vindictive woman. In June, even America's *Time* magazine (which Eva would eventually ban in Argentina) was reporting: 'The breathless eight-month rise of Eva Duarte from artistic obscurity to one of Argentina's highest-paid radio contracts is the talk of Buenos Aires. Eva is lovely to look at – tall, svelte, brunette, alabaster-skinned, twenty-six. She is also the favorite of Colonel Juan Perón, Minister of War and strong-boy of Argentina.'

Time has never been known for the accuracy of its articles and its report was inaccurate on a few counts. Eva, if a natural brunette, was then blonde. She was not 'tall' but was actually only 5ft 2in, a sly deception being practised by the use of her three-inch heels. However, *Time* then recounted a story that was in essence true.

Eva, now known by the diminutive of 'Evita' (little Eva), was in competition with Nina Cascallar, the then favorite of Captain Villegas, Argentine Federal Interventor of National Radios. The confrontation between Eva and Nina occurred on one of Argentina's national holidays when Radio Belgrano, Buenos Aires' most popular broadcasting station, fell behind schedule. Nina, who was supposed to go on the air ten minutes before Evita, wanted to be heard, although her time had already overlapped with Evita's. Evita refused to give her the extra time and, being the mistress of Colonel Perón, received backing from a Belgrano official.

Stung, Nina waited until Colonel Perón left town the following week for an inspection trip to Cordoba Province. Then, one evening during that week, just before Evita was scheduled to go on the air as star of *My Kingdom for Love*, a dramatization of the Elizabeth Essex romance, someone in the control room switched on the microphone prematurely and listeners all over Argentina heard the announcer proclaiming, 'That tart is on!'

The Press-Propaganda Office promptly hit Radio Belgrano with a forty-eight-hour advertising suspension for 'expressions which constituted an affront to the nation's culture and violated the fundamental principles of broadcasting, which today is the greatest vehicle for the diffusion of spiritual, social and moral culture.' By the time the suspension was lifted, it had cost Radio Belgrano £2,000 worth of advertising revenue – and it also cost Nina Cascallar her job.

The affront had not been to the nation's culture, but to the mistress of the Minister of War, Colonel Juan Perón.

And Evita was now Radio Belgrano's leading lady.

With Evita now in a position to become the most powerful propagandist in the country, and with Perón established as official Vice-President and unofficial leader of Argentina, the great love spectacle of the century could begin.

Chapter Eight

Perón and Evita now set out to build an unbreakable political power structure. Since successive governments had ignored the country's underpaid laborers, the *descamisados*, Perón began his bid for the Presidency by announcing that he was a 'syndicalist', a 'patriot' and 'the first Argentine worker.' In fact, even as he was publicly aligning himself with the 'shirtless ones', he was quietly incarcerating the labor leaders who had turned against him in prison camps in El Chaco and Patagonia. This task completed, he took control of the unions by seducing their remaining leaders with highly paid government jobs.

Urged on by Evita, now the secret fantasy mistress of the working masses, he began talking the language of the workers, was photographed sharing wine with them in waterfront bars, dressed as casually as they did, pretended to listen to, and take note of, their grievances, and finally, having already bought off their remaining leaders (those more easily corrupted than the ones he had thrown into prison), he installed his own supporters as the new heads of the unions. Also, more often than not in the company of the glamorous and increasingly popular Evita, he began personally attending innumerable labor meetings up and down the country. Together, he and Evita sought out the workers in the shanty towns of Buenos Aires, in the slaughterhouses of Avellaneda, the granary centers of Rosario and Santa Fé, the industrial cities of Cordoba, the vineyards of Mendoza, even the remote rural regions of Salta and Corrientes, in order to win their hearts and minds.

Adopting the style of oratory he had learned from his hero, Mussolini, Perón became increasingly successful at convincing the *descamisados* of his sincerity in wishing to place the country's affairs in their hands. In this he was helped enormously by Evita, who, having become the most popular woman in the country, their very own 'little Eva', would give lengthy speeches in her impassioned, actressy manner: voice raging, brown eyes blazing, hands waving expressively above her blonde head, spine curved, breasts out-thrust, her crimson lips pouting and beseeching, reminding them of what she was supposed to be good at: her carnal road to sainthood. Evita was both saint and sinner to them – and they could not resist her.

In fact, Evita now believed in her own manifest destiny. Having literally turned herself into one of her imaginary childhood heroines, she was living the role to the hilt and being raised on high by it. At last she had a reason to *be*, and it was greater than she was. Already a celebrity, the focus of mass dreams (star of stage, screen and radio; her picture on the covers of newspapers and magazines), she now viewed her growing legions of fans, the *descamisados*, as extensions of herself. A poor girl from the pampas, exploited and abused, she knew exactly how the workers suffered and felt at one with them. She knew what they needed, what they wanted, and she shared their frustration. They in turn were the heart and soul of the country and only she could unite them.

Driven by a huge ego and supreme self-dramatizing, Evita came to believe the very myth she was creating about herself, now seeing her past struggles and countless humiliations as the fire in which her destiny had been forged.

'I'm not leading my people because destiny demands it,' she would say later, 'but because, perhaps without realizing it, I prepared myself as if I knew instinctively that one day this responsibility and privilege would fall to me.' Evita created her own legend. Having created it, she then came to believe it and felt herself sanctified.

The combination of sex and sincerity was irresistible to the masses. For how many generations had the *descamisados* dreamed of attaining power, of tearing the wealth out of the hands of the bourgeoisie who had ruthlessly abused and exploited them? Now that power was being offered. Now that wealth would soon be theirs. Now the old, suppressive structure was being torn down to make way for self-rule and social justice. Even better, it was being offered by Juan Perón – not a remote politician, but a common man like themselves, a true child of the pampas, and a bold, macho soldier who (and how could they not admire this?) had an eye for the ladies.

And what a lady he now had! Their very own little Eva – Evita – this beauty who had escaped the same poverty that had imprisoned them, who like them had suffered hardships and dreadful humiliations, who had offered her full, crimson lips and her 'little whore's' artistry as the price to be paid for her freedom.

How many of them had dreamed about her? How many had worshipped

her on the silver screen? How many had thrilled to the sound of her voice on the radio, its histrionic sensuality, its promise of forbidden fruit, and imagined that she was talking personally to them?

Too many to count.

The whole show was irresistible: two children of the pampas, one of whom becomes a courageous military hero, the other his beautiful, blonde mistress, both of whom go on, hand in hand, to lead their people to glory. Love and sex and suffering and commitment – a soap opera for the long deprived, yearning masses; a fairy tale for the times.

To the average working Argentinian, who thrives on romance and scandal, the love affair between Juan Perón and little Eva was a blandishment beyond hope of resistance, an almost total seduction.

By the middle of 1945, Perón and Evita had a massively unionized country with the unions firmly under their control. Now heavily infiltrated by Perón's minions, the unions were faced with his Six-Point Labor Plan: (1) State control of all unions; (2) The State to elect the union members; (3) No central controlling union; (4) Suppression of political activities; (5) Submission to the judgement of the State in solving industrial problems; (6) Army discipline and military organization methods for the unions. Thus backed by the growing authority of the State and reinforced with the allies he had built up within the unions, Perón now held a power much greater than the military itself could hope to command. National leadership was therefore his (and Evita's) next goal.

Though the Second World War was ending and Perón was being deprived of the support of the Nazis, it was becoming clear to one and all – particularly to the ruling classes and the students of the universities – that he was trying to set up a self-serving fascist dictatorship. In June 1945, the Socialist and Radical Parties violently expressed their antagonizm to Perón's affairs and similar passions then raged throughout the whole of Argentina, with the students, in particular, demonstrating noisily and frequently. By August, an extraordinary anti-government coalition of conservatives, radicals, socialists and communists was demanding that the Supreme Court should take over the administration of the country and hold an election. By September, thousands of student protestors were marching through the streets of Buenos Aires.

Perón reacted by closing down the universities and sending most of their deans and rectors to jail. When the students counter-reacted by once more swarming into the streets, they were attacked by mounted police and armored vehicles; others were fired upon by the army, resulting in many casualties; and thousands were arrested and imprisoned. Refusing to quit, the students barricaded themselves into the colleges and surrendered only when attacked with tear-gas bombs. By this time, the members of the coalition's Board of Democratic Coordination were either in prison or in hiding – and the beloved Evita, who had never shown fear before, was carrying a hand grenade for protection.

Stories of wholesale beatings and torture were rife at this time and many of them were later substantiated.

By now, even the Argentine army was suffering dissension within its ranks and there were officers who, fearing that the increased public disorder would result in the overthrow of the entire social structure, felt that Perón must be restrained. This came to a head on October 9, when senior officers of the Campo de Mayo met in a council of war and decided that Perón had to go. Stung by this news, Perón, a mere Vice-President, sent his message boy, President Farrell, to the Campo de Mayo to slap the wrists of the recalcitrant officers. Farrell did not return. Instead, Generals Pistarina and von der Becke arrived with the statement: 'The President feels it is advisable that you should resign.' Left with no choice, Perón reluctantly signed his resignation papers.

By October 12, the whole of the government had resigned, with General Farrell remaining as President, though General Avalos was effectively in charge. That night, Perón was arrested, escorted on to the gunboat *Independencia*, and then transferred to prison on Martín García Island.

The Kingdom of Evita was at hand.

Chapter Nine

Evita had gained power by offering her love and was now hopelessly in love with power itself. Having seen the light of glory in the eyes of the *descamisados*, having captured them with her Goebbels-like mastery of the

radio (her voice rising and falling, now murmuring, now shrieking, now emoting with a vibrant, sensual sob) she suddenly saw her chance to strike out on her own and align herself fully with Perón.

Whether or not Perón was in love with her or simply wanted her body, he was certainly now aware that their romantic-political relationship was one of his most potent weapons. It will never be known if he would have approved of what she was planning; what is certain is that, once the plan had succeeded, he could not let her go for fear of losing the support of the *descamisados*. Yet he must have been worried. Who really controlled the *descamisados*? If they loved Evita more than they loved Perón, how much of his forthcoming power would he have to share with her?

Juan Perón sat in jail. Evita schemed to get him out. She had been attracted to Perón's power and that power was now growing every day. As a woman alone, Evita could not rule Argentina, but with Perón beside her, with her pulling the strings, she could exact vengeance for all the old wrongs and raise herself to unassailable heights. Given her subsequent actions and her fierce resentment of the Oligarchy, it would seem that the salvation of Perón was solely a political move on her part.

While Perón was sweating it out in the island jail of Martín García, his friends in the unions organized a revolt of the workers on his behalf. Perón had gone to prison on October 12. By October 16 the slaughter-yard and packinghouse workers of the nearby towns had begun to move into Buenos Aires by train, truck and foot. By the 17th, they had occupied the city. On that same day, Perón's strong-arm union man, Cipriano Ryes (who would later be brutally tortured in one of Perón's prisons) persuaded the factory owners that it would be 'healthy for themselves' if they closed down their factories for a day's holiday. Subsequently, that morning, thousands of workers poured across the Riachuelo Bridge to demonstrate in front of the Central Military Hospital where, so it had been rumored, Colonel Perón was due to arrive for treatment.

This rumor was true in the sense that Perón had been complaining of pleurisy (a ruse to have himself removed from the island prison and thus, automatically, out of captivity), and that General Farrell, after seeing the thousands of workers in the capital, decided to capitulate and use Perón's hospitalization as an excuse for releasing him.

As for Evita, who had been relentlessly stirring the masses with her histrionic radio speeches, she was also arranging for every kind of transport to bring great numbers of workers, male and female, from the neighboring towns and villages. By late afternoon of October 17, the center of Buenos Aires was packed with thousands of workers, most of whom were coatless (a shocking sight in bourgeois Buenos Aires) and, even worse, shirtless.

It was then that Evita, shrieking passionately into a microphone placed high above the teeming thousands, turned the word '*descamisados*' – formerly a shameful word – into one of glorification and self-respect.

'This word *descamisados*,' she cried out, 'has been transformed into a synonym for struggle, for revindication, for justice, for truth! It has created a state of national conscience! It has been implanted in the soul of the people, like a magic impulse, to carry them forward!'

The thousands of *descamisados* roared their approval – and that roaring gradually changed into the thunderous, repetitive chanting of 'PAY-RÓN! PAY-RÓN! PAYRÓN!' Given this, President Farrell had no choice but to give in. That evening, a car fetched Perón from the hospital and took him directly to the Casa Rosada (the Government House in the Plaza de Mayo from which many a President had previously fled) while the cheering mobs raced around the vehicle. Amid scenes of mass hysteria, President Farrell, now repentant, and Colonel Perón, now forgiving, appeared together on the palace balcony and embraced. Colonel Perón then offered an impassioned speech in which he gave his 'first welcome' to the true soul of the country: namely, the roaring *descamisados*.

* * *

On October 21, 1945, Juan Domingo Perón and Maria Eva Duarte were married in a secret ceremony performed in her home town of Junin. The marriage was to be solemnized, on December 10, with a church ceremony in the town of La Plata.

If love had formed part of the marriage, it had certainly not formed the whole. In fact, the marriage had sprung out of political motives. All of Buenos Aires and much of the rest of Argentina had been speculating on the next development in the Great Argentine Love Story. If Perón's *casa chica* was the collective dream of the *descamisados*, she could not be allowed to remain as such: Perón either had to get rid of her or legitimize the

relationship. While many felt that Perón was reluctant to do either (he may have wanted Evita, but he was also wary of her), his closest friends and supporters felt that the popularity of his *casa chica* made it mandatory that their union be legalized. So it was that Perón and Evita, the dream couple of Argentina, finally became man and wife.

Evita could now exact vengeance on all those who had wronged her.

First to feel the hand of retribution was Señor Yankelevich of Radio Belgrano. Long weary of the incessant demands of his influential minor actress, Yankelevich, upon hearing of the arrest of Juan Perón, had given Evita the boot. Ten days later, as Perón embraced President Farrell on the balcony of the Casa Rosada, Yankelevich not only had to let Evita resume her place behind the microphone but was forced to pay for her absence, give her another enormous rise in salary, and throw in limitless freedom regarding the contents of her program.

From this point on, Evita more or less ran Radio Belgrano.

Determined to be the First Lady of Argentina (having, as it were, already sampled the unique benefits of power), she used her control over the radio station to shower her listeners, in particular the *descamisados*, with her love and Perón's undying devotion. Given such sterling support, Perón launched himself forth as Presidential candidate, first resigning from the army, then proclaiming at a rally of his supporters: 'I join the ranks of the *descamisados*!'

To ensure that he would have the full support of the shirtless ones, he had the government decree that all employers must pay their workers a thirteenth month's wages as an annual bonus. Thus buying the loyalty of the formerly oppressed workers, he went on to suppress all opposition. With Evita on Radio Belgrano and with all other stations strictly controlled, his police and bully-boys went out to break up all opposition meetings. The Oligarchy and the Jews soon became the common enemy, antagonistic foreign journalists were threatened or beaten up, and a lot of middle-class professional citizens had their collars and ties shorn off.

According to Spruille Braden, then the American Ambassador to Argentina, 'civil liberties, the right of assembly, and the freedom of both speech and the Press' were suspended. Braden also described the Presidential candidate as 'a self-styled Leader, supported by a Party aping its Nazi

prototype'. Within days of this report, Perónist leaflets appeared in the streets of Buenos Aires, describing the American Ambassador as an 'undershirt diplomat', a 'cowboy', a 'rustler' and a 'gangster' comparable to Al Capone. Also, Braden's life was threatened.

The Perónist cause steamrollered on. In November, a new Labor Party made its appearance in Argentina, headed by Perón's old friends, Cipriano Reyes and Luis Gay. Included in their program was the nationalization of telephones, electric power and railways – all of which were predominantly owned by foreigners – and shorter hours and a share in the profits for industrial workers. After passionately proclaiming his faith in the New (Perónist) Argentina, Luis Gay, President of the new party, announced Colonel Juan Perón as his candidate for President.

In an attempt (ultimately successful) to gain the support of the strong Radical Party, Perón found ministerial posts in President Farrell's government for Juan Hortensio Quijano and a couple of his fellow deputies. Forming an organization called the Radical Reconstruction Committee, the three collaborationists prepared for a Nomination Convention in the New Year to put forward Perón and Quijano as their candidates for President and VicePresident respectively. A few days later, the Labor Party nominee for the Vice-Presidency, Colonel Mercante, was forced to stand down and make way for Perón and Quijano.

The Perónists and trade unions now arranged a fullscale *blitzkrieg* against the opposition, breaking into their offices, disrupting their public meetings, beating up their supporters, and calling in both the federal police and the army when strong-arm tactics were required. Allied to this was an increasingly brutal campaign against the Jewish quarter ('Be a patriot: kill a Jew!' was an early slogan of the *Perónistas*) and the arrest of countless members of the Oligarchy, including 'ex-Foreign Ministers, Nobel prizewinners, surgeons and leading land-owners'. By December, Buenos Aires had become a battle-ground of street fights, riots, police baton charges, tear-gas attacks, shooting, bomb-throwing and arson, with crowds of frightened citizens squabbling daily for places on board the steamers to Montevideo.

Appalled by what was going on, Argentina's few remaining independent businessmen arranged a lock-out in the New Year as a protest. Known as the

Employers' Strike, it was the most threatening opposition that Perón had had to face so far. He solved the problem by summoning the trade union leaders and pointing out to them that, if the employers held up production for a period of even a few months, the power of the Perónist movement might be smashed forever, leaving them back where they had started, at the mercy of the hated Oligarchy. The locked-out workers were then brought back into the factories (reportedly by gangster tactics) where they were encouraged to get production going again. On orders from Perón, one of the tactics used to make them return to the factories and keep them at work even against their will – since many were justifiably frightened to be seen defying the factory owners – was the deliberate flooding of their homes by the Fire Department. This drove whole families, who might otherwise have resisted, back to work. The Employers' Strike was smashed.

While frightened citizens continued to queue or fight for places on the steamers to Montevideo and while Perónist thugs were breaking up opposition meetings with clubs, axe handles and knuckledusters, Evita was not lying low. Indeed, aware that about one in every five Argentinians was illiterate and therefore totally dependent upon the radio for news, she had been working relentlessly in that area. Still employed by Radio Belgrano, which she now controlled almost totally, she was also Perón's official publicity officer as well as his wife, and did not hesitate to use the stream of broadcasting 'regulations' that had been pouring out of President Farrell's Perón-dominated offices to deny radio access to opposing parties whenever possible. She also spoke a lot herself, taught Perón the tricks of broadcasting, and in general ensured that Perónism dominated the airwaves.

Finally, on election day, no strong-arm tactics were required to collect Perón's votes. The previous barrage of demagogy and violent persuasion had managed to eliminate all opposition. On February 24, 1946, the male citizens of Argentina, by an honest vote, elected Juan Domingo Perón as their President.

That night, the celebrations in Buenos Aires were spectacular. Food and wine were lavished upon the Perónist supporters, oxen were barbecued in the streets and parks, and dancing and singing continued until dawn.

The day that Perón became their legal President, more than a million Argentines roared with unquenchable enthusiasm. Packed in behind the rows

of steel-helmeted, bayonet-bearing soldiers who lined the Avenida de Mayo from the Chamber of Deputies to the Casa Rosada, the ecstatic *descamisados* waved and cheered and threw flowers. At the stroke of midday, resplendent in the bluegold-encrusted dress uniform of a brigadier-general, Perón strode into the great hall of Congress, surrounded by beribboned generals and starched diplomats. Smiling from her special box was the alabaster beauty, Señora Peron, beloved as 'Evita'. Seated close to her, his many medals glittering, was Constatin V. Sheveley, commercial representative of the Soviet Union, who had just announced the resumption of relations between Russia and Argentina. Later would come the drive to the Casa Rosada, between the blue-and-white-striped Argentine flags, and, in the blue gloom of the Casa Rosada's white salon, surrounded by grenadiers in the uniforms of the Independence period (blue tunics, red-striped trousers, red pompom-topped shakos), the handing of the mace from the tearful exPresident, Edelmiro Farrell, to the solemn-faced, inwardly jovial President Perón.

Evita was now the First Lady of Argentina.

Chapter Ten

Shortly after meeting Juan Perón, Evita made her final two films, *La Cabalgata del Circo* (*The Cavalcade of the Circus*) and *La Prodiga* (*The Spendthrift*). The latter had a title so prophetic as to be miraculous, but instead of being released to the general public, it was given to President Perón as a 'personal gift' from the producers. The former, a critical and box-office disaster, was one of the many movies starring Eva Duarte that the more dignified Evita would have destroyed. From this point on, she would make no more movies, though in truth she would never stop acting.

In fact, Evita had made a great number of movies, most of them dire, a series of historical romances filled with drama and great achievements of the kind she had imagined in her childhood. On the radio and in cinema she had played the great women of history and other, fictional, women of singular achievement. Now, as the line between theatricality and real life became

blurred in her mind, she created a composite of all her favorite characters and gradually turned this magical creature into the one who would soon become widely known as *Santa* (Saint) Evita.

'She created a character,' said Señor Julio Alcaraz, her regular hairdresser. 'In her public life she created a character for herself, and she lived this character totally.'

Undoubtedly this was true. From the moment Eva Duarte took up with Colonel Perón, the remaining shreds of her more human side were stripped away. Evita now loved Perón as the child Eva had loved her daydreams, seeing neither reality nor truth: only the possibility of glory in the eyes of her lover. If Perón had once been flesh and blood, he had since gone beyond that: he was the miracle of a dream made manifest, his destiny mapped out. Evita shared that destiny. The country's heart beat in her breast. She and Perón and Argentina – the Holy Trinity – were one and the same. For this reason, her love for Perón, which was a passion like no other, had changed into something more noble than the body's base hunger.

> I was not just the wife of the President of the Republic; I was also the wife of the Leader of the Argentine people… I feel as though I am the real mother of my nation… Perhaps I don't suffer with it? Perhaps I don't enjoy its happiness? Perhaps its griefs do not grieve me? Perhaps my blood doesn't race when it is insulted or criticized? My loves are its loves. For this reason I love Perón in a different way to that in which I used to. Before I loved him for himself. Now I love him because his people love him!

What greater love than this? What country could ask for more? If Evita was to be childless, if her rumored distaste for sex was real, was it not also true that when she made love to Perón she could enjoy it only because she felt that through him she was the whole nation's mistress. Others insisted that she was the nation's mother. So through Perón she made love to the nation and gave birth to its future. If sexless, she had emotions. Or, like an actress, she *conveyed* emotions. Once Eva, now Evita, that more intimate 'little Eva', she would encourage her people to view her as both mistress and mother.

> When I chose to be 'Evita' I knew I was choosing the path of my people. Now, after making that choice, it is easy for me to show that this was the case. Only the people call me 'Evita'. Only the *descamisados* learnt to call me that. Government ministers, political leaders, ambassadors, businessmen, professionals and intellectuals and all the others who visit me usually call me 'Madam'; and when in public some of them say, 'Your most excellent and worthy ladyship', or sometimes, 'Lady President'. They only see me as Eva Perón. On the other hand, the poor only want to know me as 'Evita'. That's how I introduced myself to them when I went to meet the poor of my country; saying that I would prefer to be 'Evita', rather then the President's wife, if this 'Evita' could help relieve any grief or dry any tears.

Evita's conviction that she represented the soul of her country began during her days as Perón's mistress. Now, as the First Lady of Argentina, her belief in the power of the working masses confirmed, she set out to become the most powerful woman in Latin America and, hopefully, the world.

Afire with the revealed love of her loyal *descamisados*, moved by the conviction that she represented the New (Perónist) Argentina, she wasted no time in turning her flamboyant dreams into reality.

Soon after taking over the Presidency, Juan Perón gave his wife a desk and a few 'small chores' to do at the Secretariat of Labor, his old post. Within weeks, the Secretary of Labor was simply running Evita's errands while Evita got on with running the whole show. Before a month had passed, seasoned politicians who had thought of Evita as no more than an ambitious 'little whore' were learning, frequently to their cost, that she was tough, shrewd and ruthless.

Adapting the same dawn-to-dusk working routine as her husband, she interviewed hundreds of people weekly and traveled all over Argentina, making speeches at countless union rallies. In no time at all, she had taken over the management of the rowdy but loving *descamisados* from Perón, seducing them into submission with her charm and generosity, thinking rarely of the consequences of what she was giving away, only concerned with the

immediate, invariably warm, response.

The response was always the same, though it grew ever warmer. Soon the workers thronging in May Square, instead of chanting ‘Perón! Perón!’, were chanting ‘Evita! Evita!’ until the latter took precedence over the former. And, under her alluring command, the once powerful General Confederation of Labor became a docile Perónist instrument, reduced to carrying out orders and staging mass demonstrations in the Square.

‘She’s worth more to me than five ministers,’ Perón announced to the press.

Under Evita’s direction, Perón had made political capital during his Presidential campaign out of designating women’s suffrage a basic plank in the Perón platform. Now Evita, a woman with no female friends, was using women’s suffrage to strengthen her position with the underprivileged. Adding a votes-for-women campaign to her long list of public activities, she also broadcast in its favor every Wednesday night from Radio Belgrano. Not content with this, she ‘bought’ control of the newspaper, *Democracia*, and entered the publishing field, kicking off with a new daily column: ‘The Argentine Woman Wants to Vote’. By now she had gained indirect control of the principal Argentine newsreel companies and was ensuring that she appeared at least two or three times in every newsreel, usually against background scenes of other women and children, and invariably proclaiming the right of women to vote.

This gambit was no accident. Like the good public performer she was, Evita knew that much of her appeal lay in her good looks and that her major support, which came from the macho workers, had incidentally caused resentment amongst their women. By liberating women, and by her forthcoming acts of charity, she was not only widening the broad base of her support, but also heightening her image as a saint. Because of this, she became a heroine to her formerly oppressed countrywomen.

‘Evita represents the authentic symbol of the Argentinian woman,’ said Ebe Bedrune, a popular young bandleader, ‘because, above all else, she has not lost her feeling for humanity.’ And regarding Evita’s fight for women’s rights: ‘She is the first girl, if I may call her that, who has elevated our thoughts and taught us our mission as citizens.’

Ostensibly a women’s liberationist (before the term became fashionable

in the West), Evita was actually laying the groundwork for a pro-Perón (thus pro-Evita) Women's Party. Yet to say this might well be an injustice, since, if Evita was many things (cold, calculating, shrewish, vindictive), she was also genuinely involved in the plight of her countrywomen. Her own past – with its hardships and humiliations, its revelations of how an Argentinian woman would always be a second-class citizen, mere chattel to men, forced to beg and surrender her honor for what she needed – had imbued her with this singular, genuine passion.

Even though her economic ignorance, distorted view of social justice and vengeful nature would eventually lead the country to near ruination, her passion for women's rights was sincere. Like many a woman who has been used by many men, Evita both despised and was totally dependent upon the male sex. Though her steely resolve and unwavering ambition in a man's world had divorced her from close friendships with other women, she continued to despise men for how they had used her and, aware that other women had suffered similarly, she sympathized with women in general. Indeed, one of her legitimate triumphs was won in September 1947 when her bill giving women in Argentina the right to vote was approved.

* * *

However, by late 1946 Evita was still rushing breathlessly through her new career as First Lady of Argentina. In her office on the fourth floor of the Central Post Office Building she was receiving trade union delegations before her bourgeois neighbors (who despised her) had risen from their beds in the swank houses along the Avenida Alvear. Cabinet ministers eager to hear and kowtow to her views, teachers and nurses quick to note a militant feminist, ragged mothers from poor villages, hungry gauchos from the pampas, and trade union leaders seeking pay rises for workers poured daily into her jammed waiting rooms. When not seeking to deal with these humble souls, Evita would be sitting in on conferences to debate her husband's latest labor policy or the government's anti-inflation campaign, much to the annoyance of the other cabinet ministers – an annoyance they dared not show.

Abused and used in childhood and adolescence, Evita had come to understand the mechanics of power and the value of having trustworthy friends placed in useful positions. It did not pass unnoticed that her playboy brother, Juan Duarte, had promptly been elected as her private secretary. Nor

that Evita was surreptitiously surrounding the President with more and more of her own men, most of them servile mediocrities who would leap to obey her. Thus well guarded from the rear, she could turn her pretty face towards the masses awaiting her charitable ministrations. And the public and private faces of Evita were two different masks.

'It wasn't difficult to publicize Eva Perón,' said Raul Apold, the Press and Propaganda Secretary, 'given that she gave so much. During the Presidential campaign she was really Perón's backbone. For the people she was part of their flesh and blood. Especially in the interior, where they had real admiration for this young girl with her smile and her strong, piercing eyes. Eva wasn't worried if she made enemies herself, but she couldn't forgive those who were enemies of her husband.'

The public Evita was the soul of saintliness and generosity, but the private Evita was a different person altogether. She enjoyed taking revenge for all the real or imagined wrongs done to her, and now, with her authority and power, she set out to do so.

Señor Yankelevich of Radio Belgrano had already suffered at Evita's tender hands and now two of the country's most popular actresses, Dolores del Rio and Amanda Ledesman, found themselves in a similar position. Ledesman, who had been the star of a radio show in which Evita appeared during her early years in Buenos Aires, suddenly found radio work unobtainable. As for Dolores del Rio, she was already successful in the Hollywood despised by Evita because it had so consistently rejected her. So, for some real or imagined slight, dating back to when she was working in a picture in which Dolores del Rio was starring, Evita had the actress barred from all Argentine studios. Eventually, North American producers came to realize that US movies featuring Dolores del Rio were no longer being bought by Argentine cinemas. Dolores del Rio, her career in Argentina destroyed, went off to Hollywood and never returned.

Among others forced out of Argentina by Evita were:

Huge del Carrill, who had pinned a facetious note on Evita's first mink coat in a Buenos Aires nightclub; Nina Marshall, the Argentine's leading radio and film star, who had made the mistake of imitating Evita at parties; and Pedro Cuartucci, who had refused to sing a serenade on the balcony of the Casa Rosada on the day of Perón's liberation from prison. Likewise, while

Evita would greet the poor and the humble with a radiant smile and a generous check book, she would coldly abuse and then dismiss any nonunion worker or middle-class professional in her presence.

This private Evita – the one who needed revenge for all real or imagined slights and who had to destroy all those opposed to her or her husband – was now about to embark on the most flamboyant escapade of her political career: the infamous Rainbow Tour.

* * *

If Evita had been accepted by the *descamisados* as their saviour and Lady of Hope, she was still despised by the wealthy of Buenos Aires (the Oligarchy) who could not forgive her for her common background and her early years as an actress, regarding her as a vulgar, ambitious tramp. In a sense, while Evita had won the love of the 'shirtless ones', she had still not proved herself as a woman fit to be the President's wife. It was perhaps because of this that Evita began to dress more lavishly in public, to adorn herself with all the regalia of a Great Lady, dressed primarily by Christian Dior, wrapped in other glittering gowns by Fath and Rochas and Balmain, in expensive furs and extraordinary jewelery. No longer a Lana Turner lookalike in period costume, she was now more in the line of an Argentine Grace Kelly, she of *The Swan*, a blonde-haired, sophisticated beauty of the most refined kind. In doing this, Evita was seeking to impersonate and, perhaps, equal the very people she most despised: the wealthy, snobbish women of the Oligarchy. So far it hadn't worked.

However, Evita had a second reason for launching the Rainbow Tour. Much of her growing popularity at this time was due to her cleverly staged public acts of charity towards the poor. Though other, more reputable, charity organizations had been doing their work quietly for years, Evita was now putting them in the shade by ensuring that her own good deeds were widely publicized. (Her personal photographer was never absent when she dished out the money.) More vitally, she had already started wresting control from many of the other charities and was using her authority to do them serious damage.

The most important of these charities was the Sociedad de Beneficencia (Society of Philanthropy), which was run by the female social élite of Buenos Aires. The perennial president of the organization was the wealthy Señora Maria Unzue de Alvear; but the post of honorary secretary was traditionally

reserved for the wife of Argentina's President, who was, at this particular time, Evita. Evita wanted the post, but the women of the society refused to offer her the position, making it clear that they still despised her as a commoner.

It was Evita's intention to force the snobbish upper crust of Argentine society to receive her socially, primarily by electing her as honorary president of the Sociedad de Beneficencia, and she felt that she could do this by courting the crowned heads of Europe and returning to Argentina as an honored lady. The Rainbow Tour was therefore, at bottom, a self-serving public-relations campaign.

'I send you my rainbow,' President Perón cabled to the Spanish government.

Evita left on her Rainbow Tour in June 1947, reportedly with five dozen lavish costumes, enough jewelery to sink a battleship, and a considerable amount of Argentine pesos in cash. Stopping first in Spain, she passed on the regards of one dictator to another by saying to General Franco: 'I did not come here to establish an axis, but only as a rainbow between our two countries.' General Franco, a wily old fox, awarded the mink-coated beauty the Cross of Isabel La Catolica and sent her out to greet the worshipful Spaniards. The Spaniards, ever enamoured with women who wore ostrich plumes and mink, gave her a rapturous reception while she dispensed gifts of hard cash to the tune of over £1,000 per day.

It was all downhill after that.

From Spain she went to Italy where, from the balcony of a forty-room mansion that had cost Perón's Embassy in Rome £100,000 to prepare, she was shocked by the roars of 'Down with Perón! Down with Argentina! Down with fascism!' Undeterred, she went on to an audience with Pope Pius XII, from whom she hoped to receive the highest papal decoration, the Supreme Order of Christ. Instead, after an audience of thirty minutes, she was awarded the Grand Cross of the Order of Pius IX, a magnificent, diamond-studded, eight-pointed star that was, nonetheless, only second in the papal hierarchy. As if this were not enough, when she then visited Northern Italy, the communists bawled obscenities, most notably by calling her a whore. Shocked again, Evita turned to her official escort, a former senior naval officer who slyly ground salt in her wounds by murmuring, 'Think nothing of

it, my dear. I haven't been to sea for fifteen years and they still call me an admiral.' Finally, after Evita had suffered a merciless grilling by the press, some American GIs showed their own kind of respect with wolf whistles.

Simultaneously outraged and humiliated, Evita left Italy and travelled on to France.

In Paris, after being received by President Vincent Auriol and other leading dignitaries, she witnessed the signing of a Franco-Argentinian commercial treaty, extending a loan of £150,750,00 to France. Alas, if the glamor-smitten Spaniards had given her a rapturous reception, the more sophisticated French were less impressed. After Evita had obliged the photographers (she was always more keen on photographers than on journalists, as is the case with most actresses) by showing off the furs, gowns, hats and shoes that she had acquired in an orgy of shopping, one member of the French press was moved to write: 'Madam Perón would be more palatable to the French workers and peasants if she were dressed as a piece of Argentinian frozen beef.' Following this, she had her car's windshield smashed and the windows cracked by an expertly thrown brick and was then grossly insulted in a Paris nightclub. Subsequently, though compelled by her official schedule to remain for some time in Paris, *La Bella Blonde d'Argentina* lost her enthusiasm and, suddenly tired and pale, her smile infinitely more painful, started canceling appointments and waited listlessly for a call from the Queen of England.

Evita was expecting to be invited to stay in Buckingham Palace as a house-guest – the one thing that would finally force the ladies of the Avenida Alvear to accept her and make her honorary president of the Sociedad de Beneficencia – but, alas, such was not to be the case. After a lot of hedging by the guardians of the Palace, she was finally invited merely to take tea with the Queen. Furious, she resolved to return home.

Something else might have disturbed her during her stay in Paris. Throughout the period she was there, her activities were being watched by Perón's Secret Service and reported back to Argentine's Government House in Buenos Aires. It is possible that Evita found out about this, since her brother, Juan Duarte, also close to Perón, was traveling with her. What Evita *did* know is that Perón had made his first world broadcast in her absence and that he had, subsequently, taken to the air in a big way. In fact, Perón was to

make over one hundred broadcasts during 1947 and many of them were made, often to be broadcast much later, during Evita's seemingly convenient absence. Evita, therefore, with her passion for personally controling the Argentinian airwaves, might have felt resentment and possibly even fear at learning what her husband had been up to behind her back. Certainly, later, there would be many ominous rumors of private rifts between her and Juan Perón.

No official explanation was offered in Argentina for the fact that Evita and her brother made a brief trip to Switzerland. Though it was hardly mentioned by the press, a number of Argentinian officials would later suspect that the trip had been made for the purpose of setting up Evita's notorious Swiss bank account.

Whatever the purpose of her visit, Evita soon returned from Switzerland and then left Paris quietly, without the cheers and boos of Madrid and Rome respectively, slipping away as if she had never been. After dallying briefly on the Riviera (where, for the first time, she deliberately avoided the press photographers), she returned to Argentina by way of Brazil. In Rio de Janeiro, where she attended the Inter-
American Joint Defence Conference, the streets were covered with thousands of huge posters of her, most of which the Brazilian police hastily tore down. Finally, smiling brightly to hide her true lack of spirit, she returned to a triumphant welcome in Buenos Aires, where Perón gave a passionate public speech and Evita, also in public, wept for joy.

* * *

The Rainbow Tour made Evita's fame (or infamy) known worldwide, but it still did not gain her the honorary presidency of the Sociedad de Beneficencia. It was out of this dogmatic refusal, this all too public sign of the Oligarchy's contempt for the 'little whore', that Evita's most obsessive lust for vengeance and total power was born.

Less than a year later, she had killed off the historical Sociedad de Beneficencia, replaced it with 'the biggest racket the world has known in our time', and finally, with a malice that knew no bounds, refused permission for the remains of the recently deceased president of the society, Señora Maria Unzue de Alvear, to be buried next to those of her husband in the family tomb of a church that had been founded and built by Señora de Alvear out of

her own purse.

Evita, having proved that she could not be scorned, turned her back on the ruination she had wreaked and went on to bigger things.

Chapter Eleven

The Perón's method of consolidating their power was simply to take care of everyone who supported them, irrespective of the future cost. Perón spent lavishly on the army and allowed, or didn't dare stop, Evita's own extravagant spending. The basic *modus operandi* was to offer a public spectacle of generosity, keep everyone happy, strengthen their popularity with the workers, and let the future take care of itself. Because of this, by early 1948 Perón had not only spent the whole of Argentina's war profits, but had also, with his grandiose expansionist schemes, run the country £500 million into debt.

Evita's personal contribution to this immediately beneficial and ultimately disastrous form of government was to shower pesos like pennies from heaven on the eternally grateful *descamisados*. When the Railway Union asked for a 40% rise, Evita generously gave them 50%. When the telephone operators planned to get half of 70%, Evita nobly gave them the lot. Already, in her offices in the Ministry of Labor and Welfare, she was handing out money indiscriminately – or, at least, as she herself saw fit. Not only was she signing checks by the dozen, but the sight of a pleading face before her would encourage her to pull a wad of pesos from her desk drawer and shove them into the hand of the astonished recipient. Evita was also starting to ignore the need for records of such transactions. Where the money came from might be something that interested her; what clearly did not concern her was where it might come from in the future.

Determined to fix the 'old hags' of the Oligarchy for good, Evita, on June 23, 1947, brought the portentiously entitled Maria Eva Duarte de Perón Social Aid Foundation into being. Aware of the power that such a charity could bring her, she first removed every competitor in private welfare and

crushed their hated bones beneath the weight of her own ambitions. The Maria Eva Duarte de Perón Social Aid Foundation reportedly started with a modest amount of Evita's own money, began its life in the General Post Office building, moved on to the larger Secretariat of Labor and Welfare, and then, about eighteen months later, was moved into an extraordinary Grecian-styled building, seven storeys high, fronted by marble columns topped with a number of statues. The whole building filled an entire city block.

The initial modest sum of money, reportedly Evita's own money, was dramatically increased by the expropriation of huge sums of money from the various trade unions, the reluctant businessmen, and finally from the workers as well. Few of these contributors were volunteers.

On Labor Day, May 1, 1951, by order of the General Confederation of Labor (virtually controlled by Evita), every worker in the country was required to hand over a full day's earnings to the Foundation. Shortly after, the civil servants were 'encouraged' to hand over 10% of their combined annual salaries to the Foundation and did so, with a fat check, at a public demonstration in the Colon Theater in Buenos Aires. More money was extracted from the major employers by 'persuading' them to pay by 'lunar' months and donating the check for the thirteenth month of the year to the Foundation.

In 1951 it would not have been considered safe to even *think* of criticizing the Foundation; and many famous and anonymous citizens of Argentina were hounded into exile for having made the mistake of doing just that.

(Richard Balbin, leader of the Radical Party, said in a speech to the House of Deputies: 'The public charities of the President's wife seem to rebound to her private good.' He was subsequently sentenced, after eight month's wait in jail, to five years' imprisonment for 'disrespect towards the President and other un-Argentine activities.')

Other methods of extortion (called 'voluntary donations') abounded. For instance, employees of the Banco Central *not* wishing to donate one day's pay to the Foundation were to notify the Board of Management *in writing*. Likewise, when the young winner of a radio contest stated that he was not going to hand over his winnings to the Foundation, Evita's Publicity Office put out the news that the entire audience at the contest had broken into tears

upon hearing the young man's selfish refusal. It was not reported just how this particular offender was punished for his disrespect and lack of public feeling, but certainly all future winnings were turned over to the Foundation and the winners received only a personal note of thanks from the First Lady.

By mid-1951, government lotteries and gambling casinos had also come under the hammer and were reported to have 'contributed' 36,458,296 pesos during the first six months of the year; casinos not contributing would soon have their licences revoked for 'unlawful practices'. Likewise, when a large manufacturer of chocolates refused to contribute, he was visited by three municipal sanitary inspectors who found his factory to be unsanitary and closed it down for all time. Thereafter, industrialists in the Argentine more readily handed over the cash.

Eschewing the more blatant forms of suppression, such as concentration camps, Evita and Perón nevertheless crushed resistance to their government with lengthy jail sentences, by ruining opponents economically, or by harassing them until they fled across the river to Uruguay. Evita had already displayed her penchant for 'legal' suppression by financially ruining all charities except her own, by gaining control of all the newsreel companies, and by wresting direct control of the newspapers *Democracia*, *Laborista* and *Noticias Graficas*. (By this time, expanding her business interests, she also owned a medical, surgical, mathematical and scientific instrument company and was setting up an agricultural product company under her own name.) Criticizm of Perón's government, or of Evita's scandalous Foundation, was therefore rendered furtive and highly dangerous. While Perón was packing the courts and universities with his stooges, encouraging Congress to vote him absolute power over his seventeen million people, including the right to jail them for 'disrespect' (an abstraction beyond all possibility of defence), Evita was ensuring silence by the 'legal' suppression of any organization antagonistic to her.

As we have seen, foremost among the victims were various leading Argentine newspapers. *La Razon*, the prominent Buenos Aires daily that had long been openly hostile to the Peróns, became the next, and the biggest, to fall. Determined to ruin *La Razon*, a team of Evita's municipal inspectors constantly harassed the paper's offices, first accusing the accountants of keeping inaccurate accounts (untrue), then inspecting the washrooms, lifts

and fire extinguishers (all in order), then fining the proprietors hundreds of thousands of pesos for minor infractions, and, finally, claiming a major sanitary violation because an office fan was too small. *La Razon* paid up, dropped its editorial page, and for the first time in its illustrious history expressed no opinions of any kind about anything. Later, to the dismay of many Argentinians, *La Razon* was closed down entirely.

Nor did it end there. The *Argentine Libre* was suddenly told by its printer in Buenos Aires that he could no longer handle the paper. The owner promptly found another small printing shop in La Plata, thirty-five miles from the capital; but after the La Plata shop had brought out only one issue, it was closed by municipal authorities because it 'lacked proper washroom facilities'. Another leading opposition paper, the Socialist Party's *La Vanguardia*, was closed because the sound of its printing presses at night violated a municipal anti-noise measure, the loading of papers into delivery trucks tied up traffic on the block, and the press room lacked first-aid equipment.

Finally, since Perón's government controlled the flow of newsprint, it could and did divert it from unfriendly to friendly papers. And since, due to the nationalization of the banks in March 1946, all bank loans had to be cleared through the Banco Central of Argentina, any newspaper antagonistic to Evita and/or Perón would have found it impossible to obtain even a routine loan. The Post Office, also, often refused to distribute newspapers expressing antiPerónist views.

The creation of an Undersecretariat of Press and Radio sealed up the remaining gaps in this massive suppression. The Undersecretariat's job was to take a personal interest in the 'type and tone' of political news, which meant in effect that free access to primary news sources was increasingly denied to news reporters. Increasingly, they were forced to rely on handouts from the Undersecretariat; and official press conferences would consist of the distribution of mimeographed communiqués presenting the government point of view. Due to the Undersecretariat, further loss of freedom of expression was ensured by the limiting of the licence system for radio stations. Since all stations had to operate under temporary licences granted by the government, it was easy to make them understand that the broadcasting of anti-Perónist news or opinions would lead to a revocation of their licences. It was also

made clear that no one could speak out against the President, his wife, or the government as a whole, and that commentators could only say that they were *for*. On the other hand, three times a day, without paying for the air time, the government broadcast its own news program over every station in Argentina.

Though this massive repression was going on daily, it was scarcely noticed by the majority of working Argentinians. Formerly either ignored entirely or ruthlessly exploited by the Oligarchy and successive governments, the workers now had, in Perón and in his saintly wife, Evita, staunch defenders of their livelihood and future. Suddenly, after years of being treated like slave labor, they saw their wages doubled and even trebled, they were receiving bonuses and paid holidays, and summer camps and rest homes were being built for them.

However, if the workers were happy, the regime's opponents were more concerned, pointing out the high cost of these so-called gains. In many cases the rise in the cost of living had paralleled, and sometimes exceeded, the wage increases. It was also noted that the benefits won by the unions had been gained at the cost of their independence. In particular, the General Confederation of Labor, once the most powerful union in the country, had been reduced to a mere chattel of the government and was now conducting most of its business (which was Perón's business) in a room in the Casa Rosada. There, three military men on Perón's staff, with the help of a mimeograph machine and the Confederation's stationary, issued Labor edicts and Labor news that had been written by Evita's Publicity Office. A further source of irritation was that those unions that played the government's game had little difficulty in getting what they wanted, whereas the unions that tried to maintain a measure of independence found themselves unable to function freely.

One of Perón's many methods of breaking independent unions was the use of the so-called Federal Intervenor, whose job was to manage the affairs of the union on behalf of the government. One such union, the fifty-year-old Union of Office Workers of Cordoba Province, was 'intervened' in January 1948, after which it had its charter annulled and its right to represent the workers cancelled. Likewise, while a group of pro-Perón industrialists were enjoying special 'under-the-table' privileges, the ordinary businessmen, or those antagonistic to Perónism, were finding themselves controlled at every

turn and having to operate under a law, designed to forbid ‘speculation’, that was so vague as to render day-to-day dealings almost impossible. So, too, did the universities find themselves short of many able professors, who had either been forced to resign or prematurely ‘retired’.

Finally, to ensure that the courts could not redress any of these Perónist wrongs, Perón had Congress throw out three of the more difficult judges and filled their seats with his friends. (One of these was Justo Rodriguez, the husband of Evita’s sister, Blanca.) When doing so, he always made a point of firing judges who had jurisdiction over civil rights. Given this knowledge, as well as the fact that those who remained would not want the same medicine, it was a foregone conclusion that the courts would support all future attempts to suppress newspapers, radio stations and recalcitrant trade unions – and this is precisely what they did.

To all intents and purposes, Argentina was now totally controlled by Juan Perón and Evita.

Chapter Twelve

With all means of criticizing them throttled, Juan Perón and
Evita could now smother the whole country in marshmallow. Perón’s official plans to beat inflation and Evita’s more personal plans for the Eva Perón Foundation were sold with the aid of an extensive, relentless publicity campaign. Indeed, the public love affair between the President and his wife was as carefully orchestrated as one of the overheated Argentinian movies that Evita, when plain Eva Duarte, had formerly starred in. The story, not uncommon in those kinds of movie, went something like this…

Little Eva is born of poor parents in the pampas – a true *descamisado* – and grows up to be a beautiful, blonde teenager who attracts the beastly attentions of many men. After suffering the common woes of the ‘shirtless ones’, she leaves the farm and travels to the Big City where, after many hardships and humiliations, sexual and otherwise, she turns herself, Cinderella-fashion, into a sophisticated young woman. She becomes a movie

star, finds fame and fortune, but also learns that it is Lonely at the Top. Luckily, the dashing army officer, Juan Domingo Perón, now enters the picture and, as befits this traditional movie, it is Love at First Sight.

('I saw him appear,' says Evita in her fanciful memoirs. 'He stood out from all the others. They would cry "Fire!" and order the advance; he cried "Fire!" and advanced himself, determinedly and relentlessly in one direction, without faltering at any obstacle. In that moment I felt his war cry and his path were my own.')

Also born in the pampas but now high up in the army, little Eva's handsome lover, Colonel Juan Perón, is a macho man, a war hero, and a playboy irresistible to women. Nevertheless, deep down, he is dissatisfied with his hedonistic lifestyle and in search of his Destiny. He meets little Eva, now a glamorous, famous lady, and his love for her changes him overnight and makes him a better man. She reminds him that both of them come from the pampas and that fame and fortune cannot replace the love they had once received from their own kind, namely the shirtless ones. Perón is transformed! Now dedicated to his country, but seeing injustice on all sides, he becomes a Friend to the People, is jailed by the corrupt ruling junta, and sends his devotion to the shirtless ones through his beloved little Eva, writing faithfully from the darkness of his prison cell.

('I searched eagerly through his letters for words of love,' says Evita in her memoirs. 'Instead, he spoke of hardly anything except his "workers", who, when they were loose on the streets, he had begun to call *descamisados*. Entrusting me with his "workers" were his words of love, his most deeply felt words of love. As long as I live, I shall never forget that.')

Little Eva, who loves Juan Perón, who in his turn loves the people through little Eva, encourages the *descamisados* to demonstrate for his release from prison. The Friend to the People is duly released. He then overthrows the corrupt ruling junta, takes over the country, pours his contempt upon the Oligarchy, and brings Justice and Prosperity to the *descamisados*… And beside him, radiantly beautiful, but also humble, even saint-like, is little Eva, now the glamorous Evita, whose love is eternal.

('I am only a humble woman,' says Evita in her memoirs, 'a swallow amongst a vast flock of swallows. He was, and still is, the giant eagle flying safely high among the clouds, close to God. If it were not for the way he

swooped down to my level and taught me to fly differently, I would never have known what an eagle is, nor would I have been able to contemplate the magnificent extent of my people. Because of this, neither my life nor my heart belong to me. Nothing I am or possess is mine. All I am, all I own, all I think and all I feel belongs to Perón.')

The violins soar. The sun glints in Evita's blonde hair. She stands beside the dashing President, her husband, Juan Perón, on the balcony of the Casa Rosada, as the cheers of their beloved *descamisados* lift them up on a great wave of adulation to the right hand of God. Love and loyalty conquer all…

The public, the formerly oppressed *descamisados*, could not resist it. They were being swamped by the greatest soap opera of their times and it had them enthralled.

Central to the growth of this nauseating spectacle was the Eva Perón Publicity Office. Organized by this office were the huge posters of Evita and Perón that soon covered every wall in Buenos Aires. Written by that same office were the countless propaganda speeches that were delivered histrionically week after week by Evita or Perón. Still enamoured by the style of his old hero, Mussolini, Perón would thunder and gesticulate, his coat off and his sleeves rolled up, one hand placed over his heart or else balled in a fist that slammed up and down as he raved. And beside him, little Eva, the *campañera Evita*, her large brown eyes flashing, blonde hair shining, body trembling, first humbly lowering her head, her voice a tremulous whisper, then abruptly straightening up, punching the air with her fists, all fire and fury, sometimes weeping with emotion, flaunting diamonds and sables and Christian Dior gowns as she told the ragged workers: 'I was once just as you are now! I am taking these jewels from the Oligarchy only for you! *All* of you! One day you will inherit this whole treasure! You will *all* have clothes like these!' And the *descamisados*, the shirtless ones, now drunk with excitement, believing her every word, would stumble away from May Square and look up at the countless posters saying 'Perón Fulfils His Promises' or 'Juan and Eva – a Blessed Couple' or 'Evita, We Love You' or 'Evita is Love' and they would sob with pride and joy.

Who could resist it? What mere mortal could withstand it? The Argentinians are in love with the very idea of love, and this great love between their President and his wife, their adored Evita, was all-embracing

and perfect.

If Evita had once been a second-rate actress, she had now, by sheer tenacity and cunning, won her Academy Award.

'It struck me as a kind of popular Vaudeville,' said Sir John Balfour, then the British Ambassador in Argentina, 'with Perón as the stage manager and Eva as the lead actress. Perón… put her on the stage.'

The main stage for Evita's histrionics was undoubtedly the Maria Eva Duarte de Perón Social Aid Foundation. Now the most influential woman in the hemisphere – hailed in Argentina as being in a class with Eleanor Roosevelt, Madame Chiang Kai-shek, and the consort of the Grand Mufti of Jerusalem; awarded, on top of her previous accolades, with the Dominican Republic's Grand Cross of the Order of Juan Pablo Duarte (no relation) and Bolivia's Order of the Condor of the Andes; hailed by her own subjects as *la Dama de la Esperanza* (the Lady of Hope) – Eva had become obsessed with her own image as a saint and was tireless in attending to her flock.

'She worked fourteen or fifteen hours a day,' said Atilio Renzi, her private secretary. 'It was quite common to finish at three or four in the morning and be back at work at seven thirty.'

Up and dressed by six o'clock in the morning, Evita would drive in her Rolls-Royce three times a week to her rooms in the Secretariat of Labor and Welfare. There she would hold a bizarre court to listen to the problems of the poor, the sick, the lame and the old. On each of these occasions the corridors leading to the 'Charity Court' would be jammed tight with humble or conniving supplicants. A corps of secretaries, male and female, always flanked Evita's desk, the most prominent feature of which was a large alms box. Apart from an oil painting of one Juan Carlos Alonso, the only other pictures on the walls were of the Peróns – and, perhaps deliberately, of Christ.

The supplicants would approach the Christ-like Evita at her desk and pour out their troubles. If the problem was money, one of Evita's secretaries would reach into the alms box and hand over at least a one-hundred peso note. If, on the other hand, the problem was something else, that would be dealt with as well. If a man needed a job, a job was found for him. (The chosen employer would not dare to refuse him work.) If a woman's husband had deserted her, Evita's strong-arm men would seek him out. (The erring

husband would rarely refuse to return home.) If someone owed rent, the required sum would be provided and the 'victimizing' landlord reprimanded (even if in the right). Evita also had on her staff some strong-arm 'charity men' whose job was to locate drunken husbands and more or less beat some sobriety into them. Evita personally ordered clothing, bedding and furniture for those who needed it; and she personally wrote prescriptions for drugs. In short, whatever the case, Evita *worked*.

The sublime inanity of the Social Aid Foundation was to be found in the fact that it was not obliged to keep records of its spending. It was also ludicrous in that the enormous annual contributions (received through legalized forms of extortion) were not being invested in more farranging or long-term projects but were being dispensed with random generosity to whoever managed to get an audience with Evita. In actuality, therefore, the Social Aid Foundation was, on the one hand, Evita's greatest act of vengeance against the now obsolete Sociedad de Beneficencia's 'haughty dowagers' and, on the other, a massively organized propaganda platform from which the beloved *Primera Dama* could launch herself forth into sainthood.

> The Señora's desk was set up under floodlights [John Dos Passos recorded] behind a big bronze oversize bust of some hero of Argentine independence… When she finally arrived the floodlights were turned on and there was a great rush of cameramen in the narrow room. Distinguished visitors were posed in an admiring group behind the Señora's handsome blonde head as she leaned over the desk to listen to the troubles of the poor women and their tear-stained children… When a delegation of businessmen appeared with a check in five figures for the Señora's Foundation all other business was suspended while the cameramen posed the group. The check had to appear in the photograph. The Señora's white hand was held out to receive it. The leader of the delegation was presenting it with a deferential bow.

Indeed, behind the façade of charity, when the women and their

weeping children had departed, '*Santa'* Evita would show herself as someone quite different. Dos Passos also recorded that 'with her secretaries and the government officials her manner was domineering, the manner of a rich hostess ordering the help about, but with the delegates it was level and sisterly.' So she hid behind two masks. One was cruel and one was kind. But the kindness was reserved solely for formal public appearances, while in private the political animal took precedence. In the words of journalist James Cameron: 'When I first met her in the plushy wonders of the world's most opulent Ministry of Employment, it was like looking into the eyes of Rita Hayworth and finding Aneurin Began looking out of them.' The radiance of those eyes, which gazed in a kindly manner from the city's hoardings, did not reflect the real, much harder, Evita.

> Perón was down to earth, cynical, realistic [said Sir John Balfour] and I can't say that when we were talking together *her* sentiments were exactly gentle and soft. At one moment she said to me – she was making up, incidentally, just before rising to her feet to make her after-luncheon speech – and she said to me, 'You know I love a fight. If there weren't a fight I'd have to invent one. And if it hadn't been for Perón' – who had been sitting beside her and she gave him a nudge as she said this – 'I would have been the revolutionary out of the barracks, stringing all the Oligarchs up by the neck.'

Nevertheless, if Evita was a ruthless woman, her followers were now looking up to her as the true Saint Evita and could not keep her name from their lips. Señor A. F. Cafeiro, a junior minister in Perón's government, was of the opinion that Evita's greatest tactic was the way she actually mixed with the people, even going out into the streets to shake their hands and kiss their babies and give them pesos. He says:

> Eva had no ideological formation. Perón spoke to the people from the balconies of the government house; she spoke to the people in the hospitals, in the schools. She was a revolutionary. She had no ideological idea… she did it in the facts. In a way she was a myth. She created a character, but she lived that

> character; she lived it sincerely. As a person she had also a strong personality… people loved her or hated her.

The people who most hated her were the people she most hated: the Oligarchs, the wealthy (‘Shall we burn down the Barrio Norte?’ she would shriek at the crowds of *descamisados*. ‘Shall I give you fire?’), particularly the women who, in the safety of their *porteno* drawing rooms, would talk about the ‘little whore’, about her ridiculous Social Aid Foundation, about how she had destroyed the Sociedad de Beneficencia and now dispensed all the charity whilst flaunting her own illicitly acquired riches.

Clearly they had a point. Evita’s hypocrisy was blatant. Only the rich could have eyes and ears close enough to the Social Aid Foundation to know what was happening to the contributions. It was the rich who knew that Evita had a Swiss bank account, that she had a warehouse in Buenos Aires bulging with fashionable clothes, that while she built wastefully expensive (and often useless) homes for indigent mothers and working girls, she was also one of the country’s biggest property holders and the boss of six Buenos Aires newspapers, the radio station El Mundo, and at least two manufacturing plants.

‘Suffer little children to come unto me,’ Evita had proclaimed publicly – again comparing herself to Christ – and, while the worshipful *descamisados* were repeatedly informed of her ridiculous Children’s Village (a compound of small-scale houses, a church, bank, school, jail, luxurious dormitories, dining rooms, playrooms and accommodations for hundreds of children), yes, while the *descamisados* were being reduced to tears by the saintliness of this offering, only the wealthy knew that Evita was spending thousands of pesos per annum on her wardrobe, that she shared five luxurious homes with Perón, that she gave wealth and power to the other members of her bastard family, and that, most damning of all, the numerous properties she had acquired had been bought as ‘investments’ with some of the millions of pesos pouring into her Social Aid Foundation.

Yet Evita got away with it. She poured out her love. On the radio, on posters, on the many billboards of the city, this great love of Evita’s was advertized. When Evita walked through the streets of the city, her most fanatical admirers would strew roses for her to walk on and then throw

themselves onto their knees when she passed. Women would kiss her hands and weep. Men would bow their heads and tremble. They would doubtless have read, or heard on the radio, about the infinite humility of their *Santa* Evita: about how she tended the poor, about how she suffered the sick, about how she rose at dawn and never slept before the early morning hours, working herself to exhaustion for her beloved people. Her glittering jewelery would not offend them. Her mink stoles would simply dazzle them. For indeed, were not these riches no more than an indication of what the poor would one day have for themselves? Most certainly they loved Evita. She remained at heart a *descamisado*. Had they not read in her newspapers and been informed by her radio stations of how cruelly austere her childhood had been? Of how she would cook her own *empanadas* in her own old-fashioned oven and serve visitors with humble *maté*? Evita came from a pampas farm. She was one of the poor. She wore the splendour of the Oligarchs only as an indication of what would soon come to the shirtless ones. *Santa* Evita! *La Dama de la Esperanza*! Little Eva, *Saint* Evita, was irresistible.

Then, of course, there was how she looked. Her beauty denied all evil. First a chubby-faced girl, then a coldly seductive Lana Turner, she now possessed the pale, austere beauty of a heavily burdened, deeply responsible Grace Kelly. There is dignity to her face, yet her crimson lips hint at carnality. The carnality and the dignity combined turn her into a common dream. Those lips had to know fellatio. (So say the gauchos with admiration.) Those dark eyes had to know what suffering meant. (So sob the wives of the gauchos.) Thus her beauty speaks to all and bridges two worlds. On the one hand is the flesh that learnt its hard lessons in the Avenida Corrientes where a starlet must find fame on her back; on the other is that nobility, that transcendent, outpouring love that turns the most sinful woman into a saint. Evita was now a saint. She had paid her dues and emerged triumphant. She was every poor farm girl, every struggling *descamisado*'s daughter, who had struggled from obscurity to success. The Argentinians admired that.

> She was by any standards a very extraordinary woman [says Sir John Balfour]. If you think of Argentina, and indeed Latin America, as a man-dominated part of the world, there was this woman who was playing a very great role; and of course she

> aroused very different feelings in the people with whom she lived. The Oligarchs, as she called the well-to-do and privileged people, hated her; they looked upon her as a ruthless adventuress. The masses of people, on the other hand – at any rate for a large part of the time I was there – worshipped her. They looked upon her as a lady bountiful who was disposing from Heaven.

Indeed, the *descamisados* had good reason to love *la Dama de la Esperanza*. She had defeated the Oligarchy, brought the employers to heel, and raised immeasurably the living standards of the workers. For this the Argentine male could only adore her. As for the long-suppressed Argentinian women, Evita had given them the right to vote, put through an amendment whereby they would not have to show their ages in registration polls, set up homes for unmarried working girls, and stimulated the idea of women in careers – all this in a country where women had never had a role before. In doing this, she had altered for all time the balance between the sexes in Argentina and throughout Latin America.

She also gathered further massive support for herself. In fact, so strong was the additional support of the mass of women in Argentina that some, including Juan Perón, felt that if he were to die, a popular vote of all Argentine men *and* women would ensure Evita's succession to the Presidency.

Santa Evita was now more popular than Juan Perón.

Chapter Thirteen

Evita's popularity was bought at the expense of the whole country's economy. During Perón's first year as President, he and Evita had managed to spend the whole of Argentina's war profits from meat, wheat and maize as well as running the country into a £500 million debt. Since then, there had been nothing but further reckless spending. During the next three years another £250 million in assets in the US were squandered and £180 million in gold in the Central Bank vaults had been reduced to a mere twenty million.

Increasing the debts was the fact that the railways taken over from the British in 1948 were losing money at the rate of £50 million a year and that the huge telephone system bought from the Americans in 1946 for £22 million was losing at the rate of £9 million a year. US firms engaged in the meat-packing industry, previously one of the most prosperous in Argentina, were nearly bankrupt. Many other foreign businesses had been forced to close, including branch plants of the American Ford and General Motors companies. Inflation was rampant. The value of the peso had been halved. Money was pouring from the printing presses, the granaries were full of unsold maize, and £20 million worth of linseed oil just could not be sold. In a desperate attempt to save the worsening situation, Perón had sacked Miguel Miranda and appointed three young men, all under forty, to restore some semblance of order out of the chaos into which the Argentine economy had sunk.

While much of the blame for this can be laid at the doorstep of the grafting and inefficient Perón, undoubtedly a lot of it was due to Evita and her extravagant attempts to buy popularity – and this was starting to backfire on her in other ways. Government officials and military officers were resentful of Evita's constant interference in their affairs and very worried by the fact that she had usurped her husband's position and was surreptitiously running the whole country. Their attitude was probably best summed up by the opposition who, during the 1948 debate that resulted in the expulsion of the Radical Party Deputy Ernesto Sammartino for criticizing Perón, said that they would not 'dance to the tune of Madam Pompadour' and charged the majority party with taking orders in the form of 'perfumed notes from the boudoir'. They were also aware that Evita, in a bid to strengthen her own position, had put her dissolute brother Juan Duarte into a top post in Perón's Secretariat; had made her eldest sister Elisa practically the political boss of Junin Province; had given the husbands of two of her other two sisters lucrative political appointments; and had, until Perón replaced them both, made her mother's old friend Enrique Nicolini head of the vital Posts, Telegraphs and Radio Department, and given another old friend, the incompetent Miguel Miranda, the job of sorting out the whole economy.

For many, the fact that Perón had actually replaced both these old friends of Evita's was a sign that a rift was growing between them. It was felt that the famous lovers were not only creating their own over-lapping

administrations but were secretly fighting it out with each other in a battle for control of the strongest, most powerful country in Latin America. While this may or may not have been true, Perón's fellow party members and senior army officers were worried because, where power had made Perón more cautious, it had made Evita even more reckless. 'All or nothing is my motto,' Evita had told her intimates, echoing Adolf Hitler. 'And if I go down, look out for the crash. There won't be anybody left standing.'

A further worry to the army officers – who were increasingly looking upon Perón as a deluded victim of Evita's wiles – was that in the division of authority Evita had managed to secure a decided advantage by taking control of what the Argentinians could publicly read, hear, see and, therefore, think. Newspapers and radio were now under her personal control. The Argentine film industry, largest in the Spanish-speaking world, had to submit every script for her approval, as did the theater. Against this blanket control of, and attention given to, the public, Perón was beginning to seem relatively nebulous. Indeed, cultivating an air of Olympian detachment, he was moving farther away from the daily chores of running the country and letting Evita follow through on his decisions. How much these decisions were his own and how much born from Evita's prompting was another question that haunted the military.

It was the belief of the army officers that many of Argentina's current problems had come about because Evita's activities offended tradition, made too many enemies, and were ultimately undermining the Perón government. The army was also firmly convinced that Evita was at the center of the anti-US feelings that were currently prevalent, at a time when the Argentine needed US friendship and help. And the senior army officers, all traditionalists, as Perón had been, felt that Evita, an ambitious commoner, was antipathetic to all that they stood for.

As far as the army was concerned, Evita had traded on sex appeal, cheap emotionalism and patriotic jingoism to back her intuitive but often wayward emotional flair. It was also felt by her more nervous opponents that Evita could 'out-talk, out-coax and out-manoeuvre' Perón and that she was gradually bewitching him into ruination.

Such fears sprang directly from the differences between Perón and *campañera* Evita. Perón, a military strategist, liked to plan every detail; Evita

acted on the spur of the moment. Perón, a born politician, would pragmatically make peace with former enemies if he felt that it would benefit the government; Evita, on the other hand, a mere woman of the streets, could never forgive anyone who had snubbed or crossed her, no matter the cost to the government.

Clearly these differences were crucial and, in the eyes of the army officers, gradually leading to the fall of the country. They were all too aware of the fact that while Perón had been willing to cooperate with the US for the good of Argentina, Evita was against it on the simple, childish principle that Hollywood had rejected her as an actress. It was also noted that Evita, still raging over her rejection by Buckingham Palace during her Rainbow Tour, had encouraged the Argentine men-of-war to dispute the Antarctic territories with Britain. She had also encouraged her servile friend Miguel Miranda to raise the price of Britain's beef to intolerable levels when Perón, who feared the dislocation of his country's traditional economy, had wanted a truce in the Antarctic tussle.

The fact that Perón had finally replaced both Miguel Miranda and Evita's Enrique Nicolini with his own men was a sign to the army that he was at least worried about Evita overreaching herself. Yet the army remained anxious because it believed that while Perón was still motivated by deeply rooted, totalitarian convictions (acquired through the army and his admiration for Mussolini), plus a desire for a place in history as Argentina's Man of Destiny, Evita was driven by more elemental, therefore destructive, urges: the desire for respectability, wealth, absolute power and, clearly, revenge.

The army finally became convinced of Evita's insatiable lust for power and of Perón's gradual domination by her when, in early 1951, he suggested that she be put up as a candidate for the Vice-Presidency.

By now, Perón, fifty-three years old, was looking ill and exhausted, his face blotched by eczema, and he was smoking two packs of cigarets a day. Evita, on the other hand, had never been so relentless in pursuing what she wanted and seemed illuminated from within by the flame of her own burning ambition. To the army, therefore, this latest announcement by Perón was a sign that Evita had to be stopped.

(It is worth noting at this juncture that to the army the very thought of a female Vice-President was abhorrent and ran counter to the whole history and

tradition of the Argentine. It is also worth pointing out that even if Evita had been an exemplary and honest political figure – which she was not – the very fact that she was a woman would have ensured the army's firm resistance. Argentina was a *man's* country and Evita's liberation of women was something for which the army, the seat of tradition, would never forgive her.)

Evita's plan, which was to seek out the VicePresidency in the 1952 election on the ticket with Perón, was based on the knowledge that of Perón's three main sources of power – the Women's Party, the General Confederation of Labor, and the Perónists – the last was the weakest in voting power while the first two were now directly controlled by herself. Indeed, it was Evita's public identification with the mass of Argentine women that had immeasurably strengthened her position and made her stronger than Perón.

> I am only a humble woman belonging to a vast nation… A woman the same as millions of others in the world. God chose me and put me here, beside the leader of the world: Perón. Why was I chosen and not someone else? I don't know. I only think of myself as the humble representative of the women in the country. I feel that, like them, I am at the heart of a home… the fortunate home that is my Fatherland which Perón is leading to its highest peak of fulfilment… Within the great home of the Fatherland, I am exactly the same as any other woman in any of the numerous homes in our nation. Like her, I am, in the final reckoning, a woman.

An early sign of the Vice-Presidency bid was when, following Evita's visit to Perón with the leaders of the Women's Party, the President, in naming the Women's Party, the General Confederation of Labor and the Perónists as his three major assets, had pointedly omitted any reference to the army, which he was supposed to represent. This was immediately noted by political observers and interpreted, correctly, as an open invitation to nominate Evita for the Vice-Presidential candidacy.

Evita's ruthlessness had grown in direct proportion to her reputation as a saint and nowhere was this more evident than in her attempts to clear the decks of all possible rivals to herself for the Vice-Presidency.

The first victim was Colonel Juan Mercante, an old friend of Perón's and a man who, as Governor of the Province of Buenos Aires, was entitled to regard himself as the natural successor to the Vice-President. One evening, when the colonel was en route from La Plata to Buenos Aires in response to a summons from Perón, his car had a collision with a hit-and-run driver. Mercante, who was lucky to have escaped with his life, emerged from the 'accident' a very frightened man. Shortly afterward, he announced that he would not be standing for the VicePresidency.

Another possible contender was Colonel Filomeno Velazco, Chief of Federal Police. Strangely, after announcing that he was going to run in the forthcoming elections, he, like Colonel Mercante, received a call from President Perón, summoning him to come to Buenos Aires for an unspecified purpose. Aware of what had happened to Colonel Mercante, Velazco pleaded illness, remained in Corrientes Province, and displayed no further ambitions regarding the Vice-Presidency.

With the competition removed from the political arena, Evita now swung her massive propaganda machinery into action. Apart from the usual electioneering tactics, such as supporters wearing shirts and pullovers inscribed with 'Perón Achieves!' and 'Evita Dignifies!', other supporters involving themselves in highly publicized competitions and stunts, and the Evita-controlled radio and press pouring out their customary lies, Evita also sank to offering bicycles, dolls and other toys to children as an inducement to their parents to visit the capital for demonstrations in a Buenos Aires park. So great were the crowds that many did not get to within a quarter-mile of the park, thousands returned home with empty hands and wet eyes, and beneath the huge banners emblazoned with 'Suffer little children to come unto me' two children were knocked down and trampled to death. Evita also reverted to her 1945 trick of supplying free transport, food and drink to encourage thousands more to her demonstrations. (All opposition attempts to do the same were blocked.) Last but by no means least, the new edition of Argentina's *Who's Who*, in a biography dictated by the thirty-two year old Evita, gave her age as twenty-nine – a year less than the age set by the constitution for candidates for the VicePresidency. In the event, Evita's combination of vanity and cunning contributed to her first major disaster.

As an inducement for a popular demonstration for her nomination on

August 22, 1951, Evita had planned to gather together at least two and a half million supporters in the vast Plaza Moreno on Avenida 9 de Julio, most of whom were to be drilled in shouting and pleading for her to accept the Vice-Presidency. Timed to run from Thursday morning to Saturday night, the spectacular show turned out to be a spectacular disaster.

Earlier that week, the opposition learned of Evita's false entry in the Argentine *Who's Who* and used it to publicly flay her and make a fool of her, either castigating her for blatant dishonesty or making jokes about her 'feminine' vanity. They also made it clear that the army had refused to accept her nomination. The ploy worked. Evita's popularity had already been waning because of the punitive measures she had introduced in order to bolster an economy being drained by her own 'charitable' enterprises. Realizing that they were now being made to pay for the many benefits she had given them, the *descamisados* were beginning to wonder where it all might end. Thus, when they learned that Evita had lied about her age and, also, that the army was now resolutely against her, they failed to give her the support she had expected.

Only one-tenth of the anticipated number turned out for the meeting in the Plaza Moreno and most of the few who came did not even stay long enough to hear Evita stumbling through the farce of 'bowing to the will of the people' and accepting the nomination. The planned threeday fiesta had to be cancelled. Evita abruptly fled from the Plaza, the scene of her humiliation, and within hours there was widespread speculation that she might not run at all.

This was true. Shocked by the knowledge of her diminishing popularity, humiliated that her real age had been revealed by the opposition, and finally thwarted by the army's refusal to accept her nomination, Evita was forced to accept her first defeat.

On September 2, eleven days after the nightmarish affair, Evita, dressed in a severe black suit and a highnecked black blouse, spoke on the radio, her voice trembling and hoarse, torn by the barbs of its own dishonesty.

> I want to communicate an irrevocable and definite decision to my people, a decision I have taken by myself, to resign the noted honor given to me by the open forum of the twenty-

> second. Already, on that memorable afternoon, I realized that I should not change the post I already held with the Perónist movement for any other. I have only one great personal ambition; that is, when history writes its glorious chapter on Perón, for it to be said in a small footnote: 'Beside him was a woman who dedicated her whole time to expressing the hopes of the people to General Perón, who then converted them into reality, and that this woman was known, caressingly, as Evita.

And Evita was dying.

Chapter Fourteen

In January 1951, when Evita was operated on for appendicitis, the surgeons had seen what they suspected was the beginning of cancer. Later, during that fateful September, Evita's Secretariat announced that she was suffering from 'influenza'. Later still, it was announced that she was to be operated on for 'pernicious anaemia', an illness for which there was then no known operation. What was *not* announced was that in October Dr Abel Carcano, the leading Argentine cancer specialist, flew to Evita's despised United States of America to bring back Dr George Pack, famed cancer surgeon of New York's Memorial Hospital. On November 4, after examination by Dr Pack, Evita was admitted to the Polyclinico Presidente Perón. Two days later, news bulletins announced that she'd had surgery for the removal of a uterine growth.

In fact, she was dying from cancer of the uterus, haemorrhaging through the vagina, and already starting to waste away.

The waning of Evita's popularity was obviously tied to the waning of the country's economic stability. Yet, if the healthy have faults, the dying rest in renewed purity and the news of Evita's illness would give her back her lost credibility. Over the past eight years, Evita had made many enemies and their dissatisfaction with her had recently spread even to her beloved *descamisados*. What had once been only rumors and gossip about her Social

Aid Foundation extravagances had turned into hard facts and much grumbling was going on amongst the 'shirtless ones'. Perhaps sensing this, Evita had long since dropped her flamboyant manner of dress and started appearing in more simple clothes, her long blonde hair pulled back tight around her sharp features to lend her a rather maternal look.

When her blatantly propagandist, autobiographical book, *La Razon di mi Vida* (*The Reason for my Life*), was published that year, it contained more than a dozen photographs of Evita in her jewelery and grossly expensive clothes; yet once the book was issued, Evita, clearly realizing that this was no longer the politically correct image, had the first edition withdrawn and a new edition published, with the original photos removed and the new ones showing her in dark, severe suits, moving about in the homes, shops and factories of the workers. This gesture, however, came too late. Well before her disastrous bid for the Vice-Presidency, crude posters had begun to appear on the billboards of Buenos Aires depicting her standing nude with crowds of little men marching between her legs – a reminder of her past as a 'little whore', of her megalomaniacal ambitions, and of the fact that even the *descamisados* were becoming disillusioned.

Amongst the items that had led to the waning of Evita's once shining image was the fact that increasingly she had become exposed as Perón's hatchet woman. If Perón wanted someone removed from the political scene (or from the streets), it was Evita who arranged to have it done. Indeed, in Uruguay, the customary first stop for the exiles who got away alive from Perón's dangerous Argentina, Evita was now known as 'Pocahontas' for her acknowledged ability with the tomahawk. This image, which contrasted violently with Evita's other image as a saint, was compounded by the massive expansion of Perón's Secret Service and by the increasing number of accusations of torture by members of his staff.

Lisandfo Saldivar, one of the highest-paid members of Evita's Ministry of Labor and Welfare, was tried and, naturally, acquitted three times of charges of homicide. Martinez, the Chief of Police, who had been denounced by US Ambassador Spruille Braden, was accused by the exiled author Ernesto Sammartino of torturing to death Carlos Aguirre, friend of the leading union man Cipriano Reyes; Sammartino added that Reyes himself (once a Perón ally) had become a mere wreck of a man as the result of torture

he had undergone repeatedly in a Perónist prison after he had shown ‘disrespect’ to Perón. And, since Evita covered up and protected her husband from such charges, her own reputation was greatly tainted.

Another black mark against Evita – even apart from the growing rumors of deliberate mishandling of the Foundation’s funds – was her penchant for looking after her relatives at the expense of the country. After Evita’s succession to power, her sister Elisa, who had no political or administrative experience of any kind, was made political boss of the Province of Junin; while her husband, Alfredo Arrieta, rose quickly from nowhere to become a member of the Argentine Senate. Dor Justo Rodriguez, husband to another of Evita’s sisters, Blanca, was highly publicized by the Eva Perón Publicity Office as the ‘coming’ judge of the Argentine courts and eventually became Minister of the Supreme Court of Argentina. Orlando Bertolini, whose only experience in politics was in operating the elevator in the Town Hall of Vincente Lopez, married Evita’s other sister, Erminda, and promptly became a director of both Argentine’s Customs Department and the government-operated fishing company, the Maritime Hunt. Finally, and most deplorable of all, Evita continued to protect, when not actually encouraging, her dissolute brother, Juan, and his various criminal activities. Noted especially at the time was the receipt of £1,150,000 from some Italian businessmen in return for letting them bring an aluminium factory into Argentina (Juan was placed temporarily under house arrest, but subsequently released) and the alleged favoritizm shown in the granting of import licences to certain US firms in return for considerable sums of money.

Nevertheless, with the news of Evita’s illness, a wave of love and sympathy swept the nation. Much of this was due to the religious romanticizm of the Argentinians, to the fact that they could no longer think of Evita as anyone other than *Santa* Evita, and to the fact that Evita had, over the past year, been displaying an extraordinary, passionate and emotion-arousing conviction about the glory of the Peróns and Argentina.

Some time between 1947 and 1949, Evita started believing her own propaganda. Certainly, as early as 1947, she was publicly comparing her husband to Caesar, Alexander the Great and Napoleon. Indeed, her fervour was such that she could later write without a trace of irony: ‘Nobody, absolutely nobody in the course of history has received such delirious

affection from their people as Perón has done… If anyone has, then no one has known how to use it for the happiness of their people, as he has.'

By 1949 her delusions of grandeur had turned into religious conviction and she was telling a meeting of newly enfranchized female political leaders of Argentina that it would not surprise her if one day they should 'wake up to find that Perón had disappeared from the earth, and thus the Divine Visitation will be over.' Increasingly convinced that Perón's spiritual stature (therefore her own) was positively god-like, she was soon implying, by way of soothing the troubled Catholic Church, that if Perón was not a god he was at least guided by 'Holy Inspiration'. Statements of this kind became commonplace until, her deluded dreams getting the better of her, at a huge demonstration in the Buenos Aires football stadium, she blasphemed in the eyes of the church with a particularly melodramatic piece of rhetoric.

'Perón is the air we breathe!' she shrieked into her microphone. 'Perón is our sun! Perón is our life! The humble people, my General, have come here to prove, as they have always done, that the miracle which happened two thousand years ago is occurring again!'

Fantasy and fact were now one and indivisible. The character she had created was taking her over, and she, a failed actress, was now playing the role of her life.

'The role of Eva Perón seems easy to me,' she wrote. 'And that's not surprising. Isn't it always much easier to play a theatrical role than to live in reality? I'm quite sure that in my case, as Eva Perón, I'm playing a traditional role which many women have played throughout the years.'

So much for little Eva, the housewife. As for Evita, the beloved *Santa* Evita: 'As Evita, I'm living out a reality which perhaps no other woman has experienced in the history of humanity.'

Yes, in discarding the Christian Dior gowns and mink sables and diamonds, in wearing the clothes of a plain woman and binding her blonde hair behind her head like a matron, she was not becoming modest or accepting her age, but was, instead, displaying a growing infatuation with herself – or with that image of herself as a saint bringing God to the people. If Perón was God, Evita sat at His right hand, the living link between Him and His shirtless ones, the heart and soul of the country.

> I shall never forget that I was once, and that I still am, a swallow. If I fly higher, it's thanks to him. If I move among the clouds, it's thanks to him. If my wings sometimes almost touch Heaven, it's thanks to him. If I see clearly who my people are, and if I love them and feel their affection caressing my name, it is only through him… I held the lamp that lighted his darkness; I kept it burning as best I knew how, guarding his flank with my love and faith.

To the *descamisados* such sentiments had been irresistible, and now, with the news of Evita's mortal illness, they would return to consume them. In that bleak year of 1952, while Evita lay on her sickbed, as she haemorrhaged from the vagina and the flesh shrank from her bones, the lost love of the shirtless ones welled up again and they were blinded by grief. Now the billboards in Buenos Aires, which had formerly shown a crimson-lipped Eva, the smiling star of their collective fantasies, were displaying a new Evita, a more spiritual, austere beauty: her blonde hair pulled tight behind her small head; her face pale, almost ethereal; her lips now unpainted; her brown eyes imbued with tragic understanding, gazing down forgivingly upon her flock.

Doubtless she had trouble believing in the reality of it; was driven to believe that she could defeat the cancer and live on to fight another day. For indeed, how could she die? Her work was not yet finished. Touched by glory and the conviction of her own eternal worth, she would not be able to accept that it must finally end.

Thus, she continued working. She worked less, but she kept going. She made occasional forays into the harsh light of day, looking wasted and pale and slightly haunted, to talk, to croak, to her people, then she was carried back to her dark room and wrapped up in her bed, racked by pain and exhausted. Still she would not accept it. It could not be happening to her. Had she not come from obscurity, from ignorance and humiliation, to climb to the unassailable heights, to be supreme, inviolate?

> Until I die [she wrote] I want to be able to open new horizons and paths to my poor people, my workers, and to my women. I

> know that, like any other woman, I am stronger than I seem, and am healthier than the doctors believe. Like them, I am prepared to continue struggling for happiness at home. I am not aiming at anything other than this happiness! This is my vocation and my destiny. This is my mission. Like any other woman in the country, I want to fulfil it right up to the end. Perhaps one day, when I am definitely dying…

But dying she was. Her draining blood told the tale. She was finally compelled to stay in her bed and vote for Perón from there. After this, she had no choice. She simply had to accept it. She was drugged and yet the pain would not leave her; it bit and it tore. Doubtless, her religion helped her. She was still a practising Catholic. She had God on the one hand and her 'shirtless ones' on the other, and she would live on as *Santa* Evita, the sanctified myth. She believed in it wholly now. It was probably what sustained her. With her dark eyes burning out of that frightening skeleton's head, she perceived a world kneeling in worship to her own blinding image… Little Eva. *Santa* Evita… She wept for joy and was comforted.

How did Evita die? Reportedly with great courage. It was the courage of a growing, megalomaniacal belief in her own spiritual affinity with Argentina. Not for nothing had the people said that in bedding down with Perón, Evita had been bedding down with the whole nation. It had been suggested that she was sexless, that her orgasms were found in power, that her love affair with Perón was a love affair with the whole of the Argentine. Now Evita was proving it – broadcasting from her deathbed. As her face shrank, her brown eyes grew enormous and held a fierce luminosity.

'Today,' she had said in October 1951, 'I have left my sickbed to pay a debt of gratitude to Perón and to the workers. I do not care if I have to part with pieces of my life to pay for it.'

Who could resist such a performance? Her death could only ennoble her. And, if she had been ill in October, she was much worse the following year, in June 1952, when Perón was sworn in as President for the second time. Could Evita disappoint her subjects? Was she not a bridge from them to Perón? So now Evita had to go on to reaffirm her own sanctity, to appear

before the public for the very last time, and she did so heavily sedated, looking no more than a wraith. She fainted twice and was then carried away and was not seen again.

In the final month of Evita's life, which was spent entirely in her sickroom, Argentina scrambled to pour new honors upon her. While hearing fifty-nine speeches of eulogy, Congress officially made her 'Spiritual Chief of the Nation', ordered the construction of a huge monument in downtown Buenos Aires, and conferred on her the 753diamond Collar of the Order of the Liberator. Prayers for her recovery were offered night and day. However, a series of crises carried her lower and lower, until, towards the end, she weighed less than eighty pounds. 'I am too little for so much pain!' she cried. Finally, when ever larger injections of morphine threatened to kill her, surgeons severed some brain nerves to reduce the pain. Meanwhile, Perónist fanaticizm reached such a pitch that sobbing women crawled repeatedly around the Presidential mansion on their hands and knees.

On July 9, 1952, President Perón hurried away from the Independence Day parade, refusing to remain for the scheduled ceremony of lowering the flag, in order to be by the bedside of his dying wife. Ten days later, at 6.30 p.m., the government's Bureau of Information interrupted radio programs on all Argentine stations to broadcast a bulletin which said: 'The state of health of Señora Perón declined noticeably this afternoon.' Police cordons were thrown around the President's residence and traffic was detoured within two blocks of the house. Finally, on July 26 at 9.42 p.m., all radio stations interrupted their programs to report: 'The Sub-Secretariat of Information fulfils the very sad duty of announcing that at 8.25 o'clock, Señora Eva Peron, the Spiritual Chief of the Nation, passed away.' The announcement was followed by religious music.

At the bedside when Evita died were President Perón and a dozen relatives and close friends, including her mother, Señora Juana Ibarguren de Duarte; her three sisters, Elisa Duarte de Arrieta, Blanca Duarte de Alvarez, and Erminda Duarte de Bertolini; her brother Juan Duarte; the governor of Buenos Aires, Carlos Aloe; Minister of Communications, Oscar Nicolini; Minister of Technical Affairs, Ramon Subiza; the Under-Secretary of Press, Raul Apoldi; and Señora Perón's personal secretary, Atilio Renzi.

Outside the residence, thousands of *descamisados* had gathered to

resurrect and deify the legend of Evita.

Like Christ, she had died at the age of thirty-three.

Part Three:
Resurrection and Immortality

Suffer little children to come unto me. -Evita

Chapter Fifteen

On September 2, 1971, a hearse belonging to an Italian undertaker's firm left Milan for Madrid. The funeral company had been contracted to transport to Spain the body of a woman. According to her documents she was Maria Maggi de Magistris, born in Dalmine, Italy, died in Rosario, Argentina, February 23, 1951.

The contract had been drawn up by a man who said he was the dead woman's brother, Carlos, and that he was carrying out his mother's last wish to have the body buried with her in a grave in Madrid. The driver's name was Roberto Germani and only much later did he discover whose body he had actually transported to Madrid.

With Carlos Maggi (actually the Argentine intelligence officer, Hector Cabanillas) beside him, Germani headed for the French border. Since the Argentine authorities had secured the cooperation of the Italian, French and Spanish governments, there were no searches or delays at customs posts. Once inside France, however, the hearse was escorted by motorized *gendarmes* as it raced towards Spain. The hearse spent one night in a Perpignan garage, then early next morning it was driven across the Spanish frontier, where it was escorted by two carloads of Spanish police on the final 460-mile lap to Madrid. The cavalcade drove to the Calle de Navalmanzano

in Madrid's most elegant suburb, Puerta de Hierro, and stopped at number six, a two-and-a-half-storey, gabled house of modern design, standing in spacious grounds behind a screen of tall cypress trees. Parked outside, as it was every day and night, was a jeep filled with uniformed policemen. Two plainclothes policemen of the political brigade, both wearing dark glasses, strolled up and down the pavement in front of the house.

Waiting on the steps were the 70-year-old Juan Perón, his 39-year-old wife, Isabel, secretary Lopez Rega, Perón's personal representative, Jorge Paladino, and Brigadier Jorge Rojas Silveyra, Ambassador in Madrid.

Under the watchful eyes of the security men, the coffin was removed from the hearse, carried into the house, placed on the dining-room table, and then, in an 'eerie silence', prised open.

'I went three times to look at Evita,' Perón had written fifteen years previously. 'The doors… were like the gates of eternity.'

Now, standing beside his third wife, Isabel (not counting the reported marriage to 19-year-old Laura de Solar), and gazing down at the face he had not seen for so long, Juan Domingo Perón openly wept.

'She is not dead,' he said of Evita. 'She is sleeping – only sleeping!'

The body was quickly removed to a basement room where, the following Sunday, it was examined by Dr Pedro Ara, the eminent pathologist and mortician who had originally embalmed it. Dr Ara, a small, bald Spaniard who traveled with the guillotined head of a Creole beggar in his baggage, was much in demand with the aristocracy for his skill in transforming the dead into 'permanent sculptures'. Reportedly, he had studied the extraordinary embalming process employed on Lenin and had, for a fee of £100,000, taken a year doing the same to Evita.

First, he had replaced her blood with alcohol, later with glycerine of a temperature of sixty degrees Celsius, pumped in through the heel and an ear. Reduced to normal temperature, the glycerine solidified, leaving the body semi-embalmed, its organs and skin intact, the skin now having an unusual elasticity. Finally, the body was dehydrated and immersed in unspecified chemicals. After a year the skin took on a near transparency, a pale, tranquil beauty, though the corpse itself had been reduced in size to that of a twelve-year-old girl.

Examination of the corpse now revealed that both knees had been

broken; the chest was marked with half a dozen perforations and a wide cut near the throat; the nose was broken; cuts were visible on the left ribs, forehead and left cheek, and one of her thumbs was missing. Evita's blonde hair had been cut off at the neck and her shroud was in tatters.

Washed, repaired and clad in a fresh white shroud sewn by Evita's sisters, Elisa and Blanca, the body was placed in a new blue-silk-lined oak coffin. According to unsubstantiated reports, Perón kept the coffin on the dining table for many months in order to weep over the corpse every day. More likely is that the coffin was taken upstairs, where it was securely locked up in a small room under the eaves. There it was to remain until the people called Perón back to Argentina.

Evita had been missing for seventeen years.

Chapter Sixteen

When, in 1955, the revolution had driven Perón into exile, his immediate successor, General Lonardi, realized that possession of Evita's body by one or other of the rival factions could become an inflammatory issue. The deposed Perón, now plotting relentlessly in Madrid, had begun making demands to have Evita's body shipped to him, but the new President, obviously playing for time, refused all such requests, also refused the Duarte family, and deliberately appointed a government team to 'determine the authenticity' of the corpse. A thumb was duly amputated and its print examined. Evita's identity was confirmed. Further requests from the distant Juan Perón were ignored.

On November 19, a mere four months after he had taken office, General Lonardi was ousted by General Pedro Aramburu and Evita was kidnapped from her resting place in Room 63 in CGT headquarters in the Calle Azopardo. In command of this operation was Colonel Carlos Eugenio de Moori Koenig, head of military intelligence and a bitter enemy of Perón, who had previously demoted him. Also in the room at the time was the pathologist and mortician, Dr Ara, who had been making one of his regular inspections

of the corpse. Unable to challenge the authority of Colonel Koenig, nor that of the armed soldiers around him, Dr Ara had no choice but to let them remove the body to ‘ensure that it gets a decent burial’. Subsequently, the corpse was dumped in a cut-price coffin, slung into the back of an army truck, and driven off into the night.

The body was taken to a warehouse near Military Intelligence headquarters, where it remained for a further two months, its whereabouts kept secret. Then, on January 5, 1956, it was moved again, first to one place, then to another, until eventually, after five stops, it was transferred to a packing case and delivered to the apartment of Koenig’s deputy, Antonio Arandia.

Evita’s influence, even in death, proved destructive again.

News of the ‘kidnapping’ and subsequent disappearance of Evita’s body had aroused faithful Perónists to a howling fury. As wild rumors swept the country (Evita had been cremated; her body had been thrown in the Plata River; it had been stolen by Perón and was presently with him in Uruguay; it was in the crypts of the Duarte or Perón families), the Perónists searched through Buenos Aires, scouring the streets for news of Evita’s whereabouts.

As many of the more fanatical Perónists were armed, Major Arandia took to sleeping with a pistol under his pillow. One night, disturbed by unfamiliar noises and not knowing that his pregnant wife had gone to the bathroom, he saw a shadow in the bedroom doorway, fired twice and killed his wife outright.

Major Arandia’s wife was duly buried and Evita was moved once more, this time to the fourth floor of the Military Intelligence headquarters. Still in the packing crate, she was stacked amongst other packing crates, all labeled as holding radio sets, and left there while Koenig flew off to Chile to propose handing over the body to Evita’s mother.

This plan did not go ahead. In June, Koenig was replaced by the head of President Aramburu’s Secret Service, Colonel Hector Cabanillas, who soon discovered the packing crate on the fourth floor. Informing President Aramburu of this, he was told by the President to arrange a Christian burial.

As Evita’s presence in the capital might further inflame the Perónists, Colonel Cabanillas decided against burying her there. Instead, he had a lot of identical coffins made. One of these contained Evita’s corpse; the others were

filled with lead the weight of a medium-sized woman. (According to an Argentine bestselling *roman-à-clef*, *Santa Evita*, by Tomas Eloy Martinez, the coffins contained several identical replicas of the corpse, sculpted from wax and vinyl. However, no proof for this claim has been offered and it seems highly unlikely.) That September, the various coffins were taken from Argentina by plane and by ship, each coffin bound for a different destination and each courier convinced that he alone was about to bury the real Evita. Each of the coffins was duly buried while the real Evita was shipped to Bonn via Brussels. In Bonn, unknown to Ambassador Raoul de Labugle, it was stored for some months with the dead files and bric-a-brac in the Embassy storeroom. From there it went eventually, via Rome, to Milan.

When the body arrived in Milan, it was in the care of Giuseppina Airoldia, a lay sister of the Society of St. Paul. The sister had been told that the body was that of Maria Maggi de Magistris, an Italian widow who had died in Argentina with a last request to be interred in her homeland. So it was that under the name of Maria Maggi de Magistris, the corpse of Evita Perón was finally laid to rest in lot 86, garden 41 of the Musocco Cemetery in Milan.

It remained there, undisturbed, for fifteen years.

Meanwhile, as is customary with turbulent Argentina, a new President, General Alexjandro Lanusse, had assumed power. In April 1971, he announced that Evita's body should be found and returned to her ex-husband, Juan Perón. In order that this be expedited as quickly as possible, intelligence agents, policemen, priests and Perón's old associates were sent swarming across Argentina, Spain and Italy, questioning innumerable people and ransacking various vaults for old documents. All of this was in vain. Eventually, for reasons still not explained, President Lanusse decided to call on his personal confessor, Father Rotger.

It transpired that Father Rotger, with the assistance of members of the Vatican, had arranged the transfer of the body to Italy. Now in hiding in Madrid because of assassination threats by the same Perónist terrorists who had, a year earlier, murdered President Aramburu, Father Rotger was persuaded to emerge from hiding and fly to Milan for a meeting with Colonel Cabanillas. After telling Cabanillas where the body of Evita was actually buried, Father Rotger returned to Madrid and Colonel Cabanillas, alias Carlos

Maggi, went to the Milan cemetery armed with written permission to exhume his fictitious sister's remains.

Thus, on September 3, 1971, after a total of seventeen years, Juan Perón was reunited with Evita.

Chapter Seventeen

Evita's embalmed body had been returned to Señor Perón as a weak gesture of reconciliation by the military government in Argentina. The reason is that Perón, obsessed with regaining power in his country, had for years been controlling his loyal Perónists from his villa in the Puerta de Hierro in Madrid. Now affectionaly called *El Viejo* (the old man), Perón would chain-smoke cigarets, pore over the flood of political reports that came into the villa daily by special telex from Buenos Aires, six thousand miles away, and send commands back by the same telex. Bankrolled by the Justicialista Party in Argentina, Perónist labor unions and some wealthy sympathizers, Perón had for twelve years been able to destroy every successive government and poison every effort to restore Argentina's political and economic health. In doing so, he was hoping that Argentina's economy would continue to deteriorate and that nostalgia would then create an overwhelming urge for the Good Old Days of Perónist rule.

Remarkably, he was correct. The many young Perónists who demonstrated in the streets of Argentina could remember little, and doubtless cared even less, about the more revolting aspects of the Perón-Evita regime seventeen years earlier. Rather, what they remembered was the beauty of Evita, the generosity of Perón, the love and the support that both had shown for the 'shirtless ones'. Now Argentina was in chaos once more and its economy was nearly in ruins. Forgetting the Secret Service and the arbitrary arrests, the torture and the deportations and the general corruption of the Perón era, a good third of the country still yearned for the return of Perón and the feeling of grandeur that he and Evita had generated.

Gradually becoming aware of the fact that the insatiable Perón, with the aid of another young, attractive, show-business wife, was managing to disrupt

the government even from faraway Madrid, President Lieutenant-General Alexjandro Lanusse, who twenty years before had been sentenced to life imprisonment by Perón, was obliged to find and return Evita's body as a sign of good will. As if this were not bad enough, Lanusse, realizing that if Argentina could not be run by Perón it certainly could not be run *without* him, was forced to eat humble pie and allow Perón to revisit his home country.

The initial return of *El Viejo* was disappointing. On November 18, 1972, accompanied by dark, slim and remote Isabel, Perón stepped down from his Alitalia jet on to the tarmac of a rainswept Buenos Aires – not to the teeming thousands he had anticipated, but to a mere *three* thousand extremely wet Perónists. The lack of numbers was due to the fact that President Lanusse had cordoned off the airport for ten miles in every direction with 35,000 heavily armed troops and armored cars and tanks. Lanusse himself had cold-shouldered the arrival; and when some two thousand Perónists tried to storm the barricades, they were driven back with guns and tear-gas.

As Perón left the airport to be grilled by Brigadier General Martinez (subsequently receiving permission to hold the first of many rallies), sixty petty officers at a naval engineering school on the outskirts of Buenos Aires were surrounding the officers' quarters and demonstrating in favor of their former President and his enchanting Evita. After shooting two of the guards, the petty officers took four hostages and fled towards the airport, where they later surrendered.

Proof as this was that the fervour of certain Perónists had not dimmed, that fervour had not yet become the plague that would bring Perón back for good. After settling into his house in fashionable Vincente Lopez, Perón talked patiently and cleverly to the thousands who had daily massed outside, marshalled his forces for the electoral battle scheduled to take place in February the following year, and got down to the business of laying the groundwork for a national coalition to take over from Argentina's present military rulers. However, President Lanusse slyly scotched these plans by refusing to rescind an edict requiring Presidential candidates to have been in Argentina on August 25, thereby rendering Perón's candidacy obsolete before it even began. Shortly after, a defeated Perón returned to Madrid.

Yet Perón was not finished. Now, after eight presidents, most of them

military men, Argentina, an immense and fertile country, rich in grain and cattle, with a population of twenty-three million, was drifting into even worse chaos. The people were in despair, their pockets were empty, and they thought increasingly about Perón and Evita, who between them had sustained a vision of the country's potential greatness. Almost shirtless again, certainly impoverished and frightened, the *descamisados* remembered Perón's strength, his bold decisiveness, and Evita's abiding hatred of the rich. Religious, superstitious, they also thought of Evita's body, which reportedly, after twenty years, had not decomposed. And suddenly, not surprisingly, it all happened again: everyone was a Perónist.

Once more the billboards of Buenos Aires featured pictures of Evita as a wave of nostalgia swept through the Argentine.

As we have seen, in the first election of 1973 Perón was unable to stand because of the residency requirements imposed by the outgoing regime. However, with Perón controlling the whole show from his villa in Madrid, his colleague Hector Campora became the standard-bearer of Perónism and was elected President with 39% of the vote. This mission accomplished, on June 21 Perón flew back to Buenos Aires to repeat the Perón-Evita spectacle by preparing to run for President in the forthcoming September elections, with his wife, Isabel, aiming for the Vice-Presidency.

Perón's arrival in Buenos Aires was noteworthy for the customary violence that accompanied it. The Argentine army refused a request for President Campora to increase security precautions, so twenty people were killed and 380 injured when vicious gun-fights broke out at Ezeisa airport. There were no troops at the airport, there were very few police, and young Perónists were used to keep order.

Three weeks later, President Campora abruptly resigned and, in the elections of September 1973, Juan Domingo Perón was again voted in as President, with his wife, Isabel, as Vice-President.

Nine months later, on July 1, 1974, President Juan Domingo Perón died at the age of seventy-eight.

Chapter Eighteen

Isabel Perón was born Maria Estela Isabel Martinez on February 4, 1931, in the province of La Rioja, north-west of Buenos Aires. She was the youngest of six children of a bank executive who died in 1938 after moving with his family to the capital.

Isabel never went beyond the sixth grade at school, but she studied the piano and dancing, appeared in folkmusic groups and nightclub acts, and dreamed of becoming a star.

It was when she was performing as a dancer in a nightclub in Panama that Isabel met General Juan Domingo Perón, who was in exile after the military coup that had displaced him.

Isabel was thirty-five years younger than General Perón.

Isabel became his ‘companion’ and secretary, answering letters and typing the manuscripts of the numerous books that the former President was then writing.

Isabel accompanied Juan Perón when he moved from Panama to Venezuela, then to the Dominican Republic, and finally to Spain where, in 1961, he married her.

Isabel Peron became the first female President of Argentina.

Chapter Nineteen

The funeral of General Perón was delayed while hundreds of thousands of people filed past his open coffin in the Congress Building in Buenos Aires. Such scenes of mourning had not been witnessed in the Argentine capital since the death of Evita in July 1952.

Perón had left instructions that he was not to be embalmed and that his body was to be buried in his family tomb in the cemetery of Chacarita. Instead, he was returned to the chapel of his home in the suburb of Olivos, where the embalming process, already begun, was completed.

During his final nine months as President of Argentina, Perón, faced with a dangerous war between the left and right wings in his movement, had chosen the right. Subsequently, the young radicals and guerrilla groups, who

had demonstrated and fought in the streets for his return, became disillusioned. However, though Perón had betrayed the left, the memory of Evita lived on. In fact, it was the disappearance of her body that had helped to keep the Perónist myth alive and fire a new generation who had come to see in Perónism those virtues that had never existed in the first place. 'Evita lives! Evita lives!' they had chanted during the demonstrations. And so, beyond any shadow of doubt, it was the young revolutionary left wing's identification with the dead Evita that encouraged the new President, Isabel Perón, to bring Evita's body back to the Argentine.

In a radio and television address to the nation, announcing the return of Evita's body, Señora Perón called Evita 'the Spiritual Leader of the Nation'. She also said that the 'sacred' remains of Evita would lie, together with those of General Perón, in the Olivos Chapel, from where they would eventually be transferred to the Altar of the Fatherland, the mausoleum then being built in a Buenos Aires suburb.

The embalmed body of Evita was flown from Madrid to Buenos Aires on November 17, 1974. Isabel Perón, General Perón's third wife and political heir, accompanied by two of Evita's sisters, headed a large committee of government and military officials as the remains were taken by car from the airport to the presidential chapel in Olivos, on the outskirts of Buenos Aires. Thousands of men, women and children lined the route, throwing flowers at the passing car and weeping.

The embalmed body of Evita was put on public display in December 1974, in a crypt at the presidential residence in Olivos. It lay beside the sealed coffin of General Perón.

Twenty-four years after her death, in October 1976, the body of Maria Eva Duarte de Perón was finally returned to her family. It now lies buried fifteen feet underground in a specially armored private vault in the most exclusive cemetery of Buenos Aires.

Determined that the Duarte family vault in the Recoleta Cemetery should be Evita's final resting place, secure from further political body-snatching, the family and the military authorities called in a firm specializing in the construction of armored bank vaults to reinforce the tomb.

In the center of the floor of the burial chamber containing the coffins of other departed Duartes, an elaborate trapdoor has been inserted. It consists of

three heavy-gauge steel plates, each individually locked with a different combination. The hinges are embedded in specially reinforced concrete and the cracks between the doors are covered with another thick steel flange. Beneath this hopefully impregnable trapdoor, in total darkness and eternal silence, is a second burial chamber containing the corpse, either well preserved or rotting, of Evita Perón.

'I will return,' Evita had said. 'And I will be millions.'

Iconic Voices

Iconic Voices is a fictionalized autobiographical text divided into five parts: (1) Elvis Presley; (2) Marlon Brando; (3) Norman Mailer; (4) John Lennon; and (5) Andy Warhol. The lives and works of these five people were interconnected in intriguing ways. All of these people are now dead.

Iconic Voices is based on the conceit that all five are lost in the Afterlife, not quite knowing if they are dead or alive, but each remorselessly going over, in the first-person narratives, the highs and lows of their colourful lives, to give, between them, a detailed, if blackly satirical, picture of the turbulent times the famed individuals lived through – from the rock & roll explosion of the 1950s (Presley), to the rebelliousness of the 1960s (Presley and Brando), the social upheavals of the 1970s (Brando, Mailer and Lennon), and the ruthless commercialization of the arts in the 1980s (Warhol). In other words, a comprehensive, hugely entertaining picture of the past five decades and their growing obsession with 'celebrity culture.'

Now available as a POD book on Amazon and as a Kindle ebook.

Beauty and the Beast:
The Story of Nastassja and Klaus Kinski

As a film actor and 'cult' figure, Klaus Kinski was often described as a *monstre sacré*, a sacred monster, because of his ferocious, even frightening appearance and his often violent, demented behaviour both on and off-screen.

By way of contrast, his daughter, Nastassja Kinski, was widely viewed for a time as cinema's most angelic beauty, a possible successor to the ethereal, mysterious Greta Garbo, but a woman whose private life was often as turbulent and scandalous as her father's.

When Nastassja made her second film, *To the Devil a Daughter*, many believed the title to be a deliberate reference to her odd relationship with her notorious father.

The story of Nastassja and Klaus Kinski is one of the most remarkable of all show-business stories… ranging from rags to riches, from Germany to Hollywood to the international jet-set, from unbridled sexual licence to drink and drugs, huge success and eventual failure… a story of artistic and emotional conflict between a lovely, highly talented daughter and her possibly demented, uniquely talented father… the true, contemporary story of… *Beauty and the Beast*.

Elvis

1935 – 1977

I'm tired of being me. Elvis. The King. I was tired of being me back in 1977, before that concert in Rapid City, South Dakota, the one that sonofabitch Colonel Parker insisted on filming for a CBS-TV special, despite the damned awful condition I was in. 'How do I look?' I said nervously to someone standing beside me, waiting to go onstage, not really giving a damn, just filling the silence. 'You look good,' the yes-man standing beside me said. 'Yeah, right,' I said, without thinking, 'I'll look good in my coffin.' And not long after that encounter, there I was in my coffin, being driven along Elvis Presley Boulevard in Memphis, Tennessee.

Some funeral, I'm telling you! Biggest thing of its kind since the burial of Valentino, but in my case, even bigger than that. Over 150,000 fans lining the four-mile route from Graceland to Forest Hills Cemetery, a lot having flown in from as far away as Japan, Australia and Europe. Over a thousand security men and cops fighting to hold back the growing crowds as they attempted to break through the gates and scale the walls of my humble home, Graceland. An emergency medical center and ten ambulances required to deal with the hundreds who'd fainted or were crushed in the crowd. One woman going into labor pains and giving birth in the back of an ambulance. A drunken 18-year-old driving into a crowd of mourners, killing two teenage girls and critically injuring another. The funeral cortege consisting of forty-nine cars led by a silver Cadillac, plus a police motorcycle escort, inching slowly along Elvis Presley Boulevard, past that weeping and wailing 150,000 onlookers. The lawns of the cemetery covered in an estimated 3000 floral tributes in the shape of guitars, hound dogs, crosses and broken hearts. As I recall it ('if my memory serves me well,' as Bobby Zimmerman, aka Dylan, would have it) there was a short service in the mausoleum and then my casket, with me in it, naturally, was placed in the crypt. A few days later my beloved mama's

coffin was removed from her grave in the same cemetery and placed next to mine in the family mausoleum. A couple of weeks later, a guy called Adkins, with two buddies, was arrested and charged with attempting to steal my body from the mausoleum, hoping to 'ransom' it. That incident, combined with the predatory activities of a lot of my more fanatical fans, led to both coffins being moved out of Forest Hills and into the Meditation Garden at Gracelands. So at least I was back home pretty quick.

Or was I? I mean, where, exactly, am I now? I mean, I can see my own death and funeral, relive them over and over again, but right now I feel perfectly alive, even if a little confused and disorientated, wondering where I am and what lies ahead of me. Not much here, that's for sure. At least, not at the moment. I'm sure I'm alive but I also feel I could be asleep, or maybe sleepwalking, like I did regular during childhood and adolescence. Yeah, I'd sleepwalk a lot. So did my mama and daddy. All three of us were inclined to sleepwalk. Zombies. The Land of the Dead. I still recall being aware that I wasn't really awake, that I was sleeping on my feet, even though I was vaguely aware of what I was doing, of where I was walking. That's kind of how I feel now, alive but half asleep, with my past and present, from my birth to my death, like a ribbon of dreams unfolding in my head. I mean, I'm here and there also. I have the feeling I'm in the past and the present simultaneously. Maybe sleepwalking through Eternity. Maybe that's what this is.

I blame the sleepwalking on the death of Jesse Garon. I'm the surviving child of twins. My mama, Gladys, actually gave birth to two boys, Jesse Garon and me, Elvis Aaron. Jesse came first, but he was stillborn. I came thirty-five minutes later and survived. Jesse was buried forty-eight hours later in a shoebox in an unmarked grave in the Priceville Cemetery, just below the Old Saltillo Road. It's said that if you lose a limb you go on feeling the missing limb, just as if it was still there, for the rest of your life. Well, I believe that's pretty much how I felt about Jesse Garon. I spent the rest of my life feeling incomplete without my stillborn twin and would even visit his grave to 'talk' to him. Sometimes, in later years, when my medication was getting a grip and maybe doing my head in, I'd even talk to him in the darkness of my bedroom. I'm not ashamed to admit it.

So how did I get to where I am now, even though I'm not sure where I am right now?

Okay. Just let me recollect here. I was born on January 8, 1935, in a two-room, shotgun shack in East Tupelo, Mississippi. My daddy built that place with his own hands. The famous writer, William Faulkner, was born and raised only thirty-five miles from there. In the April of that same year, about three months after I was born, a catastrophic storm tore through Tupelo, killing 235 people, injuring 350, and destroying forty-eight city blocks. Though the tornado wrecked St. Mark's Methodist church, our shotgun shack, located directly opposite, remained untouched.

My mama thought that was a miracle. She also thought that my survival, after Jesse being stillborn, was also a miracle. So she treated me as if I was a walking miracle and we grew uncommonly close because of it. In fact, there were those who claimed that mama had psychic intuition when it came to me and I often felt the same about her. That was something to do with the loss of Jesse – her loss and mine – and it's what forged the intense love between us, leading some to think of me as a mama's boy. Well, I wasn't ever quite that, but we were sure pretty close.

I had a pretty idyllic childhood, really. Never much money around and a few bad times – like when my daddy went to prison, for instance – but really, it was mostly a pretty good, simple life with lots of love and few complications. Well, lots of love from my mama, at least. Not too sure about my daddy. He was okay, I suppose – at least he never mistreated me - but he sure as hell wasn't much to look up to, no guiding light, as it were. He did his best, I'm sure, but he was generally so passive that by the time I was in my teens I'd become, to all intents and purposes, the real head of the house. I did everything in my power to look after my mama – my daddy, too, naturally – and that was the drive behind my early success. From childhood on I'd always swore that some day I'd at least buy them their own house and a car, which is exactly what I did, as you must know. I mean, I did it in spades.

But I wasn't no mama's boy. No! Not the way it's been misconceived. Though I was only three years old when my daddy was convicted of forging a cheque and served time in the Parchman Penitentiary, I grew up knowing about it, never forgot it, was secretly shamed by it. That was one of the incidents that had a profound effect on me, making me more dependent upon, and simultaneously protective of, my mama. Then there was the time, about 1942, during the Second World War, when my daddy, who worked away from home a lot, left home again to help build a prisoner-of-war camp in Como,

Mississippi, about 170 miles from Tupelo, and in his absence my mama, pregnant again, had a miscarriage and was taken into the Tupelo Hospital. I was seven years old at the time and I remember walking alongside the stretcher, holding her hand and crying. And my mama, having now lost *two* children, loved me, the miraculous survivor, even more passionately.

But those were just a couple of the few bad times I had. Mostly as I've said, I had a pretty idyllic childhood, living in a variety of places, including the edge of Shakerag, Tupelo's colored section (now Elvis Presley Circle; how's that for fame?) and, later, Memphis. Segregation was rife in the South – yeah, I'll admit it – but I never had no truck with it, nor did my folks, and despite my close bond to my mama, I moved around a lot on my own, including the colored neighborhoods of Tupelo and Beale, 'the Home of the Blues', in Memphis. And despite being shy in certain ways, I always liked being different, had a taste for the flamboyant, so had my hair brilliantined, pompador at the front, ducktailed at the back, and bought my unusually flashy clothes – black pants with pink stripes, bolero-styled jackets, two-toned shoes - in Laskey Brothers clothes shop on Beale Street. Hell, I even helped my colored truck-driver friend, John Allen Cook, deliver groceries for Brown's Store on Gloster Street, next to Milam School, so interacting with the colored communities was no problem for me.

I sang from an early age. Man, I sang all the time. My mama and daddy attended the First Assembly of God church on Adam Street, Tupelo, and they told me that there, when I was only two years old, I'd frequently scramble up onto the stage to join in with the choir. I also sang with my folks at church or social functions, or simply with friends, which we were called upon to do often. Gospel music was everywhere. I drank it in through my pores. I even took some of my later bodily movements from the black and white preachers who went wild in their churches, cutting up all over the place, jumping on the piano, moving every which way. Man, they were frantic and I loved them.

I mean, I wanted to be a singer from as far back as I can remember, way back when I was attending the East Tupelo Consolidated School which, though located on the wrong side of the tracks, was well disciplined and had a good educational record. I was already obsessed back then with becoming a singer. Overprotected by my mama? Well, maybe, but not so much, I'd say, since from the tender age of eight I was hitching rides every week to the Saturday Jamboree country music program of the local radio station, WELO,

ocated on Spring Street in Tupelo, where I'd regularly get up to sing verything from gospel to country, even World War Two songs, and my avourite weepy, 'Old Shep', which I later recorded. By the time I was twelve, was singing 'Old Shep' all over the place, including at school, where it lmost reduced my fifth grade teacher to tears, and outside the Tupelo Hotel, where I sang for cash that I always gave to my mama. When my school principal, Mr Cole, then entered me for the children's talent contest in the 945 Mississippi-Alabama Fair and Dairy Show, when I was ten years old, I walked off with the second prize of ten dollars and free admission to the rides. Finally, in 1953, even before graduating, I hitchhiked the 240 miles to Meridan, Mississippi, to take part in the talent contest of the first Jimmy Rodgers 'The Father of Country Music' Festival. Again, I won second prize. 'm still convinced that in both cases I should have won first prize, but nothing's fair in life, is it? After years of being managed by Colonel Parker I ure as hell know that.

We were sometimes so poor that I'd have to walk to school barefoot, wearing dungarees, but always with my first guitar slung over my shoulder. Though I could silence most of the girls with my singing, some of the boys esented it and I often had to defend myself with my fists, which I did pretty vell. (I also took a lot of flak because of my greased hair and flashy clothes.) Some of those kids called me 'white trash' because my family was poor, because our house had no porch, and because my daddy had gone to prison, so always felt emotionally insecure – though never insecure in my singing. It ust seemed like second-nature to me. I learnt gospel music from my folks and t church, I learned guitar-picking from the guitar-playing preacher Frank Smith, and I learnt about country music from Mississippi Slim and the many other musicians and singers on Radio WELO. I picked up on Dean Martin, Perry Como and other crooners by listening to the popular-music radio tations. Finally, I first heard Negro music in the Sanctified Church services in Shakerag, located on the 'wrong side of the tracks' in East Tupelo, then practically fell in love with it when, in 1948, my family moved to Memphis nd I was exposed to the great rhythm and blues performers of Radio WDIA nd, finally, in the clubs of Beale Street, filled with honky-tonks, hookers, lrug peddlars and great colored musicians, and where, as a supposedly 'over-protected' teenager, I frequently performed.

Man, I just tore those colored kids up, as I'd later do with the white kids.

But I learnt a lot of what I did from the rhythm and blues performers I was being exposed to. Guys like Rufus Thomas, Joe Hill Lewis, and Ray Brown, whose 'Good Rockin' Tonight' I'd soon be recording for Sun Records, a predominantly 'black' label where the legendary blues guitarist, singer and song-writer, B. B. King, was already signed up. I remember that Robert Henry, the Beale Street promoter, used to take me to watch the colored singers and later insisted that I'd taken my 'wiggle' from Charlie Burse, known as Ukulele Ike, who performed regularly in the Gray Mule and the Hotel Improvement Club. Well, maybe I did. I *do* know that I also loved at that time the likes of Arthur 'Big Boy' Crudup, Chuck Berry and Little Richard, so when I performed in those clubs in Beale Street I knew just what I was doing. And those colored audiences were crazy about me.

Okay, fair play to me. Later on, when I was famous, I openly acknowledged my debt to my colored mentors. As far back as 1956, in an interview I gave to the *Charlotte Observer*, I said, in my unsophisticated, countrified way: 'The colored folks been singing it and playing it just like I'm doin' now, man, for more years than I know. They played it like that in the shanties and in their juke joints and nobody paid no mind until I goosed it up. I got it from them. Down in Tupelo, Mississippi, I used to hear old Arthur Crudup bang his box the way I do now, and I said if I ever got to the place I could feel all old Arthur felt, I'd be a music man like nobody ever saw.'

No accident, then, that when I turned up at Sun Records, my first commercial release was Arthur Crudup's 'That's All Right [Mama].'

Sam Phillips was a great man. He once said that he'd gone out into this no-man's land and knocked the shit out of the color line. Well, he surely did that. He also said that musically speaking, the lack of prejudice on my part was the best thing that could have happened to Sun Records. What he meant by that, I think, was that he'd 'knocked the shit out of the color line' by running a 'white' recording company specialising in 'black' musicians, but that he'd always wanted to push the envelope, to blow everything wide open in terms of a wider acceptance for colored music, by finding a white man who sounded like a Negro. That was me, folks. When I became famous by innocently combining all kinds of music, from gospel to country and ballads and the blues, all the barriers were kicked away and it all became the one music. No, man, that's one credit they can't take away from me.

Naturally I was still a bit on the shy side when, in 1953, I first walked into

Sam Phillips' Memphis Record Service at 706 Union Street to record 'My Happiness' for my mama's birthday. At least that's what I said at the time, but my mama's birthday was well past by then and I really just wanted to hear what I sounded like. And what I heard, I didn't like. But, luckily, Marion Keisker did.

Good old Sam and Marion. Sam was already a well known figure in the music business when I first entered his premises. Born in Florence, Alabama, he became fascinated by Negroe music when he was still a child and heard the blues' of the coloreds working in the fields. After working as a DJ at various stations in Alabama, he moved to Nashville and worked at WREC. Eventually he founded the Memphis Recording Service, located at 706 Union Street, where he defied local prejudice by recording mainly colored artists and selling the masters to Chess Records in Chicago. Man, he had courage! He recorded, among others, B. B. King, Chester 'Howlin Wolf' Burnett, Walter Horton, Bobby Bland, Little Junior Parker, Rufus Thomas and the Johnny Burnett Trio. In 1952 he founded Sun Records in the same building and hired Marion Keisker, a former 'Miss Radio' of Memphis, as his assistant. When I first walked in to cut 'My Happiness' it was Marion Keisker, a great lady, who welcomed me.

Surprisingly, despite having already caused rioting at a Beale Street benefit show, despite having caused a couple of girls to faint when singing 'Cold, Cold Fingers' to 1,600 pupils at the Humes High school's musical contest, I was still pretty insecure as a person while being totally secure in myself as a singer. This odd mixture certainly intrigued Miss Keisker. When she asked me what kind of singer I was, I said, 'I sing all kinds.' When she asked me who I sounded like, I said, 'I don't sound like nobody.' When she asked if I sang hillbilly, I said, 'I sing hillbilly.' When she asked who I sounded like in hillbilly, I repeated, 'I don't sound like nobody.' So there I was, clearly feeling insecure and biting my fingernails, which I did all my life, but totally confident in telling her that I could sing anything. That's the only belief I never lost during the bad years ahead.

Anyway, the rest is musical history. A few months after paying my four bucks for an acetate with 'My Happiness' on one side and 'That's When Your Heartaches Begin' on the other, I was called back to the recording studio to work with guitarist Scotty Moore and bass player Bill Black. After some false starts over a couple of tentative days we cut loose with Arthur Crudup's blues

ıumber, ‘That’s All Right [Mama]’, backed it with Bill Monroe’s country ong, ‘Blue Moon of Kentucky’, but sang to a hard-rocking beat, and had an nstant local success with it. Sure as hell there was no stopping me after that. After a few more local hit records for Sun and extensive touring of the mid-West and south with Scotty and Bill, being managed by Bob Neal, Colonel Parker stepped into the picture, arranged for RCA Records to buy out my Sun contract, and then sent me on the road to fame and fortune and heartbreak.

No denying it, folks. Fame corrupts and absolute fame corrupts absolutely. t all started innocently enough with me: more girls than I could count, ıvailable anytime, everywhere, screaming hysterically when I performed, obbing their eyes out, storming the stage doors, clambering through the lressing room windows, chasing me like packs of wolves, tearing my clothes off, swarming over my cars, scrawling their names and addresses and phone ıumbers in lipstick on the hoods and windows, ripping lumps out of the seats ıs souvenirs, even pulling blades of grass out of our lawn on Audubon Drive before we moved to Graceland), and in general acting like they worshipped he ground I walked on. It had its scary moments, but mostly it was fun and I oon learned to search out the prettiest girl in the audience, get one of my uddies (later known as my Memphis Mafia) to bring her to me and then have ne the nicest time with her before moving on. I did this in every town I erformed in. Just took it as natural. It never entered my head that my home own sweetheart, Dixie Locke, might take offence at this gallivanting and inally decide, despite our vows of eternal love, to marry someone else. Same vith Barbara Hearne, another home town sweetheart who soon saw the vriting on the wall and sensibly faded out of my life. It also happened with erhaps my favorite girl up to that time, June Juanico, who simply couldn’t gnore my highly publicized romps with Las Vegas dancers like Marilyn Evans and Dottie Harmony, as well as implied or actual affairs (no comment) vith celebrated movie stars like Natalie Wood – and later with the girl who’d ecome my wife, Priscilla Beaulieu. It was a pattern that repeated itself hroughout my life and it was due, I now have to admit, to the corruptions of ame.

There were, of course, other forms of corruption due to fame, such as the etrayal, due to pressure from Colonel Parker, of old friends like Scotty Moore and Bill Black, who were soon downgraded by the colonel from equal nembers of our group to mere wage-earning supporting players behind the

tar. They were even kicked off my first picture, *Love Me Tender* (1956), and ater would break with me in disgust at what they viewed was my lack of upport for them. I loved those guys, but they were right about that: I never lefended them. Never having the moral courage to face up the colonel, I let he sly old bastard corrupt my relationships.

What the hell! There *were* compensations. By that time I'd been described by at least one journalist as 'the Marlon Brando of the mountain-music set'. The 'mountain-music' phrase was deeply offensive to me, but any kind of comparison to Brando really gave me a kick. That's because, despite being passionate about music, I was even more passionate about becoming a movie tar, though not a 'musical' star. No, this was the time of 'crazy mixed-up kid' novies like *The Wild One* (1954) and *Rebel Without a Cause* (1955), so I vanted to be a *serious* actor like my two favorites, James Dean and Marlon Brando. In fact, I saw those two movies so many times, obsessively mouthing he dialogue as it was spoken on screen, that I memorized every single line. Question: 'What are you rebelling against?' Answer: 'What have you got?') t stands to reason, then, that I was practically in heaven when my performance in *Love Me Tender* had some critics describing me as the natural uccessor to Dean while others called me the new Brando. It didn't matter that he comparisons were unfavorable ('First of all he does not walk: he slouches, umbles, almost minces.'); just being mentioned in the same sentence as Dean or Brando was enough to have me walking on air.

Anyway, apart from all the hit records and my relentless touring, with nounting hysteria everywhere I performed, I was also knocking them dead on TV – and so Hollywood beckoned. Well, you can imagine, given the implicity of my childhood and adolescence, how overwhelming Hollywood vould have been to me. I mean, I took to being a rock and roll star like a duck o water, enjoyed most of it, actually, particularly getting the girls, but going o Hollywood, without any previous experience, to work with folk that I'd lways thought of as 'stars'… Well, frankly it just scared the piss out of me. Even Richard Egan, the second lead in my B-movie debut, *Love Me Tender*, vas a bit of a 'star' to me. (Mildred Dunnock was a great lady of the silver creen, who treated me with kindness, but she was really too old to otherwise consider; appropriately, in *Love me Tender*, she played my mother.) However, he female lead, Debra Paget, even before I met her in the flesh, was a egendary beauty who'd done some of the sexiest exotic dancing I'd ever seen

n my life and given me more than one teenage erection. Debra Paget! Her previous movie had been Cecil B. Demille's *The Ten Commandments* (1956), playing the seductive water girl, and I even had a boner watching her in that. So when I met her on the set (after a brief initial meeting on the Milton Berle TV show), I was initially overwhelmed, my knees practically trembling with awe, though pretty soon they were trembling with lust 'cause all I could think of was getting into her pants. No hope. She was actually quite nice, but didn't fancy me that way, so we joined together in a strictly professional manner. I did like her, though. She was gorgeous and had a lot of nerve. In 1958, a year after *Love Me Tender*, she married a headed-for-nowhere actor-singer, David Street, and stuck with him for all of *four months*. Two years later she married the movie director Budd Boetticher, but left him after *twenty-two days,* divorced him a year later, and only finally settling down when she married a wealthy Chinese-American oil baron, domiciled in Houston, Texas, and then became a committed Born Again Christian, God bless her adventurous heart and big tits.

Yeah, I really liked Debra when I worked with her for a while, but initially, the thought of working with actual movie stars gave me sleepless nights. I wasn't helped any when, for my next movie, *Loving You* (1957), one of my co-stars was Lizabeth Scott. Man, she was scary! Of course I'd seen her before in quite a few movies, usually playing a husky-voiced femme fatale in noir genre crime films, a kind of second-rate Lauren Bacall or Veronica Lake, and I would have been scared anyway, just knowing that she'd worked with the likes of Humphrey Bogart. But what really scared me, man, when I first learned that she was going to be in *Loving You*, was the knowledge that a few years back, about 1955, she'd sued *Confidential* magazine (which we all read and loved at the time, though few of us would admit to it) for stating that she spent her 'off-work hours' with 'Hollywood's weird society of baritone babes', meaning *lesbians*. Even worse: the same article also claimed that her name had been found on the client's list of a call-girl agency. So, there I was, an innocent country boy, being faced with the prospect of working with a mature actress who'd possibly been a *lesbian call-girl* before becoming a star. I mean, hell, man, back in Tupelo and Memphis we only thought of women as being like, well… yeah, like my mama… maternal, loving, supportive… Most times we only uttered the word 'lesbian' in frightened whispers, wondering what the hell it meant but convinced that it was something pretty dark and

legenerate. So there I was, about to make a movie with the mannish Lizabeth Scott. Man, I was terrified! I really found it hard to look her in the eye. But he was pretty nice to me, as things turned out, really sinking into her role as a kind of female Colonel Parker, the manager of a rising rock star, full of lies and con tricks, but, being a woman, unlike that cold-eyed bastard, Parker, decent at heart and filled with womanly concern for me. Still, no matter how nice she was, both on screen and off, I spent most of the movie-making process avoiding her cool, *possibly lesbian call-girl* gaze, my heart racing uncomfortably.

Thank God for Dolores Hart. She was real pure at heart. My romantic interest in the movie, Dolores made me feel good right from the start because she was even more inexperienced in movies than I was. I had, at least, made one picture before *Loving You*, but Dolores, though with a showbiz background, hadn't made any. So I felt a little more confident when working with her. Besides which, she had the face of an angel and was so sweet, both on and off screen, that a lot of my fans thought we were sweet on each other. We were, but not romantically, so nothing happened between us that way. I certainly thought about it occasionally, but there was something about Dolores that made you feel that the word 'carnality' wasn't in her vocabulary. This turned out to be true in the sense that after making another nine movies in five years, and despite being hailed as the new Grace Kelly, she became engaged to an L.A. businessman, Don Robinson, but broke his heart by breaking off the engagement to become a nun instead, despite having already played a nun in *Francis of Assisi* (1961). She's been a nun ever since. Still alive, she's now the Prioress of the Convent in the Benedictine Abbey of Regina Laudis in Bethlehem, Connecticut. No more movies for her, then. And no more for Lizabeth Scott, who retired from the business after making *Loving You*.

Of course, *Loving You* was hugely successful, even more so than *Love Me Tender*. Unlike that dog's dinner, for which I was described by one critic as looking 'smooth and damp' like 'a sausage' (a dog's dinner), *Loving You* was loosely based on my own rise to fame and gave me the chance to perform my songs like I did on the stage: wild and free, hip-swinging, knee-bending. Boy, I was hot! Also, it was in color and I looked terrific in color and, even better, was given the chance to act sullen and tormented when the occasion called for it. This really pleased me, 'cause I was convinced that my movie heroes of the time, Brando and Dean and Montgomery Clift, were so successful at what

hey did ‘cause they were rarely seen to smile on screen. I had to smile a lot cause my crooked grin was beloved worldwide, but in *Loving You* I also got o act serious and that really thrilled me.

I was allowed to be even more serious in my next two movies, *Jailhouse Rock* (1957) and *King Creole* (1958), both shot in black and white because it vas felt that it suited the subjects more than color. I agree with this theory. *Jailhouse Rock* told the ridiculous story of an aggressive young man (me) who gets thrown into jail on a manslaughter charge, is taught by an older jailbird Mickey Shaughnessy) how to play the guitar and sing, manages to perform a spectacular song-and-dance number (the classic title song) for a nationwide TV audience while still in jail, then, upon his release, goes on to become a major rock and roll star and first-class asshole. Though it was essentially stupid, I loved the part because it allowed me to be mean and moody like Brando in *The Wild One*, but I was also occasionally disturbed by the part cause it reminded me of my daddy’s spell in prison and I wondered if the scriptwriter’s had actually based my role on their knowledge of this personal humiliation. Also, I’d recently punched out a garage attendant and been hauled nto court for it, so they managed to slip that in as well. I mean, despite my huge success they had this kind of superior attitude to me in Hollywood, putting me down behind my back, secretly thinking of me as a country yokel or truck driver who’d just happened to strike it lucky, so sneaking background letails from my real life into their dumb scripts was second nature to them.

My personal favorite of my own movies, however, was my next one, *King Creole* (1958), which was also shot in black and white, was directed by a real director, Michael Curtiz, who’d also directed *Casablanca*, and had a terrific supporting cast, including Walter Matthau, Caroline Jones, Dean Jagger, Vic Morrow, Dolores Hart (playing my virginal girlfriend in our second movie ogether) and Dolores’ personal friend Jan Shepard, who went on from *King Creole* to act in *Attack of the Giant Leeches* (1959) and then worked again vith me in my 1966 offering, *Paradise Hawaiian Style*, which was possibly even worse than *Attack of the Giant Leeches*. I was also pleased to be in *King Creole* because one of my co-stars was the French actress/dancer, Liliane Montevecchi, who’d recently worked with Brando in one of my favorite novies, *The Young Lions* (1958). In that movie she had some great scenes vith Brando, but in *King Creole* all she got to do was perform a sexy dance vhile wearing a skimpy ‘banana’ costume and singing a song about bananas.

She was one sexy lady, though.

King Creole was the last picture I made before being inducted for my two-year stretch in the Army and then, upon my release in 1960, dramatically changing my image. The Colonel carried the can for that, but in all fairness he *did* have his reasons. As a performer I'd always caused a lot of controversy, mainly because of my links to so-called 'nigger' music and my supposed obscene' gyrations on stage. This worked a treat for a time, gaining me enormous publicity, but by 1958 rock and roll music in general, and Elvis Presley in particular, were being linked to the race issue in an increasingly divided society (think the riots in Little Rock over integration) and, as such, analysed politically in congressional hearings, derided by the press and, worst of all for me and my deeply religious folks, condemned from the pulpit. From the Colonel's point of view, then, going into the Army for two years and keeping my nose clean while in it, could only rectify the damage done at home. Unfortunately, I was sent to serve in Germany at the height of the Cold War and the Soviets soon started using me as a political tool, on the one hand describing me through their media as a glaring example of American decadence, on the other spreading the news that by deliberately posting me to Germany to serve in the Thirty-Second Tank Battalion, Third Army Division, also known as the 'Mailed Fist of Europe', the American authorities were blatantly using me as an anti-Soviet propaganda weapon. In the words of Buddy Holly: 'Oh, boy!'

No choice, therefore, as far as the Colonel was concerned. Having already proved myself as a decent American boy by serving honorably in the Army for two years (and spending much of that two years obsessively practising to extend my vocal range, already planning to record 'O Sole Mio', later retitled 'It's Now or Never'), I now had to become even more decent by dropping my controversial image and becoming a clean-cut All-American Entertainer. Which led to my first post-army TV appearance on a Frank Sinatra special, wearing a bow-tie, my sideburns shorn, singing a couple of duets with him, including his 'Witchcraft' and my 'Love Me Tender', followed by my first post-army movie, appropriately entitled *G.I. Blues* 1960), shamelessly based on my two years with that Army tank regiment in Germany, and packed with some of the weakest songs that I'd recorded up to that point. It was good wholesome fun, with me singing first to a couple of puppets, then to a howling baby, and the only thing I got out of it, apart from

ny first dose of creative anger, was having a hot fling with Sinatra's former girlfriend, the leggy dancer, Juliet Prowse, my co-star in the movie; thus, at he same time, getting my revenge on Sinatra for his widely publicized comment that rock and roll was 'sung, played, and written for the most part by retinous goons… the martial music of every sideburned delinquent on the ace of the earth.' Well, I didn't have sideburns when I appeared on his TV pecial, but I sure had my revenge with his girlfriend. And did so again when he press started feverishly speculating that I was having an affair with his laughter, Nancy. (No comment.) And did so a third time when Nancy co-tarred with me in *Speedway* (1967) one of my very worst movies. By that ime Nancy looked like she was made of silicone, but then, let's face it, so did .

Okay, I'll admit it: most of my movie musicals, after *King Creole*, were errible. Once Colonel Parker and those Hollywood producers realized that hey could makes fortunes off my back with cheap productions, crap scripts nd lousy songs, they ignored my proven potential as a serious actor and dug ny artistic grave with their trash. I blame them and my fans. Yeah, my fans lways put the blame squarely on the Colonel, but it was the fans who ignored ny more serious movies – *Flaming Star* (1960) and *Wild in the Country* 1960) – while turning a sand-and-sun songfest like *Blue Hawaii* (1961) into a nonster hit, with its soundtrack album becoming my biggest seller ever.

Initially I was thrilled to be in *Flaming Star* because it was a vehicle riginally written for my idol, Marlon Brando, and for that reason alone I gave t my all and was pretty good in it, hardly smiling at all, even though the novie, having practically no songs, did relatively poor business at the box ffice. I was equally thrilled to be in *Wild in the Country* because, apart from getting up real close with sexy Tuesday Weld and sweet Millie 'Ann Frank' erkins, my main-co star was Hope Lange, so touching as the romantic partner o my other screen hero, Montgomery Clift, in the *The Young Lions* (the main ead being Brando), and also featuring John Ireland, of whom I was in awe ecause he'd co-starred in the classic movie, *Red River*, with my third favorite ctor, Montgomery Clift. Still, despite my initial excitement at being in a novie with such an illustrious supporting cast, I started freezing up on screen vhen I gradually realized that again, just as with *Jailhouse Rock*, the creenplay was utilizing some of the most painful incidents of my own life, articularly when Hope Lange, as a typically unbelievable psychiatrist social

vorker, says, ‘Your mother seems to have meant a great deal to you,” and hen, asking me what I’m thinking regarding her comment, receives the numbled reply, ‘About the dreams I used to have… money… fame… I could ıave bought my ma her freedom with money and fame…’ Even worse, the cript writer, some jerk-off called Clifford Odets, who’d *almost* won a Pulitzer Prize for one of his stage plays and, more impressively, before jerking off over *Wild in the Country*, written the terrific screenplay for *The Sweet Smell of Success*, had my character give a lengthy, self-pitying speech about his ma’s mpoverished suffering in order to protect her child and how he, the child, could have ‘bought’ his ma away from all that, ‘bought’ her way out of the ticks and into town, and ‘bought’ her a house just like Hope Lange’s swell ad… but she died before he had a chance to do it. You get it? What we’re alking about here is the young Elvis Presley and his beloved mama and Graceland and his mama’s death within a year of moving into it: out of the ticks and into town. So, no question that Clifford Odets, who *almost* won a Pulitzer Prize and did at least write *Sweet Smell of Success* before jerking off ver his story about a genius writer who plays guitar, sings songs and drives vomen crazy, went the road of all those other Hollywood windbags by neering down his long Jewish nose at my humble origins and utilizing them *nd* my close relationship with my mama, for his luridly melodramatic ombination of *Rebel Without a Cause* and *Peyton Place*. And so, when I had o speak his godawful dialogue, I just froze up and gave one of the most vooden performances of my career, but in a so-called ‘serious’ movie. No ccident, then, that *Wild in the Country*, like *Flaming Star*, performed poorly t the box-office, at least compared to *G.I. Blues*, putting paid to any hopes I ıad of making ‘serious’ pictures in the future. Instead, I was forced to spend he next eight or nine years making increasingly dumb movies in which I lrove racing cars, flew airplanes, dived off cliffs, swung on trapezes, had a lot f fist fights, and sang songs written by the cheapest talents available to goofy ids and slobbering hound dogs and vacant-eyed bimbos in bikinis.

By 1965 I was reduced to making movies like *Tickle Me*, which was roduced so cheaply that we shot it in ten days and didn’t even have to pay for ny original songs because the Colonel, in his infinite wisdom, decided that ve could save even more money by raiding my back catalogue. (This did, at east, raise the quality of the songs on offer.) The only thing I liked about that novie was the presence of my co-star, Joceyln ‘Jackie’ Lane, often described

by the media as the English Brigette Bardot, even though she'd been born in Vienna. Still, she *did* look a bit like BB with her cock-sucking lips and instant-erection figure, but despite lusting for her I didn't get to first base with her because, as the pint-sized snot-nose was always quick to point out, her sister was the then famous model, Mara Lane, and she herself, darling Jackie, had studied ballet at the Sadler's Wells Ballet of London, England, so wasn't about to damage her high-class image by fooling around with a low-life, washed-up rock and roll idol like Yours Truly. No, Jackie was drawn to sophistication and went on to prove it by getting out of the movie business entirely and then marrying Prince Alfonso of Hohenlohe-Lagenburg and Marbella, Spain, the latter a kind of Spanish Las Vegas, which may have been appropriate since that's where they were married in 1973. They were divorced, ha, ha, in 1983, but Jackie went on, no doubt aided by fistfuls of the Prince's generous alimony payments, to become a successful businesswoman.

The movies, you might say, were the death of me. Which is not to say that during that awful period, the 1960s, they were *all* bad. One exception to the rule was *Viva Las Vegas* (1963), co-starring the wonderful Ann Margret. In 1962 alone I'd had three top-grossing movies in a row, beginning with *Blue Hawaii*, and been ranked as one of the most popular movie stars in the world, but MGM were really excited about this new one because they believed that the chemistry between me and Ann Margret could create a whole new market for my pictures. They believed this because Ann Marget, then only twenty-two years old, was a sexy singer, a sensual dancer, could certainly act, and had just had a huge success in *Bye Bye Birdie*, the film version of an equally successful Broadway musical based on the story of a rock and roll singer who gets drafted – in other words, based on me. They also believed it because Ann Margret had been widely described as 'the female Elvis Presley'. So, you know, they were hot. And so was I. I was hot from the minute I laid eyes on her, with her long red hair and terrific figure and vocal and dancing talents and great sense of humor. We hit it off immediately. And it was more than just lust, though there was plenty of that. No, it was love, pure and simple, and the electricity between us off screen certainly showed on screen, turning the movie into a smash hit, even bigger at the box office than *Blue Hawaii*.

Yet movies were the death of me. Maybe Ann Margret was the death of me. Certainly Colonel Parker was the death of me, despite making me rich.

What happened to me and Ann Margaret? We had a hot affair and we may

have seriously loved each other (though I also loved Priscilla Beaulieu, hidden back there in Graceland) and she fitted in really well with my buddies, my so-called Memphis Mafia, where Priscilla had never really adjusted to them, being a bit on the 'jail bait' side of too young and not really at her ease with a gang of macho guys hanging around her and me all the time. I mean, I *loved* Priscilla. I really did. She was just *different* from Ann Margret. But no question that I also fell in love with Ann Margret because of her stunning looks, her vivacious nature, and her feisty, independent spirit. Yet just as it had been with June Juanico, what I loved most in women wasn't always something I could easily live with.

Yeah, I'll admit it: I always had to be in control. I mean, my mama loved me obsessively and thought I was God-given, perfect, beyond criticism, so naturally I expected the same attitude in my girlfriends. I expected them to do what I wanted, always be where they were supposed to be, dress as I wanted them to dress, never argue and let me win every game. I was the same with most things, actually. Though loving all kinds of competitive sports, and playing them all with my gang, my so-called Memphis Mafia, I really got uptight if they didn't let me win. And just as it was with them, so it was with my women, though even more so, they being women. As far as I was concerned, a woman should know her place. And the woman's place, according to our southern gentleman's code, is to stand by her man. Which June Juanico, for instance, even though I was crazy about her at the time, clearly failed to do. Man, she was stubborn! Had a mind of her own. Wouldn't take shit from anyone – not even from me – and resented most of my buddies hanging around me all the time, playing what she thought were silly games, trying to out-macho each other, even fooling openly with a lot of female fans who were in Graceland hoping to get to me instead. (I always had first choice, then the guys shared the rejected ones between them.) So June, no matter how much I loved her, simply had to go. Then, when in Germany, humbly serving my country in a blaze of non-stop publicity organized by the canny Colonel, I met Priscilla and saw my salvation.

She was only fourteen at the time. Now I'll admit that was a bit of a problem. I mean, she first heard my records when she was only twelve years old, but then her parents, disturbed by my reputation for arousing unsavoury passions in pubescent girls, refused to let her watch me on the Ed Sullivan Show on TV. However, being only twelve and pretty bright with it, she saw

he forbidden show by opening her bedroom window to an angle where she ;ould catch the reflection of the TV screen on it. So she saw the whole show. Then her daddy, an Air Force career officer, Captain Paul Beaulieu, was ɔosted with his family, including Priscilla, to Wiesbaden, West Germany, vhere I was stationed with the Army, living with my daddy, various family nembers and, naturally, a couple of the guys, in a rented house in Bad Nauheim, only forty-five minutes drive from Wiesbaden. Then a mutual riend, Currie Grant and his wife, brought her to the house, having promised ıer parents that they'd chaperone her and ensure that the notorious rock and oll celebrity didn't despoil her.

Man, she was one beautiful kid. Real petite, almost doll-like. Wearing a :ind of blue-and-white sailor dress, with white socks and flat shoes, she ooked even younger than fourteen and I assumed she was a junior or senior in ıigh school until she told me she was in the 9th grade. We hit it off mmediately. Could talk easily to each other. I was having a bad time, ollowing the recent death of my beloved mama, also worrying about what vas happening to the music scene back home while I was serving in Germany, :utting no new records, making no movies, but I could unburden myself to ıer, despite her being so young and me being a good ten years older. So I used :very bit of my legendary charm to persuade her parents to let her keep :oming to see me on a regular 'chaperoned' basis, promising not to 'harm her' n any way. And I kept that promise, not having *actual* sex with her (I was ;etting that from various fans, the mature wives of male visitors, and my ;oung, immature live-in secretary), just kind of fooling around with her on the ɔed while popping a lot of pills to keep me awake or put me to sleep. About ix months later we were separated anyway, with me being flown back to the States to get demobbed and resume my career, while she remained in Germany, still a virgin, with her folks.

So why did I pick Priscilla out of all my other women, eventually (after a wo-year separation) move her into Graceland, and live with her for another ix years without consummating the relationship, despite media speculations o the contrary?

Well, I was proud to be old fashioned in certain ways. For instance, I ivided women into four different categories: (1) mothers; (2) wives; (3) laughters; (4) all the others. So though I was having all kinds of women, 'the

›thers', all over the place – devoted female fans, Las Vegas dancers, Hollywood starlets – when it came to *serious* relationships, meaning the ›ossibility of marriage, I expected my chosen woman to be as I'd always magined my mama to be: as pure as the driven snow. (I never thought too leeply about how I'd been conceived.) For this reason, I never thought of my lings with female fans and other women as anything special, not even as ›etrayals, but I expected absolute loyalty from Priscilla and I knew I would ;et it. In fact, when I look back on it now, I realize that my passion for Priscilla was based on her passivity and relative lack of experience; on my :nowledge that I could mould her into being my perfect woman, using the nake-up I bought for her, wearing the clothes I picked out for her, even tyling her hair as I preferred it, never making her own decisions about ınything, and, most important, being absolutely obedient, existing only to ›lease me. No way could I have had that with June Juanico or, later, with my ›eloved but independent Ann Margret. So Priscilla, apart from being beautiful ınd classy, was my perfect Pygmalion. I usually addressed her as 'Little One'.

And so, two years later, I moved her into Graceland, charming her parents nto agreeing to the unusual arrangement, promising not to 'harm her' and to :eep up her education and do anything else that would make them feel secure. So she lived there for another six years, going to all-girl Catholic school, ıaving dancing lessons, doodling with paint and canvas, putting up with my :ver-present Memphis Mafia (except when we were in Hollywood making novies, leaving her back in Graceland, in the company of my numerous live-n relatives and staff and various hangers-on), and in general being exactly vhat I wanted her to be, our relationship remaining close but *chaste*. By this I nean that we didn't have *actual* sex, though I taught her various ways of ›leasing me anyway, like having her dress up in her schoolgirl's uniform and :nact various stories, such as her being a student being seduced by her teacher me being the teacher), while I took Polaroid pictures, getting a good Lolita-ixation boner in the process. We took an awful lot of those pictures. I had to :eep sending her to the local drugstore for more Polaroid film and she later :onfessed that this really embarrassed her because of the looks she got. Still, trictly speaking I kept my word to her parents by not having *real sex* with ıer, though I was surely getting more than enough of that with other women in Hollywood. Which pretty well gets me back to Ann Margret.

Yeah, no question about it: while working on *Viva Las Vegas*, Ann Margret

ınd I performed great together, igniting each other, playing teasingly off each ɔther, singing sexily (she brought 'sex' back into my vocals) and dancing ogether as if fornicating, which is what made the movie such a success. So vhat happened to us?

Two words.

Colonel Parker.

What we're talking about here is one huge personality. So huge that he ven managed to take over the biggest star in the world (me) and then have ıimself co-starring in every public pronouncement about 'our' activities, ıigning everything 'From Elvis and Colonel Parker'. In the end, he wasn't ɔnly taking fifty percent of my income, but deducting all of his so-called expenses' from *my* fifty percent, including his gambling debts, leaving my ɔercentage bottom of the well. Naturally, knowing that I didn't have the ɔatience to check any contract, he milked the cow for everything it was worth. f I hadn't died just in time, I'd have certainly been broke.

The most famous entertainer in the world.

Broke.

Thank God I died (if I died) before it happened.

Well, I was pretty unsophisticated and innocent, no question about it, and had ɔeen brought up to respect my elders, so I never looked at the Colonel too losely, though was always torn between respect and fear when dealing with ıim. For a start, he had eyes as blue as the sky – as cold as a winter sky – ınd though he had a sense of humor it was pretty malicious and his tempers ould make him seem on the edge of madness. (I found that especially listurbing 'cause I knew some folk thought the same about me.) He had charm n spades up front, of course. A lot of wit there. He told me and everyone else ıbout his outrageous 'carney' tricks: living on Indian reservations, telling ortunes, selling sparrows that he painted yellow and passed off as canaries; ınd a scam that would actually end up fictionalized in the movie *Paper Moon*, vhere he would get to a town where he wasn't known, read the local ɔbituaries, have the names of the recent dead, preferably males, inscribed on Bibles that he'd bought cheap in other towns, then call on the grieving vidows, pretending to be a Bible salesman, and show them the Bible with heir late husband's name in it, saying that the 'dearly departed' had ordered it ınd already paid the first half of the money. And the grieving widows, nvariably deeply moved to learn of their late husband's secret devotion to the

good Lord, would pass over the second half of the money and take the Bible nscribed, as they thought, especially for the husband at his personal request.

As a deeply religious person, and knowing how deeply religious my mama ıad been, I found the very thought of the Colonel doing this deeply offensive. But I said nothing about it. Like I said nothing about a lot of other subjects hat should have been raised. Said nothing because the few times I tried, the Colonel scared the piss out of me.

So why was I so scared? Well, it had become increasingly clear that there *vere* a few things pretty strange about the Colonel and how he was managing or mismanaging) my career. Most notable was the fact that he had never once gone to Germany during my tour of duty there and that, since then, he'd offered a wide variety of terrifically inventive excuses for not letting me perform anywhere outside of the United States. So talk started circulating that he Colonel wasn't exactly legit, that he had something to hide, that maybe he vas even an illegal immigrant, frightened to make any deal that required him o leave the country or even apply for a passport. At the same time, no one vanted to ask him too many questions, because the Colonel, when angered, could be frightening in his rages. He had even been seen (I was one of the vitnesses) hypnotizing people into doing exactly what he wanted. And certainly there were times when, after being cooped up alone with him in ome pokey office or other, I'd leave with my tail between my legs, feeling hat *I'd* just been hypnotized into agreeing with everything the old bastard had nsisted upon, even when I secretly disagreed. So, yes, I was scared of him.

Yeah, I'll admit it. Most folk assumed that I'd always revered him, but ıs far back as *Loving You* – and knowing that my mama loathed him – I was tarting to feel that I was being manipulated by him, that I was just 'product' o him (a sparrow painted yellow to be sold as a canary), and resentful of how ıe was trying to take control of my relationships with my parents and girlfriends and musicians, especially Scotty Moore and Bill Black. So I'd tarted throwing a few tantrums in protest. But the Colonel had the instincts of ın alligator. Either eat or be eaten. He could see every strength and weakness, very vice and virtue, in a person, and promptly suss just how to use them. And having met my mama, despite her obvious distrust of him, he learned enough to suss that I would have done anything – and I mean *anything* – to keep her from poverty, to give her the best of everything, and he used that to play on my insecurities and have me back off at the slightest suggestion that

ny success might be lost. He did that throughout my whole career – even long ıfter my mother had died – and it worked every time. The very thought that ny career might collapse was the biggest fear of my life. And the belief that ny success was almost totally due to the Colonel – a belief carefully nurtured ›y him – was the one belief I could never shake off.

He also knew that ever since my daddy's imprisonment I had an instinctive ear of authority – and the ruthless sonofabitch used that as well.

So how did it affect me and Ann Margret?

Despite the fact that Ann Margret and me struck sparks off each other, urning *Viva Las Vegas* into my most successful musical, the Colonel became :onvinced that the director, George Sydney, was giving her too much screen ime, too many close ups, and threatening to make it as much her picture as nine. So, despite everyone else's belief that we were electrifying together and the subsequent box office proved it; my biggest success since *Blue Hawaii*), he removed two of the three duets that we'd recorded for the movie ınd also had a lot of her best moments excized from the final cut. The colonel vas also concerned because Ann Margret was taking up a lot of my time off creen, as well as on screen, and he knew that this could seriously complicate ny life, given that my little Lolita – Priscilla – was stuck back there in Graceland, reading in newspapers and gossip magazines about our hot affair ınd demanding ever more loudly that I bring her, Priscilla, out to Hollywood, vith no more excuses for not doing so. 'I hate her,' my normally placid little weetheart screamed at me one fine day during a violent row (she hurled a lower pot at me) over Ann Margret. 'Why doesn't she keep her ass in Sweden vhere she belongs?' So the Colonel talked to me. I mean, he really got stuck nto me. Blinded by love, revitalized by Ann Margret's very presence, I made he mistake of asking the Colonel if he'd manage her as well as me and he esponded with his notorious Svengali tactics, convincing me that such a move :ould damage my career, possibly even finish it, and in general scaring the ›iss out of me. So I never raised that subject again to the Colonel. Even worse, stopped seeing Ann Margret on a regular basis and generally put a cooling listance between us (except for the assassination of President Kennedy, when he came to the house in Perugia Way and we spent the day weeping ogether), until the affair, like some of my recent songs, gradually tapered ıway to nothing. Then I went back to making real shitty movies, with lousy cripts and atrocious songs, despising myself for what I knew was my

cowardice. Yeah, the Colonel sure knew how to play on my insecurities, my ongoing fear of a return to anonymity, even poverty, and I couldn't resist his mesmeric, emotionally blackmailing, ways. No, instead I could just increasingly despise myself and look elsewhere for comfort.

I found it in religion.

I found religion through my hairdresser. His name was Larry Geller. Of course I'd been religious since the day I was born, brought up in a Christian household, regularly attending the First Assembly of God church in Tupelo, then listening to and singing gospel songs. This was followed by my growing fascination with Hawaiian mythology and Polynesian culture, during and after the making of *Blue Hawaii*. This in turn explains why I always wore around my neck both a Christian cross and a Jewish Star of David: to keep my options open. But now I needed a different kind of religion and I found it through Larry. He came to my place on Perugia Way in Bel Air in 1964 on the recommendation of one of my Memphis Mafia during the making of a load of shit called *Roustabout*. (Co-starring Barbara Stanwyck, another actress rumored to be a lesbian and with a voice like sandpaper. Believe me, I kept well away from her.) Anyway, by that time I was in a state of deep self-loathing, convinced that my fame had been the cause of my mama's heavy drinking and early death, equally convinced that I was squandering my talents on crap like *Roustabout*, and increasingly convinced that in giving up Ann Margret to protect the very career that had killed my mama, I had given up one of the great loves of my life and settled instead for a compromised existence. Sooner or later, I knew, I would have to marry Priscilla (my little Lolita's continuing presence in Graceland was leading to scandalous speculations in the media and her daddy was putting appropriate pressure on me), and that such a marriage, no matter how much I loved her, which I did (I mean, I loved her as much as I loved Ann Margret, but in a *different way*) would represent a compromised existence for sure. So, I needed something to boost my flagging spirits and I found it in religion, through a hairdresser who, with the scissors clicking away in his delicate hands, talked endlessly about his spiritual interests.

Larry was great. He agreed with everything I said. When I confessed that I was convinced I had a higher purpose in life but didn't yet know what it was, he not only agreed, but brought me a lot of religious books that he said would help me in my spiritual quest. When I said that intellectually I'd understood all

he books that he'd given me, but that I'd never had the kind of 'profound, piritual experiences' they described, he agreed indirectly by informing me hat such experiences had nothing to do with 'intellectual' perception but were ased more on emotion, 'a surrendering of the ego to God'. When I said that I eeded to be away from everyone, from my usual hangers-on, my Memphis Mafia, because I was 'really into something important within myself', he greed by saying that he understood. Hell, man, he even agreed when, during a lrive from Memphis to Los Angeles, possibly over-stimulated by my rapidly ncreasing medication, I suddenly screamed that I could see the face of Joseph talin in the clouds. Yeah, he agreed that he'd seen Stalin up there as well, just efore the image faded away. Even better, when I jumped out of my car in the niddle of the desert, somewhere near Flagstaff, Arizona, near the San rancisco Peaks, in the land of the Hopi Indians, and took off into the vilderness with tears rolling down my cheeks, to tell Larry that the image of talin had changed to the face of Christ and that I'd finally surrendered my go to God… Well, yeah, he agreed with that as well. But when, a few days ater, back in Bel Air, I told him that I wanted to finish entirely with show usiness and enter a monastery instead (I mean, if Dolores Hart could do it, vhy couldn't I?) and I expected him to find a suitable monastery for me, well, e got this kind of scared look in his eyes and I knew immediately that he was errified of what the Colonel would say and do when he found out what we vere up to.

So the monastery was out. That, however, didn't stop me becoming nvolved with an ecumenical movement called the Self-Realization ellowship, based in Pasadena and run by Sri Daya Mata, a disciple of aramahansa Yogananda, whose body, when it was laid to rest, at least ccording to Larry, didn't deteriorate for three weeks, thus proving, according o Larry, that just before his death he'd been in a 'remarkably evolved state'. hrilled by this new knowledge, I paid a visit to the Self-Realization ellowship Lake Shrine, where I had an urgent meeting with the new head of he movement, who'd only recently returned from one of her many 'seeking' rips to India. Sri Daya Mata, known to her disciples as 'Ma', was a handsome ifty-year old woman who presided over the movement's tranquil retreat Priscilla: 'the flowers, the garden paths, the simple shrines') located high in Mt. Washington, overlooking Pasadena, on the outskirts of Los Angeles. She vas a deeply spiritual woman (I saw the gentle radiance of her pure soul in her

ace: the spitting image of my mother, Gladys) who, when I explained that I vas in search of inner peace, a meaning to my life, and that I wanted to join a nonastery, form a commune, become a leader of her Fellowship and teach the aith to all my fans, gently reminded me that such aims took time, that they ould not be instantaneous, that there were no shortcuts; and that I was a great ntertainer, a wonderful calling in itself, deeply spiritual in its own way, and hat I could use my work, *my calling*, to find inner peace and spiritual ranscendence if I daily practised patience and self-discipline, which is omething, I'm now willing to admit, that I'd always sorely lacked. Still, lespite my self-doubt, she reduced me to tears. And so I rushed straight back o the crowded house in Bel Air to inform Priscilla, my Memphis Mafia and veryone else of my new resolve.

Well, that didn't go down well with the Colonel. Already hating Larry Gellar's guts – as did Priscilla and most of the Memphis Mafia – he accused ne of being on a religious kick that was damaging my career, then proceeded o harass Larry, first by having his house burgled, stealing all his files on arapsychology, astrology, palmistry and numerology, as well as his tapes of nusic from the Church of the Self-Realization Fellowship, then by pressuring ne into marrying Priscilla, now twenty-one, no longer 'jail bait', and, finally, y forbidding anyone to talk to me about religion and by insisting that they, he Memphis Mafia, were to ensure that Larry was never *left alone* with me. A ew days later, the Colonel insisted that I burn all the religious books that arry had given me. And I did. Naturally, taking the hint, Larry quit the ollowing month and no one else ever breathed a word about religion to me.

So I turned to guns.

We all love guns, of course. It's the American way of life. (Just ask harlton 'Ben Hur' Heston.) Personally, like any well brought up, red-blooded merican kid, I'd loved guns since I saw my first Western movie and started ollecting them as soon as I could afford them. Right. Everything from small andguns to an M16 automatic assault rifle. But not much use, are they, if you an't use them? So I gave guns as presents to every member of my Memphis afia and we'd have really great times throwing light bulbs into the wimming pool and then shooting them, or shooting at targets pinned to the vall of the shed containing my great collection of fireworks (which made a ew of the guys nervous), or shooting birds out of the sky, or shooting the easts of the field, or, in my case, shooting the shit out of TV sets when some

personality annoyed me or studio amplifiers when the sound wasn't right or almost shooting various individuals, including girlfriends, when, not concentrating fully because of my medications, I'd fire one of my weapons accidentally, both indoors and outdoors. On a safer level, making my daddy breathe easier after he'd complained a few times about the noise and destruction, we used water pistols instead, chasing each other all over the grounds of Graceland, squirting water at each other while laughing hysterically. But even that became boring in the end.

So I turned to drugs.

Drugs? I *never* took drugs! *Medication*, yeah, but that was all. For medicinal purposes. Codeine, Morphine, Methaqualone (that's Quaalude, above toxic level), Diazepam (that's Valium), Diazepam metabolite, Ethinamate (Valmid), Ethchlorvynol (Placidyl), Amorbarbital (Amytal), Pentobarbital (Nembutal), Pentobarbital (Carbrital), Meperidine (Demorol), Phenyltoloxamine (Sinutub), and last but not least, Elavil and Aventyl, both anti-depressants. Medicines, right? Not drugs. And I knew all about them because *The Physician's Desk Reference* was practically my Bible (the Bible being my all-time favorite read) and I never had it far from my bed, where, as the years went by, I spent more and more of my precious time, sleeping during the day, staying awake most of the night (like a vampire, ha, ha), and engaging in a lot of deep thinking. Like: What am I here for? Why did God anoint me with my great talent? Why do the millions still worship me? And why am I so damned unhappy and taking all these tablets?

Truth be told, I started on the tablets a long time before Bel Air: between 1958 and 1960, when I was serving with the Army in Germany. Initially I took Dexedrine to keep me awake during the long, freezing nights in the mountains on manoeuvres on the border of Communist-ruled Czechoslovakia, then I took others to help me sleep after my sleepless nights and yet others to keep me slim because I always ate too much. But as generous as always, I passed them around. I mean, most of my Memphis Mafia received their fair share. Then, again, when I first met Priscilla in Germany, when she was still only fourteen years old, she confessed that she was spending so much night time with me (all chaste!) that she was falling asleep at school, so I slipped her some pills to keep her awake at school, though I later learned that she just kept them in a box, being too frightened to take them, still being a schoolgirl. A few years later, when she'd just arrived to spend Christmas in Graceland and was jet-

agged and keyed up and told me she hadn't slept for days, I made her take a couple of 500 mg Placidyl tablets, telling her they'd relax her, and she nervously swallowed them and was unconscious so long (two whole days, in fact) that my daddy and some of the guys went into a panic, begging me to call a doctor or an ambulance. But I told them not to worry, that she'd recover, and sure enough she did, though the experience, possibly a 'near death' experience, put her off pills for life.

Not me, though. From then on, until the very end, I just kept taking them tablets. Of course, they had their side effects. I'd always had a temper but the medications made it worse and, even worse than my worsening temper tantrums, was my tendency to lord it over those around me, particularly the Memphis Mafia, and, even worse than that, I started putting on weight. And once started, no stopping.

It was boredom. I was so bored in Bel Air, between making those damned movies, that I even bought a chimpanzee and called him Scatter because he caused so much mayhem in the house. My bored Memphis Mafia encouraged him and certainly loved to watch him 'cause one of his tricks was to look up the ladies' dresses. After he'd escaped from the house and shocked some of the female neighbors with his voyeuristic activities, I shipped him off to Graceland where I had air-conditioned, heated quarters built specially for him. That little bastard sure had it made. On the other hand, when I think back on it, I might just have bought the chimp because I'd read that my acting hero, Marlon Brando, had had a similar situation with a pet racoon that caused mayhem in his apartment in New York. Anything that was good enough for Marlon was good enough for me.

It has to be said, though, that I really *did* love animals, all kinds, and began collecting them, keeping them in my private zoo in the grounds of Graceland, just like I collected my cars and motor-cycles and golf carts and clothes and jewellery and guns and medications. Man, I had horses, ponies, dogs, monkeys, peacocks, other tropical birds… You name it, I had it… But that didn't stop me from being bored. So I gradually increased my intake of medications and, behind the Colonel's back, in the safety of Graceland, Bel Air, Hawaii or Las Vegas, returned to religion and practised spiritual enlightenment by preaching to friends and family, reading religious books to them, patiently explaining the more difficult passages to them, and generally sermonising to them for hours on end, pleased that they always received my

vords of wisdom in total, reverential, wide-eyed silence. And it was round bout this time that I truly came to understand that God had chosen me out of ll others to be one of His messengers on Earth. My great gift as a singer, as n entertainer, was truly a gift from God.

And so, now believing more than ever in God, in the spiritual world and ny personal relevance to it, being one of the Chosen Ones, I began talking ven more frequently, in the darkness of my bedroom, to my dead mama and tillborn brother, Jesse Garon. We had some great conversations. They both aid they were looking forward to seeing me when I reached the Other Side.

That's where I think I might be right now, though I still haven't seen hem.

The Beatles paid me a visit in 1965. It was a special request from them nd so, being 'the King', I passed on my kind permission via the Colonel. Most of the civilized world treated that minor event like some kind of musical Summit Meeting, but it was really just a PR stunt arranged by the Colonel vhen he learnt that the Beatles wanted to meet me. He thought it would help ny flagging career because by that time the Beatles were even bigger than I vas. I didn't really want to meet them, mainly because of my natural shyness vith strangers (which is why I avoided the social life of Hollywood and kept nyself surrounded by my Memphis Mafia), but also because, though still just bunch of kids, they were putting out masterpieces like 'Yesterday' and Help!' while I was singing 'The Song of the Shrimp' and 'There's No Room o Rhumba in a Sports Car'. So, I was embarrassed. Still, they came to see me n my house in Perugia Way in Bel Air. I think it was August. It was supposed o be a quiet affair, but the Colonel ensured, with a few quiet phone calls, that hey had to battle through a crowd of paparazzi to reach my front door. To over my embarrassment (and also to remind them that I was still 'the King') I cted pretty casual when they were escorted into the living room, barely rising off the couch I was sitting on, and then remained coolly polite while they just tood there, staring bug-eyed at me. Feeling better to note that, despite their own fame, they were clearly awed by my presence, I managed to have a altering conversation with them for thirty minutes or so, then, when the ilences became too embarrassing, I played something on my jukebox – I hink it was Charlie Rich – and picked up a guitar and sang along with the ecord. That kind of broke the ice and pretty soon more guitars were handed round and a jam session was under way, with me, John Lennon and Paul

McCartney harmonizing. I mention only John and Paul in this context because although I was known to loathe drugs (I only took medication), the tall, lanky one, George Harrison, was clearly stoned out of his skull and promptly disappeared into the back garden to continue taking whatever he was on. Naturally, hating drugs and drug addicts, I found this deeply offensive, though, being naturally polite and calmed by my medications, I chose to say nothing about it. Ringo was okay, though. Amiable as he always appeared to be on television, not as star-struck as the others, he proceeded to have a game of snooker with some of my boys, acting as if he'd known them for years and filling the pool room with sweet-smelling cigarette smoke. Paul McCartney was a charmer. He soon made me feel at home, even though it *was* my home, and he made sure not to play his borrowed guitar better than I was playing mine, which was not very well. I mean, he knew how to acknowledge a King's privileges. John Lennon was pretty funny, very quick with flip remarks, but despite making it obvious that he thought I was awesome, you could tell that it wouldn't take much to make the Hamburg hooligan turn vicious. And it was clear, despite their awe of me, that they were both pretty high on some substance or other, just like that George Harrison lurking outside, the pathetic drug addict. All drug addicts, the lot of them. I could see this with the heightened clarity I always gained when filled with my numerous medications. So when, a few hours later, they were taking their leave, having received clear indication from me that I was tired and wished to retire (my little act to encourage them to leave), John and Paul invited me to their rented house in nearby Benedict Canyon, and I just said, 'We'll see,' because I had no intention of returning the visit. No matter. When they were gone, I stayed up most of the night as usual, relieved to be alone, watching television with only Priscilla and all of my Memphis Mafia for company. However, the next day, after Joe Esposito had phoned the Beatles' manager on my behalf to decline their kind invitation, Jerry Schilling couldn't resist going to see them on his own. After his visit, safely back in my place, his pupils not abnormally enlarged, he excitedly informed me that John Lennon had made a point of telling him to tell me that if it hadn't been for me, he, John Lennon, would have been nothing. Naturally the compliment pleased me. (It was the least he could have said.) But I still didn't visit the Beatles or invite them back and I never saw them again.

I mean, apart from anything else they were into drugs and I wouldn't

vear that. I know it was widely rumored that *I* was into drugs, but there was ıo truth to it. Believe me, I only took my medications, strictly controlled, as aid down by the rules of *The Physician's Desk Reference*, which I read every lay, just like I read the Bible every day. I hated real drugs and drug addicts ınd dealers, which is why, in 1971, though I was pretty strung out on my nedications, I decided to make a personal visit to President Nixon and ask ıim to make me a Federal Narcotics Agent.

It all started when I had a serious fight with my daddy over Colonel Parker. I wanted to fire the bullying old bastard, but my daddy didn't, clearly ıot trusting me to manage my own affairs, so I just stormed out of Graceland ınd took off for a few days. Called together the crew of my private airplane ınd flew to Washington D.C. Swallowed a lot of my medications en route, felt ›retty high and so passed the time thinking out my strategy. Holed up in the Hotel Washington for a couple of days, took a lot more medications, flew back o L.A., feeling even higher, still ignoring the folk at Graceland, then called ·erry Schilling and told him to book us some tickets to D.C. under the name of ·ohn Carpenter, a pseudonym I often used when seeking anonymity. Arranged ·or Sonny West to meet us in Washington, bringing some cash, because I lidn't have a dime on me. Ate a lot of chocolate, felt really sick, so had some nore of my medications to settle my stomach. Flew back to D.C. with Jerry ınd en route composed a thoughtful letter to the President, telling him that I vanted to help my country combat its drug problem, reminding him that as a ;reat entertainer I could communicate with people of all ages, and suggesting hat I could do more good if I was made a Federal Agent at Large. Went traight to the White House at 6.30 in the morning and handed the letter to the guard on duty at the gate. I was disappointed at first when he failed to ecognize me (I was wearing my big, jewelled glasses, my massive gold belt, ınd my dark Edwardian jacket with brass buttons, draped over my shoulders ike a Batman cape), but I perked up when recognition soon followed and he ıccepted my letter. Went with Jerry from there to our hotel where I called for ı doctor because I wasn't feeling too good. The doctor examined me and told ne I'd be fine if only I'd stop eating all that chocolate. I thanked him, paid ıim, took some more medications, then paid a visit to the Bureau of Narcotics ınd Dangerous Drugs, hoping they'd arrange for a visit with J. Edgar Hoover ıt FBI headquarters. They didn't. I did, however, receive a call from Jerry, elling me that Egil Krogh, deputy counsel to the President, had called to say

hat he was in receipt of my letter to the President and inviting me to stop by ıis office in the Old Executive Office Building in the White House grounds. Took a taxi to the hotel to pick up Jerry. Sonny, who'd flown in from Memphis, arrived at the hotel just as I did. Accompanied by Jerry and Sonny, I ırrived at Krogh's office carrying a World War II Colt .45 that I wanted to give to the President. They told me I couldn't take the gun into the Oval Room, but that one of their agents would pass it on for me. Fine, I said, ıanding over the pistol. Then I spoke at length to Krogh, persuading him that I ıad valid, vitally important reasons for seeing the President. I soon charmed ınd eased the fears of that oddly nervous sonofabitch, so come shortly after nidday we were walking together to the Oval Office, leaving Jerry and Sonny ɔehind. I shook hands with President Nixon. He seemed pretty confused. I tood there, still wearing my oversized sunglasses, looking like Batman, and ilver-tongued him into giving me what I wanted: a BNDD badge. Then I gave he President a hug. This was not normally permitted, but I took him by urprise. Then, while he was still reeling from the shock, I suggested that he ay hello to my two friends, Jerry and Sonny, and give them BNDD badges as vell. And he did. And I proved my worth to him by reminding him that the lrug culture was the vanguard of violent anti-American protest and that the Beatles, just for instance, all of whom took drugs, had come to our fine :ountry, made themselves a fortune in good old U.S. greenbacks, then flown ɔack to England to foment more druggy anti-American feeling with their lecadent songs. This patriotic speech completed, I hugged the President again, hook his hand again, and then flew back to Memphis to be made a private leputy by Sheriff Roy Nixon of Memphis. That the Sheriff and the President hared the same surname was purely coincidental.

Anyway, having been sworn in as a Federal Narcotics Agent and now in ɔossession of my official BNDD badge, I started driving around Memphis at ıight and stopping any drivers I suspected of committing driving offences or ɔeing in the possession of drugs. I had a flashing blue police light on my car. I ılways carried two pistols, one in my boot, the other up my sleeve. I'd wave ny badge in their faces and tell them off for speeding or demand to search heir cars for illegal drugs. I don't know what impressed them most: the fact hat it was me, the world-famous Elvis Presley, or the fact that me and my two ɔuddies actually had official drug squad badges to wave in their faces. I even ısed my new authority to intervene when I saw guys arguing drunkenly

outside dens of iniquity or having fist-fights on the sidewalks. At such times I always wore my outsized sunglasses and Batman-styled cape, so I was pretty impressive when coming on to my chosen criminals in the dead of the night.

But I still wasn't happy.

Of course, Priscilla and me were married by that time. And at least, whether awake or dreaming, whether dead or alive, I still remember the date: May 1, 1967. We were married in the Aladdin Hotel, Las Vegas, in the suite of the owner, Milton Prell. Judging by the photos that I can conjure up in my head right now, I looked plump and sleek, with too much black lacquer in my hair, and Priscilla looked remarkably like me. Of course, that was my intention. I really don't know why. I only know that I spent the six years she spent locked up in Graceland moulding her into the very image of the girl I wanted. Though without make-up she had beautiful, fine features, I practically buried them by making her have piled-up, heavily lacquered, jet-black hair, false ink-black eyelashes, super-heavy eyeliner, thick lipstick and far too much mascara. So, by the time of the wedding, we looked almost like twins. Eerie, right? So maybe, all those years, I'd been subconsciously trying to turn her into the spitting image of myself, or, more likely, into a female version of what I imagined my stillborn twin brother, Jesse Garon, would have looked like. So maybe I was still looking for Jesse Garon.

Best not to think of it.

Anyway, we honeymooned in Palm Springs, finally consummated our lengthy relationship, then returned to a flashy house at Rocca Place in Bel Air, remained there for the first few months of our marriage, then moved into a pseudo-French regency mansion located in Hillcrest Road, in the exclusive Truesdale Estates, Los Angeles. For the rest of my marriage to Priscilla, I commuted between there and Graceland while making Priscilla spend most of her time in the latter, not wanting her to get too close to my movie-making activities, ha, ha, in Hollywood.

Actually, she didn't have too much privacy in Graceland, having to contend on a daily basis with my ever-present, bawling, brawling Memphis Mafia, and with the ever-expanding Graceland staff, including cooks, secretaries, chauffeurs, valets, maids, gardeners, security guards, beauticians and a wide variety of human oddities. Not forgetting my creaking grandma, Minnie Mae, who sniffed snuff and left her false teeth lying all over the place; her foul-mouthed, diabetic-alcoholic daughter, Diane, who had a pet dog later

lescribed by my bright daughter as ‘the dog from hell’; plus my daddy, Vernon, his conniving wife Dee, her three rapidly growing sons, all of whom I letested, and a lot of other long-term, sponging relatives. Enough to keep her ıappily distracted, I thought.

During that first year of marriage life at Graceland continued pretty much ıs normal. I practised karate with Priscilla and the guys, went horse-riding vith Priscilla and the guys, watched too much television with Priscilla and the guys, fooled around with loaded pistols without Priscilla but with the guys, ɔlayed football with show business friends and, as always, with the guys. I ılso threw a lot of late-night parties in Chanault’s restaurant in Bellevue Boulevard, Memphis, for Priscilla and the guys, regularly rented the Crosstown Theatre, the Memphian Theatre, or the Avion Theatre in West Memphis, for all-night movie sessions with Priscilla and the guys. I also hired he whole of Liberty-Land, the Memphis funfair, in order to ride the dodgems vith Priscilla and the guys – either at midnight or in the early hours of the norning – and also enjoyed some all-night frolics with Priscilla and the guys ıt Memphis roller rink, Rainbow Rollerdome, located in Lamar Avenue, Memphis. Getting to sleep and waking up again were taken care of, for all of ıs, with amphetamines and barbiturates, uppers and downers. We should have ɔeen having a whale of a time, but I couldn’t help feeling depressed and kept osing my temper.

The greatest moment of my life up to that point was the birth of my laughter, Lisa Marie, on February 1, 1968, exactly nine months to the day ıfter Priscilla and me were married. I offer this as proof that I never had a ɔroper sexual relationship with Priscilla until we were married. Though we’d ɔooled around a lot in bed during her six unmarried years in Graceland, she emained chaste until the first night of our honeymoon. This came about ɔecause I truly believed that a Christian man should only marry a virgin.

The sex stopped as soon as she announced that she was pregnant, ɔecause I simply couldn’t make love to a pregnant woman. The sex stopped ɔor good, or close enough to it, because I couldn’t make love to any woman vho’d had a baby, not even my wife. I put this down to my abiding belief, my outhern gentleman’s belief, mentioned previously, that there are only four ɛinds of women: (1) mothers; (2) wives; (3) daughters; and (4) all the others. So when Lisa Marie was born, I stopped having sex with her mother and went ɔack to the others. This caused no end of trouble.

Looking back on it, I suppose I should have realized that when I refused o have sex with the fourteen-year old Priscilla in Germany, because she was oo young, but while I was blatantly fooling around with other girls, mostly ans let into the house for that very purpose, she might have felt that she was eing rejected. Looking back on it, I suppose I should also have realized that vhen I continued to refuse to have sex with Priscilla during the six years she ived with me in Graceland (on the rare occasions I was there), while I was latantly fooling around with female fans let into the building for that very urpose, or, just as blatantly, having widely publicized affairs with my co-tars (think Ann Margret) and other female celebrities in Hollywood (though lenying it blandly every time), she might have started feeling that her ndisputable attractions were not being appreciated by her husband. So when I topped having sex with her while she was pregnant, then stopped again, for good, after Marie Lisa was born, she was surely justified in feeling resentful nd then causing some trouble.

Even recalling it, makes me think that if I'm dead it might be a good hing. A man can only take so much.

But before the trouble came, the birth of Marie Lisa filled me with joy, ifted the woes from my shoulders and rejuvenated my flagging spirits, giving ne back my lost ambition, encouraging me to lose weight, and propelling me oward the Great Elvis Comeback. This came at the tail-end of the last four novies I ever made, three diabolically bad, the last not bad at all, merely nediocre, and it took the shape of my revelatory NBC-TV Special, directed by determined young guy called Steve Binder and shown in December 1968. Typically, the Colonel had wanted me to just stand in front of a TV camera nd sing Christmas songs for sixty minutes, but Steve Binder, bless his stout eart, resisted that notion and instead put me into a sexy black-leather suit, eminiscent of Marlon Brando's outfit in *The Wild One*, sat me down with a couple of my old musicians, namely Scotty Moore and J.D. Fontana, and had ne belt out my classic rock and roll songs, including 'Lawdy Miss Clawdy', Hound Dog', All Shook Up', 'Don't be Cruel' and 'One Night', while eating the hell out of my guitar. Man, I was so glad to be back that I sang hose songs like they'd never been sung before. Having been deprived of his ixty-minutes of Christmas songs, the Colonel insisted that we climax the how with at least *one* Christmas song, but instead, again at the urging of quietly stubborn Steve Binder, the producers had a brilliant 'inspirational'

ong composed specially for me. It was called ‘If I Can Dream’ and my mpassioned singing of it at the end of the Special produced tears nationwide then worldwide) and it became my first single in years to sell a million opies.

I was back with the world at my feet.

Then it all went pear-shaped.

But not immediately, as I recall. First there was an inspired recording ession at American Recording in Memphis, leading to a couple of great lbums and a whole string of hit singles. Then there was my spectacular return o live performances, first at Las Vegas, then on tour across America (because f Colonel Parker’s dark past, I never left the country), with critics raving bout how ‘Elvis was supernatural, his own resurrection’. Then the touring, ven though wildly successful, became a real bore and also pretty exhausting, o I had to take even more medications to keep my energy levels up and then, vith my energy levels raised, I decided that I needed something ‘different’ to eep my audiences satisfied. This led me to thinking back on my childhood ove of Batman and Captain Marvel comics, particularly the latter, which in urn led me to style my already dyed-black hair even more in the color and tyle of the Captain Marvel drawings (ink-black verging on purple, including ideburns and forelock) and to have my already flamboyant jumpsuits and apes tailored like Captain Marvel capes, as well as the Captain Marvel ightning-bolt emblem on my TCB (Taking Care of Business) and TLC Tender Loving Care) jewellery, not forgetting the lightning-bolt on the tail nd of my private airplane, the *Lisa Marie*. Pretty impressive, right? At least ny audiences thought so. Certainly, when I began climaxing my live erformances by turning my back to the audience, falling to one knee, and aising my arms to spread the cape out like a great fan, all gold like a blazing un or decorated with a gold-embroidered American eagle, as the orchestra oared on the final stirring notes of ‘An American Trilogy’ (‘Oh, I wish I was n the land of cotton/Old folks there are not forgotten’) they’d go completely lemented.

Unfortunately, when that became boring as well, I had to revert to my nedications to keep the boredom at bay and keep my weight down because I vas eating like a pig because I was so bored, and also because my nedications, more and more every day, were increasing the weight caused by ny overeating and making me blow up like a balloon. Man, it was sad!

And Priscilla was mad. Colonel Parker was mad. They were mad because hey believed that my medications were making me behave irrationally, with ın increasing need to shower expensive gifts on people – flowers, jewellery, ıorses, ponies, automobiles, trucks, houses, ranches – anything 'the leeches' as my daddy termed them) desired, to the point where I was literally spending ortunes. And they were mad because I had gone back to spending hours of neditation in my darkened bedroom, having 'conversations' with my dead nama and stillborn twin brother, Jesse Garon, while fanatically studying soteric religions and philosophies, while bedding visiting fans and other adies, usually in the house in L.A., but sometimes, Lord have mercy, even in Graceland, sneaking them in through the back door. And they were mad ecause they were mistaking my perfectly legitimate medications for hard lrugs and blaming them for my increasing weight and my tendency to give ong, rambling monologues on stage ('Instead of singing', as the Colonel put t) and because I was paying more attention to my karate lessons than I was to utting new, decent records. So… They were mad.

Even now, where I stand, or where I'm sleeping or maybe dreaming, or naybe even dead, I don't know what they were complaining about. But if they vere mad at me, I was just as mad at them because of their condemnation of ny passion for karate, since I actually employed my karate exercises in a pectacular fashion on stage, wearing my gaudy jumpsuits, and the audiences oved it. Later, I was even more incensed by their comments about my karate, vhich Priscilla also practised, because Priscilla, when she decided that she'd ıad enough, had an affair with our karate instructor, Mike Stone, and then left Graceland – and me – for good, to go and live with the back-stabbing onofabitch. So much for karate!

But I have to confess: Priscilla's departure and the loss of Lisa Marie, vho went with her, was the greatest blow I had suffered since the death of my nama.

It all went pear-shaped after that.

But wait a minute. Get that light out of my eyes. It's a light at the end of ı long, dark tunnel and it's either drawing me toward it or it's coming toward ne. Can I see something, or someone, down there?

No. Stop imagining things.

When I look back on my life, I feel troubled, but there *were* a few ıchievements to be proud of, even during the dark, final years. Going back to

he beginning, to those early Sun records, Sam Phillips and me between us did ndeed knock the shit out of the color line. And Sam confessed that without ne he couldn't have done it. And then there were the RCA years, all the joy I rought to millions while breaking down the demarcation lines between lifferent kinds of music, by covering them all, from country to the blues, from gospel to rock and ballads and even opera ('O Sole Mio' and so on). Yeah, ight. And sold so many singles that if you lay them down side by side they'd ircle the whole world twice. Then there were the movies: most were bad, but ome were good, including the documentaries that set the matrix for all future ock documentaries and included the *Aloha From Hawaii* satellite show, iewed simultaneously by over a billion people in over forty countries, giving ne the greatest single audience in history. And the awards, man. Lord, yes! More music awards than any other singer alive. And the many benefit shows. The thousands of dollars given to charities. And finally, despite the divorce, a vife and daughter who loved me right to the end and always supported me.

So that was the good.

Now to the bad.

Where are you, mama? Where are you, Jesse Garon? Why did you both eave me? And why am I here all alone, waiting for your return?

Okay, if I still don't know exactly where I am, at least I now know *why* 'm here. I know it's confession time.

An English writer once wrote that in surrounding myself with the nembers of my Memphis Mafia I was surrounding myself with the voices of ny childhood. That English writer was right. When my mama died, I blamed nyself for her premature death because it was caused by my success and I ould see it but could do nothing about it and so tried to put it out of my mind. She was lovely when she was young. She lived only for me. She wanted me to ucceed and she was pleased with my success, but she had no idea of just how lestructive fame could be and when she finally found out it killed her. *I* killed ıer. I did. I did it with the very best of intentions, but I was to blame. First, she vas frightened of losing me, her only surviving child, and then, with my early ame, I was touring all the time and I didn't get home too much at all. Next, he justifiably felt that increasingly she was losing me to Colonel Parker and o the many temptations of show business. Then, with the very best of ntentions, I moved her out of our shotgun shack in Tupelo and into a four-edroom house in Lamar Avenue, a much better neighborhood. Six months

ater, we moved again, this time into a grander, three-story house in Getwell Street. Finally, I bought us our first house in Audubon Drive, in a wealthy, quiet area. I also bought mama a pink Cadillac. It was what she'd always vanted, but she never got round to driving it. And while pretending to be pleased, it was clear that she was deeply unhappy in her new home, having ost her old friends and being unpopular with the snot-nosed neighbors who vere always complaining to her about the noise and constant activity caused by my fans and the media. She could only have been made more miserable vhen the neighbors actually brought a public nuisance complaint against me, hough thankfully the judge ruled in my favor. That's when my mama started ıer secret drinking. Though she believed it was secret, my daddy and me knew ıll about it, so a year after moving into Audubon Drive, I purchased Graceland, a two-story, 23-room mansion with thirteen acres of land, located ust outside Memphis at what's now 374 Elvis Presley Boulevard. Soon after he purchase, I installed the now-famous wrought-iron 'music gates' and a swimming pool, then I raised the walls and planted trees to give us some privacy. But none of it worked. Mama just felt more isolated than ever, dislocated from all she knew, and complained that I was being taken away from her by managers and the media and my fans. On top of all this, she was ıeartbroken because she'd been so fond of my first girlfriends – Dixie Locke, Barbara Hearne, June Juanico, Anita Wood – all local girls – and was desperately hoping I'd marry one of them and give her grandchildren. Instead, suddenly I was dating Las Vegas dancers and Hollywood starlets and soft-ouch female fans while losing contact with the girls my mama was fond of. All of this only increased her secret drinking and led to the rapid deterioration of her health. Then, when I was serving with the Army, mama died from acute ıepatitis and severe liver damage caused by her heavy drinking. And I ıbsolutely blamed myself for that.

That was when I first saw the dark side of fame. In the early days of my ame I'd taken a coltish pleasure from the screaming and sobbing of my emale fans, but by the second year of it, when their antics were getting out of ıand, when they were pulling at my clothes and writing on my cheeks in ipstick or dancing up and down on the hood of my car or driving a knife into he upholstery, I saw that they were doing it with the queerest light in their yes and that kind of frightened me. Then, when my mama was being buried ıt the Forest Hill Cemetery in Memphis, even though I was distraught with

grief, almost out of my mind, sobbing relentlessly, clinging to my daddy, the fans were all over the place, taking pictures, screaming at me for autographs, some even laughing and joking with each other, turning the funeral into a circus – and that was the first clear picture I had of the dark side of fame.

I hadn't found freedom in fame; I'd been imprisoned by it. And that's why, when I was serving in Germany with the Army, but living outside the base, I brought family and friends from home to share my rented house in Bad Nauheim. The friends were Red West and Lamar Fike: the first members of my soon-to-grow Memphis Mafia. Only now can I clearly see that I wanted to be surrounded by family and friends, the 'voices of my childhood,' as a form of protection in a world without my mama, without my childhood sweethearts, the ones my mama thought I'd marry, and increasingly, until the arrival of Priscilla, without any seriously close relationships. I was a 'star' and that removed me from the real world and eventually forced me to create my own. By the time I returned to the States, in 1960, I wasn't the man I had been. I was someone else entirely. I was 'the King' and the Memphis Mafia were my courtiers. They lived by and for me.

Despite being back in Graceland, the pressures grew and grew. First and foremost was my guilt over Mama's death. Next was the growing feeling that I was all alone in the world, despite having my daddy with me – because my daddy had already shocked me by having an affair in Germany with a married blonde who boldly forced herself into our lives only months after my mama had died. That seriously angered me, putting a distance between me and my daddy that hadn't been there before. Even worse, when I was discharged from the Army and moved back into Graceland, leaving Priscilla back there in Germany with her folks, my daddy moved his new woman, the still married Dee, in as well, along with her three children, and eventually she was divorced and they got married. I couldn't stand it. I couldn't stand the thought of my daddy and this woman sharing a bed under the same roof that had sheltered my mama. So shortly after they married, which secretly disgusted me, though I tried to be civil about it, I moved them out of Graceland, into a house I'd had specially built for them out back of the main house. But I was never really easy with my daddy or Dee after that.

Everything had changed and I had changed as well. First my guilt over my mama, then the side effects from my medications, then the endless politics of life as a King surrounded by courtiers – the Memphis Mafia, family, distant

elatives, staff – who were constantly vying for my favors and frequently at ach other's throats to gain a more strategic position for themselves. I loathed t and used it at the same time, deliberately saying one thing to one of them, he opposite to another, slyly pitting them against each other, making them ompete for me, while also frequently screaming abuse at them and then howering them with gifts (which saved me from apologising) and in general ehaving like one of the Pharaohs. And just like a Pharaoh, I began believing hat everyone was out to use me (proved more than once) and scheming ehind my back for some underhand purpose or other. Then, of course, there vas the Colonel, one of the world's most brilliant schemers, manipulating this nd manipulating that and starting to interfere with my music (which he hadn't lone before) and now addicted to gambling away fortunes in Las Vegas and elling me short to make up for his crippling losses. And, finally, there was riscilla, my ever more beautiful wife (her good looks actually improved with naturity), the mother of my beloved daughter, feeling neglected by a husband vho refused to have sex with her because she'd had our child, who was more requently involving himself with other, invariably younger, women, and vhose growing dependence on medications was making him erratic and hreatening to send him off the rails altogether. So she had an affair with my ack-stabbing karate instructor and then went off for good to live with him, aking my beloved daughter, Lisa Marie, with her. After that… Yeah, right. I vent off the rails altogether.

Do I want to dwell on the rest of it? The long slide down into hell. (Is hat where I am now?) The divorce in 1973. The break-ups and reconciliations vith Colonel Parker. The ballooning weight thereafter. The overeating and omiting. The physical collapses in Graceland. The slurred speech. The out-f-focus, wandering gaze. The rambling monologues on stage. The cancelled hows and recording sessions. The repeated hospitalisations. (Enlarged colon, lrug detoxication, glaucoma, liver damage caused by the drug abuse; with my nama it was drink, not drugs, but otherwise it was pretty much the same hing.) The firing or the walking out of old friends and formerly loyal nusicians. The various live-in girlfriends – Linda 'Miss Tennessee' Thompson; Priscilla lookalike Ginger 'Miss Memphis Traffic Safety' Alden – oth required only to give me cuddles for comfort because I couldn't get it up nymore. And the final humiliation when three of my closest friends, members f my Memphis Mafia, Red and Sonny West and Dave Hebler, all recently

ired by my daddy and not defended by me, got together with an Australian ıack to produce a book of reminiscences deliberately chosen to prove that I ook ‘drugs’ (medications!) in huge quantities, engaged in some ‘unsavoury’ exual activities (strictly heterosexual!), and had an unwholesome obsession vith guns, mortuary corpses, videotaped sex, and the ‘ghosts’ of my dead nama and twin brother. That book shocked the whole world as much as it hocked me. Indeed, it shocked me so much that it finally made me give up he ghost.

I remember lying face-down on the bathroom floor, with the light gradually fading around me, but that’s *all* I remember.

Maybe it was suicide. Maybe not. Who the hell cares?

Now, here I am. Somewhere. Some time. I still don’t know if I’m awake or dreaming, alive or dead, if I have any future other than the expectation that omehow, wherever I may be, I might soon be reunited with my beloved nama and twin brother, Jesse Garon. Yet oddly enough, while I’m waiting for hem to appear, possibly emerging from the light at the end of that long, dark unnel, I keep going over my past, over and over again, like a ribbon of lreams, my successes and failures, my ups and my downs, my hopes and lost ıopes, realising that despite all of my many achievements it’s the failures that ontinue to torment me. My caving in to Colonel Parker. My betrayal of Scotty and Bill. The early death of my mama, caused by my huge success, vhich took me away from her; and then the loss of my first three Tupelo girlfriends, which broke my mama’s heart because she wanted a grandchild ınd saw the possibilities fading; followed by the bitter loss of Ann Margret, possibly the great love of my life, and then the loss of my neglected, betrayed vife, Priscilla… all of them, in various ways, given up in the end for fame and ortune. And maybe, worst of all, I remain tormented by my failure to become ı serious actor because that, despite my love of music, was what I’d always vanted the most: to be the new James Dean, or, even better, Marlon Brando. And thinking back on this, I keep recalling a brief meeting that, no matter how elatively insignificant in God’s Great Plan, meant more to me than anything lse in my whole life, other than the birth of my daughter, Lisa Marie.

It happened in 1958, during the making of *King Creole*. I was having a break with Jan Shepard in the commissary of the Paramount lot. Sophia Loren and Carlo Ponti were sitting at the table right next to us and that kind of sighting could still excite me. Then the famous actor, Colonel Wilde, came

over to my table and asked me for an autograph for his daughter. That excited me as well. (Being famous themselves, they always claimed that the autograph was for a spouse or child.) However, what excited me even more, indeed practically stunned me, was when Jan Shepard leaned across the table, grinning mischievously, to whisper that my idol, Marlon Brando, was sitting right behind me. I started shaking on the instant. I was that overwhelmed. I kept glancing over my shoulder, at his back, but I just couldn't move. Eventually, knowing what I was going through, Jan grinned and insisted that we leave. So we stood up to leave and I kind of brushed against Brando as I was passing his table – maybe did it deliberately – and he instantly grinned – that immortal, slow-burning, seductive grin – and pushed his chair back and stood up to offer his hand, telling me how pleased he was to meet me. And then he sat down again and I hurried outside, not daring to look back over my shoulder, still shaking, hardly believing what had happened.

And here I am, recalling it again, having recalled it so many times, even while yearning to see my mama and Jesse Garon, still wondering exactly where I am and what may be waiting for me out there, beyond an unseen horizon, in my problematical future. But maybe that small incident, more than any other, more than the records and the movies and the money and the many women, the highs and the lows, the successes and the failures, reminds me of all that I won and then lost, of what I most wanted to attain, but never did. Yeah, it's that single, still vivid, abiding memory, going round and round in my head like a ribbon of dreams.

I once shook hands with Marlon Brando.

Marlon

1924 – 2004

I should never have said what I said about Elvis. I was just being flippant with that *Playboy* interviewer, Lawrence Grobel. We were talking about celebrity in general and I described Elvis as a bloated, over-the-hill adolescent entertainer who had nothing to do with excellence, just myth. It was a really cruel thing to say, particularly knowing, as I did, that Elvis revered me as an actor and had based a lot of his image on me – the so-called 'sullen' look, the black leather 'Wild One' jackets, the motor cycles, and so on. Really mean of me, but what the fuck? I was sitting there on my private island, Tetiaroa, in the South Pacific, being interviewed by Grobel, and |I just wanted to wind the asshole up. Of course in the end Elvis *was* bloated and over-the-hill, but then so was I, so maybe I was just criticizing myself. Or, more likely, being hypocritical. I was always good at that. I mean, I also railed at Grobel about celebrities who lent their presence to expensive charity dinners – I described them as 'shills' – and then I ended up befriending Michael Jackson, of all people, and spending a lot of time living for free in his disgusting Neverland ranch, his Disneyland-styled playground, near Santa Barbara, and even appearing as a Don Corleone styled gangster in one of his ridiculous music videos. Even worse, I agreed to appear at a Michael Jackson tribute at Madison Square Garden and was booed by the audience. That audience clearly had more sense than I gave them credit for. They knew what I was doing up there. I was there for the money. Michael paid me a million bucks. So I sat on a leather recliner on the stage, wearing my big sunglasses, looking like a fucking elephant, and deliberately mumbled on and on.. and on… about the horrors of sub-Saharan Africa, until the audience, who only wanted to be entertained by a string of pop performers paying their self-

serving ‘tributes’ to Michael, were going mad with frustration. Dear Michael, who was seated with Elizabeth Taylor (who, before she, too, fattened up, played my promiscuous wife in *Reflections in a Golden Eye*), just sat there, looking increasingly embarrassed. I mean, he was only paying me a million bucks for the appearance, so I thought he deserved a little winding up.

Jesus, why am I suddenly thinking of Elvis Presley and Michael Jackson? Am I still unconscious? Am I dreaming? Am I dead or alive? I remember dreaming that I’d died and the dream seemed very real, but I can’t have died or I wouldn’t be here. But then, come to think of it, where’s *here*? I feel that I’m half asleep, but I don’t think I’m lying down and I can’t even feel my huge, heavy bulk; I feel disembodied. Yes, a dream, it must be a dream. I’m kinda sleeping, *partly* sleeping, and the room’s pretty dark, so dark I can’t even see the walls, though there’s a small light, a faintly flickering light, straight ahead and not too far away, maybe fixed to that unseen wall. But I can’t be sure of that. I mean, I can’t judge the distance. I only know that I’m aware of myself and that I feel sleepy, disembodied, and I keep imagining that I died, or dreamt that I died, and I’m in this total darkness and my thoughts keep returning to the past, one scene coming after the other, like an unwinding ribbon of film: the mighty Orson’s famed ribbon of dreams.

Okay, to hell with where I am. To get back to the Grobel interview, I’ll accept that I *was* being pretty mean, particularly since the bloated, bleary-eyed Orson Welles of rock and roll had only recently died (in August of the previous year), but with the biggest fucking funeral since Valentino’s. I *do* remember thinking, ‘No way am *I* going to have that size of audience when I finally kick the bucket.’ So, yes, there was a little resentment there, though my resentments about Elvis went a good way farther back than that.

So *did* I kick the bucket? Why do I even think that? If I’d actually kicked the bucket I wouldn’t be thinking about it now. On the other hand, who knows what lies on the other side? Which is where I could be right now. Shit, this is all too confusing. I’m just dreaming, that’s all. I’ve been a manic-depressive all my life, so weird dreams aren’t unusual. So what was I thinking? Ah, yes…

I knew, of course, as far back as the 1950s, when Elvis first broke out, that he had a fixation about me and James Dean, one of my most brazen imitators. I’d read and been told by friends that he’d seen both *Rebel Without a Cause* and *The Wild One* so many times, in both cases mouthing the words spoken

by Dean and me as they were uttered onscreen, that he knew every single line of both scripts and could quote them verbatim. Like lots of people at the time, Presley thought that me and Dean were similar as actors and I particularly resented the misconception because I believed that Dean was just a poor imitation of me. Though *Rebel Without a Cause* was considered to be one of the seminal 'mixed-up-kid' movies of the 1950s, I thought it was a self-pitying load of crap with the parents all treated as cartoon characters to emphasize even more the supposedly 'sensitive' nature of the troubled teenage character played by Dean who, being a self-pitying little shit in real life, played it for all he was worth. *The Wild One* may have been a crap movie, with a lot of pseudo 'hip' dialogue ('If you're gonna stay cool, you got to *wail*. You got to put somethin' *down*. You got to make some *jive*.'), but at least my character, Johnny, wasn't self-pitying like Dean in *Rebel*. In fact, although I played a lot of troubled characters, they were never self-pitying. So when Elvis placed me side by side with Jimmy Dean, even though he did so in admiration, I really wasn't too pleased.

Then Dean died in a car crash, which left only me (Monty was pretty much out of it by this time, being a little too keen on his hip flask), so Elvis started acting more frequently like Johnny (me) in *The Wild One*, which really annoyed me. Bad enough that the rock and roll legend was repeatedly photographed on motorcycles (like guess who?), but I happened to switch on the TV one afternoon just as he was being interviewed by a guy called Wink Martindale and I felt like putting my boot through the screen. Though Wink looked as straight as an arrow – proper suit, shirt and tie, bland features – Elvis looked like a young hooligan, chewing gum in an exaggerated manner while leaning sleepy-eyed on a studio jukebox, mumbling and slurring his words just like I was reported to do, though I never did at that time, at least not onscreen. Anyway, it only took me a few seconds to realize that Elvis was brazenly imitating me, talking in a hesitant, distracted manner (one of my trademarks) and even rhythmically smacking the jukebox with one hand just as I'd done in a famous scene in *The Wild One*. I felt my teeth grinding, but a couple of weeks later I caught him being interviewed by the walking dead, Hy Gardner, on the *Hy Gardner Calling*! TV show, and again he did an exaggerated imitation of me, looking sleepy-eyed, taking an eternity to reply to simple questions, and practically whispering his words when finally he *did* reply. So that was one cause of resentment. However, I'd initially had great

admiration for him because of the way, in the early days of his career, even when black people were still being lynched down south, he defied musical prejudices by boldly breaking down the barriers against so-called 'nigger' music, gaining it wide acceptance, also openly befriending black singers. So I resented him even more when, during the 1960s, when me and a lot of other celebrities were taking part in the civil rights marches, which was pretty fucking dangerous (think of the paparazzi photographing you on your bad side), he was holed up in his fancy houses in Memphis or Bel Air, surrounding himself with a bunch of hangers-on, his so-called Memphis Mafia, living like a king (the 'King' of rock and roll) with his yes-men courtiers, refusing to offer any kind of political comment, and going for the easy money with all those dumb beach-and-bikini movies.

I met him once, actually, when he was making *King Creole* for Paramount. I was having lunch in the commissary with a couple of slavering producers who were trying to con me into something or other, and one of them, obviously being flummoxed by my typically disjointed, evasive way of responding to any kind of question regarding movie projects, leaned toward me and whispered that Elvis Presley, then the hottest thing in town, was sitting at the table behind me and that his friend, a minor actress called Jan Shepard, was nodding in my direction, looking all excited, and clearly telling him that I was sitting there right behind him. Since Sophia Loren and Carlo Ponti were at the table on the other side of me, this news was hardly likely to impress me, so I didn't bother to turn around and say hello. Then Elvis did this really dumb thing that actually touched me. I heard his chair scraping as he stood up to leave, and as he passed my table he brushed lightly against me, as if accidentally, though I knew it was deliberate, and then instantly apologized, as if not recognizing me, and then, his eyes lighting up with faked sudden recognition, exclaimed, as if in awe, '*Marlon Brando*!' So knowing that he was a great fan of mine, imitating me in so many ways, the 'Marlon Brando of rock 'n' roll', I stood up, smiling smarmily, and shook his hand, not saying a word, and then, taken aback by just how handsome he was, how absolutely fuckable, despite his innate shyness, I sat down again and let him hurry, obviously all shook up, out of the room. And that was my one and only meeting with the legendary Elvis Presley, a nice kid, but incredibly sexy as well, who'd shown great potential as an actor in his first few movies, some of which I'd seen, but who would go on to make some of

the worst movies ever to come out of Hollywood.

Not that my own movies were much better at that particular time. Remember *Bedtime Story*? *Morituri*? *The Appaloosa*? *The Countess from Hong Kong*? *Candy*? *The Night of the Following Day*? *The Nightcomers*? Those movies represented my 1960s, which I'd rather forget: the years when my contempt for acting seemed to be at its peak and I was only really interested in politics. By the end of the '60s, given how bad those movies were, my career was virtually at an end and I didn't give a shit, except for hurting from my rapidly dwindling finances. At least that's the impression I gave as a form of self-defence. I mean, a man has his pride. But while the widespread belief at that time was that I simply hated acting – a belief encouraged by my own statements – it wasn't quite true.

Despite my often stated contempt for acting, the real source of my discomfort with it stemmed from the fact that each time I performed in a movie I was reminded of how, as a kid, I used to have to 'act' for my mother to waken her out of her drunken stupors. My mother was an artistically frustrated, philandering alcoholic. My father was a philanderer who liked his booze, too. I was born and raised in Omaha, Nebraska, the third child coming after two sisters, Jocelyn and Frances. In certain ways it was an ideal life, a typical Midwestern life, in a pretty wood-shingled house, with the dogs and the cats and the milk-giving family cow, a big front yard to play in. But that was the good part. Set against that was our mom and dad, 'Dodie' and 'Pops'.

My father, Marlon Sr., was a military man who'd attended Shattuck Military Academy and fought in the Great War, then became a travelling salesman (limestone products) who drank like a fish and bought whores in the many towns he stopped at. He was a hard-as-nails bully who rarely showed us any affection and often gave me a hammering with his fists, so I hated his guts. Started calling him 'Pops' as a sly form of contempt and, oddly, he let me get away with it. My mother, Dorothy, formerly a Pennebaker, known to us as 'Dodie', was something of a bohemian and talented actress who received rave reviews for her early performances at the Omaha Community Playhouse, where she played against Harriet Fonda, her daughter Joyce, and her then twenty-one-year-old son, Henry, who, like me, subsequently went on to fame and fortune in film. As I see it now, my mother had always been a pretty solid drinker in the bohemian manner of the period, when Prohibition made drinking even more exciting, but when Pops moved

us to Evanston, Illinois, outside Chicago, she was cut off from her artistic friends, saw her hopes of becoming a serious actress vanishing, and so drank even harder and soon became a full-blown alcoholic. Pretty soon she was having affairs on the side and going out to drink in bars, neglecting both her home and her kids. When Pops came home, which was rarely, him and my mother would drink the beer we brewed at home, followed by hard liquor, and then have violent arguments; when he left, my mother would return to the local bars, from which she often had to be rescued by one of her children. In various interviews, and in *Last Tango in Paris*, I implied that I was the one who most often had to endure this particular humiliation, but at that time it was mostly my sister, Franny. I didn't have to drag Dodie out of bars until much later, when she'd separated again from Pops and was living in New York. On the other hand, if Franny did the hard work in Evanston, I was already pretty talented as a mimic and used to encourage my drunken mother out of her catatonic states by pulling all kinds of faces and using lots of different voices, expertly mimicking various relatives and friends and even animals. (I could growl like a lion; I could bleat like a lamb.) That's certainly one of the reasons why, even though I initially took acting seriously, I was never comfortable with it. Acting always reminded me of those terrible days when I 'acted' to entertain my mother and waken her out of her drunken stupors.

Anyway, I'm convinced that all the fucking around of my parents – their heavy drinking, their constant fighting, their frequent separations and reconciliations, their moving from town to town in the vain hope of a better tomorrow – left its mark on me, making me deeply suspicious of grown-ups, increasing my love of the many stray dogs and cats that I brought home, and certainly making me rebellious both at home and at school. Truth tell, I was a bit of a terror. Got up to all kinds of mischief, probably seeking attention. With Pops away so often and my mother frequently catatonic, I could virtually do what I wanted and I took advantage. Bullied my sisters. Had to win at everything. Didn't think twice about cheating to make sure I won. And at school – Jesus, at school! High-profile misbehaviour with rubber bands, spitballs, paper airplanes. Would stick my foot out in the aisle to trip my classmates; terrify girls by chasing them with a dead snake in my hand. Once even used a can of lighter fluid to write 'shit' on the blackboard and put a match to it just as the teacher entered the classroom. Often got kicked out of

school for three or four days at a time, sometimes a week or two, and they often had to send for one of my parents to take me home because I was causing so much disruption. Lots of fist fights as well, often in defence of my friend, Willy Cox, whose mother was also an alcoholic and was soon to disappear for good with her lesbian lover. Wally, initially shy, later extroverted, eventually became well known as TV's Mr Peepers and we remained close friends right up to the end.

What end? Wally's end? My end? Why am I even thinking of my end when I'm right here, if half asleep, in a room so dark I can't see the walls, though I can still see that tiny light straight ahead. It's just that I dreamt that I'd died and now I can't feel my normally heavy bulk. I've been like an elephant the past few years and my weight dragged me down. It's not doing that right now.

But the past, the past… It keeps coming back to me. Now I'm remembering that to avoid confusing me with my father, Marlon Sr., most of those who knew me called me 'Bud'. This was okay by me, since I hated Pops so much I didn't want to be associated with him even by name, though I continued to seek out the attention I wasn't getting from him. In other words, I kept getting up to mischief. Took the pins out of the hinges on the door to one of the classrooms. Hung a dead skunk on the football scoreboard. Threw firecrackers out of the classroom windows in the middle of class. Poured hydrogen sulfide into the blower of the school's furnace, thus spreading a stink through every corridor and classroom. Came to a French lesson with my homework written on toilet paper and then, when asked to read it, stood up and unrolled the toilet paper sheet after sheet. My teacher wasn't amused.

If I recall it correctly, I was attending High School when I began to disassociate from the other pupils, to keep my distance, just watching and listening, rarely speaking, only whispering or mumbling when forced to speak, usually to answer a question. I'd sit in class and just stare out the window, as if I was elsewhere, but actually still listening and watching, observing the behaviour of my classmates and teachers with eyes in the back of my head. Gradually I became totally fascinated by human behaviour and that in turn became the bedrock of my future acting ability: a genius at the small but telling gesture. I also learnt pretty quickly, in my study of human nature, that an 'otherworldly' air, combined with a steady, penetrating stare, could fascinate the girls. This was a lesson I was never to forget. Being

withdrawn only added to my reputation of being someone ‘different’. The girls loved the mystery.

‘When you stare at me that way,’ so many of them said, ‘I feel that you’re secretly undressing me.’ So I always obliged.

All human behaviour is a form of acting and this was acting on my part. Whether I liked acting or not, it came naturally to me and I was good at it right from the start. But I was troublesome even then. When I joined the Dramatics Club at school I showed a natural aptitude for acting, but argued constantly with the dramatic coach, Mr Bergfald, about how a role should be played. Years later, even when praising my talents, he qualified the praise by pointing out that I didn’t like being told what to do and that sometimes I was ‘downright rude’. He was correct on both counts.

I did, however, continue to mix with other pupils in the sense that I was fond of sport and usually good at it, mostly in football and boxing. I also worked out with weights in the school gymnasium, which built up my muscular physique. I also became addicted to music, mostly big band swing, but also black jazz, the blues, and Latin music, the latter inspiring my life-long love of bongo drums. These interests, however, didn’t prevent me from repeatedly cutting school and staying at home all day; when I did I either played my bongo drums or read voraciously. Yeah, I read everything. Mostly the classics collected by my artistically frustrated mother: Shakespeare, T. S. Eliot, F. Scott Fitzgerald. Plus books on Taoism and other, mostly Eastern, religions. Even now, I can quote Shakespeare at the drop of a hat. To the day I died (if I actually died and didn’t just dream it) Shakespeare and Tennessee Williams were the only two writers whose words I wouldn’t interfere with, not even for my beloved improvisations.

Sex? God, I started into that real early and, once started, couldn’t stop. My sexual drive was prodigious. I might even say insatiable. I mean, I first tried sex, while still a pubescent boy, with our family housekeeper, Erma, in Omaha and Evanston. Erma was my first ‘exotic’, being a mixture of Dutch and Indonesian. I didn’t actually penetrate her, being only six years old, but we played together during the day and often slept in the same bed at night, with her stark naked and me lovingly rubbing myself against her. Naturally, I was deeply devoted to her, so when she finally left to get married, never to return, my heart was broken, I felt betrayed, and my trust in my fellow human beings, particularly women, was greatly diminished. But it didn’t stop my

need for sex. Later, when I was only aged fourteen and we'd moved to Libertyville, thirty-five miles northwest of Chicago, I fucked our new, black housekeeper. And didn't ignore sex at school either. There I was already perceptive enough to distinguish between the sexually conservative girls from those I considered available and always went without a qualm for the latter. Thing is, after Erma, I didn't have the patience for romance or sweet words. I just wanted to get it as easily and as quickly as possible: wham, bam, thank you, mam. That attitude didn't really change much over the years. Even in my late years I had whores service me in my place in Mulholland Drive to save me the bother of being nice to various girlfriends. You can do that if you're famous and rich enough and it makes life much easier.

That tiny light in the darkness is very slowly getting bigger. I still can't see the walls – this darkness is pretty deep – so I'm only assuming that the light, right there in front of me, is fixed to a wall. On the other hand, because I can't see the wall, I've no idea how near or far away the light is. Sometimes it looks like a distant star in a night sky, but it can't be that. I must be in my darkened bedroom, still alive, still ill, as I've been for a very long time. I just wish I could feel the weight of my bloated body, but I feel that I'm floating. And I'm thinking. Remembering…

To get back to my school days, despite my many interests I continued to play up and get into trouble and receive lousy grades, so in 1941, when I was seventeen years old, oblivious to the fact that the Nazis were gobbling up most of Europe, Pops decided to send me to his old alma mater, Shattuck Military Academy, hoping it would instil some discipline in me. It didn't. I caused as much trouble there as I'd done at high school: playing the same kind of tricks, upsetting the school routine as much as possible, and generally being a smart-ass, quick with cynical or insulting wisecracks. I hated it. I hated the fucking uniforms and the old farts in charge and the military discipline and having to keep my hair short like a regular soldier. I hated it even more when the Japs bombed Pearl Harbor, America entered the war, and my fellow students all turned gung-ho with patriotism, which didn't interest me one bit. So I kept playing my pranks, kept disrupting their whole routine, kept doing everything I could think of to make them mad at me. Naturally, they kept threatening to expel me and eventually they did, which infuriated Pops, but thank God, before that black day, I actually had some positive experiences.

First was my affair with a fellow student. He was pretty much of a hopeless case, kind of timid, clearly gay, always looking at me with puppy-dog eyes, so I initially fucked him just out of curiosity, wondering what it would be like, always fascinated, as I was, to learn everything there was to know about my fellow man. It was also a mercy fuck – he always seemed so desperate – but eventually we became a regular item, thus showing me that I was, if not homosexual (I liked women too much) possibly bisexual. This didn't bother me at all. In fact, it kind of pleased me. I felt that an understanding and acceptance of bisexuality could only be an invaluable aid to my planned career as a professional actor: one more addition to my accumulating knowledge of the bottomless well of sordid human behaviour. The second good thing was when I joined the Dramatic Association and was taken under the wing of the head of the English department, Earle 'Duke' Wagner, an elegant, eccentric gentleman, almost certainly homosexual. Though he never came on to me, he was, in my view, the first human being ever to offer me the sort of encouraging words that I'd never heard from the lips of my icily superior, sarcastic Pops. Even better, Duke repeatedly told me that I had serious acting potential and should pursue it as a career. Since Pops had repeatedly told me that I'd end up as a bum, Duke's validation often reduced me to tears, though I only shed them in private. His validation also encouraged me to stick with the Dramatic Association, and my subsequent performances led to standing ovations, confirming that his faith in me hadn't been misplaced. Eventually, however, my continuing bad behaviour, my outrageous pranks, my continuing contempt for all forms of authority, including heated arguments even with Duke when he tried to direct me too much, led to my expulsion from the academy – an absolute disgrace – and my premature return to Libertyville.

Pops went bananas and we had some serious fights that sometimes led to physical violence. This situation was made worse by the fact that I was now the only child in the house, Franny and Jocelyn having gone to New York, the former to study painting, the latter to become engaged to a guy called Don Hammer and, having already shown talent as an actress, to work in the theatre. Possibly more incensed than ever at my failure to conform, Pops continued to put me down and make heavy demands upon me: sneering about my many failures, making me do the household chores, and even, worst of all, making me milk the family cow, a messy, smelly business, just before I

went out on my teenage dates. When I picked my date up in the car, the car stank of shit. This shook me up so much that the trauma emerged years later in one of my improvisational monologues in *Last Tango in Paris*. To make matters worse, my mother's alcoholism became even more pronounced and she tried committing suicide a couple of times, first gobbling too many pills, then trying to slit her wrists, being hospitalized on both occasions. At the same time, the fights with Pops were growing worse, sometimes leading to physical violence. So eventually, between the two of them, I'd had enough and decided to go to New York and study acting.

Man, I just loved New York. Came alive there. Moved in temporarily with my sister Franny, who had a tiny apartment in Greenwich Village. Had a brief affair with Frannie's neighbor, the exotically named Estrellita Rosa Maria Consuelo Cruz, then moved in with another neighbor, Celia Webb. Not that Celia could hold me. I was fucking everything that came within range, be it man or woman. Explored Broadway and Harlem, falling passionately in love with jazz and Afro-Cuban music, playing my bongo drums wherever they'd let me. My obsession with the 'exotic' world of bongo drums and dark-skinned bodies was only increased when, having just turned twenty-one, I joined the Katherine Dunham School of Dance, where most of the dancers were either black, Haitian or Spanish, and the drumming, both with congas and bongos, put me in close contact with Haitians, Harlem blacks, and passionate Latinos. I had the time of my life in that place, fucking night and day, both sexes, all nationalities, no prejudice at all. Then the real world, in the form of my sister, Jocelyn, made me act more responsibly.

Worried that I was actually heading nowhere and could indeed, as Pops had cruelly insinuated, end up as a bum, Jocelyn, knowing a lot of people in theatre and convinced of my talent, pushed me into becoming a student in the drama department of the New School for Social Research on Twelth Street in the village, within walking distance of where I was living. It was run by a German martinet, Erwin Piscator, a real pain in the ass, but my class included Shelly Winters, Rod Steiger, Elaine Stritch, Harry Belafonte, and Kim Stanley. More importantly, however, it was my participation in the New School drama classes that led me to the two people who would become most important to my career: Stella Adler and Elia Kazan.

Stella. Jesus! Even now, wherever I am, the very thought of her makes me want to have an erection (though those days are long gone). Man, she was

gorgeous. Though about forty years old (she always lied about her age), Stella was a failed actress with the beauty of a successful actress and all the confidence that comes from a prestigious theatrical background. Her father was Jacob Adler, greatest star of the Yiddish stage, her mother was Sarah Adler, a famous Yiddish actress, and her brothers, sisters, nephews, nieces and in-laws were all in show business. Stella began acting professionally at the age of five, quickly gained a reputation as a child prodigy, toured the world with various Yiddish theatrical groups, appeared in a couple of Hollywood movies, studied under Lee Strasberg, married Harold Clurman, joined with Clurman, Strasberg and Cheryl Crawford to form the hugely influential Group Theatre, but fought with Strasberg over their conflicting theories regarding the Stanislavski school of acting, and then, when the Group Theatre collapsed, she became the most famous acting coach in the New School's drama department. When I first entered her class, wearing my customary dirty T-shirt, ripped jeans and well-worn sneakers, she said, 'Who's the vagabond?' But she was soon addressing me as 'Marlon dear' and 'my darling' and telling everyone that I was destined to become the greatest actor in the American theatre. Whether or not that turned out to be true, I always believed, and still believe, that she taught me more about acting than anyone else on Earth, though she always insisted that she'd simply kicked open the door and that I'd then breezed in with my natural talent. She also introduced me to her many artistic Jewish friends, immersing me in Jewish culture and politics, and giving birth to my enduring love of, and respect for, Jews in general. I fucked her, of course. We were really pretty close. I was fucking her teenage daughter, Ellen, at the same time, each knowing about the other and accepting the situation, but surprisingly we, meaning Ellen and me, became life-long friends. She was one of the few.

Then there was Elia Kazan, the second most important person in my whole career and possibly my greatest loss in the long term.

By the time I met Kazan, nicknamed 'Gadge', I'd already appeared in a couple of Broadway plays, including John Van Druten's *I Remember Mama*, for which I was applauded hysterically by the audiences but ignored by the critics; and Maxwell Anderson's *Truckline Café*, co-produced by Kazan, already famous as a Broadway director for his dazzling productions of Clifford Odets' left-wing plays, *Waiting for Lefty* and *Golden Boy*. (I knew Odets personally because he had a crush on me, so I gave him a couple of

mercy fucks, then discarded him because he became pathetically clingy.) Kazan hated the play, thought my initial reading was a disaster, wanted Burgess Meredith instead of me, was outraged by the fee demanded by my agent, but changed his mind when he saw the audience's reaction to me. Though the play failed, as Kazan had anticipated, he didn't forget my performance and thought of me when trying to find someone to play Stanley Kowalski in *Streetcar*. So he sent me down to Provincetown, on Cape Cod, to do a reading for the great playwright, Tennessee Williams, who was staying there with his latest temperamental boyfriend, Pancho Rodriguez, and Margo Jones, who'd directed Tennessee's first big success, *The Glass Menagerie*. Kazan had given me the money for the train fare, but I spent it before I left New York, so hitchhiked down and arrived with a girl I'd picked up en route. The instant I met Tennessee, with his little high-pitched voice and cigarette-holder and delicate hand movements and dreamy deep-southern accent, I sussed that he knew nothing about anything other than writing, so I fixed his blocked toilet and sorted out his electrics and then gave a cold reading of monologues from *Streetcar*, which, so I was reliably informed, caused him to excitedly call either Kazan or his own agent, maybe both, to tell them that the reading had 'overwhelmed' him and that Margo Jones had said it was the 'greatest reading' she'd ever heard. So Kazan, a doubting man validated, put me into *Streetcar*.

Huge success. Made me famous overnight. After that, with Kazan, who became a father-figure to me, came the movie adaptation of *Streetcar*, plus *Viva Zapata!* and *On the Waterfront*, as well as my movies for other directors, including *The Men*, *Julius Caesar* and *The Wild One*. Women were falling over me, left, right and centre, and if I didn't manage to fuck them all, I certainly tried. For a while there I was king of my castle, but then my mom and dad, Dodie and Pops, both trying Alcoholics Anonymous, also tried another separation. So Dodie came to New York, settled into a ten-room apartment in West End Avenue (Pops was earning big money by then), and invited all her kids to move in with her. While we didn't actually move in full-time, we all used it as a flop house, as did half of the lower orders of Manhattan. Dodie spent her eight months there falling on and off the wagon, first sober and elegant, then disappearing and having to be hunted down until she was found pie-eyed in some awful dive. And this time, instead of Franny, it was my turn to search the bars and beds of skid row until I found her,

sometimes alone, other times with a bum that she'd gone on a bender with, once even having to shake her awake beside the one-legged drunk she'd fallen asleep with. Though I tried to be cynically humorous about this, when discussing it with acquaintances, it broke my heart and possibly killed any belief I still had in intimate relationships. It certainly hardened my callous attitude to women and made fucking without conscience easy-peasy. From then on, given the benefits of fame, there was no stopping my sexual and trouble-making activities.

Looking back on it now, I have to confess (maybe I'm here to confess; maybe this is my Judgement Day) that I could certainly behave like a bastard, or, at the very least, a real trouble-maker, both on and off stage. In *I Remember Mama*, I loathed the pompous, scene-stealing star, Oskar Homolka, so for a scene where he had to sweeten his genuine coffee with spoonful after spoonful of sugar, I substituted the sugar with salt and made him virtually throw up onstage. The old fuck responded by not speaking to me for three months. Also, round about that time, I started my trick of turning up at sophisticated parties wearing my filthy T-shirt and torn jeans and worn-out sneakers and deliberately speaking to no one, as if in another world. It may have offended the host and hostess, but it sure as hell sucked in the women. Then again, when I mistakenly allowed myself to be roped into a production of George Bernard Shaw's *Candida*, produced by the legendary Guthrie McClintic and starring McClintic's wife, the queen of Broadway, Katherine Cornell, not forgetting Sir Cedric Hardwicke, I was so disgusted by their old-fashioned, declamatory style of acting that I deliberately stumbled late on stage as if I was drunk, which I wasn't, and then proceeded to either mumble or forget my lines to the point where I needed frantic 'reminders' from the prompter's box. I did not last long in the run. Our greatest playwright, Eugene O'Neill? I 'fell asleep' reading the first act of *The Iceman Cometh* and then sent it back to my agents with a note saying it was 'ineptly written and poorly constructed'. Alfred Lunt and Lynn Fontanne, the supposed leading lights of Broadway? Reading for a part in one of their plays, when Lunt asked me to say something, wanting to know what I sounded like, instead of reading from the script I said, 'Hickory, dickory, dock, the mouse ran up the clock. The clock struck one, the mouse ran down, hickory, dickory, *dumb*.' I did not get the part. Tallulah Bankhead? A notorious seductress as well as a florid actress, she kept trying to seduce me

during the run of *The Eagle Has Two Heads*, but since in sexual situations she always had to be in charge, and since in sexual situations *I* always had to be in charge, and since, as well, she was far too old for me, when she tried to make a meal out of kissing me onstage, I filled my mouth with peanuts, garlic and mouthwash. This not only put her off, but got me thrown out of the play, to be replaced by Helmut Dantine, who was slayed by the critics. Noel Coward? When the great man offered me a part in his new comedy, *Present Laughter*, I informed him that I considered the play to be 'trivial and unworthy of a time when people are starving in Europe and Asia.' Mr Coward never approached me again, but I didn't care, because I was also turning down offers from Hollywood, including one from famed producer Joe Schenk, who advised me to get a nose job. I didn't need a nose job. I'd had my nose broken in a boxing match during the run of *Streetcar*, used it to get myself a few days rest in hospital, and found out, when I returned to the play, that most people thought my broken nose was actually an improvement, making my formerly perfect features look slightly more human, whatever 'human' means. So with my new nose, even better than perfect, I kept making trouble.

God, was I that bad? Well, you don't have to be particularly nice to be talented. Look at Frank Sinatra. That sawn-off runt with the badly fitted toupee could sing like an angel, was totally dedicated to his music, but had a terrible temper, was quick to use his fists, believed in violent revenge and revered his Mafia friends. He hated my guts because I always won the roles he most desperately wanted. I did this to him three times. First, he desperately wanted to play Terry Malloy in *On the Waterfront* because he'd been born and raised in Hoboken, New Jersey, where the movie was shot. I not only got that role but won an Oscar for it, so Frank-baby must have been truly pissed. As a matter of fact, according to his valet, he half-demolished his own house in a rage when he heard that Elia Kazan (my favorite director) had picked me for the role. Then, when we were contracted to star together in the movie adaptation of the successful Broadway musical, *Guys and Dolls*, Frank desperately wanted to play the romantic lead, Sky Masterson, but I was given that part instead (I had only to ask) and Frank was forced to settle for second lead, the gambler Nathan Detroit, whose songs weren't as good as mine. What galled him even more was the knowledge that I couldn't really sing or dance (Frank was pretty good at both) so, despite being given the

leading role, I had to have vocal and dance coaches in order to play it. To make matters worse, Frank hated repeating himself (he had a flawless memory for dialogue) while I was constantly changing my dialogue (I could never remember it properly), thus necessitating our scenes together to be reshot many times, driving Frank crazy in the process. Naturally, the more frustrated Frank became, the more I deliberately mumbled and either changed or pretended to forget my lines, just to torment him. By the end of shooting he was talking openly about my 'Method shit' and referring to me as 'Mumbles', but I got my own back by telling a room full of journalists during a subsequent PR binge for the movie: 'Frank's the kind of guy, when he dies he's going to heaven and give God a hard time for making him bald.' The third time I stole a role from Frank was, of course, when I was picked to play Don Corleone in *The Godfather*. Despite being convinced (and furious) that a character in the original novel, Johnny Fontane, a singer backed by the Mafia, had been based a hundred percent on him (the widely spread rumor being that the Mafia had leaned on the producers to ensure that Frank was given the role of De Maggio in *From Here to Eternity*), Frank, because of his Sicilian antecedents and helpless admiration for his many Mafia friends, desperately wanted to play Don Corleone. Unfortunately for him, I won that part as well and the picture went on to become a monster success that resurrected my failing career, gave me another Oscar, and put me back in the 'A' list. My bet is that when Frank heard the news, he had to stuff his toupee into his mouth to stop his false teeth from grinding. So three up for me, pal.

Mind you, when I say Frank hated repeating himself, I don't mean he did a scene differently every time he had to repeat it. Quite the opposite, in fact. Because he hated repeating himself, Frank always insisted that the director use the first take (except when working with me) whereas I'd repeat a scene as many times as it took to get it right, doing it a little different every time. In this sense, I'd have driven Olivier as mad as I did Frank, because Olivier detested improvisation and had to have his whole performance thought out in advance, meticulously structured before the scene was shot. He was the same on the stage. But I didn't do that even in my early years, when I was on the stage. I'd do anything, even fooling around, to keep boredom at bay.

That's why I hated working with Charlie Chaplin. That sadistic bastard. I only signed up for *A Countess from Hong Kong* because I loved his silent pictures and thought he was a genius – about the only one in film – but I

didn't realize what a tyrant he was until we were shooting the picture. He didn't let me improvize a damned thing. He acted out every move for me, told me exactly where to stand, what gestures to make, how to speak, until I felt like strangling the old goat. I didn't like the way he treated his son, Sydney, either, always dressing him down and blowing him up in front of the whole crew, really humiliating him, so when he tried the same tactics with me, I told him – loudly and clearly, in front of the same crew – never to use that tone of voice with me again. Later, I took my frustrations out on my co-star, the majestically beautiful Sophia Loren, by saying, during a romantic kiss shot in close-up, 'You've got hairs up your nose.' Just trying to shock her, you know? And it surely worked. She treated me like shit after that and never let me lay a hand on her. I really lost out with that one.

And I'm feeling lost right now. I mean, I don't know where I am. The last event I can remember was struggling for air in the UCLA Medical Center in L.A. with my sister Jocelyn sitting at my bedside. I was eighty years old. I'd been ill for months and just undergone emergency tests that confirmed that I was suffering from obesity, pulmonary fibrosis, diabetes, cardiac failure and an enlarged, potentially cancerous liver. Realistic to the end, I was very much aware that I didn't have long to go and in truth, by that time, I just wanted to fall asleep and not waken up. Which is what may have happened. Either I slipped off and died or I fell into a deep sleep and I've just woken up, still in my sick bed, in the middle of the night, though the room is even darker than normal, except for that weird light straight ahead, that unblinking eye, coming closer, I think, or I'm moving closer to it, though I can't feel the familiar, excessive weight of my bloated body and sometimes think that I'm adrift in thin air.

Damn it, this is ridiculous. It's just a wide awake dream. But it's a dream filled with recollections going all the way back to my childhood and adolescence, to my early fame and later life, a veritable ribbon of dreams, like a series of scenes on film, making me relive every moment, every feeling, every hurt, each segueing into the next, just as right now my abiding hatred for Pops is segueing into my frustrated love for him and into the times I worked out my frustrations and pain in so many of the roles I played onscreen.

Yes, I can admit it now: a lot of my frustrations over my relationship with my father were worked out in some of my movies. For instance, my

performance in *On the Waterfront* was so good because I viewed the relationship, the betrayal of Terry by his brother, Charlie, played by Rod Steiger, in light of my relationship to Pops. In the same film, I viewed the priest played by Karl Malden, a father-figure to Terry, as the kind of father-figure I'd so desperately wanted but never had. So no wonder I was seeing my psychiatrist on a regular basis throughout the shooting of the movie. Likewise with the only movie I've ever directed, *One-Eyed Jacks*. I always claimed that I didn't really want to direct that picture, that Stanley Kubrick was supposed to do it, that we were in my house with Stanley and the writer Calder Willingham, playing chess, throwing darts, playing poker, supposedly discussing the movie, me banging on an Oriental gong to get their attention each time the conversation flagged, when Stanley, exasperated, said, 'Marlon, I don't know what this picture's about.' And I replied: 'I'll tell you what it's about. It's about three-hundred thousand dollars that I've already paid Karl Malden.' And Stanley, a real serious kind of guy, said, 'Well, if that's what it's about, I'm in the wrong picture.' So Stanley walked and I had to direct myself and the end result broke my heart. At least that's what I claimed.

In fact, I *did* want to direct it. *One-Eyed Jacks* was my final act of revenge against my father. I didn't realize it at the time, but I see it now. For a start, I made it through my own production company and I called that company 'Pennebaker' deliberately using my mother's maiden name to spite Pops. Then, having used Dodie's name, I brought Pops in as a so-called 'executive'. Then, throughout the production, with him working, as it were, under the name of the wife he'd abused, I repeatedly humiliated him, telling him he couldn't make any decisions, that only *I* could make decisions, and finally accusing him of driving Dodie, Jocelyn and Frannie into alcoholism and me into decades of psychiatric treatment. (A few days later, a psychatrist called me to inform me that Pops had just been to see him, suffering from severe depression.) Also, *One-Eyed Jacks* was the story of a love-hate relationship between Rio, 'the Kid' (me) and the friend who betrayed him, 'Dad' Longworth (Karl Malden again), so its relationship to me and Pops was all too painfully obvious. Shit, man, I often found myself quietly seething, practically gritting my teeth, when I was acting in, and directing, that movie. Then the producers took it off my hands and fucked up the editing and I felt betrayed all over again.

Come to think of it, I felt the same kind of betrayal with Elia Kazan, or 'Gadge', who got the best out of me with his brilliant direction of the stage production of *A Streetcar Named Desire*, then directed me in three of my finest movies: *Streetcar*, *Viva Zapata!* and *On The Waterfront*. Gadge was certainly like a father-figure to me, knowing how to deal with me, giving me the courage to burrow deep into myself and do some of my best work, so I trusted him completely and virtually looked upon him as the 'Dad' I never really had. But then, when he 'named names' to save his own skin during the McCarthy anti-communist witch-hunts, just before we went into the shooting of *On The Waterfront*, I could barely look him in the eye and found the shooting of the movie to be agonizing. After attending the first viewing of the completed work, I got up and walked out without saying a single word of either congratulations or thanks to Gadge. A lot of people thought I'd done it because I hated my own performance, but I'd actually done it because, seeing the movie in its completed form, I couldn't help viewing it as a belated apology by Gadge and the writer, Budd Schulberg, another supposed Leftie who'd named names to the HUAC committee. I never worked with Gadge again – and I never made another movie as good as the movies I'd made with him, at least not until *The Godfather* came along. Without Gadge I had no one to guide me, to give me proper support. I often thought that cutting off my relationship with him was a form of slow suicide.

But then I knew all about suicide, didn't I? Suicide has always fascinated me. I never tried it myself, though I've often thought about it and I know that a lot of people were convinced that my ballooning weight, caused by gross overeating, was another form of slow suicide. Personally, I doubt it. Like Elvis, I was just addicted to junk food and ice cream. But interestingly enough, a lot of my old flames tried to commit suicide, some even succeeding. Gia Scala, my secretary Susan Slade, and the exquisite Pier Angeli, just for starters. I was the first to fuck Pier, during our hot affair in Rome, then she went to Hollywood and bewitched Jimmy Dean, causing him misery when she married the singer Vic Damone; but after only a few years of marriage, she divorced Damone, went off to Europe, made a lot of crap movies over there, and committed suicide before turning forty. Also to be included in the roll call of suicides, in this instance failed suicides, is my demented former wife, Anna Kashfi, the mother of my son, Christian, and Rita Moreno, my on-and-off mistress for many years. Maybe it was because

so many of my women were known to go off the rails that I was blamed in the media for the suicide of Pina Pellicer, my romantic lead in *One-Eyed Jacks*, who I was fucking at the time, though I was also fucking, at the same time, Katy Jurado, who played Pina's mother in the film, and two other former lovers who were also in the cast, Joan Petrone and Miriam Colón, as well as the up-and-coming Asian actress, France Nuyen, each time she came to visit me on the set. Anyway, though I was blamed for the emotionally fragile Pina's subsequent suicide, having had an on-set affair with her and then ignored her, as was my wont, she had in fact tried to commit suicide long before working on *One-Eyed Jacks* and finally succeeded in doing it, two years and two movies later, in Mexico, not because of me, but because of a troubled lesbian relationship she'd been having with an older Mexican woman. So though I may be guilty of using her and abusing her, I wasn't the cause of her suicide.

Now Rita Moreno, she was a different kettle of fish altogether. We went all the way back to the early '50s, about the time I was doing *Julius Caesar*. At that time, Rita was still a relatively unknown Puerto Rican dancer-actress, under contract to MGM, and I was bouncing between her and Katy Jurado while setting up house with Movita Castaneda in Laurel Canyon. Rita was totally obsessed with me and always available for a session between the sheets when I stopped off in L.A. She first tried committing suicide in 1961, when I was making *Mutiny on the Bounty* and becoming seriously involved with Tarita, my Tahitian romantic interest in that movie (Movita, seven years my senior, had appeared in the 1935 *Mutiny on the Bounty*), and continuing my endless legal battles with Anna Kashfi, while also serving my old flame, Anna Gobray, on the side and trying to keep Movita happy where I'd dumped her 'cause I needed to be free. So Rita, neurotic as always, aware of all these other women and knowing I'd flown back to L.A. for a break from filming in Tahiti, but hadn't bothered contacting her, tried to off herself by swallowing a lot of sleeping pills in the home of my secretary, Alice Marchak, and then begging Alice to take her to my home in Mulholland Drive, to let me see the awful despair I'd driven her to. I wasn't home when they arrived, but after a phone call from Alice I arranged for my physician to have Rita admitted to St. John's Hospital where they saved her life by pumping her stomach. I later learnt that she was on the road to recovery as I was flying back to Tahiti.

Not that being saved from death stopped Miss Moreno. About a year later

she arrived at my house in Mulholland Drive and persuaded me to go for a drive to discuss the wobbly state of our relationship. During our drive through the Hollywood hills, she became so violently agitated that I lost control of the car and she was thrown forward, her face smashing into the dashboard. So she ended up in hospital, covered in blood and hysterical, with the paparazzi's flashbulbs popping non-stop. A couple of days later, when she was still in her bandages, we had another screaming argument and she slashed her wrists and again ended up in hospital. Round about the same time, Marilyn Monroe, whom I'd fucked quite a few times and really liked a lot, was either murdered or committed suicide; and another woman of mine, Vaea Benet, a Tahitian dancer, tried to commit suicide because we'd had a brief affair and, as she kindly informed the press, she was in love with me and being ignored by me.

Jesus! Women! I tell ya! Not that all of this trouble made me turn my back on Rita. Why, I even took her on a visit to my farm house in Mundelein, Illinois, where I'd dumped my Tahitian mistress, Tarita, she of the latest *Mutiny on the Bounty* (not Movita's earlier version), though we didn't stay with Tarita, not wanting to upset her, but instead shacked up in a nearby motel and dropped in to see her every day we were there. That was about 1966 when I was shooting *The Chase*. By the following year, when I was shooting a load of crap called *The Night of the Following Day*, Rita had married a New York cardiologist and had a child with him, but knowing that she still carried the flame for me and (come on, Marlon, admit it) probably resenting her marriage, I recommended her for the role of my drugged-out accomplice in the kidnapping related in the movie. Naturally, despite being on the set with her husband and kid, she couldn't resist me and soon we were at each other again behind her husband's back. At first Rita loved it – it was just like old times – but as I was openly shipping in a string of other women at the same time, her former hysteria was resurrected to the point where, during a scene were we were supposed to be having a quarrel, all her buried frustration and anger came pouring out and the fake quarrel became a real quarrel and then turned into a knock-down, drag-out fight, with things being thrown and hair being pulled and her screaming dementedly – and all of this with her husband and kid, standing just off the set, looking on goggle-eyed. Interestingly enough, that scene was left in the picture and was the only one to receive positive reviews from the critics, who deemed it the only scene

with any kind of genuine emotional impact.

Which gets me neatly to Anna Kashfi, who turned the next decade of my life into hell on Earth.

My own fault. I'd always been a sucker for 'exotic' women (think Moreno, Movita, Tarita) so when, in 1956, I first saw the exotic-looking Anna Kashfi sitting at a table in the Paramount commissary, slender and beautiful and *very dark*, I was instantly knocked out. Even more so when I was introduced and she told me that she was twenty-two years old and had been born in Calcutta, the daughter of an architect, Devi Kashfi and a woman named Selma Ghose. When still a small child, she told me, her mother had married again, to William Patrick O'Callaghan, a British citizen, and they'd all left India to live together in Wales, Great Britain. After an education in a French convent and a brief period in Italy, she'd tried to be a model in London, then decided to try her luck in Hollywood, soon landing a modest role in a Spencer Tracy picture, *The Mountain*. Well, I couldn't resist her, could I? She was everything I desired in a woman: exotic, dark-skinned, beautiful and *virginal*. So I seduced her and fucked her as often as I could, which was a lot, then flew off to Japan to play Sakini in *Teahouse of the August Moon*. Returning to Culver City, I learnt that Anna was in City of Hope Hospital, suffering from tuberculosis, and I visited her just about every day for three months, sitting by her bedside, consoling her through her slow recovery, becoming completely obsessed with her, telling her about my traumas over my mother's alcoholism, even giving her the earrings, brooch and favorite pillow that Dodie had given me before she died, shortly after the release of *On The Waterfront*. I must have been fucking mad. Even madder was when, just before Anna's discharge from the hospital, I slipped my mother's engagement ring on Anna's finger and proposed. Alas, she said, 'Yes.'

A disaster. Still obsessed with Asia, I returned to Japan for the shooting of *Sayonara*, poured my soul out during a vodka-sodden interview with that poison dwarf, Truman Capote, who made me, for a brief period, the laughing stock of Hollywood, then returned to the States and let myself be railroaded into marrying Anna, who'd informed me that she was pregnant by me. Naturally a lot of women had been made pregnant by me, but I'd always paid for their abortions (I had my own abortionist on standby), so why I agreed to marry Anna I'll just never know. Anyway, I did. And my son, Christian Devi, was born. And then I learnt that my 'exotic' wife was not Anna Kashfi at all:

her real name was Joanna Mary O'Callaghan, and she wasn't an Indian, but the daughter of a dark-skinned Frenchwoman and an English railway worker. Anna – Joanna – had in fact been only a café waitress and cashier in Wales, before moving to London, changing her name to 'Anna Kashfi', concocting her more 'exotic' but fictitious background, and then flying to Hollywood to win her pathetically small role in *The Mountain*. I could have killed the bitch.

The marriage started to crack almost immediately. Less than two months after we were married, in October 1957, I waltzed into our house in Mulholland Drive with the ravishing France Nuyen on my arm and Anna fled into the bedroom, bawling that I had thirty seconds to get my girlfriend out of the house. It was all pretty much downhill after that. I was in a foul mood anyway, because Pops had married a woman who looked just like Dodie, and, even worse, I'd just made another movie, *The Young Lions*, with my bitter rival, Montgomery Clift, and his reviews were a lot better than mine. Then I found out that Pops, who'd been put in charge of the finances of my Pennebaker production company, had mismanaged the funds and landed us in deep financial shit. So between that and the humiliation caused by the revelation of Anna's real background, as well as her increasing moans about my other women, we had lots of melodramatic, often violent, fights. Then our Japanese maid, Sako, drowned while swimming in our pool and I received a mistaken message that the victim had been Anna, so I rushed home only to find Anna still alive and be accused by her of being *clearly disappointed* to find her still in that condition. She left the house the same day, taking Christian with her. When she later heard, erroneously, that I'd been threatening to drown myself in the same pool, she drove straight back to the house and screamed, 'Jump, you sonofabitch! Jump!' Naturally, that was the end of the marriage and the beginning of a lot of court battles that went on for years and eventually turned our son, Christian, into a deeply troubled child.

Was it my fault? Of course not! Anna's career had petered out, she took to drink and drugs, in her drugged state she started believing in her own fictitious background (her real parents were outraged), and then she published a scandalous book about me, *Brando for Breakfast*, telling all sorts of lies, denigrating my sexual prowess, and then became my relentless opponent, taking me to court time after time, often physically attacking me in court or in front of the panting paparazzi, once even in my own home after clambering through an open window, battling repeatedly for custody of Christian, who

became an emotional wreck at a fairly young age, cruel to his pets, smashing up his toys and throwing his food at the walls. Admittedly, while all this was going on, I might have done the wrong thing when I took up openly with my old flame, Movita, got her pregnant, then married her in Mexico and installed her and the baby, Miko, in a house in Coldwater Canyon while I continued my bachelor life in Mulholland Drive. Learning about these events didn't cool Anna Kashfi's hot temper. Things came to a head in late 1964, when, having just survived a drug overdose – a reliable mother, right? – she broke into my house and abducted Christian, taking him off to a sleazy Hollywood hotel. With the aid of a detective I tracked them down, rescued Christian, and left Anna with a court order calling for my son's return. After that, he was shuttled back and forth for a while, between me and Anna, often sobbing for no good reason, but eventually ended up in the care of his aunt, my sister Fran, who was having her own drinking problems and informed me, after only a few days with him, that he was seriously disturbed. He was even more disturbed when, while I was making *Last Tango In Paris*, his mother, now in a haze of pills and alcohol and convinced that I was about to gain custody of him again, arranged for five petty criminals to abduct him from his private school in California (which he had tried to burn down) and spirit him out of the U.S. With the aid of a detective hired by me, Christian, then still only thirteen years old, was eventually found shivering with fever under a pile of dirty clothing in a tent in Baja California, being guarded by his five abductors, who were patiently waiting for the promised ten thousand dollar payment from his mad mother. Following his rescue, I was granted sole custody for the next year and took him off to stay with my other family in Tetiaroa, where he could interact with his unfamiliar half siblings, Cheyenne and Teihotu, and be looked after by his stepmother, Tarita. But despite this, Anna didn't let up for years, causing one round of custody talks after another, making a lot of lawyers rich, and then Christian, when finally freed from her madness, a grown man at last, but deeply troubled, disoriented by drink and drugs, shot dead Dag Drollet, the boyfriend of my lovely but also deeply troubled daughter, Cheyenne, in the living room of my home in Mulholland Drive.

I had nothing to do with it.

No, I don't want to think about this. I don't want to relive it. I want to remain here in this darkness, possibly my darkened sick room, but maybe

someplace else, but either way feeling helpfully divorced from reality, not having to face up to my nagging feelings of guilt, pretending they don't exist, but finding it increasingly difficult to do because that single eye of light that's directly ahead, how far away from me or close to me I can't tell, though it may be the eye of God, if He actually exists, or possibly a distant doorway leading to somewhere else, though it's definitely getting bigger, brighter, yet still surrounded by total darkness, like the light at the end of a long dark tunnel, and I feel that somehow it's judging me, or maybe making me judge myself, face up to my past sins, like the sin of bad fatherhood and too many women and marriages that weren't proper unions and the children who suffered. Ah, yes, always the children. God help the children…

To get back to my second marriage, I married Movita in 1960, shortly after divorcing Anna Kashfi, and, though we rarely lived together, I had two children by her: a son, Miko, born the same year, and a daughter, Rebecca, born six years later – though the only proof that they were actually *my* children was Movita's insistence that they were. (Since we didn't live together, she had other men in her life and rarely failed to let me know it.) Still, I *did* support them from time to time over the years, if not *all* the time. Then, as everyone in the world seemed to know, being informed by a feverish media, during the shooting of *Mutiny on the Bounty*, in 1962, I had an affair with my romantic lead, Tarita Tumi Teriipaia, who later lived with me in Tahiti as a common-law wife and bore me two more kids: a son, Teihoutu, born in 1963, and a daughter, the doomed Cheyenne, born in 1970. As they're not the only kids I have, I can't be expected, even in my present condition, wherever I may or may not be, to remember all their names, let alone the names of their various mothers.

That light is definitely getting bigger. I'm convinced it's coming closer. I'm coming around to the notion that I'm in a pitch-dark tunnel, with that single eye of light at its far end, either coming closer to me, or drawing me to it, either to pass judgement upon me or to make me pass judgement on myself, or to suck me in and spit me out into someplace else: another world on the other side. No, I don't want this. I don't want it to be real. I want to go back to believing that I'm still alive and just dreaming, still lying in my sick bed and recollecting my life in a series of unfolding scenes on a ribbon of unwinding film. Now, in one of those scenes, I see myself wearing a snakeskin jacket, distractedly strumming a guitar. Though I've put on some

weight, I'm still not too fat; I still look poetically handsome, slightly unreal: a fallen angel, perhaps. That was…

Round about 1960, trying to compensate for the financial losses of my Pennebaker production company and, also, having to pay for Anna Kashfi's outrageous divorce settlement, I took on a role I'd been avoiding for years: Val Xavier, the washed-up blues singer with guitar and snakeskin jacket in *The Fugitive Kind*, based on Tennessee Williams' *Orpheus Descending*, one of his lesser works. I'd avoided it for years because Tennessee had really written the original stage play for the temperamental Italian actress, Anna Magnani, whom he adored, so the male lead, the 'Snakeskin' character, was badly unwritten and too abstract to be believable. Aware of this, I was fearful that Magnani, with the better part, might wipe me off the screen. In the event, she didn't. Knowing that she was nicknamed 'La Lupa' (the Wolf) by her worshipful Italian fans, that she had won acclaim for the same part in a stage production in Italy, that she'd won an Oscar in 1955 for *The Rose Tattoo*, also written by Tennessee Williams, and that although she was fifty-one years old, she was still sexually rapacious and had her wolf's eyes set on me, I got in first by pulling all sorts of little stunts to collapse her confidence, including treating her with the kind of exaggerated deference that you normally reserve for old ladies, and by the time I finished with her, having avoided having sex with her to remind her of her age, she was so unsure of herself that she could barely speak the little English she'd previously mastered. Most of the critics loathed the finished film and everyone in it – me, Magnani, Joanne Woodward, Maureen Stapleton – but I didn't give a damn because I'd been paid a million dollars for it, which made me the first American actor ever to receive a seven-figure paycheck. Then I went straight from that into *Mutiny on the Bounty*, another disaster for which I was unjustly blamed, followed by the worst decade of my career, with a lot of movies so bad I don't even want to think of them anymore. Indeed, movies so bad that a lot of former fans viewed them as a form of self-flagellation, the products of my innate contempt for acting.

Yeah, the widespread belief was that I never really cared about acting. Yet now, when I look back on it, even when I wasn't doing something as personal as *One-Eyed Jacks*, I mostly tried (except when I needed money) to find projects that had some meaning for me. I did it most overtly in 1963 with *The Ugly American*, based on a novel that indicted U.S. foreign policy in

Southeast Asia, which was one of my passions. Of course, I also did it for the money in the sense that my production company, Pennebaker, was then in serious financial straits, thanks to my dumb dad, and Al Kanter, my agent, became a producer at Universal Studios and not only offered to rescue Pennebaker by purchasing it for $1 million, but also agreed to back a movie we'd optioned three years before, at considerable cost, but never got around to making, namely *The Ugly American*. So being eternally grateful to Al for what he'd done, I decided to be on my very best behaviour, always turning up on time, always knowing my lines, not interfering in any way except to insist that Jocelyn, my sister, whose acting career had bottomed out and who was now a single mother with two boys to raise and who'd been on Hollywood's political blacklist since the 1950s and who was, like my sister Fran, drinking too much… so, yes, I insisted that she be given, absolutely, no argument, a part in the movie. So she was cast as the deeply caring director of a children's hospital in our invented country of Sarkhan, which was actually Thailand. In the movie that we shot there at my specific request, though I was on my best behaviour, I played U.S. ambassador Harrison Carter McWhite, a pompous true believer in America's ability to deal with the supposed ignorance, hunger and disease of communist Asia, and certainly, buttoned up in a pinstripe suit and sporting a trim moustache, which made me look ridiculous, I tried to stick to my vow of being well behaved. Well, at least I tried. For the first week or so. Then, when it started sneaking up on me that with the real war heating up in Southeast Asia and our bright new President, John F. Kennedy energizing the nation and making *The Ugly American's* negative views of American foreign policy suddenly out-of-date and irrelevant and even offensive, not forgetting my personal anxieties over my financial obligations to my wide variety of women, my tropical island, my many employers and employees, and, finally, when I started suspecting that the director of the movie, George Englund, though a personal friend, was more talented as a businessman than a movie director… Well, when all of this sneaked up on me, I just lost interest, switched off my talent, and concentrated more on fucking whatever women were available, including the groupies who came to the set, many of whom, being Thais, this being Thailand, appealed to my love of 'exotic' females. Needless to say the resultant movie, when quietly released, died an even quieter death at the international box office.

Not so *The Godfather*. I mean, I really wanted to play Don Corleone

because *The Godfather* struck me as being as much about the legitimate corporate world as it was about the illegitimate Mafia. *The Godfather* was really based on the idea that a man with a briefcase can steal more money than a man with a pistol, and that's exactly what I thought corporate executives were doing with their underhand price-fixing, their constant manipulating of supply and demand issues, their obsession with profit ratings, their total lack of social responsibility. So I loathed them and their Madison Avenue claptrap – all that advertising about how they were committed to helping the world and its environment – and didn't really see any difference between their morals and those of the Mafia. So that's one of the reasons I did *The Godfather*. It painted the Mafia as just another side of corporate America. Another side of the same coin.

Same with *Burn!* More commonly known as *Queimada*. I did that because I wanted to work with Gillo Pontecorvo, the writer and director of *The Battle of Algiers*, a really great political film. Except, as I soon found out, a large gap existed between what Gillo believed in and how he actually lived. We shot the movie in Cartagena, Columbia, using locals as extras, and when I found out that Gillo was paying the blacks a lot less than he paid the whites, and serving them slops instead of decent food, I went ape-shit. Naturally he took offence and started fucking around with me, playing all kinds of tricks, so I started to do the same to him. Ended up, we were practically at each other's throats and Gillo started coming to the set carrying a gun and threatening to use it if I didn't do what he said. Naturally, I ignored the dumb shit and only did what I wanted to do. Then, when I found out that he was paranoid suspicious, walking around with his pockets full of plastic charms to ward off evil, scared witless by things like broken glass and people walking under ladders, I started to wind him up by deliberately walking under ladders on the set, or walking up to him holding a big mirror and hammer, saying, 'Hi, Gillo!' then smashing the mirror with the hammer right in front of him. I even spent a few days throwing salt wherever he tried to walk, making him go all weak at the knees and desperately try to find other ways to the set. He wasn't amused either, when, en route back to the location after a short break in Los Angeles, wearing a full beard so as not to be recognized, I amused myself by asking the stewardess if this was the flight to Cuba and was swiftly escorted off the plane and out of the airport, which bought me another three days paid vacation in L.A. Poor Gillo, already running late on his schedule,

was completely freaked-out. Yet I had a great deal of faith in *Queimada* and was disappointed when it failed at the box office. But that's life and life only.

Thinking about Queimada reminds me about how I was often blamed when things went wrong on pictures that I was part of. The most notorious example being *Mutiny on the Bounty*. I mean, the media had a field day blaming me for all the delays and soaring costs, but I didn't have a damned thing to do with that fucking disaster. First off, they didn't have a workable script when shooting started. Next, the first director, Carol Reed, was accused by the producers of not shooting the picture they wanted and of taking too much time to shoot what they didn't want anyway. So Reed quit and was replaced with Lewis Milestone, which set the schedule back again, and then it turned out that Milestone, he of *All Quiet on the Western Front*, but then getting on in years, was almost deaf and color blind and, on top of that, really didn't have the energy for the task. He also hated me for some reason, so that didn't help. Then some of the other actors – Trevor Howard, Richard Harris, that other English prick whose accent I stole without acknowledgement – started talking to journalists and blaming me for what was happening, saying I was too involved with the local v*ahines*, including Tarita (also acting in the picture and being attended to by me) to give the picture my undivided attention. To be blunt, they said I was being obstructive. So the next thing I knew I was being blamed in newspapers and on TV for the whole sorry mess. A real injustice, that was.

But why am I worrying about this? Why in God's name does it matter? The whole problem with *Mutiny* was surely nothing other than the fact that apart from being obsessed with fucking Tarita (see her dancing in the movie and you'll understand why) I'd temporarily lost interest in acting. On the other hand, to the good, not being satisfied with acting, which I thought was an essentially childish way for an adult to make a living, I'd involved myself increasingly in politics, starting with my involvement, way back in the late 1940s, in the creation of the state of Israel and my support for a so-called Jewish terrorist group. I mean, I didn't know shite from shinola about politics until I became involved with Stella Adler and Harold Clurman in New York, when I was first getting into acting. Lots of Jews in the New York acting fraternity, all obsessed with the creation of a Jewish state in Palestine. So I was in a play by Ben Hecht, *A Flag is Born*, which was put on specifically to raise money for the Irgun Zvai Leummi, or the League for Free Palestine. My

idol, Paul Muni, was in the play as well. We took it around the country, raising money for arms and ammunition, protelyzing wherever we went, arguing in favor of the Irgun instead of the Haganah. I was proud to be doing it. And as I was getting a lot of pussy en route, it was more than a little satisfying.

Later, in the 1960s, with movies like *Bedtime Story* convincing me that my life as an actor was meaningless, I involved myself with the civil rights movement. The election of John F. Kennedy, strongly supported by African-American voters, galvanized the young, leading to the sit-ins at segregated lunch counters and the civil disobedience advocated by Dr. Martin Luther King, and to civil rights activists like Elijah Muhammad, Malcolm X, and the Black Panthers. Inspired by all of this, I began attending meetings with Dr. King and other minority leaders, including Chicanos working for the rights of Hispanic laborers and Native American leaders addressing the country's abysmal history of broken treaties and false promises to the Indians. I took the stage of the Apollo theatre in Harlem to raise funds for the march of Washington, DC. I protested segregation in Alabama by marching with black leaders and fellow actors like Paul Newman and Anthony Franciosa. When Dr. King gave his unforgettable 'I Have a Dream' speech at the Lincoln Memorial, in August 1963, I was standing just a few feet behind him, mouthing the words as he spoke them.

When President Kennedy was assassinated in Dallas, Texas, I went into shock for a while, flew to Samoa to recover, then bought a coral atoll – a dozen or so small islands called Tetiaroa – near Tahiti. Built a house on the beach, moved into it with Tarita and our son, Teihotu, then went native, beachcombing, swimming, watching the sunsets, just generally relaxing. Returned to Hollywood, leaving Tarita and Teihotu behind, to make *Morituri*, another dog's dinner, then, being box-office poison by this time, pursued my abiding interest in native American Indians. That got me into a whole heap of trouble. In 1964 I was arrested at a fish-in for Indian rights in Washington, along with an Indian from the Puyallup reservation and a priest from San Francisco. We went to jail for a bit, but they didn't book us in the end; they just dismissed us, probably because I was famous. Then, in 1975, I joined a group of Menominee Indians who'd taken over a monk's abbey in Gresham, Wisconsin, in an attempt to get back the deed to land that had once been theirs. That sit-in turned violent, with weapons firing on both sides, a real

firefight in the snow, but the Indians finally won and got their deed. Then the priests who owned the site, the lying bastards, took the deed back and had the defeated Indians thrown into the Gresham jail, where they languished for months, or maybe years. (I kind of lost touch.) Undeterred, I then took part in what became known as 'The Longest March', when all the Indian tribes joined together to march from California to Washington, DC. I even lent my trailer to Dennis Banks, the Indian activist, after he was involved in a shoot-out with the Oregon highway patrol, but the trailer was all shot up and the cops traced the ownership to me, so I brought Banks to my place in Tetiaroa and kept him there, safe and sound, for two months. Of course the FBI and the Justice Department were mad as hell, but what the fuck could they do?

Pops died in 1965. I was mad as hell. Particularly when I had his books forensically examined and discovered that he'd deposited most of my Pennebaker money in banks all across the country, but under a variety of false names, so though I knew where the various accounts where, I couldn't claim a single cent of the money. I also discovered that practically all of his crazy financial investments had been a disaster, again leaving me with nothing. If the old fuck wasn't already dead, I'd have surely killed him.

By this time, my film career was a mess and I blew my one chance to make another movie with my former mentor and father-figure, Elia Kazan. Gadge wanted to direct his own adaptation of his own bestselling novel, *The Arrangement*, and I'd implied that I was seriously considering it. (Not that I'd read it.) Then, in April 1968, Dr. Martin Luther King was assassinated as he stood on the balcony of a motel in Memphis, Tennessee. Even as blacks were rioting in cities all across the nation, displaying their anger and grief, I invited Gadge to come and see me at my place in Mulholland Drive. He sounded pretty excited to hear that, clearly thinking I was going to discuss his movie. I did. Without even letting him into the house, I walked him back to his car and told him, on the move, that I couldn't possible consider making a movie at this particular, politically desperate time, then I gently eased him back into his car and waved him goodbye before he realized what was happening. That was the last time I ever spoke to him. Then I signed up to play Sir William Walker in *Queimda*, also known as *Burn!*, to be directed by that superstitious lunatic, Gillo Pontecorvo. Another fucking disaster.

Thank God for *The Godfather*, my biggest artistic and commercial success since *On the Waterfront*. Ironically, by the time I made it, my career was at

an all-time low and when Francis Ford Coppola suggested me for the part, Paramount's self-adoring production boss, Robert Evans, a failed actor, practically laughed him out of his office. But Francis persisted, so Paramount insisted that I, the formerly great Marlon Brando, take a screen test. Those insulting fuckers. So Francis came to my house with a single video camera, and I stuffed cotton-wool into my mouth, to make my cheeks bulge out, and croaked instead of speaking, to make me sound older than I was, and the Paramount fuckers, not even initially recognizing me when they saw the filmed screen test, were astounded by what they witnessed, and then, still not fully trusting me, offered me $100,000 and ten percent of the gross. That ten percent made me a rich man all over again.

Despite my pride in *The Godfather*, when it came to Oscar night I made my protest on behalf of Native Americans by sending along a pretty twenty-six-year-old Indian woman, Sacheen Littlefeather, wearing full Apache regalia, complete with buckskin dress and beads, to collect my Oscar for me and give, instead of the customary fawning words of thanks, a lengthy speech detailing Hollywood's mistreatment of the Indians in their Western movies. The audience was outraged, Sacheen's speech was cut brutally short, and, later, the media, always keen to attack me, tried to imply that Sacheen wasn't even a real Indian, but only a struggling actress with a Native American background and whose career was most notable for the winning of the accolade 'Miss Vampire' in 1970. What a bunch of poisonous shits! In fact, although Sacheen was not a full-blooded Indian, since her mother had French, German and Dutch forebears, her father had ancestors from the White Mountain Apache and Yaqui tribes in Arizona, she had been born in an Indian reservation, and she had been involved for much of her young life in the civil rights movement for Native Americans. So despite all the uproar, she was certainly Indian enough for me – and I still have my Oscar.

Come to think of it, I've always been dogged by controversy, from as far back as my first great success in the stage production of *A Streetcar Named Desire* (the very title was provocative) when I used to massage my cock before going on stage, to make it stand out in those carefully designed tight trousers, matching the skin-tight tee-shirts on my well-muscled body. Let's face it: I caused a sensation, loved by some, loathed by others. Then there was *The Wild One*, which was banned in many American states and foreign countries for its glamorization of teen violence and which, for that very

reason, encouraged half the teenagers of America and Europe to start wearing black leather jackets and use 'hip' vernacular. Even *The Godfather*, one of my most highly regarded movies, caused a huge controversy over what was viewed as Francis Ford Coppola's romanticising of the Mafia and my humanizing of the quietly murderous Don Corleone. Then came *Last Tango in Paris*, which was hailed as a masterpiece and also reviled as a piece of intellectualized pornography. Revered and feared critic Pauline Kael kick-started the whole controversy by stating that the New York Film Festival presentation, in October 1972, was comparable to the evening in May, 1913, when Stravinsky's *Le Sacre du Primtemps* had its premiere. *Last Tango*, she said, had 'the same kind of hypnotic excitement as the *Sacre*' and then she added, even more portentiously, that director Bernado Bertolucci and I had, between us, 'altered the face of an art form'. Naturally, Kael, and others, went on to use my improvisations as proof that I had dived deeply into the murky waters of my own psyche to come up with the characterisation of *Last Tango's* lead character, Paul, an expatriate American who played bongo drums (like me), had bitter memories of a drunken mother and brutal father (like me), was tormented by memories of being forced to milk the family cow just before meeting his date, thus filling his car with the stench of cow-shit (like me), and who was, but natch, a good 'stick man' obsessed with impersonal sex (like me?). No matter. Kael's lengthy essay was reproduced verbatim in the United Artists advertising copy, causing another sensation, and then was followed promptly by an equally long essay by the highly competitive Norman Mailer, who couldn't bear to have Pauline get one up on him. Mailer, of course, concentrated almost solely on the already notorious sex in the film, with its then very daring frontal nudity, four-letter words, masturbation and sodomy (the latter being a subject long dear to Norman's heart), and he even tried suggesting that the movie could only have fully succeeded if it had shown my real cock entering Maria Schneider's real cunt. Thanks very much, Norman. I do not say this facetiously, since the Kael and Mailer essays, in combination with *Newsweek* and *Time* cover stories, led to a veritable deluge of controversy, meaning good publicity. This in turn led to *Last Tango* being banned in Italy, copies of the film being seized and destroyed by the authorities, and Bertolucci being given a four-month suspended jail sentence and having his civil rights revoked for five years. Even better: in England the film was the first to be brought to trial under the

Obscene Publications Act, though the prosecution was dropped when it was recognized as being a film, not a publication. Last but by no means least, back in the good old U.S. of A, the Catholic Conference placed *Last Tango* on its list of condemned movies and Cincinnati went one better by declaring it to be obscene and stopping all cinemas from showing it. It goes without saying, does it not? *Last Tango* went on to make a fortune worldwide. And with my ten percent of the box office, I made a fortune as well.

So how did Norman Mailer get into my spinning thoughts? Because of his famous review of *Last Tango*, which I can, in this pitch darkness, staring into the pulsating light of that single eye, that judgmental eye, coming toward me or drawing me to it, perhaps to suck me in and spit me out elsewhere, read the essay virtually word for word and be reminded of how his comment about my cock and Maria's cunt had, on the one hand, deeply, secretly, offended me, and, on the other, simply made me smile in recognition of the underlying jealousy and resentment that had made Norman write it.

Oh, yes, jealousy and resentment. I'd first met Norman way back in my *Streetcar* days, when my politically active sister, Jocelyn, also an actress, dragged me along to a Cultural and Scientific Conference for World Peace, held at the Waldorf-Astoria Hotel, covertly backed by the U.S.S.R. (which we didn't know at the time) and endorsed by a lot of political innocents, including me and Jocelyn and supposedly more sophisticated types, like Lillian Hellman, Clifford Odets, Norman's tortuously boring French friend and so-called intellectual mentor, Jean Malaquais, and Arthur Miller, whose play *Death of a Salesman* was generally held in higher regard than Norman's hugely successful novel, *The Naked and the Dead*. Norman, ever bright, went against the grain of the conference by giving a speech that actually denounced the U.S.S.R., thus gaining himself a great deal of controversial publicity (he was always a genius at that) and also ensuring that he would not have to face the wrath of the witch-hunting, anti-communist HUAC committee that had destroyed the lives of so many others. God, he was smart.

I next met Norman at a party he threw in his loft in Monroe Street, near the Manhattan Bridge. The Lower East Side was one of those areas that had a lot of Puerto Ricans, so I took Rita Moreno along for protection. There were about fifty people in there, a very crowded situation, and the guests included the writers Vance Bourjaily and Calder Willingham (who would later work with me on the screenplay for *One-Eyed Jacks*) and my bitter actor rival,

Montgomery Clift, who had a homosexual crush on the macho Norman and had told me that he was dying to be fucked by him, Monty always needing to be the passive partner. (I didn't want to be fucked by Norman, but I think he may have wanted to fuck me. Why else would he write about my 'tragic angelic mask of incommunicable anguish which has spoken to us across the years of his uncharted heroic depths'? I mean, if that isn't true love, what is?) Anyway, I was just sitting there with Rita on my lap, my customary erection digging into her ripe rump, when a bunch of street kids, all wearing black leather jackets, straight out of *The Wild One*, barged in uninvited, looking for some girl who'd slapped one of them on the face as she was entering the building, and one of them attacked Norman with a hammer, drawing blood and sending him to the floor. Naturally, Norman, being addicted to fighting at that particular stage of his exciting life, retaliated with his fists and soon the crowded room turned chaotic. Complete screaming, violent, bloody madness until the kids left. Norman, though covered in blood, had obviously loved it, but I hadn't moved from my chair throughout the whole event, just sitting there with Rita on my lap, confident that the very sight of my fiery Puerto Rican beauty would guarantee my personal protection. It did. But not liking violence, unless started by me, I'd had enough for the night. So when Norman started explaining to his assembled guests, some covered in blood, others with torn clothing, some white-faced and trembling with shock, that his assailants had barged in looking for the bitch who'd slapped the face of one of them because he'd innocently been fresh with her as she entered the building (they'd raped a woman the night before), I quietly manoeuvred Rita off my lap and led her out of the building, wondering what the fuck Norman was doing living in a hell-hole like that.

Later, when I got to know him better, I gradually learned that he had an absolute obsession with Marilyn Monroe, more so because Arthur '*Death of a Salesman'* Miller had married her and Norman couldn't understand what she'd seen in him when a better man, Norman himself, was standing in the wings, gasping. I didn't have it in me to tell Norman that I'd fucked Marilyn even before she met Miller, when I was making *Viva Zapata!* She was actually having an affair with the director, Elia Kazan, at the time (the man in all the world I most trusted), but when he had to go to Mexico for a few weeks of further research, I moved in straight away on Marilyn and we had our secret affair in his absence. We got together a lot over the years, not

always in secret, and poor Norman, who never got to lay a hand on Marilyn, resented me for doing so. That's why he couldn't even give me full credit for *Last Tango in Paris*; why he had to bring my cock and Maria Schneider's cunt into the equation, implying that a latent sexual cowardice had prevented me from fucking her on camera. It was his way of getting his own back on me for my long-running, casual affair with the delicious, but to him unavailable, M.M. Just as in his subsequent biography of Marilyn, he couldn't resist putting down Arthur Miller, both as writer and as Marilyn's lover and husband. So much for my cock and Maria's cunt.

Still, looking back on it, I now realize that I more or less gave up the ghost after *Last Tango*. Just couldn't be bothered any more, so went for the easy money. $3 million for ten minutes screen time in *Superman*, plus a percentage of the box office, bringing it up to $14 million for three weeks work. $3.5 million for about twenty minutes of screen time in *Apocalypse Now*, also with a percentage that sent my total earnings sky-high. (Though, despite the money made, I seriously wanted to make a statement about our corrupt war in Vietnam and who else could have pulled off that ending?) Accepted a piddling $25 thousand to play the American neo-Nazi, George Lincoln Rockwell, in *Roots: The Next Generation*, because I believed passionately in the subject matter, the victimization of black people by American neo-Nazis and Ku Klux Klanners; and this brief appearance, my only appearance in a TV drama, netted me an Emmy to add to my Oscars. Another $3 million up front for three short scenes opposite George C. Scott in *The Formula*, making it $1 million per scene. Won a Golden Raspberry award for worst performance and was slammed by *Variety* for being 'grotesquely fat and ridiculous.' Retired from acting for nine years, spending most of my time in my island, Tetiaroa, experimenting with various ecological projects, losing money on most of them, not really giving a shit. Increasingly, as I exercised less and less, ate more and more, and put on more pounds, I amused myself at nights as a ham radio operator, calling myself Martin Brandeaux and altering my voice when talking with other amateur radio operators all around the world. Finally returned to acting when I accepted the Screen Actors Guild minimum of $4000 for a few brief appearances in *A Dry White Season*, an anti-apartheid movie directed by the black South African, Euzhan Palcy, and donated the money to the anti-apartheid cause. Made up for my noble self-sacrifice by demanding another

$3.3 million and eleven percent of the gross for appearing in an amiable comedy, *The Freshman*, denigrating my legendary *Godfather* performance by playing virtually the same character as a joke. Another $5 million up front for ten minutes of disinterested acting in a load of crap called *Christopher Columbus: The Discovery*. Hardly recognizable but competent in *Don Juan de Marco*, absolutely ridiculous in *The Island of Dr. Moreau*, then small roles in two movies that never got released: *The Brave* and *Free Money*, both shot in 1997. Finally, in 2001, I co-starred with Robert de Niro, widely regarded as my natural successor, and Edward Norton, widely regarded as De Nero's natural successor, in a caper movie, *The Score*, and the three of us together, in a movie directed by a man most famous for directing the Muppets in *Sesame Street* before progressing to the likes of *Little Shop of Horrors* and *Dirty Rotten Scoundrels* (a pitiful remake of my pitiful *Bedtime Story*), managed to come up with something not only forgettable, but best forgotten. And that was the end of my movie career: going out, not with a bang, but with a whimper.

It was all Anna Kashfi's fault.

Okay, maybe I'm here to be judged (wherever I am and I'm not at all sure, but it's starting to feel like some kind of Purgatory, even though I may still be in my sick bed and dreaming the rest of it) and I'm trying to wriggle out of it, to absolve myself of all sin. But come on, just looking back on what happened, it had to be that mad bitch's fault. You think I don't have the right to blame her for the murder? For what drove my son to it, putting a bullet into another young man's head in the living room of my own house in Mulholland Drive when I was, and others were, sleeping upstairs? I mean, think of what he'd become because of his mother's insane behaviour. Taking us repeatedly to court in order to get custody, and then, when she gained custody, bewildering and terrifying him in their shared home with her alcoholic-and-drug-fuelled hysterics, which led to the courts handing him back to me. Then abducting him from my house when he was still just a child, and then, even worse, even more traumatizing for him, having him abducted by five paid criminals and kept under a pile of filthy rags in a tent in the middle of wasteland in Baja California. And then not only fighting again for custody, but attacking me physically in court, screaming and slapping, to feed the paparazzi the juicy photos that Christian couldn't possibly ignore. So for sure he was mixed up. A genuine crazy, mixed-up kid, just like in the movies. But

I did my best for him. I never ignored him. I may have pretty much ignored Miko, my other son by my second wife, Movita, with whom I'd refused to live, though I really respected her, but I made it a point never to neglect Christian. So when, at twenty-three, he married a cosmetician, I let them live with me a few months before sending them out on their own. Unfortunately (not my fault!) they separated a year later and Christian, having dropped out of university and having no skills, returning to form, descended once more into alcohol and drugs. But I paid all his debts, bought him a car, introduced him to my own therapist, had his teeth fixed, his health checked, then tried to set him up as a tree surgeon, though he failed at that as well. So, disgusted with him, I flew back to Tahiti, to spend some quality time with Tarita and my other two children, Teihotu and Cheyenne. Then I flew back to Los Angeles to make another movie and was in my house in Mulholland Drive when the killing shot was fired.

I will never forget that date as long as I live. or, if I'm already dead, which I may well be, for as long as eternity. It was the night of May 16, 1990. Christian was then thirty-two years old. My daughter Cheyenne, then eight months pregnant but still extremely beautiful, on a visit from my other home in Tahiti, was staying in the house in Mulholland Drive with her half-brother, Christian, and her boyfriend, Dag Drollet, twenty-eight years old, scion of a prominent Tahitian family, and father of the child-to-be. Christian was, by that time, deeply into his latest bout of alcoholism. I was lying upstairs in bed when I heard the fatal shot. Rushing downstairs, I found Dag dead, his head bloody from the single shot, and my son, Christian, holding the pistol. The first person I called was the activist lawyer, William Kunstler, whom I'd known since the days of the civil rights marches. 'The messenger of misery has visited my house,' were the first words to come out of my mouth, perhaps inspired by my many years as a Method actor, though my grief and horror were real enough.

Naturally, the subsequent days turned into a 'celebrity' trial, with me as much as Christian in the dock. Under investigation it transpired that earlier that evening Christian and Cheyenne had shared a meal and, as Christian downed glass after glass of liquor, Cheyenne, who also had serious psychological problems, including drugs, alcohol and various unhealthy sexual fantasies, one of which related to me, told Christian that Dag had frequently beaten her up in Tahiti and had even attacked her again a few days

ago in our house in Mulholland Drive. Later that evening, when they returned to the house, Cheyenne took herself off to bed, and Christian, now manic with drink and believing his half-sister's fabricated story, found Dag watching TV, aimed a .45-caliber pistol at him, demanded to know if he'd been slapping Cheyenne around, and then, as he later insisted, accidentally pressed the trigger of the pistol. Unfortunately, forensic examination revealed that Dag had been shot through the back of the head, so the murder was deemed to be calculated and Christian was sentenced to ten years in prison.

I was devastated. And certainly paid for my sins in the months that followed. Cheyenne was sent back to Tahiti, but her baby, when born, had to be placed in postnatal detox and then, possibly ashamed of herself for having drunk heavily and taken drugs while pregnant, she attempted to overdose with sleeping pills and was placed in intensive therapy. Three months after Christian entered the California Men's Colony in San Luis Obispo, to commence his ten-year sentence, the wife of Miko, my other, too often neglected, son by Movita, was killed on a freeway in downtown Los Angeles when a drunken driver smashed into her vehicle. Miko had been acting as a bodyguard for Michael Jackson, whose Neverland ranch I was then making extensive use of, and for a short while he received more publicity than his famous father.

I should be so lucky. And I wasn't. With my debts mounting because of divorce settlements (Anna and Movita), child support (I've lost count), legal costs, lawyers' bills, and upkeep of my increasingly expensive private island, including devastation caused by storms, I needed to make more money, so sleep-walked through my role as Tomás de Torquemada, the Grand Inquisitor, in that Christopher Columbus mishmash, then finally caved in and accepted a vast sum of money to write (with the help of a real writer) my so-called autobiography, *Songs My Mother Taught Me*, in which I managed to honestly recount the frustrated love I had for my alcoholic mother and my unburied hatred for my fish-eyed, cold-hearted, bullying, stupid father, before going on to denigrate everything I'd most valued in life, including acting, the theatre, movie-making, my best films (even *On the Waterfront* and *The Godfather* were sneered at), and formerly respected friends and mentors, such as Elia 'Gadge' Kazan and Francis Ford Coppolla. Perhaps worst of all, I also denigrated my own talent with comments such as: 'If a studio paid me as much to sweep the floor as it did to act, I'd sweep the floor.' Though I didn't

believe a word of it myself, I took the money and ran.

But I was punished. God, yes, I was punished. More disturbed than ever, my daughter Cheyenne, talking to an avidly researching biographer, Peter Manso, who clearly wanted to *be* me and had indecently tracked her down to where she was incarcerated temporarily in a psychiatric clinic in Berkley, informed him that I had sexually abused her (another demented fantasy), compared me to the manipulative Don Corleone, and described me as a demon who kept a psychological influence over her to prevent her from living a normal life. My punishment was completed when, nine days after the opening of my latest movie, the not-so-bad *Don Juan de Marco*, Cheyenne, no longer beautiful, vastly overweight like her famous father, and distraught that because of her mental condition the court would not allow her custody of her four-year-old son, Tuki, hung herself in my family home in Tahiti.

It was all Anna Kashfi's fault. Her drink and her drugs and her abductions and criminal kidnappings and physical violence in court, causing Christian to be tugged repeatedly, agonizingly, between his two parents. She turned him into an emotional wreck and thus turned him on to drink and drugs. She made him just like she was.

So what about Cheyenne?

Okay. I think I'm here to be judged. I'm not sure if I'm awake or dreaming or dead, if I'm lying down in my sick bed or standing up or sitting in a chair that I can't feel, if I'm still in the room where I'd thought I was dying, with my sister Jocelyn holding my hand as I sank, or if the darkness all around me, broken only by that expanding light straight ahead, yes, expanding, growing bigger as it approaches, or as I approach it, wondering if it leads to somewhere else, yes, if that expanding light straight ahead is the one of God's judgmental eyes, demanding that I accept the truth of where I let my life lead me.

My son shot dead a man in my house in Los Angeles. My daughter hung herself in my other house in Tahiti. A lot of the women I was involved with either ended up on drink or drugs or committed suicide. So. Yes. I think I've been trying to avoid thinking about these matters, to absolve myself of guilt for them, but a recollection is emerging from that light straight ahead – the light coming toward me or toward which I'm advancing as if floating on thin air – and it's filling my head with the vivid image of myself in the courtroom during Christian's trial, my great bulk in the chair, the awful ruins of my

former self, as I sob and helplessly mutter the words that sum up what eventually led to Christian and Cheyenne and which cannot in any way be refuted.

'I led a wasted life. I chased a lot of women. Perhaps I failed as a father… There were things I could have done differently.'

Not all Anna's fault, then.

No matter. After that life lived, for good and for bad, I didn't have any ambitions left. I didn't want to do the major plays. I didn't want to act for the sake of acting. I didn't feel that I had to prove myself. You don't have to repeat yourself to show you can still do it. The fact that you've done it is enough. Orson Welles said that.

So to Mailer I say, 'Go and fuck yourself, Norman. Go and put *your* ageing cock up some woman's cunt in full view of the lip-licking public, as you wanted the on-screen Marlon to do in *Last Tango*.' As for me, I'm going back to my innocent beginnings, back to that sheltering home in the fresh-aired Midwest, to that wood-shingled house in Omaha, with the dogs and the cats and the milk-giving family cow, to my sisters playing with me in the big front yard, my lost mother inside, my hated father out of sight, and there, in this repeatedly unwinding ribbon of dreams, I can become again what I once was, before fame and the likes of Norman Mailer turned me into a 'name', a disembodied thing, to be toyed with in print. Come on, Norman. Come talk to me.

Why not? We've been friends for years.

Now, just where the hell am I?

Norman

1923 – 2007

Having stated loud and clear that I wanted no less than to revolutionize the consciousness of our time, I determined to leave my mark and began this Herculean task by stabbing my wife with a penknife in the back and upper abdomen, thus becoming famous for the second time, again virtually overnight. Pity poor Saul Bellow. Though a superlative novelist and superior brain, he had to slog grimly for a couple of decades in order to gain the kind of fame that I, with a single stabbing, at least leaving a mark or two on my wife, if not on the consciousness of our time, gained in no time at all. And why not indeed? All Saul did, after all, was write one great novel after the other, win a lot of awards (Pulitzer Prize, Nobel Prize for Literature, National Medal of Arts, three National Book Awards) marry five times, and father four children, the last when he was eighty-four years old. Not much there to crow about. I, after all, have won *two* Pulitzer Prizes, one National Book Award, and the National Book Foundation's Medal for Distinguished Contributions to American Letters, while marrying *six* times, fathering *nine* children, and in general keeping my beloved Avenger existentially engaged, perhaps even more than Saul had done. But since Saul hadn't stabbed any of his wives, or stabbed anyone else for that matter, my fame soon outstripped his, this being the way of life in the Age of Celebrity.

Stabbing my wife, while not being particularly admirable, was no great deal in the end. Even my mother, the redoubtable Fanny, defended me, telling the media that my wife must have driven me to it. This was understandable as Fanny worshipped the ground I walked on. I was born on January 31, 1923, and Fanny, who had described me as 'perfect, a really lovely baby,' gave me the Hebrew name Nachum Malech, or Norman King. The 'King' was

important. It was the way Fanny viewed me right from the start. But when it was decided that it would be silly to call me 'King' in English (what would my school friends say?), Fanny's niece Marjorie suggested Kingsley, the name of one of her favourite authors. So Norman Kingsley Mailer it became.

My maternal grandfather, Chaim Yehuda Schneider, was ordained at sixteen in a yeshiva in Russia and became the unofficial rabbi of Long Branch, New Jersey. If my mother thought of me quite literally as being a king, our family's sovereign being, my father, Barney, considered me a genius right from the start and assumed that I'd inherited my huge intellect from Rabbi Schneider. The rabbi's family owned a grocery store in Long Branch and Fanny and her sisters ran it for him. So apart from being considered a genius, I grew up being mothered by a lot of adoring women. By the time I was six my mother was convinced that she could see signs of greatness in me and told everyone that I was someone 'very special'. No surprise, therefore, that from my early days I had a big head as well as big ears.

Fame was everything to me, so I'll sum up my pre-fame days succinctly. When I was nine, the family moved from Flatbush to Crown Heights, a middle-class Jewish neighborhood located well away from what Fanny termed 'the cheap *goyim*', who were mainly working-class Irish. In this very pleasant area I was indulged totally by Fanny, who always let me do anything I wanted and made excuses for even my worst behaviour, which could be very bad indeed. In other words, I never received a single spanking and was brought up believing that I could do anything I wanted – *anything* – without fear of redress. This belief stood me in good stead for the rest of my outrageous life.

Had my bar mitzvah day at thirteen, shocking my elders by talking about Spinoza, excommunicant and atheist, and thereafter showed little interest in Judaism. Experimented with smoking and drinking at fourteen. Read everything I could get my hands on and got my hands on a lot of girls at the same time. Sex-mad from adolescence on. Wrote an unpublished science fiction novel, *The Martian Invasion*, filling two hundred pages in three notebooks. Went to Harvard. Being a Jew amongst a majority of WASPs, I felt like a fish out of water, but had no real problems, certainly not with anti-Semitism, and majored in aeronautical engineering. But my main obsession was with modern American literature, particularly James T. Farrell's Studs

Lonigan novels and proletarian literature in general. Studs swaggered, so I swaggered. Studs never backed down from a fight, so neither did I. Studs dreamt of conquering the world and mastering beautiful women, so I cultivated the exact same ambitions. Gained an A+ in English A for a novella, so wrote fourteen more stories by the beginning of my sophomore year and decided to become a professional writer. Never wavered. Wrote about Hemingway for the *Harvard Advocate*. Then wrote a parody of *For Whom the Bell Tolls* entitled 'For Whom Your Balls Squall'. Wrote a short story, 'The Greatest Thing in the World', and won *Story* magazine's first prize. Wrote a full-length, unpublished novel, *No Percentage*, about a boy being suffocated by middle-class Jewish parents who are convinced he's a genius (ho, ho), thus driving him to flee home and hitchhike around the country to learn what the *real* world is all about. Wrote many more short stories, imitating Fitzgerald and Hemingway. Started imitating Hemingway in real life, acting the tough guy and swearing a lot and hitting on girls. Spent the summer after my junior year working at Mattapan, Boston State Hospital, filled with crazy young people and senile old people, and wrote a play, *The Naked and the Dead*, based on the experience. The play was rejected by the Harvard Dramatic Society. Pearl Harbor was attacked. War came. Tried to imagine the war in a novella, 'A Calculus at Heaven', patterned after the fiction of John Dos Passos. Wrote another full-length novel, *A Transit to Narcissus*, based on my experiences in the mental wards of Mattapan, but the novel was rejected by about twenty publishers. Was drafted into the army. Served in the Philippines and Japan, barely saw real combat, but came close enough to it to believe I could at least write about it. Discharged in May 1946, I returned home and wrote my first published novel, basing its structure on 'A Calculus at Heaven' and taking the title, *The Naked and the Dead*, from my rejected play. Naturally I was hugely successful virtually overnight. And the rest, as the saying goes, is history.

But why in God's name am I remembering all this? Where the hell am I? Last thing I remember, before waking up here, wherever 'here' is, was being in hospital, slipping away with acute renal failure. The years leading up to that had been rough, with shot knees (two walking sticks required), failing eyesight (spectacles repeatedly upgraded), encroaching deafness (two hearing aids required) arthritis and even angina. Then that lingering final illness and those last awful days in Manhattan's Mount Sinai Hospital, before falling off

to sleep more often than I was awake and then, at some point, drifting off and only now wakening up, though not knowing where I am, maybe in my same sick bed, the room in darkness, though, again, maybe not, because although I feel that I'm in some kind of an enclosed space, I can't actually see any walls, only walls of a deeper, impenetrable darkness, and maybe… Is that a light I can see straight ahead? Maybe near, maybe far, I'm not sure. My thoughts keep drifting away from it, from that light, back to the past, to the war and my famous war novel, *The Naked and the Dead*.

Talking about war, I didn't actually engage the enemy during my time in the Philippines, though I always talked as if I had, employing the accent that I'd stolen from the tough, foul-mouthed Texans in my squad. I did, however, *almost* engage the enemy when I was sent out with about thirty other men to destroy about one hundred Japanese marines. We never reached them. When struggling up a steep hill, we were attacked by a swarm of angry hornets (someone had accidentally kicked over their nest) and went tearing back down the hill to get away from them. That was the humiliating incident I used in *The Naked and The Dead*. As I put it later in my forgotten book on writing: 'We were ready to lose our lives that day, but we weren't up to getting stung by a hornet.' No heroics there, then!

The Naked and the Dead was published in May 1948 to great fanfare. It was followed five months later, in October, by Irwin Shaw's *The Young Lions*, which many reviewers thought captured a broader picture of World War II than any other novel of its time. Where *The Naked and the Dead* was set on a Pacific island, dramatising the war against the Japanese, focusing on a single long-distance patrol by American troops, and James Jones' *From Here to Eternity* was set in Hawaii in the days leading up to Pearl Harbor, *The Young Lions* ranged far and wide, from Bavaria to New York, England, Africa, France and Germany in a way that Shaw clearly hoped would buy his book comparisons to *War and Peace*. There was that aspect to it, certainly, it's panoramic, Tolstoyian sweep, but Shaw's writing, strongly influenced by the precise, bloodless prose of *The New Yorker*, for which he'd written a lot of short stories, was too facile, nay, too *polite*, to make his war convincing to me. *The Naked and the Dead*, on the other hand, being foul-mouthed and sordid and certainly shocking for its time, presented a more realistic view of war, certainly of soldiers in combat, even if I had to water down its obscenities by using 'fug' instead of 'fuck', a surrender for which I've never

fully forgiven myself. Anyway, Shaw got his wish when Leland Hayward came out with his widely publicized declaration that *The Young Lions* was the greatest war novel since *War and Peace*. Hemingway, the bastard, slyly put both of us down when, in Lillian Ross's profile of him in *The New Yorker*, he referred to 'young writers from Brooklyn who think they're Tolstoy.' Since Shaw and I were both from Brooklyn, I've no doubt that the literary champ was referring to both of us with that comment. He always *was* a resentful bastard when it came to other writers.

Still, none of this did any harm to our sales and almost certainly increased them. Shaw's book made its first appearance at fifth place on the *New York Times* bestseller list, when *The Naked and the Dead* was securely in first place, but by November, *The Young Lions* had gone to the top spot, with my book just below it. Over the next month or so the two books kept swapping positions, until finally, toward the end of that year, sales of both started falling away. Naturally, the cocktail talk of the season often centred around which book was the best, but I didn't resent that half as much as I resented the fact that although Shaw and I had remarkably similar backgrounds – growing up in Brooklyn only a few miles apart, both from the same middle-class Jewish background – Shaw, though ten years older than me, was a big man, an athlete, and I, despite the beginnings of my macho posturing, was a bit of a wimp. Which may explain why, at a party in William Styron's New York apartment in 1951, shortly after the publication of Shaw's second novel, *The Troubled Air*, which I felt was a confused, morally compromised view of communism, I sort of made fun of him by imitating Johnny Weismuller, saying, 'Irwin, you – physical courage. Me – moral courage.' He was so upset, I thought he was going to hit me, but he bit his lip and managed to control himself.

Naturally our enmity deepened over the years, reaching critical point in the summer of 1964 when Shaw, despite a shocking decline in the quality of his literary output, adroitly exploited the new merging of hardcover and softcover books under one roof by signing with my own publishing house, Delacort for an unprecedented, highly publicized two-novel deal, to include hardcover and softcover rights, for what was reported to be a total of over $350,000. The deal shocked me as well as the whole publishing world, marking, as it did, the end of the more gentlemanly relationship between writer and publisher and turning publishing into a high-stakes money game. I

might have been less concerned if it had been me instead of Shaw receiving all that money, but it wasn't, so I was suitably outraged and became even more highly critical of his waning talents.

Shaw must have had his Jewish nose put out of joint when later that year, following on the new face of publishing created by him, Delacort, perhaps having a nervous breakdown, offered his pal James '*From Here to Eternity'* Jones *$1 million* for a four-book hardcover-softcover deal. My Jewish nose should have been more out of joint than Shaw's, given that not too long after the Shaw's deal with Delacort, the same company only offered me an advance of $125,000 for publication rights to *An American Dream*, which had been serialized the year before in *Esquire* magazine, causing a bit of a sensation, as I had to write a chapter per month, like Charles Dickens (the publicity hook), to meet *Esquire's* monthly deadline. Admittedly my advance was for hardcover rights alone, but its modesty compared to the Shaw and Jones advances felt more than a little humiliating. Particularly given that while the literary quality of the recent novels of both Shaw and Jones had declined alarmingly, with both of them living the lives of rich men in Paris, France, divorced, as it were, from the real world. I, on the other hand, had remained in America to mine its political and social issues, producing, amongst other works, my landmark essay, *The White Negro*, and my seminal profile of John F. Kennedy during the running of the 1960 election race ('Superman Comes to the Supermarket'), not forgetting my subsequent political essays which literally – let's have no false modesty here! – changed the face of journalism. I'd also experimented with drugs, explored psychoanalysis and mysticism, and involved myself with the beat generation and black culture, all of which added spice to my writing. So no way was Shaw – or Jones, for that matter – worth more than me.

I think Shaw really hated me in the end. We'd exchanged hardly a word since our near dust-up at the Styron's New York apartment, but over the years since then Shaw had heard negative remarks made about him by me, and on at least one occasion, when I was in my most aggressive phase, I actually snubbed him by hurrying past his table in a New York restaurant without saying a word to him. (I did the same thing to James Jones in Castel's restaurant in Paris. Good manners weren't exactly my forte.) Then, too, Shaw had shared in the general disgust of the literary world for my 'snide' comments on several of my peers, including Shaw's dear friend,

James Jones, in the title piece of *Advertisements for Myself*, a self-serving collection of essays and autobiographical narratives published in the fall of 1959. Interestingly enough, I hadn't included Shaw at all in my attack on my fellow writers, but I suspect he took the omission as the greatest insult of all. I hope so. That was, after all, my very intention.

Our relationship didn't improve over the years. I recall that in March 1965, Dial Press threw a publication party for *An American Dream* at the Village Vanguard. Somehow, despite the bad blood between us, Don Fine had persuaded Shaw and Jones to make an appearance. I was pissed – almost manic, in fact – because I knew that Fine viewed *them* as his prize authors, particularly Jones with his million-dollar advance, so when Jones walked in I drunkenly tried forcing him into a sparring match. Shaw, pointedly ignored by me, stood off to the side, nursing his Scotch, not interfering but clearly resenting the fact that *An American Dream*, despite receiving a much smaller advance that he and Jones had been paid, and despite many negative reviews, was being treated as a major publishing event and clearly headed for the bestseller lists. On the other hand, the first of Shaw's two books under his groundbreaking contract, the surprisingly slight *Voices of a Summer Day*, which had been celebrated with a more civilized party two weeks before in the pool room of the Four Seasons, was already branded a failure.

Sadly, Shaw's dear friend, James Jones, was another writer who hated me (call it a love-hate relationship), despite the fact that we'd started out as friends and I'd even praised his first novel, *From Here to Eternity*. Asked for an endorsement when it was published in December 1950, I said the title was 'awful' but then went on to describe the novel as 'one of the best of the "war novels" and in certain facets perhaps the best.' I would rarely be so generous to Jones again.

Initially, though competitive, we were great friends. I first met him in 1952, shortly after he'd won the National Book Award for *From Here to Eternity*, which had also sold sensationally well and was about to be turned into a movie. I thought he was pretty unsophisticated, more like a farmhand than an award-winning novelist, not remotely handsome with that lantern jaw and battered nose, but I admired him for having fought at Guadalcanal (and killing a Japanese soldier in hand-to-hand combat) and enjoyed his sense of humor, juvenile though it was, so soon we were seeing a lot of each other, getting plastered in the many bars along Eighth Avenue and also attending

the same Manhattan social gatherings, including my own, always a riot of drink and drugs, in my 41 First Avenue apartment, where he was thrilled to meet other successful authors, such as William Styron, Louis Auchincloss, and Calder Willingham. After so many nights spent alone in his caravan in that literary colony in Marshall, Illinois, run by that arrogant, ignorant, narrow-minded, ugly bitch lunatic Lowney Handy, his sometimes mistress and mentor, he took to the New York party scene like a duck to water and became really close to Bill Styron who, like Mailer and Jones, was seriously convinced that he was already one of America's major writers. Indeed. one evening, when the three of us were carousing in Greenwich Village, Styron, the tallest of us, standing between us at a traffic light, placed his arms around our shoulders and emotionally proclaimed that we were the three best writers of our generation. Naturally we were all in agreement: no false modesty there! So no surprise that when Jones and Styron moved to Paris, where they socialized regularly with Irwin Shaw, the same kind of immodest comments would have been passed between them, but with my name excluded. Even Styron couldn't quite live up to that claim with his later work; Shaw and Jones not remotely.

When I first knew Jones, before he married the actress, Gloria Mosolino, he was having an unsuccessful relationship with Faith Dane, a dancer renowned for an act in which she bent over and played a trumpet between her legs. The relationship didn't last long because Jones talked too much about the whores he'd fucked in Terre Haute, which did not thrill Dane. But before the breakup they came to see me quite a few times (I was then living with Adele Morales) and when not being competitive – seeing who could drink the most, playing lair's poker, engaging in grimly serious arm-wrestling matches on the kitchen table – we'd discuss our anxieties over our as yet unfinished second novels. In the event, both novels, *The Deer Park* and *Some Came Running*, were savaged by the critics, though I escaped with fewer bruises than Jones, who received the worst reviews in living memory for a supposedly serious work of literature. By that time, we'd stopped seeing each other and were fighting through the mailing system. By 1957 I was sending letters in which I accused him of being a 'dumb, benighted asshole of a writer', to which he replied that while he still believed there were great books in me, if only I would ever get them out, he doubted very much that I'd ever do it 'while writing a fucking column for *The Village Voice*.' (Together with Dan Wolf and Ed Fancher, I'd

founded a new newspaper, *The Village Voice*, meant to be an European-styled vehicle for 'underground' writers, and was writing an inflammatory column, 'The Big Bite', for it, shooting off my mouth about the evils of conformity, about the Hip and the Square, about Ernest Hemingway and Marilyn Monroe. The column outraged a great number of readers, as well as Wolf and Fancher.) Things came to a head in 1959, with the publication of *Advertisements for Myself* and my malicious comments about my fellow authors, including Jones and Styron. Jones, I was later informed, was so livid with me that he kept a copy of *Advertisements* on a sideboard in the dining room of his Île St. Louis apartment in Paris. Whenever he was visited by a writer who happened to be mentioned in the book, he would have the victimized writer pen his comments in the margin by the relevant passage. I also heard that Jones, Shaw and Styron frequently made demeaning jokes about me in front of their intellectual Parisian friends. The last time I saw him, in 1976, he was sitting with his wife, Gloria, and Bill and Rose Styron, in a Manhattan restaurant. Feeling that a reconciliation was in order, I swaggered over to their table to say hello. This time the hostile reaction came from Jones, who, clearly offended by my macho swagger, accused me of belonging to the eastern 'intellectual' establishment that he so clearly despised. True to form, my fists balled aggressively, I invited him to step outside to continue the conversation, but he refused to bite my bait, simply saying, 'My fighting days are over.' Naturally, I swaggered back to my table, feeling pretty victorious, thinking of what a pathetic jerk-off I'd made him look. I only found out later that he'd been suffering from a serious heart condition at the time, so when he died the following year, I didn't feel good about it. Of course, I never confessed that to anyone. It wouldn't have suited my developing macho image.

So Jones is dead. And Shaw is dead. And Styron is dead. So many others are dead and now I'm pretty sure that I'm dead. Have to be, really. It'd be a miracle if I wasn't. Unless my memory deceives me, I was definitely in a bed in Mount Sinai Hospital in Manhattan, slipping away with acute renal failure and well aware, in my realistic manner, that there could be no recovery from that. It was the early hours of the morning, as I remember, and I just drifted off, as Styron had done the previous year. Good old Bill 'Call me William' Styron, who imagined he was the best of us all and more high-class with it.

Styron hated me as well. Because he'd told Hiram Hayden of Random

House that he hadn't liked *The Deer Park*, just when Hayden was considering it, thus helping along its subsequent rejection, I got my own back, in *Advertisements for Myself*, by writing a deliberately personal and insulting piece about him, facetiously describing his over-rated first novel, *Lie Down in Darkness*, as 'one of the prettiest novels of our generation' and, even worse, by informing my many readers that he'd greased the wheels of his overweening ambition by making sure he was always seen only where the elite meet to eat. Styron was furious, but then he'd always been full of himself, having descended from Virginian aristocracy, married to a rich Jewish wife, and hiding his envious, ineffably smug nature behind his southern 'good old boy' mask of frosty good manners. So what I said about him in *Advertisements* was richly deserved. However, our friendship collapsed for good when, after I'd drunkenly confided in Styron about the times Adele and I had indulged in sexual threesomes, mostly with another woman included, he spread the word that Adele was a lesbian. I sent the bastard a blistering letter and that ended the friendship for good.

Truman Capote hated me as well. But then Truman, pint-sized charmer with the impossibly high-pitched voice and embarrassing lisp and serpent's tongue, really, beneath the charm, hated everyone, probably because he was a homosexual dwarf who wouldn't have had a single friend had he not been famous. Capote and I fought for years over who had first invented the 'nonfiction novel', him with *In Cold Blood* or me with *The Executioner's Song*. Regarding that, I'm willing to admit that if the little faggot hadn't produced *In Cold Blood*, I probably wouldn't even have thought of taking on *The Executioner's Song*. However, I believe my book wins hands down because, as I wrote somewhere, 'his killers were not the most interesting guys in the world' whereas I felt that I was writing about a man who was 'quintessentially American yet worthy of Dostoyevsky'. Not that I'm suggesting that Capote and Mailer (when writing, I've often used my surname instead of the perpendicular pronoun) had mercenary reasons for what they were doing with their respective books, but no question that Capote couldn't finish his book until his two killers were executed – so he waited patiently, one might reasonably say ruthlessly, until the execution took place before writing the final chapters of his supposed masterpiece – whereas I, lucky man, could not be accused of similar callousness, since my book was written well after Gary's execution, which he had, you may remember,

requested, so how can I be to blame?

Yes, thinking of dead men (in this instance, Gary Gilmore) I'm convinced that I'm dead. My last recollection is of slipping away in the early hours of a November morning (I think the year was 2007), and, given what I was suffering from, I could not have recovered. So I must be dead, though conscious in some other state of being, perhaps in some other sphere of existence. Yet I feel no fear at all. Only curiosity. I can still see that light, either close or far away, and it seems to be pulsating to the rhythm of my heartbeat, assuming I still have a heart. Maybe if I concentrate on that light, I can learn where or what I… But I can't concentrate. I feel too disconnected from any known reality. My thoughts spin and scatter and return to where they were before, to former friends, other writers, and, of course, to my wives. Truth is, I always had problems with my fellow writers and my many wives. Yes, lots of emotional turbulence there.

My, God, yes, the wives! Let's face it, all my wives, except for the last one, were a troublesome lot. The first was Bea Silverman, a Boston University student first encountered at a concert in the middle of my junior year. Bea was Jewish and highly opinionated, vibrant in her self-love and confidence. Unconventional for her day, she was blunt with her tongue, sexually bold, and made me the envy of my male friends. Though not a great hit with Fanny, who accused her of being common, selfish and too domineering by far, which, admittedly, Fanny thought about every woman her beloved son was involved with. While not quite all those things, Bea was certainly outspoken, stridently political, and not shy when it came to sex, offering me a thorough education in that field and addicting me to it in most of its sweaty permutations. Certainly, both in and out of bed, Bea was the first and last woman to take control of me, instead of the other way around. We were married in a civil ceremony in Yonkers in February 1944, in the middle of the many depressing rejections of *A Transit to Narcissus* and shortly after I'd received my draft notice. Then I went into the army and was sent to the Philippines, followed by Japan, after which *The Naked and the Dead* was completed and published, changing my life for all time. It also changed my relationship with Bea. Always competitive and quick with the foul-mouthed put-down ('Tough shit, Norman' or 'Don't be fucking ridiculous, Norman.'), she soon became resentful of the attention I was receiving as a promising new author. By the time we sailed for Europe, in October 1947, deliberately

making our escape while *Naked* was being published, she was no longer enthusiastic in bed and I, in response, was developing the notion that no couple could live together for long without boring each other. (This explains why I fucked a lot of women, no matter who I was married to.) While we were living in Paris, *Naked* became a huge success in America and Bea's resentment became increasingly, painfully evident. (I often referred to that mythical beast, the Great American Novel, as the Great Bitch, but Bea was the original Great Bitch with her sharp, foul-mouthed tongue.) By the time we returned to New York, a year later, the sexual side of the marriage was virtually over and I was struggling with my all-important second novel, *Barbary Shore*, which only served to deepen my depression. I'd hoped that matters might improve with the birth of our daughter Susan, in August 1949, but though the child at least ensured that for once I wasn't the centre of attention – the main cause of Bea's resentment – Bea continued to be jealous of my fame, particularly when we were living temporarily in Hollywood, where I mixed successfully with a lot of the stars while trying unsuccessfully to write screenplays. So, yes, the marriage continued to deteriorate.

Back home, when we were alternating between New York and Provincetown, down there on Cape Cod, she tried to compete with me, first by taking up painting, then by writing a novel, but neither worked out for her (she couldn't paint and she couldn't write) and so the arguments between us became more bitter. Finally, I ended the marriage by saying to her, 'You go out and fuck and *I'll* fuck.' Which is when I became involved with Adele Morales.

Adele! Christ! What a hot number she was. Our affair began about four months before the disastrous publication of *Barbary Shore*, in 1951, when I was still formally married to Bea. A Spanish-Peruvian painter, Adele was a hell of a looker who by the time we met had been involved with New School aspiring artist Ed Fancher, 'beat' writer Jack Kerouac, and Dan Wolf's Spanish-Indian friend, Steve Sanchez, from Mexico City. Also attending the New School and exploring the arts, Adele had mixed with the more well known 'beats': Allen Ginsberg, Peter Orlovsky, Gregory Corso, and William Burroughs, not forgetting her one-time lover, Jack Kerouac, and his friend Neal Cassady. It was Dan Wolf who persuaded me to call her from his apartment, inviting her around in the early hours of the morning, and when she came, we hit it off immediately, fucking enthusiastically while Dan slept

drunkenly in another room. We were an item after that. Our affair was tumultuous. Given her Latin temperament and my rapidly growing ego, it wasn't exactly the world's *calmest* affair, but sure as hell it was always *hot*. She didn't drink much at first, but I turned her on to it and soon she was drinking as much as I was, which by then was a lot. Domestically, however, she was a fucking disaster. Couldn't cook for shit and kept a sloppy house. Couldn't even make my favourite dishes, tuna salad or scrambled eggs, both of which, done perfectly by Fanny, I'd eaten with relish all my life. (More than once I found myself throwing Adele's scrambled eggs at the kitchen wall.) On top of that, she had lousy table manners: I had to practically teach her how to hold a knife and fork; had to show her the difference between a wine glass and a water glass; even had to advise her on how to dress, which she deeply resented. In truth, I'd become a control freak and was trying to mould her, Pygmalion-like, into being my ideal woman and mistress. She retaliated pitifully by complaining about me having lunch with my mother every day (I had a working office located near my former home) and about having to have dinner (real Jewish food instead of Adele's disasters) with my parents every single Friday evening. She also thought it pretty strange when, one evening when my parents were out of the house, I insisted that we fuck on top of my mother's bed. Adele was horrified, but she complied and I found the experience to be disturbingly exciting. To this day, I still wonder why.

Barbary Shore was published in the spring of 1951. The reviews were appalling. One reviewer described it as 'this evil-smelling novel', *Time* decided that it was 'paceless, tasteless and graceless', and the *New Yorker* emphasized its 'monolithic flawless badness.' Given an average of about fifty bad reviews to five good or fair. I tried to console myself by convincing myself that the lousy reviews were caused, not by the quality of the novel, but by its inflammatory political content, its tacit support for socialism, and by the fact that it had appeared just after the Chinese invaded Korea, giving birth to another fit of American hysteria over the Communist menace. On the other hand, while I'm now willing to concede that certainly the last third of the novel was indeed pretty awful, collapsing into a lot of sometimes incoherent political speechifying, it was at least my first attempt at the themes that would come to dominate my future writing: murder, suicide, incest, orgy, orgasm, and Time with a capital T.

When *Barbary Shore* was critically demolished, my status dropped instantly and the damage to my nervous system was considerable, though I refused to accept that I was no longer the golden boy of literature and fought ever more outrageously to keep myself as the centre of attention wherever I might be. I already knew instinctively that celebrity, no matter how obtained, was the way to succeed in America. Nothing else really mattered.

Fame. What it does to us. What it makes us do. Yet what does it even matter in the end, when illness strikes and makes us feel helpless in every way and eventually leads us to death: eternity's doorway? That's what I believe that light might be. That pulsating light right in front of me, the only light in this all-encompassing darkness, with walls that may not be walls, not the walls of my hospital room, but actually walls composed of a deeper darkness stretching out to the infinite. Sometimes that light seems near, other times far away, but I have the feeling that it's a light at the end of a long, dark tunnel, a light pulsating and calling me to it, a light forming the doorway to the other side: yes, eternity's doorway. I want go to it, to enter it, find out what lies beyond it, but my concentration upon it is weak, because I keep getting distracted by the recollections that now make up my consciousness, perhaps my whole being. And there, right before me, in my head, a good way back in time, or Time with a capital T, are the bleakly beautiful, windswept sand dunes of Cape Cod. It seems so real to me now…

It was in 1951, shortly after the disastrous publication of *Barbary Shore*, that Adele and I first starting visiting Provincetown, down there on Cape Cod, going every summer, staying in a small apartment on the harbor side. Adele painted while I worked on my third novel, *The Deer Park*. In Provincetown I was a bar and party boozer, frequenting the Old Colony on Commercial Street, mixing with Portuguese fishermen, writers, actors, painters, beatniks, tourists, beach bums, drunks and junkies, more frequently using my fake Texas accent and hipster words like 'man' and 'cat' and 'dig', pretty much like my friend, Marlon Brando, in *The Wild One*. My 'literary' parties, on the other hand, were more sedate affairs, with the likes of Dwight Macdonald, Edmund Wilson and Mary McCarthy as guests, only spoiled by Adele's lack of decent social manners and her tendency to get drunk or stoned, (as invariably I was, too) and then insult me in front of everyone.

Well, we both had hot tempers, which made the sex hot, which kept us glued together despite all the screaming and slapping and punching; and

round about that time I started ‘acting’ various roles, using different accents: my customary Texan, plus Brooklyn, Harvard, Mafia Italian and even posh British. As Adele was a born actress as well (and would, indeed, eventually turn professional, though never with great success) we had an increasingly explosive, melodramatic relationship. The melodrama was up front. For instance, one evening, while I was sounding off about my latest obsession, the psychology of the orgy, to a bunch of highly intellectual friends, male and female, Adele said, slurring drunkenly, ‘Okay, Norman, you want an orgy with these squares, you’ll get one,’ and then she defiantly took all her clothes off and stood naked in the middle of the crowded room. No need to say it: She was hoping to embarrass me in front of my ‘square’ friends, but she merely struck us all as being entertaining. And another night, at Gloria Vanderbilt’s, when Adele caught me scribbling down the phone number of one of the more attractive girls at the party, she went completely mad, screaming obscenities and threatening to kill the girl, so I had to pick her up, still crying and kicking hysterically, and take her home in a taxi.

Not that my own behaviour was much better. One night, walking along Commercial Street with Adele about two in the morning, after yet another drunken party, I manically kept calling out to a police patrol car as if it was a taxi. When the cops got out of their car and tried to calm me down, I became aggressive, wrestling one of them to the ground and throwing a punch at him, so the other one pacified me by slamming me on the head with his blackjack. Then they hustled me into the back of their patrol car and drove me straight to the police station and threw me into the clink. The wound in my head required fifteen stitches. A few days later, when in court, I elected to be my own lawyer, hamming it up like Clarence Darrow for the edification of the gathered, slavering media. Though I lost my case, I was only given a fine and the publicity was, of course, invaluable. I was learning the ropes.

Back in New York, our drinking increased: whiskey sours before dinner, Scotch during dinner, more whiskey sours after dinner. This often caused a drunken Adele to go early to bed while turning me into a Jekyll-and-Hyde personality: from amiable and considerate to sadistic bully, always goading, pushing, needling, forever looking for fights. I also enjoyed pushing Adele’s fiery Latin temperament to its limit, once even insisting that she let me go off and mercy-fuck an unattractive older lady friend who was begging me for it. Naturally, Adele was outraged, but I talked her into letting me go, though

when I returned from my saintly mission of mercy the shit hit the fan. I also got into a fight at the jazz nightclub, Birdland, and was arrested for being drunk and disorderly, once more ending up in court.

What a bad boy I was in those days! Those days that now seem so long ago. Now here I am, adrift in this darkness, possibly walled in with the deeper darkness above and below, on both sides, with only that pulsating light (my reflected heart?) in the distance, though maybe not, maybe, instead, much closer than it seems to be, and I'm recalling my final days, the days of my breaking health, my appallingly rapid ageing, and so I'm assuming that I must be dead and bravely accepting it. No fear at all. Just this growing curiosity. This attempt to control my teeming thoughts, my uncontrollable recollections, that return me again and again to where I was before, in this instance, to my wicked Errol Flynn gallivanting way back in the '50s.

Yes, indeed. In the spring of 1952 I went to Hollywood to research a novel (it became *The Deer Park*), leaving Adele back in New York. While in Hollywood, by way of research, I took other women to bed and deliberately told Adele about them. (Previously I'd told her, just to gauge her reaction, about my fucking of two hookers in Paris; her Adam's apple went up and down a few times, but she gulped and accepted it.) In revenge, she indulged in a marijuana-and-booze-fuelled threesome with a married couple in their loft in Greenwich Village and, naturally, she told me about it. Despite my own shameless gallivanting, I was furious. When eventually I returned from Hollywood to the Sixty Fourth Street apartment and she came to see me, smirking triumphantly, I spat at her, staining her snow-white blouse, then we fought and made up again. Then we moved into a crummy apartment in Pitt Street in the lower East Side. While there, I worked in a small rented room near my parents' house in Brooklyn Heights and had lunch with Fanny every day, which disgusted Adele, who accused me of being, just like her old boyfriend Jack Kerouac, a pitiful Jewish mama's boy. But when not actually fighting (and often even *when* fighting) we had a lot of booze-and-pot parties, inviting our more famous friends, including Marlon Brando, James Dean, Montgomery Clift, Stella Adler, Charles Chaplin, John Huston, Lillian Hellman, Lillian's lover, Dashiell Hammett, Clifford Odets, Alberto Moravia, and my French friend and political mentor, Jean Malaquais, who bored the piss out of everyone but me. Stella Adler, though an outrageous flirt and extremely sexy with it, was too tall for my liking and, even worse, was

Marlon's beloved mentor and occasional fuck, so I gave her a miss. Otherwise, a good if rowdy time was had by all concerned.

Beginning in 1953 we spent a few summers in Mexico, where my first wife, Bea, was living with Adele's former lover, Steve Sanchez, whom she too had met through Dan Wolf. En route to Mexico we stopped off at Marshall, Illinois, to spend a few days with James Jones in Lowney Handy's prison-like writer's colony, to which Jones was addicted. (He was also addicted to Lowney: a scenario I mentally wrote, in my kind fashion, as the story of an ugly bastard fucking an ugly bitch.) We drank like fish every day we were there and Jones and I played our macho games, such as push-up competitions and arm wrestling, none of which thrilled Adele, who disliked Jones because she suspected he disliked her, which was perfectly true. (Being common, he thought she was common.) We also stopped off at North Conway, Arkansas, for a visit with my old army buddy, now writer, Frances Gwaltney (author of the well received war novel, *The Day the Century Ended*), and at New Orleans, where we got stoned on peyote, suffered hallucinations, and were violently sick for days after. Finally arriving in Mexico City, shaken but not stirred, we rented a furnished house in the suburbs for a few weeks and visited Bea, Steve Sanchez, now her clearly desperate husband (Why else would he have married her? Surely he had to be willing to put up with anything!), and Susan, the lovely daughter sired by me and Bea. It soon became clear that Bea despised Adele, not only because Adele was now married to Bea's former husband (me), but because she'd been Steve's former lover; but I managed to ignore the simmering tension (and Bea's sarcastic tongue) by concentrating most of my attention on my much loved daughter.

Nevertheless, I was, at the time, suffering with a bad liver, a problem started in the Philippines, where I was fighting for my country, but not helped by my currently prodigious intake of tequila, Scotch, margaritas, marijuana, too many Seconal tablets (which I often dissolved in my large glasses of Scotch), my two or three packs of cigarets a day and my numerous coffees. This, however, did not prevent Adele and I from attending live sex shows, indulging in reefer-fuelled wife-swapping orgies, fighting violently afterwards, making up by making love, and then, more importantly, going to see as many bullfights as possible. My particular obsession with this beautifully brutal, bloody sport later led to my attempt to better Hemingway's

Death in the Afternoon with my lengthy essay, 'Homage to El Loco'. Not too many critics thought that I'd succeeded, but who cares what *they* thought?

By the end of 1954, when I was finishing off *The Deer Park*, but feeling anxious and depressed about it, even more deeply into pot, Seconal, alcohol, Benzedrine, cigarettes, coffee and any available cunt that came along, therefore suffering again from a tormenting bad liver, Adele started pressing me into getting married. I tried wriggling out of it, but she rarely let up about it, so I finally caved in and we were married on April 19, 1954, in New York's City Hall. Always generous to a fault, I gave her a thirteen dollar wedding ring, promising to get her a diamond ring later, though I never actually got around to doing it, instead just buying her a simple gold band, which, being hopelessly working class, she proudly wore throughout our marriage. The wedding was followed by lunch at the Tavern on the Green, in turn followed by a relatively simple wedding party organized by my sister Barbara. Guests included the black writer, James Baldwin, who had a homosexual crush on me while loathing my controversial essay *The White Negro*, and James Jones, then still not married and still seeing Faith Dane, the actress-dancer renowned for playing a trumpet between her legs, something I bet *you* can't do. During the riotous party, Jones, bombed out of his skull on booze, climbed out the window and into the next-door apartment of Dan Wolf. When Adele and Dan went looking for him, they found him in Dan's gas-filled apartment, with his head in the oven. Though I had a good laugh about it, that was probably the last time I felt close to Jones. I mean, seeing him with his head in the oven made me feel that I understood him at last.

The following year I found a loft rental on Monroe Street near the East River waterfront. Monroe was the meanest street of all the streets in that mean area. Garbage littered and gang-ridden, shadowed by the Manhattan Bridge. An area so dangerous that when escorting Adele home from the subway I always carried an iron bar wrapped in a rolled-up newspaper. During one of the parties we had there, a gang of local thugs charged in, looking for some girl that they claimed had insulted them as she entered the building. Always keen for a fight, I gave them a tongue-lashing and tried to throw them out, but was thumped on the head with a hammer for my troubles. After falling to one knee with blood in my eyes, I courageously climbed back to my feet with fists balled, preparing to take up the fight again, and was thumped a second time with the hammer, which this time put me

down for good. Adele screamed when she saw the blood, the gang fled from the apartment at the sound of her screaming, and my good friend, Marlon Brando, who was sitting there with Rita Moreno on his lap, remained where he was throughout the whole event, enjoying his Latin squeeze, as if nothing untoward had happened. Marlon, God, yes, he was a cool son of a bitch, but I could have happily killed him that evening.

I was introduced to Brando by Shelly Winters, way back in the early 1950s when he was still making his first movie, *The Men*. Brando was fucking Shelly at the time. I'd been brought to L.A. by Sam Goldwyn after the huge success of *The Naked and the Dead* and I suppose I was harboring secret dreams of following in F. Scott Fitzgerald's footsteps. Anyway, already in love with the idea of being famous, I'd thrown myself wholeheartedly into the Hollywood social whirl and eventually, imagining that I had an actual 'deal' with Goldwyn, threw a big Christmas party by way of celebration. Guests included Humphrey Bogart, Ginger Rogers, Montgomery Clift, Elizabeth Taylor, Cecil B. Demille and John Ford. The party turned out to be a bit of a fiasco because in Hollywood you weren't supposed to mix left and right-wingers and that's what I'd done in my innocence, thus being landed with a lot of guests who either argued noisily with each other or simply refused to talk to one another. Shelly arrived with Marlon, both soaked from the rain pouring down outside. Not amused, being soaked, Brando turned his back to the whole room, staying behind the bar and talking only to the black barman, then abruptly, within mere minutes of his arrival, told Shelly he wanted to leave. I caught them as they were going out the front door and aggressively demanded to know where they were going. Brando, the cunt, responded by saying, 'What the fuck are you doing here, Mailer? You're not a screenwriter. Why aren't you in Vermont writing your next book?' I could have killed the insulting bastard, but he was out the door before I could swing a punch.

Naturally, I ran into him a lot over the subsequent years and we formed a loose friendship (he often came to my New York parties) but although I admired him as an actor – indeed, viewed him as our major actor – I was always slightly uneasy with him. First, because he was known to have an obsession with seducing the wives of other men, including his best friends (he even made a pass at my wife, Adele, during a party in our loft apartment, despite having come with one of his girlfriends, the sensual Peurto Rican

dancer-actress, Rita Moreno) and, second, because I was convinced that he was bisexual and I had certain doubts about that breed.

So why did I believe he was bisexual? Well, apart from the many stories I'd heard about his bisexual affairs with the likes of Jimmy Baldwin, Leonard Bernstein, and the French actor Christian Marquand, not forgetting his rumored cruising of the Hudson River docks for rough gay trade during his early days in Broadway theatre, I'd been privy to his regular visits to Provincetown, noted for its growing artistic, bohemian and gay population. Marlon's friend, Tennessee Williams, was a regular down there. So was Clayton Snow, a legendary queen who was known as 'Claytina', served as barman in the New Central Hotel, and stood tall and flamboyant at the very centre of the gay social milieu. The word had long been put around that if a man wanted to get serviced, all he had to do was ask Clayton, so few eyebrows were raised when Marlon moved into Clayton's cottage in Pumpkin Hollow and the two became a regular item. So I was pretty amused when, years later, a Marlon Brando as big as a baby elephant appeared in drag in *The Missouri Breaks* while playing a flamboyant character called 'Clayton'.

My relationship with Marlon came to an end with my controversial review of *Last Tango in Paris*. In it, I said that 'because there is no shot of Brando going up Schneider, and since the audience has been watching in all the sombre awe one would bring to the front row of a medical theatre, it is like seeing an operation without the entrance of the surgeon's knife.' Not content with that, I continued: 'But Brando's real cock up Schneider's real vagina would have brought the history of film one huge march closer to the ultimate experience it has promised since its inception…' I learnt later from a mutual friend that Marlon, having read my review, said that he felt like sending me a note, telling me to stick my own cock up my own ass and film it for worldwide distribution. Which I thought was a pretty novel way of expressing either his displeasure or his amusement. I hope it was the latter, but I never found out, because we kind of lost touch after that. Maybe also because, having praised him by describing him as 'our greatest actor, our noblest actor,' I mischievously qualified the praise with, 'he is also our national lout.' There are times when I just can't keep my mouth shut.

Anyway, finally deciding, after those hoodlums gate-crashed our Monroe Street party, that enough was enough, Adele and I went to the other extreme,

moving to the upper East Side, into a duplex in a four-story brownstone on Fifty-Fifth Street, between First and Second Avenues. Adele bought a couple of poodles, but I had little patience with them and when one of them shat on the rug I threw it down the stairs, outraging Adele again. On the other hand, one evening, when I was out walking the animals, one of two drunken sailors I was passing accused one of my poodles, Tibo, of being 'queer.' So being as drunk as they were, I asked the other sailor to hold the dogs' leashes while I went for the one who'd made the crack. By the time we finished our brawl, my raincoat was torn and filthy, I had cuts on my face and head, and one eye was badly swollen and inflamed from what turned out to be a detached retina. Of course, it wasn't the poodle I was defending; it was my own, increasingly violent ego. 'No one calls *my* dog a faggot,' I growled at the doctor.

None of which helped with the writing of *The Deer Park*. Being under the deranging influence of drink and drugs and my sick, depleted liver, I tinkered endlessly with the manuscript of my 'Hollywood' novel, obsessed with making the prose as elegant as that of F. Scott Fitzgerald, even struggling at the last minute to come up with a final paragraph or sentence that would equal, or even cap, the famous last lines of *The Great Gatsby*: 'Gatsby believed in the green light, the orgastic future that year by year recedes before us… So we beat on, boats against the current, borne back ceaselessly into the past.'

What I came up with was: 'Then for a moment in that cold Irish soul of mine, a glimmer of the joy of the flesh came toward me, rare as the eye of the rarest tear of compassion, and we laughed together after all, because to have heard that sex was time and time the connection of new circuits was a part of the poor odd dialogues which give hope to us noble humans for more than one night.'

Get it? Fitzgerald was talking about time, the past and orgastic future, and I tried to do the same, though I dropped the capital 'T' to make 'time' instead of 'Time' (which I'd frequently used in my writings) and the marijuana fumes made such changes seem magical to me. Yes, I thought my closing lines were terrific (I didn't think of them as a steal), but all the tinkering in the world, not forgetting the constant rewriting, didn't help *The Deer Park* to find acceptance with the publisher who'd commissioned it. Even worse and infinitely more humiliating was the fact that the novel was rejected by seven more publishers, most of whom considered it to be obscene (Bernard Cerf:

‘This novel will set publishing back by twenty years.’ Alfred Knopt: ‘Is this your idea of the kind of book which should bear a Borzoi imprint?’) before finally finding acceptance with Putnam’s Walter Minton, who later went on to publish *Lolita*. Though *The Deer Park* was published to largely derisory reviews, which had me bawling obscene abuse at Adele (‘Those motherfuckers. I’ll show them!’), in a self-serving essay that I later wrote about it, I cleverly minimized the damage (PR-conscious to the end) by claiming: ‘I was not unhappy, because the good reviews were lively and the bad reviews were full of factual errors.’ Not content with that, when I talked about its relatively low standing in the bestseller lists, only reaching the sixth position before falling off altogether, I brazenly suggested: ‘it would have reached as high as three or two or even to number one if it had come out in June, and then been measured against the low sales of summer…’

Well, you’ve gotta have nerve!

But no question about it, when *The Deer Park* failed, just as *Barbary Shore* had failed, I described my feelings honestly, if rather melodramatically, in *Advertisements for Myself*, by saying, ‘something broke in me… and I was finally open to my anger, I turned within my psyche, I can almost believe, for I felt something shift to murder in me…’ Yes, suddenly I felt that I was a psychic outlaw, and for sure I liked the feeling, yes, liked it a lot more than trying to live like a respectable, middle-class Jewish boy, yes, liked the feeling of my emotions building one upon the other, yes, violent emotions, demented aspirations, as ‘I mined down deep into the murderous message of marijuana, the smoke of the assassins.’

So, yes (using the word I so often used in my prose), I can again ask myself, ‘Where are you now?’ Because the only thing I can be sure of is that I’m still conscious in some way, still thinking, still associating, even recalling in detail lines I wrote years ago, such as: ‘The reader will be aware by now that I have some obsession with how God exists. Is He an essential or an existential God? Is He all-powerful or is He, like us, an embattled existential presence who may succeed or fail in His vision?’ Thing is, once I’d covered all the major themes – war, politics, sex, therapeutic violence, buggery as a route to self-knowledge, and so on, and so forth – yes, once I’d done all that I’d nothing left to write about except the biggest subject of all, which was, of course, God. So metaphysical speculations became a dominant theme of my work, even as far back as *The Deer Park*, and continued to grow as a subject

during the years I was smoking marijuana. And I was smoking an awful lot of marijuana during my years with Adele.

According to Adele, as related in her memoir, *The Last Party*, it was shortly after the seven rejections and disastrous reviews of *The Deer Park* that I got even more heavily into marijuana, booze, cigarettes, Benzedrine and Seconal, pacing the apartment all night, whispering to myself and feverishly jotting my thoughts down in my many notebooks. Formerly slim, I became paunchy and bloated from all the drinking and the drugs and the lack of decent food. Certainly, that's the condition I was in when, in 1955, I started writing my belligerent columns for the *Village Voice*, the mag I founded with Dan Wolf and Ed Facher. Those columns outraged the public (my very intention) and ended my long-standing friendship with Dan, who'd introduced me to Adele and was then the editor, but couldn't stand my egomaniacal outbursts and need to control everything and everyone (just as I was trying to control Adele). The friendship never recovered.

Just as I'd ostracized most of the staff of the *Village Voice* with my insistence on being in control, so, in a similar manner, I destroyed any chance of my stage adaptation of *The Deer Park* being worthwhile. For a play to work, one at least needs enthusiasm from the actors. Given my privileged position, I was able to enlist an illustrious cast just for an initial reading in my grim Perry Street apartment: Montgomery Clift as Sergius, Rip Torn as Marion Fay, Kevin McCarthy as Charlie Eitel, Mickey Knox as Herman Teppis, and Anne Bancroft, fresh from her Broadway triumph in *Two for the Seesaw*, as Elena. Unfortunately – and as usual – buttressed with drink, drugs and nicotine, I repeatedly butted in, interrupting the actors, and even angrily criticized Ann Bancroft's reading, treating her like any rank amateur. This resulted in the normally well-mannered Anne throwing her script at me, telling me to let Adele play it, then storming out, with me screaming after her that her leaving was fine with me as she'd never amount to anything anyway. The play, after many more trials and tribulations, was put on at the Actors Studio, directed by Frank Corsaro, with whom I'd also fought constantly, but after an embarrassingly short run it died for all time, thus putting an end to my hopes for Broadway. However, it was that manic, possibly pathological condition, that led to the writing of *Advertisements for Myself* and *An American Dream*.

For me, heavily influenced by the works of my friend, the psychoanalyst

Robert Lindner, the end of the 1950s and the early 1960s represented the age of conformity, the suppression of individuality, the crushing of the ego, turning man into mass man, which is possibly what I meant when I wrote that 'the shits are killing us.' So I revolted against my middle-class Jewish background, my respectable upbringing, by fighting and fucking and generally going out of my way to shock and outrage and cause controversy. (Which I knew, let's admit it, was also useful for the selling of my books.) Lindner had written that every man carried a psychopath within himself and it was that side of me, the latent psychopath, that I wanted to release or, perhaps more accurately, indulge. I also disagreed with Hannah Arendt's famous statement about the 'banality of evil' and believed, instead, in 'the vast power of the unconscious or the evil of true murderousness residing in the most ordinary people.'

All of this came out, first, in *Advertisements for Myself*, in which I beat my own drum both as writer and great lover, thinly disguising myself as the New York-based bullfight teacher (a ridiculous concept in itself) in my scandalous fictional piece, 'The Time of Her Time,' in which I described my hero's cock as his 'Avenger' and first introduced my panting readers to the delights of buggery, used by the hero as the way to whip a frigid Jewess into her first ever orgasm; then, in the same vein, by causing another widely discussed controversy with my essay, 'The White Negro,' in which I offered the novel theory that a form of courage is involved even when a couple of eighteen-year-old hoodlums beat the brains out of a fifty-year-old candy-store keeper. The same themes or, if you wish, beliefs, came out later in *An American Dream*, in which buggery and murder also play a great part, both being practised by a hero who does not for a single instant express regret or remorse for any of his murderous or sexually perverse activities.

I was, you see, already working myself up to the stabbing of my second wife. We'd had a second child, Betsy Ann, earlier in the year, which made me the father of three girls in all, two by Adele, one by Bea, but in truth I was so deep into myself, into my violent fantasies, that I barely noticed their existence. The drunken fights between me and Adele had become more frequent, more violent, with me often beating her up, leaving her black and blue. A dangerous edge was reached in Connecticut when we had a wife-swapping session with married guests, all in the same room, and the other woman's husband, finished with Adele, contemptuously stubbed his cigarette

out on my ass. Naturally, this led to another drunken brawl and my slow-burn to a truly murderous rage. At another party, Adele got into a fight with a six-foot tall stoned and drunken lesbian schoolteacher playing beatnik for the summer, and I shouted at her to go outside and beat the bitch up. Next thing, they were out on the dunes, wresting and hammering each other with fists, while I and a lot of my male friends looked on, taking bets. Not long after that little incident, when Adele was six months pregnant and we were quarrelling about something, I punched her in the stomach without thinking. I never apologised and the child was born healthy, but after that our sex life was almost dead. If only 'almost dead,' it was killed off entirely when I turned up at four in the morning, drunk and dishevelled, to boldly tell Adele that I'd just fucked a black whore whom I'd picked up in Sheridan Square. However, I only fully realised that I was getting close to the edge when, after asking my beloved sister Barbara to type something for me, I went berserk when reading it, saying it was crap and accusing her of trying to sabotage me, then punched her in the face, knocking off her glasses and bringing tears to her eyes, before she picked her broken glasses up and fled, sobbing, from the room. And this was Barbara, the sister I truly loved and who was, I knew, devoted to me. Thus, it perhaps should have come as no surprise when, during a booze-and-drug-fuelled party (intended as a combined birthday party for Roger Donoghue and a promotional party for my first inane mayoralty campaign) at our Upper West Side apartment, I went mad and stabbed Adele with a three-inch pen knife.

For weeks before the incident I'd been running a crazed campaign as candidate for the mayor of New York City. It was, essentially, merely part of my growing obsession with self-publicity and I was either drunk or stoned, often both, during the campaign. In such a condition, almost manic, to put it mildly, I spent the day of the party running frantically around the city, stopping off for drinks at practically every bar I passed, inviting to the party the perfect strangers that I picked up in the bars – drunks, druggies, bums, thugs, other kinds of criminals – so by the time the party started the apartment was packed – at least a couple of hundred people had managed to squeeze in – and I was half out of my head on bourbon and pot. By four in the morning, after I'd had more than enough of a drunken Adele loudly belittling both my talent and my manhood, and after learning that she'd been up to some nonsense with another woman in the bathroom, and after scaring

one of our female guests by drunkenly pawing at her, and after attacking my friend George Plimpton down on the street, and after picking fights with other passers-by, I went back into the apartment, my shirt torn, blood on my face, sporting a black eye, and Adele, standing there with only an unknown black man for company, also drunk and enraged at my performance, spat a stream of Spanish abuse at me, then called out something like, 'Come on, you little faggot, where's your *cojones*? Did your ugly whore of a mistress cut them off, you son of a bitch?' And the next thing I knew, I had a three-inch penknife in my hand and was stabbing her with it, and, yes, there was blood everywhere and I heard her whisper, 'Oh, dear Jesus, help me!' and then she collapsed and the black man said, 'My God, man, what have you done? We've got to get her to a hospital.' And I said, while kicking her, 'Get away from here! Let the bitch die!' And then, when the black man tried to pick her up off the floor, I pulled him away and started punching him, and while she lay bleeding we wrestled around the room until the black man gave me a punch that knocked me down and, yes, while I was down, feeling dizzy and wretched, the black man picked up the bleeding Adele and carried her to the elevator and helped her down to the lobby where someone called for an ambulance and she was taken to hospital and was on the operating table for six hours. I wasn't there. Neither was the black man. That unknown black man disappeared and was never heard from again – no question, he saved her life – while I fled from the scene of the crime without looking back, finally turning up at the hospital, in a daze, a few hours later.

Of course, I got away with it, like I got away with everything. The night after her operation, I paid Adele another visit and persuaded her to tell the cops that she'd fallen on broken glass. When she agreed to this ploy, I gave myself up to the cops and was sent to Bellevue for psychiatric evaluation. While I was there, my mother, Fanny, for whom I could do no wrong, visited Adele in the hospital, poured out her concern for me, not for Adele, and made her promise not to say anything that would get me sent to jail. Then, relieved, Fanny visited me in Bellevue, bringing a pot of my favorite chicken soup. Later, I was diagnosed as being a paranoid schizophrenic with suicidal and violent tendencies. While I certainly didn't accept that psychiatric evaluation, it certainly helped in keeping me out of jail. Under relentless pressure from Fanny and a lot of friends, all of whom expressed their concern for me, not for the victim, me being a great writer, after all, a valuable member of

society, Adele agreed not to testify against me, so at the subsequent trial I was found guilty of no more than third degree assault, walking free instead of serving fifteen years.

Pretty good, eh? Even looking back on it, from wherever I am now, in my almost certainly supernatural, existentialist condition, being almost certainly dead but still bright in the head, growing ever more enamoured of that pulsating light, either distant or near, either drawing me toward it or coming toward me, I can say that I was either clever or lucky to get out of that one.

I never apologised to Adele. Instead, I continued my partying, kept fucking other women, and even went on TV to justify myself by talking about the psychology of murder and insisting that acts of violence could prevent cancer. Amazingly, people took this nonsense seriously, even heavyweight intellectuals, the cream of the New York literary world, the academics so desperate to make a name for themselves that they created from the violence of my work and my life the most elaborate critical theories and justifications. Not Adele, though. We were divorced the following year and she finally got her revenge by writing a scurrilous memoir, *The Last Party: Scenes From My Life With Norman Mailer* (1997), digging up all the dirt she could think of. Naturally, since I'd based my whole career on controversy, on having a notorious reputation, I did nothing to prevent publication. I just took my cream off the top of it.

And to make sure my fans didn't forget what I had done, I even included a little poem in my expensive hardcover collection of amateur poetry, *Deaths for the Ladies* (1962), most of the poems being composed of single-word lines with lots of spaces in between to bulk out the book and make it look like a substantial purchase. The one about the stabbing of my wife was called 'Rainy Afternoon with the Wife' and it went as follows:

So long
as
you
use
a knife
there's
some
love

left.

A bit J. P. Donleavish, I know, but I thought it was diabolically clever. However, most critics and even some of my readers took a very different view, so I defiantly reused the poem in my 1964 collection of good to bad bits and pieces, *The Presidential Papers* (1964) with the explanation: 'I wasn't trying to reveal my private life in that poem. I was trying to crystallize a paradox.' I thought that was a pretty neat way of excusing myself for making use of that particular poem twice. I shouldn't imagine that the likes of my old friend, America's Greatest Living Poet, Robert Lowell, ever felt threatened by my talent in that particular area.

And then, in my long line of turbulent women, came Lady Jean Campbell, granddaughter of the British press baron, Lord Beaverbrook, daughter of the Duke and Duchess of Argyll, posh to her fingernails, eccentric as only the English aristocracy can be, then in her twenties and a working journalist, having an affair with American media giant Henry Luce when she and I met at a party given by Gore Vidal at his 360 East Fifty-fifth Street apartment in the spring of 1961. It was love at first sight and we left the party together and started living together a few days later and then she was pregnant and we had a lot of fights because she was as crazy as I was, and I wanted her to take care of my kids and make my breakfast but she liked to sleep late in the morning and loll about in her housecoat and leave her clothes lying wherever she'd shucked them off, on every floor of every room, doubtless assuming the maidservant would come in and pick them up, and then she became pregnant and was a very big pregnant lady, yes, very big indeed, and she gave me another daughter, Kate, born in 1962, and we, Lady Jeanne and I, were divorced in 1963, after which I quipped in an interview: 'At least I can say I went fifteen rounds with the best light-heavyweight the British ever sent over.' And then I met Beverly Bentley.

How could a man of my nature resist a woman like Beverly? I met her when I was getting drunk with my boxer friend, Roger Donoghue, at the bar in P. J. Clarke's, and she came in with another boxer, Jake LaMotta (later portrayed by Robert DeNiro in *Raging Bull*), and, clearly as high as I was, said, 'Well, if it isn't Norman Motherfuck Mailer!'

It was love at first sight.

Beverly was a beautiful, blonde, strong-willed, ambitious actress who'd left

Florida at seventeen, made her way to New York, performed in a lot of TV commercials, had a string of pretty high-powered boyfriends – Orson Bean, Eddie Fisher, Andy Griffith, Miles Davis – and had even (oh heaven!) met the man I kept trying so desperately to emulate, Ernest Hemingway, when making a movie in Spain, after which, returning to New York, she played first lead in a Broadway production of *The Heroine*. When the play turned out to be a disappointing flop, she decided, at the dangerous age of thirty-three, to give up and settle down.

Well, yes, a bit of a joke, was it not, that Beverly would think of 'settling down' with me at a time when, despite the stabbing, known more politely as 'The Trouble', my behaviour had become even more outrageous? Indeed, it was not long before meeting Beverly, when I was covering the Patterson-Liston heavyweight title fight for *Esquire*, that I kind of took over the press conference by going up on the stage and sitting in Sonny Liston's chair. When Harold Conrad, who'd put the fight together, told me to get the fuck out of the champ's chair, I refused to move, saying, 'Fuck him, I ain't moving.' So Conrad said, 'Those cops will beat the shit out of you.' And I said, 'Fuck the cops.' So Conrad had the cops pick the chair up, with me still in it, and carry me out through the booing audience and dump me in the hallway. But I staggered drunkenly back inside and, wildly excited by now, started bawling various pieces of advice at Liston, with everyone booing me again, until Liston, being a boozer himself, said into the microphone, 'Leave the bum be. He's just drunk' And I stagged up to the stage and shook his hand and subsequently received all the publicity I could have hoped for. So no question: I hadn't mellowed at all when I became involved with the very beautiful, though hardly mellow, Beverly Bentley.

Our relationship, later our marriage, was an endless screaming match. Lots of screaming. Lots of shouting and screaming, though the sexual attraction was strong. We had a great time in bed the first night we met and from then on the sex was really hot, but she was a frustrated actress and I was a born actor, both of us wanting to be the centre of attention, so we had a lot of conflicts caused by those factors. For sure, she ran an organized house, and a busy house it was, too, but she was one tough broad, hiring and firing people so often I could hardly keep track and screaming foul-mouthed abuse at me like she'd been born with those words in her head. She became pregnant quickly and we decided to get married, mainly for the sake of my growing

number of kids by various wives, so in December 1963 I flew to Juarez, Mexico, to obtain a divorce decree from Lady Jeanne Campbell and that same month married Beverly in the living room of our Brooklyn Heights home. In March 1964, a year after Beverly had moved in, our son, my first son, Michael, was born, and I began work on *An American Dream*.

Spaced out on pot and Seconal and booze and cigarettes, giving way to my recently developed, drug-fuelled belief that God and the Devil are at war for possession of the psyche, I wrote *An American Dream* as if indeed possessed by occult forces. And the occult certainly seemed to have eerie resonance in the finished work. For instance, President Kennedy was mentioned in the very first sentence of the novel; further down the same page, a man named Kelly is mentioned. Later in the same chapter, the reader is informed that Kelly's middle name is Oswald – Barney Oswald Kelly. That chapter was published in *Esquire* about a month after the assassination of President Kennedy by Lee Harvey Oswald. Not satisfied with occult associations, I also based some of the characters on my various wives: the aristocratic Deborah Caughlin Mangaravidi Kelly, who haughtily insults the hero's manhood, is clearly based on a combination of Lady Jeanne Campbell (my lead character and alter ego, Stephen Richard Rojack, strangles her and throws her body out of a skyscraper window, hoping to fake her death as suicide), and the emasculating Adele Morales; the nightclub singer, Cherry, was based very much on Beverly Bentley, being beautiful and blonde, with a strong sense of loyalty to her man and having a black singer as a boyfriend, just as Beverly had once been involved with the legendary black musician, Miles Davis. (Naturally I had my hero beat the shit out of Cherry's black boyfriend.) Cherry was also partly based on my jazz-singer girlfriend, Carol Stevens. So, all in all, *An American Dream*, despite its more outlandish, occult ramifications, was pretty true to the life I was then leading.

It was not well received. While a few critics determinedly found literary merit in it, most were appalled by its lurid storyline and overheated prose. And now, looking back on it, who's to blame them? What was the plot, after all? The hero, my alter ego – war hero, Democratic Congressman, television personality, and author of a book named *The Psychology of the Hangman* – chokes his wife to death, throws her body out the skyscraper window, goes straight downstairs to bugger the German maid in no uncertain terms ('I jammed up her ass and came as if I'd been flung across the room'), outwits

the cops, impregnates a beautiful, blonde nightclub singer after beating up her 'hip' black boyfriend (shades of 'The White Negro' and my rage that Miles Davis had fucked Beverly before I did), defies death by walking around the parapet of another skyscraper, then, when Cherry and her black boyfriend are murdered (my vengeance against Miles Davis), takes off into the desert to communicate supernaturally (or in his fevered imagination) with the dead Cherry, who sends regards from the late Marilyn Monroe, presumably right there by her side in the heavenly vaults. He then packs his car and starts on 'the long trip to Guatemala and Yucatán'.

No, the critics were not kind at all. Worst of all was feminist writer, Kate Millett, who described it as 'an exercise in how to kill your wife and live happily ever after.' And even years later, my most enthusiastic assassin, little Martin Amis, would describe the writing of *An American Dream* as 'the prose of a man in a transport, not of sexual excitement so much as the tizzy of false artistry.' Yes, so said the Toulouse Lautrec of British Letters.

Still, life was catching up on me and I needed the money. More and more of it. My Brooklyn Heights home, looking out on Manhattan and the Brooklyn Bridge, cost a fortune to maintain and was now filled with Beverly, all my kids, one by her, the rest by previous wives, my secretary, a cook, two black maids, a wide variety of hangers-on, and even ex-cons who came to visit me (I was addicted to communicating with imprisoned felons) and hung around for a few days, eating and sleeping for free, before leaving and taking stolen items with them, which always disappointed me. Then, as well, I'd created a loft space where I had ropes and ladders hanging from the roof and crossing empty spaces and reaching down two stories into the living room, used for testing my courage and the courage of unsuspecting guests who had to do some dangerous climbing in order to reach me, and who hated me thereafter for having forced the frightening experience upon them. At the same time I was constructing an elaborate model of a 'future' Manhattan out of Lego blocks, requiring thousands of Lego blocks to be delivered in crates and causing Beverly to scream: 'I can't stand this shit in my living room!' And it, too, was costing a lot of money. So, needing more money, I cobbled together another collection of good to bad bits and pieces, *Cannibals and Christians* (the cover of which was illustrated with a photo of my Lego city) and followed it up with another quick novel.

Why Are We in Vietnam? is the only novel I ever finished under the

mistaken belief that I was writing another. While staying at my place in Provincetown, on the edge of the windy, desolate dunes, I began to think of a novel set there, featuring a group of bikers, hippies and studs, plus a girl or two, living in the scrub thickets that sat in some of the valleys between the dunes, from where they would slip out on a regular basis to commit 'murders of a massive brutality.' But not wishing to stain the good reputation of Provincetown, I reduced the gang to two tough, rich Texas boys and had them hunting bear in Alaska, just before being drafted to fight in Vietnam. Having already gained the admiration of a new generation of student radicals with my outrageous speech about Lyndon B. Johnson, given at the Vietnam Protest Day gathering in May 1965 (where I talked about Johnson's 'monstrous vanity' and 'overweening piety'), my fiction was narrated by a 'hip' Texas disc jockey named D. J. (get it?) who introduces himself as 'the voice of America' and claims that he also represents Lyndon B. Johnson, also described as 'Mr. J., Mr. L. B. J., Boss Man of Show Biz.' I thought this was particularly clever in that I had D. J. also representing Dr. Jekyll, the darker side of D.J. (L. B. J) and named his best friend, another gun-mad Texas kid, Tex Hyde. So off they go, Jekyll and Hyde, to test their courage in the Hemingwayesque manner, by slaughtering innocent bears with high-power rifles that could blow any living thing apart. In the words of D. J.: 'Vietnam, hot damn!'

The resulting fiction was hailed in some quarters as a masterpiece, in others as self-indulgent crap, but coming so soon after *An American Dream*, its fresh offering of gross obscenity and violence led to more outrage and controversy, thus increasing my already large reputation as the wild man of American letters.

Okay, so if I'm not actually dead, if I just dreamed that I'd died after falling asleep on my sick bed, then maybe my sleeping brain is trying to tell me that what I set out to prove I *have* proved: that film is a phenomenon whose resemblance to death has been ignored too long. Yes, by directing and acting in my own films, maybe I was attempting to create an eternal 'me' who had no actual physical existence. So maybe, right now, wherever I may be, which is somewhere unknown, I'm not dead but still alive as a creation in a film, a ribbon of dreams, of my own creation. As I said some time, somewhere: 'there is something sinister about film.' Which almost certainly explains why I decided that I had to make some of my own home movies.

My model was Andy Warhol, the super-delicate homosexual freak with whom I'd been friends for years, who'd often come to visit me in Brooklyn Heights and Provincetown, always uncomfortable, perversely interesting encounters, when we'd discuss his movies more than his paintings, if, in truth, you could call his paintings 'paintings'. While I appreciated the wan Andy's attempts to show up serious Art for the crassly commercial enterprise it truly was (a Picasso autograph being as valuable as a Picasso work of art), I was more impressed, given my obsession with Time with a capital 'T,' with how he showed in his 'home movies' that Time could be expressed, as I later put it, 'as a new kind of creation, a palpability which breathes in the *being* of film.' Warhol did this, I believed, in all those movies of his where a steady camera focused for hour after interminable hour upon nothing worth seeing for a minute. John Lennon and Yoko Ono would later try to do the same with their quivering buttock movies (no way would I want to bugger dear John's hairy ass!) and their 'Two Virgins' crap, but I definitely got in before them with my much more animated ventures into the genre. Unfortunately, given the times, I had to do it under extremely trying circumstances.

My fights with Beverly were continuing unabated, with her constantly threatening divorce. (Beverly: 'You treat people worse than niggers in Georgia. You're just a bully! I want a divorce. I want it right now!' Norman: 'Put it in writing.') On one occasion, Beverly got into a fist fight with one of our female guests who, unfortunately for Beverly, was an expert at Karate and managed to give her a black eye as well as bruised ribs. Another time, the beautiful Beverly was so drunk I had to pick her up and carry her down the stairs, only to have her scream at the guests assembled above: 'He's gonna kill me! Please come down! He's gonna kill me!' I didn't kill her, though I certainly felt like it; instead I put both her and the equally volatile Adele Morales into another production of my play *The Deer Park*, since both of them still had hopeless aspirations as actresses, but the play stank and justifiably bombed. By that time, my second wife was coming to the house on a regular basis, thus giving me two-foul-mouthed women to contend with in a home that now included seven children, most of whom were allowed to be as foul-mouthed as their mothers (and father). No wonder that by that time I'd decided that despite my failure as a playwright and stage director, I wanted to try my hand at making some home movies, albeit more expensive than those by my friend Andy Warhol, and so embarked on three of them, playing the

lead role in all three, also directing, with no advance planning, no script, no retakes, and no financial backing except what came out of my own pocket. Andy Warhol would have been proud of me, though the movies were box-office and critical disasters.

Reviewing my performance in my first effort, *Wild 90*, Pauline Kael described me as 'a growling, grunting, waddling little star, a miniaturized big-brawler, who looks and sounds surprisingly like Victor McLaglen.' Others complained that *Wild 90* was no more than ninety interminable minutes of obscene, meandering conversation between three hoodlums, me being the main one, known only as Prince, and with walk-on roles for a variety of friends and family members, including Beverly, with whom I had a love scene which, according to the always dependable Kael, 'rivals the Burtons at embarrassing us.' The next one, *Beyond the Law*, was more ambitious (and more expensive) than *Wild 90*, using three camera crews to film incoherent interrogations between police and criminals in different rooms in a make-believe police station. This time I played a New York cop, an Irishman, with the unlikely name of Francis X. Pope, and my acting, if supremely self-confident, as always, was just as bad as it had been in the previous film. The third and final movie, *Maidstone*, was the most ambitious of all (cost: $200,000), being shot by four camera crews on several different estates on Long Island over a period of six days, with a cast that included a few professional actors, notably Rip Torn, my then wife, Beverly, two of my former wives, Adele Moreles and Lady Jeanne Campbell, a lot of my girlfriends, including my latest, the jazz singer Carol Stevens, an assortment of friends from New York and Provincetown, and a lot of drunks, dopers, hookers, and general low-lifes picked up from here, there and everywhere. I had the novel idea of directing an unscripted movie about a director directing an unscripted movie while also considering a campaign for the presidency. (How's that for originality?) Playing the director, I called myself Norman T. Kingsley, thus giving him my actual first and middle names. The making of the movie soon descended into a virtual orgy of drink, drugs, random fucking and violence, with numerous arguments and fist fights, culminating in my being attacked by my lead actor, Rip Torn, who, driven border-line mad by my autocratic method of filming, ran across a field to strike me three times on the head with a hammer, drawing blood, and then wrestled with me on the ground where, while Beverly and four of my children were screaming in fear

or horror, I bit, and nearly tore off, Torn's ear.

That ended my desire to make movies for a pretty long time.

However, before making *Maidstone*, I'd written what many people thought was my finest book up to that date, namely *The Armies of the Night*.

Looking back on my life, I have to confess that my grasp of politics was no more profound than what I could get out of the newspapers or, perhaps more relevant, what was hammered into me by my humorless, Trotskyist, French intellectual friend and mentor, Jean Malaquis. My first real political involvement was in August 1948 when, suddenly famous because of *The Naked and the Dead*, but believing that to be taken seriously as a writer I had to show equally serious political convictions, I let Malaquis persuade me to join the Henry Wallace presidential campaign, which leaned toward tacit support for the Soviet Union. Politically naive, I had absolutely no knowledge of Stalinist terror and, like many fellow travellers of that time, saw the Soviet Union as the great anti-fascist bulwark. However, my politics underwent a substantial change between August and October, when Wallace failed to catch fire with the public and I, taking heed of my friend Malaquais's diatribes against the American Communist Party, shocked many pro-Soviet progressives when, in a speech given in Hollywood, I attacked both the Soviet Union and the United States as destructive imperial powers employing tremendous concentrations of economic and military force. Not content with that, at the Cultural and Scientific Conference for World Peace at the Waldorf Astoria in late March 1949, I announced my new politics by denouncing the very idea of peace conferences, saying they would do no good so long as the United States and the Soviet Union continued to converge toward the same point: totalitarian state capitalism. Initially received with great enthusiasm, because of my fame, the speech was roundly booed at its conclusion.

So much for my initiation into politics.

The Armies of the Night came, when I was more politically mature, out of one of the worst periods of my life. Only a few days before my old friend Mitchell Goodman asked me to participate in a march on the Pentagon to protest the Vietnam war, I'd confessed to E. L. Doctorow that I was feeling all washed up, convinced that my time had already been and gone, that the real world was now passing me by. Nevertheless, against my better judgement, I agreed to go on the march and subsequently, in October 1967,

found myself heading for Washington D. C., to take part in the event with other celebrities and thousands of other enthusiasts, including students, hippies, dopers, Yippies and the psychedelic Haight Ashbury angels who famously put flowers in the gun barrels of the soldiers. The evening before the main event, I attended a dinner party composed of liberal academics who got up my nose and drove me to drinking too much. Leaving the party, carrying a big mug of bourbon, I went with Paul Goodman, Dwight Macdonald and America's Greatest Living Poet, Robert Lowell, to the Ambassador theatre, to take part in an Artists of Conscience convention organized by Edward de Grazia. Drunk, I went to the toilet, couldn't find the light switch, so pissed all over the floor before returning to the main theatre where, even more drunk, still imbibing from my big mug of bourbon, I proceeded to bully everyone else on the stage, threatened to beat up the M. C., de Grazia, took over the whole show despite the protests of the others, and then, using my Lyndon B. Johnson 'southern' accent, gave a slurred, obscenity-filled speech that raised catcalls and boos from the rowdy audience, mostly students. 'I'm here because I'm like L. B. J.,' I informed them. 'He's as full of crap as I am.' The next day was taken up with more speeches, witnessing the formal handing in of hundreds of students' draft cards, and another evening of heavy drinking. The following day, marching with about fifty thousand others from the Lincoln Memorial to the Pentagon, facing the soldiers, the bayonets, the gas masks and tear gas, I deliberately put myself in a position to be busted by the cops, then was thrown into a paddy wagon with a Jew-hating Nazi, blond-haired and wearing a Nazi armband, with whom I traded a lot of ridiculous insults. 'You Jew bastard! Dirty Jew with kinky hair!' he screamed. And I responded, 'You filthy Kraut.' And he said, 'Dirty Jew!' And I said 'Kraut pig!' And he said he wasn't a Kraut, he was a Norwegian, and then he put up his balled fists and invited me to fight and I said, 'Throw the first punch, baby, you'll get it all' And so it went, on and on, the mutual insults becoming more obscene by the minute, until we were hauled out of the paddy wagon and taken into the jail, where the Nazi and I were mercifully separated, and then I was driven to another prison in Alexandria, Virginia, spent a few days there, then had my day in court and was released on my own recognizance and, greatly relieved, went back to Provincetown for a couple of months and wrote my brilliant account of the whole business.

In the first-person narrative of *The Armies of the Night*, the part subtitled 'History as a Novel,' I recreated myself as a protagonist called 'Mailer', part hero, part buffoon. I was halfway through the book before I got used to writing about this 'Mailer', but after the book was done I missed him so much that I used him again and again, albeit under a variety of different names, such as Aquarius (my astrological sign) in *Of A Fire on the Moon*, in which I bored a lot of readers with my lengthy discourses on NASA technology, 'the reporter' in *Miami and the Siege of Chicago*, in which I dismayed a lot of readers with my sympathy for Richard Nixon, and 'the interviewer' in *The Fight*, in which I wrote some of my very best descriptive and good-humored prose, despite the seeming slightness of the subject matter. Nevertheless, when *The Armies of the Night* won the National Book Award, despite its recording for posterity of how I'd pissed on that toilet floor and then gave a drunkenly obscene speech to a chorus of catcalls and boos, it convinced me that I definitely could, as my dear mother Fanny had always confirmed, do whatever the hell I liked and get away with it. My behaviour, therefore, did not improve in the future and my penchant for picking fights with my fellow authors continued unabated, most particularly, in those days, with my favourite adversary, Gore Vidal.

Okay, I'll confess. I respected Gore as a writer (his tartly astute political and literary essays; his well researched but boring historical novels) but had my doubts about him because of his self-confessed homosexuality. Never let it be said that Gore's description of *The Naked and the Dead* as being no more than 'a clever, talented, admirably executed fake' was the cause of our life-long love-hate relationship. No, what bugged me about Gore was his relentless insistence that homosexuality was the natural state of man and that those of us who proudly proclaimed our masculinity (think macho Mailer) were merely attempting to deny our true nature. Now, given that my wild veering between my frequently proclaimed distaste for homosexuality and my obvious obsession with buggery, writing endlessly about it (all the way from 'The Time of Her Time' to *An American Dream, Ancient Evenings* and *Harlot's Ghost*), might have made me appear to be a hypocrite when it came to the touchy subject, I still couldn't take Gore's strident insistence that I and other heterosexual males were pitifully trying to deny our essential homosexuality. He even tried that shit when, in early 1971, Adele and I, with our 3-year old daughter, Danielle, paid him a visit in his Edgewater mansion.

At one point during the weekend, after I'd been boasting about some of my and Adele's sexual high jinks, Gore, never a man to be out-done, said: 'Until you've known an Arab boy, dear Norman, you don't begin to know what sexual pleasure's all about.' So also being a man not to be out-done, I said: 'I *am* married to an Arab boy, dear Gore. Adele has a lot of Spanish blood and Indian blood and could pass for an Arab.' Gore, normally quick with his eloquent sarcasm, did not have a rejoinder to that.

But our love-hate relationship continued. In Gore's cross-dressing novel, *Myron* (1974), satirical representations of Truman Capote and I are used with sadistic relish. Capote appears as a giggling, inept gossip columnist named Maude, a snobbish hairdresser with a 'damp-looking face.' I appear as a drunken, semi-violent cook (which I was when in the army) named Whittaker Kaiser, 'a small fat old man of fifty or so with a full head of wiry gray hair,' constantly threatening Myron/Myra with a meat cleaver. Kaiser proclaims that 'the *real* man… takes one woman after another without the use of contraceptives… just the all-conquering sperm because contraception of any kind is as bad as masturbation and because the good burger makes the good baby.' This was merely a badly written fictionalization of Gore's poisonous put-down of me in 1971, when the slippery-tongued faggot took me to task for my hugely controversial *Harper's* article, later my hugely successful book, *The Prisoner of Sex*, claiming that my attitude to women was disgusting; that I viewed them simply as 'breeding machines' who existed solely to be 'the fruitful receptacle of the male's sacred obligation, though the mystery of sexual intercourse, to conceive children.' He then added that I viewed women as 'at worst, objects to be poked, humiliated and killed.' (A sly dig at *An American Dream*, which sold more than all his novels combined.) Then he drove a stake through my heart by saying that there was a logical progression from Henry Miller to me to Charles Manson; in other words, that it was the attitudes of the likes of me and Miller that had laid the cultural groundwork for sexual psychopaths like Manson.

Well, fuck him! He was just getting back at me because I'd stated that masturbation and contraception were both bad because anything that interfered with conception was evil. (Interview with Paul Krassner: 'Anybody who spends his adolescence masturbating generally enters his young manhood with no sense of being a man. … If one masturbates, everything that's beautiful and good in one goes up the hand, goes into the

air, is *lost*… The ultimate direction of masturbation always has to be insanity.') Which meant that in my view homosexuality was also evil. Well, isn't it? Just because that over-bright faggot had a yearning for Arab boys didn't absolve him from the sin of giving in to his homosexual drives and spilling his seed to no good purpose. And because that's what I sincerely believed he compared me to Manson!

So… I decided to pay him back by confronting him on television, on The Dick Cavett Show. The other guest was Janet Flanner, the *New Yorker* Paris correspondent. Naturally, I'd been doing a slow burn about this for months, so I got drunk before the show, met Gore in the dressing room, ran at him, butted his forehead with my head and punched him in the stomach. Determined not to respond in kind, Vidal just hurried away from me and went out to do the show as if nothing had happened. I followed him out and, still in a rage, demanded an apology for his Manson comment. When Vidal tried to ignore the issue, I shoved in his face a paper containing some of his Mailer-Manson comments and demanded that he read them to the audience. When he refused, I tried to make him reveal what he'd privately claimed he'd done to Jack Kerouac – took the steel out of his *cajones* by fucking him in the ass – but the audience didn't know what I was hinting at and swiftly turned against me for my snide remarks. By the end of the show the audience was booing me, and Cavett, the treacherous bastard, took their side by pointing to my piece of Mailer-Manson notes and saying, 'Why don't you fold it five ways and put it where the sun don't shine?'

So, again, I made a fool of myself, stinking the joint out, while Vidal, as usual, came out of it smelling of roses. The only writer who could beat him on TV was that creepy little fruit, Gore's gay friend, the late Truman Capote.

But did our feud end there? No! About six years later, in October 1977, still fuming at my inability to get back at Vidal, I attended a buffet dinner hosted by Lally Waymouth, writer, journalist and daughter of Katherine Graham, the *Washington Post* publisher. It was a prestigious affair. Other guests included Jackie Kennedy (then Onassis), the British ambassador Peter Jay, William Paley, Marella Agnelli, Jerry Brown, John Kenneth Galbraith, Joseph Alsop, Lillian Hellman, William Styron, Susan Sontag, Guy Talese, Sam Spiegel, Sue Mengers, and… Gore Vidal. The minute I learned from my companion, later my wife, Norris Church, that Gore had arrived, I walked up to him, told him he looked like an old socialist (he insists that I said 'old Jew'), then

threw the contents of my glass in his face. He later insisted that I'd thrown a punch at him, but it was only the drink and the ice cubes that he saw coming at him. During the ensuing rumble I stumbled into Max Palevsky, a Californian power broker, and he spilled his glass of champagne over Lally Weymouth's dress. Vidal, his mouth bleeding, sat on a couch at the far side of the room, having his bloody lip attended to by the literary agent, Sue Mengers, but I hurried across the room and challenged him to go downstairs with me and 'have it out in the street.' Vidal didn't move, but his ageing boyfriend, Howard, volunteered to fight me on his behalf. 'My fourteen-year-old son could take you,' I told him in the midst of this elegant party. According to Vidal, Howard then chased me out, but in fact I said to Lally Weymouth, 'Either he goes or I do.' and when she refused to ask either of us to leave, I stormed out, with Norris.

So I made a fool of myself again.

We finally called it quits in 1984 when, in my role as president of American PEN, the international writers' organisation, I invited him to take part in a series of literary evenings to raise money for the convocation of a PEN World Congress. Vidal agreed and it all went off okay, only to be spoiled when, much later, I read in a Vidal biography that he'd written to Paul Bowles at the same time, describing me as 'the Great Halvah Merchant' who is 'now ricocheting around the lit. world (don't ask me where THAT is) in a mad quest for the Nobel prize (God knows he's bad enough to get it) and lit. respectability and the world's acceptance that he is really numero uno… Oh, the drama of it!'

The drama, indeed!

Another literary rivalry became evident when I needed some quick money and wrote my notorious biography of Marilyn Monroe, entitled simply enough, *Marilyn*. (M. M. = Marilyn Monroe. M. M. also = Mailer's *Marilyn*.) Let us not forget that Marilyn had married the man whom many thought was our Greatest Living Playwright, namely Arthur Miller. I first met Miller when we were both still unknown but living in the same rooming house in Brooklyn Heights. Even then, Miller, writing *Death of a Salesman*, though not yet married to Marilyn, was a dried-out fish. When we finally bumped into each other in the hallway and got to talking and he told me about his play, I responded by telling him flatly that I could have written a similar play if only I had the time, which I hadn't, since I was too busy writing the Great

American Novel instead. Having no sense of humor, he was clearly offended by my presumption. Quite a few years later, when we'd both become famous and Adele and me were living close to Miller in Provincetown, where he was staying with Marilyn, then his wife, I pursued him relentlessly for an invitation to his house, desperately wanting to meet her. Obviously not keen, he finally relented and invited me over, but when I arrived there with Adele, Marilyn was nowhere in sight and we just had a drink and a boring conversation, during which the only mention of Marilyn was when Miller said that she'd been called to the coast on movie business. All the way home, I cursed the bastard out, repeatedly telling Adele that he'd deliberately waited until Marilyn was away to invite us over. Even worse was when I later learned, though a mutual friend, that Marilyn had been in the house all the time, in the upstairs bedroom, so no surprise that when I came to write my book about Marilyn, I let Miller have it with both barrels. He's despised me ever since.

So many conflicts. So many enemies. Looking back on it now, from wherever I am, being whatever I am, almost certainly dead but in some way still alive, oddly not frightened, prepared to embrace the All, though wondering what the All might be, either within or beyond that light ahead in the here and there, the near and far, the past and present, I'm amazed that I survived my own turbulent life for as long as I did. A long time, actually. Longer than many get. Surviving fame and failure, great wealth and huge debts, the many wives and children, the fist fights and head-butting, not forgetting the drink and the drugs and the borderline madness. Yet made it through to the end. All the way into my eighties. Only finally surrendering the ghost at a respectable old age, the eminent writer, the survivor, the patriarchal Jewish head for an ever-growing, surprisingly cohesive family of former wives, children and grandchildren. And yet all of them, good and bad, right or wrong, but mostly sane, were forged in the furnace of a temperament that was often demented. Even now, when I look back on those middle years, I wonder how they survived it. I did not consider myself a normal person, and those were not normal days…

In 1969 I threw myself enthusiastically into my notorious second candidacy for mayor of New York, with a wild Irishman, Jimmy Breslin, as my running mate (for city council president). Drunk most of the time and as abusive as ever, I sank like a stone but gained more invaluable publicity for myself. By

the following summer I was back in Provincetown, formerly an inexpensive haven for painters such as Jackson Pollock and Willem de Kooning, but starting to fill up with writers, some of whom lived there all year round, others only there for the summer season, including the likes of Joseph Heller, E. L. Doctorow, Kurt Vonnegut, Jr., and John Knowles. Still, the painters came as well, so between the artists, the writers, and the gay and hippy communities, what had once been a quiet village of mainly Portuguese fishermen and small, civic-minded shopkeepers became a honky-tonk town, a place of heavy drinking and drugs and promiscuity. By that time I was still determined to be as outrageous as possible, the 'psychic outlaw,' and had developed a passion for boxing (I had regular lessons from my boxer champion and friend, Jose Torres) and head-butting to add to my growing list of over-age juvenile sins. I also enjoyed having my former wives, Adele and Lady Jeanne, around, since both were volatile company for the volatile Beverly and melodramatic scenes could virtually be guaranteed. Naturally, since they brought their children, to add to Beverly's children, the house was always packed and noisy. So was the house in Brooklyn Heights, where the kids were allowed to run wild, and beautiful Beverly, who was putting on weight, becoming ever more frustrated at having to live in my shadow, and becoming obsessed with health issues, was always screaming about Brooklyn's foul air. Even when one of our kids had a serious vomiting fit, she did little about it other than to scream dementedly, 'It's the fucking air! Look at the air outside!' Our disenchantment with one another was growing by the day and was not helped any when she said that she thought my book about the moon shot (*Of A Fire on the Moon*) was a bad idea and demanded that I drop it. I told her to go fuck herself, but instead, knowing that I was fucking my long-standing girlfriend, Carol Stevens, as well as having an open affair with an air hostess, she took off for Mexico to continue an affair she was having with a famous race-car driver, leaving me alone with the kids, with only Carol Stevens and sometimes Adele and Lady Jeanne and some other just-passing-through girlfriends for adult company. Then, with *Of A Fire on the Moon* completed, I took off with five of my six children to Maine for a six-week vacation, hoping to find out if I could manage a large household on my own. I couldn't. Instead, I enlisted the help of a good woman from Maine, whose identify I never disclosed, and then my beloved sister Barbara helped out for a fortnight, and then, even better, my long-

standing girlfriend Carol Stevens came for a visit, stayed for the whole of the summer, did a great job with the kids, and then announced that she was pregnant by me. When I conveyed this information to Beverly, she told me that our marriage was over, and indeed it was. Now, at least for a brief period, domesticity ruled.

Even as I was settling into his deceptively peaceful domesticity with Carol, I was becoming more aware that I had somehow become the main target for the rapidly swelling ranks of feminist writers. Top of the list was Kate Millett, who, in her book *Sexual Politics,* savaged the sexual attitudes of D. H. Lawrence, Henry Miller and, of course, macho Mailer. It was Millett, after all, who'd reduced *An American Dream* to being no more than 'an exercise in how to kill your wife and live happily ever after.' Since she was worse, much worse, in *Sexual Politics*, I responded with my lengthy essay, 'The Prisoner of Sex,' which tore her feminist rantings to shreds. The essay was published in its entirety in the March 1971 issue of *Harper's*, selling more copies of that issue than any other in *Harper's* history, and then it went on to become my bestseller book of the same title. I did not, however, improve my reputation for extreme male chauvinism with my comment: 'the prime responsibility of a woman is to be on earth enough to find the best mate for herself, and conceive children who will improve the species.' (The Pope presiding over the Vatican would have been proud of me.) I did, however, appear to be sticking to my principles when Carol Stevens gave birth to a daughter, Maggie Alexandra, during the same month that *Harper's* published 'The Prisoner of Sex.' I had now fathered one daughter with Carol Stevens, another daughter with Bea Silverman, two daughters with Adele Morales, and two sons with Beverly Bentley: six children in all – and all because I didn't believe in contraception because the act of sex, without procreation as its purpose, was an act without meaning and a shocking waste of man's sacred seed.

So what's wrong with that?

With the publication of 'The Prisoner of Sex' in *Harper's*, I decided to face up to my feminist opponents (and gain myself more publicity) by organising a public debate at Town Hill in New York City. Kate Millett, the cowardly bitch, refused to come, but Germaine Greer, another wizard at self-promotion, agreed to appear, as did radical feminist Jill Johnson, Diana Trilling, and Jackie Ceballos, president of the National Organization of

Women. A lot of friends and celebrities were in the audience, including Adele, Lady Jeanne, Arthur Schlesinger, Jr., Elizabeth Hardwick and Susan Sontag. Greer kicked off the proceedings by cleverly getting me to pose with a copy of her book, *The Female Eunuch*, for the press photographers, so that was *her* evening made. The word was out that she was also determined to seduce me after the debate, but I managed to avoid that awful fate. I was, of course, the moderator, and my way of 'moderating' was to be deliberately provocative, even abusive, to the female participants, using my broad variety of borrowed accents, from posh English to Irish and Texan, to put across my contentious points. The highlight of the evening came when two of Jill Johnson's lesbian friends jumped up onto the stage and then proceeded, with Jill, to hug and kiss passionately and roll around in simulated lesbian rapture. Instead of pulling them apart, I admonished them with the comment (not forgetting for one second that I was being filmed and recorded): 'You can get as much prick and cunt as you want around the corner on Forty-second Street for two dollars and fifty cents. We don't need it here.' Understandably, that brought the house down and put an end to our supposedly 'serious' public debate on sex.

But the women weren't the only ones out to nail me. In 1970 some academic faggot wrote a novel about a professor of literature and dean of humanities who becomes involved in a student revolution and, in a lecture to his rebellious students, says: 'Our famous New York writer/promoter is considered magnificent because his life and his books hold up to us images of violence, sadism, murder as goals of aspiration.' He then talks about how 'even Mailer's Rojack, that cardboard fake, was treated as if he were the personification of some significant ideas.' He then introduces a fictional scene in which a radical student, one of the professor's disciples, before attending a Harvard lecture given by me, reads a copy of *Advertisements for Myself*, zeros in on that part of my essay 'The White Negro' where I suggest that courage of a sort is necessary for two eighteen-year old hoodlums to beat in the brains of a candy-store keeper, and concludes that what I'm offering is a 'licence for killing'. Not content with that, the academic sonofabitch, name of Alan Lelchuk, then has a scene where the radical student, outraged by my thesis, gives me a taste of my own medicine by catching me in the bathroom of a hotel during a post-lecture party, shooting me in the shoulder with a pistol, thus making me fall to the floor, then ordering me to pull my pants

down and turn around, onto my stomach, letting him place the barrel of his pistol against my arse-hole – clearly mocking the buggery in *An American Dream* – and squeezing the trigger to blow my guts out through my big mouth. And to add insult to injury, the sonofabitch, who'd used my real name throughout, called his novel *American Mischief*.

Some writers will do anything for publicity.

Not that I let him get away with it. I'm all for literary freedom, but that was too much, so shortly after reading the book I called a press conference and informed the slavering newshounds that if I ever got my hands on Alan Lelchuk 'there'd be nothing left but a hank of hair and some fillings.' Which in a way proved Alan Lelchuk's point.

Even worse was my performance at my fiftieth birthday party, which I held at the Four Seasons restaurant in Manhattan and for which I sent out five thousand invitations, informing the invited guests that for fifty dollars a couple they would be treated to 'an announcement of national importance.' What I'd come up with was the formation of a so-called 'Fifth Estate,' a group of citizens who would keep those experts in surveillance, the CIA and the FBI, under surveillance and alert the public to the way those secretive organisations were manipulating the population, to the degree, indeed, where they may even have been involved in the assassinations of John F. Kennedy, Martin Luther King, Jr., and other public figures. Guests to the grand event included my mother, my seven children, Adele, Lady Jeanne, my mistress Carol Stevens, the editors of major newspapers and magazines, celebrities such as Andy Warhol, Shirley MacLaine, Jack Lemmon, Bernardo Bertolucci, and a few unusually brave Washington D. C. senators. Unfortunately, I didn't get around to speaking until ten in the evening when, with drink in hand, I gave a drunkenly incoherent speech to an audience of about five hundred people, opening up with a dirty joke that incited a lot of booing and hurried exits of the disgusted, then ranted on about my proposed 'democratic secret police keeping tabs on Washington's secret place.' By the time I'd finished, a lot more of my guests had fled the premises. By four in the morning I was to be found butting heads with any other crazed drunks who were willing to take me on. The next day, at a press conference in the Algonquin hotel, trying to speak coherently with a filthy headache caused by hard drink and head-butting, I admitted to the gathered media that my 'Fifth Estate' speech had been a 'disgrace.' So ended my fiftieth birthday – though,

alas, it wasn't the end of my troubles.

Later that year, Hodder & Stoughton, the British publishers of my *Marilyn* book, announced that they were delaying publication because I'd been charged with plagiarizing from the Guiles's and Zolotow biographies of the same subject. That humiliation was followed by an interview on *60 Minutes*, in which Mike Wallace tackled me about my suggestion, in the book, that Marilyn's involvement with Bobby Kennedy had led to her murder. Wallace then cleverly cut to an interview with Eunice Murray, Marilyn's housekeeper, who insisted that no one could possibly have visited Marilyn during her last night on Earth. Not satisfied with that, Wallace then tricked me into confessing that I'd thought the book was important enough to be published half finished, without proper research, rather than have publication delayed. A few days later I was back in the Algonquin hotel for another press conference, this time to deny the charges of plagiarism, to be roundly challenged regarding my murder theory, and to be forced to acknowledge, in my thoughts, if not with words, that my Marilyn book was becoming something to be joked about. Pauline Kael then hammered the final nail into the coffin containing my reputation by informing the many readers of the *New York Times Book Review* (on the front page, no less!) that 'another' unworthy aspect of the book was my all-too-obvious envy of Arthur Miller.

Well, what's wrong with that? I ask again.

I was down, but not out. Certainly turning fifty wrought some subtle changes in me, dramatically altering my belief in what I'd once described during an interview with Mike Wallace as my 'joyful promiscuity' (seeing the interview on television, my then wife Adele called me a 'son of a bitch' and stormed out of the room) and even making me fearful in odd ways: fearful that my broken marriages were destroying my self-respect; fearful that I wasn't as good at sex as I'd always assumed; even fearful of making love to a strange woman and dying in her bed. In other words, promiscuity was on the way out and a more mellow me was on the way in. It was this more settled me who covered the George Foreman-Muhammad Ali world championship fight in Kinshasa, Zaire, had a good time while doing so, and produced in the resultant book, *The Fight*, one of my most good-humored and evocative works. And it was this more mellow me who took on the challenge of *The Executioner's Song*, my epic, Pulitzer-prizewinning factual novel about Gary Gilmore, a two-time killer executed by firing squad in Utah at his

own request.

I credit much of this new mellowness and sanity to meeting and then marrying Barbara Norris Church, a high school art teacher from Atkins, Arkansas, about six feet two to my five feet eight, twenty-six years old to my fifty-two, though by a magical coincidence (good Karma!) we shared the same birthday. I met her in the Arkansas house of my friends, Fig and Ecey Gwaltney, and when I first laid eyes on her, she struck me as being too beautiful to look at, so I walked out of the room in a love-struck daze. But I asked the Gwaltney's to invite her the following evening for dinner and she came and we were soul-mates from then on. Since Norris told me up front that she'd been married before and had a three-year- old son, Matthew, I confessed that I was still married to Beverly and presently living with Carol Stevens. Having got that of my chest, I then encouraged her to come to New York, where I could help her find work as an artist and model. Then, once back in New York myself, I told Carol about her, so Carol moved out and Norris moved in and Beverly eventually gave me an expensive divorce and I married Norris and my life changed for all time. I drank a lot less, gave my kids more attention, and appreciated the fact that Norris, unlike my previous wives, didn't shout and scream. She was extremely well organized, took control of my affairs, both domestic and financial, was a solid foundation during the writing of two of my most ambitious books, *The Executioner's Song* and *Ancient Evenings*, and was generally supportive – except in the case of Jack Henry Abbott, which could be termed, without fear of contradiction, the last Big Mistake of my turbulent life.

Given my hopeless romance with the criminal underworld, I'd developed the dangerous habit of writing to felons in prison and inviting them to come and visit me at home upon their release. This hadn't always worked out, as some of them abused my hospitality and then stole money and other items from the house before moving on. Jack Henry Abbott had first written to me when he heard I was working on a book, *The Executioner's Song*, about another recidivist criminal, Gary Gilmore. In his mid-thirties, Abbott had spent most of his adult life in various prisons, including a penitentiary where Gary Gilmore had served his time. When, in the middle of 1981, Abbott was released from his latest incarceration, we'd been communicating for four years and I'd convinced myself that he was a natural-born writer who could, if encouraged, write an invaluable book about prison life. In short, I thought

he was talented. What I didn't know at the time was that most of his stories of relentless institutional brutality and virtual torture inflicted upon him personally were grossly exaggerated and that Abbott, while in prison, had murdered another prisoner ('in combat' as he put it), had a record of many other violent assaults, had resolutely refused to accept responsibility for his own actions, and had been described by prison psychologists as being in 'a paranoid state' and 'capable of sudden violence.' So not knowing any of this, or perhaps not wanting to accept it, since certainly, in rereading, it was evident in the subtext of his letters, I arranged for the publication of an excerpt from his letters in *The New York Review of Books*, encouraged Random House to publish the collected letters as *In the Belly of the Beast*, and wrote an adulatory, wildly miscalculated, foreword for it. Having already promised him a job as my editorial assistant, I met him at the airport in New York the day he was released, brought him home with me, spent an hour talking to him (while Norris and the kids slept safely upstairs), then put him in a cab that took him to the Lower East Side halfway house where he was scheduled to begin his supposed re-entry into normal society. Norris was furious. 'You wrote that book about Gilmore,' she said. 'Didn't you learn anything? It's not going to work. These guys don't change.' How right she was! Within days it became clear that Abbott couldn't cope with the normal world, was completely disorientated by it and felt threatened by it, imagining that everyone was laughing at his lack of knowledge of routine social interaction, and then he bought a knife, feeling he needed it for protection, and then, over what later transpired was a wholly imagined slight, stabbed to death a twenty-two-year old Cuban-American actor, dancer and playwright working as a waiter in a restaurant located at Second Avenue and Fifth Street.

So my flirtation with a certain earlier stabbing, 'The Trouble,' and my general romanticized violence had come back to haunt me.

At his subsequent trial, Abbott admitted that many of the abuses related so graphically in his book had been 'fictionalized', but I decided to testify on his behalf anyway, despite Norris's righteous fury at my decision to do so. In court, I got off lightly, but once I stepped outside the courtroom the gathered media gave me a rougher ride, clearly outraged at what they assumed was my defence of a killer and lack of concern for his victim. So I ended up in what can only be honestly, shamefully, termed an hysterical state, bawling that if they wanted my blood they couldn't have it, insisting that a long sentence

would destroy Abbott's chances as a writer, and responding to the accusation that I seemed more concerned with Abbott than with his victim by offering the inflammatory statement: 'I'm willing to gamble with a portion of society to save this man's life.' Meaning Abbott's life, not his victim's life. Which I didn't really mean. Which led me to scream obscene words at the reporters, culminating with, 'You are full of shit! Fuck off! No more questions!' Which was the only incident that ever brought Norris close to divorcing me.

My final newsworthy event took place in November 1981 when, as at least one gossip rag had it, I had a kind of 'double wedding to wives five and six.' What I did, in fact, was marry Carol Stevens to 'honor' the years I'd lived with her and 'legitimize' our nine-year-old daughter, Maggie, then, a few days later, divorced her in order to marry Norris, thus recognizing our union and legitimizing our two-and-a-half-year old son, John Buffalo. Complications arose when Beverly claimed that she was not divorced from me, that the matter was still in litigation, 'So how can he get married even once?' But despite her objections, my marriage-divorce-marriage went ahead and Norris and I lived happily ever after, at least until illness struck me down and landed me here.

The question being: Where is here? In this oddly comforting darkness, this place of insubstantial walls, invisible walls, with only darkness above and below, on either side, and that single, pulsating light defying any concept of distance, either here or there, near or far, but inexorably coming toward me or drawing me toward it, either way expanding, spreading out, its tendrils like the light around a flickering candle, weaving and waving like the strands of a spider's web and every bit as seductively beautiful, making my eventual entrapment seem perfectly natural. And yet even as I'm drawn in, or advance as helplessly, as unconcerned, as a mote of dust in the summer air, I see myself, the ageing Mailer, face lined and hair white, inching into his final years as a more placid person, one finally at peace with himself. I have Norris to thank for that.

Yes, I quietened down an awful lot in my later years. By the mid-1980s Norris's two chosen careers, painting and modeling, were well on track and I'd become much more of an 'establishment' author, perhaps even respectable, with my Pulitzer Prize and a couple of National Book Awards under my belt, even serving as president of American PEN, the writer's organisation, from 1984 to 1986. So how much more respectable can you

become? Yes, indeed, my life was more settled, and together with Norris, who enjoyed a glamorous life style, I became part of the New York social scene in a way that I'd never done before, attending the dinner parties of celebrated New York socialites (William S.Paley, Gloria Vanderbilt, Oscar de la Renta) and interacting with their celebrity guests. This is interesting in that it had always been my belief that it's never advisable for a novelist, once successful, to live in an upper-class social milieu for too long, as Truman Capote and Jerzy Kosinski both learnt to their cost. The former played the court jester to New York society until he could bear it no longer, after which he commenced his self-destruction with his scandalous, gossipy *Answered Prayers*. Likewise, Kosinski, a hugely talented writer, but hopelessly addicted to high society, committed suicide during an illness almost certainly caused by a literary scandal that had him outcast from the society he'd tried so hard to entertain. Yet despite these cautionary recollections, I continued to turn my back on my past 'psychic outlaw' activities and instead concentrated on my new experiences in the world of high society. I also spent more time attending political conventions and writing articles, sometimes books, about them, not always with the most exciting results, many viewing them as mere excuses for not writing serious fiction. I took offence at this because although *The Executioner's Song* (1979) was a biographical study of a real-life killer and his remarkable girlfriend, I viewed it as a great social novel and certainly, by any standards, a serious work of literature. The Pulitzer Prize at least vindicated that belief. Likewise with my next big novel, *Ancient Evenings* (1983), which, though damned by some reviewers (but highly praised by others) was certainly another hugely ambitious, serious work of literature. However, the great commercial success of both books didn't stop my gradual drift into the kind of world that I'd previously avoided, including my involvement with various literary and political affairs.

That pint-sized assassin, Martin Amis, said of another of my many collections of essays, *The Essential Mailer*: 'Norman Mailer's new book bears all of the hallmarks of a writer faced with an alimony bill of $500,000 a year.' Well, he was right, I must confess, about the alimony and the reasons I took on certain books. There are times, after all, when you just have to write a book for no better reason than pressing economic problems. *Tough Guys Don't Dance* (1984) was such a book. After I finished *Ancient Evenings* (1983), I felt creatively exhausted, so I did no more writing for ten months.

Unfortunately, my then publisher Little, Brown and I were parting company, but there was one more book owed to them under my contract, and at the tail end of my ten-month non-writing period, they insisted that either I give them a final book or return the advance they'd paid for it. In effect, I had to come up with a book in sixty days! Which meant a short novel requiring no research. So bearing in mind the speed with which I'd written *An American Dream*, I decided to go for a thriller again, this one set in Provincetown, where I'd been living on and off for forty years. Which is how *Tough Guys Don't Dance*, with its patently ridiculous plot, came about. Perhaps understandably it was not well received by the critics, though it made me good money when the movie rights were sold and, even better, when I persuaded the producers to let me direct it. (Endless fights with cast and crew guaranteed; more than one person stormed off the set.) Given my previous track record with my own movies, I suppose I shouldn't have been surprised when it received a spectacular thrashing by the critics and died at the box office. But this being capitalist, celebrity-obsessed America, between failed book, failed movie and my notorious reputation (failed serious writer and wealthy man), I still managed to make a potful of money.

My obsession with writing the Great American Novel (an elusive beast, but one which always has to be 'big' in physical size as well as in subject matter) led me to the writing of another doorstop offering, *Harlot's Ghost* (1991), an 'epic' novel based on the history of the CIA, with a text so packed with acronyms and cryptonyms that most readers found it impossible to get through. (Typical sentence: 'Besides the Ukraine, we had Downtown, and BOZO, and GIBLETS, and seven safe houses, and a translation mill off the English garden called CRUMPETS, and one out at Templehof Airport in a warehouse near Customs labelled SWIVET…' Try that for 1,300 pages and see where it gets you.) This was followed in 1995 by another whopper (791 pages, plus lengthy Appendix and Glossary), *Oswald's Tale: An American Mystery* (1995), an 'epic' nonfiction work, an investigation into the life of Lee Harvey Oswald and who might really have assassinated President John F. Kennedy.

Money was not the sole motivation for my next novel, *The Gospel According to the Son* (1997), since by then I had received a $4 million advance from Random House for a four-book deal (making me the highest paid author in America), though money was certainly in my thoughts when I

first conceived of it. I knew I was begging for trouble when I decided to write it, but the idea – a fictionalized life of Jesus told in the first person - wasn't nearly as megalomaniacal as a lot of my critics assumed. In fact, the idea came simply enough when I was staying in a small Paris hotel room (I hate spending my ill-earned gains unnecessarily; indeed, when I took my second wife to Europe by boat, even at the height of my fame and wealth with *The Naked and the Dead*, we travelled second class. No pretensions for this humble Jewish lad from Brooklyn, New York!) and I couldn't sleep because the room was so tiny and the bed took up most of the space, making me feel claustrophobic. So I started reading the English-language version of the Gideon Bible that I found on my bedside tablet, was struck by how abominable the writing was ('an ungainly prose studded with golden nuggets,' as I scribbled in my ever-present notebook) and decided there and then that I could improve upon it by rewriting it as a work of first-person narrative fiction. What really tipped the scales and gave me the courage to actually do it was the recollection, which came the same night, that a relatively unknown, untalented writer named Fulton Oursler once sold a million copies of a book called *The Greatest Story Ever Told*. So, thus inspired, I wrote *The Gospel According to the Son* and was, no surprise, slaughtered by the vast majority of reviewers, who, not content with criticizing what they viewed as my pedestrian, mock-Biblical prose, could not resist making snide comments about how, with my 'God complex', I was clearly thinking of myself as 'the Son' of the title (*The Gospel According to Mailer*) and, even worse, how my fondness for the sound of my own name had first led to 'Mailer's *Marilyn'* (M. M.) and now to 'Mailer's Messiah' (M. M. again.) As I once said, 'The shits are killing us.' Now I think of 'the shits' as my critics.

Moving adroitly from virtue to vice, from the son of God, as it were, to the son of the Devil, my final attempt at the 'big' subject – and, indeed, my final book altogether – was *The Castle in the Forest*, a speculative novel about the early life of Adolf Hitler, narrated by a man known only as Dieter, or D. T., in his present physical form a member of Heinrich Himmler's dreaded SS intelligence group, but actually, in his former, incorporeal state, an assistant to the Devil, thus they both have names beginning with 'D'. And to D, or D. T., the Devil is also known as 'the Maestro.' Now, looking back on it, even *I'm* not sure what I was thinking when I concocted this final, decidedly odd

work. It has to be admitted, however, that by that time a great many of my readers, both professional and just… well, *readers*… were becoming suspicious that in the years of my dotage I was convinced that I could write anything I liked and get away with it. (And there were many who believed I could do no wrong.) This may explain why another English literary assassin, John Crace (probably a friend of Martin Amis), as part of his series of 'digested' rewrites of the novels of his contemporaries, used a clever emulation of my first-person narrative voice to rewrite my 'digested' Hitler novel and have me say: 'I am a megalomaniac author in my 80s who can write any old crap – I use that word in its nugatory sense – and know that my craven people will take it seriously… But that is the way of the Maestro: for I am Norman Mailer and I can do what I like.'

Which, when you really get down to it, is what I was clearly doing throughout my whole life.

By now, inevitably, old age was catching up with me in the worst possible way: first the acute arthritis, then the need for two walking sticks, then a hip replacement, then a bypass operation and, finally, scars on my lungs and increasing problems with breathing. Even worse was when Norris, though a lot younger than me, contracted serious cancer of the fallopian tube and had to undergo debilitating chemo and radiation treatments. Since cancer had always been my metaphor for evil and now my wife was suffused with it, I wondered if it was my fault, if my actions had given it to her, and eventually I just couldn't bear to face her and moved into the bedroom down the hall, leaving her to recover on her own. After that, when we weren't taking turns going into hospital, we more or less lived apart in the same house, but met every evening for drinks and conversation, until I ended up in the ICU in Mount Sinai hospital and gradually faded away.

And so, here I am, now faced with the seemingly unanswerable questions: Where am I now? Am I dead? Am I alive? And not being able to answer the questions, I find myself thinking of what that seemingly invisible fellow author, Thomas Pynchon (even *I* haven't met him), said in his novel, *Vineland*. 'We are assured by the *Bardo Thodöl*, or *Tibetan Book of the Dead*, that the soul newly in transition often doesn't like to admit – indeed will deny quite vehemently – that it's really dead, having slipped so effortlessly into the new dispensation that it finds no difference between the weirdness of life and the weirdness of death…'

Yeah, right, Tom. Maybe that's what's happening here. I mean, my head's definitely full of things that could only have happened after my death, but I can't really accept that I'm dead. Not that I can really control my thoughts, it being that they leapfrog from one association to the other and right now that quotation from *Vineland* makes me think of its author, Thomas Pynchon, whose reputation was even bigger than mine, even though his novels, while being filled with sublime descriptive passages and knock-out comic dialogue, not to mention some indescribably stupid song lyrics, are downright unreadable, only palatable in short stretches (the sublime descriptive passages, the knock-out comic dialogue) and plot-wise are all over the place, heading nowhere meaningful. I mean, has *anyone* ever actually finished a Thomas Pynchon novel? (They make *Harlot's Ghost* seem like a light read.) Not that you'd get a literary critic admitting to such a failure, so clever has Pynchon been at putting them in the position where an admission that one can't really read him would be tantamount to an admission of literary idiocy. Something similar, come to think of it, as I managed to do with *An American Dream* and other demented works.

So where do I stand, now that I'm here in a place, or a space, that I cannot yet comprehend, the darkness all around me, that distant light ahead, first expanding, then contracting, then seeming to lure me on, into its fathomless depths, only having the certainty that I'm about to be judged, about to have to face the difference between God and the Devil, between good and evil, the polar poles of all my writing? Yes, indeed where do I stand and why do my thoughts keep repeating themselves, one event leaping over the other, the past and present appearing as one, flickering between light and darkness as an unwinding ribbon of film in my bedazzled head? And why do I keep thinking of myself as an actor playing a part?

Ah, yes, the part. It was me, Norman Mailer, forever an actor, always marrying women who wanted to be actresses, who was finally offered a part in a movie directed by someone other than myself. The movie was *Ragtime*, based on the great historical novel by E. L. Doctorow and directed by Milos Foreman, who'd previously directed *One Flew Over the Cuckoo's Nest.* In *Ragtime* (1981) I donned a curly gray wig and false moustache to play the famous architect Stanford White, who is shown in the film being shot in the head by the outraged husband of White's mistress, Evelyn Nesbit. My own wife, Norris Church, another aspiring actress, sat beside me in a nonspeaking

part. In my brief scene, I had to be shot over and over again to enable Foreman to capture the impact of the bullet on White's head from every conceivable angle. Unfortunately, John Lennon had been shot dead only a few days before, an event that deeply shocked me and millions of others, and so, as I was being shot repeatedly in the head for the film, I kept thinking of Lennon being shot dead, which in turn made me imagine my own death, over and over again, while the perfectionist Foreman filmed my dying from as many different angles as possible. And from that point onward – from lying there on the studio floor in a pool of my own blood, albeit false blood, to my last hours in the hospital, gradually fading away with my possibly terminal illness, possibly to regain consciousness where I am right now – yes, from then to the present I never had a day when I didn't contemplate my own death in fear and fascination. So thank you, John Lennon.

I always liked John Lennon. He was a born troublemaker, just like me. He was talented and witty and rebellious, just like I am, or was. I say 'was' because I'm not really sure where I am now, *what* I am right now, dead or alive or simply a product of my own voluptuous imagination, creating a ribbon of dreams out of a life that might only have existed in the fiction of my own creation. I am Norman Mailer. I am *me*. But whatever 'me' is, whatever 'I' am, I can now only focus on that light in the distance, or that light that is very near, that light pulsating like a heartbeat, either coming toward me or luring me toward it, while I wonder what I might find on the other side of it, beyond that tunnel-like exit, that evanescent single eye, maybe old friends and enemies, maybe even John Lennon, maybe only the reflection of myself in the time warp of Einstein's theory of relativity, or in some bewildering, intoxicating miracle of quantum physics.

The light is now expanding to surround me.

I am –

I -

John

1940 – 1980

That guy Chapman did me a big favour. I'd released my first album in five years only a week or so before, but it wasn't doing well (my fans hated 'the Jap' too much) until Chapman gunned me down outside the Dakota Building, I died en route to the hospital, and the album, within twenty-four hours of my demise, was selling like hot cakes. Let's face it: the biggest mistake Paul McC ever made was not being assassinated and having his post-Beatles reputation soar overnight as mine did. I mean, if Paul had been assassinated instead of me, they'd now be raving about him as the true genius, the greatest creative force behind the Beatles, as they've been raving about me ever since I was knocked off. They certainly weren't doing it when I was alive and being jointly creative with the Jap. Now, a writer like Norman Mailer would describe those comments as existential truth and, being a writer myself, I'm bound to agree with the pot-bellied Jew-boy scribbler.

'The Jap'? 'Jew-boy scribbler'? Do these comments make me a racist and anti-Semite? Not really. At least I don't think so. I mean, I was always a bit of a wind-up merchant, you know, and I specialised in inventing insulting names. I really liked our manager, Brian Epstein, who had a crush on me, but I took the piss out of him all the time, generally for being Jewish and homosexual, often deliberately talking about 'queers' and 'arse bandits' in his presence. I remember, for instance, that when Brian hired Tony Barrow as PR for the Beatles and personally introduced him to us in the Devonshire Arms pub, I said loudly to Barrow, deliberately within earshot of Brian, 'If you're not queer and you're not Jewish, what are you doing working for Brian?' Of course Brian turned bright red but said nothing, which gave me a kick. On

another occasion, when Brian had completed the writing of his life in the music business and asked me what I should call it, I suggested '*Queer Jew*.' And thereafter, when Brian even mentioned the eventual title of the published work, *A Cellarful of Noise*, I always referred to it as '*A Cellarful of Boys*'. So I wasn't really racist or homophobic. I just enjoyed winding people up.

So what's wrong with that?

Well, I know for sure I'm dead. I mean, I have to be dead. That fat lunatic shot me. I remember the sound of the shots. I remember staggering toward the entrance of the Dakota Building, up the stairs and into the security guard's vestibule. I remember everything starting to blur. I remember having a rush of recollections of the many times I'd been convinced that I was going to die by being shot. I remember falling to the floor and Yoko screaming, 'John's been shot!' I remember being engulfed in a wave of terror and then I blacked out and regained consciousness here, in this kind of nowhere void, darkness on all sides, a kind of tunnel of darkness, the walls and roof formed by a deeper darkness, with a tiny, bright light seeming to beckon me hopefully from the distance. So I know I'm dead. There's no doubt about it. I know it and I don't feel sad or fearful, which *is* a bit odd, but maybe because I'm still alive in my memories. The past lives with me right now.

So exactly who was I? *What* was I? How did I get to be here? And where do I start? To paraphrase that great *The Who* song: with my generation.

'Ninety percent of people of my generation,' I once said self-pityingly, 'were born out of a bottle of whisky on a Saturday night and there was no intention to have children. I was never really wanted.' This was utter bullshit. Self-pitying crap. In fact, while me dad, Alf Lennon, was away from home through most of my early years, it was only because he was at sea a lot, serving as a steward on the big ocean–going liners. He also had secret yearnings to be a music-hall performer, singing, dancing and doing impersonations (a black-faced Al Jolson; that kind of thing), so when he met me mam, the effervescent Julia, since immortalised in song, he found a kind of soul-mate, because she wanted the very same thing, being a fairly good singer and a competent player of the piano accordion, the banjo and the ukulele. Though neither of them succeeded in their showbiz ambitions, I was destined to compensate for their failures.

They were married in December 1938, only a few weeks after Neville Chamberlain had returned from Hitler's Germany, claiming that he'd

guaranteed ‘peace in our time’ in return for abandoning Czechoslovakia to the Nazis, thanks very much, Nev’. Me mam’s pregnancy took place during the first months of the war, as the German army rolled across Belgium and France, the defeated remnants of the British Expeditionary Force were evacuated from Dunkirk, and heavy bombers were blowing the shite out of port cities like London and Liverpool. I was born in Liverpool on the ninth of October that year, 1940, during a series of particularly bad German air raids, doubtless with the screaming of air raid sirens drowning out me and m’mam’s birth screams.

Far from being ‘not wanted’, I was soon being fought over constantly, and being given more attention that most kids get. In my frequent, well publicized complaints about me dad never giving me any attention, I was blandly ignoring the fact that he, at the time, in going to sea when German U-boats were a constant hazard, was risking his life for his country. However, me mam, Julia, as I found out in my mature years (not that I ever matured much), was a bit of a live wire and a lot less respectable than her four sisters.

One of her sisters, me Aunt Mimi, was married to George Smith, a milkman, quiet and decent, who was to become a real father to me when my own dad and mam separated, me mam moved in with another man, a hotel waiter called Bobby Dykins, and I was taken in by Mimi, then living with George in suburban Woolton. Having old-fashioned, middle-class values, Aunt Mimi was horrified by the thought of a boy my age living with an unmarried couple – or ‘living in sin’ as it was called in those days – and so insisted that I come to live with her and George in their respectable Woolton house, located only a short walk away from me mam and her boyfriend.

Mimi had four sisters: Elizabeth, known as Mater, Anne, known as Nannie, Harriet, known as Harrie, and, lastly, Julia, the prettiest and the flightiest of the lot. All, except Julia, were married to quiet, steady men. All had kids. Only Mimi and George had no kids, which may explain why they were so devoted to me. Anyway, four of the five sisters, including Mimi but excluding the wicked Julia, were resolutely middle-class, always immaculately dressed, all with impeccable manners, and they all fawned on me, just as much as Aunt Mimi did. So despite my later claim to being working class (Paul McC was more working class than I was), I was actually a fairly well-off, middle-class lad, constantly smothered with the affection of loving but dominant women. It was just me real mam, the prettiest and least

respectable of the sisters, who let me down.

She was great, though. Contrary to all that melodramatic, self-pitying *angst* later displayed in my Primal Scream songs, such as 'Mother' and 'My Mummy's Dead', which sprang out of my fantasies of childhood desertion, she and Dykins lived only a few streets away and I could run around and see them anytime I wanted. I remember that when I was a real small kid, before moving in with Aunt Mimi, Julia used to regularly sing me to sleep at night and I really loved it. Unfortunately, later, when me real dad, Alf, drew a long stretch of shore leave and came back to Woolton to work temporarily at the Liverpool docks, he soon learnt that his pretty wife had been making a habit of visiting local pubs, getting drunk and flirting with unattached men, leaving me to be looked after either by Mimi or with a neighbour named Dolly. A lot of arguments ensued, during one of which me mam poured a cup of hot tea over me dad's head and he responded by either slapping her or thumping her on the face, either way causing her nose to bleed. Of course, I witnessed all that, and Aunt Mimi, a more proper kind of woman, wasn't pleased to hear about it. However, me dad eventually went back to sea for eighteen months, got into a whole heap of trouble when on shore leaves, including a couple of spells in foreign prisons, and finally returned home as a DBS (Distressed British Seaman) only to be informed by his lively wife that she was pregnant by another man: a Welsh soldier. As Mimi later recounted it , me dad agreed to step aside and let his missus marry the other man, to legitimize the expected baby, but me mam refused to marry him and, in fact, told him to piss off when he proposed. Me dad then agreed to take his missus back and look after the baby as his own, but me grandad, Pop Stanley as we called him, feared the public disgrace that would come from having an illegitimate baby in the house and so insisted that it be put up for adoption. When, in 1945, only a few weeks after the war ended, me mam gave birth to a baby girl, named Victoria Elizabeth, she was quickly adopted by a Norwegian couple, renamed Ingrid Maria, and taken off to Norway, never to return.

None of us ever saw her again.

Naturally, I was too young to know anything about this and only learnt about it much later. Still, even now, cast adrift in this nowhere world, my thoughts roaming back and forth in time, taking me anywhere I feel like going, I think of the loss of that baby sister and feel the same kind of resentment that I'd later feel when me mam handed me over to Aunt Mimi

and, later, when she was killed and I resented her for deserting me by dying. So she's dead and I'm dead, but maybe we're destined to be reunited soon, possibly in that distant place where the light shines and beckons me toward it. Meanwhile, as I advance, in my thoughts if nowhere else, I'm still living with the disappearance of my baby sister and wondering how it affected me.

I was four years old at the time and had already been taken away for eight months, during me mam's pregnancy and confinement, to live with me dad's married brother and his family in Maghull, between Liverpool and Southport, so even years later, when Mimi told me the story about me baby sister's adoption and swift transfer to another country, it put the fear of God into me. Even more so when me mam then became involved with Bobby Dykins and announced that she was going to set up home with him and take me with her. Me dad went mad, of course. He had a big fight with Dykins and threw him bodily down the stairs while me mam screamed her head off. Me dad, disgusted with her, then went back to sea and I ended up living for a while in our house in Newcastle Road with me mam and Dykins. Initially, I disliked Dykins so much that I walked the two miles to Aunt Mimi's house on me own and asked her to take me in. She did so, then wrote to me dad at sea and told him that he had to come home and look after me. When eventually he turned up again in Woolton, he told Mimi he was going to take me shopping, but instead he virtually abducted me, taking me all the way to Blackpool to live with him and the parents of his old shipmate and minor criminal, Billy Hall. Then me mam finally found out where we were hiding and turned up with Bobby Dykins at the Hall's house, intending to take me back to Liverpool with them. Forced to decide between me dad and me mam, I just burst into tears, not knowing what to do, but then clung to me mam when it seemed she was going to leave without me. As I was going out the door with her, I tearfully begged me dad to come with us, but he just sat on in his chair, as if paralysed, clearly defeated. And so, feeling betrayed and confused and hurt, I was taken back to Liverpool, to live with me mam and Dykins, who actually, despite my initial dislike of him, treated me kindly. Then Aunt Mimi decided that me living with an unmarried couple was just too disgraceful and insisted, despite me mam's wishes to the contrary, that I moved in with her and George, which I did, feeling that I'd been cast out and adopted just like me missing baby sister. Reportedly, when me mam called around to get me back, Mimi just stood in front of me and said, 'No. You can't have him.'

From that point on, I lived a more upmarket life with Aunt Mimi and Uncle George while regularly visiting me more downmarket mam and Bobby Dykins, sometimes spending a day or two with them. In truth, they were always pleased to see me and happy to put me up for a night after I'd had one of my many fights with Mimi and screamed that I was going back to live with me mam and then stormed out of the house. Not that I meant it. Since by that time Aunt Mimi loved me so much, she couldn't bear the thought of losing me, I used the threat of returning to live with me mam every time I wanted to make Mimi feel bad or screw something out of her, which was pretty easy, actually, it being that she was a generous woman, if a bit too stern and controlling. At the same time, Uncle George spoilt me rotten by helping me make and then fly paper aeroplanes from our back garden, by frequently taking me to the local cinemas, then known as the 'picturedromes,' and by smuggling sweets and chocolates, forbidden by the health-conscious Mimi, up to my bedroom after lights out. Me and George had a lot of laughs together.

But I had a lot of freedom. I wandered around a lot. As well as its country cottages and Art Deco villas, Woolton had some curious old houses, nestling in woodland or behind stones walls, carved from Liverpool's sandstone and embellished with the turrets and gargoyles of fairy-tale castles. My favourite, being only a short walk from Mendips, was a foreboding Gothic mansion called Strawberry Fields, then being run by the Salvation Army as a home for orphan girls. Not yet a wanker, so not being an actual voyeur, I often stood at its heavy iron gates, staring into the overgrown grounds, aware that the girls in there were orphans, just as I wrongly felt myself to be. I also regularly visited St. Peter's churchyard, which I renamed 'the bone orchard', where one of the tombstones detailed the death of one Eleanor Rigby, who'd died in her sleep in 1939 at forty-four years old. My soon-to-be mate Paul McC must have gone there as well, because years later, as a Beatle, he used Eleanor Rigby as the subject of one of his most famous, certainly one of his best, songs.

Anyway, far from being a 'working class hero', I was well looked after in a nice house in Melrose Avenue, in semi-rural, suburban Woolton. Yes, a very nice house indeed. I can see it clearly right now. Semi-detached instead of terraced, it even had its own name, Mendips, to separate it from the lesser houses in the street. Pretty posh inside as well. Partially timbered hallway,

baronial-styled staircase, stained-glass windows decorated with Art Nouveau flowers. More upmarket, then, than Paul McC's working-class upbringing in one of the many dismal council estates thrown up on levelled bomb sites or open fields shortly after the war. Yet as long as we were Beatles, and even after we'd split up, it was generally believed that Paul was the one who'd had a soft, middle-class background while I'd had a tough upbringing in a working-class environment. Since I liked the idea of being the tough one in the Beatles, this wasn't a widespread misconception that I ever bothered to correct.

Mind you, for all that I *was* a bit of a terrier: a combination of bright boy and trouble-maker. Oh, look! There's Dovedale Primary School! I can see it as clear as day, emerging out of this unnatural, otherworldly darkness. According to Aunt Mimi, I'd only been there a few weeks when the headmaster told her how uncommonly bright I was. Of course, I'd always loved reading, writing, drawing and painting, so at Dovedale, located near the Penny Lane roundabout, I won various prizes for art. Being myopic, and before obtaining my National Health specs (later to be widely referred to as 'John Lennon specs'), I had a distorted view of the world, so I didn't draw or paint like the other kids: the usual attempts to reproduce true likenesses of objects and animals. Instead, I specialised in bizarre caricatures of my schoolmates and teachers, turning them into cartoon creatures with misshapen heads, grotesque features and distorted limbs. At the same time, my myopia had led to a kind of dyslexia that made me misread and misspell many words, so I compensated by deliberately playing with language and became fascinated with puns, spoonerisms and double entendres: 'chicken pots' instead of 'chicken pox'; 'funs is low' instead of 'funds are low'. My wordplay was also strongly influenced by my constant listening to *The Goon Show* on radio, written by the eccentric comedian Spike Milligan, featuring the then unknown Peter Sellers and Harry Secombe, and filled with lunatic characters who had names like Colonel Bloodnok, Henry Crum, Minnie Bannister, Eccles, Bluebottle and, best of all, Grytpype-Thynne. My quirky verses and illustrations were also strongly influenced by two of my favourite books, Lewis Carroll's *Alice's Adventures in Wonderland* and *Through the Looking Glass*, both of which were packed with puns, spoonerisms, insane logic, and the bizarre bestiary of a grinning Cheshire Cat, a sleepy Dormouse, a hookah-smoking Caterpillar and, best of all, a Mad Hatter.

The lyrics of ‘I am the Walrus,’ were certainly inspired by those two books. Just as the lyrics of ‘Lucy in the Sky with Diamonds,’ rather than being about LSD (geddit, fans?) were based on Alice’s ruminations about a ‘boat beneath a sunny sky’ (my ‘boat on the river’) and her ‘Orange Marmalade jar’ (my ‘marmalade skies’).

But that was the bright side of me. The trouble-maker side came to the fore, at school and after it, when, with my best mate at the time, Ivan Vaughan, his pal, Nigel Whalley, and another boy, Pete Shotton, we’d do things like swinging from the rope that hung from my tree house, play rough games in a dirt field known as the Tip, catch tadpoles, newts and frogs, or paddle a home-made raft in the pond of an open space called Foster’s Field, and generally arse around, mostly playing cowboys and Indians, in the meadows and woodlands of various parks, including the grounds of Strawberry Fields. Though Pete Shotton had originally been leader of the gang that included Ivan and Nigel, I gradually wrested power from him and became the unopposed leader of our new gang of four, which I soon was calling ‘The Outlaws’, based on the gang in the William Brown novels of Richmal Crompton Lamburn. From an early age I always had to be the leader in all things (as originally, before Paul McC took command, I was of the Beatles). So when I took over our gang of four and called them The Outlaws I was emulating my anti-hero, William Brown, a fictitious boy who, with his own gang of Outlaws, indulged in secret signs and sacred rituals, communicated with a private, invented language, waged war against adults and all kinds of authority, and was expert at withering sarcasm and the telling of lies. It was me to a T. So, as a reincarnated William Brown, with me gang of Woolton Outlaws, I embarked on a series of escapades that soon had us viewed disapprovingly by the highly respectable residents of Woolton: hanging onto the backs of the trams that rumbled along Melrose Avenue; sneaking into cinemas by the back entrances and disrupting the performances until thrown out; trespassing on Allerton Golf Course to annoy the business types playing there; stealing apples from private gardens, chocolates and sweets from shops, home-made cakes and pies from fund-raising church fêtes; and, worst of all, making fun of the physically and mentally handicapped. There was something about a blind or crippled person that always gave me the giggles.

So what’s wrong with that?

And then there was the music. It must have been in my blood. My Irish

paternal granddad, Jack Lennon, before settling down as a clerk with a shipping line in Liverpool, was a member of Andrew Robertson's Colored Operatic Kentucky Minstrels in America, touring extensively with them. Then me useless dad had aspirations to be the same and often performed aboard ship and in Liverpool pubs. Not forgetting me mam, who had similar musical aspirations and encouraged them in me by continuing to sing and play the banjo and accordion. Since most of the music we heard then was put out by the BBC, it was mainly classical music of the kind that Aunt Mimi loved and I loathed, but I started listening, instead, to brass bands, American swing bands of the Glenn Miller and Benny Goodman kind, and the often dramatic theme music of various popular radio serials like *Dick Barton, Special Agent*. Already obsessed with radio's *The Goon Show*, for which Max Geldray played the harmonica, I took up the mouth organ when I was about seven or eight, learned to play it in no time, and soon became obsessive about it, taking it with me wherever I went and constantly playing a wide repertoire on it. From there, I took to playing the pianos of friends or at school, learning quickly and instinctively, but Aunt Mimi, who was strict, refused to let me have a piano in the house. Finally, as unlikely as it now seems, I was such a natural at singing that I ended up joining the choir of St. Peter's Anglican church. I didn't last long, however. I was always playing pranks, even at church, and was finally thrown out of the choir for removing the grain sheaves, vegetables and fruit used to decorate the altar during Harvest Festival Time, when the main hymn was 'We Plough the Fields and Scatter'. Nothing left to plough or scatter after I was done.

To this day a lot of fans refuse to believe that their working-class hero, John Lennon of the Beatles, had once sang in a church choir…

Okay, so I'm dead. I'm only alive in me head. I should be fucking terrified, but I'm not, which comes as quite a surprise. I mean, I know I'm here, in some shape or form, but I don't actually know where 'here' is, except that I'm somehow adrift in an almost imperceptibly shifting darkness with a light at its far end. That light seems as unnatural as the darkness surrounding it, but it has a soothing, oddly mesmerizing effect that makes me want to get closer to it. Am I moving toward it? Is it coming toward me? Either way, it's certainly, very slowly, growing larger and I now think it may be a doorway. What's beyond it? My future or my past? Right now, I'd rather dwell on the past, wanting to find out where I came from and what led me to this place.

Right now, I'm reliving my childhood and feel just like that child…

Did me mam desert me? Not really. Aunt Mimi virtually stole me and refused to return me. But while living with Aunt Mimi I continued visiting me mam and Bobbie Dykins, where they were living in their little council 'semi' in Blomfield Road in a council estate in Allerton, just a couple of miles from Melrose Avenue. In total contrast to Aunt Mimi's house, which was always spic and span, Julia's place was untidy and disorganised, but more fun than Mimi's place, mainly because she and Bobbie were among the few I knew who had a television set, and when the telly was turned off, the radio was always on, tuned to the Light Programme and playing the popular music that Mimi wouldn't tolerate in her more refined world. Even better, me mam had a gramophone and was forever buying new 78 rmp single records, thus exposing me to what was happening on the pop music charts, with the likes of Guy Mitchell, Nat King Cole, Frankie Laine, and that wimpish forerunner to Elvis, the spastic 'sob' singer, Johnny Ray. I lapped it all up.

The only thing I had against visiting me mam and her boyfriend was that they now had two daughters, my half sisters, Julia, named after her mam, and Jackie. Although they treated me like a big brother and we got on really well, their very presence could only remind me that they were more me mam's children than I was. In other words, they innocently reminded me of what I viewed as my 'orphan' state. This conviction was only made more acute by the knowledge that me dad's refusal to initiate divorce proceedings had prevented me mam and Bobbie from becoming man and wife; and by the fact that me dad had gone back to sea, slipped into trouble again, served another couple of jail sentences, including six months in Wormwood Scrubs, thus putting an end to his seagoing career, and so had finally given up entirely, taken on a menial job as a dishwasher in a hotel kitchen and then gradually faded out of my life.

So fuck you, I thought.

By that time, I was attending Quarry Bank High School in Harthill Road and could go there on the Raleigh Lenton bicycle that Uncle George had bought me as a reward for passing the Eleven Plus. Pete Shotton and me were always in trouble there, forever being called to the head's study for a caning and swiftly being downgraded from the 'A' stream, through 'B' to 'C', the lowest of the low. This didn't happen to me because I wasn't academically bright, but because I'd decided, ever since forming the Woolton Outlaws, to

rebel against all kinds of authority and only go me own way. My relationship with Pete was undoubtedly based on a weakness that I'd have throughout my life: I could rarely act alone and always had to have, if not a whole gang, at least a partner, before I could do anything at all, Just as I'd later lead, and simultaneously feel protected by, the Beatles in general and Paul McC in particular, then, later, Yoko Ono. But before Paul and the Jap came into my life, it was mainly Pete Shooton, and between us we managed to fill the school's punishment book with our crimes, which included insolence, cutting class, throwing blackboard dusters out of the classroom window, and gambling on the school field during games. And fist fights. I was always involved in fist fights. I'd fight anyone, any time, except for that big bastard, Jimmy Tarbuck, who scared the shit out of everyone and later became a popular TV comedian. Excepting for him, from whom I'd run a fucking mile, I was a real little battler.

Yet at home with Aunt Mimi, always strict, and Uncle George, not so strict, I was completely different, spending hours in my bedroom reading, writing and drawing. By that time I'd become a fan of two modern comic artists, the British Ronald Searle, whose demented St. Trinian's schoolgirls had me rolling on the floor with laughter, and the American James Thurber, whose writings and cartoon characters for *The New Yorker*, the wavering lines of the drawings caused by his near-blindness, helped me to relate to my own myopia and its effects on *my* wordplay and artwork. Though I mostly did caricatures of my teachers and classmates in this vein, I once did one of myself, emphasizing my hated National Health specs and captioning it, 'Simply a Simple Pimple Shortsighted John Wimple Lennon.' Maybe to keep my feet on the ground, Aunt Mimi treated my drawings and poems as no more than time-wasting distractions from school work and often conducted raids on my bedroom to 'clear up' and throw them into the bin. I mean, Mimi wasn't exactly the artistic kind. Nevertheless, it was my growing predilection for those cartoonish drawings and surrealistic, Goon-like wordplay that would later be used commercially in the two short books of stories, parodies, poems and drawings that I produced at the height of Beatlemania, when we could do no wrong: *In His Own Write* (1964) and *A Spaniard in the Works* (1965). That the first sold over 200,000 copies in ten months, the second sold over 100,000 in its first three months (the following sales were astronomical), and both received rave reviews from normally sane critics, was surely proof

that fame could turn normal human reasoning on its head and that Mimi, God bless her, possibly knew more about the real world than London's intellectuals.

On the other hand, what *is* the 'real' world? Was the life I was leading then any more real than where I am now, adrift in my thoughts, in this otherworld nowhere, in a tunnel of darkness only defined by a deeper darkness with dimensions I can't even comprehend? How big is this tunnel? How far away are its walls? How high and how deep is that deeper darkness above and below? Are those walls actually walls? They surely aren't physical. They're only defined by a deeper darkness in that other darkness that flows away on all sides, above and below. I'm only here in my thoughts. I have the consciousness of a dreamer. But then I was always something of a dreamer, slightly removed from reality. I often wondered what 'reality' was and what death would be like. And death was first hammered into my consciousness when Uncle George died…

My life changed completely when Uncle George died. He went instantly, of a heart attack, and fell tumbling rumbling down the stairs. Aunt Mimi was devastated and so was I, being only fourteen at the time. I didn't cry, though. I just went into my bedroom and stayed there a long time, almost certainly in shock, then emerged to take my resentments against God, whoever the fuck *He* was, out on the world. In this I was immeasurably aided by the overwhelming impact of Marlon Brando in 1953's *The Wild One*, which, being banned in Britain because of its supposed glamorization of Hell's Angels-styled juvenile delinquency, made it all the more exciting to bored teenagers, since all of us had secret aspirations to be juvenile delinquents. With the movie being banned we couldn't actually see it at the time, but that iconic photo of Brando, wearing a black-leather jacket and peaked cap, leaning on his motorcycle with an air of utter cool, his lips curved in what was half grin, half sneer, was enough to start a craze amongst teenage males for black-leather jackets and pretty soon I was wearing one myself. Then, with the coming of James Dean and *Rebel Without a Cause*, juvenile delinquency really took off, mostly in the form of Teddy Boys, or Teds, who dumped their inherited baggy trousers and grey suits for knee-length coats with velvet jackets, drainpipe trousers, frilled shirts, vividly-colored waistcoats, bootlace ties, chukka boots and phosphorescent green, yellow or orange socks. Not forgetting the hair: no longer short, back and sides, but

raised high on the head over long sideburns and shaped into a duck's arse (DA) at the rear, the favourite model for this being Tony Curtis, an American street-wise kid who'd made it big time. While thinking the Teds a bit of a joke, I did go as far as changing my hair style and wearing drainpipe trousers and my black-leather jacket. I wasn't that keen on James Dean, thinking him too self-pitying (reminding me of myself?), but Marlon Brando's cool insolence really blew me away and he's the one I most wanted to be like.

Of course, my adolescent hormones were running riot, so much so that I became a passionate wanker, as did most of me mates, and we'd even have wanking competitions, standing in a circle, to see who could come most times in a single session. We often stimulated ourselves by shouting out the names of various Hollywood sex symbols, preferably foreign and exotic, like Sophia Loren, Gina Lollobrigida, or, our favourite, Brigitte Bardot, as we furiously wanked, but I often cooled down the proceedings, reducing us all to giggles, but shouting out the names of famous *men*, the more 'straight', the better. Nevertheless, my hormones kept raging. So much so, indeed, that when I called in unexpectedly on me wicked mam and Bobbie Dykins, I caught the former fellating the latter, which caused some embarrassment all around. However, reminded by this incident that me mam appeared to be highly sexed and had often seemed to be flirting with me, I once lay beside her as she was having an afternoon rest, accidentally touched her breast (she was fully dressed at the time) and found myself wondering if I should go farther. In the event, I didn't, but for years after, when I thought back on the incident, I was convinced (a) that I should have done it; and (b) that she would have let me. This mild Oedipus Complex, this sexual mother fixation, would feature in my future relationship with the Jap, most notably when, in New York, living as millionaires in the Dakota Building, I actually, as part of our role reversals, addressed her as 'Mother'.

So what's wrong with that?

Back there in Liverpool, in the rapidly changing mid-fifties, I was chatting up the girls all the time, pretty good at it as well, and being successful at getting me hand inside brassieres or having a bit of 'finger pie', after which I'd become excited all over again just inhaling the fishy smell of the lucky finger. (Think the lyrics of Paul's 'Penny Lane' with its 'fish and finger pies'.) I also had a proper girlfriend. Her name was Barbara Baker. Another BB, like my beloved Brigitte Bardot, which made her even more attractive to

me, she'd suddenly changed from a scarcely noticed toddler sitting beside me in Sunday school into a voluptuous blonde who deliberately modelled her hair and clothes on female film stars, most notably, naturally, the original BB. Alas, though she drove my hormones wild and eventually let me into her knickers, she became tired of sharing me with my many one-night stands and so got herself pregnant by another guy. Even worse, as if emulating me mam, she was sent away from Liverpool to have the baby and then, just like me mam, put it up for adoption. When I heard the news, I went around to her parents' house and kicked a hole in their fence, screaming, 'It should have been mine! It should have been mine!' But it wasn't mine, and it was adopted and taken away, just like me baby sister, and that was the end of it and the end of my relationship with BB, God bless her wherever she may be now.

Or God bless me, wherever I may be now. If He exists, which I still seriously doubt, even though that distant light looks like a single, expanding eye, staring at me and, yes, drawing me to it – or to what lies behind it. Is that His judgemental eye? Am I on the way to being judged? Will I be made to pay for my sins, which, alas, were many? Yes, I certainly committed sins. Fish and finger pies and wanking. Then dipping the wick. Otherwise, I'd have gone mad with boredom, not to mention frustration. Luckily, I was saved by the music…

Yes, life was really pretty boring in the fifties, until a little old fat man called Bill Haley, sporting a kiss curl on his forehead, changed the whole world with 'Rock Around the Clock', which, when played on the soundtrack of the 'teenage delinquent' movie, *Blackboard Jungle*, led to teenage delinquency all over the country, including Liverpool, with both sexes going berserk in the cinemas, shouting and shrieking and sobbing hysterically while ripping the fabric out of their chairs, then either dancing in the aisles or storming out into the streets to brawl with each other. Groovy! Naturally, the Teds became Haley's biggest fans and treated the wrecking of cinemas as a sport, before adding the novelty of fights with bicycle chains and razor blades. This soon led to the wholesale banning of *Blackboard Jungle* in cinemas and the banning of the 'Rock Around the Clock' single from radio and television. Which naturally sent it soaring up the charts to become number one for months on end. Then along came Elvis.

I was mad about Elvis. As far as I was concerned, before Elvis there was nothing. (Bill Haley, the fat baboon, didn't even get a look-in with me.)

When Elvis sang ‘Heartbreak Hotel’, I got shivers down my spine. When I saw photos of him in newspapers and pop magazines, I thought he was the coolest guy since Marlon Brando. When I saw that he played a guitar, I went demented until I got one, bought for me by me mam, though Aunt Mimi disapproved, and I taught myself to play it as quickly as I’d taught myself to play the harmonica and piano. By the time Elvis had made his third movie, *Jailhouse Rock*, the *Blackboard Jungle* of rock ‘n’ roll movies, Lonnie Donegan’s skiffle music had become all the rage (you didn’t need musical skills to play it: just a washboard, a tea chest with string, and an acoustic guitar) and I’d formed my own skiffle group, the Quarrymen, initially playing mostly Lonnie Donegan songs (revamped American black slave songs like ‘Rock Island Line’, ‘Cumberland Gap’, ‘Wabash Cannonball’) in church halls and social clubs, usually for no payment other than a few free drinks, with me as lead singer and the others hardly getting a look-in. Then I was introduced to Paul McC., about eighteen months younger than me, with a babyish ‘Elvis Presley’ face and deceptively innocent eyes, who played his guitar left-handed and sang ‘Twenty Flight Rock’ even better than Eddie Cochran did. Though we had an instant rapport and he was as talented as I was, I still clearly remember thinking: ‘If I let him join the group, I’ll have to keep him in line.’ But I needed his talent, so I let him join us, and the rest, as they say, is history. He ended up virtually running the Quarrymen, just as, later, he’d become the dominant force in the Beatles.

I knew I was born to be a rock ‘n’ roll star when I sat O-levels in seven subjects and failed all of them. Without O-levels I couldn’t get into the sixth form and so, not willing to sit for them again, I left school, though I’d no idea what I wanted to do next except become a millionaire or maybe marry a millionairess and let her support me while I did me paintings. Luckily, I then managed to get into the Liverpool College of Art where I immediately offended the other, mostly middle-class, jazz-loving students, who dressed in boring Shetland knits and duffle coats, by wearing either my defiantly proletarian Teddy boy suit with string tie and blue suede shoes or my black-leather jacket with drainpipes, by openly expressing my disdain for the art lessons and causing as much trouble as I possibly could (often turned up at classes pissed out of me brain), and by continuing to play with the Quarrymen, which now had a new line-up, including Paul McC., whose guitar had replaced Pete Shotton’s washboard, thus gradually changing us

from a skiffle group into a rock ‘n’ roll band, strongly influenced by Chuck Berry, Little Richard (Paul could scream just like him), the Everly Brothers and, most importantly, Buddy Holly, the first of the white rock ‘n’ roll singers to write his own songs. So, inspired by Buddy, me and Paul were soon doing the same, composing songs together.

Thing is, Paul and me really had a lot in common. Although Paul lived in a council estate, it was the ‘posh’ end of the estate and he’d been brought up to speak ‘proper’ English instead of Scouse English, just as Aunt Mimi had made me do. (I only emphasized my Scouse accent when it became pretty obvious that no rock ‘n’ roll singer would be taken seriously unless he was seen to be working class. That’s why me old mate, Mick Jagger, though a middle class lad educated at the London School of Economics, adopted a fake working class accent.) Also, where I had, in a real sense, lost me mother when taken from her by Aunt Mimi, Paul had recently lost his mother to breast cancer. We were similar, too, in that we’d had parents with strong musical interests, me with Julia and me dad, Paul with *his* dad, who’d played in an amateur dance band when young and still played the upright piano they had at home. Also, me and Paul both loved Elvis and most other kinds of music, not just rock ‘n’ roll. Finally, we both loved reading, were unusually well read, and shared a passion for poetry in general and nonsense verse in particular. So it was pretty natural that despite being in a group, the Quarrymen, Paul and me started playing together, with none of the other group members present, and soon started co-writing our first songs.

Still, though Paul was me mate, he wasn’t the strongest influence on me at that time. Credit for that has to go to Stu Sutcliffe, who’d arrived a year earlier from Prescott Grammar School and was already renowned as the most talented student in the whole college, being brilliant at every art medium, including drawing, painting and sculpture. Stu was really small and had almost feminine features, reminding a lot of us of James Dean, though with his black-leather jacket and dark glasses, he more often made me think of another actor, Zbigniew Cybulski, known as ‘the James Dean of Polish cinema.’ Like me, Stu had a love of literature, cartooning and rock ‘n’ roll, but could verbalize his enthusiasms in a way I couldn’t do, talking seriously about them, explaining them, so when he praised my poems and cartoons, him being the best student in the whole college, he gave me all the confidence I’d formerly lacked and freed my imprisoned creative spirit. I

loved Stu and he loved me, though it wasn't a sexual love and I certainly couldn't resist taking the piss out of him, lacerating his finer feelings with my caustic wit. I did it because I knew he was easily hurt and I couldn't resist that. I must confess, I *did* enjoy hurting people.

So what's wrong with that?

By then, the Quarrymen consisted of me and Paul on guitars, Colin Hanton on drums, and a 15-year old kid, a taciturn Liverpool Corporation bus driver's son, George Harrison, who'd been taken on only because he played an impressive Hofner President guitar. Frankly, I didn't have much time for him, considering him not worth talking to because he was two and a half years younger than me. But he could play that guitar, so that was okay. When we made our first, private, recording, paying for time in a local recording studio, I sang the lead vocal on both tracks, with Paul and George singing back-up harmonies. The 'A' side was Buddy Holly's 'That'll Be the Day', the 'B' side was a country and western pastiche, written, interestingly enough, not by me and Paul, but by Paul and George. So the Speke tenement kid, despite being mostly ignored by me, proved his worth in the end.

Then, just as I was getting my confidence as both artist and musician, my world fell apart. First Aunt Mimi, the most 'proper' woman I'd ever known, had an affair with one of her lodgers, a biochemistry student half her age, which really shocked me; then, in July 1958, me mam was run down by a car on her way to catch a bus after a visit to Aunt Mimi and died shortly after in Sefton General Hospital. I was told by a policeman who came to the door when Mimi was at the hospital. Bobby Dykins and me took a taxi to the hospital, but I babbled hysterically to the driver all the way there and then, once at the hospital, refused to go in and see her. What I *did* do was go and see my old girlfriend, Barbara Baker, BB, and told her what had happened, then the two of us went to Reynolds Park and just stood there for a long time, hugging each other and weeping our eyes out. That evening, I sat on Aunt Mimi's front porch, playing my guitar, which was the only comfort I could find, and deciding bitterly that, between Mimi's affair and me mam's death, I'd been twice deserted and didn't have to feel responsible to anyone, anymore. I felt cut loose from everything.

Much later, when I was famous, I wrote and recorded at least three songs about me mam: 'Julia', 'Mother' and 'My Mummy's Dead'. So clearly, her death had its long-term affects. I mean, I feel them even now, in this

dreamlike Nowhere Land, this barely perceptible tunnel of darkness leading me on to that expanding eye of light, which could be God's eye, though I seriously doubt it, not believing in God. Well, I'll find out soon enough. I'm definitely advancing upon it. Or it's advancing upon me. Not frightening, but oddly mesmerizing, making me feel as if I'm on a drugs high: that intense, hallucinatory, other state of being that cost me so much in my rock star days. But my memories are here with me. They're so vivid, I'm actually living them. I'm back as a teenager in Liverpool, an unruly and sometimes violent little shite. Now I can see where I came from…

For a few years after me mam's death I did nothing but drink, fight, fuck and play low-paying gigs with the Quarreymen. My always sharp tongue became even sharper, always quick with the vicious put-down, even with close friends like Paul McC., and Stu Sutcliff. But both took it well. They both went with the flow. Ignoring my caustic remarks, Stu even did a brilliant pencil sketch of me and then an oil painting of a student group in our favourite pub, Ye Cracke, in which I was placed prominently in the foreground, clutching a pint glass and staring into the middle distance, as if lost in my thoughts, which I certainly would have been when he did the painting. Then I met my future wife, Cythia, another student at the art college, one of the kind I termed 'spaniels' because they came from suburbia, in her case Hoylake, on the Cheshire Wirral, and were conservative, genteel and oh so bloody respectable. That was Cynthia. She wasn't my type at all, I thought at first, but she had a lovely face and the fact that she'd lost her father to lung cancer only a year earlier gave us something in common: a mutual, instinctive understanding. Also, she was as myopic as I was, which gave us something else in common. So despite the fact that she was engaged to another guy when we met and had her heart set on becoming an art teacher, because she was as sweet and nice as anyone could possibly be, almost visibly flinching when I swore at her or insulted her in front of friends, putting up stoically with my insanely jealous rages, also putting up with my insatiable demands for sex, never striking back when I slapped her around, never talking back when I tried to start an argument, never doing anything without first consulting me, never expecting me to look after her when she was ill, but quick to pay for my coffees and ciggies and fish and chips and guitar strings – I'd only to ask – well, because of all those virtues we became an item and then she became pregnant and then, being respectable, God help

me, we had to get married, though we didn't do it until after Hamburg.

Thank Christ for the Beatles. I mean, I didn't always enjoy being one of the Beatles, but they did at least get me out of the house a lot. Away from disciplining Aunt Mimi. Away from doting Cynthia. First playing a lot of low-paying gigs in theatres, social clubs, pubs, colleges and municipal halls all over Liverpool and other northern cities, then backing fellow Liverpudlian, Johnny Gentle, during his tour of Scotland, and, finally, soaking ourselves in the delicious sin of the Reeperbahn, in Hamburg's notorious St. Pauli red-light district. By that time, the rock 'n' roll scene was falling apart, with Elvis drafted into the Army, Buddy Holly killed in an aeroplane crash, Little Richard gone all religious and training for the ministry (he mistook the Russian's Sputnik for God's beckoning light), Jerry Lee Lewis hounded out of Britain and almost ruined career-wise because of his bigamous marriage to his 13-year-old cousin, Myra Gayle, Chuck Berry serving a two-year prison sentence for transporting a teenage waitress across the state line for 'immoral' purposes, then Eddie Cochran killed in a car crash during a British tour, with Gene Vincent being seriously injured at the same time. The final curtain came when, in 1960, Elvis was discharged from the Army and starting singing operatic songs like 'O Sole Mio' reinvented as his massive hit, 'It's Now or Never.' That marked the end of the dominance of original American rock 'n' roll.

But rock 'n' roll hadn't died out in Liverpool. In fact, Liverpool was keeping the flame alive with an incredible number of purely local rock groups that had Yank-influenced names, such as Gerry and the Pacemakers, Derry and the Seniors (think Danny and the Juniors), Cass and the Casanovas, Rory Storm and the Hurricanes (with Ritchie 'Ringo' Starkey on drums), and, last but not least, me, Paul and George with our frequently changing drummers and just as frequently changing names: first the Quarrymen, then Johnny and the Moondogs, then the Beatals with an 'a' (think Buddy Holly's Crickets), then the Silver Beetles, and then, finally, once and for all, the Beatles.

By then I had a Hofner Club 40 semi-solid guitar that I could play both acoustically and electrically. Lacking a drummer, I decided to make up for the lack by roping in Stu Sutcliffe, who, still the star pupil of the Liverpool College of Art, sold one of his outsized abstract paintings through the prestigious Walker Art Gallery, making himself sixty-five quid, which

enabled him, reluctantly, under heavy pressure from me, to purchase an impressive Hofner President bass guitar that he couldn't fucking play, though I still made him a member of our band. This horrified his college tutors, who thought he was throwing away a promising career in art to become a second-rate rock 'n' roller with a no-future group. But so what? We needed him. And despite being more mature than I was, he could never say 'No' to me.

To hide the fact that he couldn't play, Stu would turn on his 'James Dean' persona, wearing dark glasses and always standing with his back half-turned to the audience, which gave him a mysterious air that certainly intrigued the birds. Ignoring my former fondness for him and how much I owed him artistically, I was disgusted with his lack of musical ability and made sure he knew it, ragging him mercilessly, constantly humiliating him, even making him sit in the most uncomfortable seat in the van, right over the rear wheel, and frequently refusing to let him sit with us or eat with us. I'd just tell him to piss off and the poor fucker, looking hurt, always did it. But as George later said: 'Having a bass player who couldn't play was better than having no bass player at all.' George, being the youngest and most self-conscious of the group, didn't move much on stage either, though he didn't intrigue the birds as much as did Stu, whose attentions from the female sex I secretly resented, which just made me pick on him all the more. I mean, fuck it, I'd pick on anyone, wouldn't I?

So what's wrong with that?

Anyway, in August 1960, as a five-man band, including Pete Best, the latest in our long line of drummers, we went to Hamburg. By that time I was committed to a kind of 'Beat' philosophy and had decided that I'd rather commit suicide than take a conventional job. 'Death before work' was my philosophy. But my God, we sure worked in Hamburg, at first playing every night in crippled-dwarf Bruno Koschmider's tatty strip club, the Idris, then progressing to his bigger and better known Kaiserkeller. Both clubs were located right in the heart of the Reeperbahn, with its unimaginably decadent sex acts ('whips, mud, live snakes or even donkeys': thank you, Philip Norman), abundance of sexually available strippers and drunken, often violent audiences composed mainly of tough international seamen and sensation-seeking members of the army and air force, British and American. The five of us were forced to share an unbelievably filthy, windowless room, more of a pigsty, actually, located right behind the screen of Bruno's Bambi

Kino, which showed mostly porn flicks from dawn to dusk. It was also positioned right next to the equally filthy ladies' toilet, which was well attended by strippers, whores, and transvestites, all keeping us awake with their noisy pissing. Forced to play for four-and-a-half hours each night, in sets of at least an hour, with only three short breaks in between, we had to fill the long sessions by singing every song we could think of, from good old-fashioned rock 'n' roll – Elvis, Gene Vincent, Jerry Lee Lewis, Buddy Holly, Little Richard, Fats Domino – to standards like 'Over the Rainbow' and 'Red Sails in the Sunset'. This required us to alternately scream our lungs out and croon convincingly, with slick harmonies thrown in, thus giving us the solid grounding for the eclecticism of our later work as the more famous Beatles. Mostly, though, to transcend the bedlam of the drunken audiences, we tried to make as much noise as possible: Paul letting loose with his Little Richard screaming, Pete Best pounding his drums as if using a sledge hammer, me acting as demented as Gene Vincent, doing me spastic act, jumping all over the place, screaming abuse at the audience, while George and Stu just stood there as solid and inscrutable as rocks, but playing their guitars for all they were worth, which in Stu's case wasn't all that much. We had to do that even when riots broke out in the club, which happened on a regular basis, with chairs and tables being hurled, knives flashing, blood flowing, and the club's white-jacketed, psychopathic waiters diving into the melee to cosh their customers senseless as they'd been trained to do by mad crippled-dwarf Bruno. We just played through it all.

Jesus, even in my present state, adrift here in this Nowhere Land, I'm forced to acknowledge that they *were* amazing days. I remember that pretty soon, being hammered into exhaustion by our relentless workload, we were gobbling Preludin tablets to keep us awake, which they certainly did, turning our eyes big and glassy and stupefied. Then, to combat the dry throats caused by the drug, we'd drink an endless supply of exceptionally strong chilled draft lager. Thus deranged, eyes popping from the Preludin, I'd risk all our lives by screaming 'Fucking Nazis!' or 'German spassies!', meaning spastics, at the violence-prone audience, causing more than one little upset. Naturally, when not performing, but still in our pop-eyed state, we'd explore the whole of the Reeperbahn, slipping in and out of the neon-lit clubs to see men and women having athletic sex on stage, white and black together, often fucking in groups, men openly giving other men blow jobs in the 'queer' dives, and

whores on display in shop windows along the gaudy, noisy, colorfully corrupt length of the Herbertstrasse. Though we weren't exactly virgins, young George excepted, we'd never known anything like it in Liverpool, were enthralled by the sexual freedom on display, and certainly took full advantage of it. Indeed, having gained a following as performers, we were practically besieged by sexually liberated female customers, waitresses, barmaids, dancers and strippers who often dropped into the club after their night's naughty work. Well laced with drink and drugs, we fucked and muff-dived everything on offer, often doing it in close proximity to the others in our darkened pigsty of a room. Even George, when he finally lost his virginity, had to do it in the presence of the rest of us and was given a round of applause when he finished.

And all the while we were writing sweet love letters to our girls, including my Cynthia, back in England.

Trust the ever sensitive Stu to fall in love at this particular time. The object of his affections was Astrid Kirchherr, a Germanically beautiful and talented photographer girlfriend of one of our German fans, Klaus Voorman, a middle class, beatnik loving graphic designer who, like Astrid, favoured black leather clothes that reminded me of Hitler's SS. Anyway, Klaus adored me and Astrid adored Stu, so as an up-and-coming photographer she photographed all of us, the five Beatles, in our black-leather jackets and drainpipe denims and cowboy boots, at the Der Dom amusement park, posing us around calliopes or perched on traction engines, all grimly industrial, to produce, maybe by accident, grainy matte black and white photos that would soon enhance the Beatles' iconographic status and set the standard for most future rock-group photos. Then Stu announced that he and Astrid were getting engaged, which didn't bother Klaus, who, obsessed with us, had decided to become a rock star and was taking guitar lessons from me. Then we left the Kaiserkeller to play in the Top Ten Club, backing Tony Sheridan, but it all came to an abrupt end when the authorities discovered that George was under eighteen, too young to be violating the nightly 10.00 pm curfew, and so George was deported, travelling back to Liverpool by train, and then Paul and Pete Best, about to move from our pigsty in the Bambi Kino to a better class of pigsty above the Top Ten Club, deliberately, as an act of revenge against Bruno, set fire to a condom in the Kino's corridor and were arrested for attempted arson, thrown into a cell in the Reeperbahn's police

HQ, and, though the arson charge was dropped, were then deported for working without permits. Though normally the worst troublemaker of the lot, I got off Scot-free and followed the others home by train, arriving late at night, like the orphan I was, at Aunt Mimi's house and awakening her by throwing stones at her window.

Naturally, despite my sins and betrayals, she welcomed me back with open arms. If I no longer had a mother, at least I still had Aunt Mimi.

Apart from invaluable training as a musician and performer, I gained something else in Hamburg: the guitar of my dreams. A double-cutaway Rickenbacker Capri 325 that I bought in the Steinway music store and used throughout the rest of my career as a Beatle. That career really took off when, shortly after returning from Hamburg and vastly improved both musically and vocally by our experiences there, we played, without Stu (still in Hamburg with Astrid) at the Litherland Town Hall and had girls virtually stampeding to the stage, screaming like banshees, in what could only be described as the first true outbreak of Beatlemania. There was no looking back after that.

Our local fame exploded when, after regular gigs in Liverpool's Casbah and the Cavern, a former jazz club turned into a popular rock 'n' roll club, another airless sweat-pit that broke every health and safety rule, we were prominently featured in a new music magazine, *Mersey Beat*, and then I contributed a regular column to it, drawings as well as writings, which really excited me creatively and which, even better, gained the Beatles even more publicity. Then, given clearance by the West German authorities, we returned to the Top Ten Club in Hamburg, ostensibly as Tony Sheridan's backing group, though Sheridan was more interested in playing lead guitar and left most of the singing to me and Paul. During that time, Germany's most famous 'popular' musician, Bert Kaempfert, took an interest in Tony Sheridan as a potential solo artist and arranged a recording session, employing us solely as backing musicians. Since Kaempfert didn't know shite about rock 'n' roll and was viewing Sheridan as potentially a 'popular' singer, we recorded crap like 'My Bonnie Lies Over the Ocean' and 'When the Saints Go Marching In'. All five tracks were terrible, but naturally, when Beatlemania swept the world, bootlegs of those early recordings became collector's items. As did the one Beatles vocal track that Kaempfert let us record: me singing solo the old 1920's favourite, 'Ain't She Sweet?'. This,

too, when it finally surfaced years later, became a collector's item.

Then the mate I respected and abused more than any other, Stu Sutcliffe, died. Awarded a grant by Hamburg city council, Stu, using the large attic room in Astrid Kirchherr's house, had embarked on a frenzy of creativity, producing large canvases of brilliant abstract paintings – so brilliant, in fact, that they inspired me to go back to my own drawings, producing another lot of cartoons of crippled people (another sign of my fascination and revulsion for that breed) and cartoons of sardonic religious comment, such as the crucified Jesus on the Cross with a pair of bedroom slippers beneath his feet. But the more Stu concentrated on his paintings, the less time he had for the Beatles, with Paul growing increasingly angry at his refusal to even join us for rehearsals, until finally he and Paul came to blows on stage, throwing punches at each other in the middle of a number with Tony Sheridan. Then Stu's health, both mentally and physically, began to fail. First he became shockingly thin and suffered blinding headaches and bouts of nausea, then his moods started changing abruptly, from sweetness and light to violent aggression and, in Astrid's case, paranoid jealously; then he came down with a virtual catalogue of grim ailments – chronic gastritis, dodgy appendix, glandular imbalance, shadow on the lungs – and then, shortly after my twenty-first birthday, he returned to Hamburg, wanting to be with Astrid, but started having convulsions, couldn't walk without falling over, and then, only one day before the rest of us were due to arrive in Hamburg to open the Star Club, he suffered a final seizure, was rushed to hospital, and died of a cerebral haemorrhage. He was 21.

We didn't learn about his death until the following morning, when we arrived at Hamburg airport and were greeted by Astrid and Klaus Voormann, who gave us the terrible news. My first reaction was uncontrollable, hysterical laughter combined with crying and wails of 'No! No!' (so Astrid later informed me; I still don't remember it), but after that I just turned off the taps and showed no emotion at all. I just couldn't bear the pain.

There were reasons for my pain, the main one being the lurking suspicion that I may have been responsible for his death. But then, again, I may not have been. Even now, being dead myself, I can't think of it clearly. I only know that Stu had returned briefly from Hamburg to pick up where he'd left off at the Liverpool College of Art and also play a few gigs with us, turning his back as usual to the audience, embarrassed by his lack of skill, which was

increasingly annoying Paul and George. Unfortunately, his lack of skill also annoyed some violent Teds, who, after a performance at Lathom Hall, waylaid him backstage and gave him a good hammering, also kicking him two or three times in the head, before Pete Best and me saw what was happening and fought them off. In the ensuing melee, I ended up with a broken finger, but Stu was much worse, his head covered in blood, though he refused to go and see a doctor when advised to do so. While all of his health problems were attributed to that kicking, his younger sister, Pauline, in a memoir she published years later, insisted that the cerebral haemorrhage that killed him hadn't been caused by the kicking he received at Lathom Hall, but by a kicking he received from me a few weeks later when I attacked him in a bout of drunken dementia. For the rest of my life I could never recall that particular incident, but since I'd attacked so many other people, including Stu, not forgetting the drunken sailor that Pete Best and me tried mugging in Hamburg when we were desperately short of cash, there could be some truth to the accusation. Certainly, I spent the rest of my life feeling guilty at the very possibility that I might, indeed, have been the cause of my dear friend and mentor's death.

So here I am, watching that distant light coming closer, expanding, or moving closer to it, now thinking of it not so much as a ghostly eye, but more as a doorway, leading through to whatever lies beyond. Another sphere? Another dimension? Another world peopled with the dead, including Uncle George and me mam and Stu Sutcliffe, who might be the ones to stand in judgement upon me. Jesus, I hope not. I can't bear to think about it. I'm not frightened being here, being dead, but I'm frightened by that thought. Best not to think about it. Best get back. To the past. Best to think of Pete Best and Paul McC and George and Ringo and what happened when Beatlemania struck. What a circus that was…

Beatlemania? Fuck it. I don't want to even remember it, though I doubt that I'll ever completely forget it. I *do* remember that having become a local phenomenon, causing riots wherever we played, we dumped our amateur manager, Allan Williams, took up with the suppressed homosexual Liverpool Jew-boy, Brian Epstein, a refined lad with a weakness for rough trade, which is why he fancied me, and let him turn us from leather-jacketed, drain-piped hooligans into well groomed, mop-haired versions of every mother's son, wearing Italianate suits, modelled on the Shadows, with Paul as the cute one,

me as the witty one, George as the serious one, and Ringo as the loveable dope – though Ringo only came in as drummer after we'd made some demos for Decca Records, were turned down by the dumb cunts, then were picked up by EMI's Parlaphone label, where the posh-sounding producer, George Martin (who'd later be justifiably dubbed 'the fifth Beatle' for his invaluable orchestral and sound-effect contributions to our greatest albums), insisted that we dump Pete Best, because he, Mr Martin, didn't think too highly of Pete's drumming. Alas, he didn't think too highly of Ringo either, so for our first commercial single, 'Love Me Do', backed by 'P.S. I Love You', both Lennon-McCartney compositions, we used Ringo *and* a session drummer, Andy White. The single was released in October 1962 and peaked at Number 17 the same week that Elvis, still 'the King' despite having softened his image, reached the number one spot with 'Return to Sender'. However, it was followed by 'Please Please Me', which reached number one in February the following year, then our first LP, also entitled *Please Please Me*, consisting of our two hit singles and their backing tracks, plus ten other tracks recorded in a single day, including another four Lennon-McCartney compositions, making fourteen tracks in all. That LP also reached number one. So no wonder we became fucking famous. No other group could have pulled off what we did and that's a fact of life, mate.

And fucking famous we became. We became famous because we released one hit single after another and one hit album after another and because we covered, both as singers and as composers, a wider range of songs than anyone else could match. We became famous because we were four distinct personalities, filled with rapid-fire Scouse wit, who appealed to both sexes and all ages. We became famous because we were beloved interviewees, always quick with the witty repartee, and because during a performance at the Royal Variety Show, with the Queen Mother, Princess Margaret and Lord Snowden present, I said into the microphone, 'People in the cheap seats, clap your hands… the rest of you, if you'll just rattle yer jewellery.' Yeah, we became famous because we were working class northerners making it big just when fascination with all things Northern Working Class, in movies, television and literature, had gripped the whole nation. We became famous because we were the first British performers ever to make it big in America and because, when we finally appeared on the *Ed Sullivan Show*, seventy million viewers tuned in to watch us, giving us the largest US television

audience in history up to that time. (We'd soon break our own record.) We became famous because our only two cinema feature films, *A Hard Day's Night* and *Help!*, became the two most successful rock movies ever made. (*Magical Mystery Tour* not included here, being solely Paul's baby and only shown on television, so mostly viewed in black and white, despite having been shot in lurid color.) We became famous because our albums advanced so rapidly, each one sounding as if it had been made by a different group altogether, and because some of those albums – *Rubber Soul* (our 'pot' album), *Revolver* (our 'acid' album), *Sergeant Pepper's Lonely Hearts Club Band* (our 'psychedelic' album), were like no other albums ever made and came in covers displaying avant-garde artwork, some by our German pal, Klaus Voorman, of the kind never seen before. We became famous because we were the first people under the age of twenty-five to be award MBEs in the Queen's Birthday Honours list and we shamelessly accepted those worthless establishment trinkets. We became famous because we were pretty open about taking marijuana and LSD, or 'dropping acid' as it was then known, thus giving the word 'psychedelic' more coinage than it had previously, while popularising, instead of bell-bottom trousers and miniskirts, hippie caftans, sandals, headbands, beads and mystical amulets. (From the last track on *Revolver*: 'Turn off your mind, relax and float downstream…') We became famous because the *Times*' classical music critic, William Mann, named me and Paul as 'the outstanding English composers of 1963' and then went on to rave about our supposedly innovative use of 'major tonic sevenths and ninths', our 'flat submediant key-switches', and even our use of 'aeolian cadence' at the end of a relatively minor song, 'Not a Second Time', which, he breathlessly informed our more intellectual fans, had the same chord progression as the end of Mahler's *Song of the Earth*. We became famous because the country's most renowned poet, Philip Larkin, wrote: 'Sexual intercourse began in nineteen sixty-three, between the end of the Chatterley ban and the Beatles.' Nice to be so credited by an eminent poet. Of course by 'sexual intercourse' Larkin was actually referring to everything that was happening in the Swinging Sixties: rock 'n' roll, free love, marijuana, LSD and other psychedelic drugs, Carnaby Street fashions, Flower Power, Pop Art in general and Andy Warhol in particular, Indian spirituality, student protest, the Vietnam anti-war movement, Grosvenor Square, Paris in May, the Prague Spring, the civil rights movement in America, plus protests against apartheid

in South Africa and Rhodesia. Yeah, right, man, we became famous because although we weren't actually responsible for all that, we were seen to be at the heart of it, epitomising it all in our ever-changing musical styles and life styles: from clean-cut moppets to bearded hippies to our widely publicized flirtations with Transcendental Meditation in Indian attire, not forgetting the freeloading insanity of our growing Apple empire, when we opened the doors to any freeloader who cared to waltz through them and grab everything he or she could get their grubby hands on. We became famous because apart from being talented, we were fucking idiots. We became famous because we became bored with being Beatles and headed off in our separate directions in a highly visible manner that made a joke of our anthem 'All You Need is Love'. That's when I brought the Jap into the picture and it all went pear-shaped.

Before that, however, there were a few things I enjoyed about being famous, most notably meeting other famous people, especially those I'd admired in my pre-fame days. Best of all, however, was meeting my hero, Elvis. I'd always loved Elvis, but when we, all four Beatles, finally got to visit him in 1965, he was stuck in the groove of his awful beach movies and wasn't cutting any decent records. Still, we were thrilled when Brian Epstein told us he'd fixed it up with Colonel Parker to meet our hero, and then, when we met him, we were so overwhelmed that we didn't realise until the day after just how much of a set-up it had been. Arranged by the canny Colonel, it was supposed to be a 'secret' visit, but when we arrived outside the house in Perugia Way in Bel Air we had to battle our way through a virtual army of paparazzi and Elvis and Beatle fans, and I'd no doubt who'd told them we were coming. Also, the hope that it was going to be an 'intimate' visit, just us and Elvis, was knocked on the head when we entered the house to find Elvis surrounded by most of his Memphis Mafia, about ten of them in all, plus his look-alike girlfriend, Priscilla (they hadn't yet married), assorted other wives and girlfriends, plus the ever-watchful Colonel and Brian Epstein, who gambled together at a coffee table converted into a roulette table. So, no 'intimate' meeting with Elvis. Not that we really cared. George was stoned out of his head and escaped to the pool outside to smoke another joint and discuss Hinduism with Elvis' hairdresser and religious guru, Larry Geller. Ringo, unfazed as always, played pool with two of the Memphis Mafia. Me and Paul tried talking to Elvis, but the conversation was a little awkward – I

swear, Elvis seemed shy – until Elvis picked up a bass guitar plugged into an amplifier and started strumming it and singing along to Charlie Rich's 'Mohair Sam', which was playing on Elvis' personal jukebox. So, relieved that we didn't have to make conversation, me and Paul picked up a guitar each and started harmonizing along with the King, who was, let's be honest, so incredibly handsome I wanted to fuck him, even though I wasn't remotely gay. (But can you ever be sure of that? I mean, just think of Norman Mailer. On the one hand obsessed with his sexual prowess with women; on the other equally obsessed with buggery. It sure makes you think, don't it?) Anyway, this jolly sing-song went on for most of the rest of the evening, with the other guests looking on and applauding, until Elvis subtly indicated (yawning, apologizing, yawning again) that it was his bedtime. Still too overwhelmed just to be there to notice what was really happening, on the way out we invited Elvis to come and see us the next day at our rented house in Benedict Canyon. 'We'll see,' was all he said. The next day, however, Malcolm Evans, our road manager, received a call from Elvis' right-hand man, Joe Esposito, informing us that Elvis couldn't make the visit. That evening, one of the more civilised of Elvis' Memphis Mafia, Jerry Schilling, came on his own to see us and, just before he left, I, feeling unusually emotional, still in thrall to the King, told him to tell Elvis that 'before him I was nothing.' We never heard from him again. So fuck him. Fuck him twice. A sentiment I expressed bluntly in the song that I modestly entitled 'God' and released on my first solo album, *John Lennon/Plastic Ono Band*.

But then I also said, in the same song, fuck you to Bob Dylan, who in truth I'd revered, ever since hearing his first album, knocked out by his lyrics as well as by his raw voice, and then becoming a real friend when we all met him in New York, during our first American tour, and he kindly introduced us to the glories of marijuana, after being informed, to his stoned amazement, that the line in our song 'I Want to Hold Your Hand' was 'I can't hide! I can't hide!' and not, as he'd imagined in his pot-zonked state, 'I get high! I get high!' But even before that, wee Bobby Zimmerman and me had lots in common. We both wore horn-rimmed glasses in private and peaked 'Lenin' caps in public, we both play mouth organ, and we both wrote prose and poetry based on our anger and aggression. So, we were soul mates. And practically every song I wrote for the *Help!* soundtrack album was strongly influenced, both lyrically and vocally, by Dylan. (Think 'You've Got to Hide

Your Love Away'.) Yet Dylan later became best friends with George Harrison, not me, so I later wrote and released that song, 'God', rejecting him and Elvis and all of my other former heroes. Desperately seeking a new life, an ultimate truth, with the Jap, I tore my whole past out by the roots and threw it away like rotting entrails.

There were lots of things about being famous that I hated. For a start, I hated the fact that once the Beatles became famous we were exposed to every kind of self-serving scumbag you could imagine, all wanting to profit from our fame and wealth. This shower would have included all those so-called hippies and New Age freaks who so ruthlessly abused our trust at the Apple emporium in Baker Street, but also my biological dad, Alf, also known as Freddie, who, when I was famous, turned up out of the blue, wanting to 'explain' himself, and then, after I'd given him a second chance, inviting him out to Kenwood and treating him kindly, tried to get himself a contract for a book about his relationship with me, failed, so sold an abbreviated version to the embarrassingly downmarket *Tit-Bits* magazine for a measly two hundred smackers, then, even worse, came out with his own recorded single, 'That's My Life (and My Love and My Home)', which he co-wrote with another shameless wheeler-dealer, Tony Cartwright, but sang all by himself, though barely able to sing a note, and released on the equally shameless Pye Piccadilly label. Not content with that, he then married, at fifty-eight years of age, an eighteen-year old Exeter University student and had a baby by her. So just as I'd said 'Fuck you' to him in the past, so I said, 'Fuck you' to him again. And that was the end of him.

By that time, we'd all lost our interest in touring because the fans screamed so much that we couldn't even hear ourselves singing and, also, because we couldn't stand the shite we had to take before and after the shows, especially high-toned cocktail parties where we had to shake hands and act civilized with the upper crust, including fat-bellied businessmen, politicians and their hyena wives. We'd actually discussed stopping a few times, but finally did it after a series of particularly nasty experiences during our world tour of 1966. After three concerts in West Germany, including a return visit, though in grander style, to Hamburg, in the 5,600-seat Ernst Mercke Halle instead of the tawdry Kaiserkeller, we flew to Toyko where we became the first pop group to receive death threats from traditionalists who viewed our engagement in the Nippon Budokan arena, normally reserved for Sumo

wrestling and martial arts, both considered to be religious rites, as sacrilege. So we had to perform our concerts while being protected by 35,000 police and security men. From there we flew to the Philippines where Brian Epstein innocently declined an invitation to attend a reception with President Marcos and his fat clothes-horse of a wife, Imelda. This led to local newspaper headlines about how the Beatles had 'snubbed' the country's First Family, which in turn led to all our police and security cover being abruptly withdrawn, the Filipino promoter refusing to hand over our share of the concert proceedings, threats that we couldn't leave the country until we'd paid previously unmentioned cash sums in income tax, and even our hotel's room service staff, supporting their beloved First Family, delivering inedible food to our room. When Brian then went on the state-controlled television network to apologise for the 'misunderstanding', carefully arranged technical interference broke up the picture and drowned out his words. The following day, at Manila International Airport, when we were trying to leave, there were no porters available to deal with our luggage, the escalators inexplicably stopped, forcing us to struggle up the stairs, carrying our own luggage in the tropical heat, and then, in the departure lounge, we were jeered and physically abused all the way to the aeroplane. It was a fucking nightmare.

But that wasn't the end of it. Back in London, to express our disgust at Capitol Records' releasing of various compilation albums in America without consulting us, we insisted on putting out their latest lousy compilation, *Yesterday… And Today*, with a cover photo showing the four of us in long white butcher's coats grinning mischievously while holding aloft bloody joints of meat and naked, dismembered dolls (children). The resulting furore caused a first pressing of 750,000 albums to be hastily withdrawn until new covers were made available. Then, during an interview that I gave to our most trusted journalist, Maureen Cleave, just before our final American tour, I made the mistake of remarking casually that the Beatles were now more popular than Jesus. *Jesus!* This simple comment, completely ignored in Britain, turned our American tour into a nightmare, with our records being banned in the Southern Bible Belt of Alabama, radio stations following suit by refusing to play our records, actual records being smashed on air or being shown on television being thrown into rubbish disposal bins labelled PLACE BEATLES TRASH HERE, churches and temples right across the nation calling down hellfire on our heads, then South Africa, Spain, Holland and,

finally, even the Vatican, joining in the public condemnation. By the time we reached Chicago, to commence our American tour, the Klu Klux Klan, taking a break from terrorizing and murdering black people, were loudly proclaiming themselves the avengers of outraged Christianity throughout the South and I was forced to call a press conference and offer a grovelling public apology, for which I never forgave myself. Not that the apology helped much. During the subsequent tour, we faced audiences holding up crosses instead of candles, signs stating BEATLES GO HOME and JESUS DIED FOR YOU, JOHN LENNON, former fans publicly breaking or stamping on our records, numerous copies of *John Lennon: In His Own Write* being torn to shreds, and police protection being withdrawn without explanation, just as it had been in the Philippines. Most frightening of all was when bullet holes were found in the fuselage of the plane used to transport us from one city to another.

'You might just as well paint a target on me,' I said to Paul, George and Ringo as we huddled fearfully together just before boarding another aeroplane.

At Shea Stadium, New York, on 26 August, there were 11,000 empty seats. By August 26, just before we played at the Candlestick Park baseball stadium, I told the others that I'd had enough and Ringo agreed that it all had to end. So that became the last live performance we were ever to give.

Did I care? No. Do I care now? No. I only care about that light in the distance and where it might be leading me. Maybe to the Other Side. To the Nowhere Land of the Dead. Maybe to loved ones departed and my personal Judgement Day. Best not to think about. Let my memories protect me. I may be here just to relive my life and find out what it meant. I spent a lot of time wondering what life meant when the Beatles stopped touring…

Not knowing what to do with ourselves, the four of us dealt with it in our separate ways, Paul finding distraction by composing the score for a new British movie, *The Family Way*, George immersing himself ever more deeply in Eastern music and religion, and Ringo simply spending more time with his wife Maureen, who soon became pregnant with their second child. As for me, I couldn't think of a fucking thing I wanted to do, except drink and drop acid and generally fall to pieces out there in beautiful, fart-boring Weybridge. Luckily, Richard Lester, director of *A Hard Day's Night* and *Help!*, offered me a supporting role in his quirky World War II film, *How I Won the War*,

playing a British serviceman, Private Gripweed, and I happily went off to locations, first in Hamburg, then Almería in southern Spain, just to get away from Kenwood, away from my missus and the kid. But that's *all* I got out of it, since the movie tanked and my own performance, perhaps deadened by my regular intake of hashish, was truly dismal. Then I was rescued by the avant-garde in general and the Jap in particular.

Now, being dead, and looking back on that movie, I recall a scene that virtually prophesied my eventual fate and confirmed my life-long conviction that I would die by being fatally shot. It was a black and white sequence in which my character, Private Gripweed, crossing a field, is shot in the midriff by enemy gunfire. First, he looks down at his midriff and says, 'I knew this would happen.' Then he looks directly at the camera, at the audience, and says, 'You knew this would happen, didn't you?' That scene reduced Cynthia to tears and gave me nightmares for weeks after. I now believe I recalled that very scene the instant Chapman shot me.

Even now, I get most of the credit for involving the Beatles in the avant-garde and counter-culture, but it was actually Paul. When we were really famous and rich, for instance, Paul was the only one of us who did *not* move to a mansion or secluded estate in the stockbroker belt south-west of London, but instead remained resolutely in his house in St. John's Wood, located close to the EMI Abbey Road recording studios. Though at the time he was going with the actress Jane Asher and, through her high-toned family, mixing with the élite of the theatre and film worlds, powerful businessmen, and even minor royalty, he was also friends with her brother, the pop-singer Peter Asher, who introduced him to the world of alternative arts and soon had him patronising avant-garde theatres and art galleries, meeting 'beat' writers like William Burroughs and Alan Ginsberg, attending concerts of electronic and atonal music, financing underground magazines and events, and even financially assisting the Indica Bookshop, specialising in alternative literature. Paul was also involved with the Indica Gallery, formed in 1966 by John Dunbar, then married to Marianne Faithfull, and two young partners, and located in a mews in the heart of London's West End. The gallery was to be devoted to the work of new 'swinging' painters and sculptors, while its adjacent bookshop would specialize in off-beat, radical literature from sources already known to some as the 'Underground.' Dunbar's partners in the venture were Peter Asher, brother of Paul's girlfriend Jane, and Barry

Miles who'd grown up with the Rolling Stones headcase, Brian Jones, in Cheltenham. (Brian was always too busy being drunk, getting stoned, or violently beating up his women to give his full attention to his music, though he was, when he actually got round to it, extremely talented at the latter. At least he was until he drowned, or was murdered, in that swimming pool.) The support of pop music's toffs was assured from the start when me mate Paul helped to paint the gallery all white before its official opening in November 1966.

So Paul was up to his eyeballs in all that while I was holing up in Kenwood, my mansion in the stock-broker belt of Sussex, bored with being a married man and neglectful daddy, feeling sorry for myself (fame was such a drag!) and trying to dissolve my ego and escape my self-pitying misery with a prodigious input of booze, pot and acid. Poor Cynthia. Right from the start, she'd always been kept on the back-burner, treated officially as non-existent, because it was thought that me being married and, even worse, a daddy, would upset the fans. So first, while I was sharing a posh mews flat with Paul, George and Ringo in Green Street, Mayfair, I'd hidden her and Baby Julian away with a reluctant Aunt Mimi in Mendips, then with Cynthia's mum back in her old home in Hoylake. It was only after the *Express* had blown our cover and I'd been forced to confess in a *Mirabelle* interview that I was, indeed, married and a daddy, that I let her and baby Julian move into a not-so-great second-floor flat in Emperor's Gate from where, while Cynthia was feeling trapped by the Beatles fans always crowding around the doorway or even mobbing her hysterically when she attempted to give baby Julian a run in his push-chair, I sallied forth to have affairs with a wide variety of other women, including the then popular singer, Alma Cogan, nicknamed 'Sarah Sequin', and Maureen Kennedy, lead singer with the sexy Vernon Girls, plus more than a few quick pokes with hysterically willing female fans, not forgetting a one-off threesome featuring oilskins and polythene bags (inspiration for *Abbey Road*'s 'Polythene Pam') and a casual affair with the Norwegian wife of the 'best friend' who'd found us the Emperor's Gate house in the first place, and, indeed, shared it with us, they then residing in their wood-panelled ground-floor flat that became, along with the wife herself, the inspiration for *Rubber Soul*'s 'Norwegian Wood'. Finally, unable to take the demented teenage fans of London, I moved with Cynthia and Julian into Kenwood, my modest 27-room mock-Tudor mansion in the

exclusive St. George's Hill Estate in Weybridge, the heart of the Surrey Stockbroker Belt, safely surrounded by other millionaires, eventually including Ringo, who married his pregnant girlfriend, Maureen Cox, and moved into a similar mock-Tudor mansion in the same estate, and George, who married his sexy model, Pattie Boyd, and moved into a luxury bungalow on the Claremont Estate in nearby Esher. So there I was, cut off from the excitements of London, spending most of my days in a stupor of booze, pot and acid, listening to good old rock 'n' roll on my personal jukebox (just like Elvis in Perugia Way), dreamily playing with my three connected Scalextric race car sets, or my numerous slot machines or table football games, fantasising about a hippie existence on an island off the Irish coast that I bought and then never set foot on, then having my black Rolls Royce repainted in eye-scalding psychedelic colors. I only did that because I was bored. I also watched a lot of afternoon TV, all those dumb soaps and series, slept for hours on end, not answering the telephone, ignoring poor Cynthia and baby Julian and the real world in general – except when thinking of Paul McC and growing increasingly paranoid with the suspicion that the real power behind the Beatles had gradually shifted from me to him.

I first became convinced of this when I gradually realised that *Sergeant Pepper's Lonely Hearts Club Band*, one of the most acclaimed albums in pop history, was mostly masterminded by Paul, with my contributions being sporadic and disinterested. While I was laying waste to myself down there in highly respectable Sussex, Paul was composing his movie score, experimenting with electronic collages, and immersing himself in contemporary, avant-garde classical music. All those strands of creativity he brought to the conception of *Sergeant Pepper*, though I later received most of the credit for it. I *did* manage to drag part of 'A Day in the Life' (the album's most famous track), the ground-breaking single, 'Strawberry Fields Forever' and a couple of other half-decent songs out of that period, but even the two Georges, Martin and Harrison, added more to the originality of *Sergeant Pepper* than I did: the former with his impressive knowledge of orchestral music and sound effects, the latter with his Indian instrumentations, inspired by the sitar lessons he was then taking with Ravi Shankar, though, credit where it's due, he'd first used a sitar as far back as *Rubber Soul*. The rest of my contributions to *Pepper* were pretty minor, though you'd never have guessed it at the time, given the rapturous reception it received by both the

music press and the ever-worshipful public. So I have to confess that my feelings of increasing isolation from the group, or, even worse, my belief that I'd actually lost my leadership of the group, were only increased by the stupendous success of what many considered to be our greatest album. Which also explains why I frequently made disparaging remarks about the album when discussing it with adulatory journalists.

Nevertheless, despite my secret resentment of Paul, it was him who rescued me from my doldrums by dragging me out of Kenwood, introducing me to gallery owner Robert Fraser, and encouraging Fraser to guide me through the varied novelties of London's avant-garde world, including the Indica Gallery, which Paul already knew all too well, having partly financed it.

It was there, in the Indica Gallery, in November 1966, that I first met Yoko Ono, then a 33-year old Japanese member of the experimental group, Flexus, dressed all in black, inscrutable face framed by black hair (looking like a bloke in drag, as I later told her), and in the gallery to set up her exhibition, *Unfinished Paintings and Objects*. The most intriguing exhibits were the physical objects, such as, for instance, an apple and a needle placed strategically together to form a so-called 'work of art'. I mean, excuse my cynicism, folks, but when even someone reportedly as intelligent as film director Roman Polanski can say of this particular exhibit, 'This is the most beautiful apple I've ever seen!' and 'That is the very essence of a needle!', I have to ask myself: 'Who's pulling whose leg, dear?'

So, convinced that the whole exhibition was a piss take, I took a bite out of the apple and put it back on its pedestal. This really outraged Yoko. I'd just destroyed her 'work of art'. There was also a so-called 'exhibit' that said 'Hammer a nail in' (into a canvas) and I asked her if I could do it and she, still being outraged by the bite taken out of her precious apple, said, yes, I could hammer a nail in if I paid her five shillings, or twenty-five pence, and so, still being a smart-arse, I said, 'Well, I'll give you an imaginary five shillings and hammer an imaginary nail in.' One up for me, like.

Yet I fell for her. Fell like a ton of bricks. Fell head over heels in love with what I thought was her originality and daring. But mostly fell for the fact that she had all the self-confidence (some would say 'arrogance') that I lacked, with my secret 'orphan boy' complexes and 'working-class' hang-ups. But it didn't happen immediately. I met her again two weeks later in Robert Fraser's gallery, at the opening of an exhibition by Pop Art sculptor Claes

Oldenberg (big influence on my occasional buddy, Andy Warhol), but when I saw her, wearing her customary black, sexless clothing and as inscrutable as the Sphinx, surrounded by Oldenberg's giant plaster milkshakes and foam-rubber hamburgers, I just smiled shyly, or possibly in secret terror, and hurriedly moved on. Paul McC also met her that evening and then met her again, a few weeks later, when she was looking for a handwritten Beatles manuscript to include in a book honouring the avant-garde composer, John Cage. Paul suggested that she should contact me instead, which she did, and though I was still scared of her, finding her unnervingly intense and almost impossible to read, I couldn't get her out of my head and we gradually drifted into a relationship that didn't, at that stage, include sex.

I know there was always a widespread, mainly racist, assumption that 'the Jap' had just latched on to me to capitalize on my fame, but I'm pretty sure this wasn't the case. No, by the time I became involved with her, she'd already become a celeb' in the avant-garde world when her Andy Warhol-styled *Film No.4*, more widely known as *Bottoms* (because all it showed was a parade of anonymous bare arses accompanied by dumb comments from the participants), was refused a certificate by the British Board of Film Censors, thus causing a bit of a media stir. Described by Yoko as her 'film of many happy endings', ha, ha, it was eventually premiered in August, 1967, and was then shown only in private clubs. She then gained more notoriety when she wrote a humorous article for the underground mag, *International Times*, in which she lampooned male genitalia and men in general. In September that year, I invited her to watch the filming of Paul's 'Fool on the Hill', composed for the soon-to-be-critically-damned Beatles' (Paul's) 'home movie', *Magical Mystery Tour*. A couple of days after that, she launched *Yoko Ono's 13 Days Do-It-Yourself Dance Festival* by mailing to selected individuals, including me, every morning for many days, hundreds of postcards bearing cryptic messages, such as: 'Draw a large circle in the sky.' On my birthday (she surely did her research), I received one saying, 'Color yourself. Wait for the spring to come. Let us know when it comes.' Being at a loose end in Kenwood, where the postcards were being received, I alternated between annoyance and exhilaration, but either way I was being dragged out of my terminal boredom. Maybe because of this, I sponsored her art exhibition, *Yoko Plus Me: Half-A-Wind* and was shocked to see my name mentioned fulsomely in the publicity for the show, despite having been assured by her

that I would, as I'd demanded, remain anonymous. So, yes, she certainly used me in that way.

By that time, the Beatles' financial affairs had become so complex that it was beyond Brian Epstein's comprehension. Convinced that he was losing control over us, being forced to give way to more forceful entrepreneurs, also increasingly tormented by his secret homosexuality, Brian was psychologically disintegrating. Also, by that time, George (clearly, like me, disenchanted with fame and fortune) was becoming deeply immersed in the Indian spiritualism of his guru, the Maharishi Mahesh Yogi, so he encouraged the rest of us to attend one of the Maharishi's banal lectures, and then, during the bank holiday weekend of '67, dragged us, along with Mick Jagger and his current squeeze, Marianne Faithfull (Mick had stolen her from her hubby and our friend, John Dunbar), off to a teacher training college in Bangor, North Wales, for our 'initiation' into Transcendental Meditation. It was while there that we received word that Brian Epstein had been found dead of a barbiturates overdose, almost certainly a suicide, in his apartment in London. We would now be managed not by Brian, whom we'd all trusted, but by his company NEMS, which was jointly controlled by Robert Stigwood, despised by all of us (as an independent record producer, he'd rejected the Beatles in 1962), and Brian's brother, Clive Epstein. The shock of this double blow – Brian's sudden death combined with the knowledge that we were now under the control of the hated NEMS – was the true beginning of the crack-up of the Beatles.

Well, that's not important now, is it? None of it's important now. Isn't it funny how, being dead, having been alive no longer seems that big a deal? All those anxieties I suffered. All that misery I endured. All the passionate ambitions I had that turned to dust in the end. Being a rock 'n' roll star. Being a Beatle. Being a writer and artist and political activist, only to end up baking bread and changing nappies and feeding the cats and calling Yoko Ono 'Mother'. I'm better off dead, really. I still only want me mam. I'm now convinced that the light in the distance, that expanding eye, is the doorway that will lead me to her, to Julia. She died before I wrote those songs about her, but maybe, if she's waiting for me beyond that light, I'll be able to personally sing them to her. I remember that I wrote the first song about her before the Beatles broke up.

Ironically, our break-up probably began with one of our greatest moments

when, in June 1967, in Studio One at Abbey Road, surrounded by exotically dressed flower children, plus Mick Jagger, Marianne Faithfull, Keith Richard, Eric Clapton and the totally insane Keith Moon of The Who, we gave a televised live performance of our latest song, 'All You Need is Love' and reached, through eighteen different overseas broadcasting systems and Earth-orbiting satellites, an unprecedented total of *350 million people*: the greatest audience in history. That I chewed gum throughout the whole affair, even when singing, and also included a sarcastic snatch of 'She loves you, yeah yeah yeah' was a largely unnoticed indication that the end of the Beatles was at hand.

The real rot started when Brian Epstein died, leaving us rudderless for the first time. It continued when we formed our own music publishing company, located it in a Victorian house in Baker Street, central London, and, inspired by the deceptive simplicity of the René Magritte painting of a green apple, then hanging on a wall in Paul's St. John's Wood home, named the company Apple Records. Next, encouraged by our accountants to put our excess money into some kind of business, to avoid having to pay the Labour government's 95% tax demands (think George's song, 'Tax Man'), we foolishly expanded Apple to include a boutique specialising in hippie clothing designed by the outrageously expensive Anglo-Dutch group known as 'the Fool' (think Paul's song, 'The Fool on the Hill'), with lighting designed by my equally expensive 'electronics guru', Magic Alex Mardas. Then we decided to make our own movie, writing, producing, casting and directing it ourselves, also starring ourselves. As I soon lost interest, this became Paul's baby, the hour-long *Magical Mystery Tour*, but its making was chaotic and the results, when shown on television on Boxing Day, 1967, only a couple of months after the critical and commercial failure of *How I Won the War*, received a venomous reception from both critics and audience, becoming the Beatles' first real flop. Luckily, the album of the same title, including what many felt was my greatest song, 'I Am the Walrus', went on to sell over five hundred thousand copies in Britain and over a million in America, making the whole sorry venture worthwhile.

Nevertheless, the loss of our Age of Innocence continued when the BBC banned the playing of 'I Am the Walrus' because it contained the word 'knickers' and when I became more deeply involved with the perceived-to-be-weird Yoko Ono. Neither of us behaved well during this time and poor

Cynthia was repeatedly humiliated. Indeed, so troubled was she by the conviction she was losing me that once, during a party given by Cilla Black at her flat in Portland Place, she hid herself in a closet to see how long it would take for me to notice that she was missing. I didn't. By that time Yoko's relationship with her second husband, Tony Cox, by whom she had a daughter, Koyoto, then five years old, was also breaking down and we were keeping in touch through the mailing system, her bombarding me with cards containing more cryptic instructions, such as 'Breathe' or 'Dance', and me responding with a deluge of lengthy letters. We had a break from each other when all the Beatles and their wives, including Cynthia, along with Paul's actress girlfriend, Jane Asher, the singer-songwriter Donovan, the American film actress Mia Farrow (who'd just finished *Rosemary's Baby*, filmed prophetically in the Dakota Building where I would spend my last days) and Mike Love of the Beach Boys, flew off to Rishikesh, located two hundred miles north of Delhi, on the banks of the River Ganges, to study Transcendental Meditation under Maharishi Mahesh Yogi, now nick-named by me 'the giggling guru'. We were supposed to stay there for at least three months, but Ringo left after two weeks because he couldn't stand Indian food and had run out of his supply of eggs, bacon and baked beans. Paul and George and me stayed on a lot longer, all three of us constantly strumming our guitars and writing a lot of songs for what would become known as the *White Album*, but we finally decided to leave when we heard rumours about the supposedly celibate Maharishi making sexual advances to one of the young women in our group and when I, personally, became pissed off at not receiving the spiritual 'revelation' I'd been expecting and also became convinced that the giggling guru's love of photo opportunities indicated that he was more interested in fame and money than he was in enlightenment. When he asked me why I was leaving, I said, 'If you're so cosmic, you should know why.' Then we all flew back home and I took up again with Yoko and my ruthless humiliation of poor Cynthia.

In fact, I didn't even wait to get back home. All the time we were in India, I'd been receiving postcards from Yoko, which were sent to Tony Bramwell in Delhi and then passed to me in plain brown envelopes to ensure that Cynthia didn't know about them. So during the flight back from Delhi, looking forward to seeing Yoko, I passed the time by confessing to Cynthia my many infidelities, cynically itemising as many as I could recall. Once

safely home and staying for a few days with Derek Taylor in his big family home in Newdigate, Surrey, surrounded by his large brood of happy kids, I told Cynthia that we should have more children to keep the neglected Julian company. She responded by bursting into tears and saying I'd be much better off with someone like Yoko. Some time later, when I was about to fly with Paul to New York to unveil Apple to the American media, she asked to go with me and I bluntly told her she couldn't, then packed her off on a supposed 'holiday' in Greece, in the company of Magic Alex Mardas, Jenni Boyd, Donovan and his manager, and a dodgy article called Gipsy Dave. Not for the first time, poor Julian was sent off to stay with our housekeeper, Dot. In America, we naively informed the media that Apple Corps, which was now an umbrella company for a record label, a film company (it's only production would be *The Yellow Submarine* psychedelic feature film in which we featured solely as cartoon Beatles), a publishing company, and a retail and electronics company, was to be run by young people (experience not necessary) and firmly grounded in the hippie ideals of 'love, peace and sharing', or, as Paul put it, 'a kind of Western Communism.' This concept went down a real treat with Capitalist America.

Back home, while Cynthia was still in Greece, safely surrounded by my motley crew of watchers, I phoned Yoko from Kenwood and asked her to come and see me straight away. She arrived about midnight, still looking like a bloke in drag. Instantly, I took her up to my studio and played her all the tapes that I'd made of my experimental music. Impressed, and doubtless raised on high by the LSD I'd just given her, she suggested that we make an album between us. We started straight away, working until dawn, creating what would become the basis for *Two Virgins*: a mixture of different sounds, including bird song, white noise, Yoko's avant-garde singing (a kind of demented screaming) and lashings of my surreal *Goon Show*-styled comments, offered in a variety of different accents. Then we fucked for the first time. When Cynthia finally returned from Greece, accompanied by two of my spies, Magic Alex and Jenni Boyd, she found Kenwood unusually quiet, with no sign of Julian or our housekeeper, Dot. Then she found me and Yoko seated together on the floor of the sun parlour, both wearing dressing gowns, neither of us showing the slightest sign of guilt, both probably still high on LSD. When she then found a pair of Japanese slippers outside the door of the guest bedroom, she fled from the house. A couple of days later,

when she returned, she found Julian and Dot reinstated and was informed by me that finding me in the sun room with Yoko Ono meant nothing at all. But I was so distant and cold to her over the following weeks that she asked permission to go on holiday again, this time to southern Italy, accompanied by her mother, Julian, and an aunt and uncle. Naturally I said yes. Within hours of Cynthia's departure Yoko had left her husband, Tony Cox, for good and moved into Kenwood. During our time together, we made a couple of movies, the first, entitled *Smile*, just showing me in close-up, pulling a lot of funny faces for fifty-two minutes, the second called *Two Virgins*, after the music we'd made that first night, and simply showing our faces merging, separating, merging again, over and over, except when giving the viewer a break by showing our romantically embraced silhouettes.

While Cynthia was still in Italy, Yoko and me collaborated on an Arts Laboratory exhibit, *Build Around*, a so-called 'sculpture' consisting of a wooden platform covered in pieces of broken glass and plastic, to which spectators could add their own bits and pieces. Invited to the exhibition when driving with me through London, Paul and Ringo both insisted, while avoiding my stoned gaze, that they had pressing engagements elsewhere. A few days later, when Apple launched its latest example of retail madness, a Sergeant Pepper-styled 'Civil and Military' clothing business in fashionable King's Road, Chelsea, I appeared at the packed press party with Yoko by my side. Three weeks later, at the prestigious National Sculpture Exhibition held in the precincts of Coventry Cathedral, me and Yoko informed the world of our relationship by planting two acorns, one facing east, the other west, symbolising our love and the merging of our two cultures (Yoko and John: geddit?) in unconsecrated grounds because, as we'd been informed by a snotty cleric, we couldn't plant them in the consecrated grounds of the cathedral. Three nights later, when my stage play, *Scene Three Act One*, returned to the National Theatre, now retitled *John Lennon: In His Own Write*, Yoko and me sat boldly in the front row of the dress circle, wearing matching white outfits, flanked by the other Beatles, listening to outraged calls from the audience of 'Where's your wife?' and 'Where's Cynthia?' Next morning, the front page of every newspaper in the land screamed that I'd left my wife and begun an affair with the notorious Yoko Ono. And Cynthia, who was still on 'holiday' in Italy, still didn't know a thing about it.

So what did I do? I sent good old Magic Alex Mardas to Italy to pass on

this message: ‘I’ve come with a message from John. He’s going to divorce you, take Julian away from you, and send you back to Hoylake.’

Traumatised, Cynthia flew back to England, but avoided Kenwood, where I was still staying with Yoko, and instead moved in with her mother in a central London flat owned by Ringo. From there, she tried repeatedly to contact me through the Beatles office, but was repeatedly, callously, put off. Eventually, I notified her through my solicitors that I intended to sue for divorce on the grounds of her ‘adultery’ with an Italian friend, Roberto Bassanini. Since I was in fact the adulterer, indeed many times over, my insistence on Cynthia’s adultery was more than a little hypocritical. Still, Yoko and me finally moved out of Kenwood, letting Cynthia move back in with Julian.

Meanwhile, public hatred for Yoko Ono, ‘the Jap’, was growing. It began when she was viewed as the calculating slit-eyed foreigner and older woman who’d broken up my marriage to sweet, devoted Cynthia. It accelerated when she broke a strict Beatles ruling that no wives or girlfriends could be in the Abbey Road Studio Two when we were recording. With my permission (I was besotted with love and on a drugs high) Yoko started coming into the studio during the recording sessions for the *White Album*. Naturally, the other Beatles were upset by this, particularly when Yoko, when not sitting there like a block of stone, dressed entirely in black, pale face framed by long black hair, rarely smiling, thus unnerving everyone, started offering her comments or ‘instructions’ regarding both our lyrics and our music, thus enraging everyone, especially Paul McC. Even George Martin confessed to feeling ‘terribly inhibited’ by her presence. So, given her immoveable, inhibiting presence there in the studio, it came as no surprise that the resultant double album turned out to be virtually a collection of solo performances by individual Beatles with the other Beatles performing more like a backing band than a genuine, fully integrated group. Even worse, shock! horror! was that a female backing vocalist was used for the first time, namely Yoko on ‘Bungalow Bill’. And no one, except me and Yoko, wanted to include the collage of avant-garde sounds known as *Revolution 9* (it was nine minutes long) which most listeners, at least those not stoned, doubtless skipped over with a sigh of relief. Not that the double album didn’t contain some great things (most of the critics raved) but in the end it wasn’t really the Beatles. Nevertheless, Yoko’s presence in the studio continued throughout the

remaining Beatles recording sessions and reached an outrageous climax, as far as the others were concerned, when, after being hospitalised as a result of my atrocious driving, she had a specially prepared bed brought into the studio and remained in it for three days, propped up with pillows, a microphone dangling over her head to enable her to comment on the proceedings, during the *Let It Be* sessions, during which, for obvious reasons, cordial relationships between the four Beatles finally and irrevocably broke down. Not much later, after recording what many thought was our greatest album, *Abbey Road*, the Beatles called it a day.

The end, as I recall it, was pretty messy. First there was the infighting caused by Yoko's presence in the recording studio, which led to the rift between me and the others. Next was the filming of the *Let It Be* documentary, which ended with us playing our final gig together, though barely speaking to each other, up on the roof of the Apple Corps building in Savile Row, right in the heart of Mayfair, in the middle of the day, until stopped by the arrival of the police. Finally, there was the Big Break-up that began when me, George and Ringo signed up with Alan Klein as our manager while Paul opted for Linda Eastman's high-powered American lawyer relatives. And after that came the endless legal battles, taking years before they were resolved and causing even more bitterness between us.

Yes, the Beatles were finished.

But *I'm* not finished. I may be dead, but I'm still full of piss and vinegar as I let my thoughts wander to and fro, into the past and the present and even the future, far beyond the day of the shooting, this doubtless being one of the privileges of the Afterlife. I can, for instance, see what happened to me after I was shot, when the world was so shocked that some fans committed suicide, other held vigils outside the Dakota Building, holding up lit candles and singing my songs, and critics who'd dismissed me as a has-been started hailing me as the genius behind the Beatles. God, Paul must have been pissed. I mean, I know he was genuinely shocked by my death, as were George and Ringo, but deep down, as my faded reputation started regrowing in leaps and bounds, when I was deified as a saintlike person and worshipped as a great artist and deep thinker, Paul must have had a few sleepless nights, wondering why he was suddenly being looked upon as a mere 'commercial' talent who couldn't have written a decent song without me. If I had a gun, I'd go back and shoot him, just to make him feel better.

God, that light is really expanding. It's seeping into the surrounding darkness. I'm trying to see what's in it or behind it, but all I see is the light itself, which is mesmerizing. I don't want to be mesmerized. I want to stay fully conscious. I want to be fully awake when I reach the Other Side and, perhaps, meet up again with me mam, my beloved Julia. But best not to get my hopes up. Best, for the moment, which could be an eternity, to keep my thoughts focused on where I left off, with the end of the Beatles…

Not that I gave a shit about the Beatles. By that time, Yoko and me were being seen everywhere together, usually in matching white kaftans, and I was engaged in artistic activities that I felt were more important to me than the Beatles. Following the revival of *John Lennon: In His Own Write* at the National Theatre, my first complete art exhibition, *You Are Here*, opened at the Robert Fraser Gallery in Duke Street, receiving enormous media and public attention, though mainly because of my 'scandalous' relationship with 'the Jap'. By this time, when Cynthia was still resident in Kenwood with the now 'fatherless' Julian and counter-suing for divorce on the grounds of adultery, Tony Cox, now formally separated from Yoko, had moved to the south of France with Yoko's 'motherless' daughter Kyoko, while Yoko and me, both of whom were already whining publicly about our greatly exaggerated 'orphan' childhoods, had moved, without the kids that we had, in a real sense, just orphaned, into the one-bedroom basement flat in Montague Square that was owned by the ever helpful Ringo.

We'd barely moved in when the flat was raided by police searching for drugs. (The previous tenant had been the notorious druggy rock star, Jimmy Hendrix.) All they found was a small quantity of cannabis resin, which I swear was planted at the time. I was, instead, on heroin at the time, but I'd cleaned all that out before the pigs arrived, so the cannabis they 'found' had to be a plant. Yoko and me were released on bail, but a few hours later, Yoko, pregnant, was rushed into hospital, where she nearly suffered a miscarriage, was given several blood transfusions, and then was told she was going to lose the baby. We named the dying child John Ono Lennon II. I then recorded the baby's dying heartbeats, to be used later on a John-Yoko album.

So what's wrong with that?

My divorce from Cynthia was granted in November, 1968. Yoko and Tony Cox had come to an agreement that the latter would move with their daughter, Kyoto, to the Virgin Islands where the divorce would take place,

with both parents sharing custody of Kyoto. That same month I had to appear in court where I pleaded guilty to the charge of possessing hashish and was charged £150, with the charges against Yoko being dropped. At least I didn't sob openly, like a fucking six-year old, the way Mick Jagger did the year before when he, along with Keith and their partner in crime, Robert Fraser, were done by the Law, handcuffed, and given a couple of nights in the clink, after being neatly stitched up by the *News of the World* because Mick, in a separate court case, was trying to sue them for libel. Foolish Mick. So there he was, the supposed rock 'n' roll rebel, trying to hold back his tears as he was taken away for a night or two in Lewes Prison. The poor, piss-weak bastard.

But I liked old Mick. Liked all the Rolling Stones, even that lunatic Brian Jones. The media liked to invent stories about the fierce competitiveness between the Beatles and the Rolling Stones, but in truth we were actually great friends, even backing each other vocally on various tracks. It *is* true, however, that Mick was in awe of *Sergeant Pepper* and slavishly tried to copy it with his psychedelic *Satanic Majesties Request*, one of the worst albums the Stones ever released. It was such a pathetic attempt to cash in on *Sergeant Pepper*, with its sound effects and vaudeville and touches of flower power and Maharishi mysticism – even the cover was a rip-off – that I felt like weeping for Mick, just as he'd wept when in handcuffs. Not that *that* stopped the album, with its multicolored 3-D sleeve and the Rolling Stones looking ridiculous in their wizard robes and hats, from gaining $2,000,00 in advance sales. That made for a lot of bitterly disappointed fans when they heard what they'd purchased. Not that Keith gave a shit. Only Mick, with his insatiable lust for money (his London School of Economics education), lost a lot of sleep over it.

Still we were friends. So much so that when Mick followed his *Sergeant Pepper* rip-off with an equally blatant *Magical Mystery Tour* rip-off, the chaotic TV Christmas special, *Rolling Stones Rock and Roll Circus*, I actually went along to the BBC studios in Wembley to lend a hand, swallowing my pride by letting myself be dressed up as a 'be-ruffed and stockinged juggler' (thank you, Philip Norman), with Yoko as a witch (how appropriate, some would say), and then singing 'Yer Blues', with Eric Clapton on lead guitar, Keith Richards on bass, Mitch (Jimmy Hendrix Experience) Mitchell on drums, and Yoko doing her usual nonsense in a black sack, before emerging

to scream ‘Whole Lotta Yoko’ while Ivry Gitlis accompanied her on violin and the rest of us just strummed our guitars. Eric Clapton, who secretly hated my beloved, was clearly not impressed.

But that was 1968. By 1969 the Summer of Love, with its kaftans and beads, its Mary Jane and LSD (and my very own ‘All You Need is Love’), had collapsed into its opposite, with Love & Peace being replaced by student riots in London and Paris, Berlin and Amsterdam, Los Angeles and Detroit and Washington, DC, leading to mass demos, burnings and looting, by way of protest against Vietnam and Czechoslovakia. In short, the Age of Aquarius, short-lived, was already over. Not that I was bothered. I mean, when the demonstrators looked to the likes of the Beatles and me personally for revolutionary anthems, all they got was, ‘You say you want a revolution… Well, you can count me out.’ That, see, was because I was too busy working for peace in my own way, with Yoko, having our notorious Bed-Ins and engaging in other, equally fucked-up examples of ‘living theatre’. Not that Mick J did much better, soon following up ‘Summer’s here and the time is right for fighting in the street, boy’ with his shameless cop-out: ‘but what can a poor boy do, ’cept to sing in a rock ‘n’ roll band?’ So much for us as revolutionary figureheads during the so-called Permissive Society of the Sixties.

But Yoko and me had our own agenda, with the beds and sacks and other idealistic shite, well aware that the tabloid press would swallow it wholesale. Looking back on it, I can see that from the moment, in January 1969, when Yoko and a heavily bearded me slipped furtively from a white Rolls-Royce into the Dorchester Hotel for a secret meeting with the notoriously untrustworthy Allen Klein, to confirm that he could manage me and George and Ringo, but not Paul (whose widely loved *Hey Jude* was actually an artfully-worded reprimand to me, both for so selfishly neglecting my son Julian [Jude] and for having taken up with the hated Yoko Ono. Think ‘Go out and get her.’)… Yeah, from that moment on, I let myself be guided, or possibly dominated, by Yoko. I did this because despite what I often said to the contrary, me mam, Julia, when alive, only lived a short distance from where I lived with Aunt Mimi and was always loving and caring, Aunt Mimi and her sisters were equally loving and caring, and I’d therefore become addicted to dominant but deeply caring women. And Yoko was both.

Ah, Yoko! Oh, Yoko! I can see you even now, Yoko. I can look into that

expanding light and let it take me into the Dakota Building and see you in your ever-expanding empire, adding at least another six apartments to our already block-length apartment, daily checking your collection of over three hundred fur coats in the refrigerated room we had specially built for them, then going into your also specially built Egyptian Room to caress with loving fingers your fabulous, and fabulously expensive, collection of ancient Egyptian artifacts, which you seriously believe have mystical and supernatural powers, or maybe wandering into the candlelit White Room to remember us renewing our wedding vows after you let me come back home after my eighteen-month Lost Weekend, or returning to the main living area to consult with your many maids, administrative assistants, tarot-card readers, psychics, masseurs, acupuncturists, decorators and odd-job people while listening to 'imagine no possessions' or 'Working Class Hero' booming out of the state-of-the-art speakers, and then sitting down at your gold-inlaid desk under the *trompe l'oeil* ceiling to consider the purchase of even more apartments or properties elsewhere, particularly in tax-free havens, or to consider various shares or possible business mergers, the good and the bad, the reliable and the dodgy, or to examine the state of the now awesomely vast and complicated Beatles finances, which you fully understand, and over much of which you now have control. Oh, Yoko, Yoko Ono, my Yoko, you're surely still a gal in a million and I love you and always will.

What needs to be understood about Yoko is that she was born and raised as the daughter of wealthy, widely travelled, multilingual Japanese intellectuals, that she enjoyed a life of extraordinary privilege and luxury, that even when she was a child, servants had to approach her on their knees and depart backward on their knees, so she grew up with an unshakeable sense of entitlement. But during the Second World War, when Tokyo was bombed, her family home was destroyed, and her father was interned in a Chinese concentration camp, her former life of luxury was turned overnight into a life of desperate hardship, when she had to learn to survive in the ruins while looking after her younger brother and sister, which meant giving instructions and never taking 'no' for an answer. So years later, when she instructed me to bake bread, change our new baby Sean's shitty nappies, become a househusband, fly around the world to 'find' myself, or even have an affair with our secretary, Mai Pang, she did it with such quiet, steely authority, I was no better than one of those servants advancing and retreating on their

knees. Scared shitless, I did what I was told.

She certainly liked giving instructions. I mean, way back in 1964, even before her avant-garde fame in Greenwich Village, she'd published *Grapefruit*, a short book of haiku-styled poems that instructed the reader to perform various weird tasks, such as 'Draw a map to get lost.' Or 'Steal the moon on the water with a bucket. Keep stealing until no moon is seen on the water.' I loved that little book. It was just like my own two little books. So in the Dakota Building, when Yoko set me similar, sometimes mystifying tasks, I always tried to work out just what she meant by them and how, once understanding them, to perform them. She sure kept me busy that way.

I still can't quite believe what she persuaded me to do over our years together.

First, in April 1969, with Yoko's permission, I changed my middle name, Winston, to 'Ono', insisted that from now on my name and Yoko's would be joined and we'd be known as 'JohnandYoko', and then recorded the rock song, 'The Ballad of John and Yoko', ironically accompanied, both musically and vocally, by only Paul McC, who by that time simply couldn't stand Yoko.

Next: Yoko's *Film No.5*. This was a high-speed film in which I was instructed to smile for three minutes while sending out 'good vibrations'. When played back at normal speed, the film lasted for an hour and a half, as did my manic smile and supposed good vibrations. According to Yoko: 'People in five hundred years' time will watch it and just feel the vibrations.'

Yeah, right. And that was just the beginning. We released the recording of the experimental 'music' we'd made during our first night together in Kenwood, calling the album *Unfinished Music No 1: Two Virgins* and used a photo of both of us standing naked on the cover, albeit with our backs turned to the camera, though our flabby arses were certainly well displayed. We performed as part of the *Alchemical Wedding* event at the Royal Albert Hall, though both of us were only to be seen writhing frantically in one of Yoko's beloved sacks. We put out another avant-garde album, *Life With The Lions* (mainly Yoko's vocalising and my feedback guitar) and used the recording of the dying heartbeats of our unborn baby, John Ono Lennon II, on one of the tracks, followed by two minutes of reverential silence. When finally agreeing to get married, we tried to engage the services of the Archbishop of Canterbury, but he claimed to be too busy with previous engagements, so we

settled for the British Consul in Gibraltar and were married wearing only white and in tennis shoes. For our honeymoon, we had our Bed-In, spending ten hours every day for seven days in a double bed in the Amsterdam Hilton, both wearing white pyjamas, discussing with the invited media the ongoing war between Nigeria and Biafra, the escalating war in Vietnam, the benefits of peace and pacifism, and the need for people to stay in bed and grow their hair (my hair and beard were long at the time) instead of becoming involved in violence. 'Hair is nice,' I informed them. 'Hair is peaceful.' At the premier of our film *Rape* we appeared again in a sack; when asked by a journalist if it was really us in the sack, I identified myself by singing 'Maggie May' while Yoko warbled Japanese folk songs. At a press conference at Heathrow Airport, we announced our 'Acorns for Peace' campaign, which would entail the sending of one hundred acorns to one hundred world leaders to 'plant for peace'. Professing solidarity with the working classes, we sent a bouquet of red roses and a £5,000 cheque to the striking Clydeside shipworkers, but then, needing a house to live in, we purchased Tittenhurst Park, a white Georgian mansion in seventy-four acres of ground, including a row of former servants' cottages and a mock-Tudor villa, located near posh Ascot, Berkshire. Refused entry to America because of my British drugs bust and our FBI listing as 'dangerous subversives,' we went instead to Montreal where we staged another Bed-In, this one for ten days instead of seven, regaling the panting media with more homilies about peace and then recording, in our bedroom in the Queen Elizabeth Hotel, with a chanting chorus composed of counter-culture celebrities, 'Give Peace a Chance', which was the first performance credited to the Plastic Ono Band, though the songwriting credit still went to Lennon-McCartney. Following *Rape*, we made another film, *Self-Portrait*, which lasted for fifteen minutes and showed me achieving a slow erection. Together, we went off cocaine, went on to methadone, then went cold turkey, thus enabling me to write the song, 'Cold Turkey', based on personal, horrible experience, first performing it live at the official Plastic Ono Band gig, along with Eric Clapton, Klaus Voorman and Andy White at the Rock 'n' Roll Revival Concert in Toronto. We performed again in a sack, wriggling most expressively, at Hyde Park Corner to protest the innocence of James Hanratty, hanged in 1962, and then we went together to the servants' entrance of Buckingham Palace to hand back my MBE as a protest against Britain's involvement in the Nigeria-Biafra conflict, against

Britain's support of America in Vietnam, and, as I succinctly put it, 'against "Cold Turkey" slipping down the charts.' We advertised peace by paying for billboards in most major Western cities to display our Christmas message: 'War Is Over – If You Want It – Happy Christmas, John and Yoko.' At the end of 1969, the true end of the Swinging Sixties, in the company of Tony Cox, his new wife, Melinda, and Yoko's daughter, Kyoto, we doused our cigarettes in the snow of Denmark, and cut off our hair to express our hope for a new beginning.

On January 16, 1970, the police raided the London Art Gallery, which was holding an exhibition of my mildly erotic lithographs. They confiscated eight of them on the grounds of obscenity. In response, Yoko and me wrote a new song, 'Instant Karma', and promoted it with an appearance on *Top of the Pops*, me singing while Yoko, wearing a white blindfold, knitted a scarf. The hair we'd cut in Denmark was donated to an auction to raise funds for the Black House community centre, headed by the black radical, Michael X. In March, Paul McC released his first solo album and a statement saying he'd left the group. In one of the many interviews he gave to promote the album, he said, on the one hand, that no one was to blame for the break-up of the Beatles, but then, on the other, he implied that my relationship with Yoko had been a major factor. I responded by saying, 'That old gang of mine was over the minute I met her.'

Round about that time Yoko and me became disciples of Arthur Janov's Primal Scream Therapy, believing it would help us with our 'unhappy, isolated childhoods'. (What would the loving Aunt Mimi have to say about *that*?) I couldn't really imagine what Primal Scream Therapy could do for Yoko who had, of course, been screaming (singing) for years; however, I used Janov's belief that nearly all neurotic behaviour stems from the 'traumas of childhood' as the basis for my own solo album, *John Lennon/Plastic Ono Band*, in which, in retrospect, my 'honesty' about my childhood traumas was actually a form of shameless self-pity (still whining, in 'Mother', about the loss of me mam after all these years), mixed up with extraordinary vanity (essentially telling my fans, in 'God', that the Beatles 'dream' was over and that they, dear friends, just had to carry on without me) and, yet again, in 'Working Class Hero', attempting to portray myself as a working class lad when in fact I'd had a pretty cushy, protected, middle-class childhood with Aunti Mimi. Nevertheless, despite my self-delusion, my singing on the album

was some of the most expressive I'd ever done.

I feel no self-pity now. Being dead has its advantages. As I drift in Nowhere Land, which makes me think of my song, 'Nowhere Man', I feel more serene than I've ever felt before and have no thought of turning back. To life. To my former existence. In that vale of doubt and fear. No, now I only want to go forward, into my Future Problematical, the World of Might Be, rather like Alice in Wonderland, even if of the male sex, which means I can't be Alice. But maybe I'm sexless now. I'm pretty sure I'm incorporeal. I'm not conscious of my body, of my limbs, but only of my being. But that dazzling light is expanding. It's approaching or I'm approaching. It's almost blinding, but I somehow can look into it and I think I see movement. Wavering dark lines. Maybe shadows. Maybe figures. No, I'm just imagining that. A little bit of wishful thinking. That light is playing tricks with my brain, so I have to focus my thoughts. Ask myself a few questions. For instance, where was my favourite place to live? No doubt about my answer at all. In the good old US of A…

Eventually given new visas by the US Immigration and Naturalization Service, in May 1970 we returned to New York where Yoko made two more films, *Up Your Legs Forever* (eighty interminable minutes of legs, male and female) and *Fly* (a fly crawls for what seems like forever over the body of a naked woman), both of which received only yawns from their audiences. Meanwhile, I gave my notorious *Rolling Stone* interview, in which I expressed my contempt for the Beatles and again flayed the flesh off my former best friend, Paul McC. Back in England, after a brief trip to Japan where Yoko managed a reconciliation with her estranged, filthy rich parents, we gave a lot of interviews to impoverished left-wing magazines like *Red Mole* and *Black Dwarf*, eagerly offering our embarrassingly idealistic views on everything from the Angry Brigade to radical leftist politics and Women's Liberation, with me lying through my teeth that I was actually working class (try telling *that* to devout middle-class Aunt Mimi) and insisting that what was needed was a worker's revolution. I then compounded the injury by releasing another Plastic Ono Band single, 'Power to the People', and describing it as 'a sort of guilt song', written because, although I was supposedly working class, I was also a rich man.

Having effected a reconciliation with her wealthy parents, Yoko, when not aligning herself with the working classes, was trying to track down her seven-

year old daughter Kyoko, who'd disappeared with Tony Cox and his wife, Melinda. As part of her campaign, she appeared again in a white sack at the Toronto Rock 'n' Roll Festival (released as the album, *Live Peace in Toronto*), but soon wriggled out of the sack to sing 'Don't Worry Kyoko', punctuated by unrelated screams of 'Britain murdered Hanratty!' Finally locating Tony and Melinda in Majorca, where the increasingly barmy couple were attending a meditation class, Yoko and me went to Kyoko's kindergarten school, spirited her out of the playground and took her back to our hotel, where she promptly became ill, possibly because of the tension engendered by her abduction. So we called a doctor, who alerted the police, who piled into our room to charge us with kidnapping and throw us into the clink for fourteen hours. Eventually, the deeply confused Kyoko was returned to Tony Cox pending a court judgement, the Palma court dropped all charges against me and Yoko, and then we gratefully returned to London… only to learn that Tony, Melinda and Kyoto had vanished again, defying a joint-custody agreement.

Now flitting between the UK and New York, we continued to give concerts, record benefit songs, such as 'God Save Oz' (the counter-culture magazine then being subjected to an Old Bailey obscenity trial), and produce disastrous albums like *Sometime in New York City*. In our recording studio in Tittenhurst, our far-from-working-class Georgian mansion, Yoko worked on her avant-garde double album, *Fly* (same title as her film) while I worked on *Imagine*, my first mainstream offering since leaving the Beatles. In July, while Tony Cox, through his lawyers, was taking legal action to establish custody over Kyoko, whereabouts still unknown, George Harrison invited me to take part in his epic fund-raising concert for Bangladesh, but I turned down his offer when he refused point-blank to allow Yoko to appear as well. In August, shortly after the paperback publication of Yoko's *Grapefruit* and after we'd both completed extensive interviews and book signings for it, we joined a London demonstration protesting the sentencing of the defendants in the *Oz* trial, then we took off for New York and never returned.

I didn't even bother to say goodbye to my son, Julian, still living with Cynthia, and didn't see him again for another three years.

The final years were pretty mundane. Even after I'd made more millions with the hugely successful *Imagine* (in which I sang of love and peace while viciously denigrating Paul McC in 'How Do You Sleep?') and we'd moved

from Greenwich Village into the prestigious Dakota Building on West 72nd Street, overlooking Central Park, we continued to involve ourselves in counter-culture politics, forming alliances with Yippie activists like Jerry Rubin and Abbie Hoffman, flirting dangerously with the Black Panthers, playing benefits for the 'oppressed' of America, black and white, writing political songs like Yoko's 'Sisters, Oh Sisters' and my 'Attica State' and 'Happy Christmas (War is Over)', while also involving ourselves in even more avant-garde exhibitions. However, between Yoko's constant battle to locate and gain custody of her daughter Kyoto, my constant battles to avoid being deported, and our growing awareness that we were under surveillance by the FBI because of our supposedly subversive political activities, exhaustion finally had its day and our attorney advised us to distance ourselves from our activist friends. So that's what we did. And that was the start of my more reclusive life in the Dakota Building.

It wasn't all easy. Before entirely terminating our relationship with Jerry Rubin, we went to his apartment to watch the Nixon-McGovern presidential elections on TV and I, being as high as a kite on drink and drugs, pulled one of the female guests into an adjoining room and proceeded to noisily have my way with her. Since the walls were thin, everyone, including Yoko, could hear what was going on and that began the rot in our relationship. Though we still had a lot in common artistically, the glow had gone off our sexual relationship. Nevertheless, we managed to continue on our non-too-merry way until, frustrated because Yoko wouldn't let me have my way with her, I started fucking our secretary Mai Pang, who was then acting as a production assistant for Yoko's latest album, *Approximately Infinite Universe*, and my latest mainstream album, *Mind Games*. Mai later insisted that Yoko had actually engineered the affair to get me out of the apartment, which she certainly succeeded in doing when she suggested that a 'trial separation' might be a good idea and that I should move to Los Angeles, taking Mai with me. By way of encouragement, Yoko released a new album, *Feeling the Space*, which she dedicated to 'the sisters who died in pain and sorrow and those who are now in prisons and in mental hospitals for being unable to survive in the male society.' Thus relegated to the brutish male society, I embarked on an eighteen-month alcohol-and-drug binge in Los Angeles, mostly ignoring the unfortunate Mai Pang in favour of me mates (the

relatively sane Klaus Voorman, the hard-drinking Harry Nilsson, the totally mad Keith Moon, the gun-toting Phil Spector) and humiliating her, just as I'd humiliated the sweet-natured Cynthia, by calling Yoko night and day, pitifully telling her that I wanted to come back home. Finally awarded permanent custody of her daughter, Kyoto, but still unable to find her, Yoko didn't want me back home making a nuisance of myself, so tried finding a new meaning to her life by investigating different kinds of religions and then, failing to find revelation, developed a keen interest in the business world and learnt how to invest our money wisely. Though she renewed old friendships with arty friends like the walking dead, Andy Warhol, she gradually lost interest in the art and music worlds, both of which had increasingly lost interest in her, and instead started investing my millions in priceless antiques and valuable properties. Meanwhile, now ignoring the working classes when not actually insulting them (restaurant waiters and waitresses and suchlike) I, in my new rock star drink-and-drugs lifestyle in the City of the Angels, was making guest appearances on other rock stars' albums and had conned Elton John into playing piano and singing the backing vocal on my latest single, 'Whatever Gets You Thru the Night', on the condition that I'd join him onstage during his next New York concert should my single reach Number One. Which it did. So, after throwing up with nerves in the backstage toilet of Madison Square Garden, I joined Elton onstage, where we performed three songs together to rapturous applause. That was my final stage appearance. However, Yoko was in the audience and came to see me backstage and, whammo, before you could blink, we were back together again. The unfortunate Mai Pang, like my once beloved Cynthia, was then rendered invisible.

So what's wrong with that?

In fact, everything was perfect after that. Though Yoko was over forty and had been told after her last miscarriage that she wouldn't be able to have any more children, she did indeed become pregnant and I cancelled everything to attend to her needs. Two days after my appeal against my deportation succeeded and the Judge instructed that my application for permanent resident status be renewed, Yoko, on my thirty-fifth birthday, gave birth by Caesarean section to our son, Sean Ono Lennon. Following through on her credo that 'our life is our art', Yoko then decided that we should both cease work as creative artists and that I should recreate myself as a 'househusband',

changing shitty nappies and baking bread, while she recreated herself as a business tycoon, investing my millions to make more millions. Naturally, while she was doing this, I was wearing my hair in a pigtail, baking the bread, reverting to my childhood by addressing Yoko as 'Mother', and lavishing upon baby Sean all the attention that I'd resolutely refused to lavish on my other son, Cynthia's son, Julian. This slavish devotion to domesticity may have been wise, since back in Britain rock stars like myself were being replaced by genuine working class heroes like The Sex Pistols; and another group, The Clash, had picked up where I'd left off with my anti-hero song, 'God' ('No more Elvis, no more Zimmerman'), with their '1977' lyrics: 'No Elvis, no Beatles, no Rolling Stones.' Ignoring them, Yoko added to her (our) financial investments with the purchase of farms and dairy livestock, plus artefacts from ancient Egypt, which encouraged her, for art's sake, to take us both on a trip to Egypt to see the pyramids. This visit, in turn, increased her interest in numerology, astrology and the Tarot, all of which she was convinced would help her as an empire-building businesswoman, though I still stuck to my humble tasks of baking bread, changing shitty nappies, feeding the cats, and having screaming tantrums when my sons, Sean, and the 11-year-old Julian, on one of his rare visits from England, annoyed me. Naturally, doing nothing creative, I gradually lost my creativity. Attempting to revive it without actually composing music or writing songs, I visited Andy Warhol some time in 1979, hoping to pick up hints on how to produce screen prints in his style, but, fascinated as I was, as usual, by Andy Pandy, he of the white hair and whiter face, I lost interest as soon as I left the studio. Eventually, however, after about five years of reclusive living, maybe stung by the increasing number of crazy press stories about me (I'd gone bald, I was wrecked by drugs, I was dying from some unmentionable disease) and certainly feeling fearful that I'd lost touch entirely, I decided to go back to the studio and make a new album. Naturally, by that time, I couldn't even conceive of doing it without the controlling Yoko, who now reminded me of Aunt Mimi, so we both recorded our separate tracks and put fourteen of them, alternating between me and Yoko, as she'd forcefully suggested we do, on my final album, *Double Fantasy*. It was not a huge success, either critically or commercially, until, when returning from the recording studio with the remix of Yoko's 'Walking on Thin Ice' and walking the short distance from our chauffeured limousine to the imposing Dakota Building, a so-called 'fan',

another shithead, stepped out of the shadows and I heard him call out ‘Mr. Lennon?’ and then he shot me four times and I was dead.

Being dead, my resurrection both critically and commercially, was practically guaranteed. Finally, being dead, especially having been assassinated, I sold a stunning amount of records, even beating Paul McC for a while, and was not only mourned all over the world, but also hailed as the true genius behind the Beatles. In truth, I couldn’t have planned it better. Paul *had* to be envious.

Now, here I am, in this strange twilight zone, dark yet not dark, slightly unreal, though not frightening, aware beyond doubt that I’m dead and about to move on to another place. To that hopefully beckoning light at the far end of that long, horizontal tunnel formed by walls of constantly shifting, cosmic darkness. So thanks, Mr Chapman.

Well, I’d always suspected I was going to be assassinated. There was that moment, for instance, during the making of *How I Won the War*, when I had to act as if I’d just been shot dead and became convinced that it was a prophetic moment. Then there was the well-known psychic who, just before the Beatles’ final American tour, sent me a letter telling me to be careful because he’d ‘sensed’ that I was going to be shot dead in America. I also recall that a friend and occasional mistress of mine, Sonny Freeman, Norwegian wife of Robert Freeman, the photographer who’d shot the group photo used on the cover of *With the Beatles*, told me that her dad, the mayor of Breslau, had too loudly declared his contempt for Hitler and been shot dead for his troubles. When Sonny told me this, I responded by confessing that I didn’t think I was going to live very long and that I’d often been shaken by the conviction that I was going to die by being shot. Then there was the time I was flipping through a magazine in Japan and came across a photo of Yoko’s great-grandfather, Zenjiro Yasuda, the Japanese Emperor’s de facto banker, and, amazed that he looked so much like me, told Yoko that it was me in a former life. Shocked, Yoko told me never to say that again – because Zenjiro had been assassinated. So, for years after, particularly when depressed, I told a lot of friends that I was convinced I was going to be shot dead. Which, as we all know, I was.

And now, here I am.

So, what, in the end, did it all amount to?

It could be said fairly, I believe, that the much despised ‘Jap’ and me were

the last of a dying breed: politicized pop stars. By the end of my life, the FBI had assembled about 280 pages on us, having taped and transcribed what me and Yoko had said during our numerous TV appearances, even placing our innocent friends under surveillance. This reached its highest point of lunacy in 1972 when the increasingly paranoid Richard Nixon, the man you wouldn't buy a used car from, started worrying that our support for his Democratic opponent, McGovern, might deny him a second term in the White House, and so unleashed the Feds against us in the hope of getting us arrested on drug charges. Naturally the Feds also had other grounds for anxiety. I had, for instance, released songs such as 'Give Peace a Chance' and 'Happy Xmas (War is Over)' which became the anthems for the anti-Vietnam war movement. With the break-up of the Beatles, my political attitudes hardened – naïvely as some would have it. First, after the atrocity of Bloody Sunday, I declared that given a choice between the British Army and the IRA, I'd side with the latter. I followed up on this outrageous statement by releasing my solo singles, 'Sunday Bloody Sunday' and 'Luck of the Irish'. To make matters worse in the eyes of the Feds, I started composing and releasing 'radical' songs, such as 'Power to the People', then picked up on 'subversive' feminism with songs like 'Woman is the Nigger of the World', which, though written and sang by me, was based on a comment made by Yoko. So both of us, despite all our nonsense, were right there in the thick of it.

So what did it all amount to, when it came to the likes of the Beatles and the Rolling Stones and Yoko Ono and me personally? Were our many contradictions, our great successes and dismal failures, our good and bad deeds, our generosity and greed, our high principles and hypocrisy, no more than a confirmation of the glamorous eccentricity of our celebrity and so-called genius? Could the word 'genius' even be applied at all? Frankly, I doubt it. I was called a 'genius' so many times I lost track of what the word actually meant. Yes, I was called a genius, me mate Paul McC was called a genius, and even Mick J, when not being accused of rock 'n' roll satanism, was occasionally called a genius. I mean, fuck it, we were *all* geniuses back then.

You want proof of our genius?

Well, me and Paul and George (Ringo had more sense) temporarily lost ourselves in the supposedly enlightening Indian mysticism of our 'giggling

guru', Maharishi Mahesh Yogi, later immortalized, when I got my senses back, as 'Sexy Sadie' in one of my more sardonic Beatles' songs. At approximately the same time, Mick J was not only, with his then squeeze, Marianne Faithfull, letting 'astrological data' dictate his every move, using the *I Ching Book of Changes* (think Yoko Ono), but also moving on from his obsession with fairies, goblins and elves, to a burgeoning interest in black magic, no doubt encouraged by the knowledge that the demented movie-maker, Kenneth Anger, a disciple of Britain's most notorious black magician, Aleister Crowley, also known as 'The Great Beast', had described him, Mick baby, as a contemporary Lucifer, with good old Keith Richards as his devil-buddy, Beelzebub. As for Keith, the lad himself, inspired by his tempestuous affair with the very beautiful but scary Anita Pallenberg (as Mailer would put it: 'crack that whip!'), he was fascinated by witchcraft and black magic, was convinced that Kenneth Anger possessed the powers of an evil sorcerer, or Magus, and was actually contemplating, with Anita, a 'pagan' marriage ceremony, conducted by – who else? – Mr Anger. No surprise, then, that the Stones' next single was 'Sympathy for the Devil'.

All geniuses. Oh, yeah? Well all I can say now, from a more mature stance, being dead and able to look back on my past sins with a little objectivity, is that if we were all geniuses, then 'genius' is not necessarily dependent on a great deal of intelligence, and that intelligence, even when it exists, can be easily thwarted.

Still, it was a life. When it wasn't bad, it was good; when it wasn't depressing, it was fun. And in the words of a Beatles' song, sung jointly by me and Paul: 'Everybody had a good year/Everybody had a hard time/Everybody had a wet dream/Everybody saw the sun shine.'

And there the sun shines again. The light at the end of that long, dark tunnel. The light that's gradually mesmerizing me and drawing me toward it, maybe to meet Julia, me mam, immortalised in song, and even Uncle George and Stu and my Future Problematical in an Alice in Wonderland world. And it doesn't frighten me at all. Indeed, it makes me feel serene. So I'm wondering if I really *will* find revelation when I enter that blinding light. I'm wondering what, or who, I'll find there when I finally get there. I mean… just…

Imagine!

Andy

1928 – 1987

I adored – I just simply adored – Elvis and Marlon and Norman and John. I first fell for Elvis when I saw him in that movie, *Flaming Star*, in which he played the half-breed Indian with a pistol holstered at his waist. For some reason, I kept viewing the weapon as an additional penis (not that Elvis really needed one, I'm sure), a sort of Norman Mailer Avenger, and I confess that the thought made me feel quite faint. Of course I've always been rather fragile, my face and hair white, my body slim, like death warmed up, as some would say, and this has made me seem irresistibly attractive to a wide variety of New York's more extreme sexual predators, none of whom I encouraged, I would assure you. It has to be admitted, though, that a lot of them practically lived and sometimes almost died in my loft studio, known as 'the Factory', then located on 47th Street, New York, which may explain why dear John Lennon, the former Beatle, unfortunately then lumbered with the dreaded Jap, seemed to lose his normal bombast, even acted rather nervous, when he came to the Factory to sit for his silkscreen portrait. He probably imagined, erroneously, that I wanted to fuck him or suck his normally inhibited working-class English cock, but I didn't, I swear it. I just loved his music.

Well, here I am, dead. There can be no doubt about it. I clearly remember lying in bed after the operation, feeling surprisingly fit and so glad that it was over, the pain gone at last, and actually feeling so upbeat that I watched television, which I loved more than life itself, and then getting straight back into my old routine of phoning up lots of friends from my bed, which I'd done for years anyway. I remember doing all that in the hospital ward, after learning from the TV that it was indeed a hospital that I was in, seeing myself on that flickering screen, my more real TV self, and then lying back, feeling

deeply satisfied, and falling into the first sound sleep I'd had for weeks and then waking up here, initially assuming that I was in the same ward at night, or in the depths of the morning, with the silence and darkness, though warmed by a very strange advancing, spreading light, and then realising that I was actually in the middle of Nowhere, just me, or my consciousness, and accepting that this had to be death and that I was now on the Other Side.

I've always believed in an Other Side because I've always been deeply religious, a regular churchgoer, despite what those who disapproved of me might have thought to the contrary.

It's nice to be dead. I always wanted to be dead. I always, secretly, felt dead inside and now that I'm actually dead, I feel at peace at last. Death does not have dominion. It's simply another state of being. I often said about death that I didn't believe in it because you're not around to know that it's happened. Well, it's happened and now I know about it and I don't mind it at all.

I know I'm not alone. I'm alone but not alone. I know that there are others all around me, out there, in the oddly living darkness, dark yet not dark, being illuminated by that expanding, brightening light that was, when I first became aware of it, a mere pinpoint of light, a flaring eye, at the end of a long, dark, womb-like tunnel, though it's either coming towards me or I'm moving towards it, so either way it's growing bigger, spreading out, taking over the darkness. I don't yet know just how long I've been dead or how long that light has been advancing, expanding as I move toward it or as it moves toward me, but I know that it's the light of revelation and that I've nothing to fear. Time will surely reveal all.

Meanwhile, my thoughts are teeming, spinning like atoms in the cosmos of my mind, taking me back to the past and forward into the future as if the present has no meaning, which it probably hasn't, because, once given its moment, the present instantly becomes the past. I believe this phenomenon is no accident. I believe it has a purpose. It's meant to keep me from feeling fearful of this unexpected new experience, this seeming Nowhere place where I am, by letting me relive my life as if I'm still alive. It's designed to keep me from returning to the fears of my Earthly life. But in real life I talked a lot to myself, so why not do it now?

I was always the nervous type. Talked a lot to myself. I mean, I had three nervous breakdowns when I was a child in Pittsburgh, Pennsylvania, one at

eight, one at nine, one at ten. I don't think they were actual nervous breakdowns because I suffered from rheumatic fever leading to repeated attacks of Sydenham's chorea, or St Vitus' Dance. As this affects the movement of the face, feet and hands in the form of twitches and shakes, I might have thought I was having a nervous breakdown; it may also account for my pale face and blotched skin and, later, the loss of my hair. The attacks always started on the first day of summer vacation, though I never understood why. Maybe it was just the thought of being at home all day with my mom, even though, because I was bedridden so often, I bonded closely with her and later, in New York, insisted upon having her live with me, in a four-story Victorian house on Lexington and 89th, but maybe only to keep other women from having designs on me, which would have been embarrassing, given my sexual orientation. However, back there in Pennsylvania, during my childhood, my dad, Ondrej Warhola, spent a lot of time away, either in the coal mines or on business trips relating to them, so I never saw much of him and he rarely spoke to me when he *was* at home. Lonely and kinda girlish, I'd spend most of the summer listening to the radio and lying in bed with my cuddly Charlie McCarthy doll and my static cut-out dolls, which I never cut out (I didn't want to spoil the nice paper they were drawn on), scattered all over the bedspread and pillows. Sometimes my mother, Julia (same name as John Lennon's mom), would read to me, but her Czechoslovakian accent was so thick that I could rarely understand what she was saying and soon lost interest. I did, however, enjoy my *coloring* books, and every time I finished coloring in a page, my mom would reward me with a Hershey Bar. Because of this, I developed fantasies of having lots of candy and then I decided that I had to make lots of money in order to buy lots of candy. That's how ambition starts. Later, when I was rich and famous, I started buying more and more candy and eventually reached the stage where I always had lots of bags of candy in the kitchen and my living room and bedroom, no matter where I lived, so I could just dip into them when I wanted, which was most of the time. So I spent most of my adult life gobbling candy instead of healthy food. This probably did nothing to improve my unhealthy white pallor.

Anyway, apart from the candy, I don't remember much about my childhood at all. I know that I was the youngest of three brothers and that I had a sister who died in infancy in Czechoslovakia, before my parents moved to

America. I think I may have had a few friends in Oakland, or McKeesport, one or the other, I could never remember which, so I kept changing my mind (they rubbed shoulders after all), but most of the kids thought I was weird-looking (my deathly white, blotchy face) and weird (my girlishness), so they rarely invited me to join them in their fun and games. Yes, they thought me a mama's boy, a sissy, a *butterboy*, so they tried to avoid me. As for high school, the only thing I remember about it is how the walks to and from it were too long and took me through the depressing Czech ghetto (hemmed in by the German, Polish, Hungarian and Italian ghettoes) with its miners' overalls and babushkas flapping on the windblown clothes lines and the fires of the steel mills lighting up the evening skies, creating what looked like a hellish inferno, turning the rivers into an eerie orange color, just like some of my later paintings, and making me yearn to be somewhere else: a world more glamorous and exciting, not painted perpetually in orange twilight.

Mmm, yes, indeed. Looking back on it from here, this painless land of the Dearly Departed, its darkness being dissolved by light, wasn't it fortuitous that I won a place in the Carnegie Institute of Technology where I majored in painting and design? Even better, while still there I worked part-time as a window dresser for a few department stores in Pittsburgh. My interest in fashion and advertising was probably kick-started when the manager of one of those stores asked me to go through his collection of *Vogue*, *Harper's Bazaar* and other, mostly European, fashion magazines to look for 'ideas' that would benefit his retail business. I don't think I ever came up with any ideas, but I was excited just looking at all the fashion pictures and advertisements in the magazines (excitedly jerking off over them) and started thinking about getting into that line of work. I was also addicted to collecting movie star pictures and perusing movie magazines, so between them and the fashion magazines, jerking off over all, I soon started fantasising about interacting with the glamorous, the famous and the idle rich for whom I felt no resentment. Which is probably why, at eighteen, in 1949, seven years after my dad died, leaving the family in poverty, the thoughtless creature, I left home and went off to New York. Once there, I dropped the 'a' from my name to make it sound more American. (Maybe that's why I named my avant-garde novel *a*.) The following year, 1950, I started wearing the first of my many straw-colored wigs and had my bulbous, bright-red nose, which I loathed, enhanced with plastic surgery. So even then I was well ahead of my time.

At one point, in New York, I lived with about seventeen different young people, a kind of art commune, in a basement on 103rd Street and Madison Avenue, but just as it had been at my previous schools, few of them befriended me or confided in me, because they thought I was odd. Not that I would have appreciated it, since by that time I had developed the notion that the few friends I had were giving me problems with their problems, so I didn't really want to listen to them. Also, I was busy from dawn to dusk, doing the rounds, trying to find a job, drawing half the night, scraping a few bucks here and there by designing greeting cards, drawing clothing and shoes for retail catalogues, or selling watercolors independently for very little cash. Alas, the sleazy apartment was filled with cockroaches and I'll never forget the humiliation I felt when, being interviewed by Caramel Snow at *Harper's Bazaar*, I unzipped my portfolio and a cockroach crawled out of it and down the leg of her desk. But that cockroach was a blessing in disguise, because Carol, when she saw my embarrassment, took pity on me and gave me my first real job. From that day on I worked constantly as a free-lance commercial artist for a wide variety of magazines, including *Harper's Bazaar*, *Vogue*, *Glamour*, even *The New Yorker*, as well as retail stores such as Tiffany & Co., immortalised in the lovely Truman Capote novel, *Breakfast at Tiffany's*, and Bergdorf Goodman, and Bonwit Tellor, eventually receiving the Art Directors Club Prize for the best advertising in the press. Given all that exposure, I soon gained the recognition I needed to have my first solo exhibition, *Andy Warhol: Fifteen Drawings Based on the Writings of Truman Capote*, held at the Hugo Gallery in Manhattan. I was on my way…

As I'm on my way right now. I don't know exactly where I am or precisely where I'm heading, but that light has been moving toward me for what seems like an eternity, or I've been moving toward it, also for what seems like an eternity, and as it's comes closer, or as I've moved closer to it, it's expanded to spread out in all directions, north and south, east and west, above and below, its tendrils lighting up the darkness, and it holds no fears for me whatsoever and, indeed, seems increasingly comforting, removing the kind of pitiful doubts and fears that often made me want to retreat from life on Earth.

So even when alive, I wasn't bothered by death. I certainly wasn't bothered when, in June 1968, after that demented woman shot me, the day before another demented soul shot dead Bobby Kennedy (I love name dropping), I

lay in the hospital bed just before the operation, virtually comatose, and in my state of semi-consciousness heard the doctors around my bed agreeing that they thought I was a goner. And so although I survived and went back to my normal life, while becoming more reclusive and paranoid about security, I always considered myself, yes, possibly melodramatically, to be someone who'd *come back from the dead*. So death itself no longer concerned me. At least not in life. And now that I'm no longer alive, I'm not bothered by anything.

Yet I keep thinking of the past. I keep reliving my life. I can travel through it in two directions, or dimensions, from the past to the future, though right now I prefer to see it as it occurred, in its chronological order. Mmm, yes, right now I'm recollecting those early days in New York City when I, a relatively uneducated child of the immigrant working classes, the steel mills and orange rivers, the Czechoslovakian parents who could barely speak English, hopelessly effeminate and socially ignorant, first took a deep breath and inhaled the heady air of success…

Leaving the shared apartment on 103rd Street, I moved into my own place, located in a five-floor walk-up under the El on East 75th Street, right on top of Shirley's Pin-Up Bar. My apartment was on the fifth floor, but I was making good money by then, so when the second-floor apartment became available, I took that as well. By that time I was convinced that I was starting to have problems because of the problems of the few friends I had, most of whom talked endlessly about their problems, this being a very New York City thing to do, so I started seeing a psychiatrist in Greenwich Village. He was a problematical man who really didn't solve my problems and that really gave me something of a problem. Then I bought a TV set for the apartment and fell in love with it and left it on all the time and that enabled me to stop seeing the psychiatrist because it solved all my problems. Realising how beneficial TV could be, I soon had four sets, all in the same room, all switched on at the same time to different channels, and I'm sure they kept me on an even keel. In fact, I could no longer imagine life *without* TV and often felt that I was actually *on* TV. Even years later, when I was shot and nearly killed by that ungrateful woman, Valerie Solanas, the instant she fired the gun I felt that I was on TV, watching myself being shot on TV. And when I woke up the next day in hospital, not initially knowing where I was, I heard

someone talking excitedly about thousands of people gathering in St. Patrick's Cathedral because Bobby Kennedy had just been shot as well. And then I realised that I wasn't actually on TV, though I was back in the television world, there being a TV set fixed to the wall of the ward I was lying in. So TV has always been important to me. Possibly more 'real' to me than my real life, which at that time could be summed up in one word:

Success.

I should have done a silkscreen painting called *Success*. Beginning in 1954, I received a Certificate of Excellence from the American Institute of Graphic Arts, had another solo exhibition at the Loft Gallery in New York, utilized my fascination with the rich and famous by creating collages of gold-leaf shoes with details that represented famous personalities (I even designed a pair of shoes for my adored Elvis Presley), then embarked on a world tour and ended up, back in NYC, with another solo exhibition at the prestigious Bodley Gallery in Manhattan. I was no longer merely on my way. I had actually *made it*.

Some time in 1960 I decided to try my hand at fine arts and some of my first efforts were comic strip characters painted in oil. Then, shock, horror, I found out that another New York artist, Roy Lichtenstein, was doing the same thing but with better results, so I promptly abandoned that line of work and went back to paintings that were strongly influenced by mass production techniques. The following year, five of my more commercial paintings were hung as a backdrop in a window display at the Bonwit Teller department store, and by 1962 I was already well into my experimentation with screen-printing techniques, producing the Campbell's Soup cans, the *Do-It-Yourself Paintings*, the Elvis Presley and Marilyn Monroe silk-screen portraits, and the even more controversial *Disasters*.

Mmm, yes, the *Disasters*. An interesting collection. Now, being dead, I can appreciate that even way back then, even long before the shooting and my first flirtation with actual death, I was subconsciously obsessed with the subject and trying to deal with it in my own modest way. Watching countless hours of television, sometimes three or four different stations on different TV sets simultaneously, I was constantly bombarded not only with trivia, but with the kind of obscene violence that television itself had made all of us numb to. That violence led to death. It *always* led to death. And so I changed my technique, from hand-made silkscreens to photographic screen printing,

to create works of art out of instruments of violence, such as electric chairs, guns, the atom bomb, and violent events, such as automobile accidents, plane crashes, and race riots. Often derived from illustrated newspaper articles and reproduced with oil paints on canvas to create weirdly colored and juxtaposed images, sometimes repeated many times within the one frame, they had a nightmarish quality appropriate to the ghoulish subject matter. For instance, in my *Five Deaths On Orange* (1963) I joined my recollections of the orange rivers and skies of Pittsburgh to the gruesome realities of automobile accidents to create an image that shocked the art world and, in so doing, made me another potful of money. But that was me trying to be serious. Less seriously, I simply wanted to meet the rich and the famous, the celebrities of our age, and just, as a child, I'd wanted to make money to buy candy, so, as an adult, I went out to find the fame that would gain me entry to what my dear friend Norman Mailer described as the Harbors of the Moon, by which I think he meant wealth and power, though with Norman you just never knew…

No matter. Making potfuls of money at a relatively young age, I rented a huge loft studio on the top floor of a building on East 47th Street and Third Avenue, had my photographic assistant, Billy Name, cover its walls and roof with aluminium foil and metallic silver paint, as he'd done with his own apartment, and named it 'the Factory' because, although we were producing art, it was mass-produced art. After changing my straw-colored wig for a platinum-blonde wig, to make myself more exotic, I hired people to share the work load and some of them actually lived there in the loft, like the whip-wielding Gerard Malanga, one of my first painting assistants and a regular performer in some of my early underground movies, such as *Vinyl* and *Kiss*; and Fred Hughes, who shared a desk with Gerard and would eventually become the manager of my art career. So they and others were often there night and day, Fred doing the books, Gerard acting as my whip-wielding assistant, and we had the delectable Maria Callas blaring out over the amplifiers while we worked, stretching canvases, spray-painting, creating my Pop Art statements, shooting my feature-length 16mm underground movies (blown up to 35mm for theatrical release), letting the rock group, Velvet Underground, rehearse there, competing with Maria Callas, and soon, given my open-door policy, we were receiving lots of famous visitors, like Jack

Kerouac, Alan Ginsberg, Barnett Newman, Peter Fonda and Dennis Hopper (both then on a roll because of *Easy Rider*) and the Rolling Stones and even Judy Garland. I loved Judy Garland. All the gays loved Judy. And apart from famous people, we were also visited by counterculture and subculture figures, potheads and acid droppers and transvestites and S&M fetishists and, by way of contrast, the sort of rich women who could afford to go slumming in shockingly expensive 'Pop' clothes bought from boutiques like Paraphernalia or designers like Tiger Morse.

I loved Tiger almost as much as I loved Judy. Tiger would purchase a psychedelic dress from Klein's and May's for two dollars, tear off the ribbon and flower, and sell it for four hundred dollars. She'd buy a piece from Woolworth's and paste or stitch something onto it and sell it for a small fortune. Tiger was a true inspiration to me. She taught me that if you were bold enough, you could sell anything to men and women desperate to be seen as fashionable. So I started selling my art works the same way, but mainly focusing on the very rich who were always desperate to be seen as being at the forefront of all things fashionable. Doing that made me very rich indeed. I tabbed it as Business Art. I mean, Art is Art and Business is Business, but put the two together and you get Business Art and that's what I loved most of all.

It was widely believed that the Factory, perhaps because of its silver walls and roof, which ensured that it didn't look like anyone else's studio and gave it a rather decadent appearance, was a den of iniquity, with degenerates openly having degenerate sex on every couch, addicts openly shooting up, and drag queens and venomous queers verbally abusing any remotely 'straight' person in sight. This was far from being the case. In fact, apart from the widespread use of amphetamines, the S&M outfits (all that black leather, latex and steel studding), and the frequent displays of high camp, often from people who normally lived in the toilets of Times Square, it was really quite an innocuous place with prominently displayed signs saying NO LOITERING (I'm not sure exactly what I meant by that) and NO DRUG TAKING (in case the police turned up). The silver Factory did, of course, have what Billy Name described as a 'spooky glamor' to it and that probably accounted for its undeserved notoriety, eventually turning it into one of the trendiest gathering places for the 'in' crowd and the centre of New York's cultural world.

I never gave parties myself, but other people did, having their parties in the

Factory with my permission. I let certain friends do this because they always brought famous or interesting people and that was my bag. Some time in 1965, Lester Persky gave a party at the Factory for what he boldly publicized as 'the fifty most beautiful people.' He might have done it to celebrate the fact that he was producing his first Hollywood film, *Boom*!, based on Tennessee Williams' *The Milk Train Doesn't Stop Here Anymore*, starring the world's most famous and beautiful couple, Elizabeth Taylor and Richard Burton. I don't remember all the guests, but as one of them, Billy Name, said: 'After Rudolf Nureyev, William S. Burroughs, Allen Ginsberg, Tennessee Williams, and Judy Garland showed up, people stopped counting.'

Naturally, this open-door policy also brought in some dangerous nutters, such as Valerie Solanas, a woman who'd authored the *S. C. U. M.* (Society to Cut Up Men) *Manifesto*, a nutty feminist attack on males (men are SCUM, geddit?), and had a brief appearance in one of my underground movies, *I, a Man*, and so, feeling outraged because she'd been turned away from the Factory after asking for the return of a film script that she'd given to me and I'd lost, came storming into my office in June 1968 and shot me, nearly killing me, while I sat at my desk minding my own business. I wouldn't have minded so much if I'd gained something from it, such as *Life* putting me on their cover, which they were planning to do, but Bobby Kennedy was shot dead the next day, while I was being treated in hospital, so *Life* put him on the cover instead, relegating me to the inside pages. Anyway, the only thing I ever did to that woman was give her a tiny window of opportunity regarding possible underground stardom, so her shooting of me was just another example of the kind of craziness that encircled the Factory. On the other hand, we had wonderful individuals like my 'superstars' Ondine and Viva and Ultra Violet and Candy Darling and Holly Woodlawn, Lou Reed and the other members of the Velvet Underground, and even Brigid Polk, wealthy daughter of the highly respectable Hearst Corporation chairman Richard Berlin and slumming superstar of my most successful movie, *Chelsea Girls*.

When I use the term 'superstar' I'm not talking about Hollywood stars, but about the offbeat people who'd come out of the woodwork at Max's or just dropped into the Factory hoping to get a part in one of the equally off-beat movies directed either by me or my assistant, later solo director, Paul Morrissey. In fact, Paul came into prominence with his solo effort, *Flesh*, which starred the Factory's handsome receptionist/bouncer, Joe Dallesandro,

as a male hustler whoring to raise money for his girlfriend's abortion. Those were the kind of movies we liked to make up there in the Factory.

There's no doubt, however, that the Factory, in particular, maybe because of its silver walls and ceiling, which certainly looked bizarre, courtesy of amphetamine freak Billy Name, had a strange effect on some of those who either worked there or just came calling. There was, for instance, the hippie girl who deliberately locked herself into the lift for a week and refused to come out, so we all had to use the stairs for the week that she was in there and pass food into her through the iron grills and beg her every day to come out, but she just shook her head violently, indicating, 'No!', though not saying a word, and so we had to keep using the stairs and passing the food in to her until, lo and behold, one morning we found the lift door open and the girl had gone. We never found out who she was and she never came back. Not that anything changed when we moved to Union Square. People continued to come and go and then disappear without saying goodbye. Even, Billy Name, the amphetamine-driven photographer who'd been responsible for the silver look of the 47th Street Factory decided, in late '68, to retreat from the daytime activities of the Factory and instead spend all his time in the darkroom he'd set up at the back of the loft. He stayed there for months, emerging only at night when everyone else had gone home, only letting us know that he was still alive by the amount of fast-food containers we found in the trash can each morning. Naturally, we didn't interfere with him, and after nearly a year of this strange existence, he just upped in the middle of the night and disappeared for good, leaving a note saying, 'I am fine. Goodbye.' As for Paul Morrissey, he went on to make films like *Trash* (1970) and *Heat* (1971), then, in 1974, he went to Rome to make two movies for Carlo Ponti's production company, *Andy Warhol's Frankenstein* and *Andy Warhol's Dracula*, but when they were finished he stayed on in Rome and never returned to the Factory…

Thinking of Billy Name describing the Factory as having a 'spooky glamor' reminds me of where I am now, which is this kind of spooky Nowhere place, surrounded by curved, incorporeal walls of darkness that form this womb-like tunnel being gradually illuminated by expanding light. Though it has a 'spooky' atmosphere, it isn't actually frightening, which is, I suppose, kinda spooky because it should be frightening but isn't. I say the

tunnel, if it *is* a tunnel, is 'womb-like' because I *do* have the feeling that although I'm only alive here in my thoughts (I only *exist* in my thoughts) I'm somehow on the move, heading deeper into the light, being surrounded by the light, as if indeed I'm gradually emerging from the womb to be born again. Maybe that brightening light, which used to be only a pinprick in the darkness, then a flaring, judgmental eye, but is now spreading out all around me, or around my consciousness, is the daylight into which I'll be thrust when I'm actually born again. So maybe death, which I never feared, though I certainly feared hospitals, is just the moment between birth and rebirth, though that moment may last an eternity. Who's to know until they've been reborn? And that hasn't yet happened to me. And might never happen. And I'm not sure that I *want* it to happen. So right now, to avoid these complex issues, which might give me problems, I'll return to the only place where I ever felt really secure, that glorious madhouse known as the Factory…

People often imagine that I began and ended my career in the East 47th Street Factory, but apart from the addresses that I'd lived and worked in before it, there were a couple of places after it, notably the all white, mirrored loft that replaced the silver loft and took up the whole sixth floor of 33 Union Square West, virtually the dividing line between uptown and downtown, and then, after that, 860 Broadway. However, Union Square was probably my favourite, with its wonderful views of the park and the Con Edison tower, its clock face allowing us to see the time night and day, which was helpful to those of us who slept there as well as worked there. Also, I love shopping and Union Square was located conveniently close to the bargain shopping in 14th Street, as well as the West and East Villages and SoHo. A block away, on Park Avenue South, was Max's Kansas City, where I'd found so many of the odd-ball characters who ended up in my Factory movies and where, every night, celebrities of the art, fashion, music and underground filmmaking worlds crowded into the back room, where some of my art works hung on the walls. So naturally I was very fond of Max's.

It was when we moved, in the summer of '74, from Union Square to 860 Broadway, that I stopped calling the Factory 'the Factory' and instead renamed it, simply, 'the office'. Being more mature then, I felt that 'the Factory' sounded too corny and needed an uplift to respectability. Now, in retrospect, I believe a bit of the glamour went out of the business from that

point on and that we should have kept the old name, though the glamour, I think, was fading well before that. Maybe that's why, being still personally obsessed with glamour and bored with painting and making movies, I decided, in 1969, to start *Interview* magazine, later unblushingly renamed *Andy Warhol's Interview*.

I wanted the magazine to be totally about the movies, with the stars interviewing other stars and the resulting interviews unedited, the subjects allowed to say anything they wanted. Starting at Union Square West, the magazine had two rooms on the tenth floor, separated from the Factory by four floors, but when we moved to 860 Broadway it was located on the same floor as my office and painting area, though I never felt as close to the staff of the magazine as I did to the original Factory staff members. While thoroughly enjoying my personal supervision of the magazine, being addicted to the glamour of movie stars and other celebrities, I found myself addressing most of the magazine staff, with the exception of, say, executive editor Bob Colacello and socialite Catherine Guinness, both dear friends, as 'them' while referring to the Factory staff as 'we'. I never quite worked out why this was so. Nevertheless, by the 1970s, when the cost for making even my formerly cheap underground movies was becoming too prohibitive and I was making fewer every year, the magazine gave me a whole new direction, enabled me to meet a lot of creatively talented young people and thus keeping me feeling young myself. Indeed, if we occasionally ran short of movie stars, we were never short of beautiful young male and female wannabe stars who thought that by letting themselves be photographed for the magazine they might be noticed by Hollywood producers and end up in proper movies. So instead of telling them, 'We'll put you in a movie,' I started saying, 'We'll put you in the magazine.' As for older celebrities, particularly movie stars, who might express reluctance to appear in the magazine because they felt that they were visibly ageing, I'd persuade them to appear by telling them not to worry about their photographs because we retouched everyone over twenty. So, again, I was well ahead of my time. I was retouching before airbrushing was invented.

Bob Colacello had a lot to do with forming the magazine's apolitical and sexually androgynous image and, more important, introducing me to the many famous and wealthy people he knew, such as the collector Daniel J. Weitzman, Richard Brown Baker, Jean Tinguely, Andy and Ethel Scull and

the Tremaines of the Miller company in Meriden, Connecticut, who'd made a fortune manufacturing fluorescent lightings for elevators and airports. It was mainly Bob who obtained a lot of the portrait commissions I was given during that time and who was largely instrumental in steering me through my increasingly glamorous social life, which included classy parties attended by fellow 'New York' painters like Roy Lichenstein and Robert Rauschenberg. At one stage, when I was into films more than painting, Sam Green and I thought it might be a good idea to make movies purely as a means of social climbing. The whole point being to get into the apartments of wealthy art collectors. To avoid them thinking that we were just trying to get our foot in the door, we asked a lot of them, one after the other, if we could shoot part of our movie in their bathrooms. Being vain, they nearly always agreed. Once in their apartments I invariably found myself being fascinated by the furnishings of the rich: the Louis XV chairs and sofas, the baby grand pianos, the Noguchi coffee tables, the Matisses and Picassos and abstract expressionists side by side with my Campbell's soup cans, Brillo boxes and Coca-Cola bottles. When leaving, I always made a point of gushing to the owners of the apartments, 'Gee, you have the best bathroom I've ever seen.' The movie was going to be called *Soap Opera* but it was never finished and in fact, truth tell, I often didn't even bother to put film in the camera. Like I say, the point was to get into those exclusive apartments and it worked every time. Even Gloria Vanderbilt fell for it.

My biggest coup regarding *Interview* was probably getting the archly gay Truman Capote to write for us. When I first came to New York, way back in 1949, I already knew that Truman was a social power broker who knew everyone worth knowing and so I determined to make contact with him. In pursuit of this, I wrote him nearly every day for months, called him constantly on the phone, and even stood outside his apartment, until his mother said, 'Please stop calling here and stop pestering my son.' But I persevered, flooding him with notes covered in little watercolors of butterflies and angels, and eventually, when I was steadily gaining fame and notoriety and must have seemed, to Capote, to be an up-and-coming member of his beloved jet-set, he agreed to meet me and we became firm friends on the instant. I knew this for sure when, in 1966, he sent me an invitation to his legendary Black & White Ball in the Plaza Hotel, but I wasn't allowed to bring a partner, which for me would have been agony, so despite the fact that

it was going to be the most glamorous party of the year, I didn't go. Or maybe I did. I mean, I can't really remember. I went to so many parties in those days.

Of course Truman and I were very similar. We were both visibly gay. We both considered ourselves to be geniuses. We were both like spoilt children. We both liked getting our own way. We both could be charming one minute and bitchy the next. We both loved the company of other celebrities and liked being treated as stars. We both, when not fighting, which we did frequently, fed off each other's stardom, each making the other feel like a bigger star. We both considered ourselves to be living legends. So we had lots in common.

Truman's initial contribution to *Interview* was when he let me follow him around everywhere with my only 'Wife', my tape-recorder, to his psychiatrist, his dermatologist, his accountant, his editor, his masseur, his barber, constantly taping everything he said to them and, of course, said to me. My usual interviewing technique was to say very little to the interviewee, letting him or her ramble on without direction, and then suddenly say something really stupid, to throw the whole interview off balance, in a direction that could produce interesting, unexpected results. Truman, however, being just as much a control freak as I was, wouldn't play ball with this, so eventually I suggested that he write a year's worth of articles for us in return for two free portraits by me. As my portraits were then worth $25,000 each, Truman agreed. And apart from the free portraits, I had to put him on the cover of the magazine.

I produced the two silkscreens. Both had white backgrounds, which was unusual for me. In one of them Truman was wearing a yellow fedora, in the other a red one. In both, his ageing face and blue eyes were highlighted and he was smoking a cigarette in the manner of the great Hollywood movie stars. When I put Truman on the cover of the magazine, he was so delighted that he asked for five hundred copies and wallpapered his spare room in his UN Plaza apartment with them. In return, he gave us some wonderful articles, particularly his novella-length *Handcarved Coffins* and his short Marilyn Monroe piece, which even in its brevity said more about Marilyn than did the whole of my darling Norman Mailer's bestselling book. Unfortunately, Truman was on pot and booze and cocaine at the time, repeatedly in and out of rehab, and he really was a monster to deal with, demanding this and that

and quick to scream like a spoilt child if he didn't get it. Being a great self-promoter, during the year he was writing for us he never failed to mention *Interview* and his articles for it, but when most of those articles were put together for his book, *Music for Chameleons*, published by Random House, and he went on a promotional tour for it, he never mentioned the magazine again and he never once came back to see me or even gave me a call.

Not that I didn't run into him, particularly at Studio 54, the mainly gay disco club that opened in 1977 and soon became notorious for its drugs and decadent sexuality. Most of my Factory team went there at one time or another. I went a lot. The majority of the barmen and busboys were gay and willing to have sex on the instant. Downstairs in the basement and upstairs in the balcony, people took their clothes off. Random fucking and sucking were normal practices, scarcely raising an eyebrow. Pounding music, spotlights and spinning fans. The celebrities would come in through the back door, then down the staircase behind the kitchen and into the basement. A kind of hellish basement with cement floors, cubicles, sperm-soiled banquettes, mattresses scattered carelessly on the floor for those who required them. Lots of pipes and oil burners and storerooms and cyclone-fenced cages and a bathroom where you couldn't take a piss without having your cock massaged. A dark and dangerous area called the Tunnel where the gang-bangs took place, either with volunteers or with the innocents who'd wandered in there by accident. Pot and cocaine and quaaludes and cigarettes laced with PCP. The ceiling right under the dance floor and the pounding music overhead, going boom, boom, boom without end. Truman went down there a lot. He made good use of the mattresses. He was this funny, pot-bellied, squeaking little man who didn't care about making himself look foolish when he got up and danced or made a pass. Someone told me that some Eurotrash princess had asked to be taken down to the basement and handcuffed to a pipe and fucked by a barman who then remembered that there was no one behind the bar, so rushed back upstairs, leaving her there, still handcuffed to the pipe. And not just princesses. Also film stars and rock stars and high-fashion stars like Yves Saint Laurent and Sao Schlumberger. Truman would be down there, wearing his black pyjamas, with me and Bob Colacello keeping him company until he eluded us and found someone to share a mattress with or pleasure him standing upright or let him pleasure them in any position. Truman really loved Studio 54 and so did I, but in the end it was Truman's

partying that killed him.

I didn't go to Truman's funeral. Bob Colacello went. I didn't go to Truman's funeral because I didn't go to funerals and my only concept of death, at that time, was that people didn't actually die: they just went uptown to Bloomingdale's and they never came back. They went shopping.

It was also Bob Colacello who got me my book contracts. For my first book, *The Philosophy of Andy Warhol (From A to B and Back Again)*, I simply talked to my beloved Wife, my tape-recorder, and then my dear friend and literary assistant, Pat Hackett, put most of my recorded words of wisdom into a coherent whole and edited the book to ensure that I came out of it looking idiosyncratically intelligent. Pat also worked on my next book, *Popism*, though this time I gave her a credit on the cover, her name right below my own, for which I hope she's eternally grateful.

At this time, I was still making the odd movie, though not very many. For instance, in 1976 Jed Johnson shot my surprisingly ambitious *Andy Warhol's Bad* in New York City, using a 35mm camera and, horror of horrors, a union crew. While most of the cast consisted of my own so-called 'superstars', such as Geraldine Smith of *Flesh*, the real thrill of the movie for me was being able to use Carroll Baker, a real Hollywood movie star who had so delighted me by playing a thumb-sucking Lolita in Elia Kazan's movie adaptation of Tennessee Williams' *Baby Doll*, delighted me again by playing a tramp who becomes a nun in the ravishingly awful movie adaptation of Harold Robbins' *The Carpetbaggers*, delighted me a third time by playing Hollywood star Jean Harlow in the cleverly named *Harlow*, and then slid downhill for years with movies like *The Sweet Body of Deborah* and *Orgasmo*, until, in her mid-forties, she delighted me for the fourth time by appearing in *Andy Warhol's Bad*. Surprisingly, despite performing in one of *my* movies, she went on to make more proper movies than I can count on both hands. A real trooper, was Carroll B. Maybe even the kind of girl I could have married…

Marriage? Who needs it? In the end, despite love and devotion, straight or gay, you just end up here, in this Nowhere that I don't know at all. I'm now surrounded by the light. It keeps the darkness at bay. I see the darkness beyond the light, curving over me and under me, but gradually fading as the light grows brighter and seems to take on a life of its own. Movement. Shifting shadows. Either shadows or silhouettes. Maybe others, like me, who physically died but are still alive in their separate worlds. They're there and

yet not there. I sense them rather than see them. Maybe lost friends and heroes, like my mom and my dad, and Elvis and *his* mom and dad, and John Lennon and *his* mom and dad, and even Edie Sedgwick and *her* mom and dad. Maybe even those who died after me, like Marlon and Norman, since the future, when you're dead, becomes the eternal present and lives side by side with the past. So maybe I'm about to be reunited with all of them, which *would* be nice, except my mom might start whining again about why I never got married.

So why didn't I?

People often imagined that I never got married because I was homosexual. I don't think it was that at all. More likely, it was because of my revulsion at the thought of having to regularly share my bed space with someone else and then, even worse, having to face their bad breath in the morning. Then, again, though my mom always told me not to worry about love, just make sure I got married, I didn't get married because I didn't want children, who would take up even more space than a wife and who, even worse, might inherit all the problems that I have. More realistically, perhaps I didn't get married because I was basically homosexual, though I often tried pretending to people that I was actually asexual.

Was I one hundred percent homosexual? I'm not so sure. I think my sexual nature was voyeuristic more than anything else. This may have started when my mother caught me masturbating while looking at Popeye cartoons and so, ever after, though I certainly had gay sexual relationships, I only felt really secure in sex when I was the watcher, not the one being watched, even if only being watched by the person I was having sex with. This is also why, before I stopped thinking of 'love' altogether, even when I felt strongly attracted to someone, or, God help me, felt that I was *in love* with them, I deliberately avoided having sexual relationships with them because I was convinced that loving someone without actually having sex with them made the relationship more exciting. On the other hand, being a normal human being, despite what many have said to the contrary, I needed sexual release now and then, but did it mostly through voyeurism, either by making my pornographic movies (*Blow Job*, *Taylor Mead's Ass*, *My Hustler*, *Lonesome Cowboys, Blue Movie*, also known as *Fuck*, or *Flesh*), by painting my sexually explicit paintings, by taking literally thousands of sexually explicit photos, almost exclusively of young men, sometimes kissing each other, often showing their cocks and

assholes, by doing drawings and taking Polaroid photos of friends' penises, or by giving impersonal blow jobs and having equally impersonal hand jobs by anyone available, though the younger the better, since I didn't like being reminded of my age by lovers my own age.

So thank God, if He exists, I don't have to worry any longer about age, or mortality, or living and dying, since I'm already as dead as people said I was when I was, at least as far as I knew, alive. Of course, they meant I was dead emotionally. They believed I wasn't quite human. I talked very little, offering, 'Mmm' and 'Yes' and 'No', and I often acted as if I was on another planet, hiding behind my dark glasses, putting my fingers to my pursed lips, as if in Deep Thought, even if my cameraman was shooting a fucking or sucking scene behind me and someone like Edie Sedwick was dancing flakily right beside me, and I behaved as if I hadn't even seen them, and that made my Grand Inquisitors uncomfortable. Maybe that's why I liked making movies. The actors did my living for me. They fucked and they sucked and they danced and they crooned and all I had to do was say, 'Shoot' and it all came alive for me. My voyeuristic impulses were given full expression as long as the camera rolled.

My pre-Paul Morrissey film, *Vinyl*, while being based shamelessly on Anthony Burgess' novel *A Clockwork Orange*, was also my attempt to remake *The Wild One* as gay soft-core porn in which the homo-erotic element in biker movies is made more explicit. It was described by its scriptwriter, the poet Ronald Tavel, as 'a series of sexualized cinematic tableaux, a voyeur's desire to freeze-frame the moment.' That voyeur was me. *Vinyl* was also notable for its use of S&M fetishes, beefcake and stylized violence, as well as for being the first movie to feature the sylph-like Edie Sedgwick, soon to be famous as the first of my underground film superstars.

I think it was Holland Cutter who described me as the first major postwar artist to put gay identity at the very centre of my work and, if true, I was certainly doing it well before Gay Liberation urged us to come 'out of the closet and into the streets'. Indeed, I did it at a time when the fear of homosexuality was second only to the fear of communism in America. So I was really a pioneer in that way. Pretty courageous, actually.

I would certainly consider my Pop celebrity portraits of the '60s – Elvis, Marlon, Marilyn, Liz – to be both voyeuristic and gay. I changed to less sexual images in the '70s when Pop Art was over, just as the Swinging

Sixties were over, and I started doing commissioned portraits of unstarry subjects, like gallery owner Harry Sullivan, art collector Ethel Scull, and as many of my wealthy patrons as asked to have their portraits painted by me. However, 'painted' was hardly the word for it. Instead of going straight to the easel, or the spray-painting floor, I would ask the subject to pose while I took about fifty or sixty Polaroid photos of him or her, using my Polaroid Big Shot camera. From all those shots I'd choose four or five and give them to a screen printer to be turned into positive images on 8-by-10-inch acetates. When I had the acetates, I'd choose one of them, crop it as I saw fit, then cosmetically alter it to make the subject appear as attractive as possible – trimming noses, enlarging or reducing lips, cleaning up blotchy skin or pimples, as I did when I erased the pimples from my self-portraits, and generally airbrushing before airbrushing became commonplace. (I also believed in low lights and plastic surgery.) This job completed to my satisfaction, I'd blow the doctored 8-by-10-inch image up to a 40-by-40-inch acetate and then get the screen printer to make it into a silkscreen. I'd then trace the image from the acetate onto a prepainted, flesh-colored canvas and paint in the colored areas of the facial features as well as the stand-out features of their clothing, if shown. When the silkscreen was ready, the detailed image would be lined up with the prepainted flesh-colored areas and the details of the photograph would be screened onto the canvas. The almost imperceptible contrast between the slight variations in the alignment of the image with the prepainted colors underneath was what gave my portraits their distinctive, 'shifting' appearance and made me a rich man.

Another innovation of mine was Oxidation Painting, or Piss Painting, as the technique became more commonly known. In this instance, the canvas would be prepared with copper paint and then oxidized with urine. At first I had a couple of special 'ghost pissers' who would be paid to come into the Factory to urinate on the canvases prepared with copper paint, but gradually I started using anyone who happened to be there at the time, particularly young men who I'd invited for lunch and deliberately encouraged to drink a lot of wine. One of the ghost pissers, Ronnie Cutrone, used to take Vitamin B and I noticed that when he pissed on the canvases, his urine turned the copper into an unusually pretty green color. Sometimes, if no one else was around when I needed urine for a canvas, I'd piss on it myself and later, by way of experiment, I tried the same technique, but used sperm instead of urine. Since

then, I've often thought that if the cops had arrived in the Factory when young men were pissing or masturbating on the canvas, they'd have arrested us for indecent exposure, not for drugs.

At one stage I decided to document a year in my life and asked *Mademoiselle* photographer David McCabe to follow me everywhere for that year and photograph me in all kinds of circumstances, at work and at play, but particularly when I was with famous people whose glamour might rub off on me. I picked David because he'd taken some great pictures of my superstar, Baby Jane Holzer, and also photographed me, using a fish-eye lens, which I'd never seen used before. So for the next year, David came running whenever I called him about some social event that I was going to attend and over the year he took a lot of pictures. Unfortunately, the more I looked at the pictures, the more I disliked my own appearance, as I'd always disliked it in the mirror, so in the end I used very few of his photos and instead documented my life by concentrating on the people I was with at any given time and taking pictures of them with my Polaroid camera. I then found that I could make myself look better when other people were taking pictures of me by keeping my eyes hidden permanently behind dark glasses, wearing them even when in bed, and putting two fingers to my lips as if deep in thought, even when my head was actually empty, and by generally looking enigmatic. All of this greatly enhanced my image as an eccentric artist.

Image is all important. I think without an image you're dead. I had my visual image, but I also had my personal image, which was a deliberately controlled mixture of naïvety, kindness, shyness, idiot savant, and softly-spoken, lethal bitchiness. Many considered me to be the King of Cool, particularly when I became even more withdrawn than normal, hardly moving at all, looking, in the words of David McCabe, 'like a waxwork of himself.' McCabe also described me as finally disappearing into my own 'immaculate image'. I rather liked that.

But am I that concerned with my image? Am I that extreme in my obsession with hiding the real me? Even now, being dead, wondering what lies ahead of me, I look back into my past, in a sense my living present, and am amazed at how far I would go in order to hide the real me. At one point I was so reluctant to expose myself that when I was scheduled to do a tour of colleges, showing one of my films and then answering questions from the students, I paid an extrovert friend, Alan Midgette, to impersonate me

throughout the whole tour. When I offered Alan half of the lecture fees, he agreed to my request, so Paul Morrissey and I sprayed his hair silver, put some talcum powder on top of that, then put a light Erase over his face, eyebrows, lips, nose, hands and arms, then made him wear my black leather jacket, the collar turned up, and dark glasses. Finally, we told him to chew gum a lot, which I always did. It worked. Alan, pretending to be me, completed the whole tour and had no problem in answering the students' questions, since he only had to respond with a whispery 'Yes' or a 'No' or a 'Maybe' as I was known to do when answering similar questions. The scam was nearly blown when Alan disembarked from a plane in Salt Lake City and a fierce wind blew the talcum powder off his silvered hair. But when a reporter, taping him in the back of a taxi en route to another college, saw all the stuff on his face, the talcum powder and the Erase, and asked what it was, Alan said, 'I have a skin condition.' And since I was known to have a skin condition, he got away with it. The scam was finally exposed when Alan was in Mexico, but I only learnt about it when I saw the stories in *Time* and *Newsweek*.

Friends and enemies have often also described me as being no more than a mirror, reflecting only what they want to see in me, whether real or imagined on their part. And I often responded by saying that if a mirror looks into a mirror, what is there to see? Certainly, when *I* look into a mirror, I see nothing at all. Or, at least, I only see the invented me, with my silvery-white wig and surgically enhanced nose (when I was younger they called me 'Andy the red-nosed Warhola) and, of course, the make-up I applied to cover up my deathly pale, horribly blotched skin. No wonder that as a boy and then an adolescent, I felt that I was nothing at all. So I had to reinvent myself to become something, which I think I did pretty well.

Because I was so diffident, even wan, I was often asked when, if ever, I 'turned on'. I always replied that I turned on when I turned off and went to bed. Going to bed was, for me, the most exciting moment of the day, maybe because I felt that second only to sex, which can be avoided by going to bed alone, the hardest work in life is simply being alive. Being alive, I decided, could also be avoided, albeit temporarily, by going to bed alone and sleeping soundly.

Well, I don't have to avoid being alive anymore because I'm dead and feeling at peace. I can only assume that I'm not bothered by being dead

because I always felt that life was nothing. When friends, shocked to hear me say this, would respond by insisting that life had to be something, a process of learning at least, learning more from one year to the next, I'd say they were only learning more of nothing and that made life even harder to live. Shocked again, they would then say that if I believed in nothing, what was I living for? 'For nothing,' I'd say. I might have also felt that life was nothing because I had no memory. Every day was a new day because I couldn't remember the day before. So maybe that's why I don't mind being dead. If life is nothing, then maybe death is something. I might soon find out.

I recall that people often complained that I went nowhere without an entourage, which I did, but it was only because I was so nervous at meeting new people, particularly if they were famous or glamorous or may have had a fixation about me, either romantic or sexual, that I brought my closest associates, or members of my staff, along with me as a form of protection. This enabled me to talk to my 'Mafia' when I didn't know what to say to the person I was supposed to be talking to. Likewise when I was travelling overseas. The people I took with me had to act as buffers between me and the alien culture I was being exposed to. Also, because I always felt that in foreign countries I'd go mad without good old American television, the people I travelled with had to keep me entertained and distracted. They also protected my space: the space between me and other people. I mean, it wasn't like grandstanding with real bodyguards. It wasn't even showing off, like Elvis used to do with his Memphis Mafia. It was simple survival.

Lots of space here, where I'm dead but still conscious. Nothing but space. Formerly a kind of dark space, but not really dark, just empty space above and below and on both sides, now a space filled with light. I like that. I always liked space. In fact, it's possible that I never really liked paintings because I liked space so much and felt that paintings just took up valuable space. So since I liked space and paintings stole space, how could I possibly like paintings? And, come to think of it, how did I get so involved with painting, instead of continuing as a hired-hand commercial artist for fashion magazines and advertising?

I can probably blame it all on Greenwich Village in New York. In the early 1940s – I think 1943 – Marlon Brando was sharing a Greenwich Village apartment with his sister Frannie, who was studying painting with local artists. As artists such as Franz Kline, Willem de Kooning, Barnett Newman

and Mark Rotho were beginning their careers in the Village, it was definitely the place to be, particularly the place to be provocative, which Marlon and Frannie were, both in their work and in their private lives. Later, in the mid-1950s, when Elvis was causing a sensation with his first black-sounding records, Kooning and Robert Motherwell were producing what many felt were violent and disturbing works of art (Elvis' records of the time were being received the same way), Jackson Pollock's 'drip' paintings were considered to be highly aggressive, even anti-art, and Mark Rotho's abstracts were viewed with similar outrage. At the same time, John Cage's strange aleatory compositions were gaining attention and, in the jazz clubs, Charlie Parker was playing on his saxophone notes so far removed from the original compositions that his audiences were both baffled and intrigued. In other words, the whole cultural and artistic world was changing. All of 'art' had become 'anti-art'.

Of course, music and art have always gone hand-in-hand, be it opera or jazz or rock 'n' roll. It was therefore no accident that we not only constantly played Maria Callas in the Factory, but also let the studio be used by the Velvet Underground, who would rehearse there even as we were working. The main contributors to the Velvet Underground were Lou Reed and John Cale, both of whom went on to adventurous solo careers, and the mysterious blonde German singer, Nico, who could have become one of my film superstars but instead became lead singer with the band. I let them rehearse there because I was also their manager, getting them their first recording contract and using them in my multimedia roadshow, *Exploding Plastic Inevitable*, which included 16mm color projections with colors created by me and which played for several months in New York, before touring throughout the US and Canada. For their first album, *The Velvet Underground and Nico*, I designed my famous Yellow Banana cover: a bright-yellow banana with 'Peel slowly and see' printed near a perforated tab which, if pulled open, revealed a pink, peeled banana beneath. While never a commercial success, the Velvet Underground went on to become one of the most influential groups in rock history, with their innovatory use of electric music, including dissonance, feedback and extended improvisations, not forgetting John Cale's piano and viola or Lou Reed's bold use of formerly taboo lyrical subject matter, such as the joys and horrors of drugs, the grim realities of life on the streets, and all forms of decadence. They were a group very much in keeping

with the ambiance and philosophy of the Factory.

The Yellow Banana wasn't my only rock music cover. In 1971 Mick Jagger commissioned me to design the logo for the Rolling Stones' new company, Rolling Stones Records, and made it perfectly clear that he expected me to emphasize his major importance to the company and within the actual group. This I did (naturally knowing which side my bread was buttered on) by producing a logo based on Jagger's fat lips, wide open and with his notorious tongue, painted blood-red like the lips, hanging out as if slavering, as reportedly Jagger was prone to do with his many women. (According to writer Philip Norman, Marianne Faithfull, one of Jagger's more famous conquests, found my painting 'particularly evocative'.) Indeed, so pleased was Jagger with my work that he also commissioned me to design the album sleeve for his new label's first album, *Sticky Fingers*, the front cover showing a denim-clad crotch, the cock slyly outlined, its fly a real zip fastener that could be opened to reveal, inside, my painting of Jagger's lascivious lips and tongue. I'm pleased to recall that my signature was clearly visible on the underpants in the notorious 'crotch' shot also used for the inner artwork.

I took the basic idea for the *Sticky Fingers* sleeve from my own silkscreen paintings of my beloved Marlon Brando in *The Wild One* (1954), in which he wore black leather and a cocked peaked hat, looking tough and tender at once, while bestriding his phallic motorcycle. I based my silkscreen, first painted in 1963, on that particular still because in it Marlon looks like a sex god and certainly, for me, that's what he was. Black leather is, of course, an explicitly gay form of dress and one which we, in the Factory, took to kinky extremes, such as when my protégé, Gerard Malanga, appeared with the Velvet Underground, wearing black leather and cracking a whip. However, Malanga, though beef-cake handsome, could never quite match Marlon who, in that particular silkscreen, is the very epitome of sexual availability, both challenging and beseeching, potential predator and preyed upon, seducer and seduced, and I yearned for him every second that I worked on that silkscreen, obsessively wondering what his cock looked like, imagining myself sucking it, imagining him sucking mine, and then having to relieve myself by engaging with one of my Lonesome Cowboys and sticking it in where the sun don't shine.

Oh, Marlon, what you did to me! You and Elvis together!

Dear Marlon. I *did* take a lot of my inspiration from him. Not only my

fantasies about having him fuck me, or at least gobble me with those wonderful lips of his, but also from his various comments over the years about his essential contempt for modern art. It was Marlon, after all, who said, 'There's no fucking culture in this country. The last great artist died maybe a hundred years ago. In *any* field.' And I have to say that I agree with that comment. He also said that there are no longer artists, only businessmen, merchants, and that although he thought Picasso could possibly be called an 'artist', even Picasso was purely commercial in the sense that he could draw the outline of an outhouse and give it to somebody and it would immediately be worth thousands of dollars. 'Because it's making a commentary on the obscenity of our standards.' In other words, even a Picasso sketch of an outhouse, valued then at thousands of dollars (it would now be worth millions) was really, in the words of Marlon, 'absolute trash, horseshit… just like a Guggi label. Yeah, it's just a label, a Picasso label.' And so, you know, I kind of took those comments of Marlon's to heart in my later years, taking comfort from them, realising that what I was doing with Heinz baked-bean tins or mass-produced silkscreen portraits of famous people, including Marilyn and Marlon and Elvis and John of the Beatles (though later, God help him, of Yoko), were just as valid in terms of contemporary art as anything by the pop-eyed Picasso. Maybe *that* was my genius.

My paintings of great numbers of Coca-Cola bottles were a good example. When people complained that they weren't fit subjects for works of art, I responded with a statement which, like my 'fifteen minutes of fame' statement, became almost iconic. 'What's great about this country,' I said, 'is that America started the tradition where the richest consumers buy essentially the same things as the poorest. You can be watching TV and see Coca-Cola, and you know that the President drinks Coca-Cola, Liz Taylor drinks Coca-Cola, and just think, *you* can drink Coca-Cola, too. A Coke is a Coke and no amount of money can get you a better Coke than the one the bum on the corner is drinking. All the Cokes are the same and all the Cokes are good. Liz Taylor knows it, the President knows it, the bum knows it, and you know it.' That was my defence of Pop Art and you really can't knock it.

I mean, it's not as if I was personally responsible for what became known as 'Pop Art'. Pop was actually a combination of fine art, advertising, publicity, movies, rock 'n' roll, and fashion, but the art of the early '60s developed from the autobiographical and emotional drives of the artists

practising Action Painting. In direct contrast to that, Pop Art utilized the essential neutrality of everyday consumer goods, the supermarket shelf, as it were, though the images weren't the actual objects, or 'ready mades', as found in Dadaism, but a reworking of them, greatly elaborated in dimension and color. Despite the fact that a lot of people still believe this was started by me, it actually began with Claes Oldenburg (b.1929), who blew up seemingly banal items into gigantic sizes, transforming items such as trowels, tubes of toothpaste, and clothes pegs into huge sculptors. He also created brightly painted plaster sculptures of desserts, cakes and pieces of meat, or hamburgers, and made models of hard, unyielding objects, such as light switches and typewriters, in soft, pliable materials. Reversing reality, as it were.

My own mass-produced 'commercial art', my insistence upon repetition, succeeded, I believe, in removing 'meaning' from images that were in themselves fairly dramatic. This was the case with the symbols of death and social struggle that I depicted in *Orange Disaster* (1963) and *Race Riot* (1964); the social 'meaning' of the paintings is reduced to the status of the merely decorative.

While I was busy annihilating the significance of my images, Roy Lichenstein (1923-1997) was doing the opposite: emphasizing the importance of an image by taking it out of its context and reproducing it on a large scale, thus elevating, for instance, a comic strip to the status of a work of art; and Tom Wesselman (b. 1931) was portraying his female nudes in commonplace environments, as if they, too, were consumer objects, lacking facial expression and recognizable only by their exaggerated erotic features.

In a similar existential (one of my dear friend Norman Mailer's favourite words) vein, the American sculptor, George Sigal (b. 1924) made plaster-cast models, taken from life, of people frozen in varied poses or in the act of carrying out routine tasks. Those figures, in their isolated stillness, seemed to convey modern man's alienation from daily life. I did pretty much the same, taking cultural items and reproducing them flatly and without emotion. I did the same with my films. When, for instance, I made my six-hour long film, *Sleep*, in 1964, containing only shots of a man sleeping, I was simply employing the narrative neutrality of Pop Art, but in terms of film even this wasn't original. In fact, this emphasizing of the dimension of time (or Time, as Norman would have it) had been done thirty years earlier by Fernand

Léger in his film, *24 Heures*, in which an anonymous couple were filmed for an entire day while carrying out their normal, extremely boring, activities. It was this 'boredom' that lay at the very heart of most of my films, notably in my eight-hour film of the Empire State Building at dusk, as it did, also, with the films made by Yoko Ono and John Lennon, both of whom shamelessly imitated me.

But why was I so despised in certain quarters as a 'commercial' artist? Aren't all artists commercial?

I remember being told that Robert Rauschenberg was once given the gift of a pastel from Willem de Kooning. With de Kooning's permission, he erased the pastel and then signed it 'Pastel by de Kooning erased by Robert Rauschenberg.' Then he sold it. My darling Norman Mailer wrote about this incident as: 'Rauschenberg was saying that the artist has the same right to print money as the financier. Money is nothing but authority imprinted upon emptiness.' And the same principle, I now accept, was the impetus for my belief that art is simply a commodity with a certain market value that has nothing whatsoever to do with the intrinsic value of the individual work of art itself. Thus, a painting of a can of baked beans, or of Marilyn or Elvis or Marlon, or my *Campbell's Soup Cans*, can have as much artistic value as a painting by de Kooning, Rauschenberg, or even Picasso.

Personally, speaking without prejudice, I think my *Double Marlon* was rather wonderful. Not that it was the first work I'd done on him. In fact, back in 1963 I'd done a single image on silver, described in the Christie's catalogue as a 'silver-backed altarpiece to cool', which I thought was pretty cool itself, but three years later, in 1966, I created the *Double Marlon*, using an image taken from his cult movie, *The Wild One*, with Marlon, leaning languidly on his motorcycle's handlebars, dressed in black leather for his role as a rebellious biker gang leader, shown at the right-hand edge of a vast, deliberately unprimed canvas. I picked that image quite deliberately, knowing that just as photos of Marlon as Stanley Kowalski in *A Streetcar Named Desire* had created a vogue amongst the young for plain white T-shirts, so too did the photos of him wearing his black leather jacket in *The Wild One* create another vogue for that kind of 'cool' clothing. Marlon, at that time, was indeed the very epitome of cool. No wonder I produced eight images of him in that single year of 1966.

Cool. Mmm, real cool.

Of course, the Elvis and Marlon silkscreen portraits were only two of the many that I did in my lifetime. There were also *Marilyn* and *Liz* (my dear friend Elizabeth Taylor), to name just a couple out of many. So many silkscreen portraits of the famous, the infamous and the unknown, all derived from newspaper cuttings, film stills and my own Polaroid pictures, that they constituted what one journalist described as 'an unrivalled gallery of modern portraits' and even led to me being hailed as 'the greatest portrait painter since Picasso.' (I was also hailed as the Pope of Pop.) While not about to stand on false modesty by denying such claims, I should make it clear that I was by no means a total original, but was indeed strongly influenced by the likes of Edgar Davis, who painted faces from 19th century photographs, and John Singer Sargent, whose portraits of society figures had all the glamour and sexuality of contemporary Pop Art. On the other hand, I can also state with pride that my own portrait work strongly influenced such modernists as David Hockney, Sam Taylor-Wood, and Gerhardt Richter. So no matter where I may be at this moment – dead, rest assured, but not certain of just *where* – I can look back with the confidence that my life was not in vain and that I earned my rightful place in the history of modern art.

I also made lots of money.

For instance, my *Double Marlon* sold at Sotheby's, New York, in 1983, for $32,521,000. Which is why I was often described, quite rightly, as a 'commercial' artist. (Just like my 'commercial' idol, Picasso.) And my *Eight Elvises* sold for even more: $100 million, which was described as a 'benchmark' price that only Jackson Pollock, Picasso, van Gogh, Renoir, Klimt and de Kooning have achieved. Even the Brillo boxes that I used for my show at the Stable gallery were initially priced at $300, sold for $50 and ended up going for $800,000. Which just proves that a painting's only real value is the financial value placed upon it.

I sometimes believe that my major contribution to art was in gaining enormous publicity for myself and, in so doing, bringing the kind of attention to the art world that would eventually turn artists into stars. And although I was often despised for this, my market value just rose and rose.

I likened my art works to my beloved Levi Strauss bluejeans, with that little pocket and little copper buttons, the best-looking pants ever designed by anybody. I couldn't live without my Levi Strauss bluejeans, which are, of

course, mass produced just like my art works.

What's so important about art, anyway? In my *Philosophy* book I stated that I liked money on the wall. By which I meant that if, say, you were going to buy a painting costing thousands of dollars, you should take that money, tie it up, and hang it on the wall instead of the painting you were planning to buy. So I now think of art as simply being money on the wall.

The only contemporary artist who received as much abuse as I did for being blatantly commercial was, I think, Salvador Dali. Naturally, before I met him, I thought Dali was wonderful. Then I met him. Knowing that Dali was widely considered to be a 'crass merchandiser of modernism' who was engaged in a 'cynical, shameless pursuit of money' who had, horror, horror, hired or licensed other horrible artists to forge his art, even signing sheets of paper for them to draw on and let him sell as his own – well, knowing all this I was dying to meet him and finally got to do so in his suite at the St. Regis Hotel in New York. Dali was then working on two enormous paintings. After greeting me at the door with, 'Welcome to my humble atelier for the fabrication of dollars,' he ordered up every gourmet snack he could think of from room service as well as numerous bottles of wine. He and I barely said a word to each other because the opera music blasting out of his amplifiers was so loud that we couldn't hear each other speak. Everything seemed chaotic and continued chaotically, not helped by a feral cat that Dali had picked up on the street and which, when not wriggling frantically in his hands and trying to viciously claw his famous, waxed-moustachioed face, kept leaping at and bouncing off the walls and, more dangerously, his two paintings-in-progress. I was shocked by all this. I didn't know what to do. Normally I only drink carrot juice or tea, accompanied with a snack of brownies, but now I found myself gulping glass after glass of white wine, without a single brownie to soak it up, and starting to feel distinctly odd. Dali kept shouting, trying to make himself heard above the thunderous opera music while wildly waving his walking stick over his head. He had an elaborate Inca headdress that he'd been using as a prop and he put it on me, which I found pretty frightening, then he stood melodramatically behind me and wildly waved his walking stick again while bawling incomprehensible words. I was petrified. Speechless. I was being exposed to Dali's Theatre of the Absurd and I was such a quiet, mild person. His wife Gala entered the room as if about to defend me, but Dali waved his walking stick at her in a demented, threatening

manner and she turned around and hurried out again. At some point during the hellish afternoon, he bawled the title of his latest masterpiece into my face, practically spitting at me, but when he saw that I just didn't get it, he scribbled it down on a piece of paper and thrust it into my hand. When I was finally set free and hurried home, near the point of collapse from unfamiliar drunkenness and nervous exhaustion, I avoided my watchful mother and scurried into my bedroom where I studied what my former hero had scribbled on the piece of paper he'd given me. The name of his latest masterpiece was: *Salvador Dali in the Act of Painting Gala in the Apotheosis of the Dollar, in Which One May Also Perceive to the Left Marcel Duchamp Disguised as Louis XIV, Behind a Curtain in the Style of Vermeer, Which is But the Invisible Though Monumental Face of the Hermes of Praxiteles*. Presumably the length of the title matched the breadth of the painting.

So that was Salvador Dali, the only painter more admired and reviled than me. Still, while I never defend myself against criticism, I have to confess that the criticisms hurt me so much I decided not to pass further comment, good or bad, on the work of my fellow artists. This soon evolved into not passing comment on anything. When asked what kind of art I liked, I'd say something like, 'Mmm, I love everything.' When asked about something serious, like, say, politics or religion, I'd say something like, 'Mmm, I don't know.' That seemed to me to cover all the bases…

The darkness had been defeated. I can see it beyond the light. It's out there, like a cloud wanting to weep rain, but it can't get back in. I'm now at the centre of a great bowl of light within which there is imperceptible movement, opening and closing flowers of blackness, like the Rorschach inkblots or paint drips of some of my paintings, and, again, those slightly shifting forms, those silhouettes, which may be the others who died and are now in their own worlds. This should be spooky and I should be afraid but inexplicably it seems perfectly natural. And I'm moving deeper into the light. It's like the light of the sun. I'm convinced that I'm emerging from that eternal, womb-like tunnel and approaching the light of revelation, my personal heaven or hell. And instead of being filled with wonder or terrified, I'm returning helplessly, reluctantly, to what I used to be and wondering why, when alive, when I was so successful and rich, I never felt comfortable with myself and always tried to hide that fact by keeping myself busy night and day. Mmm, yes…

I was always withdrawn; always reticent. Nevertheless, my reticence didn't prevent me from my rapturous socializing with the rich and famous. One of my favourites was Norman Mailer. I think I first met Norman in the Charles Theatre on Avenue B on the corner of Twelfth Street, way back in '61 or '62. At that time the Charles, basically run by Jonas Mekas, was the only viable place for the works of independent producers and directors: Patty Smith, Joseph Cornell, Kenneth Anger and, of course, me, since that's where I premiered the *Sleep* and *Eat* and *Kiss* series. A lot of the underground poets also attended the showings, including Ginsberg and McClure, and we'd all meet later in Stanley's bar, just across the road from the theatre. Ultra Violet, before she featured in my films, was then in Salvador Dali's entourage and the both of them were frequent visitors, as were Pop Art painters like Rauschenberg and Johns. I had, of course, met Norman before, both at the offices of *The Village Voice* and at various Greenwich Village parties, but I only really got to know him well when he became interested in making his own 'underground' movies and started mixing with the other people producing similar works. I think it was my concept of using friends, anybody who wasn't professional and therefore didn't have to be paid, that really influenced Norman the most and made him come up with movies that were, if I may say so, with all due modesty, really clones of Andy Warhol and Paul Morrissey films: no prior preparation, no script, just actors creating their own characters by being flung together (and often asked to fuck) in front of the cameras. A sort of amateur Stanislavski and/or Actors Studio method. My last directing job, however, was *The Chelsea Girls*, shot in 1966; after that, I left all of the directing to Paul Morrissey, who had a lower boredom threshold than my own.

By that time Norman was making his own 'home' movies and I thought they were wonderful failures. I mean, they didn't make any sense whatsoever, and I thought *that* was wonderful. But the individual movies were failures. I was, however, proud of the fact that Norman had been so strongly influenced by my work, saying: 'It was Warhol's talent to perceive that in every home movie there is a sense of Time trying to express itself as a new kind of creation, a palpability which breathes in the *being* of film. The best of works and some of the worst of film works have this quality.' Well, of course, I was proud that he said this, though I didn't have a clue what he was talking about. I did, however, appreciate Norman's use of the capital 'T' on

‘Time’ and felt, which I’m sure was Norman’s very intention, that the capitalized ‘T’ lent the word an apocalyptic importance. Still, his three hugely expensive ‘home’ movies, while failing in their intent, were, I felt, wonderful because they’d been so influenced by me. Norman’s problem, I believe, is that he thought filmmaking was easy and also thought, being so famous, that he was God and could do anything he wanted and get away with it. (We can blame his doting mother, Fanny, for this.) He was, however, wrong in believing that he could just throw actors, most of them untrained, in front of the cameras and everything would turn out just *so*. Alas, with *Maidstone* and even the two before it, that just didn’t happen. (I not only forget the titles of the films; I forget the actual *films*.) Why it didn’t happen, I can’t say. Perhaps it was the editing. Perhaps he was just too ambitious and used too many people. I *do* know that when I used only a couple of actors in my films, they always came out well, whereas when I used a relatively large cast, say about fifteen actors, it never worked at all, maybe because I, like Norman, lacked the ability to be a *proper* director and worked best when I simply had my cameraman point his camera at two people, a man and a woman, both preferably naked, and then I only had to whisper, ‘Roll it!’ Norman, being a rampaging egomaniac, almost certainly wouldn’t even have considered doing something that simple.

Mick Jagger was another favourite of mine, particularly because he so admired my *Sticky Fingers* album cover design. In 1977, Mick’s wife, Bianca, with her flowing gowns and flying-saucer hats, her dangling scarfs and ornamental canes, a model to the manor (*and* the manner) born, often dropped into the Factory, between ‘charity’ missions to places like Managua and Nicaragua (where she actually came from), looking ethereally, exotically beautiful, to do a bit of slumming with me and the many creative crazies who were always present. Though Jagger was already blatantly involved with another model by this time (Jerry Hall, blonde-haired and leggy and lively), he occasionally accompanied his unhappy wife on these visits and pretended to be vitally interested in what I was up to. He was, in fact, remarkably ignorant about it, as he was about most culture in general. Indeed, so much so that when he was compelled to share a table with Bianca and William Burroughs (novelist, homosexual, drug addict and possible psychopath), he innocently asked Burroughs if he was married, not knowing that Burroughs had killed his only wife (they had a sexually odd relationship) by accidentally

shooting her dead with a pistol when trying to shatter a glass of gin balanced on her head. The glass of gin didn't explode, but, alas, her head did.

John Lennon was another favourite. Though he came to the Factory once or twice to sit for his silkscreen portrait, we mostly met at social events, in art galleries, or in his and Yoko Ono's massive apartment in the eerily Gothic Dakota Building on West 72nd Street, overlooking Central Park. By the time they left England and came to live in New York they had already put out their egomaniacal 'unfinished music' tape-buzz LPs, *Two Virgins*, with both of them naked, Adam and Eve style, on the cover, and *Life With the Lions*, which commemorated Yoko's miscarriage of 1969. Following *The Wedding Album*, an extraordinarily boring narcissistic box set, they embarked upon their notorious 'Bed-Ins' and their worldwide crusade for peace. Once living in New York, with the world as yet unchanged, they involved themselves in the counterculture, in radical left-wing politics, and played concerts in which John sang blistering hard rock while Yoko wriggled about in sacks and burst eardrums with her avant-garde screaming. Becoming obsessed with Primal Scream Therapy, John recorded his confessional *John Lennon/Plastic Ono Band* album, which he thought was nakedly honest and I thought was shamelessly self-pitying. The album was a commercial disaster, but not being an artist capable of living with lost popularity, he put out his Utopian pop album, *Imagine*, which was a huge success, but then followed it with a disastrous collaboration between him, Yoko and the left-leaning rock band, Elephant's Memory, which I'm convinced was a clone of the Velvet Underground, the only difference being that John's 'political' lyrics were witless and naive, compared to the brilliance of Lou Reed's lyrics, and Nico's great singing was replaced by Yoko's demented screaming. Finally realising what side their bread was buttered on, John and Yoko then retreated from the counterculture and politics, John put out a few more so-so mainstream albums, neither of which had the success of *Imagine*, then both retreated into semi-retirement in the Dakota Building. Stories started circulating that while Yoko was turning herself into a hugely successful businesswoman, spending John's millions to make more millions, John had turned himself, at Yoko's urging, into a 'househusband' who baked bread and looked after baby Sean. I thought this odd in that when I visited them in their immense, luxurious apartment ('imagine no possessions') in the Dakota Building, I invariably

found John sitting up on his bed in his pyjamas (he and Yoko seemed to have separate bedrooms by that time), surrounded by his three cats and playing with various electronic toys while watching TV, leaving Sean to be looked after by his nanny, since Yoko was too busy making more money to do it herself. My feeling was that John had deliberately put out those stories about domestic bliss and his househusbandry because he knew that his last two albums had been relatively lacklustre and he was too frightened to either write or record anything else, let alone go back to his painting. It was a sad sight to see.

Nevertheless, I continued to see John and Yoko over the years, both inside and outside the Dakota Building. I remember that when I was having a meal at Ballato's restaurant with Peter Boyle and his wife, and John and Yoko, and my *Interview* editor, Catherine Guinness, the latter asked John for his autograph and he refused, saying he'd just read that Robert Redford refused to give autographs. (I think he meant Paul Newman.) However, a few weeks later he came to the office and when Catherine asked him again for his autograph, he picked up a newspaper picture of Paul McCartney and drew a moustache on it and then signed it and gave it to her, grinning mischievously. Not long after that, in some restaurant or other, a friend and I were having lunch when a man at the next table suddenly fell to the floor and started screaming dementedly, and then, when he reckoned we were suitably shocked, sat up, grinned mischievously, and said, 'Oye, can I have your autograph?' And it turned out to be my dear friend John Lennon. I also remember that I was with John one day when he was buying thousands of dollars worth of shirts and I felt really hurt because he didn't even offer me one. Finally, I remember that on Monday, December 8, 1980, I was attending Diana Vreeland's opening night Costume Institute dinner when someone came in and told us that John Lennon had been shot dead outside the Dakota building. No one could believe and I didn't believe it either until I got back home and saw it all on TV. Next day, the *Daily News* 'John Lennon Shot!' Collector's Edition included a feature entitled 'The Man Behind Andy Warhol' which I felt was a considerable reversal of the historical facts. The following day the newspapers were claiming that the man who killed John was a frustrated artist who had a Dali poster on his wall and was insisting that the devil had made him commit the murder. Meanwhile, hundreds of fans, many as sick as they were sympathetic, were holding a night-and-day vigil

outside the Dakota building, singing John Lennon songs and doubtless driving Yoko and young Sean mad. At the end of that week, I was in a cab with a black driver at the exact time we were supposed to be silent for a few minutes to remember John and pray for his soul. I don't pray. The black driver had a black music station on the radio. When the disc jockey said, 'We're up there with you, John,' the black driver laughed and said, 'Not me, baby, I'm stayin' right down here.' Then he turned to another station and the DJ on that station was *talking* about the silence.

After John's death, I continued to see Yoko, either running into her at some social gathering or gallery opening; or when invited to a dinner or party at the Dakota Building, by which time she'd definitively dropped her impoverished, sexless, counterculture image and had taken to beautiful make-up, Fendi furs and jewellery, Peretti diamond earrings, emerald rings with big embedded rubies, and glamorous wraparound dark glasses. She looked like a million dollars and was worth every dollar. Later, when I visited her in the Dakota Building, I was told that I had to leave my shoes in the hallway and I noticed that she had lots of pretty boys as waiters, that everything was very chic, and that she had a live-in boyfriend, Sam Havadtoy, formerly one of her many decorators. John's three cats were still in the apartment and Yoko told me that they hadn't purred since John died until she put on one of John's records, at which they started purring again.

In 1981 Yoko released her album, *Season of Glass* and one track, 'No No No', opened with the sound of gunshots and a blood-chilling scream. The cover was a picture of the blood-splattered glasses John Lennon was wearing when he was shot. Three years after John's death, Yoko had a sale at Sotheby's; the items she was selling included toilet paper that John Lennon had touched. Approximately three years later, she put on a stage show based on her life with John Lennon. While enacting the years 1980-81, she wore men's clothes and Reeboks when she should have been in furs and Armanis, as she actually was at the time. Shortly after seeing the show I found myself wondering what young Sean would have thought of all this. But continuing to see his mother, Yoko, socially, I eventually learnt that as John's widow she had appointed herself the guardian of his artistic heritage, that she had effectively become a voting member of the Beatles, and that she and Paul McCartney, who despised her, were now the joint curators of the Lennon/McCartney songwriting empire. For years after, she kept telling the

world that she rarely went out much, yet I kept running into her at gallery openings and parties and other upmarket functions, during which she was rarely to be seen in men's clothes or Reeboks.

Surprisingly, given my always packed social life, I often found it difficult to make conversation. My inclination was to respond to all statements with 'Mmm, yes,' or 'Mmm, no', followed by a wan smile that encouraged the recipient to keep talking and fill what might otherwise have been an embarrassing silence. In my experience, most people love to talk, so it was no real problem for me, except with someone like, say, Bob Dylan, who notoriously didn't talk much and was, like me, inclined to respond to all statements with, 'Mmm, yes,' or 'Mmm, no.' While I didn't know Dylan very well, we had mutual friends and he *did* visit me at least once in the Factory, having reluctantly agreed to come in for a screen test for one of my underground movies. I wasn't that keen on Dylan's work, actually, but I pretended to be a fan and he, in turn, pretended to be a fan of mine, though I believe he was more curious than admiring. Nevertheless, knowing that he was an Elvis fan (Elvis' version of 'Tomorrow Is A Long Time' was Dylan's all-time favourite cover of one of his own songs), I showed him my series of almost life-size portraits of Elvis, the silkscreens of him as a half-breed cowboy in *Flaming Star*, later renowned as the *Double Elvis* pictures. Though I was normally reluctant to give artwork away, when Dylan expressed enthusiasm for the Elvis silkscreens, I gave him one to take home with him.

Now, a lot of people assume that because so many people involved with me have died prematurely (suicides, drug overdoses, AIDS) and I have shown little emotion about this sorry fact, I lack sensitivity, but such is certainly not the case. I am very sensitive, indeed. *Very*. I just don't like to show it. So when I later heard, though a mutual friend, that once Dylan had taken my silkscreen home (tied to the roof of his station wagon), he told his wife Sara that he 'loathed' it and proved the point by, first, hanging it upside down for the amusement of his guests, and then, second, hiding it away in a closet – well, when I heard this I was cut to the quick, being the sensitive kind and easily wounded. Even worse was when Dylan then passed the silkscreen on to his manager, Albert Grossman, and his wife, Sally (the woman reclining on the chaise longue on the Daniel Kramer cover for Dylan's seminal *Bringing It All Back Home* album), actually swapping it for no more than one

of their sofas. I therefore hope that the little bastard threw up with shock when, later, Sally Grossman sold the silkscreen and received $270,000 for it. So fuck you, Bobby Zimmerman.

Naturally, I didn't invite him back to take part in my film. Particularly since he'd tried to make a move on my favourite superstar, the adorable (before she wrecked herself with drugs) Edie Sedgwick…

Ah, Edie, dear Edie, where are you now? Are you here, where I am, in this brightening Nowhere place with those shadows, or silhouettes, repeatedly appearing and dissolving and then reappearing, not forgetting the Rorschach inkblots and paint drips of my paintings, perhaps being recreated to make me feel at home… Mmm, yes…are you here, as I am, still not sure of where you are, but hoping to be reunited with those you left behind when you passed to the Other Side? Are we going to be reunited, you and I, and will you then attack me for my past sins regarding you? Am I here, in this expanding bowl of light, with those shadowy walls rising up on all sides, like ghostly high-rise buildings, to be judged and damned by you? Oh, dear, I sincerely hope not…

Thinking of Edie reminds me that I have also been accused of lacking sensitivity or normal human feelings, whatever they are, because of my so-called exploitation and subsequent neglect of Edie, so let me put this into perspective, if only to ease my own troubled soul. I remember writing somewhere that during the '60s people forgot what emotions were supposed to be and that's more or less what happened to me. I mean, it's possible that I was never really capable of love, but after the '60s, particularly after I was shot and nearly died, before I actually died, I never thought in terms of 'love' again. I did, however, remain fascinated by people, by their behaviour, and Edie, I think, fascinated me more than anyone else I'd ever known.

I first met her in early 1965 in Lester Persky's penthouse on East 59th Street, where she was dancing like an angel and looked like one. Slender, almost sylph-like, with legs that went on forever and huge dark eyes and full lips in a face of extraordinary delicacy and dyed silvery-white bobbed hair that almost made her look like the little sister I never had, so maybe I saw myself reflected in her. My superstar at the time, Baby Jane Holzer, was kinda running out of speed and Lester had said that I had to have a new superstar and that she simply *had* to be the twenty-two-year-old Edie. So

when Edie finished dancing and Lester introduced us and I saw her face up close, all I could think of to say, speaking sideways to Lester, was, 'Oh, she's so bee-you-ti-ful.' Edie and I were friends from that moment on.

Edie was a presence – a stoned presence, a constantly drugged, constantly smoking *presence*, impossible to ignore, with an almost magical inner luminosity. She was the classic 'poor little rich girl' who came from an aristocratic, deeply troubled family in Santa Barbara, California, including a handsome, highly sexed, coldly dominating father and two brothers who had both been in mental homes, before one of them hung himself and the other died after crashing his motorcycle into a wall, either by accident or, as Edie thought, deliberately as his own form of suicide. Edie herself had been in and out of mental hospitals and claimed that her handsome, highly sexed father had tried repeatedly to come on to her for as long as she could remember, that he'd always wanted to fuck her, though she always insisted that she'd never succumbed to him. Given my slavish worship of the idle rich, I was naturally in awe of her wealthy background and classy Cambridge education, but it soon became clear to me that despite my adoration of her, she was a deeply troubled child-woman, seductive one minute, cold or insulting the next, insatiable in her need for company, for attention (as I was), with a dangerously fragile grasp on reality, not helped by her addiction to alcohol and drugs. Nevertheless, I had to have her in my films. She was just irresistible.

She could rarely remember her lines, though she lit up the screen. When she made *Kitchen*, following her striking debut in *Vinyl* a month or so earlier, she was already having problems with reality and couldn't remember a single word. Finally, seeing that her memory was hopeless, I told her that if she forgot what she was supposed to say, she could just sneeze. So she sneezed a lot, practically sneezing her way through the whole picture. At one point, seeming to develop a toxic reaction to *any* kind of language, treating words like some kind of threatening virus, she solved her problem by turning on the malted machine, thus drowning out *all* the dialogue and forestalling any further conversation. And sneezing. She kept sneezing to avoid having to remember her lines. Naturally, the resultant film was an incomprehensible mess, not entirely due to Edie, but my dear, pretentious friend, Norman Mailer, when reviewing it, described it as an 'historic document', adding apocalyptically, as was his style: 'I suspect that a hundred years from now

people will look at *Kitchen* and say, “Yes, that is the way it was in the late fifties, early sixties in America. That’s why they had the war in Vietnam. That’s why the rivers were getting polluted. That’s why there was typological glut. That’s why the horror came down. That’s why the plague was on its way.” *Kitchen* shows that better than any other work of that time.’ Dear Norman. We’ll never see his like again.

Nevertheless, despite the mess that was *Kitchen*, Edie’s fame grew exponentially with each subsequent film and soon she was getting lots of the attention she so desperately craved. When not making movies in the Factory, she partied all day, pills from morning to night, meeting all kinds of people, gay and straight and downright decadent, but in the evenings she only went out with me, invariably wearing her black leotards, which soon became her trademark style, and gaining herself even more attention. Described as ‘the greatest of Andy Warhol’s superstars’ and ‘the silver-topped queen of the underground’, she became almost as famous as I was and started playing the part. When she met Mick Jagger at the Scene, wearing the cinnamon-colored Gernreich dress that she’d previously modelled, the media treated it like the Event of the Century and the spectators, mostly male, were so excited they came near to rioting. When we attended an opening at the Lincoln Centre, where the cameramen went crazy, I sat beside her with my head down, wearing my black leather jacket, acting shy while telling her what to do, whispering, ‘Stand up. move around, pose for them.’ And she absolutely loved it and ended up, at intermission, doing her extraordinarily languid free-form dancing, as elegant as a swan in water, no music, with the whole audience watching, entranced. When she appeared on my arm at the Warhol Philadelphia exhibition, the first survey of all my work, held at the Institute of Contemporary Art at the University of Pennsylvania, it was the biggest event ever to be held in Philadelphia, with lots of cameras and people at the preview, and in the crush the television lights began to fall into the paintings, tearing them, so we had to take the paintings off the wall and have the public opening, the following night, with no paintings at all, only people. Edie and I were mobbed. The institute was small and thousands of people were crammed into it. The people in the mob kept clawing desperately at us and we were forced back up a staircase that led up to a fake ceiling. The mob tried following us up and they were chanting repeatedly, ‘Edie and Andy! Edie and Andy!’ I was terrified. I was surely whiter than my normal white.

Edie looked scared as well, but she loved the attention so much that, amazingly, when halfway up the staircase, she started teasing the mob by letting the sleeves of her long red Gernreich dress fall down over the heads of the mob and then drawing them up again, down and up, down and up, avoiding the grasping hands, offering her radiant smile while calling out to the mob, telling them how wonderful they were and how wonderful *I* was and weren't we all having a wonderful time? Luckily, as the mob was becoming even more dangerously hysterical, a concerned architectural graduate managed to smash through the fake ceiling with a crowbar and led us out, over the roof and down the fire escape, to where the cops could protect us. Only then did I realise that Edie had been talking to that baying mob for a full forty minutes. She was something alright.

It was all downhill after that. Edie's worsening drug addictions, combined with her natural aristocratic *hauteur*, got the better of her and she began to play up in the Factory, during the making of other films, complaining about her lines, demanding to know what they meant ('Nothing,' scriptwriter Ronald Tavel told her. 'The lines mean nothing.'), refusing outright to say them, then walking away from the camera and going to the toilet in the rear of the loft where she'd dance for hours, all alone, in a trance, completely spaced out, with the rest of us watching her, mesmerized.

But before the end came, she took me to meet her father on his own turf, the exclusive River Club in Manhattan, and I had my own taste of his coldly dominating nature. A practising painter and sculptor, but getting nowhere with it, despite being an aristocrat and knowing many important people, he obviously resented my success and my relationship with his beautiful, troubled daughter, possibly troubled because of him, and looked at me as if to say, 'I can tell you're just a screaming fag.' He said that with his eyes and other things with his big mouth, his thinly veiled insults, and then, when I saw the way Edie was looking at him, with a combination of revulsion and adoration, I realised that if she'd felt threatened by his repeated sexual advances, she also felt a strong sexual attraction to him, but knew that such a relationship would be impossible, just as it was with 'screaming fag' Andy Warhol. I knew then that Edie was androgynous, just as I was. My beloved Edie was Peter Pan.

By then she was getting regular shots from the notorious Dr. Roberts, immortalized in the Beatles' song of that name, sometimes vitamins laced

with methadrine, or speed, other times cocaine or LSD, and sometimes, in her stoned condition, being fucked by him in return for freebies – or so she said. She needed the shots to keep up her relentless socialising, not forgetting the endless boozing, but in the end it all did her head in and she slid down the tubes.

I could tolerate her *hauteur*, but I wouldn't tolerate open rebellion. When she kept rebelling during the making of other films, I tried giving her a hint by excluding her from *My Hustler* while giving a small part to Genevieve Charbin. When Edie complained and I took no notice of her, she started asking everyone I knew if she should break with me, get herself an agent, go to Hollywood. Once, when she saw Ronald Tavel's script for *Shower*, a film in which she and Roger Trudeau spend their whole time naked in a shower, she screamed that she wouldn't be a spokesman for Tavel's perversities. Finally, when in front of everyone she tore up Tavel's script for a movie called *Space*, calling it stupid, causing Tavel to walk out, I decided to do something about her. So I went to a 42nd Street bar and found a lady called Ingrid von Schefflin and cut her hair just like Edie's, made her up just like Edie, named her Ingrid Superstar and put her into my next movie instead of Edie, who was naturally shocked.

She responded by going on to what she imagined were better things. Bob Dylan had written at least two songs said to be about Edie, 'Leopard-Skin Pill-Box Hat' and 'Just Like a Woman', and claimed that he wanted to make a non-Warholian film with her. Edie took him at his word and one night, in the Ginger Man, after having made eleven films for me in four months, she told Paul Morrissey that she didn't want me to show any of her films anymore. Then, when she'd completed a small role in *Chelsea Girls*, she came into the Factory and asked me to take out the section of the film that she was in, claiming that she'd just signed a contract with Dylan's manager, Albert Grossman, whose wife had made $270,000 by selling the silkscreen I'd given to Dylan for free. By that time it was clear that she had a crush on Dylan and was expecting a real relationship, so I made her turn whiter than I was normally by telling her that he'd secretly married another woman, Sarah Lownds, in November 1965, just a few weeks before. Edie not only turned white: she visibly shook and then ran from the loft.

I never saw very much of her after that, but I did hear the stories. She'd

become so thin that she looked like Twiggy and managed to get work as a model for the experimental clothes of Paraphernalia, virtually kick-starting the whole unisex movement with her boyish physique in backless dresses, silver-fish dresses, leotardic clothes, and body-composition dresses with the color compositions based on the shape of the body. Initially, she caused quite a sensation. Then Gloria Schiff had her photographed for *Vogue*. Gloria told me she was 'adorable… an enchanting, beguiling little girl.' Gianni Penati photographed her wearing black lingerie and white stockings because she was 'so blonde and pale and light.' When she saw the pictures, Diana Vreeland, then editor-in-chief, was convinced that they'd found themselves 'a star.' Then it all collapsed. Edie just disappeared. She didn't have the discipline to be a model and she needed her drugs. Things could only get worse after that. In 1966 she took an overdose, dropped her cigarette when becoming unconscious, and set her apartment on fire. Though lucky enough to make it out of the apartment, she ended up in the Lenox Hill Hospital. Released from the hospital, she moved into a room in the notorious Chelsea Hotel on West 23rd Street, set that room on fire as well, and ended up lying naked on the floor of the lobby until another ambulance came to take her away. Before that, however, she'd returned home for a break, reportedly looking like a rag doll, practically emaciated, but her father had her committed to the psychiatric section of the Country Hospital, until she was rescued by Bob Dylan's manipulative friend, Bob Neuwirth, with whom she'd been having an affair in the Chelsea Hotel. Returning to New York, she tried out for a role in Norman Mailer's play, *The Deer Park*, but lost it when Norman realised, correctly, that she'd never last the course. A few months later, she and Bob Neuwirth parted company. She was then taken on by producer Bob Margouleff to act in a *vérité* underground movie, *Ciao! Manhattan*, but everyone on the set was taking drugs and, naturally, Edie was taking drugs as well, being injected in the ass in full view of the stoned crew, so the movie collapsed in on itself and was never finished.

Her family allowance had been cut off when she was living in the Chelsea, so she no longer had a source of income, could no longer hire limos, didn't even know how to use the subway or buses, so she only went to dives she could walk or stagger to, and once there, doped or drunk or both, give everyone, including alcoholics, drug addicts and psychotics, her contact

details, enabling them to sneak into her hotel room in the early hours of the morning, when she was in a drugged or drunken stupor, to steal whatever they could get their hands on, including her drugs and drink, maybe even to steal a quick fuck, during which, given the state she would have been in, they would have been met with little resistance. Rescued by Bob Margouleff, who let her use his apartment, she kept falling into drugged stupors, dropping her lit joints or cigarettes, and started at least five fires in his apartment, burning up three mattresses. She had other affairs. She drifted here and there, getting small parts in movies that were never seen by the public. She went in and out of hospitals on a regular basis and finally ended up back up in Bellevue, suffering from convulsions. She was in Gracie Square Hospital when her father died, but by that time she was beyond family feelings. Gracie Square was a private mental hospital and she was there for five months and then she ran away with a patient who'd been a junkie since the age of nine and was emotionally retarded. She went to see a gynaecologist in the hope of getting some pills off him and he drove her up the coast in his Aston Martin and stopped in a motel and gave her three ampules of liquid Sandoz acid and then they both fucked all night and then he had to get back to his office to start another day's work, so he gave her a shot to calm her down and she took about fourteen Placidyls and then back in her apartment with the life-long junkie boyfriend she had a Bloody Mary and dropped a few more Placidyls and went into a coma and was again rushed into hospital. The New York State Psychiatric Institute at Columbia Presbyterian Hospital. Then Manhattan State on Ward's Island, in the middle of the East River, next to the prison. Released, she met a man called John Grable, also known as Mad John, and they moved in together and partied in the streets of Isla Vista, tripping out on acid, and she kept running off with other guys but always returned to Mad John, saying it was nothing to worry about. And then she was back in Cottage Hospital in Santa Barbara, where she managed to score more junk and fuck a lot of her fellow patients, and then she got out and became involved with the members of the Viking motorcycle club, turning into a biker chick, then developed a taste for Seconal and vodka and sodium pentothal and breast enhancement with silicone, or running around naked, or hitchhiking with her shirt open to let them see her new breasts, and then she ran off with Roger Vadim, the famous French film director, and then returned to have shock treatments, and then, at twenty-eight, dressed formally in white

satin, she married a twenty-year-old long-haired, bearded guy called Michael Post, whom she'd met in the psychiatric ward of Cottage Hospital and whose virginity she'd stolen, and she kept calling him 'Daddy' and then breaking down in tears and demanding more sleeping pills, or 'meds', until finally, four months after they were married, they came home from a fashion show at the Santa Barbara Museum and Michael gave Edie her 'meds' and sat beside her, staring silently, lovingly, at her, while she fell asleep, breathing harshly.

By that time, when people asked me about Edie, I was telling them that I didn't know where she was or what she was up to, that we'd never been that close, that I never really knew her that well. When Brigid Berlin phoned me to tell me about Edie's death, I didn't feel especially surprised or shaken, but only asked, 'When?' When Brigid then told me that Edie hadn't died of drugs, but had suffocated in her sleep (barbiturate overdose), I asked how she could do such a thing. Then, not knowing what else to say, I asked if 'he', meaning her relatively new husband, would inherit all the money and was told that Edie didn't have any money. 'Well, what have *you* been doing?' I asked of Brigid, and so, clearly relieved, she started talking about her latest visit to the dentist…

So Edie's dead and I'm dead. In the end we're all dead. Being dead is the only way to live because at least it gives you lots to think about. Right now I'm thinking of how Edie, when making my films, couldn't remember her lines and how I wasn't much better at remembering mine. I once played an 'airport person' in a movie shot in Rome and starring my dear friend, Elizabeth Taylor, and though I only had one line to speak I simply couldn't remember it. I was the same when I did commercials: I just couldn't remember my lines. But people kept hiring me anyway, because I was famous, and that, in the world I moved in, was all that mattered. Not that it helped me with the critics when the totally forgettable movie, *The Driver's Seat*, was finally reviewed. One of the critics described me, even though my role was minuscule, as being 'slightly repellent, like a reptile.' When I asked a friend if the critic meant that I was slimy, she didn't answer, instead changing the subject slightly, slyly, by informing me that reptiles don't like to be touched. This made sense to me, since when I was touched unexpectedly, say in a crowded room, I'd practically jump six feet in the air. And one of the reasons that I didn't really like sex, though I indulged in it

occasionally, is that I really didn't like being touched, because being touched could make me feel slimy.

Then, again, I have often been accused of suffering from emotional disassociation, which may be true, and which may explain why, when my mother, still sharing the house on 89th and Lexington, started suffering from senility and needed constant care, I sent her back to Pittsburg, to be looked after by my rarely visited brothers, John and Paul, and then, in 1972, when she suffered a stroke and died in a nursing home, for years after I would always say to friends, when they asked me how she was, 'Oh, she's fine.' So here, beyond death's doorway, I might soon be reunited with my mother and dear little Edie, hopefully to be forgiven by both of them.

I often said, when asked about the subject, that people never die, that they just go to department stores, and that certainly seems to be the case with me. For now, as I emerge from this dazzling light, there they are, once ghostly high-rises, but taking shape and form like one of my silkscreen paintings, materializing right in front of me… the great shopping malls with their vast parking lots and plate-glass windows and piped music and huge glossy advertisements for sophisticated clothes and sexy underwear and lipsticks and perfumes and skin creams and hair shampoos and laptop computers and ipods and cell phones; and there, inside the shops, the shelves stacked with bottles of Coca-Cola and Pepsi-Cola and tins of baked beans and soup cans and Brillo boxes…. all the mass-produced goods that I turned into an art form that the critics said cheapened art but that has outlived a lot of the art they previously acclaimed. Mmm, yes, indeed. All the subjects that they said would be short-lived and would soon put an end to me.

They didn't. Death did. Though I'm still conscious and on the move, I'm certainly dead. The only thing I remember about my actual dying is that on Wednesday, February 19, 1987, after suffering too many days of pain with my ailing gall-bladder, I went to see my doctor and was informed that if I didn't go into 'the place' (I was so terrified of hospitals I could never even say the word) and have 'it' done (I was so terrified by the very thought of an operation that I could never say that word either) because, if I didn't, I would surely die. So the following day I was admitted, in fear and trembling, to New York Hospital and on the Saturday my gall-bladder was surgically removed. Surprisingly, I seemed to have recovered quickly from the

operation, because later that same day I was watching my beloved television and making my usual gossipy phone calls to friends, telling them they'd no need for concern. But early next morning, for reasons unknown (just as it was with Edie) I died. And now here I am. Dead.

Well, not dead, exactly, I'm still here, am I not? I'm not too sure of exactly where I am or where I'm heading as the brightening light gradually, mercifully, reveals heaven, at least *my* kind of heaven, but I certainly know I'm still here. I know we're *all* still here, in this great shopping mall of twenty-first century American life where I now find myself. With Elvis and Marlon and Norman and John – all still here, as I am.

I once said that in the future everyone, no matter how humble, would be famous for fifteen minutes. Well, I've had my fifteen minutes and more, as have Elvis and Marlon and Norman and John. We're still here. We will never die. We're still alive, now and for always. Still alive. Still here. We'll still be here when you, dear reader, are dead and buried. Geddit?

Mmm, yes.

Deadlines

W. A. Harbinson

In the offices of Saturnalia Publications, home of the disgraceful ‘male interest’ magazines, *Gents* and *Suave*, staffed by a bunch of highly chauvinistic boozers, pill-poppers, and philanderers, the word ‘deadlines’ strikes true terror to the heart. It means that everyone must get whatever it is out of wherever it is and do some work.

All those not nursing hangovers are gripped by post-coital depression and even the stoned and slippery Art Director (Artful Ed to the trade) is busy freelancing at an undisclosed address. To make matters worse, a dreaded enemy has managed to infiltrate the building… a shapely shock-trooper from the sharp end of Women’s Liberation!

The war between the sexes is about to be engaged as never before. The sexual mores of the Seventies are about to be laid bare…

‘The most politically incorrect novel since *The Ginger Man*.’
-Dennis Elliot, *Gents*

‘The most hysterically funny black comedy since *Catch 22*.’
-Harvey Wheeler, *Suave*

‘Definitely my all-time favourite comic novel.’
-W. A. Harbinson, *the author*

The Writing Game

Recollections of an Occasional Bestselling Author

W. A. Harbinson

The Writing Game is an autobiographical account of the life and times of a professional writer who has managed to survive the minefield of publishing for over thirty years.

Unlike most books on the subject, ***The Writing Game*** does not try to tell you how to write, or even how to get published. Instead, it focuses with gimlet-eyed clarity on the ups and downs of a unique, always unpredictable business.

On the one hand, a compelling look at a life lived on the edge, under the constant threat of failure, both artistic and financial, on the other, an unusually frank self-portrait enlivened with colourful snapshots of editors, fellow authors and show business celebrities, ***The Writing Game*** succeeds, as few other books have done, in showing how one professional, uncelebrated writer has managed to stay afloat in the stormy waters of conglomerate publishing.

Here, for the first time, a working author tells it like it really is.

Designed on the Isle of Wight, Great Britain, by www.inkdigital.org

Two astronauts, a man and a woman, are taking part in a scientific experiment designed to gauge the effects of prolonged isolation and weightlessness on the human body. At first everything runs smoothly, but then things start going wrong. First, the Skylab inexplicably malfunctions, then the astronauts have magical, fearful experiences. But are their experiences real or imagined? Is the Skylab haunted or not? Or are both of them simply going mad?

Into the World of Might Be is a tour de force of prose writing, a remarkably vivid evocation of the bewildering 'new reality' of quantum physics, alternate or parallel universes, black holes and the mysteries of Time. Uniquely combining hard scientific facts with a philosophical, metaphysical and, at times, deeply religious work of fiction, this could well be the ultimate short text for the New Age… for a new generation. Read it and take wing.

Part One: Orbit

'The fairest thing we can experience is the mysterious. It is the fundamental emotion which stands at the cradle of true art and true science.'

-Einstein

1

A black hole within the dark void, immense, without depth, its presence only made manifest by the surrounding stars. The stars are bright and unblinking, multitudinous, a dazzling mosaic, sweeping out in all directions around the enormous black hole, beyond time, mocking distance, already dead: a mere illusion of being.

A black hole within the dark void. Around the black hole: star-flecked darkness. Within and beyond the boundless void: total stillness and silence.

The silence is absolute, transcending all known silence: a lack of sound so total it is resonant with its own hybrid presence.

In the beginning is the Nothing. A black hole in a dark void. Around the black hole, the countless stars, already dead, wrapped in silence.

And from nothing… a growth.

Colour is light. In this case, a white light. The angle of incidence equals the angle of reflection, and the faint, hazy light, bouncing off the black hole, illuminates a bleak, jagged surface and fans across its curved edge. The light shimmers and bends. The stars beyond it fade away. Around the left edge of the planet, that black hole now filled with matter, the light of the sun cascades out to form a dazzling crescent.

The black hole is now the moon. It is enormous and hangs in silence. The white crescent splits the darkness, floods across the blistered greyness, and divides the brooding sphere down the middle.

White light and shadow. Black craters and writhing plains. No water, no air, no movement, no life. Motionless, forbidding, the sun’s halo stretched around it, the moon is a colourless desolation curving back towards darkness.

Colour is light. White light is luminous energy. In waves and in particles it bombards the moon's surface, and the electrons break off and streak away to form the void's shifting spectrum: the red and yellow of the sun's corona, the silvery white of Earthshine; and around those, the star-studded night devoid of depth or dimension. Colours blending and interacting. A haunting blue light on grey rock. The blue moves across plains and black craters as the sun fills the darkness.

Now the great sphere is divided: one side dark, the other bright. Monstrous, three-dimensional, a globe split by shadow and light, it is here, still and silent, implacable, dominating the black void.

Space. Endless space. The moon floating in space. Gliding out from its dark side, eighty miles above its surface, a slow-spinning web of silvery metal, traversing the silence.

A Skylab in orbit.

In the void it is a molecule. To our eyes it is immense. A glittering steel web, a shapeless mass of bits and pieces, the Skylab moves around the sun's orbit, reflecting sunlight and Earthlight. It weights 150 tons and could cover a 15-storey building. Like some gigantic metallic insect, like a technological nightmare, it is composed of modules and solar panels and wings, of antennae and interlocking legs and reflectors and hatches. It emerges from the darkness. Sunlight flashes and spreads around it. The Skylab, this home of wire and metal, has become the moon's satellite.

How long has it been up here? A very long time. Every two hours it circles the moon, glides through darkness and light. It passes over the bright side, over the thousands of black craters, over an infinite desolation, over the debris of previous landings, gliding out of the sun and over the bleak, curved terrain and disappearing behind the dark side again.

Silence outside and inside. Stars reflected in a window. White light, the shifting darkness of the cosmos, the windows facing a boundless void.

The Skylab keeps orbiting.

2

Why are we here? We must understand why we are here. We are here because we dream, because reality is not enough, because the problems of Earth and its unresolved injustices are not a large enough excuse for us to stay. We must travel, we must move. The history of man is a tale of movement. We have travelled without rest through the centuries and there must be a reason.

Why are we here? There is nothing but silence here. No air, no life, no promise or denial, and yet we brave the dark side of the moon in pursuit of what know not what. Why? We ask the question. The poor of Earth will ask the question. On Earth there is famine and war, and yet we circle the barren moon.

Questions… and answers… All the illogical, non-rational men. All the men who had to know what lay beyond the haunting seas of their dreams. The Greeks and the Phoenicians, the Spanish and the Portuguese, the obsessed men like Eirikkson and Columbus and de Gama, like Magellan and Cortez and Pizarro, like Drake and then Cook.

There are seas and distant mountains. Their very presence is a challenge. Beyond unseen horizons, on peaks shrouded in cloud, along rivers that flow into the darkness, there are things still unseen. It matters not what they are. The only lure is their existence. Ignoring poverty and hunger, blind to Earth’s

pain and strife, Man needs to view the unknown, to chart the uncharted, to reveal what had previously been concealed and make real the unreal.

Why are we in space? Is it because we are obsessed? Are we here because no logic can contain us or free us from dreaming?

Logic is brutal truth: life's squalor and teeming horrors. Robbery and rape and kidnapping and torture; disease and starvation and slavery and genocide; and the wars, the many wars, more wars than ever before: in north and south Yemen, in North Korea and South Korea, in China and Vietnam, in Iran and Iraq, in Afghanistan and Pakistan and Turkey and Syria, in Israel and Lebanon, in Kampuchea and Indonesia and India and the Philippines, in Angola and Zimbabwe and Uganda and Zaire, in Guatemala and Chile and Ecuador and Peru, in Northern Ireland and El Salvador and South Africa and Mozambique - in all those places and more, across the earth with its burning foliage, with its millions of weeping children, their eyes melting in the sun, there is famine and pestilence, plague and fire and flood... and also, ironically, to a great many shockingly, our ceaseless pursuit of the spiritual mysteries that have yet to be solved.

Logic is brutal truth: the living picture of what we are. We live in a vale of tears and flowing blood, so we look to the future. No amount of carnage can stop us. It may even encourage us. It is likely that life's nightmares are the root of our need to take wing.

And so we are here. We will let space seduce us. There is deprivation and boundless pain on Earth, but we must keep on moving.

So why are we here? The question may not have an answer. But perhaps we are here because, in the words of John F. Kennedy, 'We need men who can dream of things that never were.'

So let us go dreaming.

3

Imagine our astronauts. It is their first week in the Skylab. They are drifting in the womb of a complex machine which itself drifts in the womb of the cosmos. Yes, they are in a womb, both feeling like newborn babies. They frolic in zero gravity, drifting lazily as the Skylab drifts, waving to one-another and smiling and turning in slow, languid somersaults. It is playtime and they are playing. The gestation period is over. They have suffered their initial sickness, their disorientation and primitive fears, and are now like creatures emerging from the darkness to the warmth of the sun, their spirits tentatively rising.

Somersaults and other activities. Drifting up and gliding down. Drifting sideways and spinning and turning, crouched up like large rubber balls. It does something to them: takes them back to their childhood. It briefly pulls them out of the silence of their separate secret thoughts.

Zero gravity is playful. Water drifts in glistening globules. Coloured ink weaves arabesques in the air and drifting cotton forms waving webs. He chases spinning balls. She fiddles with fluttering napkins. They move out of the mid-deck, through the airlock to the flight-deck, hover there in mid-air, a good way from the lower deck, then pass the instrumentation panel and look out from the view-port.

Looking out... at what? Looking out... *What?* Already they have changed, becoming more than they were, and are alive with a sense of themselves that transcends their perceptions. She has short-cropped blond hair; his hair is shaved close to the skull. The Skylab doesn’t spin, so they float. In white suits. Passing windows.

And looking out... At what? At the darkness, the boundless void. Seeing bright stars, grey moon, distant Earth, a burning sun: the littered black

whirlpool of the galaxy that defies our meek logic.

Looking out. *What?* They are changing every minute. Now floating, feeling light and transparent, swimming slowly through stored air.

And changing. Always changing. They are not what they once were. It is their first week in the Skylab and already it is making them unreal.

They are one.

An experiment.

4

I'm getting used to it at last. Actually starting to enjoy it. After the initial strangeness, this freedom: a child's sense of play. He obviously feels the same. Floating past me smiling slightly. Heading for the docking adapter, a tunnel of white steel, through the hatch, into the smaller airlock module.

A man and a woman. Zero gravity and silence. Not silence: something other than that... a constant humming vibration. The air-conditioning machinery. A comforting sound in the silence of space. So quiet and yet the atmosphere so low we can't hear very far.

The nausea has finally gone. Very bad the whole first week. The spacesickness like seasickness (the canals of the inner ear). We had to freeze-dry the vomitus and label it and package it like our urine and excrement and blood. For future medical analysis. In the NASA laboratories. Back on Earth all that distance away, so far away it's unreal. Green-blue through the porthole. The luminous orb of home. Hovering there in the blackness beyond the moon's horizon with the unblinking stars spread all around it... A home rendered mysterious.

No more nausea. Exhilaration instead. Still adjusting to being weightless.

Overshooting and crashing into things and turning lazily and floating. Along the grid floors. Past consoles and instruments. The floors above the upside-down doors in the walls far below.

The secret is in adjusting. To the Skylab and to him. Six months minus one week to go and that could promise anything.

A very odd programme. For once understand the secrecy. No way to explain it to those at home and receive their approval. Yet it has to be done. It is important that we adjust. To the Skylab, to the silence, him to me, me to him; to the mystery and magic of the cosmos, to the moon's chilling lifelessness.

The moon is cold, but it seduces. Devoid of life, it looms like death. And like death, it has a certain strange allure, dominating the thoughts.

Where is he? Exploring somewhere. The man to my woman. To be serviced in the privacy of this spacecraft for another six months. Radio contact forbidden. Except in panic or emergency. A study of isolation and weightlessness with the dead moon for comfort.

5

Zero gravity is dreamlike. To float through air is unreal. The white walls all around him, above, below, swimming lazily, weightless, through the tunnel of the airlock module, past the docking adapter's consoles and instruments and jutting boxes, the walls cylindrical: a huge can on its side, without any real vertical.

Which way is up? The panels curve all around him. And then into the command module, suddenly confused, upside-down, gripping the handrail and trying to orientate himself, watching out for his feet.

Turning around floating. Just above the grid floor. Glancing down through the grids to the lower deck far below, far down (up?) that dizzying well of grids and pipes and barrels, spiralling down, sweeping out in all directions (Which is right? Which is left? Am I moving up or down?), then blinking and turning away quickly, sitting floating on air.

Confusing. Disorientating. Best to concentrate on work. Physics and astrophysics, planetary and stellar astronomy, communications and navigation, botany and electrophoresis, and general life sciences and other disciplines of high technology - enough to fill in the long hours.

Enough? More than that. We have to work on ourselves as well: blood and urine analysis, cell tissue growth morphogenesis, vestibular and cardiovascular function and general physiology -enough to keep the pair of us engaged for the six months ahead.

Keep the feet on the floor. Attach the cleats to the grid. Now standing in the slight crouch of the neutral G position, the magician's invisible chair, his eyes fixed on the gyroscopes. He is a technological man who believes in work and discipline. It is not enough to wallow in the stars: he must also make use of them… The Stellar Astronomy Experiment. The airlock hatches hissing open. He stands there (or sits there) at the console, cranking out the first camera.

Starbright.

Eternal night.

6

One week gone already. It seems longer and shorter. The Earth seems very far away, nonexistent, a mirage. Is she working? I wonder. I'm not sure

she'll last the course. The novelty of the first week must end and then the routine will set in.

Too many repairs already. Things going wrong mysteriously. First one of the cameras, then the air-conditioning machinery, and now, I note, a broken solar panel. Damn NASA's incompetence. Or the universe itself. At times, in the silence, it seems alive with a will of its own.

It's as strange as I now feel, my head tight, my voice nasal. Not a cold, but that's just what it feels like when a man becomes weightless.

And out there, the moon. Dominating the view. And beyond it, rising over its curved rim, the green-blue globe of Earth. No sign of life there. No sign of life anywhere. The stars around the dark side, very bright, never blinking, a silvery cascade spreading out and reaching back to the infinite.

Silence. Silence humming. The air-conditioning machinery working. The white walls of the Skylab, floors above and below, a network of tunnels and modules and airlocks, leading into larger, multilayered rooms and more gleaming white walls.

Our new home.

This laboratory.

We are here to be studied. We package our urine and excrement. We take samples of our own blood, record our own heartbeats, and at night, hanging vertically in the bags, our sleep is constantly monitored. The bunny caps contain electrodes and are wired to various systems. Like monkeys, like rats, like insects under a microscope, we are examined by computers and specialists, our very dreams scrutinized. This environment is perfect for it. A white laboratory: sterilised. The air-conditioning machinery hums through a silence that compliments what is outside.

Where is she? Somewhere else. Probably in the Experiments Room. Either on the ergometer or in the Vestibular Function Experiment - working,

keeping her body in tune, the body I have to use.

At night. Mostly then. We both retain some Earthly habits. Unzipping the sleeping bags and floating out, our limbs colliding and linking. An academic engagement. A scientific masturbation. No romance: just a mutual release; the sexual urge gratified.

We must record all such couplings. Duration and frequency of copulation. Take note of ejaculatory force and the pulse and the heartbeat. We know one another well. Very wise that we were trained. I often wonder what she really thinks about it... if she thinks as I do.

A technician adrift.

7

No more acrobatics. At least only for exercise. Now lying in the Lower-Body Negative Pressure Experiment, secretly frightened of being sucked into space.

Since that terror is always present, she's relieved when it is over. Wriggling out and then floating away, she sees a hatch drifting past her. She reaches out to grab it. The sudden movement makes her spin. She sees the plants sprouting out of the ceiling, the lights shining beneath her. Swinging her arms, she corrects herself. It takes some time to find her vertical. Now the lights are above her, the plants back on the floor, and she drifts across the room and reaches down and pulls herself toward a grid. She settles down, crouching slightly. It is a foetal position. Already she feels the changes in herself: the almost imperceptible increase in height and visible weight loss.

Earth is framed by the porthole: a glowing globe in the black sky. The Milky Way, dazzling, soaring outwards, larger stars red and yellow. The constellation of Gemini. The red star, Eta Geminorum. Darkness and light, endless night, the boundless realm of the cosmos.

She studies the ergometer. Her wristwatch is drifting above it. And above that rotating chair, a floating screw, a bolt drifting and turning.

Objects go adrift mysteriously. It's hard to tell where they've come from. In zero gravity they work loose and drift away, floating to and fro spectrally. Blame it on NASA. Even Houston could be careless. She releases the cleats and floats away, through a large open hatch, then lets herself glide gently down, into the well of the main lab.

Immediate disorientation. Drifting across the wardroom. The table is on the ceiling and books grow out of the floor, their pages fanning open and waving: exotic plants in an alien world.

She turns around to find her vertical, then sees him floating towards her. He has a deeply tanned, roughly handsome face, his eyes grey and intelligent. He settles down with her at the table. The room is now the right way up. They talk about routine matters, jobs done and work to do, as they sit on invisible chairs and partake of their meal.

The food, which has been dehydrated, has to be reconstituted with water. The water is injected into wet packs, then the packs are opened with scissors which, tied to a string overhead, drift away when not being used.

They scoop the food from the bags with silver spoons and fill their mouths with the sticky paste. What is it? Hard to tell. Cold cereal, meat and vegetables. If they put the spoons too quickly to their mouths, the sticky food also floats away.

Sometimes he curses. Just occasionally she sighs. At times they will smile at one-another.

They both speak in high voices.

8

A strange situation. I'm still trying to adjust. He is handsome and pleasant in a bland way, concealing himself. A work-orientated man. The new breed: the astronauts. Even in the night, during sex, he does not give too much away. A functional endeavour. Keeping the tensions at bay. I've been trained to do no more than that for him and I must not forget it. Yet how long can we continue? What good is our training in this isolation? If we touch, if we

share our breath and skin, it must lead to a change. My woman to his man. His penis in my vagina. They have put us together to negate sexual stress, but we cannot reduce it all to biology because we aren't made that way.

They have insisted that I keep notes. I am a voyeur when I do so. Though a scientist, I am still humiliated, wondering what they will think of it.

Does he know about the notes? I think he does, almost certainly. I think they've told him to keep notes as well and that he does it with diligence.

I could hate him for that.

9

Their bodies intertwined, the distant eye of Earth, the alignment of flesh with the arc of the moon, their cold burning breath… even these things are nothing compared to the slow glide through an emptiness that can never be measured.

He knows. It is part of him. All existing, exists within him. Floating outside in space, hearing only his own breathing, his heartbeat, the white spider of the ship in the vortex of eternity… the cosmos.

Yes, it is this. And it moves him too deeply. More than childhood, more than dreams, more than fleeting ambitions; more than anything that ever was or would be, it enslaves him and uses him.

He cannot escape.

10

Night. The probing penis. She feels his skin at her lips. She draws him in as they float there in the darkness, in the womb of the white ship. Their bodies turn in the air. Already bored, she experiments. He is amused, his fingers running through her hair, the short blond hair, dishevelled. The moist licking of her tongue. The pale outline of her throat. In the silence, the soft humming of the air-conditioning, their fingers stroke and then search. He arches back, thrusting forward. Her nostrils flare at his loins. Turning over, spiralling lazily in thin air, they think of things far away. The stippled rivers of Earth. The green fields and burnished hills. These are memories that enshrine them in their flesh and make them cling to their history. His probing penis at her throat. Her fingers kneading his buttocks. Coiling dreamlike, the white walls in darkness, they are reams of smoke drifting. The dark side of the moon. Around a black hole: countless stars. She drifts sideways, her green eyes too bright, reflecting dark night and starlight. Now. He touches gently. His fingers trace her ribs and spine. She floats beneath him, licks his stomach and thighs, her hands rubbing, cajoling. No involvement. He thinks this. His grip is firm and assured. She comes to him, legs coiling around him, seeks him out, draws him in. More thoughts from far away. The days of training, the desert sands. The awareness that they must give and take with a cool objectivity. Now. She smiles and strokes him. Now. His touch reveals her. This moment: the breaking of all oaths, his low gasp of submission. Their tongues' warm saliva. Their lips: the breath mingling. They spin over, turning languidly in the air, arms and legs intertwined. He licks her throat and breasts. Her nipples stiffen and slide along him. She drops lower and trails her hands along his spine and takes him into her mouth. The easiest way in zero gravity. Other ambitions severely limited. He looks down, his hands

holding her head, a soft light on her blond hair. His eyes close in surrender. Behind his eyelids, the moon and stars. He feels the spasm, opens out to the void, then drifts away with a shudder, his sperm swimming around her.

They sleep separately.

Vertically.

11

The laboratory is superb: a masterpiece of design. A few faults here and there, the obvious mistakes of mortal men, but for all that it must be recorded that it *is* an achievement.

I'm not sure she would agree. Sense a certain antipathy there. Have noticed her slight annoyance at different things, at what seems inconvenient. Odd. A feminine trait. Earthly expectations returning. I would have thought that such feelings are well behind her, but such isn't the case. The lure of home is always present. I see her eyes fixed on Earth. Only three weeks in space and already she yearns for a normal life.

Understandable, perhaps. I want only the cosmos. She does, too, but it doesn't enslave her as, in dreams, it does me. Rarely stop thinking about it. The cosmos swims through my mind. The black painted on black, the wheeling stars, the huge suns beyond time.

It always existed here, within me. When a child, my skull was boundless. With eyes closed I would see streaming darkness, the bright explosion of galaxies. To fly, to be in flight. A hunger close to the rapacious. High school, university, then West Point and the Air Force, then Columbus, San Marcos and Nevada, then Korea and Houston. To fly, to be in flight. The white clouds and blue sky. From California to Labrador, from Greenland to France, then the USAF Experimental Flight Test Pilot School at the Edwards Air Force Base, California, hidden deep in the desert.

How could she understand? How could *anyone* understand? There is nothing in the past to sustain me; there is only the future.

To fly, to be in flight. The apocalyptic flames of Houston. The fierce bedlam that comes from the smoke and dissolves unreality. A rocket ship in motion. The bloody gauze of the upper atmosphere. White light and heat,

deafening thunder, then the vast sweep of outer space. Silence. Utter stillness. Black painted on black. Then the Life Support System, stars reflected in the Perspex, drifting gently above the white steel of the ship, in the void of the cosmos.

All embattled dreams reconciled. The past and future as one. The great hazed blue-white globe of Earth can no longer speak to me. Five months still to go. I want more... and more than that. In the night, as our bodies find solace, I see only the universe. The body dies with each new day. Desire decreases every night. I think of work, of the mysteries to be unravelled, of the stars to be numbered.

How can she understand? I drift away and become more helpless. Now I must look at the moon, at its crater, and find out what is hidden there.

Tsiolkovsky.

The possible.

12

She travels down through his eyes, wanting to see what he observes. He has become hypnotised by the dark side of the moon and she needs to understand what is happening there.

The moon is forbidding. A dead, crenellated brain. An achromatic terrain, a mass of craters and blisters, sunlight and shadow at play in a grey, spectral dream.

She looks down and shivers. A dead landscape fills the lens. Studying it, she is repulsed and mesmerised by that stark, total lifelessness. It looks cold. He feels cold. The cold encircles her heart. She sees the black eye of Tsiolokovsky staring up, a giant hole with no bottom.

It is dead. (Is it dead?) She looks down again and wonders. Its black centre has melted over the mountain slopes that contain it, as if once it had boiled up from its core and poured over the rim. Volcanic? Very likely. Not all craters are caused by bombardment. She looks down to see that black eye staring up, a darker blackness below it.

A black hole in the moon. At least that's what it looks like. A black hole leading through to the other side: to the deep of the cosmos.

Is that what he sees down there?

13

We are changing and I feel it. We are not what we once were. A loss of hormones and red blood cells and electrolytes, our faces puffy, legs thinning. How long have we been up here? Is it three weeks or four? I've lost track and I'm not taking notes because something is happening here.

I want to press the Panic Button and speak to those on Earth. There's something happening and I don't know what it is, but I see it in him. We are drifting apart. The moon has totally hypnotised him. He sits in the solar console all day, his head bent to the telescope. It isn't good enough: I can't live here by myself. I don't even want sex anymore, because he's not really here. I think he's down in that crater. I hear him muttering as he works. When I speak to him, he looks strangely at me and then turns away. He's now obsessed with that black hole.

Tsiolkovsky: the giant crater. A black wound surrounded by blisters. The dark side of the moon is a leprous domain, a bleak terrain, cold and forbidding, reflected now in his eyes... No, in his manner.

There is something happening here, but I can't work out what it is. I want

to turn on the radio, speak to Earth, hear the song of the static. Even that would be music. Even static would be contact. I don't think I can live with this silence if he withdraws completely.

How could I? It's all wrong. It's not working out as planned. Once adrift only from Earth, we're now adrift from one another - just as things drift to and fro across the ship, from white wall to white wall. We're drifting freely, like the debris. Like the debris, we are aimless. Straight ahead, a screwdriver floats trembling, as if searching for work. It spirals gracefully in thin air. I wonder where it's come from. He lacks discipline, I lack discipline, *we* lack discipline as the rest falls apart.

It's so easy to forget. We forget and things start drifting. They are items to be regarded as dangerous, but how can I tell him this? No point in trying – I'm too frightened. I suffer panic and paranoia. Fluids migrate to the upper body and head as red eyes display changes. Physiological or psychological? Does it matter or not? My own paranoia takes many forms and will not be a help.

Sudden fears and inhibitions. An unexpected feminine coyness. Making use of the Waste-Management Compartment, standing upright, I cringe. How to do it in this position? How to parcel it when it is done? To be packaged and labelled and stored and then later examined. By whom? That's the question. By a stranger or a friend? What part of me will be revealed when they examine my excrement? Not a question asked lightly. Not a commonplace conjecture. When a term like 'Waste-Management' is used, it leads to primitive fears.

Three or four weeks have passed. The exhilaration has gone. Now too much time for thinking, for the mirrors of the mind, for a self-examination that mocks and then deadens the heart. Does he feel the same as I do? Do I feel this way because I'm female? No, I've been trained just like him, and

that must count for something. It must be the silence. I put it down to that. I lay the blame on the silence and the moon, on his lust for that crater.

What lies in Tsiolkovsky?

14

Selenologically and geologically the moon is not dead. There may have been volcanic activity. There may now be gas emissions. Given this, there could be microclimates, and life might exist.

What form of life? What does it matter? What is life but that which exists and perpetuates new life?

The moon's craters are dried seas. Those dried seas are filled with history. Since the long-vanished lunar seas existed, there might still be some form of life.

Perhaps? We say *yes*. Certain forms of life can survive in a vacuum. Microscopic life can survive anywhere and in climates bizarre to us.

Strange radiations in space. Solar gas and magnetic fields. The whole cosmos is alive with light and sound that has not yet been captured. And the moon, the haunting moon. The pale eye of our dreams. The moon is scarred by lava flow, by what might be riverbeds; it gives signs of volcanic outgassing, other signs of a vanished world.

What lies in the lunar soil? What thrives in its dirt? Was there fire, was there heat, was there condensation and water? And is so, was there something that lived and gave life before passing on? What is matter? What is life? What flows out of Tsiolkovsky? The mountains around the crater are brighter than the crater's black vomitus.

He looks down upon that crater. He sees the dark of the space beyond. He looks down on Tsiolkovsky, that black painted on black; looking down on the moon and then through it, back to space and the cosmos.

It is born in his mind.

15

The telescope's bright prisms. Distortions of light and shadow. The black hole and the blistered earth around it, brooding mountains, unmoving dust. It is quiet here in the console. I no longer played taped music. Looking down on the black hole, on Tsiolkovsky, I need silence and privacy. There's something down there, I'm certain. I'm not certain, but I think so. She told me that I'm obsessed and she's right, yet I feel it's important.

What is it? I don't know. I don't even know why I started. Photographs… I was taking photographs when the black hole enslaved me. No point in asking why. The root of obsession now runs too deep. My rigorous training, my pragmatism, is betrayed when I squint through the telescope.

Nothing. A black hole. I see it more clearly in dreams. Feeling more tired with each passing day because the dreams keep me restless. Dreaming always about Tsiolkovsky. The black hole, the sun inside it. Drifting down through Tsiolkovsky and out again, to where the sun fills the heavens.

Awesome. Overwhelming. Fierce heat and incandescence. An immense sphere of white gas and black spots and streaming filaments; the latter flaring up into the corona and dropping back in bright arcs. Great bubbles within the holocaust, some as large as the Earth or moon. Inside and between the bursting bubbles, pouring light, swimming colours. Heat beyond comprehension. Explosive power beyond measuring. The gas geysers up and leaps and explodes and then reforms as more bubbles. This sun is pure energy. It is unbelievably violent. A universe on its own, burning itself into extinction, it is dazzling with motion and colour. Cataclysmic. Omniscient.

Thus do I view it. I am outside and inside. Flaming gases belching out into space, lightning flashes surrounding me. Seeing what? Some strange patterns. The blinding dance of electrons. An expression of pure energy and

force, illuminating the heavens. Then retreating through the black hole. Drawn back through in my dreams. Awakening, looking down, seeing Tsiolkovsky… The black hole. The Nothing.

The dream and the reality: one exists within the other. I am no longer sure of the difference as my thoughts slip and slide. Now in the solar console. Photographing in invisible wavelengths. The momentum-control gyros spinning outside; the bright stars in great clusters. What is real? What is unreal? My harsh breathing fills the silence. Coming around the dark side of the moon: an immense arc of silvery light. Sunshine and Earthrise. Blue shadows on grey rocks. Gliding over the moon, the stark horizon, the stunning cosmos, seeing the eclipse of the sun by the Earth, a dazzling circle of fire.

Is it all in my mind?

16

Floating through an airlock module. Gliding along a clean white tunnel. Passing gas tanks and ventilating equipment and on into the workshop. An upper and lower deck. Triangular grids and fuel tanks. She finds her vertical and floats across to the trash airlock and flushes her rubbish down. A spasm of fear. She thinks the airlock might malfunction. If it did, they would be swamped in their own rubbish and that would finish it all.

Why the fear? It's never happened. She urgently pushes herself away. She swims back across the workshop, hearing the humming of the air-conditioning, and is struck by her unexpected lack of logic and surrender to morbid fears.

Stars glitter outside. The sun's fire rings a black Earth. She drops carefully

through a hatch and drifts down to land on the lower deck. This is the living quarters. The sleeping bags hang from the walls. An empty spacesuit bobs gently above the floor, filled with air, looking lifelike.

Ghosts. The inexplicable. Something snaps and whips past her. She gasps, twisting away, feeling fear, and sees it swinging around her, wriggling like a beached fish.

It's one of the bungee cords: a length of elastic with hooks fixed to it. It snapped loose and shot across the room as if fired from a pistol. If it had struck her, it would have lacerated her face and possibly taken an eye out.

Frightened, she stares at it. The cord wriggles in thin air. The hooks whip up and down before her eyes as her beating heart settles down.

Damn NASA and their carelessness. Damn the Skylab and its mysteries. Equipment malfunctions mysteriously, screws and nuts come apart, bolts snap loose for no apparent reason and drift to and fro, glittering.

The bungee cord stops its wriggling, then drifts gently past her gaze. She looks out through a porthole at the Earth, a black disc ringed with fire. Her head fills with the past. (How long ago was her past?) Pretty houses in neat streets, painted doors behind fences, sprinklers on parched lawns in the sunlight, sounds of laughter and play.

An Air Force camp in a wilderness.

When and where had the past begun? Did it start in the desert sands? Did she start losing herself when she first met him in that singular intimacy?

They had trained her to serve him. Prepared her for isolation. In a secrecy so complete it was unreal, they had levelled her history.

Yet something had been missed. He now rejects her advances. He now sleeps in the solar console, on the wall, his face turned toward the moon outside.

The giant crater, Tsiolkovsky. The dark side of a barren moon. He now sleeps with his face turned toward it, as if bowing in prayer.

No, she cannot take it. She was not prepared for this. Thus she glides across the room, glancing sideways, still fearful of flying things. Then the Waste-Management Compartment. Her menstrual blood flowing. When finished, she withdraws the bag and seals it and labels it.

Let them study her shrinking form.

17

I do not belong here. I belong to the Earth. I'm a woman and I'm made of flesh and blood, and I need my own history. He doesn't need the same. He sees only the future. A child of technology, a pure prodigy of science, he would brave the far corners of the cosmos without once looking back. That's the difference between us. It will *always* be the difference. I go to his body as I drink of the Earth, but he uses me as he would the universe: to unravel a mystery.

Now even that is unnecessary. His one lust is for the cosmos. He looks down upon the moon, his eyes glazed, his thoughts far beyond this place. I don't know what he is thinking. He insists that it's nothing special. Yet at night, when I creep to the console, he is hanging there, twitching. His eyes open and close. He threshes restlessly in the sleeping bag. I hear him muttering, but I don't know what he says, and I retreat when he jerks awake.

I should make radio contact.

And yet I can't do that. He won't let me do it. He insists that nothing's wrong - and then turns away to leave me with more silence. But something *is* happening. I just don't know what it is. After only two months, something's happening, and I can't get to grips with it.

What is it? I can't tell. We have four months still to go. We have been here for two months, we have four months still to go, and already we are changing dramatically and fear fills each moment.

My thoughts... can't control them. I keep repeating the same statements. I keep repeating the same thoughts in my mind, my head spinning, exploding. I must try to control it. Make the best of a bad thing. Keep my peace and let him do what he wants and pray he comes to his senses.

I cannot make sense of it. He was the best of all the astronauts. His discipline must surely have been enormous, but now he seems quite demented. Always studying the moon and stars. Muttering constantly about Tsiolkovsky. Photographs it with ultraviolet rays, studies grey rocks, the mountain peaks. All dead. Ruined forever. The photographs show the truth. Yet he hangs in his sleeping bag, his head bowed, the moon below him, often opening his bloodshot eyes to look down upon that curving dark wasteland.

I know he dreams a lot. He mutters constantly in his sleep. He dreams no longer of sex or the Earth; he sees only the universe. What lures him out there? He has seen it all before. He is now like a man in search of God or some other Absolute.

The walls of the console are covered with photographs. They are all of that crater. They all look the same and yet he studies them as if at an altar.

Now he's studying the sun. Now he photographs that as well. Photographed in ultraviolet light, it is a black-peppered soup. White gas flecked with black spots. Streams of helium sweeping around it. One plume is half-a-million miles long and he finds it intriguing.

He has started drawing the sun and moon. The sketches are scattered around his feet. It is difficult to tell the difference between the two, since he draws them the same way.

His doodling is chaotic. The lines are desperate and uncontrolled. First the sun or the moon, then the black hole of Tsiolkovsky, then lines radiating out from the crater, forming spirals and circles.

He must think there's a connection. It's hard to gauge just *what* he thinks. Now he's fascinated by the sun and the moon, by curving lines that lead nowhere. The spiralling lines resemble bubbles. No, not bubbles: not quite circular. Trailing outward, they are more like amoebae as viewed through a microscope.

What does it all mean? What goes on in his mind? He is on his hands and knees in the console, drawing furiously, blindly.

When I drift forward, he looks up, then waves me away. I drift back and stop my flight with a handrail, hold it tight, keep on watching. He appears not to notice. Above his bent back: a window. In the window: the eclipse of the sun by the Earth. All around them and above them, the stars, the glittering web of the universe.

I should make radio contact.

Part Two: Possibilities

'*Round about what is, lies a whole mysterious world of might be, a psychological romance of possibilities and things that do not happen.'*

-Longfellow

18

What is real? What is unreal? What is madness and what is sanity? Is it true that a man must be mad if he sees the invisible? Life does not end with our senses. What we perceive is not the Whole. Beyond what we see, what we feel, what we hear, lies another world of colour and light, containing life that defies our gaze. That world is very real, but indifferent to our presence. It continues all around us and within us and it often feeds off us. In this sense, we are blinkered. We truly see and feel little. There are colours and sounds and vibrations and organisms that exist beyond our limited comprehension and have always been there.

Life is finite and infinite. It defies space and duration. It mocks all our theories of shape and dimension and time. What is time but Man's invention? Are not all dimensions relative? Do our fellow human beings really exist, or do we simply project them?

Reflect now on the human being. He cannot exist as a physical entity. The human body is composed of molecules that drift and collide like the particles in our own perceived cosmos: there are no solid men. Even our flesh is

incorporeal, with other worlds passing through it. In our skin, in our blood, in our bones, a rich, microscopic form of life thrives. And within it, other life, defying our eyes and microscopes; a life of dazzling, overwhelming complexity, passing through us, oblivious.

Each living thing is a universe. Within that universe: more life. Given this, the human being is no less than a self-contained cosmos, as boundless as outer space.

What is real and what is unreal? What exists and what does not? If the mind is the arbiter of all that we perceive, then whatever exists in the mind must be assessed as Reality. The dream and the actual: is there a difference between the two? Might it not be true to say that what springs forth from the mind is, by simply having been imagined, as real as a memory?

And what is memory but something lived? It still exists, though it is gone. It exists, or lives, in retrospection, in thought, and is as real as the present.

Think, also, of conjecture. Just how real is conjecture? Indeed, what is conjecture but the future in the present? A future as immediate as the present while it is held in the human mind.

The past and the future: two simultaneous realities. Between the two lies the present, always past, never actual; every second of the instant an advance from the past into the future.

Thus the present is a mirage. Only past and future are real. The past and the future are as actual as dreams - and all exist as reality.

The only reality is in the mind. Dreams are thus a form of being. By dreaming, by remembering, by speculating, we expand that reality. Therefore what we dream, we live; what we imagine has actually happened. Once we think of an event, it exists and will stay with us always.

By this reasoning, all concepts change. What we think is where we are. What is real is what we dream, what we imagine and project - and by these

terms, the only real world is the one we create.

There is no single reality. Each person creates his own. Given this, there is no sanity or madness, no real or unreal.

Only that which *is.*

19

Imagine our astronauts. They are changing every minute. Their pulses are twenty beats lower, their heart contractions are much slower, and they drift about in an ethereal, dreamlike way, like divers under the sea. Put it down to lack of gravity, the price paid for weightlessness. Eyes bloodshot, faces puffy, legs thinner and skin too pale, they are also taller and more imbalanced than before - and not nearly as fit. Their red blood cells are changing shape, they've lost calcium and electrolytes, and their bones are brittle to a dangerous degree, their muscles slack, aching constantly.

Zero gravity has its affect. The silence also has its affect. In the large, womb-shaped rooms of the Skylab, the silence is resonant. They are *aware* of the silence. The air-conditioning reminds them of it. This subdued background humming is a mockery to their chill isolation. Isolated from the Earth. From daily human contact. Once just that... now isolated from one another, bringing strangeness and tension.

The moon's horizon shifts constantly. Earth rises and falls beyond it. What was home is now a luminous, green-blue globe, hovering out there in black night. All black but for the stars, multitudinous, unblinking; and the sun, a distant orb of fire and heat, pouring light through the void.

This is home.

A laboratory.

20

He cannot tolerate the lunar console. He suddenly finds it repugnant. The haunting black hole of Tsiolkovsky obsesses him to the point of mild lunacy. I must not let this happen. He thinks so and feels better. With a sigh, feeling human again, he takes down all the photographs. They are bundled together and then filed. He collects the drawings from the floor. There are spirals and loops and curving lines, which make him think of amoebae.

What has led him to draw them? A temporary aberration? Glancing down at the moon, the ringed craters and their shadows, he shivers as if shaking off a ghost and then closes the airlock hatch.

He drifts out of the solar console, through an oval-shaped door, glides along a white tunnel, passing a ring of gas tanks, and eventually arrives at the larger clutter of the workshop. She is floating under the grid ceiling, spiralling languidly in the air. Somersaulting, her lengthening blond hair coils around her pale face. He hangs in space, observing. Her body turns in the air. She seems strange to him, an alien in flight, not at all recognisable.

She does not float alone. Drifting debris surrounds her. The air is filled with clothing, with knives and forks and spoons, with bolts and glinting nuts and screws, with slide-rules and pencils. They all drift magically, gliding above and below her, signifying that his neglect has been ruinous and things are falling apart.

Still involved in her callisthenics, she hasn't noticed his presence. Turning slowly in the air, her hair flowing, limbs adrift, she seems removed from a sense of her own being, too immersed in a private dream.

Disturbed, he glides to her, stops beside her, speaks her name. His voice is high-pitched and disembodied, seeming to come from outside him. She blinks and stares at him. They both float there in silence. He can see his twin

reflection in her eyes, but otherwise they are dull. What is happening? he wonders. What is going on between us? She stares at him, no smile on her face, then drifts away from him. He follows her down. They pull themselves close to the table. They sit there, trying to smile at one-another, the silence humming around them.

Neither knows what to say.

21

I am truly so sorry. I wish I could say those words. I wish you could understand what it was like: what that crater did to me. I don't understand it myself and am ashamed that it happened. I was obsessed and I don't know what caused it, since I saw nothing down there. It's just another lunar crater, caused by meteorite bombardment. It might even have been volcanic long ago, but that makes little difference. What matters is that it's dead. Like the whole moon, it is barren. I must bear this in mind when I see your wide eyes fixed upon me. I must try to be sensible.

What caused the obsession? That's something I cannot answer. I'm ashamed when I think of my behaviour and can hardly believe it. I'm an educated man, experienced and highly disciplined. I have been in space many times before and it never affected me this way. Was I temporarily insane? No, I can't believe that. Yet what did I hope to find down there in the eye of the crater? I never saw anything. I don't remember seeing a thing. In fact, I don't remember much of it at all. It was all a strange dream.

Tsiolkovsky: the giant crater. And the black spots on the sun. I went right through the crater to the sun and saw the dance of the molecules. The drawings: the loops and circles. Was it my hand that made them? Black

craters and a mass of swirling lines, the sun and moon, both the same. I dreamt of such things. The sun and moon became as one. I saw the black spots on the sun as great chimneys out of which the solar winds rushed. Then travelling down through those black tunnels. Streams of light and radiant colours. The mighty roaring of the elements, the bubbles dancing and exploding, the gas reforming as more bubbles and reflecting my multiplied form.

What kind of dreams were those? Certainly not my normal dreams. I wish I could find out what it was that sent me into that hell. And undoubtedly it was that. An unprecedented nightmare. I couldn't sleep or think straight - I felt insane, my head caught in a vice. What did I hope to find there? What did I actually photograph? I photographed the crater, Tsiolkovsky. Nothing more. Nothing less.

I must put this behind me.

Work. An escape. I will reorganise the Skylab. The whole place is filled with debris and it's dangerous and that must be corrected. We need order. Commitment. We must not detour again. If it happens again, which I doubt, I'll make radio contact.

There's nothing out there but space.

22

He is wrong. There's something out there. I now know this for a fact. Last night, when he was sleeping (and peacefully, at last), I was drawn to the darkened solar console, where I gazed out the window.

The dark side of the moon. The dark side is not dark. I looked down upon the moon, upon Tsiolkovsky, and it seemed to stare back at me.

I must admit, I was frightened. That enormous, pitch-black pupil! Staring up as if taking me in: a black pupil in blue light. And around it, the mountains: a fawn iris around the pupil. For a moment, I thought the iris had opened wider, to let the pupil expand. The eye of the moon. Beneath that eye, what lies in wait? I felt suddenly that the moon was alive, so I turned away, terrified.

Space. Endless space. The constant brilliance of the stars. Not just white as they had been from Earth; here they had different colours. Red, yellow and purple. The whole spectrum on display. And far away, across that black, expanding void, the sun's fierce, scorching light.

We cannot look directly at the sun, since its unfiltered radiance is blinding. Instead, I looked at the moon, at its crater, then stared straight ahead. Emptiness. Silence. The nearest star is beyond our reach. I felt the void opening out to draw me in and started flying towards it.

Sudden fear. Blinding panic. I blinked repeatedly and shook my head. A rushing noise, a hissing sibilance in my ears, the flaring up of fierce light. The fear passed, leaving silence. I was sweating and shaking. There before me was a silhouetted tree, a swirling white light behind it.

Fear and disbelief returned. I felt the handrail in my hand. Closing my eyes, I tried to shake myself awake, but then I opened my eyes again. A silhouetted tree, quivering out there in space. Behind it: an enormous, silvery disc, a giant plate standing upright. It was spinning and glowing, and kept fading in and out. Then I heard the rushing sibilance as my head exploded, filling with pain, and I closed my eyes and felt myself dropping through a dark, roaring well.

Nausea. Deepening fear. A fierce, obliterating revulsion. Then it stopped, the void freezing, and I blinked again and looked out. There was nothing out there but the night and the cold, brilliant stars.

Silence? Not really. The television was crackling. It was normally used for viewing the sun, and it had turned itself on.

I felt cold, though I was sweating. I certainly felt that I was dreaming. Staring at the large screen, at the sun's magnified, mottled surface, I saw a line of multicoloured coils stretched across it, spinning furiously, radiantly.

I was frightened. And paralysed. The coils seemed to be transparent. They were spinning very quickly, glowing brightly, changing colours every second, making it seem that they could be viewed simultaneously from both ends - a trick to tease the eye and brain - becoming tunnels, then whirlpools.

I tried in vain to escape. The spinning coils became my world. I felt nausea, a hideous revulsion, and heard sound rushing in. Voices. Roaring winds. Other noises beyond normal sound. I was shaking, exploding out from my centre as a fierce pain cut through me. Then oblivion. Velvet darkness. Sudden silence and streaming stars. I awakened and found myself still in the console, floating under the grids, the screen below me blanked out.

There is something out there. It's not in me: it's out there. I don't know what it is, but it's real.

Perhaps he just didn't see it.

23

He sleeps well and feels better, so buries his shame in hard work. He drifts around the workshop, putting things back where they belong, then wraps his legs around the legs of a table and starts writing notes.

He is far behind in this task, not having written a note in days. Thinking back on how that time was spent, he feels flustered and guilty. What can he write now? Would not all of it seem like madness? On the other hand, if he fails to write the truth, it might haunt him forever.

The situation is novel to him, unexpected and therefore daunting. He tries to put the truth to words, but cannot do it, so puts his pen down. The effort had been too much. Now he has a headache. He puts his face in his hands and almost sobs and wonders what the date is. They have been up here a long time. He's no longer sure how long. He feels that he should make radio contact and explain it to Earth.

Yet he simply can't do it. It would seem too much like failure. Feeling ill, experiencing a pang of dread, he puts the notebook away.

He buries his shame in hard work. Runs a check on the whole Skylab. Replaces some filter screens, realigns the guidance system, checks storage batteries and cameras and gyros, cleans the telescope tower. Then he checks the growing crystals. Untouched by gravity, they are not deformed. Through the microscope, they are taking on new properties, which he cannot define.

All things, he realises, even crystals, are different in weightlessness.

Botany and biology. Solar astronomy and metals processing. There is a lot of work to do in the Skylab and he is eager to do it. Also, he exercises, trying to get fit again. He performs athletics in thin air, somersaulting, body-stretching, then he climbs onto the ergometer and has a real workout.

His leg muscles have deteriorated. His bones are losing calcium. Thus, when he has finished, he climbs off with his legs aching badly.

He glides across the Experiments Room, clambers into a metal barrel, and fastens a rubber skirt around his waist to seal himself in. He is lying horizontally, his legs sealed inside the barrel. The air inside the barrel will be vented into space and the vacuum will draw his blood back to his legs, just as gravity would.

He pulls the switch for negative pressure. There is a fierce, unnatural roaring. He feels his legs being sucked into space as if down a giant throat.

He cries out and struggles wildly. The rubber skirt shrieks in protest. The barrel shudders and roars and reverberates as his legs are sucked out. Whipped by fear, he bellows and wriggles. His stomach is sucked into the barrel. He screams and hammers frantically on the barrel, then claws at the switch. The barrel shudders and roars, sucking him in up to his chest. He feels the throat of the monster, the pressure, around his bruised legs and torso. The barrel roars as he screams. He claws in vain at the switch. He has a vision of the deadly realms of space and himself drifting endlessly.

Then he sees a feminine hand. It sweeps down across his eyes. The switch is pushed up, the roaring stops, and his body breaks free.

He is neck-deep in the barrel with the rubber skirt almost choking him. He just lies there, looking up at her green gaze, his choking fear twice reflected.

What happened?

What was it?

24

He is frightened. It is obvious. He is being very diligent. He keeps away from the Experiments Room, but otherwise he is working. I pretend not to notice. Nevertheless, I am worried. He should go back to the Experiments Room and continue his exercises. He is not very healthy. He is crouched up more than usual. His eyes are more bloodshot than mine are and his skin looks transparent.

What was it? Perhaps an accident. Though I don't think he believes that. He is frightened, but I still don't know why. I want to know what is out there.

After it happened, we saw nothing. At least we *think* we saw nothing. There was a light (or what we thought was a light) like the tail of a comet. It was gone before we blinked. We really couldn't describe it. We just looked out the windows, at the void, and then stared disbelievingly at one another.

He hasn't talked much since then. He is working with great diligence. He doesn't shave and his hair is growing longer, but at least he is active. I don't understand his fear. I need to know what is out there. The revulsion I once felt is gone, and now I just want to know.

I don't think *he* wants to know. I think he wants to forget it. I think the accident of the Lower-Body Negative Experiment has scared him tremendously. He tries not to show anything. Now he buries himself in work. I don't think he comprehended fear before, which must make it difficult.

No matter: I have to watch him. I don't know what he might do. I only know that in the night, when I go to the solar console, he's groaning and muttering in his sleep, as he did a few days ago.

I enjoy the solar console. He doesn't know I go up there. I am finding it very difficult to sleep, and the console relaxes me.

I gaze down on the moon a lot, feeling drawn to Tsiolkovsky. I look down and seeing its pupil staring up, the iris opening and closing. It is black. Without depth. The shadows make me think of light. I look across at the sun and the stars, beyond which is the universe.

It is safe to observe the sun through the camera. Magnified, it is a bowl of peppered salt. The salt is glowing and the pepper appears to shift around the fierce solar flares. It is a world of heat and energy. Not cold like the moon. It is bright and the moon seems very dark, yet they both look the same.

I feel drawn to both of them.

I don't know why he's frightened. What we are is what's out there. The green-blue-white globe of Earth, the curved horizon of the moon, the immense, flaring eye of the sun - all are one and the same. I don't know why I think this. I don't think it: I feel it. I am drawn to the console, to that void beyond the window, and I stand there for hours and stare out and feel as if I am glowing.

Is it real or unreal?

25

I must watch her. She is changing. She is losing her grip. She drifts about the Skylab all day long, in a trance, smiling distractedly. No help. I am on my own. She never does any work. When I speak, she just blushes and floats away, spiralling languidly, aimlessly.

I should make radio contact. I've tried, but I can't do it. When I reach for the switch, my hand freezes and my heart starts to race. Shame? I'm not sure. I don't understand at all. My hand freezes and I turn away and drift off and return to my work.

It’s the only solution. My one refuge is in work. I must work until it’s time to return to Earth, though I’m not sure when that is. No sense of time at all. One day drifts into another. Lots of dreams, though I’m not sure of the difference between the dream and reality. Her naked body is there before me. My rigid penis is in her flesh. There is darkness and the wheeling of stars, but that doesn’t explain much. I don’t think we have sex. I think I dream that we have sex. I think I dream of the moon and the stars and the sun’s blinding vortex.

I think I dream all the time.

It’s difficult to work. I seem to lack concentration. Either that, or my disciplined brain has become too imaginative. I think I am seeing things - things that cannot exist. Either that (I repeat myself) or I am seeing things that once I was blind to - or to which I was once blind.

Hidden senses springing forth. Buried powers bursting free. I see things where there is nothing to see - and when I blink, they remain there.

With eyes closed, I see perfectly.

She goes frequently to the solar console. I know she goes there when I sleep. In my dreams I see the moon and the stars, my gaze fixed to her green eyes. She stands for hours by the window. Looking out at the cosmos. Entranced by the moon and countless stars, she does not know I watch her.

I think she may be crazy. She imagines there is something out there. It is a thought that has passed through my own head, but my trained mind resists it. Still, I keep observing her. My eyes follow her shifting gaze. Between us, we survey the lights of space, the blazing eye of the sun.

In my dreams we don’t talk.

With eyes closed I see perfectly. Even more than I should. I see the Kirlian ghost of a leaf I have just bisected or a flower that has suddenly died because the greenhouse turned cold. Such things happen all the time. The heat and

light are not dependable. The lights suddenly start flickering, the heat turns itself off, and then, even before I get to check them, they again behave normally. I blame it all on NASA. I try not to, but I do. Yet I know that these mechanical faults can't be blamed on the Earth. That wouldn't explain the bisected leaf. It would not explain the withered flower. When I cut off a part of the leaf, I see its image clearly. The withered flower has a healthy ghost.

Today she was different. She was very strange today. She was standing by the ultraviolet stellar astronomy camera, and I looked intently at her and saw her change. Her hair and fingernails were blue. Both earlobes were green. Her nose was yellow while her neck and cheeks glowed a bright orange and red. I knew immediately what I was seeing - a thermographic photograph. I knew this when I saw the glowing aura around her slim form. There was a hazy outer layer. The inner layer was brighter. As I watched, I saw striations of silvery light flaring out and then dying. Fascinated, I kept watching, wondering how my eyes perceived it. Then it faded and I saw her as he is... and I felt close to madness.

I must ignore all the whisperings.

26

He is taking a blood sample. Her wide eyes reflect the needle. The hypodermic syringe gleams under the light as it shakes in his hand. He pinches her white skin. The probing needle finds a vein. She glances down as the needle slides in and her blood starts to flow. He doesn't take much. The blood bubbles in the syringe. He withdraws the needle and holds it up, then squeezes the plunger. A red globule floats away. The blood forms a tiny sphere. It bobs lightly in the air between their faces, drifting magically to and fro.

She studies the drifting globule. Her green eyes are filled with light. Her dark pupils contract and then widen and move slowly from left to right. She is entranced by her own blood. The globule resembles a distant planet. She leans forward and blows gently at it, making it rise and fall. When it settles down, she blows again. The red globule darts away. It bobs lightly in the air, left and right, up and down, then floats away on an invisible wave: a light-reflecting, red planet.

She is instantly agitated. The globule floats right in front of her. She shivers and picks up another syringe and fills it with water. She waves it before her eyes, holds it up and presses the plunger. A bubble forms on the point of the needle and she jerks the syringe away. Another bubble drifts in front of her. The light inside it is silvery. She makes another, then another, yet another, until the bubbles surround her.

He watches her thoughtfully. She is blowing the bubbles to and fro. They rise and fall lightly as she blows them, her pale face excited. He stares at her, fascinated. She studies the bubbles, mesmerised. Agitated, she bursts one, then another, and starts all over again.

He doesn't say anything. There is nothing to say. Her face becomes that of a child as more bubbles form. After a while he turns away. He marks and seals her blood sample. He packs it away with the excrement and urine while her strange game continues.

He drifts down to the table, starts to eat and is ignored. She is floating before the window, making bubbles, the moon's sharp edge behind her. The moon in bleak and forbidding. Its craters move out of darkness. Beyond the bright, curved horizon are the stars and the numberless galaxies. Blowing bubbles, she is oblivious. She guides the bubbles into groups. Night comes and she is still blowing bubbles and he silently watches her.

She cannot stop what she is doing. She is in some kind of trance. The bubbles dance in the brightly-lit room, rising and falling by white walls. What is she looking for? Why does she keep regrouping them? Finally, even that begins to pall, so she makes up some different coloured dyes. She uses half-a-dozen syringes, each filled with a different dye. Using each syringe in turn, she makes more bubbles: different colours, all sizes. The bubbles float there in front of her, forming a kaleidoscope. They drift all around her like planets in a luminous universe.

The patterns change constantly.

27

There is method to my madness. He doesn't know it, but there is. My blood globule forms a sphere that drifts freely, and I know it's the sun. Other bubbles, large and small. They regroup and change themselves. The blue one is Earth, the crimson one is Mars, the two green ones are Neptune and Uranus, the dull yellow is Pluto. One must mix the dyes carefully. Various

colours for Jupiter. Awakening in the night, I raised my eyes and saw Saturn's rings. The bubbles moved and regrouped. I stared at them and they moved. A yellow globule split in two and one part formed the rings around Saturn. The planets danced before my eyes. I willed their movement and they obeyed. An untouched sphere of water was Venus; a red one became Mercury.

I didn't leave my sleeping bag. He was hanging there right beside me. Turning away, I surveyed the drifting bubbles representing the universe. They bobbed and collided, broke apart and formed new groups. I hung there, imprisoned in my sleeping bag, and the Skylab seemed far away.

There is method to my madness. He doesn't know it, but there is. I unzipped my sleeping bag and drifted out, floating towards that small universe. The planets danced all around me, drew me in and mesmerised me. I saw the great rings of Saturn, the red desolation of Mars. Then I travelled through the silence of space to find the black clouds of Venus. Eroding rock and lava flow. Volcanoes rumbling in the gloom. The only life is in the wind and the flames, and both drove me away. Back to stars and wheeling planets. The stunning beauty of the cosmos. The flaring eye of the sun casting light on more dead rock: the debris-strewn, parched plains of Mercury, its sky pitch-black and chilling. The Earth and moon are in that sky. They both look very small. The sun is three times the size that it is from Earth, and it cast its light over the huge rock behind which I was drifting. Out towards Jupiter. Across the North Pole of Europa. The frozen gas of the mountains is lit by the light from that great sphere. A globe of rich, dazzling gold. The Great Red Spot like a wound. From Amalthea, the monstrous planet fills most of the sky, is a maelstrom of yellow and white, burning fiercely and glowing. And beyond: the rings of Saturn. The long line of the inner satellites. All around, in a black sky, are the stars, a dazzling mosaic of indescribable colours.

I drift on and am captured.

No fear. Calm acceptance. The great ships drift in silence. They are snow-white and stupendous and beautiful: technological works of art. They are drifting all around me, glowing and vibrating. Their lights flicker on and off to form rainbows in the dark sky before me.

I feel no fear. I am calm. It is the calm of recognition. The great ships drift around me in silence, their lights gently seducing.

I see a silhouetted tree. It is framed by a glowing disc. There is sound, but I cannot say what it is: it is part of the silence. The tree disappears abruptly. The disc flares up and vaporises. The great ships start to glow and a white light fills my eyes, then I blink and shake my head and look again and see him staring at me.

He doesn't know where I've been.

28

She is visibly going crazy. I think we're both going that way. I keep glance repeatedly at the radio, having the urge to make contact, but every time I try to switch it on, my hand freezes above it. She knows of my dilemma. Her green eyes observe my hands. When my hands twitch and freeze above the radio, her lips form a strange smile.

What is she concealing? Her smile is enigmatic. When she offers that enigmatic, secretive smile, I am filled with cold fear. Because of this, I despise myself. I've never felt fear before. I knew fear in the Negative-Body Pressure Experiment, but that was the first time. Now it's all too familiar.

I'm going crazy as well. It's the only rational explanation. I think we're both going crazy in this Skylab, which is now like a madhouse.

I found her drifting again this morning. She was floating through the coloured bubbles. At first I thought she was sleeping, but I was wrong: with bright eyes, she was smiling. She didn't see me for some time. She was too engrossed in the coloured bubbles. Even when I called her name, she took a long time to turn toward me. She was not pleased to see me. Having seen me, she turned away and stared at the moon. She watched the Earth rise over the moon's horizon: that spectacular dawn. Earthlight fell on the craters.

We have lost our appetite and never eat anymore. We are strangers to the Earth and to ourselves, and our bodies are changing. We are taller than we were. Our upper bodies are much broader. Our eyes are sunken and bloodshot, our faces hollow-cheeked and pasty, and our legs are getting thinner every day and have become almost useless. I know fear. And feel rage. I think the rage comes from her. It is cold and suppressed and possibly violent, but I don't know what causes it.

There are strange things happening here. I sometimes think we're not alone. There are whisperings, but I'm not sure if they're real: they are part of the silence.

Whisperings. *What* whisperings? Are they voices? Is it really sound? First I think I hear them, then I'm not sure, but I always feel cold.

There are sounds we cannot hear. Perhaps I hear those sounds now. I only know that whether real or unreal, they make me glance all around me. I see the moon beyond the window. There are bright stars in the sky. The coloured bubbles are floating like distant planets in the Skylab's bleak emptiness.

She is floating as well.

Her blonde hair is now longer, coiling around her haunted face. She looks fragile, a mere wisp of smoke, drifting languidly, silently. Occasionally she glances at me. My hand reaches for the radio. When she smiles, I feel my

hand growing numb, the fear whipping my nerves. This is something I can't explain.

She drifts slowly with the bubbles. The Skylab drifts around the moon. Here, in the Skylab, in this silence, we drift out of ourselves. Other things are also drifting: spoons and pencils, nuts and bolts. I once removed them all, but now they're back and the sight of them frightens me. All the modules are strewn with debris. Things just break loose and drift. They drift to and fro across the rooms as if searching for something.

Last night, when I awakened, I saw her floating in a silvery aura. Her body was luminous, her blonde hair like fire. Beyond her, outside, was a large sphere, spinning and gleaming. The sphere filled the window. It was as bright as the sun. Silhouetted in its light was her body, now transparent and glowing. I could see right through her skin. Her bones and veins were visible. They made me think of a tree in the moonlight, its outstretched branches bare.

I blinked and looked again. The gleaming disc was shining through her. The coloured bubbles were clearly visible through her skin, and I thought of amoebae. Then the disc disappeared, leaving black sky and stars. I saw her body as a solid in space, the bubbles drifting in half-light.

I fell asleep almost instantly.

Perhaps I'm hallucinating. I often fear that this might be so. Then, when I note her quiet smile, my fear becomes stronger. Her eyes are green and enigmatic. She has the slyness of a cat. She drifts quietly in thin air, through the bubbles, and I sense mounting violence.

Within me?

Within her.

29

Night. He awakens. He is hanging in his sleeping bag. He blinks and sees her hanging beside him, her head bowed in silence. Though asleep, she is filled with violence. It pours out of her in waves. He is frightened and rubs his eyes, licks his lips, his stomach rumbling with tension. All the windows have been closed. There is darkness and silence. Not silence: a constant, humming vibration. Something else... ghostly whispering.

He hangs in his sleeping bag. The ghostly whispering is all around him. The voices are outside and in his head, rushing in, fading out again. He is sweating and shivering, burning hot and cold. He glances fearfully to the side, sees her hanging in her sleeping bag, the coloured bubbles floating slowly to and fro between the grid floors.

He doesn't know what to think. He is frightened and fascinated. Shakily, as if not quite awake, he unzips his sleeping bag. Zero gravity draws him out. He drifts toward the bobbing bubbles. They are drifting to and fro on a light breeze that should not exist.

It's the breeze that is whispering. He doesn't know where it's coming from. It is blowing around the centre of the workshop, lifting papers and plants.

Feeling strange, he glides forward. The breeze whispers and croons. It swirls lightly and he sees the plants swaying and hears muffled voices. He cannot understand the words. In fact, they may not be words. He drifts closer and the breeze moves around him and turns him to ice.

He cannot believe how cold it is. He can believe the fear that grips him. The breeze strengthens and seems to close around him as the bubbles expand. Not bubbles: huge moons. The moons glow and glide through darkness. Then the darkness explodes with a roar into white fire and scorching heat.

He is drawn in through the cosmos. Light and darkness pour around him. The noise is deafening, an awesome, shattering sound, as he is spun around and crushed and sucked dry. No time for fear or calculation. The geometry of space is revealed. There are white moons and silvery stars and immense, coloured planets. He is part of the whole. It unravels inside his head. He looks out from the tunnels of his eyes to see the face of the infinite. Time and space have no meaning here. All exists within the moment. What he hears are the voices of history rushing into the instant. It all exists at once. It obliterates the Self. He feels and perceives and reacts as but part of the chaos. No time for recollection. Time itself is rendered redundant. There are streams of light and darkness and colour sweeping through the great storm. The bright molecules dance. He is at one with the amoebae. Floating up and drifting down, his body singing, he dissolves into pure being. No limits are decreed. No possibility is denied. What he is (which is nothing) is pure sensation, which destroys and renews itself. He dances with the molecules, swims with the amoebae. There is ecstasy and terrible pain at once, and they sweep him away.

White walls and grid floors. His human body convulses. He rebounds from a gas tank and screams and spins around and turns over. He is gasping for air. His ears are ringing and aching. He stops spinning and then drifts across the workshop with his heart pounding dangerously. Eventually, he settles down. He reaches out for a handrail. He shivers (With revulsion? With joy?) and then takes a deep breath.

The Skylab is quiet. All the windows have opened. He looks out to see the darkness of space, a white glowing receding. Then there is nothing. Only dark moon and glistening stars. Numbed by fear, he shivers and turns around to see the green of her wide eyes.

She is looking right through him.

30

I think they are coming for us. They would take us now, but he resists. He is frightened and I don't understand that, since it's what he most wants. I didn't want it at first. Now I want it more than life. What we are is what is out there - and I must find my origins.

His resistance is futile, merely delaying the inevitable. I want him to accept what is happening and then *will* the event. There must be acceptance. His rejection only leads to fear. He won't talk, but I know that what he sees is his own inner conflict. He must open up his mind. Try to give them what they want. If he tries to close his mind, they will come and just tear it away from him.

I believe that may be starting. I think that's what frightens him. I understand what they are offering - the Oneness - but he knows only terror.

Fear made manifest is a nightmare. Too much doubting leads to chaos. He resists, so they unlock his mind - then the past and the future become one. We cannot survive such treatment. He cannot survive if he resists them. If he does so, they will unlock his mind and make him view the abyss.

This morning he was terrified. I awakened to find him floating. He had opened the viewing windows and was gazing out at the cosmos, but finally he turned his head to look at me as if staring through me.

I didn't dare meet his gaze. I saw the white light all around him. I saw his bones and the tapestry of his veins, then the white light receded. It turned into a glowing disc. It was hovering just outside. It was spinning, then it darkened and changed shape and became a huge eye. It made me think of Tsiolkovsky. A distant sun shone in its pupil. It was framed by the immense, pulsating iris,

which was webbed with fine lines. Then the pupil contracted. It disappeared into silvery light. The glowing disc made a sound that pierced my brain and numbed all nerves; then it faded, seemed to shrink and fall away, disappeared, left the starlit void.

I saw him looking at me. When I smiled, he turned away. He floated down to check the plants on the floor, and they stretched up to touch him. His shrank from that contact, kicked his legs and shot away. He glanced at me, his eyes bright with fear, then floated into the upper deck. I observed him through the grids. He floated along on his belly. He kept glancing left and right, up and down, and his body was twitching.

I knew then that the fear had swamped him. It was threatening to engulf us both. I unzipped my sleeping bag and drifted out and tried to glide through the cosmos.

The planets had disappeared.

31

She blames me for the missing bubbles. Her green eyes are resentful. She floats around the workshop in a trance, only stopping to stare at me. Her violence is almost palpable, making her tremble as it flays me. I recoil and then shamefully turn away to find peace elsewhere. I avoid the solar console. I never go near the Experiments Room. When I think of what is lurking outside, I am filled with pure dread.

The Lower-Body Negative Experiment. The taunting eye of Tsiolkovsky. There is something out there, something real, and it is trying to get at me. Why me? Why not her? She has changed, but hasn't weakened. She has taken all her strength from my weakening, and now she despises me. I can tell this from her violence. I can see it in her smile. I cannot control my mounting fear, and this makes her feel stronger.

What does she see? It is not what I see. While my eyes fill with blood and resentment, her eyes gleam with wonder. Drifting there, she is ecstatic, enslaved by her secret thoughts. While I fight for my life, she travels on through the dream of her mind.

It is all in the mind. All experience is in the mind. All phenomena are of and by the mind and cannot exist otherwise. Perhaps she understands this. Maybe I was wrong. I once thought that the mind was a tool, but now I know it is everything. Without my mind, I cannot be. Life is only made manifest through my awareness. Should I cease to be, the universe will disappear, its past and future obliterated on the instant, the dream of life blotted out. Yes, I was wrong. The mind is not a mere tool. All that was, all that is, all that will be, exists by my being.

Yet what can this mean? Am I real or unreal? Do I, or does that which I experience, have a claim on the actual? The dream and the reality: I cannot

tell one from the other. I know only that what I am, where I am, is what has to be dealt with.

The Skylab is attacking me. I think she's *making* it do so. I sensed it when the plants tried to sting me, when the screwdriver flew at me.

I cannot forget the screwdriver. It snapped free like a switchblade. Flying out of its clips, it came at me with unnatural speed. I saw it and ducked. It missed my head by mere inches. Then it thudded into a box on the wall, split the wood, hung there, quivering.

Staring at it, I felt ill. My pounding heart made me sweat. I looked at her and saw her green eyes, the slight smile enigmatic.

Her powers are developing. I think it all stems from her. It's not just the plants and the screwdriver... it's also the other things.

The windows open by themselves. The cameras turn themselves on and off. Just this morning, when I gazed at the TV screen, I saw what had to be Pluto. It should have been the sun instead. The camera was focused on the sun. I checked the camera, but I couldn't adjust it, so Pluto remained on the screen. Frightened, I turned away. She watched me emerging from the module. As she stared, a pack of batteries snapped free and flew straight towards me. I avoided them just in time and they exploded against the wall. I looked at her and she smiled and turned away, though she was visibly trembling.

She has lost a lot of weight. I think she's burning herself up. She is using all her energy to attack me, but I don't think she knows it.

I must find out what's happening.

He straps her into the cardiograph harness. She has agreed to let him do this. He switches the current on, checks her resting physiology, and discovers that her magnetic field is unusually powerful. She keeps her eyes closed. Her wrists are strapped to the chair. He checks her body's magnetic field again and is awed by its strength.

Her brain waves are unusual also. Certainly they're not normal. He studies her and notes that she is calm, so he begins the experiment.

He places an egg in the air before her and tells her to look at it. She opens her eyes and stares at the egg, which is quivering slightly in thin air. He tells her to separate the white from the yolk, even though she cannot get out of the chair. She stares intently and her brow starts to furrow and the egg shakes a little. He checks the ECG. It shows intense emotional excitement. This excitement increases and the egg quivers even more, then it leaps up and down and eventually cracks.

She is shaking in the harness. A vein throbs in her neck. She starts sweating, but keeps staring at the egg as the shell cracks and breaks. It breaks into two pieces. They float away in opposite directions. The white and its yolk are like jelly, now shaking in front of her.

She concentrates even more. The white stretches like protoplasm, stretching out until it forms a semicircle with the yolk in the middle. He studies her face. She is straining and sweating. She leans forward in the chair, her body straining, as if trying to free herself. Then he checks the ECG. Her brain waves are in turmoil. Her pulse has soared to approximately 250 beats per minute and her heartbeat is dangerously irregular.

She pours sweat and shakes violently. Her bright eyes reflect the egg. She shakes even more, chokes and gasps, her eyes wide, then the white of the egg drifts away and the yolk floats alone.

She relaxes immediately. He checks her heartbeat and pulse. Both are racing, but they soon settle down while she blinks her tired eyes. She is temporarily blind, but her vision soon returns. She is dizzy and seems extremely weak, but he points to the rocking chair.

It is a metallic device. He straps her in and she rocks herself. She has to use her hands and feet and this determines her mass and from that he is able to calculate her weight.

She has lost nearly three pounds in ten minutes.

They return to the workshop. She is still weak and dizzy. She says she wants to rest and he tells her to drift freely and relax. She does as she is told. She just lies there in thin air. He turns the lights off and the darkness swoops in to envelop her. He reaches out to the strobe projector, moves it around and points it at her. She turns languidly in thin air, her eyes closed, but he tells her to look at him. She does as she is told. He is wary of her compliance. She just floats there in the darkness, in silence, and her breathing is audible.

He turns on the strobe projector. She is transfixed in the light. The beam flickers on and off at 24 frames per second, and she stares at it and starts going crazy.

She groans and spins around, starts shaking and gasping. Her arms wave, her legs twitch, her head rocks, and then she jerks in fierce spasms. He keeps the projector running. She jerks and writhes in thin air. She is like an epileptic under water, being drowned by her violence.

Suddenly, she screams, spins away and disappears. He turns the main lights on in time to see her slamming into a wall. She bounces off and drifts away. He switches off the projector. She drifts toward him, her eyes glazed, her limbs loose, and he pulls her down gently.

Her heart pounds. Her pulse races.

This does not make him stop. Instead, he sets her in front of the flickering camera screen. He focuses the camera on the sun. The sun appears on the screen and he orders her to study it carefully.

She shakes and sweats again. She has to hold herself down. The sun changes and becomes a huge moon, ringed with fire, veiled in mist. She stares at it, then gasps. He tries adjusting the camera. This doesn't help, so he studies the screen and sees the burning moon changing. It turns into a shadowed crater. It is the black eye of Tsiolkovsky. Inside it, in the darkness, a distant sun gleams and then disappears, leaving only the black hole.

She gasps and slumps forward. She trembles and then is still. He looks down at the screen and sees Saturn and Janus and Titan. He studies the screen at length. She is groaning in the chair. He looks down to see her wrists in the straps, the skin pinched, the veins throbbing. Then he looks at the screen again. He sees the great white ships. They are glowing and forming rainbows in the vast velvet bowl of the cosmos.

Then they darken and disappear.

He hangs her in the sleeping bag, zips the bag up, drifts closer. Her head nods and he slaps her face lightly to make her open her eyes. He floats a tray directly in front of her. It has a glass lid. Beneath the lid there are crystals, glittering richly, and he tells her to move them.

She licks her lips and stares at them. Her pupils grow large. She starts shaking and the sweat slicks her face as the floating tray rattles. He tells her to be careful. She appears not to have heard. He doesn't want the breaking glass to blind her, so he warns her about this. Her eyes flicker in acknowledgement. The pupils widen and become intense. She shakes as if in fever, the glass starts to crack, then the pieces break apart and drift away as the crystals float upward. They bob just above the tray, spinning and flashing

before her eyes. She shakes violently, gasps, drops her head... then the crystals stop moving.

She appears to be unconscious. He picks the crystals out of the air. He puts them back in the tray, puts on a new lid, then clears the surrounding air of shards of glass. When this is done, he gazes at her. She is sagging in the sleeping bag. He feels confident, no longer afraid, and so he slaps her awake.

She raises her head. Her green eyes are too bright. She looks at him and through him - beyond him - and his fear makes him scream.

He lifts his hands to protect himself. A roaring white light rushes at him. He is picked up and hurled across the room and sucked dry and emptied.

Their minds meet at the crossroads.

Part Three; Journey

'What is actual is actual only for one time/And only for one place.'
-T.S.Eliot

33

All illusions are real events. They exist because they *are.* What is captured by the eye or the brain is given life in that instant. It must exist thereafter. It must have its past and future. Once conjured up, in the instant of its creation, it is given eternal life. There is no such thing as time. The finite sleeps with the infinite. One exists within the other, both are parallel, as one, and they move from point to point and return and will always be present.

This happens within the mind. What we think becomes what *is.* Once we think it, it is part of what we are, made manifest by our consciousness. An existence must be perceived. Once perceived, it must exist. Consciousness, that metaphysical word, is where the world starts and ends.

Physicality is limitation: an illusion to protect the mind. What is physical is that which our minds record to afford us shelter and sanity. The mind dictates what we feel. Kill the mind and touch dies with it. The mind also dictates what we perceive, and men are blinded by shock. A shocked man rejects sight. He withdraws from the visual world. He retreats inside himself and creates another world of his choice. In that world he sees perfectly.

What does he see? He sees a world we cannot know. He sees a world that for us would be fantastic, but for him is quite normal. It is a world of light and colour. It has shape and dimension. He travels through it, moving backward and forward, finding what he most needs. What he sees, we cannot

see. His world is not our world. Yet his world is as real to his blind eyes as is vision to us.

The real world is in the mind. All outside the mind is false. The illusion and the reality are one if the mind so decrees it.

Close your eyes and look inward. Study darkness and light. Turn away from your closed eyes and look inward and travel down through yourself. Think hard about the past. Recall places and faces. Keep your eyes closed and think of the future and try to imagine it. What do you see? If you see anything, it exists. You may forget it, but it will stay in your brain and can always be called back. What you think, you retain. What you retain is but a thought. And yet what is a thought but an image that has life just by *being*?

All that *is,* is reality.

Time and space are imponderables. The past and future are one. Open your eyes and look out at the illusion that your mind has created. Is it real or unreal? Is it past or in the future? It is not in the present (that has passed once it has been), so it must exist somewhere where we cannot reach because the mind will not let us. The mind has its reasons. It selects what we perceive. In this selection it is giving us protection from the chaos of lawlessness.

One thing about what you see: it is not here and now. So, if it is not here and now, when and where is Reality?

It must be in the Nothing.

34

We awaken. We look out. We see the tree and the disc. The disc is spinning and glowing outside the window with the tree just in front of it. The tree is silhouetted. It forms a web of black veins. The veins shiver in the light of the spinning disc and radiate flickering, opaque light. The spinning disc is immense, blotting out the whole cosmos. It makes a noise that is pitched above sound and has a life of its own. The silvery disc glows and flashes: a whirlpool of changing colours. It spins rapidly, and at its vortex is the tree: silhouetted, transparent.

The laws of nature are contradicted. What we see cannot be real. It *is* real because it fills our whole view and keeps us transfixed. The tree is black, yet transparent. The great disc spins behind it. The disc shimmers and glows and then whispers and roars all at once.

We are here. Transfixed. The tree shivers and then dissolves. The gnarled branches of the tree break apart and spread out in the air. The black lines turn to silver. They form a glittering web. At the tip of each line a moon forms, fading in and out, glowing. There are four down the middle. On either side are three more. The silvery lines join them together like a web illuminated by sunlight.

We are here. Enslaved. We are masculine and feminine. The moons glow and the silvery web shimmers as the sound draws us to it. To the centre. Its beauty. We reach it and are lost. The central moon flares up and fills the window and then leads us through silence.

The black eye of Tsiolkovsky. The writhing mountains around the iris. The iris opens and a sun shines in the darkness and draws us toward it. That sun is far away. It is a white light in the pupil. The pupil opens and draws us into its vortex and then closes around us. Silence. Endless night. The distant

sun shines through the darkness. We travel on, moving through space and time, until the sun fills the Nothing. There is white light and fierce power.

The sun's shattering maelstrom. Gas exploding and swirling. The gas geysers up and cascades and explodes and then reforms as great bubbles. The violence is limitless. Such power cannot be measured. The sun blazes with an incandescent fury that returns to devour itself. And in white light: the black spots, now great holes in the furnace. We travel through them as the solar winds sweep past us and rush into the void.

We travel on to transcendence.

35

Night. The familiar. What we cling to as the real. In an unending darkness and silence are the props of our history. She drifts there before me. He drifts there in front of me. We meet and our bodies are naked and warm with remembered dreams. We touch and are joined. We trace the flesh of the known. There is the beating of hearts and burning blood and the shelter of lust. He moves inside me. I am in her. We spiral sensually in the void. The darkness glows and then the ten moons surround us and grow faint and disappear. His chest and curving spine. Her breasts and streaming hair. We are interlinked and then we dream and drift apart and come together as One.

The shimmering images of the familiar. Ghostly white walls and doors. They fade out and are replaced by a spaceship that sits there in darkness. We might call it a flying saucer. It is white and phosphorescent. Its lights blink on and off, the whole spectrum on display, then they blink one last time and disappear and the spaceship goes with them.

Leaving darkness. Distant stars. The sweeping silence of the void. We

travel on and see a house just ahead, its windows framing the light inside. The house doesn't look real. We see the stars through its walls. The house fades away and we see the stars spreading out all around us.

The comfort of the familiar. Water trickling in space. It comes out of the blackness just above and disappears just below us. We reach out and it is gone. A white light flares up and fades. I see my penis in her vagina, I feel him inside me, then both of us see a red rose. It floats there before us, then shrinks and turns to flame. The flames spread out to form a great arch under which we must pass. It disappears, leaving darkness.

The glorious web of the cosmos. Stars glistening like dew. We traverse time and space to arrive where the unreal is meaningless. Black painted on black. Within the darkness: prisms flashing. The prisms spin and break apart and form a line that stretches into infinity. The line runs from left to right, stretching above and below us. The prisms, which are diamonds forming rainbows, defy space and dimension.

There is lawlessness here. Here there are no laws at all. He knows this, she knows this, so we withdraw as the colours sweep over us. They reform as four walls. Through the walls we view the stars. Between the walls there are drifting chairs and plants and an upside-down table. This furniture disappears. The single door swings open. We take our leave and emerge into night and see the moon in the sky.

We accept the familiar.

36

The moon is remote. It is there and then here. It spreads out to either side and hides the cosmos and blinds us with light. We are one and the same. We

perceive the moon and ourselves. We see the moon and also gaze out *from* the moon to see us gliding across it. We pass craters and alluvial rocks, traverse the great dried seas, ascend to travel beyond the horizon to the stars' dazzling grandeur.

The moon and our Earth cross one another and then part. The moon glows softly, then blackens as it eclipses the sun. The rays of the sun shine around it and turn it into fire. A black disc ringed with flames. The flames colour the night crimson. Great sheets of crimson fan across the void and surround us like lava.

We must travel, we must move. The history of life is a tale of movement. The void shifts and seems to fold into itself, then opens out to fresh glory. The red globe of Mars. The purple craters and snow-white poles. It grows larger, then balloons to fill the sky, and the red becomes orange. The air is carbon dioxide. The desolation is total. There are mountains and volcanoes and canyons and dried riverbeds. There is no sign of life here. Only rock and frozen water. The orange glow of the sky falls about us as time meets itself.

We see water in the riverbeds. It reflects the orange sky. It pours over and soaks through the rocks as a brighter light warms them. There is life in the water. It is microscopic and mindless. The past rushes towards the future and the planet moves away from the sun. The rock freezes and is destroyed, turning barren and lifeless. At the poles, where the ice forms a mantle, that which lives hibernates. The night arrives and departs. The orange light fills the landscape. The ice at the poles does not melt, so all life is extinguished.

The Martian night returns. A purple shadow stains a rock. On the rock is what might be a footprint leading down to more footprints. Those footprints are recent. The dust still settles around them. They lead to a boiler-suited figure, his head in an oxygen mask. He glances left and right, then gazes up at the tiny Earth. He looks down, then moves forward laboriously, heading

into the sunset. The purple shadows deepen and stretch across the mountain peaks. They spread across the valleys and plains as the burning sun sinks. The Martian wilderness is now black. A purple light fans the horizon. The fan ripples and shimmers like desert sands, then the sun disappears.

There is silence.

A dark void.

37

The spinning flight of an asteroid. It is an immense, red-hot rock. It sweeps in from some distant, unknown orbit and races towards us. We dissolve to embrace it, but are sucked in and abducted by it. Glowing red, it cuts rapidly across the sun and the light explodes over us. We are held, enthralled. Then swept across the plains of Mars. We are released and the darkness surrounds us as we fall towards Deimos. The outer satellite is silent. Light and shadow divide the rocks. We look up to see the luminous globe of Mars, gold and orange, magnificent.

We are not alone now. We are in a geodesic dome. In the dome there are buildings and vehicles and men who look human. They drift past us like ghosts. And are oblivious to our presence. They move in and out of workshops and laboratories, under large radarscopes. When they talk, their lips move. We observe their speech before they speak it. They shoot out through the dome on flying platforms, encased in their flying suits.

These men work in space. They glide eerily above Deimos. Their silhouetted forms are framed by the enormous, dazzling grandeur of Mars. The polar ice caps gleam whitely. The orange plains are striped with shadows. The planet hangs there, immense, ringed with stars, giving shape to the universe.

The surrounding dome dissolves. We see Mars in its half-phase. One half has disappeared and the other now forms a great sphere. Time expands and contracts. The stars die and are reborn. They glitter in their unblinking glory in the sky above Deimos. The broken rocks are cold and desolate. The orange light is streaked with black. The shadows creep across crevices and hills and touch the dust-covered debris.

A glittering shard of glass. A light-reflecting Perspex mask. Here a spacesuit and gloves, there an old boot, a flag curled at the edges. Life has been here and gone.

Time and space have no meaning. The moons of Mars remain in orbit. The red planet hangs in stillness and silence while the stars shine around it. We are drawn to its night side. Phobos clings close to its mother. Between them, in that black, depthless void, is the gateway to freedom.

There are no boundaries here.

38

The sun rises in the west. It sets in the east. Its rays spread out and reach for the clouds and then are swallowed and lost. The clouds are black and relentless, never parting to reveal the sky. They pour sulphuric acid, are unscathed by the scorching heat, and cast shadows on rocks and volcanoes and the rivers of lava. Here hell has its equal. Past and future are defunct. The immensely powerful winds erode rock that has never held life. There is no sign of the stars. The distant sun is well hidden. The days are long and never offer more than gloom and the rumbling of lava-flow. The rocks burn and are windblown. Mountains boil and spew fire. The molten rocks pour in long lines of red flame through dark desolation. There is nothing here but time. In this place time is meaningless. There is nothing here but dense cloud and fire and the sting of the acid.

This nightmare is Venus.

39

The sun’s movement is erratic. Its size is terrifying. It flares over the scattered rocks and low hills and the broad, empty craters. There is no life on Mercury. It has no satellites. There is total desolation, fierce heat and bitter cold, and the silence goes beyond the Absolute. A comet’s tail streaks the black sky. The double-star is the Earth and Moon. There are other stars, scattered, remote, but they do not fill the emptiness.

40

We are starting to resist. Beneath our wonder lies terror. The unchained mind is prone to recoil from this vast, lawless cosmos. Is it real or unreal? Is it past or still approaching? Gliding out of that complete desolation, we are frightened and lonely.

The familiar arrives to comfort us. The burning tree and glowing moons. The ten moons spin and form in three lines webbed with shimmering white light. All around is the black sky. The stars wheel and glitter. Below and above there is nothing but more stars and blackness. We are transfixed by the tree. The ten moons spin and sing. They surround us and the middle one embraces us and transports us to beauty.

It fills the whole sky. It is immense and magnificent. It is yellow and white and blazing gold, streaked with orange and brown. It is dazzling, mesmerising. It roars and pulsates. It is composed of liquid hydrogen and rocks and exploding gas, and it burns with an incredible heat that sweeps out to engulf us.

We drink the radiation, soak ourselves in the gas. The cosmos roars and explodes and cascades and swirls wildly about us.

We must travel, we must move. We observe the beginning and end of Life. It is a maelstrom of beauty and terror, an unleashed, blinding radiance. We must travel, we must move. This cataclysm offers transcendence. We are swept up in white flame and bedlam and rushed through the furnace. Streams of phosphorescent gold. Roaring rivers of fire and ice. The blazing vortex shrieks and vomits us out as the stars wheel and dance.

Space folds into itself. The sudden silence is stunning. Looking up from Europa, across the valleys and frozen mountains, we see the great golden globe of the killer planet: the awesome beauty of Jupiter. It hangs above the

white mountains, which are really frozen ice. The globe hangs there, streaked with yellow and gold, its Great Red Spot a bloody wound. Around it are the satellites. There are thirteen, maybe more. The globe hangs there, like an immense, golden apple, and is drenched by the stars.

41

Beauty and terror. They are one and the same. Could we ever know one without the other? Would we know what they are? There is beauty in terror. Terror offers transcendence. Give us beauty beyond what we can measure and our terror is total.

The ringed giant that is Saturn. Here aesthetics meet their Maker. The sheer beauty defies mere description, builds its brief on superlatives. We look and are captured. The planet hangs above Rhea. We take in the streaming light, the glowing gas, the mesmerising serenity. It looks immense. It is majestic. The crystal rings reflect the sun. Seen edge on, the rings form a white line that bisects the planet. Along the white line are the satellites: spheres facing the sun. They are on the same plane as the rings and their sunlit sides gleam.

The rings are formed by ice crystals. There are rings within rings. They rotate around Saturn like great wheels, reflecting sunlight and colour. The rings are Saturn's rainbows, and have grace and perfect beauty. We cannot think of oxygen or methane or ammonia when we view this sublime work of the cosmos. We can see only grandeur.

That grandeur is overwhelming, dominating the stunning sky. The stars around it are dense and multicoloured, with a hard, remote brilliance.

Overwhelmed, we transcend ourselves.

42

Terror explodes. It destroys and devours. We recoil and see the rushing of light and feel Them pulling us forward. I resist. I do not. He feels fear. She feels ecstasy. We are joined together and then we tear ourselves apart to be swept back as One.

The stars wheel and fall around us. A crimson light streams through the void. We are trapped and swept into the clouds of Titan, where the mountains spew frozen gas. Blue sky and yellow Saturn. Liquid ammonia and methane. We are rushed through a blood-coloured haze and see the molecules dancing. They break apart and regroup, expand and shrink again, swirl and intermingle within the clouds, glowing with alien life. We observe them and ourselves. We frolic and mate above Titan. The volcanoes spew their frozen gas below us as we dance in the bloody clouds.

Life: that which *is.* We are no more than Impulse. We procreate and live and then die to reform as more Life. How long here? *Are* we here? Are we Thought? Are we Impulse? We are picked up and carried through the red clouds and hurled into silence.

Space. Playful voids. Our fear is soothed by the familiar. The great ships, which represent our defunct technology, are drifting before us. They are white, immense and gleaming: what we once dreamed of building; now drifting in the Nothing of the infinite, glowing softly and humming. They cannot be real. We must agree on this point. They are here to reflect what They think we would most like to see.

The ships shimmer and vanish. We reach out for the familiar. A brown leaf tumbles out of the void and drifts past us and disappears. A brown leaf?

A withered leaf. Not a leaf: a green apple. It floats in the nothing and balloons to become a great planet. This planet is crescent-shaped and seems to tilt on its axis. It is dark and has an air of desolation that suggests the abyss.

We recoil and it fades away. The whole galaxy spins around us. The planets are coloured bubbles dancing freely at the touch of our breath. She is guiding them. He is stunned. We break apart and come together. Time and space open out and fold in and we come out through the other side.

Here the stars are brilliant. The distant sun is small and feeble. The massive globe of Neptune spins rapidly and blinds us with blue light. We are here, but also there. Our mind expands and contracts. All exists within the mind and is held there until released again. We cannot contain the universe. We can only grasp it for a moment. Our mind expands to let the universe out and then we go in pursuit.

Terror. And ecstasy. The far reaches of outer space. We must travel, we must move, and we do so… And the void casts us forth.

We are on the perimeter. Waves of frozen gas surround us. There are seas of methane gas and rocks that are ageless, and the sun is a pinprick in black sky, now lost in the stars. Total silence. Desolation. No movement. No change. The frozen gas hangs in the gloom and will stay that way always.

Beyond Pluto... the infinite.

43

The tree glows in the void. It represents the familiar. It vibrates and curls around our thoughts to prevent them from scattering. The human body is a trap. It gives the mind a cell to dwell in. Remove that wall of nerves and

pumping blood and the mind would take flight. Now our mind needs such protection. Without that, it would fall apart. The glowing tree represents the familiar and is something to cling to.

We must travel, we must move. We are now a searching impulse. The tree glows, the moons shimmer, form a single wheel, spin and vanish; then space opens out to suck us in and we are spat past dimension.

We emerge to strange beauty. This planet is outside the galaxy. There is water and vegetation and air, with low hills green and blue. The sky is the one vast spiral. There are star clusters and nebulae. The purple arms of the spiral coil around the glowing hub and cast a blue sheen on the water and earth below. There are glass domes on the hills. All are small, smooth and luminous. There is no sign of life between the domes, but the burning light comforts.

We wish to explore here. We need knowledge and communication. We are filled with a fierce exultation and an odd hint of grief. Yet we cannot remain. They will not let us remain. We are swept through the great galactic halo and embraced by infolding space. On through darkness and light. Roaring storms and sudden silences. The stars stream and cascade about us and then give way to stillness.

The landscape is desolate. The stars are large and multicoloured. There is black, basaltic rock, a lake fringed with ice crystals, and the mountains, untouched since time began, are silhouetted in crimson haze. The distant planet dominates. It is a giant, searing globe. A black disc, formed by the transit of the moon, is like a hole in the burning sky. The silence is total. The desolation is absolute. The grim landscape is hazed in bleeding light and it drives us away.

Space and time: the nonexistent. Glittering stars and shifting light. We emerge to see a red supergiant dominating a blue star. There is scorched earth

and crenellated rock and a sharp, bleak horizon. The shadows are kaleidoscopic. It is the landscape of a dream. We rush towards the blue star and rise above it and pass the red supergiant.

Heat. Luminosity. A mass eclipse of all the planets. The distant stars become one and burn fiercely and explode into white light. The light recedes, leaving darkness. There are two suns in the sky. One is large, one is small, they are both shaped like eggs, and the burning gas that covers them forms a deep crimson bridge between them. Both suns are spinning rapidly. They leave streamers of glowing gas. The glowing gas forms a pulsating red spiral that envelops the lonely stars.

The nearest planets are desolate. Farther out: more desolation. Triple suns blaze and spin above rocks that are smooth and untouched. The rocks are ochre and black. The suns are orange, white and yellow. Above them, in a matchless velvet sky, the stars are brilliant and cold.

In this beauty lies terror.

44

The terror seems natural. It is the only true state. We accept it and soothe it with wonder and are swept to our destiny. Beyond time and space. Past all possible perimeters. A brief panic and the glowing tree appears and its middle moon captures us.

We are transported through the Nothing. We are One and we are All. In the darkness is the gift of the familiar: drifting spacecraft, an astronaut. They appear and then vanish. A disc spins but makes no sound. The astronaut returns and drifts past us, encased in his white suit. He is here and then there. He is not gone: he is present. Darkness roars and streams of light swirl about us and dissolve into rainbows. A purple flower beneath a stone arch. Water trickling out of nowhere. Another flower balloons and fills out the space to form a rippling sand dune. This dissolves into nightmare.

There has been a nova outburst. The whole planet has been scorched. The sky is vivid blue, its moons hazed in white heat, and the earth below is split and filled with lava that flows red and yellow. The seabed has become molten. Mountains spew fire and smoke. The fierce heat and stabbing, blinding light have made the air almost luminous. There is death and destruction here. Lifeless cities overlook other ruins. There are broken walls and cracked, blackened windows gleaming over the burning earth. The whole planet has been destroyed. Civilization has disappeared. What was life, what had once been a world, is now a great lava-flow.

Our grief is touched with wonder. We have found life too late. We have seen the dawn and dusk of an alien race, but it defies comprehension. The boiling lava spews skyward. The empty buildings are splintered bones. We revolt and turn away to greet the sky and let the cosmos deny this.

There is *no* death and destruction. There *is* death and transmutation. In the cosmos, in the galaxies, in our universe, on Earth, there is violent, spectacular regeneration: a perpetual changing.

Not mere death.

Transmutation.

45

What are we? We are One. We are One and we are All. We are everything outside and inside ourselves, and without us it cannot be. All that is, begins here. Space and time are created here. The past and the future are here and exist by our will. We survey the teaming infinite. We rule over what we survey. Should we cease to be, it will *all* cease to be: the universe will shrink and disappear and will never have been. All that is, begins here. All that will be, must end here. Here, within us, is the beginning and end of the circle.

We venture forth to greet ourselves. We draw space and time together. All the light and colours of the spectrum swim around us in glory. We are radiant. We accept. The light pours through ravines of colour. The sounds of history pass through us and recede and return eternally. All that is, is familiar: the glowing tree, the boundless void. All that was, all that is, all that will be, is here and now always.

The light pours and pulsates. Voices speak and yet are silent. The great moons are eclipsed by other moons and travel through time and conquer it. We are radiant. We accept. We embrace all that *is*. It streams through us and around us and then spreads out to fill up the Nothing. The purple flower of a flare. A comet streaking through the night. The rivers flow and turn into huge rainbows that bridge the black depths.

We venture forth to be greeted.

A great asteroid filled with lights. The polished stone glows and hums. Along miles of chipped rock and natural craters there are doors and antennae. The ark travels through space. It is a world unto itself. It has been travelling so long, its origin is a mystery, locked in a ledger in a secret vault inside, no longer read by the occupants.

These are people from the past. They live and die inside the asteroid. Because they cannot return home, they explore, though they have yet to find other life. How long have they been in here? What is their concept of time? Their whole world is a monolithic stone with its earth and skies inside. They have a closed-circle ecology, live animals and healthy crops; they have lakes and vegetation and sidewalks, written laws and philosophy.

Yet their world is artificial. Like the unreal, it is real. Generations come and go inside the ark and their history is formed. The ark comes from the forgotten. The asteroid is a living world. It travels from the past into the future and knows not what it seeks.

Thus time is rendered redundant. So is space obliterated. Life is lived and there is death and rebirth and the movement is endless. We must travel, we must move, negating the impossible. We must let the living asteroid drift on until it finds its own destiny.

Our destiny is here and now. Here and now there are no boundaries. What we see and what we feel and what we hear are all created within us. We see the darkness and the light, feel the ice and the fire. We reach out and touch what we will because we want it to be there.

A sudden dazzling phosphorescence. Streams of colour and burning light. The sounds of history are collected and cast forth to bridge the past and the future. Exploding galaxies and roaring voids. Darkened deserts and glowing cities. The great dust-clouds envelop the clustered stars and then radiate beauty.

We venture forth to be made whole.

The silence is singing. The darkness is luminous. There are shades of black so complex they form rainbows of soothing nonlight. A shimmering whiteness appears, flares brightly and solidifies. The great ship, the beautiful flying disc, spins and hums in the depthless night. It has no defined purpose.

Its purpose is just to *be.* It reflects what was once a mere image or a thought held and lost.

The disc-shaped spacecraft is stupendous. A magical radiance limns it. There are windows and antennae and sealed doors, all shining in golden light.

The spacecraft scarcely moves. It hums softly and vibrates. A long antenna rises out of its centre and turns as if searching. The velvet darkness spits yellow fire. Dancing moons surround the great ship. They flare up and cast their light across the void and then take shape as smaller ships. These smaller craft are metallic-grey. They are grouped around the mother ship. They start glowing as the mother ship flares brightly… then they all disappear.

We ordain all that is. We accept it or cast it out. Our mind is emptied and we let it fill up with all the wealth of the universe. The birth and death of galaxies. Blazing suns and imploding stars. Lonely moons circle planets of a size that defies comprehension. Then light. A rush of colours. The golden furnace of a giant star. The fire is drawn out like a stretching balloon and forms a rainbow… a whirlpool.

The whirlpool is immense. It swirls around a black hole. It is a maelstrom of energy and heat and blinding colour, and it swirls around the black hole and is devoured, leaving only night's silence.

We embrace the silent night, cast off space and time, and see the boundaries of our mind receding rapidly until the distance is infinite. All that is, is in here. The past and future are now. There are parallel lines of light and force that stretch from here and *end* here. Direction and dimension: neither has credence here. There is knowledge and the certainty of existence, its reality constant. Radiation and sound. All the wavelengths rendered visible. There is colour and sound and vibration, but they cannot be measured.

All is here.

All is now.

The black hole is antimatter and cannot be seen. It is only revealed by the stars, which give it shape and dimension. Time and space are distorted here. Here such concepts are meaningless. The imploding star breaks every law to create its own Nothing.

The black hole is immense. It swallows up a passing galaxy. The galaxy, which was, is no more and yet it still exists somewhere. It is frozen in time and space. It is neither here nor there. It now exists where meaning is redundant... and it will never escape.

The great spaceship glows. Its many lights flash on and off. It is minute and enormous (it is both) and it drifts toward the black hole. The imploding star is hungry. It devours space and time. The great ship, its lights flashing on and off, is drawn into curving space.

The black hole is the Nothing. The great ship is sucked into it. The event-horizon draws the ship toward the vortex, where escape is impossible. Those inside the ship feel nothing. They have their own concept of time. That concept is based on finite laws, but such laws are now obsolete. The ship travels toward the vortex. It moves slower and slower. It glows fainter and fainter, moves slower and slower, then eventually freezes and hangs there forever, its lights still flashing on and off.

Inside the ship, time is finite; outside, it is infinite. The ship hangs there in space for all time, yet it never stops moving.

There are no laws anymore. We accept the rule of Being. We see spaceships and men and whole galaxies, frozen in time and space. What we see cannot be real. Yet it is certainly here and now. It was always here and always will be - and cannot be denied.

The event-horizon greets us. We accept the imploding star. We draw the spinning depths to our being and let them surround us. Here the universe

ends. Here the unknown has its boundary. We look down and see the star's frozen image racing up to devour us. Time and space have no meaning. All that cannot be, *is.* The frozen star races up to devour us, then it suddenly vanishes.

We are now in a reverse world. What was, is now its opposite. The universe outside has ceased to be, and inside is the Nothing. The gravitational force is monstrous. It obliterates time and space. There are spaceships and men and whole galaxies, frozen eternally. We are in it and of it. We are what was and will be. There is no time or space where we are, and the past is the future.

The Great Nothing is a throat: a funnel to the infinite. Rushing through it, we are greeted by ourselves, now reflected and multiplied. Which one of us is *We?* All are real - and here and now. We advance to meet ourselves and pass through us and come out on the other side. Here the funnel flattens out. Here time and space are void. Here the fierce storms of gravitational force rage about in the Nothing. We accept it. It is *We.* We rush through to the other side. The Nothing opens out to form Space and Time and shape them into the Other.

We are thrust forth to birth.

46

We are born. We are All. We are masculine and feminine. The tree glows in the darkness, drenched with stars, its ten moons webbed with light. Wisdom. Understanding. A power tempered with love. Beauty and majesty and endurance: transmutation through death.

We are singing. We burn. We are the great moons and suns. The tree glows and its middle moon expands to reveal the great Other. Death. And transmutation. Another moon: the Foundation. This expands and fills with light. The light streams and coils languidly around us and hazes the distant stars.

We sing. What we *are* sings. The tree's moons dance and play. The bottom moon opens for us and draws us in and dissolves to reveal us. The Kingdom and its glory. Time and space reconciled. The moons spin and flare up and fade away as the universe unfurls.

Colour: that which *is*. A vast spectrum on display. Orange skies and purple clouds and yellow suns, the stars green, blue and golden. There is death and beauty here. The stars melt and reform. There are great magenta clouds of formless matter slowly rising and falling. Green fires blaze up and die. Comets streak the sky with silver. Silent winds blow ice crystals in immense cyan spirals, and they sweep out and girdle the stars and the pale, serene moons. The colours merge and are dazzling.

We sing. What we *are* sings. What we are is what *is*. We are one, we are millions, and we divide down the middle, and repeat this again and again and thus multiply always. Amoebae. Loops and coils. The pale moons stretch out and mingle. The stars blaze and their light meets and blends to become a vast web.

We are in it and of it. We are here and also there. We are singing with the voice of sensation, pouring forth and returning. We are One. We are the same. We break apart and come together. We are thought, we are brain, we are mind, making real the unreal.

We are born. We are All. We live and die on the instant. We are outside and inside ourselves, being one and the same. What unfurls is within us. We

ordain all that is. We expand and contract and envelop and pour forth to create.

We are All.

All is...

47

A black hole within the dark void, immense, without depth, its presence only made manifest by the surrounding stars. The stars are bright and unblinking, multitudinous, a dazzling mosaic, sweeping out in all directions around the enormous black hole, beyond time, mocking distance, already dead: a mere illusion of being.

A black hole within the dark void. Around the black hole: star-flecked darkness. Within and beyond the boundless void: total stillness and silence.

The silence is absolute, transcending all known silence: a lack of sound so total it is resonant with its own hybrid presence.

In the beginning is the Nothing. A black hole in a dark void. Around the black hole, the countless stars, already dead, wrapped in silence.

And from nothing… a growth.

Colour is light. In this case, a white light. The angle of incidence equals the angle of reflection, and the faint, hazy light, bouncing off the black hole, illuminates a bleak, jagged surface and fans across its curved edge. The light shimmers and bends. The stars beyond it fade away. Around the left edge of the planet, that black hole now filled with matter, the light of the sun cascades out to form a dazzling crescent.

The black hole is now the moon. It is enormous and hangs in silence. The white crescent splits the darkness, floods across the blistered greyness, and divides the brooding sphere down the middle.

White light and shadow. Black craters and writhing plains. No water, no air, no movement, no life. Motionless, forbidding, the sun’s halo stretched around it, the moon is a colourless desolation curving back toward darkness.

Colour is light. White light is luminous energy. In waves and in particles it bombards the moon's surface, and the electrons break off and streak away to form the void's shifting spectrum: the red and yellow of the sun's corona, the silvery white of Earthshine; and around those, the star-studded night devoid of depth or dimension. Colours blending and interacting. A haunting blue light on grey rock. The blue moves across plains and black craters as the sun fills the darkness.

Now the great sphere is divided: one side dark, the other bright. Monstrous, three-dimensional, a globe split by shadow and light, it is here, still and silent, implacable, dominating the black void.

Space. Endless space. The moon floating in space. Gliding out from its dark side, eighty miles above its surface, a slow-spinning web of silvery metal, traversing the silence.

The Skylab in orbit.

It is not alone this time. A service module drifts beside it. The module reflects sunlight and Earthshine, its antennae revolving. Both spacecraft drift in silence, eerily beautiful in the vastness. The great belly of the moon is far below them, its barren soil shadowed. The module's thrusters burn briefly, turning the module toward the Skylab. It remains above the silent Skylab as its airlock door opens.

An astronaut emerges. His Perspex mask reflects the Earth. He is bulky and unwieldy in his spacesuit, crouched under his backpack. He operates his body thrusters. Punched forward, he glides through space. He is obstructed by the Skylab's antennae, then drifts down to the airlock door.

There is no response from inside. There has been none for weeks. The astronaut drifts to the emergency hatch, his gloved hands fumbling awkwardly. He looks carefully about him, sees the moon and distant Earth;

glances down and pulls out a control box and presses a button. The white-painted door opens.

The astronaut goes inside. He glides through the command module. He is shocked to see the debris everywhere: knives and forks, nuts and bolts. All these items are drifting freely. They move eerily through the silence. The astronaut glides forward, through the docking adapter, then drifts along a debris-strewn tunnel until he comes to another hatch.

He enters the airlock module. There is debris here as well. He glides through another hatch and drifts along until he comes to the workshop. The workshop is filled with debris: empty wetpacks, clothes and tools. The astronaut stops and takes a deep breath when he sees the two subjects.

They are bobbing above the grid floor. Their drifting limbs are intertwined. The man is unshaven, and the woman's hair is long and dishevelled. The eyes of both are open. Both are pale and oddly stiff. The astronaut glides over to inspect them and finds them both lifeless.

He examines them at length, being trained for this: a doctor. When he has finished, he cannot understand how they could both starve to death.

The Skylab keeps orbiting.

W.A.Harbinson is the author of two bestselling novels, *Genesis* (1980) and *Revelation* (1982). His epic fictional series, 'Projekt Saucer', including *Inception*, *Phoenix*, *Genesis*, *Millennium*, and *Resurrection*, remained in print for most of the 1990s; the first three volumes are now available in PoD and Kindle ebook formats An updated edition of Harbinson's seminal nonfiction work, *Projekt UFO: The Case for Man-Made Flying Saucers* (1995), is also now available in PoD and Kindle ebook formats.

OTHERWORLD
BOOK 1: THE MISSION
W.A. HARBINSON

Otherworld

W. A. Harbinson

Deep in the heart of the Amazon rainforest live the Yano Indians. A fierce, elusive tribe, they are dedicated to the powers of darkness, their presence only revealed

only by the hypnotic beating of drums… and by mysterious lights in the sky.

Laura Wellman , an American photojournalist, beautiful, sensual and deeply tormented… Believing herself to be possessed by evil spirits, she decides to offer herself to the dreaded Yano in a final, desperate

attempt to release her soul from torment.

Father Paul Benedict , a middle-aged Anglican priest who is starting to doubt his God and the meaning of life in general… Gradually becoming obsessed with Laura,

he believes that in somehow saving her from selfdestruction he can find his own redemption.

Alex Poulson , adolescent son of a depraved rubber baron, an almost spiritual innocent born and raised in
Amazonia… Falling helplessly in love with Laura, despite being rejected by her, he follows her into the dangerous depths of the rainforest and is, in turn, followed by the concerned Father Benedict. There, beyond the reach of civilization, even beyond the light of reason, all three are drawn into the Yano's alien 'Otherworld', where good collides with evil in a titanic, earth-shattering confrontation…

Otherworld

Luminous with love and possibility, pulsing with eroticism, murder and dread. A powerful, haunting novel about the eternal conflict between primal, mysterious forces on the other side of existence.

By the internationally bestselling author of *Genesis* and *Revelation*.

Book One
The Mission

Prologue

The snake was about nine feet long, its silvery-grey scales glistening, slithering out of the darkness, slowly, silently, rising up and curving down, flat head moving briefly through moonlight, its forked tongue clearly darting in and out, eyes like small stones, jaws throbbing. The spider was unaware, or possibly knew and was paralysed, an enormous spider, a bird-eater, leg span covering eight inches, furred body heaving rhythmically, taking its last, precious breaths, one of its eight eyes illuminated between its front legs, also held in the single beam of moonlight as the snake slithered towards it.

Alex's pupils reflected both, expanding to defeat the darkness, a mirror to the beauty and horror of the rainforest's cycle of life and death. He raised his head where he lay, his body swinging in the hammock, looking down at the beam of light on the mud floor of the spartan thatched hut. The spider should not have been there – perhaps a tarantula; not a bird-eater – and the snake, which resembled an enormous, throbbing vein, likewise did not belong in the hut, but out there in the forest.

Alex kept looking, not frightened, simply wondering why they were there, listening for the sound of the drums but hearing only the silence. The snake's slithering broke that silence, writhing along the mud floor, its scaled body sliding across the damp leaves to where the spider was resting.

Did the spider know what was going to happen? Alex thought that it did. First motionless, it now moved, its eight legs bending farther, the fur on the brown ball of its body standing up like fine wire. Fear. And then acceptance. The spider seemed to almost sigh, its body sinking back down between the legs that could have straddled a large plate.

It was doomed and knew it.

Alex watched its death from his lightly swinging hammock. The snake stretched out to its full length, its scaled body glistening, and he saw its eyes, as dead as the moon, hypnotising its victim. The spider simply stared back, the fur rippling on its body, seven eyes viewing a prismatic world, its eighth eye greeting death. The snake's forked tongue darted out, its head appeared to ricochet, and the spider almost imperceptibly quivered and then seemed to freeze. Paralysed, it was still watchful, unable to turn its head away, its middle eye forced to stare straight at the jaws of the snake, opening wide, inching forward. The neck of the snake formed an arch, its head hanging straight down, and then its jaws, forming a salivating funnel, dropped down over the spider and snapped shut.

The snake swallowed the spider whole, with one languid but noisy gulp, sucking it into the expanding tunnel of its throat and flicking the leaves with its tail.

Alex watched it, fascinated, swinging lightly above it, wondering at how enormous the snake looked in the thatched hut's dim light. Then at last he heard the drums, faraway and faint, and he swung his long legs off the hammock and slid down to the floor.

The snake was bloated with the spider, but turned its head to stare at him, its throbbing vein of a body uncoiling as its tongue started darting. Hearing the drums, he was unconcerned, knowing the magic would protect him, and he merely smiled and stared at the snake, his gaze following its wavering head. The snake studied him with gelid eyes, its hammer head swaying slightly, and then, as if he had actually stared it down, it slithered out of the hut.

He watched the snake departing, heard the drums and felt the cold, glanced briefly around the old Indian's hut, its stark simplicity amusing him. A miniature palm-and-thatch *maloca*, its mud floor carpeted with fine-leafed ferns, it was shaped like a coconut shell and held only one person. The old Indian lived simply – in the natural gloom, his bed the earth – and the hammock, stretched between two tall poles, was there only for Alex.

He dressed quickly and easily, not requiring much clothing, first putting on short pants and a plain white shirt, then a pair of leather sandals. He didn't comb his blond hair, but patted it down with his hands, then turned around, feeling healthy and unafraid, and left the hut.

The plantation was couched in darkness, its buildings blacker than the morning, and all around him, in an enormous outer cloak of silence, were the

constant sounds of the rainforest: the distant chattering of monkeys, the muffled croaking of giant frogs, a bird call that sounded like twanging wire, generalised slithering and rustling and murmuring, the sibilant rush of the river. He glanced back at his father's house, a building of timber raised on stilts, shivered as if shaking off a ghost, and then started running.

He followed the sound of the beating drums, breathing deeply, his fists clenched, wending his way between the thatched huts and wooden buildings of the plantation, then heading straight into the rainforest where most men would not roam at night.

The soaring trees closed in around him, the crowns above him closely spaced, allowing little light in during the day and now themselves lost in darkness. The forest came alive in darkness, when camouflage was not required, and now around him as he ran, skirting the web-like, tangled liana, was the rustling of giant-sized rodents, the snorting of pigs and ant-eaters, the shrieking of monkeys and the *basso* croaking of outsized frogs, the ghostly whisperings of the palm leaves on the damp forest floor where ground beetles and ants and termites moved about in their millions.

Alex felt no fear, his attention focused on the distant drumming, his eyes raised to glance through the canopy of the trees high above in that darkness. Up there, in that canopy, was the true wealth of the Amazonian rainforest: pigeons and honeycreepers, macaws and humming-birds, marmosets and cotingas, hornets and stinging bees and wasps and huge bats, more monkeys and numerous poisonous snakes, including the boa constrictor. He looked up, unafraid, his eyes scanning the darkness, tried to see through the canopy to the patches of sky above it, but seeing only a dark, drifting cloud, a patch of stars… then a star that *ascended*.

His heart skipped a beat, but then the trees closed in again, shutting out the sky and its ascending star and deepening the darkness around him. He continued his casual running, lured onward by the distant drumming, that lone star still ascending in his head to illuminate the night.

An ascending star. A magical light. Very high in the sky. Ascending and descending over the rainforest where no white man and very few Indians had ever dared venture.

He kept running, his heart racing, glancing occasionally at the forest floor, slowing down only to clamber over the gigantic, tangled liana, but soon picking up speed again and often staring above him.

There was a break in the forest canopy, a patch of stars, then some lights, more lights like the one he had seen before, all slowly rising and falling. He kept his eyes on them, again wondering what they were, and then that patch of sky slipped behind his head as he kept moving forward.

He was near the edge of the plantation, passing the last of the rubber trees, and then he crossed that invisible boundary where the plantation met the jungle, and headed deeper into the untamed rainforest where the drums sounded louder.

A furred animal crossed his path, the outsized rodent known as a *paca*, and then he saw a snake slithering up a tree trunk towards an unwary sloth. He went past them, unafraid, concentrating on the distant drums, aware that he might never see who was playing them and feeling a biting loss.

That distant drumming was hypnotic, almost ethereal, unreal, and he felt his heart beating even faster as the forest closed in on him. It was bitterly cold but he felt warm, the running keeping his temperature high, and he drank in the crisp, invigorating air in deep, healthy lungfuls.

The darkness was becoming even deeper, the trees pitch-black on grey-black, their great trunks and the clinging liana forming enormous, bizarre forms that soared up and fell away into dark tunnels that distorted reality. Then a wavering beam of greyish light, illuminating a demented hornet, falling past it to encircle a scorpion and spider in a dance of death on the forest floor.

He jumped over them, kept running, disturbing *pium* flies and mosquitoes, glanced up and saw the sky, an irregular circle of stars, other lights, not the stars, rising and falling in silent splendour, then followed the striations down, through the various layers of treetops, down past the writhing liana and the great tangled roots to a clearing that was gloomily lit by oblique beams of moonlight.

The clearing was near the river – he could hear the murmuring water – and through a cap in the forest canopy, a natural wonder through the foliage, he could see the rise and fall of the mysterious lights, their serene, silent grandeur. The lights were like Catherine wheels, ascending and spinning rapidly, their brilliant outer rings swirling around a darker core, their silvery striations shooting out for miles and turning into great cobwebs. There were a great many of them, forming kaleidoscopes in the starry sky, shooting up from the jungle depths, far north, in the interior; and, equally mysteriously, exploding out of the sky itself, first as pinpricks of light, then as dazzling,

fluorescent flares that descended in slow, elegant arcs and disappeared in the forest.
He watched them, fascinated, wanting to know their true nature, then lowered his gaze back down to the clearing and looked at Peruche.
The old Indian was alone, sitting cross-legged in the damp grass, wearing nothing but the briefest of loin cloths, his brown skin like dried leather. He was rocking back and forth to the rhythm of the distant drums, repeatedly bowing his head over a wooden bowl placed just in front of him and chanting some indecipherable litany with a worn-out, cracked voice.
An old Indian, *very* old, some said ninety-nine years old, now suddenly sitting upright, stiffening his frail shoulders, fixing his rheumy eyes on Alex and then nodding his head.
'Sit down,' he commanded.
Alex sat, flicking the blond hair from his blue eyes. He gazed into the wizened face of the old Indian and felt like a child.
In fact, he was an adolescent, an exceptionally healthy seventeen, but now shivering with the morning's biting cold – and with real excitement. He stared steadily at Peruche, hearing the drums from faraway, recalling the mysterious lights that rose and fell where he still dared not roam.
Would the elusive Yano emerge? Was that part of the ritual? Alex, lean and tanned, facing the frail, shrunken Indian, felt the forest pressing in on all sides as if trying to crush him.
'White boy,' Peruche said, his hair thin and white on a shining skull, his brown eyes illuminated by moonlight and reflecting more darkness. 'What did you dream about?'
Alex licked his lips and leaned forward, his ears filled with the distant, beating drums.
'A great ball of fire in the heavens. An umbrella of light.'
His voice trailed away, as if disbelieving its own offering, and the Indian, his brown body shrivelled, smiled slightly and nodded.
'That is good,' he said. 'We both shared the same dream. It's a sign that someone is coming to point the way to your future.'
Closing his eyes, he murmured indecipherable words, shaking his head from side to side, then reached down to the bowl between his crossed legs and picked something up. The jungle chattered all around them, the drums pounded in the distance, and the old Indian raised his cupped hands to his lips

and kissed what he held in them. Then he looked up again.
‘Take your clothes off,’ he said.
Alex did as he was told, quickly removing his shirt and pants, then sat cross-legged, naked and cold, directly facing his mentor. Peruche raised his right hand, crooked one finger in a beckoning gesture, and then, when Alex had leaned towards him, slipped the chain of the stone amulet in his hands around Alex’s neck.
‘It was dipped in the bowl of *epena*,’ the wizened Indian, Peruche, croaked. ‘Sniff the *epena* into your nostrils and then close your eyes. No evil will harm you then.’
Alex glanced north, through that window in the forest canopy, to see the lights rising and falling above the unexplored regions. He wanted to find that place – to unravel the mystery of Peruche’s enigmatic smile – but that smile, now illuminating his thoughts, forced his eyelids to close.
He held the stone amulet in his cupped hands, lowered his head, sniffed up the *epena*, then put his head back and breathed deeply and let the dreams take command.
‘Have faith,’ Peruche said.
Now, out of the undergrowth, out of the darkness of the shifting foliage, came swarming the enormous spiders and centipedes and giant ants and two boa constrictors. The spiders formed a rippling carpet, an undulating, rippling tide that lapped first at Alex’s feet and then splashed up his legs. The centipedes swarmed over the spiders, the ants over the centipedes, glistening on the furred backs in the moonlight that fell over his tanned skin. He shuddered violently and then was still, his body covered in the seething mass, and then the snakes, oblivious to danger, their every instinct apparently deadened, nosed through the spiders and centipedes, slithered over the countless ants, and then coiled around Alex’s body as it gradually disappeared under that hideous coating of insects.
Blond hair and blue eyes. Alex’s face was oddly beautiful. His eyes opened briefly and then closed again as the crawling mass reached his lips. He shuddered again, heard the drums, thought of the lights, then the centipedes and ants filled his ears as the spiders covered his head.
Now, in the forest clearing, where Alex was still sitting, the two boa constrictors, their thick bodies pulsating, were wrapped around a living, human-shaped mound of spiders and giant ants and centipedes, all crawling

in harmony.
The drums pounded. The lights rose and fell.

Chapter One

‘She arrives today,’ Father Benedict said, putting his felt hat on his head and settling himself into the small boat, then raising his eyes to squint up at the young Indian who was untying the restraining rope. ‘In fact, she’s arriving in the same boat that’s taking Father Symonds away from us.’

‘An American woman?’
‘Yes, Mengrire.’

Hearing the resentment in his own voice, he smiled slightly, with self-mockery, aware that he was being unreasonable, but not able to stop himself. Mengrire, like all the Indians, was clearly very curious, unable to comprehend why a rich white woman would come to the Amazon jungle.

Now the Indian pulled the rope free, coiled it expertly around his arm, placed it in the stern of the boat and then started the engine. The sudden noise was shocking, splitting the forest’s dawn silence, and some herons, like a slowly exploding cloud, scattered into the leaden sky.

Father Benedict shivered with cold, but knew the heat would come soon enough, burning through the clouds to dry the damp trees and fill the air with an oppressive humidity which, combined with the grey sky and muddy river, made the days strangely slow and lackadaisical, more dream than reality. The boat roared and shuddered a little, then nosed through the rushes in the river shallows, gliding away from the rotting wooden jetty at the edge of the mission camp.

It was not much of a camp, merely a random collection of thatched-roof log huts, containing living quarters for four, a first-aid hut, a small store, shower and toilet, and another hut used for worship, all of which were crammed together in a clearing by the river bank and dwarfed by the immense trees of the dark and inhospitable rainforest.

Father Benedict watched the camp receding, becoming smaller beneath the trees and appearing to be sucked into the black-shadowed, rich-green vegetation, and he shivered, thinking of God's immutable handiwork, then turned his eyes to the front.

'There's been talk about the woman?' he enquired of the Indian.

'Yes, Father.' Mengrire was sitting in the stern, holding the boat's wooden rudder, the jungle behind him coming right to the edge of the river and sweeping away in both directions as far as the eye could see. 'It's said that she has come to steal our images as other white men have done.'

Though Mengrire, a Yanoama Indian, was also a Christian, he had not given up on the need for diplomatic deception. The ploy amused Father Benedict and brought a smile to his cracked lips, his heat-dried, middle-aged features wrinkling with good humour as his head, with its thick-curled black-and-grey hair, shook from side to side.

'Stop talking like a savage, Mengrire. You can reserve that kind of talk for Miss Wellman. You know damned well what a photograph is, so please don't act bewildered.'

Mengrire was short and solid, his brown chest hairless beneath a loose white shirt, his muscular legs in pants cut to just below the knees, a hand-beaded sweatband around his head. Father Benedict glanced at him over his shoulder, saw his fleeting grin, then turned his gaze back to the front, squinting into the brightening light.

'The woman is not a missionary,' Mengrire said from behind him, 'and we wonder why she comes to this place if not to save our poor souls.'

'She's a photographer,' Father Benedict said. 'She takes photos for an American magazine. She's coming to snap photos of us all and then take them back to America.'

'She does this for a living?'
'Yes, Mengrire.'

‘You white people are strange.’

The engine of the small boat was quiet now, as it headed across the Rio Negro towards the Indian village on the opposite bank about three miles away. The water was humus-blackened, splashing around the rocking boat, flowing away like an enormous lake with dense forest on either side, but receding until it was merely a thin line disappearing many miles to the east into an ominous, shadowy green haze.

The water dark, the sky dark, the immense jungle also dark; and Father Benedict, his thoughts still webbed with sleep, sensed that darkness within him.

‘This white woman will be a nuisance,’ he said, ‘but we must treat her kindly. Like Christians, Mengrire.’
‘Yes, Father. Like Christians.’
Was the Indian slyly mocking him? It was difficult to say. Mengrire’s parents had been Christians and he had been brought up as a Christian, learning the white man’s mores and speaking English with unusual fluency and understanding; yet for all that he was an Indian, still bound to certain traits, one of which was a sly sense of humour based on an inborn sense of superiority. Father Benedict didn’t mind it – in fact, it give him some amusement – and so, with a small smile on his lips, he let the comment pass over him.
It was still cold and he shivered, looking forward to the heat, yet dreading it, then he fumbled in the pocket of his tropical shirt and withdrew a cigarette. You could never get used to the Amazon: its extremes were too ridiculous. By day it was hot and humid, forcing even the rainforest into silence, and by night it was as cold as a tomb and, just like a tomb, without light. Father Benedict shivered again, struck a match, cupped his hands, lit the cigarette and threw the match into the river, watched it floating away.
The water was uninviting, oppressively quiet, terribly dangerous; he raised his gaze from its rippling, splashing surface and looked at the green jungle on its far bank. Though the English called it a jungle, it was actually a rainforest. There were no words to describe its true nature, nor what it contained.
The priest inhaled on his cigarette, inhaling deeply, exhaling slowly, dressed

not like a priest but like a plantationer: long-sleeved shirt, long trousers tucked into canvas boots, a felt hat on his head.
‘Bloody hell,’ he said quietly.
He inhaled again on his cigarette, hearing the river splashing around him, his gaze fixed on the dense forest at the opposite side of the mighty river, his thoughts winging in languid loops back to the night he had endured without sleep.
Those damned drums again. And the mysterious lights above the jungle. He had lain in his hammock for hours, in the hut’s almost total darkness, listening to the distant, relentless drumming and to his own beating heart until his curiosity overcame his fear and forced him out into the night. The drums had seemed to be close – closer than they usually were – and when he had looked at the northern sky, through a break in the forest canopy, he had seen the lights rising and falling in serene, sparkling splendour.
‘You’re very quiet this morning,’ Mengrire said. ‘Your shoulders lean in deep thought.’
‘I’m glad to learn that my leaning shoulders are so expressive, Mengrire. And doubtless you can also read my bloody mind.’
‘A priest should not use such bad words.’
‘No?’
‘No. It does not encourage respect.’
‘You don’t respect me, Mengrire?’
‘I respect you, but others might not.’
‘My language may sometimes be strong, Mengrire, but it’s not really bad.’
‘Some of the Indians think you blasphemous – ’
‘They’re more Christian than I.’
‘ – but I know that your tongue is much sharper than the feelings you hide.’
Father Benedict smiled at that, blew some smoke to the warming air, felt the breeze blowing through his hair as it followed the river. *I still have my hair,* he thought inexplicably. *It stays healthy while my ageing body rots*. He instinctively spread his fingers, pressed them down on his fleshy stomach, frustrated that the daytime’s devouring heat did not reduce his spreading waistline. All men, as he well knew, were in truth as vain as women; and he, a middle-aged priest, was not immune to such vanity.
‘Why is my friend, the priest, deep in thought?’
‘I’m not deep in thought; I’m just tired.’

‘You could not sleep last night?’
‘No.’
‘The drumming kept you awake?’
‘Yes.’
‘When the Yano beat their drums in the night, no man can sleep soundly.’
This was true enough – for both Indians and white men – and Father Benedict, recalling what he had seen and heard, felt the fear creeping into him.
He saw the green line of jungle far ahead, beyond the broad swathe of water, a ghostly mist drifting over it. He had been here for six months and was still not used to it. The river was too immense, the jungle too alien, and not even his experiences in New Guinea could compare with its strangeness.
‘You were awake, also, Mengrire?’
‘Yes, Father, I was awake. When the drums pound there is sickness and madness and we have to be watchful.’
‘The sick become sicker?’
‘And the mad uncontrollable. We Indians have learned to live with it, but we cannot ignore it.’
Father Benedict closed his eyes, recalling the drums, the mysterious lights, wondering where conjecture merged into blasphemy and then opening his eyes again. A broad expanse of dappled water and, beyond it, threatening jungle.
When the Yano beat their drums in the night, no man can sleep soundly…
Yes, incomparable strangeness. And just where were the Yano? Sometimes the drums and lights seemed distant, other times up close, yet no one had ever found the elusive Yano and returned to describe them. Nor, for that matter, had anyone seen the lights up close, let alone offer a reasonable explanation for their nature and source. Lights that ascended and descended mysteriously – far north, where the jungle remained unexplored by all but the Yano… If, indeed, the Yano existed at all and were not just a tribal myth.
‘I don’t believe the Yano exist,’ Father Benedict said, glancing back over his shoulder at Mengrire and catching that sly, mocking smile.
‘No, Father? Then who plays the drums in the depths of the rainforest?’
‘Some of your fellow Yanoama Indians.’
‘If ordinary Yanoama Indians were in that forest, you would have found them by now. So why have they never been found? Because they are *not* ordinary,

Father. They are the Yano, who, though human in form, are possessed by the evil ones.'
Mengrire was no longer smiling and his brown gaze was intense, so Father Benedict, noting the abrupt change in him, quickly turned away from him.
'And you call yourself a Christian, Mengrire.'
'Yes, Father, I am a Christian. But do we Christians not believe in good and evil? The Yano are pure evil, possessed by the powers of darkness, and because of this, because of the powers of darkness, they will never be found.'
'And the lights?'
'I do not talk of the lights. I close my eyes when they rise and fall.'
Father Benedict sighed, shook his head from side to side, then flicked the butt of his cigarette over the side of the boat and watched the water carry it away. The river was vast and frightening, a dividing line through the jungle, over three miles wide here, seven miles wide elsewhere, its source a tiny brook in the snowcovered Andes of Peru, its mouth, pouring out one fifth of all the Earth's water, situated four thousand miles away where the jungle met the Atlantic. Truly a mighty river, here quiet, elsewhere violent, hidden danger in every inch of its enormous length and on the banks on both sides of it.
Here, where it was quiet, Father Benedict felt its cold indifference, its remove from the finite boundaries of man, its inviolable majesty. It judged and was not judged, it punished but could not be punished, flowing eternally and renewing itself while mortal men lived and died. Father Benedict, seeing the water all around him, felt lost and expendable.
'Ah, Mengrire,' the priest sighed. 'I'm tired. *Damned* tired.'
'I think not only from lack of sleep, Father. The tiredness springs from your spirit.'
'If that's so, Mengrire, then I blame it on this place. This great river and the jungle combine to drive we poor white men crazy.'
'The white men are crazy anyway. They were crazy before they came here. The white men have lost touch with their own spirit and so cannot see clearly. But you, Father, I think are different: you see clearly and that disturbs you. You see and feel things that you simply cannot let yourself accept. I believe you're not happy, not comfortable as a priest, and I believe that the jungle, with its beauty and horrors, is slowly eating into your soul and making you doubt yourself.'
'You think I doubt myself?'

‘I do, Father. It is what you call *tiredness*.’
Father Benedict glanced at Mengrire, surprised by his perception, but then just as quickly looked away, feeling slightly embarrassed. There was truth in the Indian’s words – much more than he cared to acknowledge – and his recent insomnia, which he had blamed on the Yano drums, on the haunting mystery of the lights that rose and fell over the jungle, kept him awake not only during those visitations but also during the most peaceful of nights.
In truth, he was not only haunted by the mystery of the lights, but by the shadows that now fell over his faith to chill the hope that gave life.

Chapter Two

Looking straight ahead, he saw the riverbank coming closer, the Indian village taking shape beneath the soaring trees and tangled liana. The forest canopy was high up, as much as a hundred and thirty feet, and the dark clouds drifted lugubriously above it, as if threatening rain. The cold, which before had chilled his bones, was making way for the humid heat.

‘This whole place is cursed,’ Father Benedict said. ‘It’s the devil’s very own hiding place.’
‘So the priest believes in evil after all?’
‘Being a priest, that’s my curse.’
Something pumped against the boat’s hull, rocking it slightly before moving away, and he glanced down to see a crocodilian caiman nosing silently through the rippling, mud-browned water in search of food. Death constantly stalked the river, often wearing a hideous countenance – death by the stingray, by the fearsome anaconda, by the piranha fish and crocodiles and giant catfish – and as he watched the caiman gliding away towards some bulrushes near the approaching bank, once more he felt that nature’s horrors, equalled only by human atrocities, made a mockery of man’s attempts to give a meaning to life – and thus, incidentally, also formed a challenge to his own, constantly wavering, Christian faith.
The caiman sank beneath the surface, the water rippling where it had been, and then the bulrushes in the shallows bent sideways as if alive and sprang back to their original positions as the caiman passed through them.
Father Benedict watched intently, both entranced and repelled, as the caiman

emerged from the tall bulrushes and clambered up the slippery clay bank to disappear into the forest where some other animal's fate was already sealed. He shuddered at the thought, not wishing to dwell on life's brutalities, and then turned his head to stare at the Indian village that was now directly in front of him, set back from the riverbank in a clearing hacked out of the forest.

It was quite a large village, consisting of half-adozen *malocas*, between which, squatting around smouldering fires, were mainly women and children. These *malocas* were large communal huts, each housing three or four families, each about three hundred feet in diameter and nearly a hundred feet high, made of palm fibres and dry leaves that had been woven into a skeleton of poles and shaped like gigantic, bisected coconut shells upturned on the earth and grouped in a widely spread semicircle beneath the towering trees.

The boat bumped against the riverbank, muddy water splashing into it, the bulrushes swaying gently around it, disturbed by its movement. Mengrire turned the boat sideways, letting it rest against the wall of earth, and then quickly looped the restraining rope around a pole that was thrusting up from the river's edge. He used the rope to pull them in, tying the boat close to the bank, and then jumped out and reached down with one hand to help the priest out. Father Benedict disembarked easily, not really needing the assistance, but aware that the young Indian viewed him as an old man, well past his prime.

'*Obrigado*, Mengrire.'

'*Nao tem de que*,' the Indian replied, his Portuguese as good as his English, and then turned away and glanced across the clearing, his attention drawn by the smell of cooking food.

Following Mengrire's gaze, Father Benedict saw the villagers around the campfires, the women making *mandioca* cakes or stirring pots of soup, some old men weaving baskets or sniffing *epena*, the children, most naked, simply playing or staring forlornly around them.

There was, palpably, a destitute air about the village, and Father Benedict knew why this was so. The true Yanoama Indians, with their Stone-Age culture, had retreated from European encroachment to the few remaining untouched areas of the rainforest, north of the Amazon. Those who had not done so had either been herded into tribal reserves or, as with the Indians of this particular village, had been recruited to work on the white man's rubber

plantations. In a proper Yanoama village, the able men would have been out hunting, fishing or making war with rival tribes, and the village would have been more visibly active; instead, the men of this village were mostly working in the surrounding rubber plantation – the despised Frank Poulson's plantation – and the desolate air of this village sprang from the silence of their unspoken shame. The men here did not fight, did not hunt or fish, but instead worked as *seringueiros* – rubber gatherers – for Frank Poulson, their status little more than that of slaves. Now, at the very thought of Frank Poulson, Father Benedict's ire rose.

'Damn that man,' he said to himself. 'There's no end to his evil.'

Not hearing him, Mengrire had started advancing into the clearing, heading straight for the Indians huddled around the fires in front of the enormous *malocas*. Father Benedict followed him, his stomach lurching uneasily, now deprived of the cooling rush of the river breeze and feeling the clammy humidity. With the growing heat there were many flies, the *borrachudos* and *pium*, and he had to swot them away as he walked, hoping to avoid being stung.

An old man stood up to greet him, rising slowly and none too steadily, his dark skin hanging in folds above his loin cloth, shoulders broad, legs thin. He was wearing large, moon-shaped earrings and had a beaded band around one arm, his hair black and remarkably healthy, his chin beardless and angular. He did not smile when the priest stopped in front of him, but appeared to be friendly.

'It's early in the morning, priest,' he said, speaking in Portuguese. 'You're welcome, but why are you here so early?'

'You have a sick man,' Father Benedict replied, 'and his woman wants me to look at him.'

'His woman should have called the witchdoctor, not a white man.'

'The woman is a Christian.'

'That won't help her man. The white turd who wants the rubber did great damage and you cannot undo it.'

In describing him as a 'turd', the old man was clearly referring to Frank Poulson, and Father Benedict, even without knowing the details, felt his rage growing stronger.

'What damage was done?' he asked.

'The *seringueiro* was overworked and not given enough food. He spent many

weeks in the forest, gathering the latex from the trees, and grew sick from exhaustion and hunger and returned before time. The white turd was very angry – and also crazy with his drinking – and instead of giving the *seringueiro* food, he took a stick to him. He beat him brutally and then sent him home. Now the *seringueiro* is dying.'

Father Benedict flushed with rage and had to look away from the old man, letting his gaze rest on the great wall of rainforest just beyond the thatched huts. That rainforest went for thousands of miles in every direction and was not very welcoming to the individual. It didn't take much effort to imagine what it was like to work in there, much less grow sick and exhausted there. Yet Frank Poulson, even knowing this, continued to send his rubber gatherers in for too long with too little, and this wasn't the first time that one of them had suffered the consequences. Thinking about it, Father Benedict grew even angrier, glancing over his shoulder to see the coffee-coloured river flowing endlessly, a wall of green at its far side.

'Take me to see this man,' he said, turning back to the old Indian. 'Perhaps there's something I can do – and there's no harm in looking.'

'You cannot help him, priest.'

'I stand as much chance as your witchdoctor.'

'The only way you can help him, or any of the others, is to get rid of that white turd who debauches himself nightly in the big house.'

Father Benedict grinned at that, amused by the old Indian's perspicacity, then they walked side by side across the clearing, leaving Mengrire to have his breakfast, skirting the various groups huddled around the smouldering fires and soon approaching one of the enormous *malocas*.

If the palm-thatch structure had seemed large from outside, it seemed even larger once they were inside it, surrounded by the circular walls and dwarfed by the high, dome-shaped roof that disappeared into the darkness directly above them. The interior of the *maloca* was extremely dim – the opposite side was barely discernible – and the woven palm-leaf hammocks, enough for half-a-dozen families, were slung between poles that had been stuck in the ground around the larger, supporting poles of the main structure.

Contrary to popular opinion, even the Indians did not like communal living, so the faces of those peering out of the gloom showed little emotion.

Father Benedict followed the old Indian across the earthen floor to the far side of the *maloca* where they found the sick *seringueiro* lying in a hammock

above the hammock that belonged to his wife. His wife was sitting cross-legged on the floor nearby, devoid of clothing, her dark skin flabby, rocking to and fro with her eyes shut, her lips offering a repetitive, mournful litany. Beside her, at a vertical loom, in the process of weaving a blanket, was her daughter, dark-haired, fullbreasted, still in her early teens. She glanced up when Father Benedict stopped in front of her, then quickly, and demurely, lowered her eyes again. Father Benedict, discomfited to find that he was blushing, stood by the upper hammock and studied her father, the ill *seringueiro*.

The man had obviously been beaten badly with a thick stick or length of bamboo; the welt marks were all over his body as well as his arms and legs. However, if the beating that had been inflicted upon him had been uncommonly vicious, it did not alone account for his sorry condition. His face was too thin, almost emaciated, his cheekbones clearly visible through his yellowing skin, his eyes far too large and wild with fever, his face slick with sweat. He seemed to be suffering from anaemia, and when Father Benedict examined him by running his hands over his body, he was certain that his fingertips had felt the spleen's fatal enlargement.

'Does he sweat a lot?' he asked.

The man's wife, who had been rocking on the floor, now stopped and looked at him.

'He burns and he freezes,' she said, speaking Portuguese. 'First hot and then cold. Even when burning up, he cries out that he is cold, and when I touch him I feel the death inside him, trying to claim him.'

'Has he been taking his quinine?'

The woman stared at him, perplexed. 'He sniffs his *epena*, nothing else.'

'I'm not interested in his damnable drug; I want to know about medicine. Now did he take his quinine?'

'He took only *epena*.'

Exasperated, Father Benedict stepped away from the dying man who had suddenly started groaning and shaking his head dementedly from side to side. His wife climbed to her feet, wiped the sweat from her forehead, crooned soothing words in their own indigenous language, and eventually managed to calm him.

'He's dying,' she said to Father Benedict, again speaking in Portuguese. 'When he dies, if we do not obey his murderer, we will all truly suffer.'

Ashamed to look at her, Father Benedict lowered his eyes and glanced at her daughter, then quickly, perhaps too quickly, found himself returning his gaze to her mother. There was no doubt that her husband was dying – and now her grief seemed to swamp him.

'The beating was bad,' he said, 'but not severe enough to kill him. It's the *malaria* that's killing your husband. Why in God's name did he not take his quinine before entering the forest? You understand? *Medicine!*'

The woman shook her head in a negative gesture, her dark eyes blind with grief. 'No medicine,' she said. 'He was never offered any medicine. The white chief gave him no more than the stick that opened his skin to the bone. No medicine. Just hunger!'

Her eyes were large and glittering, floating before him in the gloom, wrapping her grief around him and drawing him in through his anger and shame. The shame he felt was for Frank Poulson, for other white men just like him, and, though he refused to articulate it, for his own, secret self.

He glanced at the young girl, saw her smooth skin in the dim light, the curve of her naked breasts forming a path to the stem of her throat. Above the throat: sensual lips, smiling slightly, untouched by death, giving meaning to the invitation in the dark eyes no longer demure. He sensed what she was dreaming – what he, also, had often dreamt – and the shame, which had begun as one thing, now became something else.

Shocked by his own thoughts, he removed his gaze from the girl, tried to focus on her mother, and then thought of Frank Poulson, and of his innocent son, Alex, and let his self-righteous anger cool the fires of desire.

'I'm sorry, but I'm afraid there's little I can do.' His voice sounded mechanical and faraway. 'I'll send for some medicine and arrange for transportation to a hospital – but I'm bound to say I think it's too late.'

'No hospital! He will not die with white men! He will die in this place, in this *maloca*, and feed the soil of the forest.'

'You are a Christian! Your husband is a Christian! He must die like a Christian!'

'No more! No Christians! We no longer play your game! My husband, myself, other Indians, we play your game because we know that if we do not make you smile we will be punished. We are not Christians, priest! We are Indians – Yanoama! We accepted your God because you told us to do so and because we needed your protection from the rubber barons. But what good

did that do us? What good did it do my husband? He was sent into the jungle without food or your precious medicine, and then, when he hungered and turned sick, the drunken white man just beat him. Can you protect us from that, priest? Have you ever protected us? And can you protect our daughters' – she jabbed her finger at the kneeling girl – 'when that beast who gets his power from our rubber comes and steals them away from us? You know what he does, priest! He shames our daughters and then disowns them! And you, priest, you and your fellow Christians, you simply tell us you're sorry. Well, priest, keep your God from my husband's grave. He will die as an Indian!'
The woman spat at his feet and then turned away from him, her naked body twisting in the gloom and curving, as if in slow motion, over the husband who was painfully dying in the swinging hammock. Father Benedict was startled, then felt wounded and humiliated, and his eyes, with a will of their own, turned to take in the adolescent girl. She was getting to her feet, her body well-fleshed and voluptuous, and then her eyes, ignoring death to lure him in, floated out of his sight.
He felt numb and unreal, but had the urge to say something, and his mouth opened and closed as his brain raced, stumbling into stunned silence. He coughed into his clenched fist, squinted into the gloom, heard the wailing of the stricken woman, saw her embracing her husband's body, that body which, diseased and brutalized, was surely expiring.
'You must understand,' he heard himself saying. 'I simply cannot…'
His planned apology got no farther, cut short by the woman's wailing and, more bizarrely, by the sudden, staccato, high-pitched chanting of the old Indian beside him. Father Benedict stepped back a little, hardly believing his own ears, and saw the old Indian squatting on his haunches and starting to rock back and forth, all the better to continue his raucous mourning. Father Benedict stared at him, at the woman embracing her dying husband, at the husband as he swung in the hammock beneath the weight of his wife as if, at the quickening approach of death, they were making love for the last time; and then, his heart racing, the chanting and wailing filling his head, he turned and hurried out of the enormous hut and let the morning light dazzle him.

Chapter Three

It was not all that bright, but his eyes were indeed dazzled, being released

from the dim light of the *maloca's* interior and adjusting to the shocking expansiveness of river and sky.

He blinked and rubbed his eyes, blinked again and then walked on, wending his way between the warm, smouldering fires and the Indians squatting around them. Their very presence was disorientating, defying sense and credibility: a world war had just ended, a splitting atom had scorched the heavens, and here, as if guns and tanks had never existed, as if Hiroshima and Nagasaki were simply dreams of a distant future, these Indians were still squatting in the dirt, their souls tuned to the Stone Age.

Father Benedict felt suffocated, the river breeze now filled with heat, and was glad when he reached the murmuring water where the air was much cooler. He swotted stinging flies from his face, saw the biting ants on his boots, recalled the crocodilian caiman gliding out of the river and crawling up the clay bank. He shuddered, thinking of death, of the brutal realities of the life preceding it, and wondered how to reconcile his faith with his all too mortal, unsteady thoughts.

' O my God, I cry in the daytime, but thou hearest not…'
The sound of his own voice startled him, making him glance up, embarrassed, and he saw Mengrire kneeling in the boat, untying the restraining rope from the post. The young girl from the *maloca* was nearby, sitting casually on the riverbank, one leg raised, her cheek resting on the knee, her naked skin etched in bronze. She was not staring at Mengrire, but at him, the white priest, and he felt himself responding to her sly smile, his will and virtue dissolving.
Green forest, leaden sky, a bronzed flesh against muddy water… He thought of the woman's wailing, of the old man chanting, of this girl's father dying… She didn't yet understand death, not as something terribly final, but would understand pain and humiliation if Frank Poulson came for her.
Frank Poulson: an evil bastard. Assuming that evil actually existed. Or, if evil did not exist, a former good man corrupted. Father Benedict did not feel charitable and let the anger shake his soul, and then, in the midst of his anger, thought of Frank Poulson's son, Alex. The beauty of true innocence. To be corrupted and destroyed? As that man, that degenerate, corrupted and

destroyed all he touched.
I'm a priest, Father Benedict thought. He affirmed this fact even as he stared at the young girl. She was naked and the river flowed past her and took his senses away with it. How, indeed, had he helped her father? And, in truth, how could he help her? Even now, as he looked at her bronzed body, he felt nothing but lust for her.
Father Benedict breathed deeply, willing himself to look away from the girl. Seeing Mengrire standing up in the boat, he managed to glare angrily at him. 'Don't just stand there, you Christian savage,' he said, trying to make a joke of it. 'Give me your hand and help me aboard. We can do no good here.'
The Indian, a true Christian, smiled and then held out his hand.

Chapter Four

'You look tired,' Father Symonds said, glancing up from the piles of clothing that had been placed neatly around the suitcase on the bed.

'That's what Mengrire told me,' Father Benedict replied, stepping fully into the other priest's room and sitting down wearily in a chair behind a small, wooden table. 'However, Mengrire, clever Indian, thinks my tiredness is of the soul, not of the flesh.'

Father Symonds smiled. He had a round, almost babyish face, his cheeks as pink as his bald head, his hazel eyes, with their good-humoured crow's feet, radiating true warmth. 'All the Indians are philosophers,' he said, 'and believe our souls are visible. Do you think Mengrire was right?'

'No, I'm just tired. It was those damned drums again. I spent half the night on the veranda, chainsmoking, listening to the drums, and watching the rise and fall of those lights that no one can explain.'

'You smoke and swear,' Father Symonds said, 'which makes you a rather unusual priest, if not quite a respectable one.'

'Do you think I'm a good priest?'
'I think you *could* be. I'm not sure that you are.' The older man smiled again,

his eyes wrinkling with good-natured mockery, then he sighed and gazed down at the bed, examining the clothes that still had to be packed. ‘Anyway,’ he continued, ‘you shouldn’t dwell on those lights. As a Christian, you must simply ignore them and get on with your work.’
‘Do you mind if I smoke?’
‘No’
Father Benedict lit a cigarette and inhaled gratefully, realizing that he still hadn’t eaten, but not feeling hungry. He blew the smoke to the gloomy air, squinting through it at his fellow priest, deeply saddened that he was leaving this very day to take the boat back to England. Now, watching his short, plump, elderly friend distractedly putting more clothing into his suitcase, Father Benedict again felt desolated, as he had on the river.
‘I’ve only been here for six months,’ he said, ‘but you’ve been here for fifteen years. It just doesn’t seem real that you’re finally leaving. I still can’t quite accept it.’
‘You’ll get used to it soon enough, Paul. And you’ll be better off without me. I’m now too old for this jungle, I’ll soon be needing walking sticks, and I think it will be better for us both if I tend my garden in England.’
Finding it difficult to imagine his good friend in an English garden, Father Benedict inhaled on his cigarette and stared through the mesh wire of the open window that looked out on the lush greenery of the rainforest. Whether forest or jungle, it always slightly disturbed him, making him feel that he was living a dream in an alien landscape. Here everything was giant-sized – to some, horrifically so – and right now, as he gazed through the insect-covered mesh wire, he saw the great lengths of liana hanging in loops from the towering trees, forming bizarre, surrealistic limbs that embraced the tree trunks and webbed the grassy ground in between like numerous, giant serpents. Certainly it was not like an English garden, nor like any forest he had known before, and the various life forms in there, and the countless ways in which those life forms died, could be viewed as nothing less than a nightmare beyond human imagining.
Were all creatures God’s creatures? If so, what was He like? And how could the jungle’s ferocity, in truth matched by human cruelty, be accepted as a manifestation of His wisdom and benevolence?
Father Benedict exhaled more smoke, watched it drifting in front of him, then turned his gaze away from the challenging forest and again looked at his

friend. The other priest, Father Symonds, was still standing over his bed, putting his tropical clothing, ill suited to England, into his suitcase.
‘Sometimes,’ Father Benedict said, ‘I wish I was back in New Guinea. At least the Japanese didn’t frighten me the way this place does.’
‘The Amazon frightens you?’
‘Yes, I think so. In some way I can’t quite define. Lately I’ve been feeling disorientated and I have real trouble sleeping.’
‘I told you: you must ignore those mysterious lights and close your ears to the drumming. You mustn’t let them prey on you.’
‘How can one ignore them? They’re *there*. I mean, you can’t keep your eyes off the sky when you know that they’re *there* – lights rising and falling to the rhythm of unseen, pounding drums – lights whose source and nature are unknown and that should not, in rational terms, exist.’
‘I know what’s going on inside you, Paul. You want to take an expedition into the jungle to find the drummers and learn where the lights come from.’
‘I confess, I’m sometimes tempted.’
‘Don’t be tempted, Paul. You’d be wasting your time. For a start, you wouldn’t get any of the natives to go with you, since all of them are frightened of the Yano, whether or not that tribe actually exists. As for going it alone, there’s no question that you wouldn’t return, since you’d either get hopelessly lost, drown in a swamp or quicksands, be poisoned or eaten by one of the jungle’s many predatory creatures or, failing all that, be murdered by the reportedly homicidal tribesmen who play the drums that so often disturb your sleep.’
‘The Yano.’
‘Some strange Indian tribe, certainly; let’s call them that for now. No matter: whoever they are, they’d almost certainly kill you.’
‘Do you believe what the Yanoama say about the Yano?’
‘That they have magical powers? That they’re possessed by evil forces? No, Paul, I do not – and neither, as a Christian, should you. So, please, let’s talk no more about it.’
Father Symonds raised his head just long enough to deliver a firm, steady gaze, then he lowered his head again and resumed his packing.
Sighing, restlessly crossing and uncrossing his legs, Father Benedict inhaled on his cigarette, blew smoke across the low table, then stood up and stared out through the insect-covered mesh-wire window at the surrounding

rainforest. Little sunlight penetrated and it was gloomy beneath the trees, the tangled liana trailing away into the impenetrable blackness farther in. Everything was damp and remained so all the time, perpetually rotting and being renewed in a natural cycle of death and birth.

'Anyway,' Father Symonds said, 'you won't be alone for long. My replacement arrives in six weeks. In the meantime, since she'll be staying here for a month, the American woman, the photographer from *National Geographic* magazine, can use this hut.'

Aware of the rising humidity, Father Benedict turned away from the countless insects trapped and either dead or dying in the mesh wire of the open window and glanced first at his fellow priest, then at the dimly lit hut in which he had lived. It was a spartan hut, the walls made of forest logs, a hammock slung between one wall and a pole thrusting up from the boarded floor, a mosquito net above the hammock and above the crudely made single bed upon which the older priest's suitcase was resting, but otherwise containing only the small wooden table at which Father Benedict had been sitting, a couple of equally dilapidated wooden chairs, open shelves on the walls for clothing, books and sundry items, and a couple of oil-fired lamps for illumination. The communal latrines were outside. It was not, to Father Benedict's mind, the sort of abode to which a sophisticated woman from Hollywood would readily accommodate herself.

'I hope this woman doesn't turn out to be a nuisance,' he said.

'Why should she be a nuisance?' Father Symonds responded, pressing the last of his clothing down and then closing the lid of the suitcase.

'Any white woman would be a nuisance in this particular area – and a woman from New York by way of Hollywood even more out of place.'

'This woman's a *professional* photographer, Paul. I'm sure she's travelled a lot.'

'Being well travelled, particularly as Americans travel, doesn't necessarily make one suited to the Amazon. Most Americans, whether well travelled or not, like air-conditioning, prepackaged food and their fellow Americans. An exaggeration, certainly, but reasonably close to the truth – and frankly, now that you're leaving, I could happily do without having to act as a guide for a photo-journalist who'll clearly want to show up the Indians for what they are not.'

'You judge the woman before she's even arrived. She's coming here for a

month to take some photos and write an article, after which she'll be returning to America. It isn't the first such occasion and it certainly won't be the last; and I'm sure that the woman, whether from Hollywood or not, will be able to look after herself. I think, dear Paul, that the celibate life of a priest is making you crusty.'
It was a good-natured remark, offered with a gentle smile, but Father Benedict, uncomfortably aware of the truth in it, had to hide his embarrassment.
'Great,' he said. 'My good friend's final shot is that I'm a woman-hater. Revelation is painful.'
He shook his head and grinned, inhaled on his cigarette, blew a few smoke rings to the air and watched them slowly dissolving…
Yes: dissolving. Like his life: gradually dissolving. A spasm of panic whipped through him, unexpected and disturbing, casting up from the dungeon of his mind some long buried, forgotten fears.
His good friend, Father Symonds, was sixty years of age, but still had the face of a child, innocent and curious, while he, Paul Benedict, a mere forty years old, already felt the draining of energy and enthusiasm that normally comes with the twilight years. He was tired of the Amazon, tired of living like a primitive, possibly even tired of being a priest – and the latter thought, blasphemous in the extreme, was growing stronger each day.
In truth, what he resented was the possibility that he had not lived a real life.

Chapter Five

'So,' Father Symonds said, tightening the leather strap on his suitcase and then pressing his fingers into his spine as he straightened his back. 'I'm ready to go.'

'What preparations have you made for leaving?' 'Are you coming with me?'
'Of course.'
'I've said goodbye to everyone except a few friends

on Frank Poulson's plantation. I thought we could stop off there, shake a few hands, and then drive back this way and on to Manaus. Is that all right with you?' 'That's more than all right. I want to have words

with that bastard, Poulson.'
'Ah, you had a bad time in the Indian camp.' 'Yes.'
'Let's have breakfast.'
Father Benedict threw his cigarette butt on the

earthen floor and stomped on it, then together both men left the hut and made their way across the flat expanse of the mission camp, the great river flowing quietly on their right, the huts of the modest camp on their left, below the towering trees. They did not walk very far, but felt the heat nonetheless, a relentless, suffocating humidity caused by low-hanging, dense clouds. There were numerous biting flies, enormous butterflies and mosquitoes; and the ground beneath their feet, damp and grassy, was alive with numerous insects.

The mission camp was small and destitute, made diminutive by the soaring trees, its few log buildings incongruous in the forest's green density. Naked Indian children were playing freely, chasing frightened chickens and geese while their parents, most wearing shirts and pants or shabby dresses, milled around the entrance to the medical hut, waiting for treatment for their wide variety of ailments. Behind the medical hut was the rainforest, ominously quiet and gloomy, little sunlight penetrating through the trees, no breeze to temper the clinging heat.

When the older priest entered the mess hut, Father Benedict followed him in, ducking his head as he passed through the low doorway. It was cooler inside, but the flies were just as numerous, buzzing frantically over the long trestle table containing their breakfast: a generous selection of melons, mangoes, papaya and pineapple, crusty white bread with a syrup made from *assai* berries, a porridge of plantains, and two jars containing *laranja* and *maracuja*, all of it, in one way or another, taken from the forest.

Uncomfortably aware of his spreading waistline, Father Benedict settled for two large slices of melon and a mug of rich, thick black coffee, then sat down at the table, facing the other priest. He sighed, picked up his knife and fork, then cut into the melon.

'You're not eating?' he asked of Father Symonds.

‘No. Truth tell, I’m feeling a little tense and my stomach’s upset.’
‘Because you’re leaving?’
‘Yes. Because this time it’s final. Perhaps because retirement is a sign that the curtain is coming down.’
‘Nonsense,’ Father Benedict said, swallowing a piece of melon. ‘You’ve lots of years left in you yet, so don’t talk as if it’s all over.’
The older priest sighed, accepting the reprimand. ‘I stand corrected, Paul. And of course you’re absolutely right: the curtain hasn’t come down yet, though it feels that way to me. The truth, dear friend, is that I’ve already been here too long and now the very thought of returning home scares me, as if I no longer belong there. And there *is* some truth in that. This place turns one into a primitive. What’s a fish knife to a man who licks his fingers? And can I handle a proper tea cup and saucer?’
He smiled at his own doubts, but Father Benedict shifted uneasily, feeling strongly that there was more truth in the question than his old friend realized. A mission priest was almost a castaway, living a primitive life, so far removed from normal society and the church itself that the commonplace rites of civilization were all too easily lost. China tea cups and fish knives were indeed long lost luxuries, but much greater was the loss of mental stimulation and the mores of cultivated social life. Father Benedict was no gentleman (he had good manners, but lacked etiquette) yet he felt increasingly, as each passing week drained him, that the few civilized refinements he still possessed were gradually being eroded in this jungle, worn away through lack of proper discipline, destroyed by deepening lethargy. The jungle’s silence drained the mind, the empty mind sapped the will, and in time, as the distance between past and present increased, that modest history that at least offered identity vaporized in the sweltering gloom. In truth, Father Benedict loathed this place and secretly yearned to pack his own suitcase and leave with his fellow priest.
‘English tea and muffins,’ he said. ‘I’m sure you’ll learn to live with it. As for fish, after fifteen years here, I should think you’ve had quite enough of it. No fish, no fish knives to deal with, so you’ve no need to worry.’ He sliced up some more melon and started digging out the pips, trying to ignore the flies buzzing around his head in pursuit of his sweat. ‘But does it really feel that strange to be going back after all these years?’
‘Yes, I’m afraid it does. I’m not too happy about it. I mean, I *want* to go

back, but I'm not sure about what I'm returning to. Fifteen years is a long time; fifteen years here, even longer. I don't know that I can settle back in England and simply tend my garden. A family might help, but I have no family left, and perhaps, in that small cottage in Hertfordshire, I'll simply become a recluse.' His eyes, normally twinkling with good humour, were now very serious. 'Be careful of that,' he said. 'Don't let this place completely change you. You've only been here six months, yet already you can't sleep at nights, your ears tuned to the jungle. This is a very strange place, Paul. It isn't just another jungle. It's not like New Guinea, nor like any other place on Earth. You must learn to close your eyes and ears to what you don't understand.'

'You mean the lights that rise and fall over the interior? Those and the drums of the Yano Indians?'

'Who may or may not exist,' Father Symonds replied. 'Yes, I mean the drums – which may be played by an unknown tribe, if not the mysterious Yano – and the lights, which though seeming to defy logic, may yet be explicable as atmospheric phenomena. I mean those… but not only those.' Finishing his coffee, he wiped his lips with his fingers, stood up and clasped his hands behind his back and then went to the doorway of the hut to gaze out over the river. Beams of sunlight, edging around the forest clearing, slanted over his portly frame.

'Something happens to we white men when we stay here too long,' he said. 'We rot in mind and body, go native or even mad; sometimes compensate for boredom and loss of identity by embracing sin as our most intimate friend.'

'Like Frank Poulson?'

'Yes, Paul.' Father Symonds sighed, as if releasing his despair, then turned back to face the interior of the hut while remaining in the doorway. The sunlight, spraying out around his body, rendered his face a black, featureless mask. 'The man is corrupt. Perhaps irredeemably so. And yet once upon a time, not so long ago, he actually seemed halfway decent. It was this place that changed him, wrapping its web of evil around him, robbing him of every civilizing belief and turning him into a devil. Believe me, this place can do that; by my faith, I would swear to it.' The older priest shuddered a little, as if caught in a sudden chill. 'So,' he said, stepping forward, his kindly face reappearing, beads of sweat gleaming on his bald head as he sat down again, 'what happened this morning?'

No longer hungry, Father Benedict slid his plate away, swiped at the flies buzzing frantically around his head, then had a sip of his coffee. He wiped his lips with the back of his clenched fist and then reached into his pocket.
'You've just named the bastard,' he said. 'It's Frank Poulson again.' He took a cigarette from his packet, lit it and inhaled, blew the smoke over the buzzing flies and observed their panic with pleasure. 'Another *seringueiro* is dying right this minute – and I don't doubt who caused it.' He recounted the story of his visit to the Indian camp across the river, emphasizing that the Indian's illness was due to a lack of medication and, also, to the beating he had received from Frank Poulson, noting, as he did so, the distaste of Father Symonds' face and feeling his own anger rising as it had earlier on. 'I'll have to do something,' he said, inhaling deeply, exhaling the smoke, 'and I'll start by seeing Poulson. I'm not going to stand by any longer while that bastard, without reason or rhyme, brutalizes his workers, If he doesn't agree to instantly change his ways, I'll go to higher authority.'
'*What* higher authority? There's *no* higher authority. Even the Church has no authority in this place, as already you know. By all means speak to him, but don't expect too much; most likely he'll just laugh in your face and throw you off his plantation. No one cares about the Indians, Paul. The Church can only do so much. We can say what we want to Frank Poulson, but beyond that, we're helpless. And, with particular regard to Poulson, our words fall on deaf ears.'
'And what happens when the Indian actually dies? Can we not call it murder?'
The older priest sighed. 'Yes, Paul, we can call it murder – but that won't get us anywhere with the authorities who will use the word "accident". Frank Poulson is aware of this – that the so-called authorities are on his side – so no matter how much it disgusts us, alas we are helpless.'
Father Benedict felt the sting of his own impotence, the rancid bile of defeat, recalling the angry words of the *seringueiro's* wife, her accusation unanswerable. 'What are we doing here?' he asked, 'if we have no power to act? Is there any point in being here at all or are we fooling ourselves?'
'The Church does what it can, but must accept its limitations. The world can't be changed overnight – least of all this particular world with its own obscene rules.' The hazel eyes looked directly at Father Benedict, gentle yet probing. 'But is that what you think, Paul? That you're being wasted here? That

because the Church can't move mountains, it should not even try? If so, then indeed you lack faith of the most fundamental kind.'
'I think you've always sensed that in me.'
'Yes, Paul, I have.'
The gently perceptive eyes were staring steadily at him, and Father Benedict, smoking his cigarette, felt slightly ashamed. A lack of faith was what he felt – more so every day – and if it stemmed, as it surely did, from his past, his present situation had also served to aggravate his old doubts. He stood on shifting sands and had done so all his life, but recently the moving grains had formed a fissure into which he felt himself falling. His faith was not a rock, but an expanding vacuum in his soul, and he was certain that this jungle, as his good friend had said, was working its destructive tricks upon him. He wanted to explain himself, to reveal his past to the older man, but when he spoke, hearing the hollowness of his own voice, he merely talked of the present.
'Maybe you're right,' he said. 'Maybe I'm not a good priest. My faith wavers and I feel like a hypocrite when I try speaking of principles. It's like talking into a mirror: the image only reflects my false self; and in that sense, when I'm angry, when I let my anger lead me, when I despise Frank Poulson for his brutal mistreatment of the Indians, I can't do so without feeling a certain confusion over my motives.'
'I'm not sure I understand, Paul.'
'Frank Poulson has, at least indirectly, killed more than this one Indian, and as such he represents that genocidal movement of which we're possibly a part, even if with the best of intentions.'
'By "we" do you mean the Church?'
'Yes.' Father Benedict, hearing his own weary sigh, suddenly felt considerably older than he actually was. 'As we both know, the decline of the Amazonian Indians and their way of life has been caused, in the main, by a threat to which they simply can't adapt: we white men. First the sixteenth-century Spanish, then the Portuguese conquistadors, bringing firearms, diseases and Christianity, none of which, we must reluctantly agree, were mercifully inclined. When the Indians were not being killed off by the firearms, they were being wiped out by smallpox, measles, the common cold and syphilis, while many of the survivors were tortured and brutalized as slaves. Christianity, on the other hand, had its own particular effect:

destroying the native culture of those who survived physically and thus bringing on the death of their spirit… Can you now understand why I have doubts? Even we, with our good intentions, may be contributing to the decline, or disappearance, of the Indians' way of life; by our presence, however much we respect the Indians' traditions, we constitute a very real force for change – a change that could, alas, lead to obliteration. Frank Poulson, then, is not the only criminal. We have all been collaborators.'
Feeling embarrassed and trying to hide it, he blew a cloud of smoke at the circling flies and then stubbed out the cigarette. A line of ants crossed the table, oblivious to human doubt, advancing through pools of shadow and light on the untreated wood.
Father Symonds clasped his hands, sliding his thumbs under his chin, his right eyebrow raised in a questioning manner, his smile understanding.
'To be human is to err,' he said, 'and the Church is still human. It exists to do God's work, to bridge the sacred and the profane, but can only do that work through human beings, who by their nature are fallible.'
'I know that. I accept it.'
'Then why doubt your faith simply because the Church is fallible? And why doubt yourself simply because you can't judge your fellow man without passing judgement on yourself? It's not a sin to question your own motives; blind acceptance is worse.'
Father Benedict nodded, appreciating his good friend's kindness, but the words, while making sense, could not heal the wounds that still scarred his faith. His doubts went too deep for that, were now too old to be subdued, and their genesis was far back in that time between childhood and youth. He wanted to tell his friend about it, to unburden himself by passing it on, but this moment, with his friend's departure imminent, just seemed like the wrong time.
'And Frank Poulson?'
'Have no doubts, Paul. Your assessment is correct. The man is corrupt and growing worse, ruining all he touches. I understand your anger and that it stems from your concern, because it's not only the Indians you care for, but also Frank Poulson's son.'
'We've grown close,' Father Benedict said.
'I know. And I'm pleased. You treat Alex almost like your own son, and that's something he needs.' Father Symonds scratched his bald head, pressed

his fingers down upon it, shook it in an almost comical manner, then pursed his lips and let air out. ‘Such a tragedy it was,’ he said, ‘to lose his mother when he was born; yet a miracle that the father is such a brute and the boy so good-natured.’

‘Magically good-natured… *and* magical.’

‘Ah, yes, that also…’ The older priest stood up, removing his hand from his sweating bald head, swatted distractedly at the circling flies and glanced vaguely around him. It was gloomy in the mess hut, a single shaft of sunlight falling obliquely, cutting a thin line through the shadows and illuminating the mosquitoes in the motes of dust that seemed to drift endlessly. ‘He was a beautiful baby,’ he said. ‘Always smiling, at peace. The wife of old Peruche, then alive, stood in for his mother. A large woman, always smiling, she loved the growing boy as her own, and when she died, when Alex was six years old, it was a sad day for all of us. Yet, strangely, Alex was unaffected. He just drew close to Peruche. And that wily old bird, rumoured to be a witchdoctor, simply encouraged Alex’s innocent nature and guided him gently through childhood. Yes, there’s something magical about the boy – and I don’t mean his strange powers.’

‘I assumed you would have disapproved of those.’

Father Symonds shrugged. ‘No really, Paul. Alex’s gifts are of a very minor order – and tempered with sweetness.’

‘They’re magical nonetheless.’

‘But not necessarily supernatural. The Indians, like certain animals, have retained occult powers that we white men lost long ago; and Alex, under the wing of old Peruche, is very much like an Indian.’

‘And you still don’t disapprove?’

‘I chose to ignore what I can’t understand, which perhaps is *my* secret cowardice.’ Father Symonds smiled and shrugged, raising his hands in a begging gesture. ‘At my time of life, after a lifetime of observation, there are questions that one simply avoids in case the answers are damaging. Leave it only that I think of Alex as a very remarkable and lovely boy; and that I understand only too well your urge to protect him. The sadness, of course, is that he most needs protecting from his own wretched father.’

Sensing that the older priest was preparing to leave, Father Benedict pushed his chair back and stood up, pressing his hands into the base of his spine and stretching his back. ‘Damn,’ he said, ‘I’m not young anymore. My bones

creak and ache.'
'A daily swim in the river is what you need. The piranha fish would love you.'
Father Benedict smiled at that, briefly cheered by the good humour, but as they both crossed the floor to the open doorway of the hut, he thought of the man dying across the river because of Frank Poulson.
Should he ignore what was happening? Should he accept the status quo? Or should he, as representative of the Church, take a stand on the matter?
When his more experienced friend, Father Symonds, ducked his head and left the hut, Father Benedict, undecided and lacking faith, followed him out.
The sun was high in the sky, blazing down from the scattered clouds above the mighty river, unobstructed by the canopy of trees that normally kept it from illuminating the forest floor. Father Benedict rubbed his eyes, squinting into the sudden brightness, then focused on his short, bald-headed friend whose kindly face gave him hope. He was immediately invigorated, filled with unexpected conviction, and briefly felt that all his fears would fall away if he took positive action.
'So, Paul,' Father Symonds said, 'I think it's time I was leaving.'
'You've said goodbye to everyone here?'
'Everyone… and I can't stand repeating myself.'
'Fine. So let's go.'
Father Symonds started forward, heading towards his own hut, saying that he would pick up his suitcase and then come straight back. Hearing the rustling of foliage, Father Benedict turned his head and saw the Indian, Mengrire, walking urgently towards him. Mengrire stopped in front of him, looking grim. He indicated the river. Father Benedict looked across that wide expanse of dappled water to see a thin plume of smoke spiralling above the far bank.
'It's a sign,' Mengrire said, almost whispering. 'The *seringueiro* has died.'

Chapter Six

'It's going to rain,' Mengrire said, sitting stiff-backed in the driver's seat, his hands firmly on the steering wheel of the jeep as he let the wind carry his words back to them. 'I can feel it in the coldness of the air. It will rain very soon.'

The two priests, sitting close together in the back of the jeep as it bounced and rattled along the crude track, merely glanced at one another but said nothing, both aware that Mengrire's words disguised the anger he doubtless felt about the *seringueiro's* death. They had just left the mission camp and were heading for Frank Poulson's plantation, the gloom deepening around them as the forest became more dense, the lower branches of the trees meeting above their heads and cutting out the sunlight.

Father Benedict glanced about him, surveying the forest, seeing little, helplessly gazing inward at himself and his conflicting emotions.

The death of the *seringueiro,* though expected, had still badly shocked him, brutally destroying his brief elation and resurrecting his former doubts – about himself, about the frailty of his faith, about the role of the Church in this jungle which belonged to, and was perhaps only understood by, the frequently betrayed and exploited Indians.

He wiped sweat from his face, not feeling the cold that Mengrire had mentioned, and looked straight ahead at the crude track that snaked through the foliage. The few striations of light were dimming, making the grey shadows blacken, while the clamour of the jeep, the tortured banging of the gearstick, punctuated the silence of the forest like some alien, metallic beast.

The rainforest slept during the day, its teeming wildlife camouflaged, but Father Benedict, well aware of what the lush greenery hid, could not forget the terrible spectacle of savagery and death enacted nightly within it; and was convinced that the jungle, which was cruel beyond belief, was a microcosm of all life on Earth, including the bloody history of Mankind. This was not a Christian belief – quite the opposite, indeed – but increasingly it was one that haunted his dreams and tormented his waking hours.

Feeling guilty and unworthy, degraded by his own reasoning, he glanced sideways at Father Symonds' profile with its flushed, blue-veined cheeks, slightly bulbous nose, and bald head rising out of thinning hair like an egg in a bird's nest. His friend's eyes were closed, his head held back to catch the breeze, and his lips were curved in the hint of a smile, part goodhumoured,

part sad. Father Benedict felt anger again, thinking of Frank Poulson and the dead *seringueiro*, even angrier that the death should have occurred the same day Father Symonds was leaving.

'I'm sorry it had to happen today of all days,' he said. 'Right now – and God forgive me for saying it – I could kill that degenerate bastard, Frank Poulson.'

'It's a tragedy that it happened at all, Paul. That it happened today of all days has nothing to do with it.'
'I think you know what I meant, Michael.'
'Yes, Paul, and I appreciate it, but you really shouldn't be concerned for me, but for that poor Indian's family.'
'I'll look after them, of course.'
'And that's all you can do. There's no point in brooding further about it; change comes slowly but surely.'
Father Benedict was doubtful about that, as he was with most things these days.
'I promise you,' he said, 'I'll do something. I won't let this matter rest.'
Father Symonds opened his eyes to stare at him, smiling more broadly.
'Do as you wish, Paul,' he said. 'My time here is over.'
'That doesn't sound too encouraging.'
'It wasn't intended as encouragement. I merely reiterate that no matter what you feel, you can probably do little.'
'He virtually murdered that Indian.'
'Virtually, but not quite. And that will make all the difference in Manaus, should you take it to court.'
'I won't know unless I try.'
'By all means try, Paul, if you insist, but don't expect justice. Justice, in this case, will only come from God, when He feels it is time. In the meantime, if you have your confrontation with Frank Poulson, you may at least unburden your conscience and sleep more soundly at night.'
Father Benedict was startled, wondering what his friend meant. 'My conscience? Why bring my conscience into this? We're talking about the activities of Frank Poulson, not of my minor sins.'
Father Symonds smiled at him, unperturbed. 'You want challenges, Paul. You want issues to wrestle with. You want them much more than you would

were your heart truly peaceful. I accept your anger over this crime, your contempt for Frank Poulson, your despair over the limitations of the Church in this uncivilized place. I accept that your feelings are sincere and the causes are real enough. Yet you brood too much, Paul, concentrating too much on negatives, and I sense that your lack of faith, your deepening cynicism, springs not from what you see around you, but from your own secret nature. Your anger stands like a mirror before you, casting back your reflection. It's your own sins you fear.'

Shocked by that remark, uncomfortably aware of the truth in it, Father Benedict averted his gaze from his fellow priest and instead watched the forest slip past him: a dark and sombre sight, few flowers brightening the light-starved soil, the lianas writhing around the tree trunks or hanging down in giant loops, often coiling around the brown fruit of the Cannon-Ball trees or green clusters of avocado pears in pursuit of the sky. The lianas climbed towards the sky because sunlight rarely penetrated through the trees, and now, surveying that gloom, still stinging from his friend's perceptiveness, Father Benedict felt that he was staring into the darkness of his own discontented soul.

'You told me it was no sin to doubt,' he said eventually, 'and yet that's my greatest fear.'

'Your lack of faith?'

'Yes.'

'Why?'

'Because it becomes worse every day, making me feel like a hypocrite.'

'Hypocrisy has nothing to do with it, Paul. You're suffering what most decent men must suffer at some time or another: the loss of emotional energy and conviction, of a sense of direction. *And thy life shall hang in doubt before thee; and thou shalt fear day and night… In the morning thou shalt say, Would God it were even! And at even thou shalt say, Would God it were morning!…* Is that not the case in this instance, Paul?'

'Deuteronomy. Yes.' Father Benedict smiled uneasily, pleased that his friend understood, displeased that the truth in what he had said could so easily disturb him. 'That certainly is what I feel, but it's more than a midlife crisis. I've had such feelings ever since I joined the Ministry; and the Amazon, its ghostly silence and strangeness, had simply forced me to think more about them.'

He studied the back of Mengrire's head, seeing the Indian's long hair blowing, his dark hands sliding around the steering wheel as the jeep bounced and rattled. Here – the Amazon. And before that – New Guinea. And before that, in childhood and adolescence, the flat plains of the outback of Australia. A single street through a small town, red dust drifting lazily, people frozen in pools of shadow on their porches, the road shimmering in heat waves. One school and one church, both built with clapboard, swinging doors on the bar of the sole hotel where the sheepshearers drank. The days were bright and long, not much noise, the townsfolk silhouetted, and his parents, guarding the doors of the small church, were the ghosts of his history. His father, the Catholic scholar; his mother, the obedient wife. Both preserved in the fine gauze of his thoughts and impressed upon his memories for life.

Had they loved him? He never knew. Only their sermons remained with him. His father had drawn him into the Church, pushed him unswervingly towards the Ministry, and then shamed him, when he was still an insecure young man, into going to work for the Aboriginal mission stations. A good son, he had done so, convincing himself that he truly wanted it, but eventually, when the truth was forced upon him, he had viewed his own life as false.

'If being in the Amazon disturbs you so much,' Father Symonds said, 'why did you volunteer to come here? And, indeed, why have you spent so many years serving the Church in similar places?'

Mengrire mangled the gears and the jeep slowed abruptly, banged into a liana trailing across the track, then bounced over it and crashed back down again and moved on, growling in protest. Father Benedict, holding onto his seat, felt a chill in the air.

'A good question,' he said, 'and one that bothers me a lot. Time plays tricks with our memories – we often reinvent our past – but I believe I left Australia for New Guinea to get away from my father. He was a decent man, I suppose, but I mostly remember his sternness, his humourless and unbending theology, his puritanical zeal. Please forgive the violins, but my childhood was lonely. My mother, either respectful or actually in fear of her husband, was a quiet and uncommunicative woman who, though treating me kindly, showed little emotion. As for my father, he was positively Victorian, a disciplinarian with narrow views of right and wrong, of honour and duty. He instilled such beliefs in me, tried protecting me from all evil, even protecting me from the mischief of other children by keeping most at a distance. So, I was lonely,

influenced only by my parents, and even later, as a young man, when studying at a theological college in Brisbane, my father rarely let me out of his sight. Naturally, then, my friendships were few and my influences likewise. My father's religious world was the one I inherited. No accident, therefore, that I never truly felt the calling, but simply entered the Church to follow the path laid down by him for me.'

The forest was now much darker, the faint sunlight disappearing, the distant rumbling of thunder punctuating the spasmodic coughing of the badly tuned jeep.

What he had said was disingenuous, not the whole truth, not even remotely so, and he felt the deepening gloom of the rainforest dissolving his sense of reality, while his past, in the form of ghostly images, came alive in his mind…

The theological college in Brisbane, his student's room bleak and musky, the chapel spartan and forbidding, other students whispering prayers or singing hymns as the clock ticked the hours away. Outside, the sun shone; inside, the gloom prevailed. In the night, when sleep refused to come, he knew the heat of temptation: *thou are cursed above all cattle, and above every beast of the field*… Thus, he lay, a young man in the long night, his wanting flesh shrivelled by the accusing, overwhelming voice of God…

'So you were doubtful even then,' Father Symonds said.

'Yes,' he replied, feeling the dampness in the air and knowing that the rain would soon be coming. 'Now I see that I was doubtful from the very beginning, though at the time, perhaps understandably, I couldn't admit it to myself. I *wanted* to believe, I begged the Lord to strengthen my faith, but my doubts prevailed and tormented me. Which is why, when my father encouraged me to go and work in the Aboriginal mission stations, I went with a feeling of great relief. If nothing else, I would escape his constant attention and maybe find my own breathing space.'

'So you developed a taste for lonely places, far from civilization.'

Father Benedict sighed, feeling foolish, but still compelled to talk, his gaze focused on the darkening forest slipping past on both sides of him. Here, the Amazon rainforest; and before this, New Guinea, its jungles also dense and forbidding, crushing the spirit. The thunder rumbled again in the distance; a light breeze shook the foliage.

'Yes,' he said, his voice strained, in competition with the noisy jeep. 'Even in

Australia, I developed a taste for the Aborigines' alien culture and the outback's great silence, which, in its own way, spoke volumes. There was a touch of masochism in it, the need to punish myself for my doubts. In that silence I could admit that I hadn't really wanted to enter the Church; admit, also, that I was tempted by material possessions and worldly pleasures. I felt that I was missing out on a real life. That feeling persists to this day.'
Thunder rumbled again and the rain started falling, splashing lightly on leaves and spraying around them to signal what was to come: a deluge; a storm. Father Benedict, hearing that noise in the heavens, thought of it as God's accusing voice.
'God speaks to me,' he said, 'from the heavens. It's a clear reprimand.'
The older priest smiled, not offended. 'Did you believe in Him at that time? Or did you live a complete lie?'
'Not a complete lie. I believed in Him then. And even now, with my doubts looming larger, I can't fully deny Him. I have doubts, yes, but my belief in Him persists. What I can't accept – and never could – is that I belong to Him.'
'If not to Him, then to the devil.'
'Not necessarily so. We don't have to give ourselves to one when we turn away from the other.'
'But you didn't actually turn away from Him. You simply doubted His nature and your own place in His mystifying design.'
'Yes. I wanted to live as other men, to enjoy their sinful pleasures, and the Church, with the demands it made upon me, deprived me of that.'
'Are you suggesting that a priest has no real life?'
'I'm suggesting that I was not then, and am still not, cut out to be a proper priest; that I'm a man with strong desires – worse, perhaps even a sensualist – and that my need for *earthly* experiences is stronger than my desire to be virtuous.'
'The need you mention is perfectly normal,' Father Symonds said, 'even for priests.'
'I accept that, also, though it doesn't solve my problem. It's true that most priests have to battle with temptation, but most take their pride from fighting that battle and strengthen their faith by so doing. As for myself, I have no pride; I merely resent what I've lost, especially that most precious act of intimacy: to share love – create new life.'

The words had come out of nowhere, unplanned and unexpected, and he felt himself burning with embarrassment even as he uttered them. Confused, he bowed his head, sensing the floodgates slowly opening, the buried secrets of his past rising up to form a whirlpool of memories, some of which were unwanted.

A few raindrops fell upon him, large raindrops, warm and gentle, then the introductory drizzle to the deluge sprayed down through the giant, quivering leaves.

He recalled his modest church in the Australian outback, its clapboard walls bleached by the sun, and around it, shimmering dreamlike in the heat, the huts and tents of the Aboriginal mission station with its beaten inhabitants. The men drank and slept a lot, spirits broken, minds emptied, while the children played noisily in the dirt and the women welcomed the white men. Fat women, drained of life, selling themselves for sustenance, while he, the mission priest, closed his eyes and turned away in despair. He recalled it clearly now, just as if it were yesterday: the tents lamplit at night, the silhouettes in indecent motion, the masculine, drunken oaths, the feminine giggling, the children kept temporarily outside, though they knew what was happening… And most vivid of all, that particular girl, the young one, her breasts bared in the sweltering gloom of his room, her brown eyes staring at him with hope and drawing him to her. In that singular recollection, as clear and cold as ice, lay the secret he could never discuss, nor completely accept. Nonetheless, perhaps encouraged by the imminent departure of his trusted friend, the older priest, his voice emerged reluctantly from his throat, speaking into the drizzling rain.

‘I was tempted,’ he confessed. ‘Tempted so many times. And although I never gave in to temptation, I resented my loss. I wanted to love and be loved in return, to touch and be touched, to marry and have children and look after them as a decent father should. I could not understand why the Church should deprive me of that.’

‘And, of course, by the Church, you meant God.’

‘Yes, I meant God.’

The rain started pouring down, first attacking the forest canopy, making a muffled drumming sound high above them as it drenched the high trees. Thunder rumbled and lightning crackled, briefly illuminating the dark depths, then the rain poured down through the branches just above them and turned

into a heavy shower.
‘There’s no point in stopping,’ Father Symonds said. ‘We’d just get soaked anyway.’
Mengrire kept driving, his long hair already dripping, his brown skin showing through his soaked and almost transparent white shirt, while Father Symonds, already heading for the rain of England, opened a black umbrella and held it over himself and Father Benedict. The jeep shuddered as if stalling, its wheels churning up mud, but then it growled and lurched forward again, coughing and banging.
‘You’ll soon need a new jeep,’ Father Symonds said. ‘This one won’t last much longer.’ He smiled benignly, still holding the umbrella up over their heads, the rain drenching it and pouring noisily off it. ‘So,’ he continued, ‘you were often tempted but resisted, and yet, even knowing that you hadn’t succumbed, you still suffer guilt. Ah, Paul, dear Paul, you’re a puritan like your father, expecting, just as he expected of you, an impossible perfection. Is this logical, Paul? Alas, I fear it’s not. You’re a mortal man with mortal man’s weaknesses and must learn to deal with them. To be human is to chose – between good and evil, right and wrong – so perhaps your wavering faith, your need to doubt and question, is merely a sign that you’re more aware than most of the need to make choices. And choice, Paul, the ability to decide, is what makes men of beasts.’
The thunder rolled again, the voice of God splitting the heavens, and the lightning spasmodically slashed the forest in jagged ribbons of silver. First darkness, then brilliant light, then the black of night again, the rain drumming on the forest canopy, running in rivulets down the foliage, then pouring out of the shivering lower branches to hammer down on their heads.
Mengrire whooped in exhilaration, smacking the steering wheel with one hand, but Father Benedict, leaning forward, trying to keep himself dry, to stay under the umbrella, felt cold and deafened and unreal, his head as tight as a drum. Cursing softly, he rubbed his eyes, blinking repeatedly, squinting into the deluge to see slanting lines of silver, glistening streams and rivulets, the rain spraying off the big leaves and rushing down the writhing liana and sweeping across the winding, muddy track along which they were travelling. He shook his head from side to side, grinning painfully at Father Symonds, but the noise of the rainfall, of the rolling thunder and crackling lightning, combined with the jeep’s growling and the banging of the misused gearstick,

made him cover his ears with his hands and bow his head even lower. The lightning flashed and he closed his eyes, falling into a dark well, his friend's words reverberating in his mind like the cry of a ghost… *good and evil, right and wrong… to be human is to chose…* He felt the words as physical blows at his temples, making his thoughts spin.

The thunder rumbled again, but now seemed to be far away; the flashing lightning seared through his closed eyes, illuminating his mind…

Another time, another place, another storm in another night, the lightning flashing outside a rattling window to intermittently illuminate brown breasts as they moved, with seductive sensuality, out of shifting shadows. Dark hair and dark eyes, brown breasts and brown shoulders, the skin curving down smoothly, irresistibly, to what could neither be ignored nor forgotten. Remembering, he shivered, scorching the image with his shame, staring through the smouldering ash of the recollection back to the present…

He had come here in flight, running from Queensland to New Guinea, then on to the Amazon, trying to shake off the tentacles of that night by purging himself in the jungle. And yet nothing had helped, neither the Aborigines nor the Japanese; not even the horrors he had witnessed towards the end of the war. Those horrors had served their purpose, almost making him lose his faith, but they had failed to erase from his thoughts the shame that kept him awake at nights.

In flight? From what? From the secret he could not divulge. From the truth of why he could not accept his God and be true to his faith. The thunder rumbled far away, the rain gradually stopped falling, and then out of the growing silence emerged the dripping of the drenched, shivering jungle. Opening his eyes, he glanced sideways to see the older priest's sad smile, then he looked away and saw the glistening forest, its giant leaves soaked and bowed.

He had fled to this place, hoping to purge himself of weakness, to forget his sins in work, in the distractions of the unexplained, secretly grateful for the lights that rose and fell over the interior, also grateful for the unseen Yano drummers whose mesmeric rhythms emanated from an unknown source and were said to lead to the manifestation of strange, possibly occult and dangerous, powers…

He rubbed his eyes and looked ahead, past Mengrire's wind-whipped hair, and saw that the muddy track had become a road that was covered with

tarmac. All around were rubber trees, cleared spaces and marked posts, and the sun, breaking through to the forest floor, was turning the rain to steam. Mengrire raised his right hand, sliding his thumb into his clenched fist, then put his foot down and drove on to the heart of the plantation. The clapboard houses and thatched huts materialized in a sunlit clearing, their walls and verandas hazy behind drifting curtains of steam, while the Indian workers, moving lethargically back and forth in the deepening steam, looked like ghosts in the mists of prehistory.
Mengrire parked the jeep in an area reserved for cars, then the three men, still drenched, disembarked from the vehicle, Father Benedict already focused on the largest building, which was Frank Poulson's house.

Chapter Seven

The plantation had clearly been organized along the lines of a Jesuit *aldeia*, with the thatched huts of the workers bordering the roads that intersected at right angles and were spread out around the house of the *fazendeiro*, their master, Frank Poulson. That house was, in this case, perhaps with deliberate arrogance, situated in the middle, in a mown grassy square where, in a genuine *aldeia*, the Jesuit church would have stood. The huts were dilapidated, the paint peeling off the planks, the wood itself chipped or rotting, the holes in some of the roofs stuffed up with cardboard or a patchwork of bamboo cane, whereas the large house belonging to Frank Poulson was, with its ornate brickwork, its colonnades and flamboyant porticos (grotesque Portuguese town baroque), an immaculate pink-and-blue extravagance clearly designed to intimidate the lowly workers.

Studying it, Father Benedict felt the return of his rage, but he managed to turn his gaze away and have a good look around him. The rain had turned the earth to mud, the roads and trees were still steaming, and he saw, across the clearing beyond the car park, broad stone steps leading down to the jetty. The river was down there and the plantation had its own *porto*, served frequently by the paddle-steamers of the white traders and the smaller boats of the Indians. Manaus, the nearest city, was ninety minutes upstream, and Father Benedict's mission camp, another stop-in for the boats, was approximately halfway between Manaus and this decaying plantation.

Now, looking around him, squinting against the blazing sunlight, he observed the Indians who worked the plantation, some listlessly walking about, some playing checkers on their small verandas, other rocking rhythmically in their hammocks and sniffing *epena*, and he knew that this plantation, like the city of Manaus, had seen the last of its good days, was slipping into oblivion.

Glancing at Father Symonds, he felt oddly desolate, aware that he was losing a good friend. The older priest reached out to Mengrire and placed a hand on his shoulder. 'Well, Mengrire,' he said, smiling benevolently at the Indian, 'you managed to get me here without killing me, so now help me to make my last goodbyes by telling where I can find Peruche – and *his* friends – and *your* friends. I want to say goodbye to my flock once and for all.'

'This is sad,' Mengrire responded, but with a sly, good-humoured grin. 'This is truly a cause for much mourning that our friend should depart from us.'

'I'm sure you'll all survive Mengrire.'

'But with heavy heart. We will pray to God to keep you in good health – and keep us in your thoughts.'
Father Symonds smiled at him, shaking him lightly by the shoulder, then removed his hand and offered his smile to Father Benedict. 'What an excellent diplomat Mengrire is. You should cherish him, Paul – and also be wary of him. Perhaps we've taught him too much.'
Looking at Mengrire, studying his youthful, Mongolian face, Father Benedict thought of the girl by the river, her naked skin golden in the morning light. The very thought of her made him blush, though he was guilty of nothing, perhaps simply because he knew that Mengrire had been intimate with her. What did conversion mean when applied to these Indians? Could they, once converted to Christianity, really change their old skins? Father Benedict wasn't sure – and wasn't sure that he wanted it anyway – but now, seeing Mengrire's restless gaze, he wondered what he was thinking.
'In the afternoon,' Mengrire told them, 'Peruche stays in his hut, receiving those who wish to come to him for help or advice.'
'Like a king,' Father Benedict said.
'Like a wise man,' Peruche retorted. 'Though not a Christian and still

practising unchristian magic, Peruche clings to his modesty.'
Studying Mengrire's dark gaze, trying to catch it and usually failing, Father Benedict once more found himself wondering what the Indian really believed in. Mengrire, though professing to be a Christian, had many sheltered, dark corners, his eyes seeming to slip back into shadows that did not match his sly smile.
'All right,' Father Benedict said to the older priest. 'You go and say your goodbyes while I have words with Frank Poulson. If the walls come tumbling down around our heads, you'll know our shouting has caused it.'
Father Symonds smiled, his ring of grey hair shivering slightly, then he rubbed his nose with the palm of his hand and shook his head in bemusement. 'As you wish,' he said. 'Pick your cause and go fight it. If the heavens split open above my head, I'll indeed know the cause.' He nodded at Mengrire, who nodded back, smiling slyly, then together they walked off through the wet grass, between the nearest thatched huts. Father Benedict watched them go, the sunlight stinging his eyes, then he sighed and headed across the clearing toward Frank Poulson's house.
Tendrils of steam drifted about him, dissipating in the returning heat; the earth beneath the grass was wet and muddy, making soft squelching sounds. Feeling the tension in his stomach, the quickening rhythm of his heartbeat, he was confused between embarrassment and rage, not knowing which he felt most.
The *fazendeiro's* house was raised on stilts, making it seem larger than it actually was, and behind it, some distance away, was more virgin jungle, the trees dense and gigantic. He normally loathed the sight of it, but now he wanted to get lost in it, and realized, as he tried to formulate what to say to Frank Poulson, that the possibility that young Alex might be present was disturbing him further. He didn't want the boy to be present – indeed, the possibility was abhorrent to him – and he knew that if he found Alex with his father, he would not, out of respect for the boy's feelings (which were, he was convinced, of a very rare and sensitive kind), be able to mention the death of the Indian.
It was with some relief, then, that when he went up the steps of the house and onto the veranda, he was greeted by the plantation overseer, the amiable Antonio Bozzano who, to his enquiry if Alex was inside, shook his head in a negative gesture and said, 'No. I think he's in old Peruche's hut, as usual,

learning God knows what deviltry.'
Antonio was a *caboclo*, his mother Indian, his father a white man, and though too generously endowed with café-coloured skin, had the cheerful, almost mischievous good looks of a good many of his kind. His hair was black and usually windblown, his eyes were brown and warm, and when he smiled, as he now did at Father Benedict, he radiated benevolence.
'Why?' he asked. 'Did you come to see Alex or to talk with his father?'
'To talk with his father.'
'The *seringueiro*?'
'Yes. He's dead.'
'Ah!' Antonio exclaimed softly. 'Just as I feared.' He winced, shook his head from side to side, stared glumly at his feet for a moment, then looked up again, forcing out a sad smile. 'This really upsets me,' he said.
'You mean the beating?'
'Yes, I mean the beating. Reportedly Frank was very drunk and just couldn't be stopped.'
'Being drunk,' Father Benedict said, 'doesn't excuse such brutality – and that bastard has been brutal once too often.'
'I know, I know,' Antonio responded, 'but I can't be here all the time to watch him.'
'He's not your responsibility.'
'I think he is.'
'I think not. Frank Poulson is old enough to be responsible for his own despicable actions.'
'He drinks too much, Father, that's the problem. And when he drinks, he turns violent.'
'Why does he do it?' Father Benedict asked rhetorically. 'What drives the brute?'
Antonio sighed, then shook his head from side to side, raising both hands in a placating gesture and offering a weary smile. 'He's not a brute, Father. He's just tormented and fearful. He might soon have to close the plantation and he can't face that fact.'
'He's a brute,' Father Benedict insisted, 'beyond hope of redemption. That's all there is to it.'
'Surely you, a Christian priest, should not accuse anyone of being completely beyond redemption. Redemption, after all, is for the sinner, no matter how

bad.’
Antonio smiled even more broadly, gentle mockery in his brown eyes, as he leaned against one of the plank supports of the veranda, his belly hanging over the belt of his trousers. Father Benedict smiled back, acknowledging the Brazilian’s wisdom, then he stepped across the veranda and stood facing the front door.
‘You’re quite right,’ he said, turning back to face Antonio. ‘This priest fails in his duty. Nonetheless, I often find myself wondering how you can work for that swine.’
Antonio shrugged and raised both hands, spreading his fingers in the air, then, turning slightly away from Father Benedict, pointed across the grounds of the plantation, at the nearest thatched huts.
‘I was born there,’ he said. ‘Thirty-one years ago. I lived there as a child, then became a *seringueiro,* when the plantation was owned by Frank’s father and Frank himself was a child.’ He lowered his hands and turned back to fully face Father Benedict. ‘You have to understand, Father, that the man inside that house is not the boy I used to play with all those years ago. Frank was four years older than me, but it made little difference between us, and although I was the son of a worker and he the son of the plantation owner, we became close friends and managed to remain so for many years, until he took his turn for the worst. Those were very good years, the best we’ve ever known in the Amazon; the rubber boom was at its height, it seemed it would never end, and Frank’s father, like *all* of the rubber plantationers, had become wealthy beyond his wildest dreams. So, Frank was spoiled – spoiled rotten, in fact – and by the time he was eighteen, when I was working as a *seringueiro*, he was indulging himself in the most outrageous ways in the numerous bawdy houses of a Manaus that was very different from the decaying city you know today. He wasn’t vicious, you understand – not like he is today – he was simply a young man given too much too soon, and, at the same time, not offered the slightest moral guidance by his equally spoilt, spoiling parents. So, he developed certain indecent appetites, and, particularly in Manaus, found them easy to satisfy.’
‘And then the rubber boom ended, virtually overnight.’
‘Exactly,’ Antonio said, looking mournful for that distant day. ‘Well, you can imagine,’ he continued, swotting the buzzing flies away from his face. ‘Frank wasn’t bad, then – he was simply spoiled and overindulged – but

unfortunately, when the Great Crash came, in 1929, when Frank was only nineteen years old and Manaus and its surrounding plantations started sinking into impoverished decay, his whole world collapsed around his ears and he never recovered. His parents returned to England, but he insisted on remaining here, convinced that the good times would return. And of course, as one year passed into another, he rotted away with this place. Already spoiled, his abrupt descent from seemingly limitless wealth to abject poverty, broke his pride and made him bitter – a bitterness that made him seek to lay all the blame for his misfortunes on the Indians and so treat them cruelly. That cruelty, which at first was just verbal, became worse and more physical every year, until it got out of hand.'

'If you think it's out of hand,' Father Benedict said, 'why do you stay here?'

'I have to stay here,' Antonio replied, 'for more than one reason.'

He raised his right hand, forming a cup with his fingers, followed the flight of a large fly with squinting eyes and then, with remarkable speed and accuracy, reached out and grabbed it. Then taking a step forward, still smiling amiably, he held his clenched fist, containing the trapped fly, under Father Benedict's nose.

'I'm trapped here,' he said, 'just like this fly. Even if I wanted to do so, which I don't I could not, for more than one reason, pack my bags and depart.'

He opened his clenched fist, letting the large black fly escape, watched it buzzing away into blinding brightness and then smiled and nodded.

'And my reasons?' he said. 'Well, for a start, there's the fact that my mother was an Indian. I'm therefore half Indian and I feel a moral obligation to protect my own kind as much as I can. I say "as much as I can" because clearly I'm severely limited, but at least, while the courts are indifferent and your own Church ineffectual, I can, if not preventing *all* of Frank's crimes against the Indians, pacify him during his more violent outbursts and, by curtailing at least some of his grosser excesses, save more than one Indian from his abuses. This is, I know, a modest endeavour, but it's better than nothing.'

'Better than my own endeavours,' Father Benedict said. 'So what are your other reasons?'

'Well, as I said, I was born and raised here and, at the moment, I wouldn't know where to go if I left. Also, like you, I have great affection for young

Alex and feel, in a sense, that I'd be deserting him if I left him all alone with his father, who is not, as we both know, the most concerned of individuals in certain areas. Finally, perhaps stupidly, right or wrong, good or bad, I'm the oldest and best friend that Frank has, and I cannot, no matter what he's become, simply leave him to rot.'
'That's a rare kind of devotion, Antonio.'
'We Brazilians are like that.'
Looking at Antonio's plump, kindly face, Father Benedict knew he was speaking the truth, and, in that awareness, felt that his own nature was emotionally and spiritually superficial, devoid of real content. Nevertheless, in his anger over the *seringueiro's* death, he continued to chew on Frank Poulson.
'If Poulson's world collapsed around him with the Great Crash of 1929, then surely, since the beginning of the war, when the Japanese invasion of the Far East made Amazonia the Allies' sole source of natural rubber and put him back in the money, he should have lost all his excuses for his self-pity and disgusting behaviour. The war, after all, *has* resurrected the lost fortunes of most of the rubber plantations along the Amazon.'
'Alas,' Antonio explained, 'with the war at its end and the Far East rubber plantations back in business again, our new boom is already nearly over – and this time there'll be no resurrection. So, rather than help the Indians of this particular plantation, the brief boom has merely deepened their plight – since aware that the boom will soon be ending, Frank's working them more mercilessly in order to make as much money as he can, as soon as humanly possible. And that particular form of exploitation, combined with his alcoholic fears, has pushed him right to that edge where all things, few of them good, are likely to happen.'
'We can't let it go any farther.'
'How do we stop it?' Antonio said.
How indeed? Father Benedict wondered, *when even the Law in Manaus turns its back on his flagrant transgressions?*
Glancing around the plantation grounds, at the linear roads and rotting shacks, he saw the sunlight beating down on the thatched roofs and wooden steps, the grass high beneath the raised floors, swaying gently in the shadows, the inhabitants lazing on the small verandas, rocking to and fro in hammocks, playing checkers with bottle tops, smoking or sniffing *epena* or snoring

softly, their dark heads hanging over their chests like the fruit of the Cannon-Ball trees. Then he felt the weight of the silence, the pervasive silence of the surrounding jungle, and turned his gaze back upon Antonio, relieved to see his humane smile.
‘Is he inside right now?’
‘Yes,’ Antonio replied. ‘I’ve just left him. He’s just finished his breakfast and is starting on his first bottle of beer.’
‘A late breakfast and early beer.’
‘He considers it lunchtime.’
‘Are you hinting that I shouldn’t go in there?’
‘You could have picked a better day for it, but you do what you have to do.’
‘Is he alone?’
‘No. He’s with that bloated imposter, Rollie Thatcher, and they’re having the beers to recover.’
‘You mean they’ve been together all night?’
‘Yes, that’s what I mean.’
Father Benedict still felt his anger, but around it was depression, a grey, amorphous cloud of bad feeling that suffocated his spirit. Bad enough to face Frank Poulson regarding the death of the *seringueiro*, but much worse to have to do it in front of Rollie Thatcher, a failed plantationer who now sponged off his friends – or what few he had left. Still, the priest felt a certain relief that young Alex would not be present, knowing that he would not feel much concern for the finer feelings, if such existed, of the revolting and parasitical Rollie Thatcher.
Feeling better than before, but also slightly unreal, Father Benedict grinned at Antonio, and then, trying to lighten the situation, jabbed him gently in the belly where his abundant flesh hung over his leather belt and threatened to burst from his shirt.
‘You could do with going on a diet, my friend,’ he said.
‘The ladies like me this way.’
Antonio smiled when he said that, spots of sunlight in his brown eyes, then he nodded in a debonair manner and nimbly jumped down the steps. Father Benedict watched him departing, cutting across the nearest tarmac road. Then, raising his eyes to survey the sky above a green swathe of rubber trees, he reluctantly turned around, took a deep breath, and knocked on the solid-wood door before him with his large, sweatslicked fist.

When there was no immediate response, he impulsively turned away, but then, regaining his courage, he knocked again, this time harder and longer. He heard Frank Poulson bawling something, a curse or angry instruction, then footsteps sounded within. The door opened a little. The withered face of an Indian servant peered out and then vanished as the woman stepped back to open the door fully and let him enter. This he did, stepping into the gloom, and then the servant quietly closed the door behind him and waved him into the main room.

Chapter Eight

The room was like an empty bar, reeking of cigar smoke, yesterday's liquor and stale sweat, and was illuminated, since its shutters were still closed, with some dim oil lamps. There were carpets on the floorboards, once luxurious, now fading, and the curtains, a rich mauve to match the carpets, were covered in dust. If it seemed like an artist's nightmare, it was also an antique collector's treasure-house, containing a wealth of once expensive furniture, no piece matching any other, all of it obviously purchased in a random, not to say haphazard, fashion, with market value, rather than good taste, being the only visible criterion, this being the only criterion to the overnight millionaires who had proliferated during the rubber boom at the end of the 19th century.

At this very moment, in the morbid gloom of the sunless room, Frank Poulson, slim, handsome, clearly dissipated and dishevelled, was slouching in a 17th century late baroque Venetian armchair with his booted feet resting on a velvet upholstered, gold-fringed, brassstudded, ornamented footrest, while facing him, over an English Palladian gilded console table, carved with large motifs and topped with Derbyshire marble, Rollie Thatcher, bloated, unshaven, wearing shabby grey slacks and an unbuttoned striped pyjama top, was squeezed into a carved gildwood French *bergere*, circa 1775, the patterned cushion almost flattened beneath him, the ornate arms squeaking dangerously.

Indeed, the room looked like a museum, or some mad collector's warehouse – a Louis XV commode, a Florentine Pietra Dura cabinet, Chinese vases

from the reign of the Emperor K'ang Hsi resting grotesquely on 16th century South German chests or French Rococo cabinets replete with tortoise-shell and brass marquetry
– and even in that dim lighting, through the blue cigarsmoke fog, could be discerned the reflective glitter of glass and silver, of sculpture and bronzes.

Father Benedict was impressed (his disgust was touched with wonder) and he quickly drank in the treasures of this seedy mausoleum before returning his slightly stunned gaze to the one who was, in a very real sense, incarcerated here. Frank Poulson was staring at him, wiping his beer-stained lips with the back of one hand, looking upward and offering a grin in which no humour was manifest.

'God has arrived,' he said, 'in the shape of his servant, wearing a white shirt, floppy pants and a funny felt hat. Indeed, God looks hot and bothered at this moment. Can I offer a cooling beer?'

'I can do without the beer,' Father Benedict replied, 'and would thank you to speak no more blasphemy, at least not until I leave.'

'Since you've just arrived, Priest, it would be impolite to ask when that might be.' Poulson glanced at Rollie Thatcher, giving him a humourless smirk, then turned his bloodshot eyes up again, staring over his beer glass. 'And so,' he continued, 'since you're here in my house, and, more specifically, since you weren't invited, may I take it that this isn't purely a social call?'

'I think you know damned well that I wouldn't come to this house for pleasure.'
'And do you, Father Benedict, know what pleasure is?' So saying, Poulson, with a jaundiced, lopsided grin, indicated with a nod of his head the Indian girl who was, as Father Benedict noticed with some embarrassment, sitting on an antique settee in the shadowy corner at the far side of Rollie Thatcher, wearing only a flowery dressing gown, her feet bare, her upraised legs exposed, her long black hair hanging down in an uncombed tangle, her young, spotted face expressing exhaustion and shamed resignation.
She reminded Father Benedict of the other Indian girl by the river – she was

certainly not much older – and he stared at her, dumbstruck, feeling almost contaminated, and then followed her fearful gaze back across to Rollie Thatcher, seeing his fat, unshaven face, his pursing lips, his evasive eyes, feeling revulsion at the sight of his unbuttoned pyjama top and wobbling belly, and then practically in relief, the choice being between two evils, forced himself to return his gaze to Frank Poulson, a slimmer version of Thatcher.

How could this man be Alex's father? He just couldn't imagine it.

'Don't talk to me of pleasure,' he said, trying to keep his voice steady. 'I don't need to take my pleasure by snorting like a pig in a trough.'

'Are you calling me a pig, Priest? Is that how you convert the sinners? Do you come here to call me insulting names because I won't attend your church?'

'You know why I've come here.'

'You've come to make a nuisance of yourself with your pious concerns. Get out of here, Priest. I'm not in the mood for you this morning. Go and whisper your deluded nonsense to my son, thus encouraging his silliness further.'

'I think we should leave Alex out of this.'

'Your concern deeply touches me.'

The sarcasm was brutal and made Father Benedict flinch, but he forced himself to keep his gaze steady on Poulson's lean, dissipated and once handsome face.

A Dorian Gray face, he thought. *Eternally young in a curious manner. Only the unshaven chin, the hollow cheeks and bloodshot eyes, reveal that his soul is much older than the flesh that surrounds it.*

Poulson's eyes were deep brown, his hair black and slick with grease, and when he looked up, holding the beer glass to his thin, shivering lips, he appeared to be perceptibly shrinking, his skin taut on the bone. Father Benedict, feeling claustrophobic and unreal, took another deep breath.

'I came about the Indian you recently mistreated,' he said. 'I went to see him this morning, but could do little for him – and he died just over an hour ago.'

'Which particular Indian are we discussing, Priest?'

'You know damned well which Indian: Sirire – the one you beat recently.'

'Ah, that one,' Poulson said. 'I remember him, the lazy bastard. He'd do anything to get out of doing his work; and was always complaining that he was sick to excuse the fact that he hadn't tapped his required quota of trees.

Of *course* I beat him, Priest – the lying bastard deserved it – but that beating, if leaving a few bruises, would not have killed anyone.'
'The Indian was extremely ill because of malaria and malnutrition, suffering the former because you gave him no quinine, the latter because you worked him to the bone and without enough food. If the beating didn't kill him – and he shouldn't have been beaten anyway – it certainly broke the remnants of his resistance and hastened his death.'
'Don't worry about his loss,' Rollie Thatcher said. 'There's plenty more where he came from.'
The fat Englishman chuckled indecently at his own remark, keeping his eyes fixed on Frank Poulson and slapping his big belly affectionately. Father Benedict, glancing across at the Indian girl in the corner, knowing how completely disposable she had to be feeling, felt shame for his own kind.
'As far as I'm concerned,' he said, pointedly ignoring Rollie Thatcher and returning his gaze to Frank Poulson, 'you're solely responsible for the Indian's death.'
'You heard my friend,' Poulson replied, nodding his head in the direction of Rollie Thatcher. 'There's no need to worry about the Indian; there's plenty more where he came from.'
This time, delighted at the repetition of his own tasteless remark, Rollie Thatcher laughed out loud, his fat belly quivering and encouraging the pyjama top to open wider, revealing an unsightly mass of white flesh and sweat-dampened black hairs.
'Hear, hear!' he chortled. 'Dispensable labour is the great compensation for being in this hell hole – more so when dispensed with.'
Though filled with revulsion, Father Benedict forced his attention back to Frank Poulson who, having just drank some more beer, was now wiping his lips with the back of his hand while offering an oddly defiant sneer that exposed tobacco-stained teeth.
'You're contemptible,' Father Benedict said, trying to stare Poulson down, but unnerved by the sight of those bloodshot eyes, the watery pupils malicious. 'Do you really feel nothing at all? Or are you hiding your shame?'
'Shame, Priest? Did you say *shame*? Because some damned Indian's died?' Poulson snorted with mirthless glee, throwing his hair back from his forehead, letting the lamplight fall on his dark eyes and his oddly small, brown-stained teeth. 'No, Priest, I don't feel any shame. The more of these

damned Indians we get rid of, the better off we'll all be.'
Father Benedict stared at him, fascinated by his moving lips, recalling when he had last seen teeth like those: in the mouth of a Japanese soldier, his lips frozen in death's grin where he lay, in flattened foliage and mud, in a blood-soaked glade somewhere along the Kokoda Trail during the war in New Guinea.
Poulson glanced past Rollie Thatcher, at the unfortunate girl in the far corner, and smirked when he saw her bowed head, his eyes devouring her wellshaped body.
'Bloody Indians!' he continued, returning his gaze to Father Benedict. 'Lazy, mindless bastards, the lot of them, as worthless as pig shit. No wonder we're in such a bad state: you can't work with these animals.'
'They're not animals, Frank – they're human beings
– and apart from the fact that they truly own the rubber trees, they can't be blamed for the collapse of what you imagine were the good old days.'
'*They* own the rubber trees? What on earth are you talking about? They didn't know what a rubber tree *was* until we came here and showed them.'
'The Indians – '
'A bunch of bloody barbarians! As primitive as cave men! We British came here and we organized the dumb bastards, and instead of painting our faces and practising witchcraft and slaughtering each other, as they did, we made use of what the jungle had to offer and earned every last penny. We didn't steal a thing from these primitive bastards! What's latex to them?'
'I hardly think that justifies – '
'What you think, Priest, concerns me not in the slightest. I've been here all my life, I know the Indians inside out, and I don't need some priest with pious notions to tell me what I can and can't do. What do you *want* in this place, Priest? Why do you people insist on coming here? If, as you suggest, I'm exploiting these poor Indians, is it not equally true that the Church, in its own way, is also stealing from them, taking away their history and culture and replacing it, for its own selfish reasons, with its suppressive religion?'
'Christianity isn't suppressive. Nor, if I may say so, is the preaching of Christianity to be compared to the physical exploitation that you so blatantly practice.'
'A bloody good whipping,' Rollie Thatcher said, burping, 'is something these ignorant blighters understand much more than the Bible.'

‘Isn’t it just?’ Poulson said, now also ignoring his fellow plantationer. ‘Does the Church really believe that the stealing of their souls is less disgusting than my very human abuses? Surely, Father, my exploitation is of a relatively minor nature when set beside the Church’s systematic obliteration of the Indians’ whole way of life.’

‘Semantics,’ Father Benedict said.

‘The truth,’ Poulson retorted. ‘You supposed men of God also have your greed – you want to strengthen your grand Church – and so, no matter how you otherwise describe it, you grow stronger by devouring foreign cultures and leaving only the bare bones. Don’t worry about my modest crimes, preacher. Go and wash your own hands!’

The words had a crude, brutal force that was not without truth. Father Benedict felt trapped, strangely impotent and frustrated, and this, combined with anger and shame, led him into confusion.

He glanced desperately around the room, again aware of its seedy elegance, noting the shadows from the oil lamps flickering erratically on drapes and paintings, the pale yellow light on antiques purchased during the rubber boom. Then he saw that other acquisition, the claimed and silent Indian girl, observing her dishevelled clothes and long, uncombed black hair, her almost naked brown limbs, the humiliation and defeat in her lowered face with its deprived and already fading pock-marked beauty. Just to be here made him shiver, thinking too much of immorality and decay, and he glanced at Rollie Thatcher, a bloated buffoon in merciful shadow, and then reluctantly forced his gaze back to Frank Poulson, who was staring defiantly at him. Poulson was licking his lips, somehow gloating as he did so, and his eyes, peering out of his sallow, unshaven face, made him seem, in their unfocused and bloodshot weariness, twice as old as he was.

‘No answer?’ he sneered. ‘Of *course* you’ve no answer! You’re just a priest, a man deprived of normal pleasures and satisfactions, and so, in your frustration, desperately trying to prove your dubious moral superiority, you whine about your concern for the damned Indians and my unchristian behaviour. Well, don’t talk to me about the Indians. You save their souls while I use their bodies, and between us we should make an unwholesome form of progress as they gradually disappear. Go and talk to my son, Father. You seem to have a rapport with him. And after all, the boy behaves just like an Indian, so you should be *sympatico.*’

‘I’m not frustrated and don’t need to prove my moral superiority which, in any case, I don’t believe in. As for Alex behaving like an Indian, this is perfectly understandable since, not having a father he can depend on, he’s had to turn to the Indians for emotional support.’
‘And what do your precious Indians teach him? Witchcraft! Magic! Their idiotic hocus-pocus! None of which helps him to be a Christian, nor makes him better than me.’
‘You talk about him as if he’s not even your son.’
‘The seed of my loins, Priest. I can state that without blushing. Flesh of my flesh that boy is, if too much like his mother.’
‘Not a bad thing,’ Father Benedict said.
‘He’s effeminate,’ Poulson said. ‘He’s as sensitive as a woman, shows no signs of actually desiring one, and believes in, and dabbles with, magic – just like a woman would. And, indeed, just as the Indians do, the primitive, superstitious bastards.’
‘It’s that particular old bastard, Peruche,’ Rollie Thatcher said, scratching his belly and belching. ‘You ought to throw him off the plantation, before he does too much damage.’
Father Benedict sighed, understanding that he was getting nowhere, but compelled, like a dog with a bone, to gnaw at it some more. ‘I didn’t come here to discuss Alex,’ he said. ‘You’re just trying to change the subject. I came to tell you that I’ve had enough of your brutality and that this time I’m going to report you to the proper authorities.’
‘Because of the death of the Indian?’
‘Yes.’
‘Don’t waste your time,’ Thatcher said. ‘They’ll just give Frank a medal.’
He grinned at Poulson and then stood up, rising heavily and slowly, his great bulk pouring sweat through his pyjama top and rumpled grey slacks. Standing there, in the flickering shadows, he seemed enormous yet insubstantial, as if the inner light that gives a man his character had been completely extinguished. If large, he was also grotesque, the folds of his belly white and damp, his jowls matching the bags under his eyes, which, buried deeply below bushy eyebrows, were almost invisible. He belched and then farted, briefly bending his massive legs, then turned around, holding his empty glass, and walked like a wounded rhinoceros to the girl in the corner. The girl looked up, dismayed, when he stopped just in front of her, his

pyjama top hanging open and his enormous belly, with its overlapping folds of white flesh and hints of pubic hair, hanging down just above her upturned face.

Father Benedict was shocked, his own imagination shaming him, helplessly visualizing the night that this poor girl had just been through, either with Thatcher or with Frank Poulson, possibly both, and half expecting, with dizzying dread, the shadows flickering across his line of sight, that a repeat of that performance was about to be enacted right there in front of him.

In the event, he was proven wrong – though an eternity passed before he knew it – and he glanced wildly at Poulson, still slouched low in his Venetian armchair, his booted feet still on the footrest, slim and dishevelled, too young to be so dissipated, and saw the beer glass moving away from his thin, grinning lips, his sleepless, bloodshot eyes rising lazily to clearly mock him.

Only then, looking away, staring across the flickering dimness, did he see the enormous Rollie Thatcher crooking the index finger of his right hand, hooking it under the girl's chin to pull her face up, then grinning down at her, contemptuously and insultingly, before turning away to pour himself another beer and return to his chair.

Shaking a little, his heart racing, cheeks blushing, Father Benedict turned away from the massive bulk of the slowly subsiding, broadly grinning Thatcher and became aware that Frank Poulson was staring at him with unusual intensity.

He thought of the girl by the river, of another girl, long ago, and then his heart, impelled by memories of brown skin curving down to nothing, raced faster and made his breath catch in his tightening throat.

Perhaps Frank Poulson noticed it, or at least sensed it somehow, for he now leaned forward, his grin widening triumphantly, and then looked across at the Indian girl, whose bare thighs were striped by light and shadow. Still grinning, he turned his eyes to Father Benedict, to the girl and back again, and then abruptly jumped up, his agility surprising, and hurried across to the girl, placed his glass on the low table beside her, and almost viciously, with a sharp flick of his wrist, before Father Benedict could protest, ripped the loosely-wrapped dressing gown from her body, leaving her naked.

'Is this it?' he sneered. 'Is *this* the secret cause of your guilt? That you should want her as we do?'

The girl had shrieked instantly, trying to hold onto the dressing gown, and

was still shrieking when Poulson laughed, Rollie Thatcher his bellowing chorus, and Father Benedict, his heart pounding, shame and revulsion whipping through him, choking back his nausea and dread, fled from that dimly lit, awful room – not only thwarted, but defeated, his resolution destroyed.

Chapter Nine

Still badly shaken, but trying to compose himself, Father Benedict hurried across the mowed lawn that surrounded Frank Poulson's house, passing out of the blinding sunlight and into the cooler shadowed areas where the humble shacks of the *seringueiros* were nestled beneath the sheltering trees leading down to the river.

Already the earth had dried and felt warm through his thin shoes, while the sweat had started dribbling down his face and forming under his armpits. He swotted the buzzing flies away, avoided a cloud of mosquitoes, cut across a road and went between some more houses, noting the crudely patched thatched roofs, the cramped, dark rooms inside, the adults and children on the verandas, none of them wildly active, their silence based on despair, the children's bellies bloated with hunger, the women old before their time, the men playing checkers with Coca Cola or Fanta tops, or trying to forget their troubles by rocking in their hammocks and sniffing *epena*. None of this improved his mood, nor helped him lose the sour taste of defeat, and for once he appreciated, when he moved out of the forest gloom, the explosion of bright light and space above the wide, muddy Amazon.

He walked along the river bank, keeping well away from the edge, his burning face cooled by the breeze that came off the murmuring water and gently shook the foliage on his right where the forest began. From here the river seemed vast, more an ocean than a mere river, and on the far bank, about five miles away, the forest was a solid green line dividing black water from blue sky, curving from east to west with incomparable grace.

At once beautiful and repellent, slightly intimidating in its grandeur, it had often forced him deeper into himself, trying to trace his own boundaries.

Now he knew that same sensation, the need to hide within himself, as he gratefully reached the crudely hacked trail that led him back to the trees.

The gloom cooled his burning cheeks, settled the fires of his shame, but he still felt, as he walked through the forest's embracing silence, the full weight of the guilt and buried sorrow that Frank Poulson, with his ignorant venom, had dragged up from the depths. He passed a jacaranda tree, all alone in its sea of forest, heard the musical cry of a *seringueiro* bird, saw Venetian-lace leaves, tangled liana, buttressed trees, and then emerged to a várzea lake, bright light pouring down through the clearing.

Father Symonds, Antonio Bozzano, Mengrire and young Alex were all kneeling in front of a small thatched hut, clearly in conversation with Peruche, the much revered, ancient, Yanoama Indian.

'The drums tell us that something of great importance is on its way.' The voice of Peruche was a dying croak, borne in the listless breeze. 'And its coming is soon…'

Father Benedict heard no more because Antonio Bozzano, hearing the snapping twigs, turned around, saw him approaching and immediately, doubtless trying to protect young Alex, stood up and walked away from the kneeling group to stand by the lake. Father Benedict followed him, pleased and touched by his sensitivity, noticing the slight smile on Antonio's face, a gentle mockery that soothed the troubled soul.
'How did it go?' Antonio asked.
'They had a girl there,' Father Benedict replied.

'You didn't warn me about that.'

Antonio sighed and shrugged. 'It just slipped my mind. He has so many girls in that house, they've begun to look like the furniture.'

'That girl was no prostitute.'
'No, she wasn't. She's just the daughter of a *seringueiro* who couldn't pay his debts, and when that happens, as so often it does, Frank takes the daughter instead.'

‘He takes the daughter as *payment*?’
‘Yes.’
‘That’s obscene!’
‘I agree.’
Father Benedict lowered his eyes, too shocked to respond immediately. He glanced down at the limpid lake, seeing the hyacinths and tropical lilies, then slowly, with great reluctance, raised his eyes again.
‘Has he been doing this for long?’
‘No,’ Antonio replied. ‘It’s a recent, very disturbing, innovation, but the Indians can’t argue.’
‘He uses those girls and then throws them out?’
‘Yes, I’m afraid so.’
‘So his nightly debauches aren’t even conducted with prostitutes, but with innocent girls whose only sin is that their fathers are in debt to Frank Poulson for food they can’t afford.’
‘Precisely. They used to live off the rainforest, but now they depend on Frank; and since he always pays them less than what they need, he ensures that they’ll always be in debt to him. Once, he used to only keep them under his wing, but now, doubtless encouraged by Rollie Thatcher, he’s taken it further. Yes, he takes their daughters in lieu of payment, ostensibly as servants in the house, but truly as mistresses.’
‘And when he’s finished with them?’
‘He throws them out, sends them back to their parents, and then lets the whole family starve.’
Father Benedict closed his eyes, took a deep breath and held it in, then let his breath out very slowly and opened his eyes again, now staring across the clearing to the thatched hut and looking down at those kneeling there. Alex was directly in front of old Peruche, close beside the squatting Mengrire, and again Father Benedict could not believe that the boy, so sweet natured, almost spiritual, had sprung from the seed of the dissipated Frank Poulson.
‘When I told him I was going to report him to the authorities,’ he said to Antonio, ‘that bastard Thatcher said that if I did they’d probably give him a medal. Given that the revolting creature was being sarcastic, do you think there’s some truth in it?’
‘Oh, yes. Thatcher knows what he’s talking about. The authorities – those that count – are in the pockets of the white men and have never shown much

concern for the Indians. Frank knows damned well that even if they got him to court in Manaus, he'd only have to swear that the *seringueiro's* death was an accident and they'd let him walk out of there without a murmur. What's another impoverished Indian to the authorities? They just won't want to know.'

'I can't bear the thought of it,' Father Benedict said, feeling the anger and frustration boiling up inside him. 'Not only does it enrage me that he can do what he wants and get away with it; it also appals me to think that Alex, at his impressionable age, should have to stay in the same house with that man and hear his nightly debaucheries. The situation is sick on both counts and I feel utterly helpless.'

'I'm caught between two stools here,' Antonio said. 'On the one hand, I'm half Indian and can't stand to see my fellow Indians abused; on the other, I'm Frank's oldest friend and feel the need to protect him, even if from himself. I'll admit that I feel guilty because I won't pack up and leave here; and also because I'm worried that Frank's abuses could, if not checked, give rise to something much more serious.'

'What, pray, could be more serious than the abuses he heaps on the Indians?'

'Indian vengeance.' Antonio shrugged again, a forlorn, uneasy gesture, while some herons, perched in a tree across the lake, scattered into the cloudy sky. 'Sooner or later,' he continued, 'and we can't discount the possibility, some Indian, or Indians, might revolt – and then we'd *really* have trouble.'

'What kind of trouble?'

'A reversal to past customs: physical violence or witchcraft, either of which could start by being aimed only at Frank, but could then go out of control and affect us all.'

'I hardly think that witchcraft – '

'Don't discount it. Now let's join the others.'

The abruptness with which Antonio terminated the conversation left Father Benedict in no doubt that he had a reason for rejoining the group around old Peruche's hut. Confused, he followed Antonio across the clearing, taking note of the striations of weak sunlight that fell down over the hut, while the forest surrounding the lake in the clearing was laced with swathes of pure darkness.

Mengrire glanced up and nodded, his face solemn, his eyes hooded. Father Symonds, his bald head poking through his ring of grey hair, waved and

smiled brightly, his cherubic face flushed. Father Benedict sat between them, the grass warm beneath his backside. He crossed his legs and then nodded at Peruche who nodded lazily back.

The old Indian was almost naked, his loins covered in a modest *tanga* made from monkey skin and *arara* feathers, his wrinkled forehead encased in a headpiece of white-boned armadillo discs. His legs were crossed, his elbows resting on his knees, and his body, the skin wrinkled like that of a prune, was bent slightly forward, his face a parchment of age and experience, the lines forming a map of a life lived for a very long time. He was smiling, his mouth toothless, and talking in a low voice, his rheumy eyes focused mostly on young Alex, Frank Poulson's son.

'What comes is not written in the skies, but is the voice of the wind. The drums announce its arrival.'

'What arrival?' Alex asked, brushing the blond hair from his forehead, his youth's voice as gentle as a dew drop sliding down a veined leaf. 'What form will it take?'

Peruche closed his eyes, pursed his lips and raised his face to the sky, his ears tuned to the light breeze. 'It comes in darkness,' he croaked, 'bringing violence and death, opening the gates that lead into the unknown and the source of all things.' He lowered his head again, opened his eyes to stare at Alex, his lips closed over his toothless gums before he spoke again. 'You were called and have come. Past and future are as one within you. The drums tell me that that which comes to pass will come soon, and that you are the instrument of those forces which elude us and bind us. It is you, my son, in your innocence and grief, who will stand where the Earth spins.'

'This is nonsense,' Father Benedict said, his voice sounding strange to him. 'You mustn't preach such nonsense to the boy; it's neither sensible nor Christian.'

He had spoken to Peruche but now Alex turned towards him, drawing him to the depths of his azure eyes as if into an empty sky. Father Benedict was startled, certainly not for the first time, as Alex's strange, indefinable beauty briefly fractured reality.

Yes, Alex was beautiful – it was the only word to use – his beauty residing in his remarkable serenity and almost impossible innocence. He was handsome and unblemished, lean and pale, his gaze brilliant, yet these attributes, particularly in one only seventeen, were not that uncommon. No, the beauty

came from within, from his purity and faith, giving his blue eyes, beneath the blond hair, a serene child's inner luminosity. There was something extraordinary about him, a singular gentleness or passivity, as if, without a mother and neglected by his father, he had turned to the Indians, particularly old Peruche, and found a remarkable sense of security well beyond what was normal.

Alex lived in a private world, a mysterious and mystical place in which, under the guidance of Peruche, he had developed uncommon powers. He could travel the forest blindfolded, draw dangerous animals to him, and sometimes, if so far only slightly, have an affect on the elements: making still water ripple, causing flowers to open or close, conjuring light out of the darkness and a breeze from a windless day. Such gifts were indeed uncommon, and to Father Benedict, frightening, yet from Alex he received only the glow of inviolate goodness. And this, in direct contrast to the degeneracy of his father – indeed, possibly even magnifying that degeneracy tenfold – was what made Father Benedict, with some confusion but no embarrassment, think of Alex as a beautiful work of art: something rare and invaluable.

'Nothing can be nonsense,' Alex said, 'when all things are possible.'

It was a striking comment to be offered by a boy his age, and now, looking at him, drawn into his open gaze, Father Benedict felt as if the ground on which he sat was slipping away from him.

'All things are not possible,' he said, 'which is something you'll soon learn.'

Alex didn't take offence but merely smiled in his dreamy fashion, his blue eyes unwavering and benevolent, filled with childish acceptance. Though only seventeen years old, he was simultaneously naive and oddly mature.

'If God is possible,' he said, 'then all things are possible; and since you, Father, have taught me to believe in God, I must believe in His miracles.'

Father Benedict, in a paternal manner, had a great deal of affection for Alex, but there were times, and this happened to be one of them, when the boy's peculiar mixture of innocence and ruthless intelligence, made him feel that he was somehow being threatened and morally confused. Now, as he stared at that delicately handsome face, at the almost golden blond hair and the gently smiling poet's lips, into the ravishing blue eyes beneath the long eyelashes, he felt again that the ground was shifting beneath him and tilting him out of his orbit.

‘You’re a good lad,’ he said, ‘but right now you’re playing with words, and since the subject is of such importance, I don’t think you should do it.’
‘I’m sorry, Father,’ Alex said. ‘I didn’t mean to make you angry. It’s just that I sense things – things I can’t quite grasp – and what Peruche has told us strikes a chord deep inside me.’
‘When the Yano beat their drums,’ Peruche intervened, ‘this child sees and feels what most of you have lost and which makes him, possessing it, one of us. He is special. A chosen one.’
‘Chosen for *what*?’ Father Benedict asked.
‘To serve that which is coming.’
Father Benedict glanced at Mengrire and saw the movement of his sly eyes, then he turned his own gaze on Father Symonds who sat at his left side. ‘You know this kind of talk is helpful to no one. Why tolerate it?’
‘*Tolerate* it?’ Father Symonds replied, smiling benignly and shrugging his shoulders. ‘How can I *not* tolerate it when I’ve no right to stop it? Peruche has his beliefs which, even if we don’t agree with them, must be respected. And he’s simply been telling us, since we asked about the Yano drums, why he thinks they’ve been beating all night long for the past three nights.’
‘That much I overheard,’ Father Benedict retorted. ‘He believes something important is on the way and I believe that’s nonsense.’
‘Never before have the Yano drums been heard three nights in a row,’ Mengrire said, ‘so we know that something unusual must be happening and that it relates to the rise and fall of the magical lights.’
‘The lights aren’t magical,’ Father Benedict protested, ‘and we don’t even know that the Yano actually exist. They’re probably no more than one of the many unknown tribes that still roam wild in the jungle and sensibly avoid contact with white men.’
‘Then how do you explain the lights that rise and fall when the drums beat? Can we call those lights natural?’
The question had been asked by Antonio Bozzano who, smiling mischievously, without malice, was nevertheless staring at Father Benedict as if he meant what he said. Father Benedict, feeling defeated, the fear tugging once more at his stomach, glanced briefly at his fellow priest, saw him shrugging and lowering his eyes, then looked into the rheumy eyes of old Peruche and felt the weight of his gravity.
‘You know what is believed,’ Peruche said, ‘and you cannot disprove it. If, as

you insist, the Yano are normal human beings, you still cannot explain the lights that rise and fall every time the drums beat.'

This was true and Father Benedict felt chilled by it, well aware of how the strange lights had burned relentlessly into his consciousness. Beautiful, inexplicable, always accompanied by the beating drums, the lights would rise and fall in his dreams and then draw him from sleep.

Indeed, though he went to great pains to deny their magical nature, it was true that if he was, during the day, perfectly at ease with the Yanoama Indians who worked in the rubber plantations, he was secretly haunted and frightened by the thought of the more mysterious Yano Indians who had, according to folklore, but for reasons never explained, fled from their original home in the unexplored regions of Gatrimani, far north of the Amazon, to the closer but similarly unexplored regions of the rainforest.

According to Peruche, who claimed to have once been a prisoner of the Yano, those runaway Indians were now barbaric and obsessed, perhaps even insane, practising their own bizarre religion in which God was reviled and the 'Dark One', the devil, was worshipped in esoteric pagan rituals. As Peruche had also explained, it was the belief of the Yano that the 'Dark One' and His forces (for so they had deified him) had arrived on Earth many millennia ago to create the Gateway to the Oneness – eternal life – somewhere in the reportedly inaccessible interior of the rainforest; and that His forces had, since then, returned frequently to Earth, passing in and out of the Gateway, to and from the Oneness, or the 'Otherworld' of eternal life; and, finally, that during certain nights, when the Yano drums were beating, the dark forces could be observed as those lights in the sky, ascending and descending in silent splendour over the uncharted jungle.

Father Benedict shuddered to think of it, his doubting soul still bound by faith, realizing that the very concept was blasphemous by his own Christian standards. Once more he found himself staring at Alex, at the face of untouched innocence, wondering just how much the boy had learned from Peruche and what he now believed.

'You described Alex as a chosen one,' Father Symonds said. 'What did you mean by that?'

Peruche studied Father Symonds for some time and then opened his toothless mouth to speak words both sibilant and strange. 'I have taught him the basic mysteries of the most ancient truths, which were brought down to my hidden

brothers of long ago, when we knew not ourselves.' He stopped speaking and sniffed, as if trying to inhale the breeze, put his head back, took a deep breath, and then stared at each of them in turn, his gaze steady but somehow distracted, as if not really seeing them.
'By the hidden brothers of long ago,' Father Symonds asked, 'do you mean the Dark One and His dark forces who arrived on Earth long ago and have returned frequently since then, manifesting themselves as those lights in the sky?'
'The lights represent the Good. They constantly war with the forces of darkness. The Yano, though mortal, are the slaves of the dark forces and exist on the perimeter of the Gateway that leads to the infinite. The lights we see rising and falling are actually passing in and out of the Gateway, which separates this mortal world from the place where time and space have no meaning.'
'Why were the Yano chosen to serve the Dark One and His forces?'
'Long ago the Yanoama were innocent, living in a state of grace, naked and unafraid of the darkness, protected by faith. But then some of them were tempted and succumbed to that temptation, committing crimes against their Creator and their fellow men, their sins both sensual and violent. For this reason, they were cast out, along with their women and children, and eventually, after travelling for many suns and moons, settled in that part of the rainforest known to shelter the strange gods, a place considered by the Yanoama to be World's End, where the past meets the future. There, it was told, the dark forces claimed our brothers who, once enslaved, became the practitioners of foul rites that invoke the fearful powers beyond the Gateway, which we view as the Infinite.'
'And who reigns over the Gateway?' Father Symonds asked, his voice like that of a dying man, his normally sweet face intense.
'There is light and darkness,' Peruche replied. 'Good and evil coexisting. Somewhere, in that place where time and space have no meaning, the forces of good and evil, of day and night, war eternally, fighting for the souls of all men through rare individuals. Those individuals are the chosen few, drawn from chaos to ordain order, their innocence representing the strength and weakness which divide every soul. Just as men become Man, as all souls are the One, so, then, do the few who are chosen represent those not called.'
He stopped talking, licked his dry lips, took a deep breath, then nodded in a

dignified, judicious manner.
‘Yes,’ he continued, ‘I’ve taught Alex because I recognized him at birth, and now, though whiteskinned, he has the soul of the rainforest which alone, unlike the souls of mortal men, is the mothering womb of the Otherworld.’
‘This is absolute nonsense,’ Father Benedict said. ‘It’s also, in Christian terms, blasphemous. Alex isn’t the soul of the rainforest or any other.’
‘Alex more than simply *knows* the forest,’ Peruche continued, as if Father Benedict hadn’t actually spoken. ‘He’s part of it – and it of him. So the animals come to him, the serpents take warmth from him, and all that lives in the river, or thrives in bark or soil, accepts him because he is pure and as open as air. It is he, this mere child, more child than most children, who will stand between day and night, light and darkness, to represent all men.’
Father Benedict was speechless, struck dumb by Peruche’s words, some part of him, rising out of his shaken faith, exhaling fear and revulsion. He felt hot and claustrophobic, far removed from himself, and his skin seemed electric with raw nerves. Flies and mosquitoes swarmed about him, small spiders crossed his feet, and the ants, always highly active, etched black lines on the flattened grass. He glanced at Alex’s radiant face, at Peruche’s brown, wrinkled skin, was only vaguely aware of Antonio and Mengrire when eventually he looked at his fellow priest.
What he saw terrified him, making his world shift on its axis, because his dear friend, Father Symonds, normally optimistic and cheerful, seemed to be changing where he sat, looking older, more frail, the intensity of his gaze, focused on Peruche, now almost tormented.
Feeling badly shaken by what he was seeing, Father Benedict, with a shudder, something breaking within him, was convinced that Father Symonds would not live to see tomorrow’s dawn, let alone England’s green shores.
‘Enough!’ Father Benedict said. ‘I’ll hear no more of this! What you’re saying, Peruche, is definitely blasphemous and may even be dangerous.’
They all stared at him, startled, sensing the fear in his voice, then Father Symonds, shaking his head from side to side, as if trying to waken himself from a trance, reached out and gently squeezed Father Benedict’s shoulder.
‘Fear not, Paul,’ he said. ‘Listening isn’t necessarily believing – and it helps us to understand.’
So saying, he turned away to face Peruche once more, staring at him with the intensity of a blind man praying for sight. Father Benedict shivered, again

touched by some dark presentiment, and, feeling fearful, avoided looking at his fellow priest and instead focused his attention on Peruche, speaking to him with anger.

‘Alex’s a normal child. He’s not one of your chosen ones. You mustn’t fill his head with this dangerous nonsense – and nonsense it is! He does *not* belong to the rainforest, nor to the mothering womb of your Otherworld, and the mysteries you’ve taught him are shallow tricks of no particular importance.’

In desperation he turned to Alex and saw a slight smile either tender or mocking, but strangely seductive. His thoughts scattered and spun, the Earth shook, but he managed to speak again.

‘You’re perfectly normal,’ he told Alex. ‘Do you understand, my son? You’re as normal as the rest of us here and I’d like you to stay that way. Don’t imagine that you have special powers; they’re merely tricks of the mind.’

‘You are arrogant,’ Peruche said to Father Benedict, ‘and your arrogance has blinded you. Like most white men, you’ve lost the primal instincts and feelings that help us commune with the Earth and the sea and the sky. Yes, your eyes see little, your ears hear even less, and your skin, which should respond to a mote of dust, feels only the extremes of heat and cold, the bite of pain, lust’s sweet sweat. Yet such things are superficial, drops of rain on the mighty river, and by denying your primal senses, refusing to accept your real nature, you’re cutting yourself off from your true spirit and its boundless potential. Alex, this white boy in the Indian’s world, has gained all you have lost. He is *not* like the rest of you: having faith, he was chosen. Now behold how, with a simple wave of his hand, he separates himself from you.’

Father Benedict heard the words, but he was no longer looking at Peruche; instead, feeling almost paralysed, his gaze was focused on Alex. The boy was staring straight back, his eyes wide and brilliant, glittering with an intense inner light that could not have been natural. Those eyes hypnotized Father Benedict, drawing him out of himself, away from his love for Alex, a paternal love that had been frustrated, and sucking him into some place where fear breathed like a dragon.

The fear breathed all around him, a living thing, palpable, emanating from the black swathes of the jungle and taking the shape of a snake. It was a boa constrictor, thick, very long, its enormous body sliding out of the

undergrowth and over Alex's crossed legs. Alex sat there, not moving, apparently unconcerned, while the snake, its scaled skin glistening in the sunlight, coiled around his slim body.

Father Benedict wanted to help him, tried to do so but couldn't move, felt a shiver of revulsion slipping through him and dragging him down into a nightmare. He loved Alex like his own son, wanting to protect him from his other father, believing him too innocent for his own good, naive, too trusting. Yet at times, in recent months, the boy had confounded him, staring out of some secret inner place that was beyond comprehension. Father Benedict was frightened, unable to grasp what was happening, not knowing if the enormous snake, coiling around Alex's body, was real or the product of an imagination somehow unleashed by Peruche… or by Alex himself.

The snake tightened around Alex, its body as thick as a rubber tyre, and Father Benedict opened his mouth to protest, but could utter no sound. He choked back a sob, closed his eyes, took a deep breath, felt something smooth and sinuous slide across him and then move on.

Opening his eyes, he saw the snake slithering lazily through the grass, moving around Father Symonds, then Mengrire and Antonio, finally coiling over the knees of a chanting Peruche and then heading straight for the lake. The lake rippled and parted, letting the snake nose down into it, and then the ripples spread out and started swirling until the water formed a whirlpool into which the giant snake, its tail waving in a languid, seductive manner, was eventually sucked under.

It disappeared completely, seemingly sucked down into the vortex of the whirlpool, and then out of that swirling black hole, with a shocking, staccato crackling, shot a dazzling bolt of lightning that clawed its way up to the darkening sky like the fingers of a giant, grasping skeleton. Thunder roared in reply, a great beast devouring the lightning, then black clouds, as heavy and dense as smoke, materialized high above.

Father Benedict looked up, wondering where the clouds had come from, waiting for the rain, surprised when it didn't come, and then watched, astonished, as the clouds broke apart and revealed, inside a great ring of darkness, a mass of glittering stars. Around the clouds was the daylight, within the clouds was the night sky, and Father Benedict, in a fear that was now suffocating him, looked across at the roaring vortex of the whirlpool in the lake and saw, in that swirling black funnel, another mass of bright stars.

Had Alex merely waved his hand? Had he waved his hand at all? Father Benedict, with such questions splintering his head like ice picks, tore his stunned eyes away from the roaring lake and stared at those sitting close to him. They were all in the same position, as if time itself had stopped, but all of them, with the exception of Alex, seemed hazy and unreal. Alex was different, his boyish profile clear, the whole of him bathed in a halo of brilliant light that appeared to pulsate to the relentless rhythm of faraway drums.

'Now observe,' Peruche said, his voice bizarrely amplified, reverberating in Father Benedict's head and defeating the noise all around him. 'This boy has the power – he touches the spirit of the forest – but he only has such power when the Yano beat their drums, because their drumming is a sign that the forces of good and evil are present, and his power, which derives from his faith, is a gift from the Good. When the drumming stops – when the opposing forces disengage – his power seriously diminishes.'

Father Benedict hadn't heard the drums before, but now he heard them distinctly, a bass rumbling that came from far away in the jungle's interior. He looked above Alex's head, the blond hair like shimmering gold, and saw the black clouds surrounding a mass of stars in a dazzling blue sky. There were no rising and falling lights – they could not be seen in the daytime – but the drumming, like some rumbling from the bowels of the Earth, could not be ignored.

He closed his eyes and covered his ears, trying to will himself into oblivion, then saw the bleak town in Australia, his Aboriginal mission station, a brown shoulder, feminine and sensual, the flesh curving down to… nothing.

He cried out his protestation (the exact words he would never know) and then opened his eyes to see Alex's hand raised on high, his fist clenched and surrounded by that magical mass of stars. Father Benedict tore his eyes away, still refusing to believe it, and saw, in the roaring whirlpool of the lake, another mass of brilliant, blinking stars, the funnel of water a depthless void. Good and evil coexisting: he felt the force of that truth. The fear rushed up and locked in his throat as he leaned forward to gag. He beheld that upraised fist, stars arched across the knuckles, then the fist became a web of outstretched fingers and the stars abruptly blinked out.

No stars. Just that black hole. Then the sunlight took command. The light blinded Father Benedict, the roaring ceased, the wind stopping blowing, and

he gasped and rubbed his eyes and looked around him, seeing nothing unusual.
The várzea lake was perfectly still, the sky was blue, the jungle silent, and no light shimmered around Alex's head to turn his blond hair to gold.
Father Symonds was rising slowly, looking unusually weak and frail, nodding his thanks to Antonio Bozzano who was helpfully holding his elbow. Antonio was smiling slightly, good-humoured as always, thoughtfully assisting the older man, while Mengrire, his gaze shifting restlessly about him, seemed, like Father Symonds, to be visibly weakening.
Father Benedict licked his lips, rubbed his forehead, coughed to clear his throat, tried to slow the frightened racing of his heart as he looked across at Peruche. The old Indian was still seated, his legs crossed, his head bowed, but then his frail body shivered, he raised his head and blinked repeatedly, as if emerging from a trance, and Father Benedict, compelled to stare at those rheumy eyes, did not look for long.
Instead, he turned to Alex, the boy he treated as a son, and saw that adolescent face, its innocence beautiful, the blue eyes fixed upon him.
'She arrives today,' Alex said. 'The photographer from America. Since you're going to Manaus, can I go with you? I can't wait to meet her.'
Though hearing the words, Father Benedict didn't really comprehend them, but the sound of Alex's voice, that shy whisper, seemed to toll like a distant bell.
'What happened?' he asked.

Chapter Ten

'Pardon?' Alex said.
'What happened? I thought…'
'You fell asleep,' Father Symonds said, his voice

strained and unnatural. 'It's my fault, of course, for staying too long and talking too much. However, the boat clearly won't wait forever, so we'd better leave now.'

Father Symonds seemed strange, subtly altered, somehow older, his face not as cherubic as before, his smile tentative and nervous. Father Benedict tried

not to stare, aware that he might be imagining things, still fighting, as he was, to regain his senses and let his racing heart slow down.

‘I fell *asleep*?’ he asked.
‘I think so,’ Father Symonds replied, stumbling over the words as he rushed them out, skipping over the lie. ‘Only briefly, of course.’
‘So?’ Alex asked. ‘Can I come with you? I want to meet the American lady.’
Father Benedict stared at him, the words taking some time to register, at first wondering what the boy was talking about and only slowly remembering: the New York photographer, a lady originally from Hollywood, arriving on the boat that would take Father Symonds away and due to stay in the mission camp for a month, writing about, and photographing, their daily routine. Distaste filtered through him, but his sense of unreality remained, not helped when he looked into Alex’s eyes and saw the blue sky reflected. No black clouds, no stars, no thunder and lightning; just a clear, normal afternoon sky.
‘Why do you want to meet the American woman?’ he asked of Alex.
‘She’s a stranger,’ Antonio put in, walking up to stand beside them, a pleasing grin on his face. ‘More important,’ he continued, ‘she’s an *American* lady; and, even more important still, she once lived in Hollywood. Even Alex, who’s seen very few films, can fail to know what they are.’
Alex blushed and smiled broadly, lowering his eyes in embarrassment, instantly like a normal adolescent, emotionally awkward and charming. Father Benedict, without thinking, put his hand on the boy’s shoulder, shaking him affectionately and then letting him go, touched by his embarrassment.
Had it truly happened? Had a mere wave of this boy’s hand transformed the elements? Father Benedict, remembering vividly, again felt a creeping fear, but when he looked at Alex, who was distractedly running his fingers through his blond hair, he was convinced that whatever had happened, it could not have been bad.
‘She’s not a film star, Alex. She only *lived* in Hollywood. She actually lives and works in New York, a less glamorous place.’
‘Not to Alex,’ Antonio said.
‘And not to me,’ Father Symonds added. ‘To me, right now, *any* place outside the Amazon seems glamorous, so let’s start for the boat.’ He turned to say goodbye to Peruche, but did not shake his hand, since the wizened Indian,

looking up with his rheumy eyes, merely smiled and waved languidly.
‘So it is,’ Peruche wheezed. ‘The winds blow us here and there. All of us are one, as the whole of Earth is one, and so, wherever you may be, you will also be here with us. Have a good voyage, my friend.’
‘Perhaps I’ll return some day,’ Father Symonds said.
‘I think not,’ Peruche said.
Father Symonds took a step back, visibly twitching, and then turned to stare directly at Father Benedict, his lined eyes imploring. Yes, he had changed, his cheerful face now like a death mask, fearful yet fighting to retain some dignity, his teeth biting his lower lip. Then Father Benedict felt it again, spiralling up to grip his throat: the conviction that Father Symonds was doomed and would never see England. This conviction, which had no rational basis, shook him body and soul.
‘It’s time to leave for Manaus,’ he said, speaking more urgently than intended, ‘so let’s set about it. And you can, of course, Alex, if you wish, come with us and meet the American lady.’
He returned Alex’s grateful smile, but it took considerable effort, since what had just transpired (and he could not accept that he had merely been dreaming) had completely disorientated him, filling his head with old memories that had resurrected buried guilt, and making everything around him – the green walls of rubber trees, the teeming grass and shifting foliage, the black-surfaced, very still várzea lake, the grey clouds in the azure sky – seem unreal and yet strangely threatening, as if closing in on him.
‘So,’ he said, ‘do we go by the river or by car? It’s up to you, Father Symonds.’
‘I’d like to see everything from the river one last time,’ Father Symonds said. ‘So if no one else minds, the boat is my choice.’
‘It’s your day,’ Father Benedict said, then turning to Mengrire, added: ‘Perhaps you could drive on to Manaus, Mengrire, and wait for us down by the docks. Since it’ll be dark by the time Father Symonds’ boat sets sail, you can drive us and the American woman back to the mission.’
‘As you wish, Father. But first I’ll put the suitcases in the small boat, to be certain they’ll arrive with you in Manaus.’
‘You think you might get lost, Mengrire?’ Father Benedict asked with gentle mockery.
‘Not lost,’ Mengrire replied, returning the smile but avoiding the older

priest's eyes. 'I only fear that the jeep might break down, or that there might be another bad storm, and that because of such unexpected circumstances, Father Symonds might have to leave for England without his possessions.'
'Most considerate of you, Mengrire,' Father Symonds said. 'And the thought is appreciated.'
Clearly relieved that he would not have to go with them, the Indian grinned and turned away and loped back through the forest towards the residential area of the plantation, while Father Symonds, merely nodding one last time at Peruche, still squatting in front of his thatched hut, finally managed to tear himself away and headed for the local *porto* with Antonio Bozzano by his side.
Alex likewise nodded at Peruche, but then held the old man's gaze, their eyes locked in some secret communication that again disturbed Father Benedict. He started to move off, then stopped, surprised by the intensity of Alex's gaze, remembering how Father Symonds had also stared at Peruche and now seeing almost the same expression on Alex's face, as if he was reading Peruche's mind and the old Indian, his.
'Follow your instincts, my son,' Peruche said, 'for what will come starts today.'
'I just want to go to Manaus and meet the American woman.'
'If your impulse is to do so, then do it. Trust your senses in everything.'
The boy nodded agreement and turned away, smiling at Father Benedict, and together they walked behind the other two, around the lake, through the trees. Emerging from the wooded area, they made their way along the bank of the great river. The bright sunshine was fading gradually, giving way to a cloudy greyness, and the immense expanse of water, its far bank ribboned with greenery, temporarily overwhelmed Father Benedict and eased his troubled thoughts.
Arriving at the *porto*, they found Mengrire waiting for them, having deposited Father Symonds' suitcases on the desk of the small and dilapidated paddlesteamer. Satisfied, he drove off, the jeep rattling and banging dangerously, then the rest of them walked down the plank to the lower deck of the boat. Father Benedict shared a wooden bench with his perspiring fellow priest while Alex and Antonio leaned against the rusty steel railing. Staring past the heads of Alex and Antonio at the well spread huts of the plantation, recalling his confrontation with Alex's father, Frank Poulson,

Father Benedict felt, in the sudden rage that stabbed through him, a more cutting shame.
Good and evil coexisting, past and future as one: he thought of his own secret guilt, which Poulson had unwittingly resurrected, and a hot flush rose to his cheeks, making him lower his head.
The boat's engine charged into life, its muffled roaring filled with metallic screechings and bangings, then the wheels of the paddle-steamer, white paint flaking, churned up the water around the *porto* and pushed the boat, sluggishly but surely, out into the river.
Father Benedict looked up again, first at Alex and Antonio, who were talking together, and then at his fellow priest. Father Symonds was studying the river, the sun shining on his bald head, the grey hair that surrounded his egg-shell skull being blown by the wind. His cheerful face, which had always seemed too small for his portly body, now looked like it had shrunk even more, losing its former colour and animation. Father Benedict, seeing that apparition before him, felt fearful for him.
'Are you all right?' he asked, trying to sound as casual as possible, blinking against the sunlight that flashed off the rippling water and keeping his hands in his lap.
'Yes,' Father Symonds replied, not looking at him. 'I'm fine. A bit sad, perhaps.'
'But are you sure you're all right?'
'Of course I'm all right. Why do you ask?' Now Father Symonds turned towards him, shading his eyes with a cupped hand, tilting his head slightly and squinting out of upraised eyes. 'Your question didn't seem rhetorical,' he added. 'Why the sudden concern?'
Still feeling fearful, Father Benedict didn't know what to say. He couldn't shake from his thoughts how adamantly Peruche had told Father Symonds that he would not be returning to the Amazon, as if he knew something they did not.
'I'm not sure,' he managed to blurt out. 'You seem changed. Not at all your old self.'
'I haven't changed,' the older priest replied. 'I'm just sad to be leaving. After fifteen years in this place, I should think the feeling is natural.'
'I think it's more than that.'
'It's not.'

‘I think it is. Something happened back there with old Peruche and it affected you dramatically. You seemed shocked, perhaps even frightened, and all the life left your face.’
Father Symonds sighed, visibly shuddered, and then turned his head away, his gaze focused on the river’s far bank, that green ribbon of jungle.
‘Yes,’ he said, ‘you’re right. I feel terrible. Is it really that noticeable?’
‘I noticed it. I don’t know that anyone else did.’
‘I feel old. Suddenly very old. As if my whole world is ending.’
‘Why? What happened back there?’
There was a fairly long silence while Father Symonds pondered the question, his lips opening and closing again, his gaze fixed on the river. Glancing over his shoulder, Father Benedict saw Alex and Antonio at the railing, the humus in the river making a brown wake in the glittering black water, the nearside bank curving away out of sight around the overhanging branches of the trees and the bank’s tall, swaying bulrushes. Hearing Father Symonds sighing again, he returned his gaze to his strained face.
‘I can’t really describe what happened,’ Father Symonds said quietly, ‘but I *do* know that when I looked at Peruche, I knew, I just *knew*, I actually *felt* that I would never see England.’
Hearing those words, Father Benedict experienced a chill that almost numbed him to the point of paralysis.
‘Imagination,’ he said, trying to make himself sound soothing. ‘Probably the tension caused by your imminent departure made you – ’
‘No!’ the older priest interjected. ‘It definitely wasn’t imagination. I had the feeling that I was hypnotised, that Peruche was inside my head, and that through him I was experiencing my own future, which does not include England. My future’s right here, in the Amazon, and does not go beyond it. What else can this mean other that I won’t be leaving here after all; that whatever time I have left, it will terminate here? And so, convinced of this, I felt something break inside me, draining me of strength, or, more precisely, the will to live. It ends today, Paul, and Peruche saw it… and now I have to accept it.’
He had finally turned around to reveal his fear and wonder, but Father Benedict, either unwilling or unable to accept what he was hearing, retreated into a protective cloak of disbelief.
‘We’re both crazy,’ he said. ‘We’re letting our imaginations run riot. We’re

letting ourselves succumb to all the nonsense that's been preached by Peruche. You're sailing back to England tonight, dear Michael, and nothing will stop you.'
'I won't see another dawn,' Father Symonds said, 'and both of us know it.'
They glanced at one another, but then lowered their eyes. 'Yes, Paul, you know it, because you, too, experienced something back there – something that frightened you severely and made you question your sanity.'
'You said I'd just been sleeping.'
'That's what it looked like. You were kneeling in front of Peruche, your eyes closed, your head moving from left to right in agitation. When you woke up, you seemed completely dazed and were obviously frightened. What happened to you, Paul?'
Father Benedict licked his dry lips, remembering, wondering if he were mad.
'I saw things,' he said. 'Things the rest of you clearly didn't see. Inexplicable and miraculous events that seemed vividly real. I wasn't sleeping, Michael. I *know* it. I was wide awake through it all.'
'And yet the rest of us experienced nothing – only the sight of you sitting there, apparently sleeping, moving your head from side to side in agitation.'
'I was moving my head from side to side in order to see all that was happening. I saw Alex's hand raised in the air – and when he lowered it, everything stopped. Peruche had said that with a mere wave of his hand, Alex would separate himself from us – and then Alex, by waving his hand, created a whole new world that I *didn't* imagine.'
'A form of hypnosis,' Father Symonds said. 'That possibly explains it.'
'You think so?'
'Well…'
'Do you even remember Peruche making that remark about Alex?'
'Yes, I do.'
'And what happened next?'
'Nothing.'
'Nothing? You mean Alex didn't even raise his hand?'
'I don't remember him doing so.'
'So what happened after Peruche told us that Alex, with a mere wave of his hand, would separate himself from us?'
Father Symonds looked confused, his eyes flitting left and right, his hands rising to his cheeks and falling again to lie like dead fish in his lap.

‘You know, I *can’t* remember… I remember Peruche making the remark. I remember that I turned to look at Alex. I remember that he *started* to raise his hand, and then… I remember that I decided to leave the group and stood up to do just that, feeling remarkably weak, Antonio holding me by the elbow… Nothing else. *Nothing!*’

‘And did you hear the Yano drums?’

‘No, I didn’t…’ He hesitated. ‘Yes… Yes, I might have. Come to think of it, I’m certain that I heard them; how long for, I don’t know. Presumably a very short time…’ He glanced up, bewildered, then looked across at Alex and Antonio, both of whom were still leaning against the railing, talking casually and watching the frothing wake of the paddle-steamer. Eventually, shaking his head from side to side, he turned back to the front. ‘It’s a mystery,’ he said.

Shaken and confused, Father Benedict gazed over the mighty river, at that ribbon of forest eight kilometres away, then fixed his attention on the bank close to the port side, sliding past the large, rotating wheels. The wheels made a lot of noise as they churned up the water, their loose slats clattering, but the forest that came right up to the sloping bank was gloomy and silent. Eventually, the boat passed the mission camp, the buildings desolate in the shadowed clearing, and some Indian children waved from the jetty while others waved from the sick bay. Father Symonds waved back, standing up as he did so, then went to the railing and stood there until the mission camp had fallen well behind the boat. He returned to his bench, shaken, and sat down, sighing loudly, then wiped a few tears from his eyes and looked at the jungle. The trees, overhanging the river, seemed almost humanly mournful.

‘It’s all right,’ Father Benedict said again with exhausted, forlorn hope. ‘It’s all superstition and nonsense, so there’s nothing to worry about.’

‘I’m not worried,’ his friend said. ‘I just feel a deep sadness. There was so much I wanted to do and now so little accomplished. When I think of what I might have been, I feel my loss more acutely. When I think of it and wonder what lies on the other side, if one carries one’s memories with one, I’m stricken by the thought of what I’m leaving: all my friends, the dawn light, the sun setting upon the water, the wondrous variety of the forest and its inhabitants, my mother’s face, my first tears. No, Paul, I’m not worried: my earthly anxieties have left me. What I feel is only grief over what I’m leaving behind – and great wonder at that which is to come when the time itself

comes. Peruche said that something was coming today. What he meant was my death.'

His words had a dreadful finality, writing the end to a life, bringing an invisible curtain down between them, dividing one from the other. Father Benedict looked away, feeling bereaved and shocked, his mind reeling from the impact of this single day that had not, as he realized with increasing dread, yet run its full course.

He watched the jungle sliding past, the river lapping at banks of clay, primitive jetties running back to the Indian shacks raised high on stilts, the odd Indian passing by in his canoe, children pulling their fishing nets in. *Rio Negro: Black River*… merely one stretch of the mighty Amazon, its vitreous surface limpid and quiet, reflecting forest and sky. What was he doing here? He did not belong here. This place only filled his head with old memories that made his skin burn.

Buried sin and mounting guilt: the accumulation of all the years. One sin above all others – the sin of lust – was what haunted him night and day. It takes a sensualist to know a sensualist, as Frank Poulson had recently proved, and Father Benedict (his mind filled with an image of brown flesh leading to nothing) understood that one minute of weakness could lead to a lifetime of remorse…

It had happened in Australia, near a bleak, sunstruck town, when he, in his middle thirties but still a virgin, had dreaded every night the thought of sleep, with its dream-filled torments. Yet why that particular girl? Was it compassion or perversity? Had he thought to set her free from her self-disgust or to martyr himself in the flames? He now vividly recalled her, a half-caste Aboriginal, unusually beautiful, first seen at the far end of his desolate mission station in the primal, sweltering outback of north Queensland. A brown flesh leading to nothing? Or to his own latent perversity? He had been instantly drawn to her, almost blinded by her beauty, and had followed her beckoning eyes, pretending to inspect his miserable mission station, while secretly burning up with lust and shame, a priest surrendering all virtue. Celibacy: that curse. Could it ever be truly lived with? His eyes had ravished the smiling girl – her long black hair and full lips, her swaying hips and teasing breasts – and only later, in his room, during a rare thunderstorm, did he see clearly her bare shoulders, exquisitely rounded and delicate, the brown skin, which he wanted to lick and suck, curving down

to… nothing.
A cauterized stump for a left arm, the skin curled beneath the shoulder blades – and his heart, as his eyes fell on that terrible wound, had opened out to embrace her.
That recollection could still scorch him, laying waste to his defences, stripping away the pretence that he was a man of God, his virtue inviolate. Now he recalled it clearly, as he had been doing all day, and his soul, which too often had huddled in doubt's grave shadow, seemed to drain out of him completely and leave him spiritually bankrupt.
Oh, yes, he saw her clearly. And now wanted to confess to someone. *She removed her dress and stood naked before me, her beauty making my senses reel*. That – and more. Not just lust, but also compassion. *I saw the stump of her amputated arm and couldn't take my eyes off it*. Heat and sweat, the buzzing flies, thunder rumbling and lightning flashing, the shadows dancing over her naked skin and emphasizing her feminine curves. *I prayed to God in pious humility. The heat flooded my aching loins. When she stepped close, placing her hand behind my neck, my vows choked in my throat*. Lust – and compassion. Her perfect beauty marred so hideously: that cauterized stump, shockingly ruining her otherwise perfect form, stilled the last writhings of his guilt and led him into the flames. *Oh, God, and I a priest! And what did I do? Even now I can't bear to think about it, nor let it out in Confession*. He had wanted to melt into her, to make her whole by ingesting her, and his lips had found her throat, her exquisite shoulders, then that stitched, folded flesh. So his mouth and tongue had worshipped that dreadful wound, his heart and soul pouring over her.
Why her? He would never know (he had soon fled to New Guinea) but he would, without a doubt, ponder the question the rest of his days. A ravishing adolescent, one arm torn off at the shoulder, she had clearly suffered the conviction that her relationships could not be normal and, her spirit and pride crushed by that knowledge, was offering all she could give.
Had she sensed his repressed desire? And did it matter what she had thought? He only knew that her armless shoulder, a shocking blasphemy against one so lovely, had drawn out of him an overwhelming compassion and hatred of God. Before the lifetime, one moment, a blind and heedless decision, defying God and asserting human need, erasing that blasphemy with his tongue, denying the ugliness with his lips, and perhaps confirming, in that

incandescent moment, that his pinioned spirit still lived.
Father Benedict covered his face, feeling the warmth of his cupped hands, bending forward on the hard wooden bench, the deck vibrating beneath him. He didn't want to think about it, tried to avoid it, but failed, recalling Frank Poulson's instinctive knowledge of what he had himself tried to deny against all the facts.
He had taken his vows, but his vows had not protected him; if celibate, he had not wished to be so and so he failed to subdue his lust. The simple hungers of the flesh? Or the need to love and be loved? Doubtless both, which for others was quite normal, but for him was a sin. *Yet in the end, I resisted, casting the unfortunate girl aside*, his desire and compassion, beating with huge wings in that dark room, brutally destroyed by the intrusion of a spiritual training more remorseless than flesh. *God, no!* he had cried out – the words still rang in his head – *God forgive me, you poor child, please forgive me. Get dressed and then leave here at once…* And later, when she had gone, he had knelt there for hours, the sweat dripping from him, the light from the oil lamp flickering over his trembling body as he repeatedly thanked God for his deliverance
– and felt the self-contempt smothering him.
For indeed, if he had learned to fear God, he had also come to fear women… or, at least, their ability to seduce and destroy him.
His secret world was his curse.

Chapter Eleven

'The dock's crowded,' he heard Antonio saying. 'The boat must have arrived.'

Father Benedict looked up, squinting against the sky's glare, to see Antonio and Alex standing just in front of him, their heads lowered towards him. The paddle-steamer was turning to port, moving past some shacks on stilts, and he saw, beyond the silhouetted outline of the Indian captain, the great floating docks of Manaus, clearly crowded with people. He rubbed his eyes and glanced around him, feeling confused and badly shaken. Father Symonds was dabbing at his sweating forehead with a crumpled white handkerchief.

‘Did you say…?’

‘The boat from Belem has arrived,’ Antonio confirmed, ‘and the crowds are all out to greet it.’
Antonio grinned and stepped aside, leaving Father Benedict’s view unobstructed, and he saw the mass of people crowded along the floating docks, the brown turrets of the Customs House thrusting up well behind them, and below them, supporting the enormous steel plates upon which they stood, the large drums upon which the docks floated, the water splashing around them. Alongside the nearest dock, white paint rotted with rust and peeling, was the Amazon River Steam Navigation Company two-decker boat that had brought passengers, livestock and cargo nearly a thousand miles up the river from the port of Belem. Most of the crowd were milling about the docked boat and there was much noise and jostling.
‘Looks like a carnival,’ Father Benedict said.
‘A lot of buying and selling,’ Antonio told him. ‘It’s a pretty big day for them.’
Grinning, Alex and ran to the railing, his blond hair flopping in the wind. Father Benedict, his nervous system in disarray, followed him to stand close beside him. The paddle-steamer was inching up to its own docking space, chugging past the larger boat, water cascading down its rotating wheels and splashing over them, warm and wet and refreshing. Hearing Alex laughing excitedly, Father Benedict glanced down to see his profile, noting the aristocratic forehead, the finely chiselled nose, the delicately sensual, almost feminine lips, the eyes, when they turned up to look at him, an impossibly clear blue – all of that, plus the boyish candour and enthusiasm and a complete lack of arrogance.
‘Are you excited, Alex?’
‘Yes, Father, I am. I really enjoy coming to Manaus and it’s even more exciting when a big boat arrives.’
‘And when it brings a newcomer.’
Alex blushed at that, but nodded his head and smiled, then the paddle-steamer’s engine was turned off and its wheels stopped rotating. The boat bumped against the dock, making a metallic, grinding sound, and some Indians, wearing dirty white shirts and floppy trousers, prepared to put out the gangplank.

Father Benedict glanced left and right, surveying the crowds milling about on the dock, buying and selling fruit, a variety of fish and trashy trinkets, and then, remembering Father Symonds' words, returned his attention to Alex, who clearly was still very excited.

'You seem particularly enthusiastic about meeting this American woman, Alex. One is driven to think, from the way you're behaving, that you've known her before.'

'Yes, Father, you're right,' Alex said candidly. 'I can't wait to meet her because I feel as if I already know her.'

'How come?'

'Because the night before last I had a dream in which she appeared to me.'

'The *American* woman appeared to you? What made you so sure it was the American woman, since you've never seen her before?'

'It was her. I *knew* it was her. I recognised her even in my dream. I knew who it was.'

'Really?' Father Symonds said from behind them. 'And what was this creature of your dreams like?'

'*Beautiful!*' Alex exclaimed.

Father Benedict turned with Alex to face the older priest and found him standing beside Antonio, both of them framed by the broad expanse of the river, which here, around Manaus, was a hive of activity: floating houses and shops, floating fuel dumps and *restaurantes*, even a large floating ice factory, its chimneys belching black, oily smoke.

Father Symonds, forcing a smile for Alex's benefit, nonetheless looked terrible.

'Well,' he said, 'you may be right. The woman could indeed be beautiful. You *do* have a modest talent for precognition and telepathy, and so, if you're right in this case, it won't be the first time that one of your dreams has come true. Be prepared, however, for disappointment, since I think that in this case your dream is probably the product of wishful thinking of a most common kind.'

The priest's words were good-humoured, but his face showed terrible strain, as if he was only managing to hold himself together with a great deal of willpower. Father Benedict felt uneasy, remembering what his friend had said about not expecting to see the dawn. The sun had started sinking in a surreal, kaleidoscopic sky, and he shivered, as if shaking off a ghost, and then turned

back to Alex.
‘He’s right about that, Alex. You *do* have some strange gifts. I still remember that dream you had, just a month or so ago, when you saw – and I quote – *a great ball of fire in the heavens, an umbrella of light*. I remembered what you said because later I learned that the very same day, shortly after you’d described your dream, the Americans dropped the atom bomb on Hiroshima.’
‘A new and more terrible age,’ Father Symonds said. ‘Truly the end of man’s innocence.’
An embarrassed silence fell between them, eased a little by the noisy crowd milling about on the dock above, and then, as if sensing that the silence had to be filled, Alex, watching the gangplank being lowered, said, ‘I told Peruche about that dream – and you know what he said? *It’s a sign that someone is coming to point the way to your future*. Meaning *my* future.’
‘And you think that this someone might be the American woman?’
‘Yes, Father Symonds.’
The older priest’s smile crumbled, giving way to a trembling grimace. Turning aside, he shivered visibly, and then walked to the gangplank that led from the deck of the boat to the dock slightly above it.
Mengrire, who had arrived here before them, scurried down the gangplank, nodding vigorously and murmuring his greetings to everyone, and then headed straight for the suitcases at the far side of the deck.
Father Symonds stepped onto the gangplank, started ascending, missed his step, but was rescued by the alert Antonio Bozzano who helped him continue the short climb to the floating dock.
Alex was right behind him, Father Benedict behind Alex, and soon they were grouped together on the dock, being jostled by the milling townsfolk – Africans and Portuguese, European and Asian, *mesticos* and *caboclos* and *cafusos* – most of them shouting and gesticulating, swopping anecdotes and jokes, buying and selling and bartering with good-natured zeal.
They pushed their way through the crowd,, heading for the Belem steamer, Father Benedict walking beside Alex, Antonio holding Father Symonds’ elbow and walking ahead of them, Mengrire trailing in their wake, carrying the suitcases. The dock was packed with small stalls, all painted different colours, all stacked with flour and rice and *farinha*, with fresh fruit and fish, the combination of which filled the air was rich, pungent odours. The sun was setting quickly, sinking down behind the steamer, silhouetting the boat in a

great fan of riotous colours that blended and changed to display the whole range of the spectrum, and finally covered the market on the floating dock in a sublime golden light.

Father Benedict, at that moment, hardly noticed all the excitement, his senses numbed to everything except sadness and a sorrowful wash of shame. His whole day had been very strange, a dream of magic darkly cast, filled with unpleasant confrontations and bizarre, haunting incidents.

What a day to remember! First death, then departure; then a flood of memories leading back to his past and its cruel, relentless accusations. And with the past, the future: the revelations of his friend, Father Symonds, who, now walking two or three steps ahead, looked like the ghost of his former self.

Dark omens, premonitions, sundry portends of doom – and magic, a blasphemous play with unknown forces, turning the world upside down.

Father Benedict remembered his childhood, his strict religious upbringing, his years of solitude in the Australian outback; then temptation, the flesh demanding, a onearmed girl wanting attention; then his guilty flight to New Guinea and the horrors of the war against the Japanese, along the Kokoda Trail…

He felt grief fill his heart, an almost physical pain, and then he heard an anguished gasp, someone exclaiming, ‘Oh, dear God!’ – and he stopped walking, the twilight dazing him, blinking into a golden haze, and saw his friend, Father Symonds, clutching his left arm and falling forward, his knees striking the steel dock with a horrible cracking sound as Antonio, muttering something incomprehensible, leaned forward to pull the falling man back, his hand missing and merely brushing the dying priest’s shoulder as he collapsed and rolled over.

Had he seen all this before? *It’s come true: he is dead*. Father Benedict moved quickly, dropping down beside Antonio, pushing the Brazilian back and grabbing his old friend by the shirt and shaking him vigorously while silently pleading for him to live.

Too late: the priest was dead. His weary heart had given out. Grief and pain pierced Father Benedict, cutting through to his very soul, and then everything inside him, all the guilt and fear and love, burst forth and temporarily set him free, his tears finding release.

Alex stared at him in wonder, kneeling right there by his side, then Father

Benedict saw the boy looking up as a shadow fell over him. The crowd had gathered all around them, a ring of faces painted black, and Father Benedict, raising his head, feeling the tears on his cheeks, saw an extraordinary beauty, her red hair like flames, and her eyes, large and frightened, opening and closing repeatedly, as green as the grass of that England to which Father Symonds, his heart stilled for all time, would not, as Peruche had prophesied, ever return.

The strange woman, floating magically in that golden haze above, her long, fiery hair hanging down around her tanned face, flicked her agitated eyes from Alex to Antonio to Father Benedict, and then, her sigh as tremulous as the light breeze, spoke through brightly painted lips.

'I'm Laura Wellman,' she said.

Otherworld

W. A. Harbinson

Deep in the heart of the Amazon rainforest live the Yano Indians. A fierce, elusive tribe, they are
dedicated to the powers of darkness, their presence only revealed only by the hypnotic beating of drums… and by mysterious lights in the sky.

Laura Wellman , an American photojournalist, beautiful, sensual and deeply tormented… Believing herself to be possessed by evil spirits, she decides to

offer herself to the dreaded Yano in a final, desperate attempt to release her soul from torment.

Father Paul Benedict , a middle-aged Anglican priest who is starting to doubt his God and the meaning of life in general… Gradually becoming obsessed with Laura, he believes that in somehow saving her from

self-destruction he can find his own redemption.

Alex Poulson , adolescent son of a depraved rubber baron, an almost spiritual innocent born and raised in
Amazonia… Falling helplessly in love with Laura, despite being rejected by her, he follows her into the dangerous depths of the rainforest and is, in turn, followed by the concerned Father Benedict.

There, beyond the reach of civilization, even beyond the light of reason, all three are drawn into the Yano's alien 'Otherworld', where good collides with evil in a

titanic, earth-shattering confrontation…

Otherworld

Luminous with love and possibility, pulsing with eroticism, murder and dread. A powerful, haunting novel about the eternal conflict between primal, mysterious forces on the other side of existence.

By the internationally bestselling author of *Genesis* and *Revelation*.

Book Two
The Plantation

Chapter One

‘That poor man,’ she said. ‘A heart attack! Oh, dear God, that poor man!’

Laura Wellman, sitting in the back of the jeep between Antonio Bozzano and Alex, brushing her long hair from her face, let it blow out behind her in the wind, shook her head from side to side in a bewildered manner, and stared all around her.

Alex watched her shyly and slyly, avoiding her gaze when she turned towards him, still stunned by the unexpected death of Father Symonds, but also, to his shame, helplessly dazzled by the creature sitting beside him, his senses reeling from the initial impact of her beauty.

Night had taken command, plunging the rainforest into darkness, but Alex vividly recalled her fiery red hair, her brightly painted lips, and, most of all, her incandescent green eyes with their long, fine eyelashes, rising and falling in peculiar agitation.

Father Benedict was in the front seat, sitting silently beside Mengrire, the slump to his shoulders telling all there was to know of his grief and shock, though he had also (or so Alex imagined) reacted in a startled manner to the first resplendent appearance of Laura Wellman, almost as if *he* had recognized her – or something strange in her.

‘Oh, God, I still can’t get over it! The way he just fell down in front of me. I mean, I feel it’s my fault.’

‘It wasn’t your fault,’ Antonio said. ‘It was nobody’s fault.’
‘Had he been ill? Do you think he was ill?’
‘It was a heart attack,’ Antonio said. ‘At his age it’s not all that uncommon, so please stop worrying, Miss Wellman.’

Alex felt her eyes upon him, staring wildly out of the darkness, and something reached into his heart and took a fierce hold on it. Mengrire mangled the jeep's gears, making the vehicle shudder violently, and the warmth of Laura Wellman, when she fell against him, touched Alex with glory.

'Worry?' Laura said. 'Of *course* I worry! When someone drops dead right in front of you, then naturally you *worry*.'

'*Please*, Miss Wellman,' Antonio said, sounding to Alex not quite himself and actually looking annoyed with the American woman. 'I think it would be best if we could just drop the subject for now. Talking about it won't make any of us feel better.'

'Oh, dear, I've upset you.'

'I assure you, I'm not upset at all; I just think it will do us no good to dwell on this matter. And I'm truly sorry, Miss Wellman, that you arrived to such a tragic event, which naturally has shaken you.'

'Call me Laura. I don't like using surnames.'

Antonio turned his head to stare directly at her, taking a deep breath as he did so, then turned back to the front without saying a word. Alex felt very peculiar, too confused to think clearly, and he found himself looking at Father Benedict, as if for support. His good friend, the priest, a shadowy form in the forest's darkness, was sitting up front beside Mengrire, his shoulders still slumped.

'Where did they take that poor man when they drove him away in the truck?'

'To a hospital in Manaus, Miss Wellman.'

'Laura. Please call me – '

'Laura.'

'And then? What happens then?'

Antonio sighed. 'They'll do what's necessary and then, the day after tomorrow, he'll be buried in a small graveyard outside the city – exactly as he'd be buried in America or, in his case, England.'

'Swell,' Laura said. 'Great.' She put her hand up to her forehead, her elbow tapping Alex's temple, then distractedly stroked her windblown, streaming red hair as she looked around at the forest on both sides of the jeep. It was almost pitch-black in there, certainly too dark to see, and now, in the cover of night, the whole forest had come alive with alien sounds: bird calls and chattering monkeys, croaking bullfrogs and chirping crickets, the infrequent,

muffled growling of a jaguar or puma, the constant rustling of the undergrowth as giant rodents and anteaters and snakes traversed the forest floor, while that even more varied wildlife – macaws, cotingas, pigeons, honey-creepers, marmosets, toucans, spider-monkeys and every imaginable kind of spider – lived and died nearly a hundred feet above in the forest's dense canopy. Laura Wellman was obviously impressed – her tall and lean body shivered – then she turned her radiant gaze upon Alex.
'Oh, dear,' she said. '*What* did you say your name was?'
'Alex.'
'Ah, yes, that's it. You must forgive me, Alex, for forgetting, but… you know… that poor man dying and all – '
'Yes.'
' – it sort of made me stop thinking. Anyway, Alex, you're really an extremely handsome boy. What age are you?'
'Seventeen.'
'God – forgive me, Father – what I'd give to be seventeen again. Unfortunately, those days are long gone and the wear and tear shows.'
'You're still very attractive,' Alex murmured shyly.
'It's kind of you to say so, Alex. I'm feeling better already.' A *seringueiro* bird called out, its cry jagged and metallic, and she twitched and put her hand on Alex's wrist, making his cheeks burn. 'This jungle is spooky,' she said. 'Is it always this noisy?'
'Only at night. By day it's fairly quiet. Most of the animals stay hidden during the day and only come out at night.'
'Thank God – thank heavens for that,' she corrected herself, glancing nervously at Father Benedict's slumped shoulders, perhaps fearing his wrath. 'I mean, this noise, if it went on all the time, would drive you out of your mind. So how do you sleep at night?'
'You'll get to like it,' Antonio said laconically. 'And then, when you lie in your hammock at night, you'll never feel lonely.'
'A hammock? You mean I won't have a *bed*?'
'No, I'm afraid not.'
'Ah, well,' Laura said, sounding unconcerned, 'that's also something I'll have to get used to and maybe, given a little time, even come to enjoy.'
Mengrire mangled the gears again and the jeep almost stopped, then shuddered vigorously and lurched on, its headlights beaming into the

darkness over the crude, winding track while Antonio, Laura and Alex were thrown into each other.
‘I think this jeep needs attention,’ Laura said. ‘Or maybe the driver needs lessons.’
Mengrire showed no sign of having overheard the remark, but Father Benedict seated beside him, coughed into his clenched fist.
‘Father Benedict?’
‘Yes, Miss Wellman.’
‘Can I take it that you’re now in sole charge of the mission?’
‘Yes, that’s correct.’
‘I hope you don’t resent me for dumping myself on you for a month.’
‘Not at all. On the contrary, we’re glad of the opportunity to let the world know what we’re doing here. Also, hopefully, the publicity we’ll gain from your published articles will bring in some of the funds we always seem to be needing.’
‘I’ll try not to get in the way too much.’
‘I envisage no particular problems, Miss – ’
‘Wellman.’
Clearly Miss Wellman was not yet ready to insist that the priest call her by her Christian name, and Alex, taking note of this fact, wondered why it was so. He felt strange sitting so close beside her, slyly studying her exquisite profile, unable to distract himself from the soft pressure of her hip and thigh, which, pressed against him, gave life to his flesh. He had no carnal experience of women and had thought little of sensual matters, but now, as if shedding his old skin, he felt his hidden self wakening.
As if reading his thoughts, Laura Wellman turned her head to look at him.
‘Seventeen, Alex? And you’ve lived here all your life? It must be a strange way to grow up. Do you like being here?’
‘Yes, Laura, I like it.’
‘And do you go to school here?’
‘Yes. Normally I go to school in Manaus, but right now we’re on holiday.’
He hardly knew what to say to her, so dazzled by her was he, his heart beating too quickly, his senses scattering like pollen in a wind. Glancing up at the night sky, he saw the ink-black jungle canopy, the odd patch of stars visible above the treetops and glittering with remarkable clarity from that vast, distant cosmos. Everything seemed magical to him, incandescent,

blindingly vivid, and when he turned his gaze back upon the woman her radiant presence poured over him.
‘Is the mission far away?’ she asked of no one in particular.
‘No,’ Antonio said. ‘We’ll be there pretty soon.’
‘I didn’t quite get what you said when we met, Antonio. Do you work in the mission?’
‘No, Laura. I work in the rubber plantation owned by Alex’s father. I’m an overseer, a sort of foreman, in charge of the rubber gatherers: the *seringueiros*. To confuse you even more, the bird that you can hear this very second, making that ear-splitting, metallic noise, is called a *seringueiro,* or rubber-gatherer’s, bird. So when we talk of a *seringueiro*, we could either be discussing a bird or an all-too-human rubber gatherer.’
‘Fascinating,’ Laura said, continuing to glance all around her. ‘I just wish I’d arrived in the daytime. It’s so frustrating not seeing it all.’ Alex felt her hand squeezing his wrist as she turned towards him again. ‘And *you’re* fascinating, Alex, living here your whole life to date. Have you ever left this jungle at all or is that still to come?’
‘No, I’ve never left here. I’ve seen nothing beyond the Amazon. But at the end of my next term at school in Manaus, my father’s going to send me back to England to further my education at a school in London.’
‘You get driven to your school in Manaus every day?’
‘No, I stay there five days a week and come back on the weekends.’
‘Which do you prefer? Manaus or the plantation?’
‘I prefer it here in the rainforest.’
‘Why?’
‘The Indians, the animals…’ Alex didn’t know what to say. How could he explain what he felt when the forest spoke to him? ‘I just like to visit Manaus,’ he explained lamely, ‘when a passenger steamer arrives. Like today, when you came…’
A sliver of moonlight illuminated her brightly painted lips; her smile then disappeared, leaving darkness. ‘You make me feel welcome,’ she said. ‘You have a way with the ladies.’
Her remark seemed charged with meaning, setting a flare off in his mind, and he felt her fingers squeezing his wrist again and then trailing off. The jeep roared and raced on, bouncing over a mound of earth, and the wind, rushing through between Mengrire and Father Benedict, beat at Alex’s face. He

reached up and touched his cheek, where Laura's hair had lightly grazed it, and some part of him, the adult too long buried, leapt out of his centre. The beams of the headlights slid off tree trunks, slashed across some dangling plants, then raced on to converge farther ahead on a wooden gatepost. Alex saw the plank huts of the mission camp, light pouring out from various windows, and then noticed that Father Benedict was straightening his shoulders, as if coming alive again.

Mengrire forced the gearstick, pressed the footbrake too hard, and as the jeep slowed down too quickly and then leapt forward erratically, Alex reached out to grip the back of Father Benedict's seat, thus ensuring that Laura Wellman wasn't flung into it. He felt the soft, warm side of her breast against his outstretched arm. At that, his cheeks burned and his heart started racing, but then the jeep slowed down further, eventually came to a shuddering halt, and the woman, offering a sigh, straightened up beside him and, blinking rapidly, repeatedly, gazed curiously all around her, unaware of his embarrassment and desire and increasing confusion.

'We've reached our destination,' Antonio informed Miss Wellman, his tone of voice slightly sardonic.

'I don't believe it,' Laura said, her gaze taking in the unimpressive mission camp.

Alex was first to disembark from the jeep, more or less vaulting out, but by the time he had turned around, Antonio was helping Laura Wellman down and Father Benedict, ostentatiously stretching himself, was staring slyly at both of them.

The woman was wearing a white cotton dress, not particularly attractive but practical, her feet in flat shoes, her long legs in stockings, and she stepped down to the ground with natural elegance, every movement a musical note. Alex was entranced, feeling as if he was in a theatre, hypnotised by the woman as she curved her spine and pulled her shoulders back, letting her breasts, full and firm, fill out the simple dress.

Mengrire was unloading her suitcases and the leather bag, but when Laura saw the latter she rushed over to take it from him, moving from the darkness into an oblique column of yellow light that beamed down from the mesh-wire window of the medical hut. Rescuing the leather bag, which had a shoulder-strap, she slung it over her right shoulder, then, jerking her head in an odd, slightly neurotic manner, she turned to face Father Benedict. The priest,

running his fingers through his black-and-grey hair, seemed to be getting his spirits back and managed to give her a slight, tentative smile, his lined eyes, nonetheless, avoiding her face and instead focusing somewhere behind her.
‘That bag looks heavy, Miss Wellman.’
‘It *is* heavy, Father, but since it contains my cameras and accessories, it’s especially precious to me.’
‘Well, you look like a strong and healthy young woman.’
‘Is that a compliment?’
‘Certainly.’
Alex saw her smiling, taking a deep breath, looking around her, her white dress turned an offgreen colour by the yellow light from the medical hut.
‘So this is it,’ she said, holding her shoulder-strap with one hand, the other resting on the languid curve of her out-thrust right hip. ‘A few buildings on the edge of the Amazon – and I’m here for a month.’
She offered a soft, throaty chuckle, fixing her smile on Father Benedict, then turned her profile to Alex as she looked across the wide, gently flowing, black river which, reflecting the moonlight, was striped with wavering striations forming a great silvery fan that constantly rippled and swayed. The river, so dark and silent, its far bank lost in the night, had a mysterious and frightening quality to it that few could ignore; and Alex, looking from it to the American woman, saw her shivering as she turned back towards him, a nervous smile on her painted lips.
‘Spooky,’ she said.
Mengrire, his gaze shifting around the woman’s intimidating beauty, asked Father Benedict where he should take the suitcases, but before the weary priest could reply Miss Wellman spoke up.
‘And you are…?’ she asked the young Indian, adding, before he could answer: ‘I’m *so* bad with names, particularly foreign ones.’
‘Mengrire,’ the Indian answered, deliberately feigning a look of stupidity. ‘My name is Mengrire. I am Christian and speak English. I work here, in the mission, as general helper, and am always obliging.’
‘Your English is *very* good, Mengrire.’
‘You are most kind, Miss Wellman.’
Mengrire bowed his head slightly, a sly grin on his face, which gesture was not lost on Father Benedict who, moving deliberately, stepped between them and addressed himself to the woman.

‘So, Miss Wellman,’ he said, smiling, ‘I suppose we should show you to your hut and let you settle in.’
‘I’ll leave, then,’ Antonio said quickly and, turning his attention to Alex, added: ‘What about you? Are you coming with me?’
Why? To what? Alex found himself staring, unable to remove his gaze from the woman standing there in the yellow light. No, he didn’t want to leave, could hardly bear the thought of doing so; he had no wish to return to his father’s plantation, to that mausoleum of a house, to the giggling and shrieking that went on every night when his father, more often than not with that swinish buffoon, Rollie Thatcher, forced some unfortunate Indian girl into his bedroom for some drunken debauchery. No, not tonight; not with Laura Wellman here.
Alex stared at her, almost speechless, remembering what Peruche had said, wondering if she was part of what the old Indian had prophesied would come very soon. Then he managed to remove his eyes, his racing heart telling its own story, and briefly fixed his attention on Antonio Bozzano, his very good friend. Antonio, normally smiling, was staring at him with his lips firmly shut.
‘Well?’ Antonio asked, after an uncomfortable silence.
‘I think I’ll stay here for the night. If Father Benedict agrees.’
He looked desperately at Father Benedict, silently begging him to agree, and the priest, smiling out of his slightly battered, handsome face, nodded assent.
‘Presuming, of course,’ he added to his unspoken words, ‘that your father won’t mind.’
‘My father won’t even know that I’m not at home,’ Alex said, ‘so whether or not he minds doesn’t even come into it.’
‘Well, goodnight,’ Antonio said, ‘I’m leaving you in very good hands, Miss Wellman, so I depart without guilt.’ He smiled charmingly, with a slight bow of his head, and then turned to Mengrire. ‘I’ll wait for you in the jeep until you’ve taken Miss Wellman’s suitcases to her hut. Try not to be too long.’
The young Indian nodded, glanced briefly at Laura Wellman, then, without a word, picked up the suitcases and started off across the clearing, heading away from the medical hut to the other buildings that were situation in a crude semicircle around the edge of the forest, with Father Benedict, Alex and Miss Wellman coming up behind him. They soon reached Father Symonds’ hut where Mengrire, moving athletically, kicked the door open and

went in, again followed by the others.
Father Benedict lit the oil lamps, one by one, saying nothing, and the flickering yellow light, growing brighter as each lamp was lit, soon illuminated the whole room and filled it with their elongated shadows.
Now Alex saw Laura Wellman more clearly and was instantly intoxicated by what he saw, her unusual beauty exciting his senses and confusing his thoughts. She looked around the spartan hut – at the hammock beneath the mosquito net, at the bamboo table and hard chairs, at the empty, dusty shelves and the meshwire windows – and then, pointing at the rear wall, said with a slow, sensual softness: 'You said there wasn't a bed.'
'I forgot that Father Symonds had a bed as well as the hammock. It just slipped my mind.'
'You mean the priest who just died? You mean you've given me *his* hut?'
'Yes,' Father Benedict said. 'Since he was due to leave today, you would have had this hut anyway.'
Alex met Laura's wandering gaze and was startled by what he saw: a panic that made her eyes go out of focus as her hands rose and fell, the fingers curving as if in search of something solid and, failing to find it, contented themselves with resting on her thighs and scratching distractedly.
'Why me?' she asked intensely of no one in particular. 'Why do these tragedies pursue me? I feel so goddamned *haunted!*'
She looked at Alex again, her gaze drawing him towards her, and he stepped forward, into her wavering shadow, and then stopped again. He saw that Mengrire was confused, moving sideways to the door, and then, as the Indian disappeared, he glanced at Father Benedict, sensing that he, too, had been subtly altered by this woman's arrival.
'You don't want to stay here?' Father Benedict asked, raising his hand in a questioning manner.
'No, no, it's all right.' She brushed her hair away from her face in an agitated manner, staring down at the suitcases on the floor and furrowing her brow; then, lowering her camera bag onto the bed, she smiled and added: 'Of course I do. It's okay.'
'I'm sorry, but there's no other accommodation available, so – '
'It's fine, Father Benedict. No problem.'
Nodding affirmatively, she offered a tremulous smile, instantly managing to look like a teenage girl, lost and uneasy. If before, to Alex, she had seemed

impossibly sophisticated, now, in this lamplit, spartan hut, she seemed simultaneously aristocratic and genteel, her very presence a rebuke to the modesty of Father Symonds' lifestyle. 'Well, well,' she said, clapping her hands together and then spreading them out to take in the whole hut. 'Home sweet home for a whole month. It should be an experience. Would a lady be indelicate in asking where…?'
'I'll send one of our Indian workers over straight away,' Father Benedict said, stepping forward as if preparing to leave, his glance passing briefly over Alex. 'She'll bring sheets for the bed and anything else you need. She'll also show you where to wash up and – '
'That's swell, Father Benedict.'
Aware of the embarrassed silence, Alex stared at each of them in turn and was relieved when Father Benedict coughed into his fist and then cleared his throat. 'Here, in the Amazon, we go to bed early and rise early,' he said, 'but of course if you'd like to have some supper… or something to drink?'
'I ate a full meal just before disembarking, but I'd really love something to drink. Dare I ask for a beer?'
'I'll have the woman bring some bottles and some ice. Have a good rest, Miss Wellman.'
At that very moment, just as Father Benedict was about to step past her and leave the hut, what sounded like a great number of drums started beating, suddenly, loudly, and obviously far away, in the unseen depths of the jungle. Laura jerked her head around, tilting it slightly, her eyes widening, first staring at Alex, then shifting her gaze to Father Benedict, finally glancing beyond the motionless priest to the patch of starry sky visible through the open doorway.
'What's *that?*' she asked.
Father Benedict ostentatiously studied the floor at his feet, then raised his head again. 'Indian drums,' he said. 'You hear them a lot around here. Don't worry; it doesn't mean they're going to war; they're just having some kind of ceremony.'
'*What* kind of ceremony?'
'We don't know, Miss Wellman.' Father Benedict sighed, shrugging his shoulders, his face angled away from her. 'Truth tell, we don't even know exactly who those particular Indians are or what tribe they belong to. Those drums sound muffled because they're a great distance away: somewhere far

north in the unexplored interior of the jungle. The locals call them the Yano, but we've no proof of that. What we *do* know is that they're clearly some undiscovered tribe of which, in this vast region, there are many. So, Miss Wellman, whatever they're like, no matter how loud their drums sound, they're too far away to do us harm – though certainly they make sleeping difficult.'

He was trying to make light of the subject, but Miss Wellman was unimpressed, her ears cocked to that distant, frightening drumming, which certainly made the floor shake.

'They're far away? Are you sure of that?'

'Yes, Miss Wellman, I'm sure. And I won't forget to send that beer to you… It might help you sleep.'

Alex followed him through the doorway, giving Laura Wellman a smile, noticing, as he stepped out into the cold, dark night that she was staring, not at him but at the sky, her gaze drawn towards the source of the relentless drumming, with its fast, mesmerising rhythms. The drums called to him, also, making him want to find Peruche, but he followed Father Benedict into the medical hut where an Indian woman wearing a white smock, her weathered face clearly disturbed, was preparing to dim the oil lamps. Father Benedict told her about Laura Wellman, asked her to do the necessary, and then, noting her nervousness and knowing what was causing it, patted her reassuringly on the shoulder, thanked her and said goodnight, then led Alex back out of the hut and across the clearing to his own hut sheltering under the shivering palm trees.

The drumming had not abated and, indeed, now seemed to be louder, and when they closed the door of the hut, though the noise was reduced somewhat, those pounding, relentless rhythms shook the plank walls and made Alex's heart race.

Sighing, Father Benedict sat on a stool beneath his hammock, lit a cigarette and inhaled with obvious relief before looking up again. His blue eyes, Alex noticed, were bloodshot and slightly out of focus.

'So,' he said, 'what do you think of the woman you so much wanted to meet?'

'She's beautiful,' Alex replied candidly.

'And?'

'I don't know… She's different from anyone I've met before. Glamorous,

sophisticated, and… a little bit strange.'
'*Strange*? How do you mean?'
'I'm not sure. I mean, I'm not sure how to take her. I couldn't always work out when she was being serious and when she was joking. She has an odd way of talking, a sort of theatricality… She laughs a lot, but seems a bit wound up, as if always performing… I've just never met anyone like her before… No one at all.'
'And clearly you find her attractive.'
'Yes, I've already answered that. She's beautiful. *Beautiful!*'
'She's beautiful and she's in her early thirties, which makes her too old for you, my boy.'
Blushing, Alex lowered his head and then looked up again, touched by the priest's kindly smile.
'I feel as if I know her,' Alex said, 'and have always done so.'
'That feeling is one I share,' Father Benedict said, 'but I'm inclined to put it down to today's dramatic events and the way they've played on my mind.'
'It's not just because she's beautiful,' Alex heard himself saying, his voice emerging from some lost cell in himself and fighting its way to the surface. 'It's also because she's different in a way I can't quite make out. There's a strangeness about her.'
Letting smoke out through his nostrils, Father Benedict turned to the low table beside his stool and opened a bottle of beer. He asked Alex if he wanted a drink, received a negative reply, and then put the bottle to his lips and had a long swig of it, after which, wiping his lips with the back of his hand, he inhaled on his cigarette and blew a thin stream of smoke.
'Different, indeed,' he said. '*Very* different. I think she might be neurotic.'
'Neurotic?'
'Oh, never mind, my boy. I speak too much too soon. Now lie down on that camp bed and have some sleep, if those damned drums will let you. It's been a long day.'
'I'll never sleep,' Alex said.
He did not remove his clothes, but lay down on the camp bed, clasping his hands under his head and staring up at the ceiling. The plank walls supported a thatched roof made from the palms of *palla* trees and was, he knew, festering with a wide variety of insects, but he contemplated that fact with equanimity, and soon, as he listened to the distant drumming, his thoughts

spiralled back to Laura Wellman…
Were the drums announcing her arrival? Did her arrival here signal something momentous? Had Mengrire in fact known that she was coming and why she would come?
Alex pondered the questions, but was not disturbed by them, merely letting them fill the dark, most secret corners of his mind while the sound of the distant drumming, insistent, relentless, gradually encased him in a fine shell of sound and shut out the real world.

Had he slept? He wasn't sure. The Yano drums were still pounding. Hearing a sigh and rustling sheets, he glanced across to Father Benedict, who was, at that very moment, getting slowly to his feet and shaking his head from side to side as if trying to clear it. There was a cigarette butt in the ash tray, still smouldering but clearly finished, and the bottle of beer, now back on the table, had also been finished. Father Benedict stared at him, grinned forlornly, shrugged his shoulders, then, without a word, he crossed the room, opened the front door and stepped outside.

Alex followed him, feeling as if he was dreaming, moving out of the warm room to the chill of the night where the beating drums, which had reached some sort of demented crescendo, made the hair stand up on his neck and drew his gaze to the sky. He glanced above the trees and saw an irregular patch of stars, other lights, not the stars, rising and falling in silent splendour, then he followed the starlight down, through the various canopies of the forest, down past the writhing liana and the great tangled roots, back to the clearing just in front of the late Father Symonds' hut where Laura Wellman was standing in the doorway.

She was wearing bedroom slippers and an oversized blue dressing gown, her long red hair trailing down her spine as she stared up at the sky. The mysterious lights were high up and obviously far away, looking from her vantage point not much different from the stars, but considerably larger than the stars, and, more inexplicably, rising and falling in serene, stately grandeur.

She kept staring, hypnotized, unable to accept what she was seeing, while the

sound of the beating drums, as far away as the magical lights, reached a pitch beyond pure noise, an almost deafening cacophony, causing the ground to tremble and the trees to shed their leaves.

Alex covered his ears, saw Laura Wellman doing the same, and then Father Benedict, his hands also over his ears, walked towards the American woman, but stopped and just stared, until she, as if touched by some peculiar intuition, turned to face him and return his frightened gaze, her eyes as bright as the moon.

The drums abruptly stopped beating.

Chapter Two

'I didn't sleep a wink all night,' Laura said, raising the tin mug to her lips to sip some more coffee. 'Not after that incredible drumming. I mean, I've never heard anything like *that* before and it *did* shake me up. And then, when it stopped so suddenly, that shocked me as well. I've never known silence like that before… It was like a great scream.'

She sipped the coffee and winced, burning her lips on the hot tin, then placed the mug back on the table and drummed her long fingers on the bamboo.

'Really,' she continued, 'it was a pretty frightening sound, not at all like normal drumming, and I think you both know what I mean, since you both seemed… well, *odd*… when it was going on.'

'Odd?' Father Benedict said carefully. 'I don't know what you mean.'
They were having breakfast in the mess hut, Alex sitting beside Laura, both of them facing Father Benedict across the long, narrow plank table. The air was already hot, flies and mosquitoes swarmed around them, and large black ants repeatedly appeared on the table, fearlessly hurrying to and fro.
'I think you *do* know what I mean, Father,' Laura said, her brightly painted, sensual lips forming a smile touch with good-natured mockery. 'You looked pretty badly shaken, exactly as I was, while young Alex here, lovely boy, was staring at me as if in a trance.'

Father Benedict also smiled, but more tentatively, a watchful glint in his eyes. ‘I think you’re imagining things,’ he said. ‘I was merely surprised to see you standing there. And, of course, I was still a little shocked by what had occurred in Manaus, by which I mean the unexpected passing of Father Symonds. As for Alex, I believe he’s been staring at you from the moment he met you – and, if I may say so, given how attractive you are, it’s perfectly understandable.’

Alex felt his cheeks burning, but he didn’t lower his gaze, instead glancing at each of them in turn and feeling good to be with them. Perhaps ‘good’ was the wrong word, for in truth he felt ecstatic, the very sight of Laura filling him with the light of enchantment. He, also, had not slept all night, though the cause was not the Yano drums; it was the image of Laura Wellman, floating teasingly behind his closed eyelids, that had made him toss and turn all night long on his uncomfortable camp bed.

Now Laura glanced at him, amused by his embarrassment, placed her fingers around his wrist and shook it affectionately, then returned her attention to the priest.

‘You flatter me, Father, but I won’t let you change the subject. I know why you were frightened and why *I* was frightened: not only because of the drumming, which was frightening in itself, but because those lights in the sky, which at first I thought were stars, were actually *rising and falling* in a way that normal stars don’t do. And how did you explain that phenomenon? That it was a kind of mirage! Really, Father, how can you, a priest, deliberately *lie* like that? Now I’d like the truth, please.’

Father Benedict shrugged, took a cigarette from his shirt pocket, lit it, inhaled, and released the smoke in a long, luxurious exhalation. ‘A little white lie,’ he said. ‘Even priests must weaken sometimes. I told you that because I didn’t want you worrying about things you can’t possibly understand.’

Laura glanced at Alex, smiled at him and squeezed his wrist, then, with her fingers lightly stroking his skin, she turned back to the priest.

‘Things that I can’t possibly understand?’

‘Things that no one here can understand. Those lights have been seen for years and have always materialized when the drums beat, but no one knows for sure who’s playing the drums or what those lights actually are.’

‘Why doesn’t someone go to that area and just *look?*’

‘More than one person has attempted to do just that, but no one, not a single soul, has ever returned from there. Not knowing what happened to them, we can only speculate: quicksands, wild animals, poisonous snakes or spiders, or, most favoured by the locals, the elusive, reportedly extremely barbaric, Yano Indians, who may or may not exist.’
‘May or may *not* exist?’
‘I’ll let Alex explain to you.’
Father Benedict sat back in his chair, contently smoking his first cigarette of the day, while Alex, now almost breathless under the steady scrutiny of Laura Wellman, recounted the story of the Yano as passed on to him by his mentor, Peruche. Laura’s eyes were radiant, almost luminous, drawing him into their seductive depths, and when her fingers stroked his arm, which they did more or less constantly, he felt all of his senses focusing on that point as if no other existed. Yes, she touched him a lot – and touched herself and all things near her – first stroking his arm, then scratching the table with her long, lacquered fingernails, then gently squeezing his knee, tapping her teeth with her index finger, running her thumb around the rim of her tin mug and then stroking his arm again. He hardly heard his own voice, aware only of her jittery movements, but when he finished talking she ran her fingers along his whole arm and visibly trembled, glancing nervously at Father Benedict, then back to him, beads of sweat on her exquisite face.
‘And the local Indians think those lights are the forces of good engaged in conflict with the forces of evil?’
‘So they believe,’ Alex replied.
‘And the so-called Yano Indians are enslaved by the forces of evil?’
‘If they exist,’ Father Benedict said.
‘And the Yano fear and hate women?’ Laura asked, as if in a trance.
‘So it’s widely believed by the Yanoama,’ Alex said.
‘But why?’
‘Women are of the Earth, giving life to other mortals; thus, to the Yano, they represent God, who, having created the Earth and mortal man, is the immortal enemy of those who came here from beyond time and space: the Dark One and His forces.’
Laura’s eyes, facing into the sun, had the brilliance of gemstones.
‘And the Yano women? What about them?’
‘According to the Yanoama, the Yano men treat their women dreadfully –

and frequently use them in a sacrificial manner when engaged in their rituals. It's believed that they're engaged in their rituals when we hear the drums beating.'
'And invariably that's when you see the lights?'
'Usually. Not always.'
Father Benedict sighed ostentatiously and stubbed his cigarette out, then, placing his hands behind his thick neck, stretched his broad body. 'Those are myths, no more, most spread by old Peruche. Of course, Alex tends to believe them because he believes in Peruche. Isn't that so, my boy?'
'Yes, Father, that's correct. I believe in the existence of the Yano. I also believe, like the Yanoama, that there's life beyond the visible, here, there and everywhere, existing around each and every one of us, at this moment and *all* moments. And I believe, as Peruche says, that the forces of good and evil are in conflict where time and space have no meaning, which for us, with our severely blinkered vision, is that area where the Yano are hidden and the stars rise and fall.'
'They're too big to be stars,' Laura said, almost whispering.
'They *are* stars,' Alex insisted, surprised by his own intensity. 'They're simply magnified by the clarity of the place we believe is the Gateway.'
'The Gateway?'
'The area that folds in upon itself and opens out again at the other side, in the Otherworld, where time and space have no meaning. You might call it Eternity.'
He glanced at Father Benedict, aware that he might have angered him, and was relieved to see no more than a gentle smile and a laconic shake of his head. But then, when he returned his attention to Laura, he saw something much more disturbing: fascination and rapidly mounting fear, one at odds with the other.
Raising her right hand to her mouth, she pressed her long fingers to her trembling lips, as if she had been about to say something but changed her mind. Father Benedict, studying her carefully, lowered his eyes as if embarrassed, and then, with an oddly hurried movement, pushed his chair away from the table and stood up to look down at them.
'You're here for a month, Miss Wellman, and can discuss this at your leisure, but right now I must be off to my daily business, which is, I believe, what you want to see.'

‘Please call me Laura,’ she responded, obviously having gained the courage to be more informal with him. ‘I’ll really feel terribly unwelcome if you insist on using my surname.’
Father Benedict smiled. ‘Of course,’ he said. ‘Laura it is. So what about you, Alex? What are your plans? Do you want to spend the day here or go home? The choice is all yours.’
‘Are you going to do your rounds of the mission camp?’
‘Yes, I’m doing my rounds.’
‘Then I’d like to come with you.’
In truth, it would have made little difference to Alex what had been planned for the day, since his only interest was in remaining close to Laura for as long as possible. He was therefore not slow, when they stood up together, to offer to carry her heavy camera bag, an offer she gratefully accepted, rewarding him with a dazzling smile. After removing her camera from the bag, she handed it to Alex, and then, when he had slung the bag from his right shoulder, she ran her fingers playfully through his hair and stroked his scalp. That touch, which was light and all too brief, made him soar like an eagle.
‘So what’s your daily routine?’ Laura asked Father Benedict when they had stepped out of the relative coolness of the gloomy hut to the brilliant sunshine and draining humidity of the clearing that housed the rest of the mission camp.
‘It varies,’ Father Benedict replied, leading them across the clearing, parallel to the river. ‘We’re here not only to spread the Gospel, but to attend to the health and education of the Indians, with particular emphasis, regarding education, on the children. To this end we have a few small schools scattered around the area and, right here, in the mission, a modest medical hut which also acts as a hospital and for which, alas, we’re constantly short of medical supplies and other facilities. Much of my time, then, is spent in administering these various arms of the mission – the medical hut and the schools – which means knocking on a lot of doors in Manaus and begging for cash or, less humiliating but just as time-consuming, writing to charitable organizations in America and Europe. Naturally, when not thus engaged, I have to visit the various schools, Indian villages and isolated families along the river, sometimes delivering medicines, sometimes other supplies, sometimes settling disputes, and always preaching the Scriptures.’
‘Sounds like a pretty busy life.’

‘It is.’
‘And when you talk about doing your rounds, presumably you mean you’ll be making all those visits today?’
‘Yes, indeed,’ Father Benedict replied. ‘So I hope you like boats.’
The centre of the clearing was packed with Indian children, some wearing shirts and shorts, others naked, all barefoot, most of them playing in the spiralling dust, either chasing one another or the unfortunate chickens, some drawing in the dirt with sticks. Their parents were also present, but gathered outside the medical hut, some sitting on the steps that led into the raised building, others leaning against the tall stilts on which the large plank hut had been raised, all of them looking undernourished and forlorn, their eyes as dead as their tongues.
Father Benedict went up the steps, nodding and smiling at the numerous patients, but Alex, after watching the priest disappearing inside, was attracted by the clicking sound of Laura’s camera and turned back to watch her. She was photographing the frolicking children, begging them not to stare at her or the camera, but inevitably, after obtaining a few shots, her curious subjects surrounded her.
‘Gee,’ she said, ‘I wish I had something to give them.’
‘Don’t give them anything,’ Alex told her. ‘You’ll just set a precedent.’
Wiping sweat from her forehead, using her hand as a handkerchief, Laura glanced across the immense expanse of the sluggish river and, as she turned back to face him, used the same hand as a fan. ‘Phew,’ she exclaimed histrionically, ‘it’s so damned *hot* here! My throat’s parched and I’m dying for a drink already.’ She stared steadily at him, her eyes bright and too intense, but then, when he offered to fetch her some water, she shook her head from side to side, chuckled throatily, and said, ‘Thanks, Alex, but that’s not what I had in mind. I’d better take some more pictures.’
She gently pushed him aside, her fingers scratching at his chest, smiled at him, raising her fine eyebrows, and then, keeping the smile on her face, started photographing the older Indians crowding the steps of the medical hut. A few of them showed mild curiosity, some actually smiling, but most of them were apathetic, hardly noticing her presence.
Alex went up the steps, making the patients part for him, and stood on the veranda at the top, looking down at Laura. When she had taken all the photos she needed, she followed him up and they both entered the hut.

Inside, it was long, narrow and gloomy, divided into two sections, one a square-shaped area used as a combined consultation room, first-aid room and dispensary, the other, much bigger, used for inpatients, this area being divided, rather pitifully, with ceiling-high bamboo partitions, into a few cramped, twin-bedded wards, each bed being covered with a mosquito net strung from the wooden supports for the thatched roof, the patients either stretched out or sitting on the primitive beds, there being no chairs available, and all of them hemmed in by cardboard boxes, woven baskets, tin buckets and small metal baths, the whole place smelling of urine and vomit and sundry medicinal odours. It was not an attractive place, neither to see nor to smell, and Alex, standing near the open front door, close to Laura, felt, for the first time, oddly ashamed that it should be such a mess.

Alex and Laura were in the reception area which contained two hard wooden benches for the waiting patients, a curtained-off corner that was clearly the doctor's consultation room, and a badly chipped trestle table at which, behind an untidy mound of documents, sat the middle-aged Indian nurse they had met the night before. Father Benedict was talking to her, murmuring words they couldn't hear, and then he went behind the curtain of the consultation room to talk to the doctor.

'God,' Laura whispered, 'now I could *really* do with a drink!'

Alex turned his face away, humiliated by his burning cheeks, and saw Father Benedict emerging from the consultation room and coming towards them. Stopping in front of them, he nodded, but spoke directly to Laura.

'Well,' he said, 'what do you think?'

'I might have seen worse,' Laura replied, 'but only in my worst dreams.'

'We're really short of cash, that's the problem.'

'You're not kidding!'

Father Benedict's smile was wintry, but his eyes, Alex noted, contained an interest that had not been there yesterday. 'That's why, as I said, I don't mind you being here. Contrary to simply getting in our way, your article, or articles, could help us. We need all the donations we can get, which means we need some attention.' He waved a hand towards the cramped hospital area. 'Do you want to take some photos?'

'Not now,' Laura replied. 'I have four weeks. I can do this place later.'

'And do you still want to see how I spend my average day?'

'Absolutely.'

‘Let’s go.’

They left the hut, stepping out onto the veranda, then went down the steps, past the Indians who were waiting patiently to get in, and then crossed the clearing, through the enormous shadows cast by the forest trees, eventually reaching the small jetty, the *porto,* where Father Benedict’s boat, actually a canoe with an outboard motor, was tied to the posts thrusting up from the humus-blackened water. When they were all in the canoe, Father Benedict tugged the cord that started the outboard motor and then, when it had coughed into life, took the rudder and headed out into the mighty river which, with its ribbon of jungle etching a green line far away, seemed to be curved under the sky like a great, rippling bowl.

He headed across the river, toward that endless green line of forest, and soon, caught in the water’s sluggish flow, they were cooled by a merciful breeze. The sky above was an azure sheet, the sun high and fiercely hot, but dark clouds were advancing over the horizon, threatening rain. Alex put his hand in the water and watched it arch up on both sides of his wrist, curving back down toward the canoe’s bubbling wake. It was warm but refreshing, sending tingles up his arm, but then, feeling the length of Laura’s thigh against his own, he turned see her distracted gaze.

‘It’s beautiful,’ she said.

‘Yes, it is,’ he agreed. ‘But a lot of people, even thinking it beautiful, also find it threatening.’
‘I don’t think I’m one of them. I think it’s beautiful. That’s all there is to it.’
‘I’m glad.’
‘Why?’
‘Because I want you to like it.’
‘Oh, Alex, you’re such a sweet boy. You make me feel so important.’
Her pleasure seemed genuine, but could not stop him from blushing, and he found himself staring at Father Benedict who, handling the rudder with considerable skill, was staring thoughtfully at her. There was admiration in his face, but also a certain tension, and Alex started wondering uncomfortably what his good friend was thinking. Then the priest leaned

forward a little, his left hand still on the rudder, and, with his face deliberately composed, looked directly at Laura.
‘So what’s it like being in the Amazon,’ he asked, ‘after New York and Hollywood?’
‘Strange,’ she replied. ‘*Very* strange. More so because of last night. I don’t know what I expected, but I certainly hadn’t prepared myself for anything remotely like that: first the death of Father Symonds, collapsing right there in front of me, then, of course, the wild drumming and those mysterious lights. Now I’m not only tired, I also feel disorientated, and here, in this great, unreal silence, I feel as if I’m losing myself.’
‘Would that be good or bad?’
‘That would be wonderful.’
‘Why?’
‘Never mind.’ She pulled a pair of sunglasses from the top pocket of her khaki-coloured cotton shirt, slid them onto her nose and looked around her. ‘Lord,’ she said, ‘it’s so damned hot here! I’m just *dying* of thirst.’
‘Would you like a beer?’ Father Benedict asked her.
‘Are you kidding me, Father?’
‘No, Laura, of course not. We all drink a lot of beer in the Amazon, so this canoe is kept well supplied.’ Reaching down to the wet sack-cloth bag at his feet, he withdrew two small bottles of beer, opened one and handed it to her.
‘What about Alex?’ she said.
‘Alex doesn’t drink beer. Nor, indeed, any other kind of alcohol. Isn’t that true, Alex?’
‘Yes, Father.’
‘So young, my dear Alex,’ Laura crooned teasingly. ‘So very pure.’
‘Yes, Laura, he certainly is that.’ Father Benedict raised his bottle and tapped it jokingly against Laura’s, then they both drank. After having a normal swallow and then lowering his bottle, Father Benedict took note of the speed with which Laura managed to dispose of more than half of hers. When she finally stopped drinking, gasping with relief, Father Benedict coughed into his fist and then gazed steadily at her. ‘I believe you don’t actually come from New York,’ he said. ‘How long did you live there?’
‘About four years,’ she said. ‘I first went there in 1941, just before the Japanese bombed Pearl Harbour and we entered the war. God – excuse me, Father – I still remember that terrible carnage. I had nightmares for months

after I saw it – and still have them occasionally.'
She shuddered and drank some more beer.
'You were *there* when Pearl Harbour was bombed?' Father Benedict asked.
'No,' she replied. 'I photographed the carnage a few days after the attack. I was working at that time for a New York newspaper and Pearl Harbour was my first big assignment. They flew me out to Hawaii shortly after the attack and I'll never forget what I saw there as long as I live.' She shuddered again and had another drink of beer, taking a lot very fast; then holding up the bottle, dangling it between her fingers, she let her face express its disappointment at finding it empty.
'Another one?' Father Benedict asked, taking the hint.
'Oh, yes,' she said. '*Please*.'
Though still only halfway through his own bottle, Father Benedict opened another and passed it to Laura, then moved the rudder a little, turning the canoe towards the opposite bank. The dark clouds that had been advancing in their direction from the hazy horizon, had been blown by the wind to the west and were moving away from them, leaving the sky a clear, burnished blue from which the sun cast down its fierce heat. The vitreous river, spread around them like an enormous mirror, reflected the few drifting white clouds.
'So how long have you been with *National Geographic*?' Father Benedict asked casually.
'Only since last August. Shortly after we dropped the bomb on Hiroshima. Though I must confess that coming here has made it seem a lot longer.'
Alex was mesmerized, recalling the dream he'd had the night before that bomb fell on Japan. He wanted to tell Laura about the dream, but was too embarrassed to do so.
'You appear to have a penchant,' Father Benedict said to her, 'for somehow linking yourself to momentous occasions. Is that what you meant yesterday when you said that you felt haunted and also expressed the belief that bad events seem to pursue you?'
'They do, Father! *They do!*' She nodded emphatically, then had another drink, licked her lips and stared at him again, this time almost defiantly. 'I mean, why *me*?' she said. 'I'd only just *joined* that newspaper! And yet two days after I started – you hear me? *two* days! – the goddamned Japanese bombed Pearl Harbour and I was assigned to photograph the results. That's more than a coincidence, Father. I'd call that *fate*!'

‘I hardly think – ’
‘Yes, Father, *fate*! Preordained. I was somehow tied to it! And then later, when we dropped the atom bomb, I just knew that…’ Her words trailed off to nothing and she turned her gaze on Alex, her flickering smile not disguising the fact that she was clearly disturbed. ‘Oh, Alex,’ she said, reaching out to gently stroke his cheek. ‘You’re so beautiful because you’re so completely innocent that you seem almost unreal.’
There was silence for a moment, broken only by the canoe’s chugging engine. Alex was a little puzzled by what she meant and noted, from the expression on his face, that Father Benedict felt the same. The opposite bank had taken shape as a dense forest and they were heading straight for it.
‘The atom bomb?’ Father Benedict queried quietly. ‘What had that to do with you?’
‘Events like that… You don’t understand…’ She gazed across the sullen river. ‘The dropping of that bomb meant something to me… I remember… I can’t explain it!’
She shook her head from side to side in frustration, her hair whipping her face, then tilted the bottle of beer to her lips and finished it off in one gulp. Alex was amazed – and saw the priest’s face, also amazed – as Laura lowered the empty bottle, letting it rest on her lap. Licking her lips, she stared intently at the approaching bank of ochre mud and yellow bulrushes, her dark glasses making it difficult to judge just what she was thinking. Alex heard someone humming – it was himself, displaying his nervousness – and then Laura, as if understanding what he felt, again reached out to him, her thin, delicate fingers wavering blindly in the air before settling, as light as a butterfly, on his virgin knee.
‘That bomb meant something to you?’
‘Yes, Alex, it did.’
‘It meant something to me as well,’ he said, finally getting up the courage to tell her, ‘because I saw it exploding.’
‘You *saw* it exploding?’
‘I dreamt about it the night before the actual event. I saw a great ball of fire in the heavens; an umbrella of light.’
‘A dream…’ Laura murmured.
‘But accurate,’ Father Benedict said. ‘Alex told me about that dream the morning after he dreamt it – and later, that same day, the Americans dropped

the bomb on Hiroshima.'
Laura removed her sunglasses to stare at Alex like a large cat, hypnotizing him and rendering him helpless. '*A great ball of fire in the heavens; an umbrella of light*…' Her voice was as gentle as a raindrop, rippling across the surface of his heart with beguiling humility. 'I felt that I was meant to come here,' she murmured dreamily, 'and now you've confirmed it. That bomb made me flee from America… and now it's brought me to you.'
'What do you mean by that?' Father Benedict asked, startled.
'Never mind,' Laura replied vaguely. 'I meant nothing at all.'
Father Benedict turned off the outboard motor, letting it whine down into silence, and the canoe drifted gently towards the sloping mud bank that led up to the very edge of the lush green rainforest. There was no Indian village in sight, just a small natural clearing, but a crude path could be seen winding away into the forest's deep gloom. Fat flies and mosquitoes buzzed in thick clusters, animal tracks led down to the water, and not far away, as if aware of their arrival, the bulrushes parted and fell back together in a wavering line as a caiman or some other unseen creature moved well away from them.
Removing her sunglasses, Laura looked up, surveying the soaring trees, then she put the sunglasses on again, the river's bright light defeating her. She then followed Father Benedict out of the tethered canoe, splashing through the shallow water, then turned back to face Alex as he did the same. He smiled at her, feeling confused, now despising his own innocence, his lack of knowledge regarding women, then bent his neck to let his cheek touch her hand when it slid onto his shoulder. He blushed again, his heart pounding, but did not move his head, letting the warmth of her hand heat the blood in his veins and make his skin glow. Then he saw Father Benedict, his head lowered in embarrassment, and so, feeling guilty and afraid, he straightened up and stepped sideways.
'You want to see how we live?' Father Benedict asked rhetorically. 'Then be prepared to do a lot of walking through this extremely hot forest.'
'I need another beer,' Laura responded. 'Or preferably something much stronger.'
Father Benedict stared at her for what seemed like a long time, then, shrugging, he turned away and headed into the forest. Alex, not sure of what was happening, reached out blindly to Laura, trying to touch her with his fingers, with his heart, before the dark forest swallowed them.

He did not actually touch her, but let his hand dangle in the air, and then, in a trance, without saying another word, they both walked into the shadow of the trees and left the river behind them.

Chapter Three

The moon was pale and pock-marked, beaming across the black river, its silvery striations spreading out through the darkness to form an alluring chiaroscuro on the rippling water. Laura shivered and leaned forward, wrapping her raised knees in her arms, then rocked herself gently back and forth as she looked into the darkness.

‘Are we all right here?’ she asked. ‘Is it safe? What about snakes and things?’ Alex, sitting beside her, was amused by her concern. ‘Yes,’ he said, ‘we’re perfectly safe. Nothing will harm you.’
‘No snakes?’
‘No snakes.’
‘No poisonous spiders?’
‘None. All the things you fear are in the forest and won’t come out here.’ It was a lie, but a harmless one, designed to ease her mind. The odd snake or poisonous spider could certainly be found here, but would, if faced with a human presence, promptly move off elsewhere. As for the forest, it had come alive, chattering incessantly all around them, weird and ghostly sounds ricocheting back and forth, held bizarrely within an outer shell of silence composed of water and sky. The river itself was still and reasonably quiet, a quiltwork of shifting light and shadow.
‘It frightens me,’ Laura said. ‘It has a strange, terrible beauty. When I look at it, I imagine how easy suicide could be: that river, in the moonlight, is almost hypnotizing. There’s a certain magnetism to it; it seems to tug at your body.’ She raised her glass to her lips and drank some more of her *caipirinha*, a potent mixture of *cachaca*, or cane alcohol, mixed liberally with lemon and ice. She seemed to be more sober now, to have drank herself back to sobriety, and she offered a selfdeprecating smile and said, ‘Was I *really* terrible this evening? I can’t remember it clearly.’
‘No,’ Alex said, too embarrassed to tell the truth, ‘you were just a little bit drunk.’

‘More than a little bit, Alex… and Father Benedict was angry.’
‘Don’t worry about it.’
When she failed to reply, he glanced sideways at her, his emotions confused and spilling over into areas unknown to him. Father Benedict, if not actually angry, had certainly not been impressed and had left them just a few minutes ago, right after the evening meal, claiming that he was simply too tired to stay awake any longer. His statement was, of course, a lie, a mere diplomatic ploy, and Alex, naive though he was, knew that Laura had caused it.
Now, as he sat beside her, the long day unravelled in his head: the arduous hike through the forest, following the narrow, winding tracks, stopping briefly at a small Indian village, then at a school just outside it, then the first of many isolated families living down by the river; then another boat journey, the noon sun blazing overhead, another village, more lonely families, another shabby school in the forest, then another boat journey, another landing, heat and sweat their reward.
Initially, Laura had been fascinated, her tongue tripping on endless questions, her different cameras (Alex had carried the heavy bag) being used almost constantly: photographing the shacks on stilts, children playing in the dirt, skinny fishermen with their nets drifting out around their canoes, *seringueiros* tapping rubber trees on the land of dying plantations – and, last but not least, Father Benedict’s patients, a few Christian, most not, many *Umbanda* or *Quimbanda* worshippers, their common denominator being poverty and hunger and ill health: malaria, dysentery, skin diseases and sleeping sickness, some suffering from hernias and suppurating sores, others with elephantiasis tumours or hideously deformed limbs.
Yes, she had been fascinated initially, her photographer’s eyes seeing all, excited by the visual possibilities and using film extravagantly. But then it became too much – too much hiking, too many boat rides, either scorched by the sun that blazed down on the open river or drained by the suffocating humidity of the forest’s gloomy interior – and so she had asked for another beer, and then another, and another, until Father Benedict, his face composed in weary sufferance, informed her that the supply of beer was finished and she would have to go thirsty. That had made her really angry, exploding with, ‘Damn it, this jungle stinks!’, then she had called out to Alex, telling him to open her camera bag and take out the large bottle of lethal *caipirinha*, from which she had, during the rest of that gruelling day, sipped repeatedly,

defiantly.
‘He did it deliberately, didn’t he?’
‘Pardon?’ Alex said.
‘Father Benedict visited more places today than he would normally visit – and he did it deliberately.’
‘I’ll admit, he did a lot.’
‘He did it deliberately,’ Laura insisted.
‘I don’t see why – ’
‘For some reason he feels threatened by me – and that’s why he did it.’
‘I don’t believe he would do that, Laura.’
‘He would and he did. He wanted to humiliate me. And now, just because I was so hot and drank too much, he has something to hold over my head if I step out of line. Oh, yes, I can see it!’
Not knowing what to say, Alex gazed out across the river. The *caipirinha*, following on the beers, had certainly loosened her tongue, making her talk of black magic, of destiny and fate, peppering her conversation with words like ‘haunted’ and ‘possessed’ and causing Father Benedict, for whatever reason, to become uncommonly angry. Then later, after sunset, right here in the mission, sitting down after dinner with the flies and mosquitoes buzzing, she had said to Father Benedict, as if speaking to herself, ‘I know what you think, but it’s not true: I don’t normally drink that much.’
‘I think you’ve had a bit too much today.’
‘I’m not teetotal, Father.’
The priest had left then, turning away from the table without a word and then leaving the hut, clearly angry. Alex, seeing it all, hearing all, now wondered what it all meant.
‘Oh, God,’ Laura said. ‘I *do* drink too much. And here I am, after that goddamned awful day, still sitting here drinking. Alex, my friend, my beautiful young man, you must think me a witch.’
‘I think you worry too much.’
‘You’re so mature for your age.’
‘You’re making fun of me, but that doesn’t matter: you *still* worry too much.’
‘It’s that priest I’m worried about.’
‘He’s a nice man. Stop worrying.’
‘God, Alex, you’re really wonderful for your age. You’re a strange, lovely boy.’

For the first time in his life, Alex resented that form of address, suddenly preferring to think of himself as a man, and desperately, with his wounded heart bleeding, wanted her to acknowledge him as such. As if sensing what he was thinking, she reached out with her right hand, fingers spread, to lightly, affectionately, stroke his head.

'Do you think he's jealous, Alex?'

'Jealous?'

'You sweet boy! Never mind!' She had another sip of her *caipirinha*, lowered the glass and licked her lips. 'Let me tell you something,' she said, her voice peculiar, floating towards him on an almost imperceptible breeze, each word sounding a different note. 'On my first birthday, May 7, 1915, a German U-boat sank the liner *Lusitania*, and my mother, carrying me in her arms, visited Aleister Crowley, the Satanist known as the Great Beast, where he was then staying at 40 West 36th Street, New York – an address I can never forget – and where, as the *Lusitania* sank beneath the waves just off the coast of Ireland, drowning nearly two-thousand passengers, my mother witnessed and, I believe, took part in, the sexual magic practised between the Great Beast and a black prostitute, Anna Gray. I have lived with that knowledge all my life and it haunts me relentlessly.'

He saw her face in the moonlight, the green eyes still intense, no trace of a smile on the lips that had uttered those words. Was she joking? No: she was shivering with emotion. Her free hand, which had been resting so lightly on his head, slid sensuously down the side of his face and came to rest on his shoulder. Her other hand was holding the glass of *caipirinha*, which she sipped methodically.

'Aleister Crowley! The Great Beast! The world's most wicked man! Drunkard, drug addict, mesmerist, sexual deviant, the most infamous and sinister black magician of the twentieth century, endeavouring to become a god, ending up as a monster, driving many of those he met along the way into every kind of degeneracy and insanity – and my mother, in the madness of her delusions, lay down with him and his black whore.'

She stared wildly at Alex, then reached out to grab his wrist, shaking it like a dog with a bone, her luscious lips trembling.

'Yes, Alex, she did that – and never ceased to remind me of it, telling me that she'd engaged in some ritual with that monster and his whore while I, a

oneyear-old, lay right there beside them – and insinuating that because of what went on that night, I, her daughter, had been committed to the forces of darkness and that they, sooner or later, would come to claim me. That's what she told me, Alex – and what she told my father – because she hated him for good reason, and so, in that hatred, wanted to hurt him by telling him that his only daughter had been cursed. But that plan didn't work: the only person damaged was *me*. My father didn't believe in magic, black or otherwise – instead, he believed that my mother was mad – but I, poor child, grew up believing I was possessed, and eventually, when I reached adolescence, I was living in secret, endless torment, haunted by the most vivid dreams and terrible nightmares.'

Alex was perplexed, not understanding what he had heard. 'But I thought you came from Hollywood,' he said lamely, 'so how did you – ?'

'Hollywood! Hollywood! Don't even mention that awful place! Oh, Alex, my Alex, don't tell me you romance about *Hollywood*.' She had another sip of the *caipirinha*, then stared even more intensely at him. 'The story I told you is true, Alex. God's truth, no less. My mother never stopped telling me about that night of debauchery with the Great Beast and suggesting that I had, because of that, been possessed by the forces of darkness. *Hollywood*? What *better* place than Hollywood? That's where dreams become real.'

'I still don't understand,' Alex said. 'I'm not sure what you're – '

'Hollywood, my dear Alex, is where dreams become real, but whether that's good or bad depends on the nature of the dreams. And mine were all bad…' Her words trailed off weakly, dissolving into the night's darkness. The forest's chattering, which Alex had briefly forgotten, now returned to assail him. He was used to it, normally liked it, but now found himself resenting it, wanting to hear nothing but her voice which wove a seductive web about him. Her fingers tightened on his shoulder, shook him slightly and then fell away, making him feel almost bereaved. But then she leaned closer to him, her eyes reflecting the moonlight, and started talking again.

'Yes,' she said, 'I was born and bred there, where they make all dreams real, where those who live there hardly know the difference between reality and fantasy, between the lives they live on the silver screen and the lives broken around them. Did I know the difference? I'm not sure that I did. We lived in Windsor Square, surrounded by the major studios, and my playgrounds were the studio back-lots where, usually alone, my head filled with childish

scenarios, I acted out my fantasies in abandoned forts and castles, deserted western towns, realistic Roman galleys still afloat in enormous tanks, luxurious, three-walled penthouses on huge, silent stages, artificial tropical gardens and forests that faded slower than the real ones. And, of course, the same at home, in our rambling house in Lorraine Boulevard, all those movie stars that the fans dreamed about as our casual acquaintances; and they came and went, and pretended to be what they were not, many unable to distinguish between their real selves and the characters created for them by scriptwriters – and so, given those idols of the silver screen and my lonely hours spent in studio back-lots, I grew up in a world of make-believe and suffered because of it.'

She sipped her drink again, licked her lips, distractedly studied the dark river, her brow furrowed in thought. When eventually she returned her gaze to Alex, he melted into the mothering earth.

'Oh, yes, Alex, I suffered as a child! There I was with my wealthy parents, having the famous as neighbours and friends, and yet I lived in a terrible, crippling solitude with a mother gradually going crazy and a father, a successful movie producer, too involved in his own life to take any real notice of me.'

She nodded emphatically, had another sip of her drink, nodded again, as if to confirm her point, then started talking again.

'You have to understand, Alex, that my mother's marriage to my father had virtually been *arranged* by their two powerful families, to enhance the business merger of their individual studios. Thus, already feeling bought and sold as part of a package, my mother was even more humiliated and broken because she truly loved another man, a studio grip who, she claimed, had been removed from her life when my father found out about the affair and brutally terminated it by paying the grip a fortune to leave Hollywood and never return, and then ensured, by way of punishment for her sins, that my mother, a successful actress, never worked again. Yes, he got rid of the only man she'd ever truly loved, destroyed her career by simply making a few phone calls, and then made her pregnant to enslave her to a child she hadn't wanted in the first place. Inevitable, was it not, that my mother ended up not only despising her husband but also resenting the daughter that he'd given her against her wishes? That daughter was me.'

Lowering her eyes, she gave an audible sigh, then shook her head

disbelievingly from side to side and shivered again. When she next spoke, her voice was like a whisper carried home on the faint breeze.

‘It was a dreadful situation, an emotionally destructive situation, and it only became worse when my father’s successes multiplied and my mother, ever more frequently ignored, her resentment towards him deepening, started slipping from theatrical eccentricity into full-blown madness. This madness took the form of heavy drinking, promiscuity, and an increasing fascination with the occult and black magic in particular – a fascination that had, as far as I could tell, first started the night Aleister Crowley seduced her in God knows what repulsive and degenerate manner.’

She put her empty glass down, setting it gently on the grass between her crossed legs and leaning forward slightly. A light breeze, coming off the murmuring river, made the trees shiver.

‘So there was my mother,’ she continued, ‘growing crazier every day, her face too garishly made up and her clothes wildly Gothic, looking like some grotesque imitation of Pola Negri, picking up and dropping lovers with the casual indifference of suppressed mania, and attending every séance and black magic ritual she could find… And I, now approaching adolescence, a blossoming fifteen-yearold, was exposed to her lovers, forced to attend her seances and magic rituals, and repeatedly reminded of her intimacy with Aleister Crowley, the so-called Great Beast, and so became convinced that I’d indeed been cursed and that the forces of darkness would, sooner or later, come to claim me. I believed it then, Alex, and still believe it now… and I can’t help myself. I still have the vivid dreams, all those nightmares of light and dark: of black men coming at me out of featureless blackness and filling me with the seed of their unnatural being while the heavens split open, just like that ball of fire you dream about. Where was this taking place? I didn’t know! It was here, there and everywhere. But it haunted me night and day, every minute, every second, and now I know that my destiny lies where good merges with evil.’

Alex could scarcely credit what he was hearing, but her tale drew him in, coloured with mystery and luminous with dread, conjuring up a world beyond the visible. Was she mad or was she as sane as his old friend Peruche, who saw the reality behind the illusions of the physical world and was thought by many, particularly white men, to be either a madman or a charlatan?

‘And your mother’s now dead?’
‘Yes, Alex, she’s dead…’ Laura’s head moved left and right as she scanned the inky river, then she sighed and lowered her face as if praying, her body curved like a bow. ‘I left home,’ she said. ‘I couldn’t take it anymore. I went to New York, hung around there for a year or so, then received an urgent cable from my father, telling me that my mother had committed suicide and ordering me home. So, a few days later, I was back in Los Angeles, attending my mother’s funeral, after which, at my father’s insistence, I stayed on, moving back into that big, rococo house in Lorraine Boulevard, near to the studios…’
Her voice faded to a whisper as she glanced at the night sky where, instead of rising and falling lights, she saw commonplace stars.
‘It just didn’t work out. Wearied by what he felt were my mother’s – and presumably my own – neuroses, my father threw himself into an even more hectic social life, bringing different women home every night while constantly reprimanding me for remaining alone and rarely leaving the house. He was right, of course: I rarely left that house. Formerly completely dependent upon my mother for protection against the forces of darkness, now left without that protection, I was terrified of the night, too frightened to go out, and so became a recluse, taking sedatives to keep me calm, sleeping all day and staying awake at night with all the lights in my bedroom turned on. This drove my father crazy – it also embarrassed him socially – and when he threatened to commit me to a mental institution, I finally got away from there by plunging headlong into a hopeless marriage.’
‘You were… *married?*’
‘Yes, Alex.’
Alex was shocked, ridiculously so, not having even thought of this possibility and, being suddenly faced with it, feeling almost betrayed. He didn’t know why he felt this way and had no reason to do so, but the pain, knifing through his jumbled emotions, was unfamiliar and cutting. Staring at her, feeling the pounding of his heart, he saw her lost in herself.
‘It was 1936,’ he said, ‘when I was twenty-two years old. Robert, eleven years older than me and the son of one of my mother’s friends, was a financially struggling atomic physicist, full of talk about the mysteries of atoms and other esoteric items, and working in a top-secret establishment in Los Alamos, near Las Vegas, Nevada. Naturally we had little in common,

either socially or intellectually, but decent and dedicated, he was also understanding and patient, so pretty soon, by which I mean a few weeks after our first meeting, he managed to coax me out of the house and back to the company of real people. Did I love him? No, I don't think I did. But being lonely and frightened by the very thought of a mental institution, I soon convinced myself that what I felt *was* love, and so, shortly after our platonic relationship commenced, I accepted Robert's proposal and we rushed off to get married in Las Vegas.'

Alex sat there beside her, scarcely breathing, hearing the murmuring of the mighty river, the sighing of the breeze through the trees, the forest's incessant, dominating, chaotic chatter and (or so he imagined) his own thudding heart. He wanted the darkness to ease his pain and desire. He wanted never to leave her.

'Of course,' she continued, her voice adrift in its own drama, 'I was still a virgin at the time, almost frigid in fact, and so, from the first night of our marriage, our physical relationship was a disaster. Because convinced that I was a victim of the forces of darkness, I couldn't give myself over to the sexual experience and, as I soon found out, really only wanted someone beside me in my frightening nights. God, it was awful! The very thought of it still shames me. I made love with my body, but my thoughts were always elsewhere, my inner eye roaming constantly through the darkness in search of my demons. I still had the vivid dreams, so vivid they seemed real, and felt presences in the room, surrounding the bed while my husband slept, incorporeal, spectral, drawing me out of myself and somehow carrying me to that place where, while the darkness was divided by the light, a magical, pulsating light, my mortal body was desecrated in the most obscene fashion and made the repository for evil in its most vile manifestations… God, yes, how I suffered from those hauntings! And struggled to stay sane.'

Her voice trailed off again, this time on a note of despair, and Alex wished that he could talk to Peruche and learn what he should know.

'Are you still married?' he asked, shocked to hear the trembling of his voice, equally shocked to find that he was frightened of what the answer might be.

'No,' she said. 'I'm not married anymore. I couldn't satisfy my husband in bed, because my nightmares were growing worse and because I couldn't stop talking – dear God, as I'm talking right now – about the subject that obsessed me and refused to let me go: my mother's carnal interactions with Aleister

Crowley. Yes, this constant talking, this babbling, destroyed our sexual relationship and eventually convinced my husband that I was either neurotic or completely insane. So, in the end, Robert grew weary and frustrated beyond the point of endurance, until, after about three years, we both managed to face the fact that our marriage was doomed and had enough sense to call it a day. In 1939 I returned to Hollywood where, with the assistance of my forgiving and influential father, I became a portrait photographer for his studio – right back where I had started.'

Her voice trailed off again as she looked appealingly at Alex, reaching out to stroke his bare arm and fill him with warmth.

'What made you finally leave Hollywood?' he asked, wanting only to hear her voice.

'I hated the place,' she said, 'and everything it stood for, and so, again through a friend of my father's, I got a job with a New York newspaper, starting when I was twenty-seven years old, two days before the Japanese bombed Pearl Harbour.'

Shuddering, she straightened up, removing her hand from his wrist, then glanced at the starry sky and took a deep breath.

'It doesn't look like we're going to see those magical lights tonight,' she said.

'You're looking in the wrong direction,' Alex told her. 'The lights always materialize in the northern sky and you're looking south. But I don't think you'll see anything tonight. The Yano aren't playing their drums.'

Smiling wanly, Laura turned her empty glass between her fingers.

'In Hawaii,' she said, as if speaking to herself, 'shortly after the Japanese bombed Pearl Harbour, as I was photographing the terrible destruction, I was reminded of the sinking of the *Lusitania* on the day my mother took me to Aleister Crowley's apartment in New York. The sinking of that ship had encouraged America's involvement in the First World War, and I was frightened to think that I'd been given for my very first assignment – and only because, remarkably, no more experienced photographers were available – the job of photographing the attack that would lead to American involvement in the *Second* World War. I also remembered that Aleister Crowley himself had sailed on the *Lusitania* just a few months before it was sunk and that he had, according to what he told my mother, cursed it and all those who sailed on it.'

'I don't see what all this has to do with you.'

Laura didn't immediately reply, but simply sighed and stood up, holding her empty glass in one hand and turning away from the river, in order to look up at the odd patches of nocturnal sky visible through the densely packed trees of the darkened rainforest. Satisfied that there were no magical lights rising and falling, she spread the fingers of her free hand and lightly stroked Alex's hair. He wanted her to do more, to touch him everywhere, but he just sighed and closed his eyes, his heart beating too quickly.

'Because my mother told me that part of my curse was that wherever I went I'd be connected, in one way or another, with destruction and death. So when, during the very first day on my new job, the Japanese bombed Pearl Harbour and led us into another world war, I felt that what my mother had said must be true and that this was my curse.'

She removed her hand from his head and so he stood up immediately. When he saw her eyes focused steadily upon him, he felt his soul taking wing, rising up, rapturously and with ease, over his sea of confusion.

'You assume too much from too little,' he said. 'You may be seeing what's not there.'

He watched her expectantly, hardly aware of the chattering forest, his whole world contracted to the moonlight that shone in her green eyes. He was twice reflected there, miniaturized, adrift in space, and he travelled down through silence and time to where her soul joined with his. Then a sound, her voice, tumbling words, drew him back to the river bank, clasping one hand in the other, focused intently upon her.

'You think I'm not connected to destruction and death?' she said, as if having a perfectly normal conversation. 'Well, in June, 1945, I had a meeting in Los Angeles with my husband, Robert, to discuss final settlement of our pending divorce. When I met him, he seemed harassed and disturbed, and when I asked him what was wrong, he confided that his work in the secret establishment in Los Alamos had been taken over surreptitiously by the military and was, at that stage, virtually outside the control of the original research team of which Robert, my very idealistic husband, had been a fairly important member. The product of this new, military-dominated research, he informed me, would soon be terrifyingly evident for the whole world to see. I never saw Robert again – once the divorce was completed we stopped seeing each other – but not before I realized what he'd been talking about… On the sixth of August that same year, we Americans dropped the bomb on

Hiroshima. My husband, therefore, was one of the men who, without meaning to, contributed to the emergence of the Atomic Age and possibly set the groundwork for Doomsday.'

Alex felt hypnotized, her presence permeating his whole being and rendering him helpless. Was she sane or insane? Now it didn't matter to him. The only thing that mattered was to touch her and be touched in return.

'And that's when you left the newspaper?' he asked, not knowing what else to say.

'Yes,' she replied. 'And got the job with *National Geographic* and was immediately sent here. And what do I find here, Alex? Tell me it isn't true. A priest falls dead at my feet the minute I step off the boat, and then I see those lights, rising and falling impossibly, and am told that they represent the forces of good and evil in conflict at the Gateway to Eternity. Is that a coincidence, Alex? No, it's certainly not! That atomic bomb made me flee from America and then it brought me to you – to you, Alex, who dreamed about that bomb the night before it was dropped, and who, like me, have grown up without a mother. For believe me, Alex, I never really had a mother, only that spiteful, demented creature, and have had to endure the contempt of a father who doesn't know what parental love means. Oh, Alex, my Alex, we're so similar in so many ways, and I know – I just *know*! – that someone, or some power, has deliberately brought us together for some hidden purpose. I was *destined* to come here!'

At that moment, for the first time, Alex truly felt very strange, uprooted from security and thrown into the web of a conspiracy that seemed to defy all reason. Indeed, as he stood there, he was willing to believe all she had told him, feeling a common bond in their similar problems with their parents and convinced that he had, in some secret part of him, known her before. Had he dreamed about her husband's bomb? It certainly seemed that way. *A great ball of fire in the heavens; an umbrella of light*… The old Indian, Peruche, had had the very same dream and had told Alex that the dream was a sign that someone was coming to point the way to his, Alex's, future.

Should he tell Laura about that? No, he didn't think so. It was true that when he'd first met her, he'd felt instantly that he'd always known her, but something in her voice, in the words now crowding his head, made him feel that to confess how her arrival had been anticipated would send her, unprepared and ill informed, in pursuit of the Gateway. Thinking of this, and

of the possibility of losing her, Alex was filled with love for her.
‘God, I’m tired,’ she said, shaking her head from side to side. ‘Walk me back to my humble shack, my handsome escort. I think I’ll sleep well tonight.’
She locked her arm around his and held his hand in her own, then, her hips rocking against him, walked him across the clearing to the thatched huts on stilts. Most of the mission was in darkness, the buildings illuminated eerily in the moonlight, but light beamed out of Laura’s hut, formerly Father Symonds’ hut, and from the hut that Alex was sharing with Father Benedict. Alex thought fondly of the priest, knowing his anger wouldn’t last, but forgot him when he glanced sideways at Laura.
They stopped just in front of the hut, facing each other near the steps. Alex, feeling feverish, his heart beating fit to burst, leaned forward and kissed her on the lips, very lightly and chastely. Embarrassed by what he’d done, scarcely believing he had done it, he let go of her hand and stepped back, and then, to his horror, this time not believing his ears, heard the unreal sound of his own voice giving words to his feelings.
‘I love you,’ he said. ‘I really love you. That’s what my heart tells me.’
She pressed her fingers to his lips, preventing him from saying more, her smile at once tender and gently mocking, her eyes reflecting the moon and stars.
‘No, you don’t,’ she said. ‘I’m too old for you, Alex. You may believe you love me, but you don’t – though what you believe melts my heart.’
Removing her fingers from his lips, she blew him a kiss and turned away, climbing the steps to the hut’s veranda, opening the door and disappearing inside, while he stood there, the forest chattering all around him, joy and pain at war in his very soul as they had not been before.

Chapter Four

‘So,’ Laura said, ‘this is it: your daddy’s plantation.’ She smiled at him and squeezed his shoulder, then turned away from the jeep and glanced around her, squinting into the noon sun.

Mengrire watched her with hooded eyes, his shirtless body rippling with muscles, then he glanced with a certain muted appeal to Alex and spread his hands in the air. ‘Yes, Mengrire,’ Alex said, reading the expression on the

Indian's face. You can go and see your friends. Come back at two o'clock precisely, if we don't come for you first.' The Indian grinned at him and nodded, put his thumb up in the air, then turned and loped off across the road toward the huts of the workers. Alex returned his attention to Laura, saw her profile framed by the azure sky; his heart, turning over inside him, made the pain no less bearable.

'Is that where the workers live?' she asked, indicating the plank shacks and thatched huts that lined the intersecting roads at the far side of the lawns.

'Yes,' Alex said.
'Not exactly palaces, are they?'
'No, I'm afraid not.'
She smiled at him, obviously embarrassed by what

she had said. 'And are the other plantations pretty much the same?'

'Some are a lot better, some are worse, but most aren't doing well now. The end of the war has put an end to the rubber boom here; a lot of the plantations are being run down and will probably soon close. Most of the rubber trade has reverted to Malaya, so we're feeling the pinch.'

'Will you be sad to see it go?'

'It doesn't matter to me. I'll be going to England to further my education and learn good manners.'
'The education won't do you any harm and your manners are exquisite.' She took his hand, holding it affectionately in her own, kissed him lightly on the forehead and then raised her eyebrows. 'So,' she said, 'shall we go for the quick tour or see your dad first?'
'Let's see my father first. Get that over and done with.'
He had spoken without thinking and, once the words were out, realized what he had said by the look of surprise on Laura's face. Then he started walking, his right hand entwined with hers, leading her across the mowed lawns to his father's large house.
'Hot,' Laura said. 'Very hot. I've lost pounds already.'
'Yes,' Alex said. 'Hot.'

He didn’t know what else to say, her presence turning him inside out, his power of reasoning, which had recently been perfect, now swamped by emotional chaos. He had never known anyone like Laura, had never imagined anyone like her, and since first meeting her three weeks ago, when Father Symonds had dropped dead in front of her, he had repeatedly vowed his love to her as if in a trance. When he thought of it, he blushed (as even now he was blushing) but the impulse to express desire, which before had been dormant in him, continued to hammer relentlessly at his temples and burn in his racing heart.

Yet she had constantly rejected him, gently, often humorously, usually insisting that she was much too old for him and that his feelings, no matter how strong, would change soon enough. Was this true? He didn’t think so (a part of him died with each rejection, no matter how gentle) and he also felt, because of her warmth, because of how she touched and stroked him, that no matter what she claimed to the contrary, she felt deeply for him.

‘You’re not keen on your dad, are you?’ she asked him as they cut across the lawn, her index finger scratching the palm of his hand in a sensual manner.

‘I don’t see him that much,’ Alex replied, ‘so I can’t really say.’

The sun blazed down on the palm trees, on the forest of rubber trees behind them, and on the river that glittered black and silver beyond the roofs of the workers’ huts.

‘Rubbish! We’re talking about your *father*, Alex!’

‘Oh, he’s all right, I suppose. I just think he drinks too much. He says a lot of things that sound unpleasant, but it’s just the drink talking.’

‘But it hurts you, doesn’t it?’

‘No. Really, it doesn’t matter.’

‘It matters and it hurts. I sensed that my first night here. “My father won’t even know that I’m not a home,” you replied when discussing with Father Benedict whether or not you could spend the night in the mission – and there was, as I recall, just the slightest touch of bitterness in your voice.’

‘Well, maybe you’re right,’ Alex said. ‘It’s just one of those things.’

But it *did* matter and he knew it as he led Laura up the steps onto the veranda of the large house and saw his father stretched out on a low-slung hammock in the shade of the porch, some bottles on the table beside him well within arm’s reach. He was wearing a crumpled white shirt and unwashed matching trousers, his sleeves rolled up, his feet bare; and although his bloodshot eyes

widened in surprise when he saw them, he made no effort to sit up when they approached, but merely, with a lazy nod and a sardonic grin, acknowledged their presence.
‘My God!’ he said. ‘Visitors!’
His glance passed quickly over Alex in favour of Laura at whom he stared, with an almost suggestive admiration, for a considerable time. Laura, simply elegant in a sky-blue blouse, slacks and flat shoes, stared back, her tall body straight.
‘And I take it, Alex, that this wonderful creature you’ve brought to me is the American photojournalist?’
‘Yes, Father. Laura Wellman. Laura, this is my father.’
‘Frank Poulson,’ his father clarified promptly. ‘Please call me Frank.’ He waved his hand languidly towards the table just below him. ‘Would you care for a thirst-quencher, Laura? Or perhaps a medicinal.’
‘You have Scotch?’
‘Whiskey.’
‘Fine.’
‘It’s right there on the table.’
He didn’t move from where he lay, but merely grinned at Laura, cradling his gin and tonic in his lap, his fingers stroking the glass. Laura stared steadily at him, making no move towards the table, and Alex, feeling angry and embarrassed, rushed to fix her the drink. His hand was shaking when he poured it, still shaking when he put the ice in, aware that the silence had only been broken by the sound of the tumbling ice cubes. Then he handed the drink to Laura, received a nod, a sly smile, and saw her looking back at his father, then glancing around her.
‘You have a *chair* here?’ she asked.
‘It’s right behind you, Miss Wellman. Alex, don’t stand there like a dummy: fetch the lady a chair.’
Alex quickly fetched the chair – a seventeenthcentury, hard-backed Chippendale, its woodwork damaged and bleached by the sun, its padded seat torn
– and positioned it behind Laura, sliding it under her as she sat down and crossed her long legs. His father’s gaze roamed up and down her, as if inspecting merchandise, and eventually settled, with that same loathsome suggestiveness, on her slightly upraised face.

‘Thanks for the drink,’ Laura said, tilting the glass to her mouth and having a sip with what, to Alex, appeared to be an unexpected and exaggerated delicacy.
‘My pleasure, Miss Wellman. It’s always a treat to see a new face in this deplorable jungle.’
‘You don’t like it here?’
‘Most uncivilized – as I’m sure you already appreciate.’
‘I’m not sure what you mean by uncivilized.’
‘Rain and humidity, flies and mosquitoes, lack of proper sanitation and other basic amenities, ignorant bloody Indians and general Brazilian stupidity, little decent conversation, little money, no culture at all.’
‘It sounds like hell, Frank.’
‘It is, Laura.’
‘Then why do you stay here?’
Alex studied his father’s face and saw the brief crack in his humour, the sardonic smile leaving his lips and then returning again, dominating his dissipated good looks in some indefinable manner.
‘I stay here,’ he said, ‘because I’ve lived here most of my life and because, as long as I remain here, I’m king of my domain.’
‘You mean this plantation?’
‘This plantation – and everyone in it.’
Still lying there in the hammock, his slim body slunk low, he raised his glass to her in a mocking salute, which gesture she returned with a mockery that equalled his own. They both drank and then studied one another in a brief, oddly challenging silence that made Alex, whose throat had gone dry, feel extremely uneasy.
‘This plantation, if I may say so, doesn’t look like much of a domain. In fact, it looks about as dead as a door-nail.’
‘We have fallen upon unfortunate times, my rich American friend, but brave the situation with fortitude, this being the English way.’
‘The American way would be to get off your backside and do something about it.’
Alex felt shock, a sharp stabbing sensation through his nervous system, as the smile on his father’s face quivered and then came back to life again, the thin lips tightening reluctantly over teeth that had long required treatment.
‘The American way,’ his father said, ‘may well work in America, but here,

where the only thing worth having is the rubber, we're faced with the knowledge that our rubber is no longer required.' He had another drink, wiped his lips with the back of his free hand, then gazed at Laura with a sly, contemptuous smirk behind which, to Alex's consternation, was reluctant, and possibly base, admiration. 'And so, Laura – may I call you that? – I simply accept my fate, looking after my pig-ignorant Indian workers and praying the tide will turn eventually.'
'Your Indian workers don't seem that well looked after.'
'These are hard times all round.'
Laura offered no immediate reply, but simply raised her eyebrows and held her empty glass up in a questioning manner. Alex watched, fascinated, not understanding what was happening, as his father, taking note of Laura's empty glass, grinned and nodded his head. Laura leaned out of her chair, not quite standing but almost, poured a goodly portion of whiskey into her glass and then, sitting back in an upright position, again raised her glass in a mock salute and put the drink to her lips. She drank some of the whiskey (a considerable amount, Alex noticed) and then lowered the glass to her lap and smiled again at his father.
'Alex,' his father said, 'why don't you go off and read a good book? You look bored standing there.'
'No, Alex, it's all right.' Laura glanced at him and smiled, then, turning back to his father, said, 'Your son is my friend and I get to feeling lonely when he's not with me.'
'Ah, yes, my dear Laura, I've repeatedly asked Alex about you, but he's been remarkably reluctant to discuss you, which makes me think, rightly or wrongly, that he cares deeply for you.'
'We care deeply for each other,' Laura said, 'but in a way you might not understand.'
'Friendship, Miss Wellman – Laura – a very wonderful thing.'
'And do you have many friends around here?'
'Not many, I must confess. Not many at all.'
'Why not?'
'I don't get out much anymore. The good old days have gone.' He had another sip of his drink, crooked his lips in a sardonic grin, then ran his eyes up and down her body in a way that made Alex burn. His father? No, not his *father!* He could not bear to think of it. 'Why ask? Are you concerned for my

welfare? Do I look so pitiful?'
'You could do with a shave.'
'I will bear that in mind.'
'You could also do with washing your clothes.'
'I'll bear that in mind, also.'
Alex felt even more confused, not understanding what was happening, watching first one, then the other, seeing the smiles on both their faces, each challenging in its own way, the antagonism almost palpable in the air. And yet… and yet he felt uneasy, at once embarrassed and obscurely threatened, sensing that beneath the antagonism was a mutual attraction.
'I was going to show you the whole plantation,' he said desperately to Laura, 'and there's an awful lot still to be seen.'
'*What* was that?' his father asked sharply.
'I was talking to Laura,' Alex replied. 'I brought her here to show her around the plantation and I thought – '
'I'm sure Laura could do with another drink, Alex, so kindly fill up her glass.'
Alex took Laura's glass, which already was empty, noticed her fleeting, secret smile, poured the whiskey with an unusually shaky hand, and then handed the glass back. Laura thanked him, had a quick swallow of her drink, then turned back to his father.
'You have a lovely son here,' she said.
'You think so?' His father grinned maliciously. 'Like father, like son is the general supposition, though in this case I *do* have my doubts.'
'What the hell does that mean?'
'The way you say that makes you sound so American.'
'I want to know – '
'I wasn't insulting my own son; I merely suggest that father and son are different.'
'A blessing?'
'Perhaps. Is that whiskey to your taste?'
'I'm certainly enjoying it – and I *really* think you have a fine son.'
'He's just like his mother. An equally fine woman. She died, alas, just after he was born, which hasn't made his life easy.'
Alex closed his eyes briefly, feeling the pain obliterating him, seeing a blackness filled with stars, a swirling cosmos beyond time and space,

entering into the past where his radiant mother smiled in welcome, and then, when he opened his eyes again, hearing his father's malicious wit.
'Alex is far too private, too romantic and naive, and he spends too much time with the Indians, learning all the wrong things. God, the ignorant, unclean savages! We should put them all in cages and feed them bird-seed. Without them, this would have been a better place – perhaps even civilized.'
'You really seem to despise the Indians.'
'I've lived with them too long. And you, if I may say so, have already spent too much time in that ridiculous Christian mission, no doubt listening to Alex's other friend, Father Paul Benedict, and being brainwashed accordingly. Believe me, my dear, God may side with the priests, but not, I'm bound to say, with the Indians and their abominable ways.'
He rolled over in the hammock, balancing precariously on his side, and reached down to the table just below him to fill his glass up with gin. He did this and then added the tonic, dropped some ice cubes in and swirled them around, then rolled back to his original position without spilling a drop, his grin oddly attractive in his dissipated good looks, also still challenging and indecently suggestive in a manner that continued to baffle Alex and made him uneasy.
'How long has it been, my dear Laura? I mean, how long have you been here?'
'Three weeks,' Laura replied.
'Ah, yes, that's a long time – relatively speaking, of course; certainly long enough to have been a little brainwashed by the good Father Benedict. Has he already turned you into an Indian lover, saying that all men are equal in the eyes of God?'
'He didn't have to brainwash me into that; I already believed it.'
'Really?'
'Yes, really.'
'I'm always so touched by American democracy, by an image of the huddled masses in the boats that pass the Statue of Liberty – '
'Sarcasm is cheap.'
' – but I remain an Englishman, proud of the British Empire, and believe that the white man's mission in life is to educate, by bribery, blackmail or deceit, our generally primitive noggie brothers, or, where failing to do so, keep them firmly in their place. Alas, Alex, my only child, strongly disagrees with this,

having been influenced by that miserable priest and, even worse, by that rogue of an Indian, Peruche, who, were he not so damned old, would feel my whip on his bare back.'
'I believe *that*,' Laura said. 'The tales of your mistreatment of the Indians are, to say the least, legion.'
'And who told you such tales? My loving son? Or Father Paul Benedict?'
'Neither. It's the Indians who gossip. The very mention of your name is enough to make them angry or fearful, when they're not actually spitting on the ground to express their distaste. Naturally, as I'm sure you must know, most of the gossip concerns the *seringueiro* who died, reportedly after being mistreated by you. It's said that you – and, apparently, your only friend, Rollie Thatcher – work your rubber gatherers half to death, give them only a quarter of the legal minimum food requirement, fail to pass on to them their necessary anti-malaria tablets and instead sell them to the burgeoning pharmaceutical shops in Manaus for extra cash, and, finally, perhaps most disgustingly, exploit your position as *fazendeiro* by making use of your workers' women in ways that are best not mentioned here.'
'Most delicate of you, I'm sure. But really, you're just repeating a lot of nonsense. The Indians have always been notorious whiners and this clearly hasn't changed. Who's to say I work them too hard? Who's to say I feed them too little? Such judgements are surely subjective and should be ignored. As for the sale of their quinine tablets, I doubt that the law would let me get away with it; and in this place, where everyone knows everyone, they'd find out soon enough if I was really doing it.'
'It's the fact that everyone knows everyone in this place that makes them turn a blind eye to you.'
'Pure hypothesis, my dear. And regarding the socalled exploitation of the Indian women, let me just say – and I'll phrase this as delicately as I can – that I don't have to succumb to the use of physical force in order to obtain gratification of the kind you suggest. That I may enjoy a certain popularity amongst the ladies is hardly my fault – and jealousy, as both of us know, always speaks with a forked tongue. Your glass is empty, dear lady.'
Watching Laura as she leaned forward in her chair to pour herself another drink from the almost depleted bottle of whiskey, Alex felt shame and despair, the former because of his father's tasteless and slyly suggestive performance, the latter because Laura, while superficially antagonistic,

appeared to be responding to his father with thinly disguised pleasure. Did she really despise his father? Alex wasn't sure that she did. And as he watched her sip her drink and then smile in a secretive manner, his love for her, which repeatedly she had told him was just a passing thing, swirled up from the most sensitive depths of his soul to swamp all his defences.
'And does your good friend, Rollie Thatcher, visit you often to share in your excitements?'
'He comes to visit me, Miss Wellman, to share drinks and conversation, most of which revolves around our business with its manifest problems. As for the excitements you mention, well, what can I say? I'll leave those to your colourful imagination which, I've no doubt, is considerably more colourful than mine. But I reiterate, dear lady, that we mostly drink and discuss business, most of which concerns how to deal with our thick-headed and indescribably useless Indian workers. Indeed, even as of this minute, Rollie – who more than anyone else understands my particular problems – is helping me out by collecting, from the family of that half-wit Indian who died, compensation for all the unpaid debts that now lie on my desk.'
'What unpaid debts?'
'Food, drink, and, naturally, the accommodation used while working on the plantation – '
'You mean one of your own shacks.'
'Correct. And, of course, since the food and drink is purchased on credit from my own company stores – a system first devised, dear Laura, in the coal fields of your own democratic country – and since, but naturally, I'm the owner of the rented accommodation, the Indian owed more than he'd earned on the day he died. So, compensation is now required from his family.'
'You bastard.'
'Just call it democracy.'
'And what kind of compensation do you hope to get?'
'Alas, the man's family can offer me little. All the Indian's relatives were totally dependent upon him and his wife is unfortunately too old to be of any use to me. However, he does have a daughter who's healthy and strong enough to do work here on the plantation, so she'll be brought here to work in a certain capacity until such times as her father's debt has been paid off.'
'And, of course, since she has to eat and drink and sleep while she's working off the debt, she'll have to get credit from your company store and abide by

your self-serving rental arrangements, which means she may, in fact, be here forever as, more or less, unpaid labour.'
'Yes, that's the unfortunate truth of the matter.'
'And what, precisely, will be required of her here?'
'That hasn't yet been decided, though I'm sure we'll manage to come up with something. Perhaps, some other evening, when I'm having a drink with my good friend Rollie, you could return here and spend a quiet evening with us, during which you could pursue this matter to its final conclusion.'
'I don't think so.'
'You might enjoy it.'
'What makes you say that?'
'You strike me as a lady who might appreciate the new and unexpected.'
'Go to hell, Mr Poulson.'
Laura polished off her drink and put the glass back on the table, then, ignoring the smirk that creased the face of Alex's father, she turned to Alex and said, 'I think it's time we left for the rest of the tour.' Feeling a glowing inside him, something warm and uplifting, Alex stepped forward to pull her chair out of her way as she moved towards the veranda steps. His father still lay in the hammock, his body curved like an inverted bow, tapping his finger against the glass on his chest, his grin crooked and fixed.
'A pleasure to have met you,' he said to Laura's departing back, 'and I trust this will be but the first of many similar encounters.'
Laura stopped moving, her spine visibly stiffening, then she took a deep breath and turned around, that secretive smile on her face.
'Of course,' he said. 'That would be nice. Thanks a lot for the drinks.'
Alex stared at her, bewildered, as she walked to the steps, her tall body moving sinuously in the white clothes, her hips swaying in a possibly provocative manner that made his father's eyes widen. He felt a great woe, his uplifted spirits crashing down again, and as he studied his father's face, suddenly aware of its dissipation, he felt, also, for the very first time, a stab of real hatred.
Stunned, feeling his innocence collapsing, he turned away and followed Laura down the steps, to the smooth lawns surrounding the house. Laura smiled and reached out to him, reassuringly took his hand, then together they walked across the road that divided the lawns from the huts of the *seringueiros*. When they reached there, they stopped, both looking back at

the big house, their attention drawn to the jeep that had coughed its way around the curved driveway and was now braking to a halt before the steps they had walked down.
Rollie Thatcher got out of the jeep – Alex immediately recognized him – then snapped his fingers at the Indian girl who had been sitting beside him. He stepped back while she climbed down. She was clearly very young, about sixteen or seventeen, and beside the bloated and generally enormous Rollie Thatcher, she appeared too fragile and graceful to be real. The sky above the house was cloudy, bending the rays of the sun, and those long, oblique striations of wavering light dissolved the house in a silvery haze. Rollie Thatcher took hold of the girl, grabbing her shoulder, rudely shaking her, and then, when she had bowed her head demurely, he dragged her, none too gently, up the steps of the veranda, until both of them, like figures in a bad dream, had melted into the shadows.
Alex felt close to breaking, his throat dry, his heart beating, and he dug his fingers into Laura's palm and glanced desperately at her. She returned his stare, blindly, as if not really seeing him, and then, before he could question her, before he could work out what she was feeling, he saw her green eyes widening and slipping away to glance over his shoulder.
Following her gaze, he saw Mengrire, standing a short distance away, his chest heaving in and out as he breathed in painful spasms, his hands opening and closing in frustrated, violent motions, and his eyes, usually sly or completely unreadable, focused with glittering intensity on the veranda of the house into which, like a slave from the auction block, the Indian girl had been taken.
Mengrire was weeping.

Chapter Five

Embarrassed, Alex led Laura away from the weeping Indian, something inside him dying a little at what had transpired. Laura obviously understood this, since she gently squeezed his hand, and he glanced up, squinting against the sun, to see her flickering smile. Mengrire was trying to control himself, his sobs sounding like choking sounds, and then, before they had managed to get out of hearing range, they heard him saying, repeatedly and brokenly, '*Bastardo! Bastardo!*' Alex looked straight ahead, too mortified to look at

Laura, his shame and disgust almost too much to bear. When they crossed the first road and reached the *seringueiro's* shacks, he saw the Indians on their cramped verandas, the small, dark rooms behind them, and realized that he no longer had enough enthusiasm to show Laura around the whole plantation.

'Let's go and see Peruche,' he said. 'I think I'd rather do that right now.'
'Okay,' Laura said. 'Fine.'
She squeezed his hand again, clearly trying to reassure him, but instead unwittingly resurrecting his helpless love. He needed her desperately, like the night needs the moon, and was sure that if she disappeared from his life the light within him would burn out.
'Was that big fat brute Rollie Thatcher?' she asked.
'Yes.'
'And the Indian girl was the one whose father died?'
'Yes, I'm afraid so.'
'Mengrire's sweetheart?'
'I didn't know that before, but obviously that's the case. God, I feel terrible.'
'Does it bother you to talk about it?'
'No,' he said, 'it's all right.'
He saw her glancing at the veranda of the shack they were passing where two badly weathered *seringueiros* were playing a game of checkers, one using the metal caps from Coca Cola bottles, the other doing the same with Fanta bottles. Laura smiled, but uneasily, as if unsure of her own reactions, her eyes scanning the other verandas and the workers resting upon them – aged women in rickety chairs, old men rocking in their hammocks, children hanging over the wooden railings or playing with the chickens and dogs around the supports the kept the shacks well clear of the ground – and then she shook her head sadly, her hair swinging across her face, and glanced over the stone wall that led down to the plantation's *porto* at the vast, rippling surface of the Rio Negro and its solid green far bank.
'It's so wide,' she said, 'and so *quiet.* It always gives me the shivers.' She did in fact shiver, and chuckled deliciously, then gave his hand another squeeze while saying, 'Oh, Alex, this plantation is *diseased*… and so is your dad.'
'I thought you liked him,' Alex said, feeling guilty the minute he spoke. 'I mean, I had the impression that although you didn't like what he was saying, you were attracted to him in a way.'

‘He has a certain roguish charm,’ Laura responded, unconcerned, ‘and once, before the drink took command, must have been a pretty attractive man. What led to the drinking and cynicism? The death of your mother?’
They had turned right in front of the *porto* and were now walking alongside the river, cooled by the breeze and by the shadows of the trees, and Alex, given Laura’s question, found himself seizing up, some grief that had for too long been buried suddenly resurrected.
‘I don’t think so,’ he said. ‘It might have been, but I doubt it. I was too young to really know what was going on, but as far as I can tell my mother was visiting here with her family, my father swept her off her feet, they got married, and in a fairly short time realized that they just weren’t compatible. According to Antonio, my mother was a quiet woman, romantic and loyal, but my father, from adolescence on, was an inveterate womanizer, and my mother, though remaining loyal to him, was sickened by his many affairs. So, they were estranged even before I was born and I honestly don’t believe that my mother’s premature death concerned my father all that much.’
‘God, how you must hate him for that.’
‘No, not really. I’ve never felt hatred for anyone. I don’t believe in inherent evil or badness. I believe that most people are essentially good and then somehow get warped.’
‘You mean even the sinners are victims?’
‘Yes, something like that.’
Laura chuckled again, her head shaking, her throat curved and inviting. ‘Oh, boy,’ she said, ‘have *you* a lot to learn! You’re so pure, you’re like Adam in the Garden of Eden, and like him, doomed to grief.’ She leaned into him, wrapping her arm around him to give him a hug. ‘Well, maybe not,’ she said. ‘I hope not. Let’s get back to your dad.’
‘There’s nothing more to add,’ Alex said. ‘My father’s what he is. He once had a lot of money, but he squandered it as fast as he made it, then the rubber boom died out, he was temporarily saved by the war, and now, with the rubber trade reverting back to the Far East, he can’t keep this place going much longer and so he’s making the most of it.’
‘He’s trying to make as much money as quickly as possible before he has to close down.’
‘That’s right. And he’s doing it on the backs of the Indians, which I think is awful.’

‘But you still don’t hate him?’
‘I didn’t think so – at least not until this morning.’
‘Why this morning?’
‘Never mind.’
How could he tell her what he had felt when his father leered at her; or, perhaps worse, what he had felt when she smiled at his father? No words could describe the hurt – the intensity of it had shaken him – and now, as he turned away from the wide, blackstippled river and led her into the semi-darkness of a small stretch of forest, he understood that he was changing, losing his calm acceptance of life, and instead thrashing around in some dungeon of heart and mind where his thoughts and feelings, formerly in perfect harmony, were surrendering to chaos.
He had wanted to talk to someone about it, to have someone older guiding him, but even Father Benedict, his best friend with Antonio Bozzano, had seemed in his fevered imagination to suddenly have become someone unapproachable regarding the matter. He knew that Father Benedict didn’t approve of his addiction to Laura, had virtually told him so, and knowing this only made him resent the priest for the very first time. There were many first times now – suppressed anger, desire and fear – and as the trees thinned out, revealing the várzea lake and Peruche’s hut, he prayed that he would find a respite from his troubles in the Indian’s presence.
Coming to a standstill, Laura released his hand, then put her two hands to her mouth, her eyes widening as she took in the unexpected beauty of the clearing that led down to the várzea lake. Peruche’s hut was right in front of them, a miniature version of the large *malocas*, and the still lake was close behind it, shaped like a painter’s palette, water hyacinths and tropical lilies creating pink, purple and white patterns, the trunks of the ungurahui and palla trees surrounding it decorated with climbing plants, the leaf mosaics of peperomia, while the many lianas, using the tree trunks for support, writhed upward in bizarre green coils and loops into the downpouring sunlight. The whole clearing looked magical, almost dreamlike in its exotic perfection, this effect enhanced by the pale flowers of the cauliforous leaves that drifted down from the forest canopy high above like a magical rain.
‘It’s fantastic,’ Laura whispered.
‘Yes,’ Alex said, ‘it is.’
‘I feel like I’m on another planet.’

‘Maybe you are.’
‘Is that where Peruche lives? That thatched hut?’
‘Yes.’
‘This is wonderful.’
She shook her head in bemusement, then advanced to the hut, walking as if in a trance, a touching smile on her lips. Alex hurried to catch up with her, then passed her to reach the hut first; there, indicating that she should wait, he knelt on one knee and called to Peruche through the motionless cotton curtain that covered the entrance. Peruche’s voice came back instantly, a cracked, sepulchral sound, and Alex, indicating the Laura should follow him, pulled the curtain aside and went in, practically down on his knees.
Peruche was squatting on the baked-mud floor, his hands resting on his knees, the hands, just like the knees, webbed with blue veins on brown, withered skin. Laura entered after Alex, crawling in on hands and knees, then sat beside him and fixed her gaze on Peruche. The old Indian’s head was bowed over a small clay bowl placed just in front of him, his hammock, stretched out between two poles, hanging above him. He sniffed, then raised his head, sniffed again and opened his eyes, smiled affectionately at Alex and eventually looked directly at Laura, his rheumy eyes scarcely blinking.
‘Ah,’ he said, ‘the American woman.’
‘Yes,’ Laura said. ‘Laura Wellman.’
‘I know your name. Alex has told me much about you. He thinks highly of you.’
‘And of you,’ Laura said.
The old Indian smiled, leaned over the small clay bowl, sniffed deeply and then straightened up again, fixing his gaze once more on Laura.
‘You have come to the Amazon to take photographs?’
‘I was given the opportunity of coming here to take photos, but I wanted to come here anyway. Now that I’m here, I feel that I was *destined* to come here.’
‘Why?’
‘I think Alex has already told you.’
‘Alex has told me that you believe yourself to be possessed because of your mother’s relationship with an evil, possibly possessed, man. That you’re now possessed yourself may or may not be true – if you believe it strongly enough, you will make it come true

– but why did you want to come here and now feel it was destined?'
'Since childhood I've suffered terrible nightmares and dreams so bad that they convinced me I had to be possessed. So believing this about myself, I looked for some kind of escape and thought I might find, in this primeval jungle, another kind of reality through which, if I embrace it wholeheartedly, I might lose my old self.'
'And you believed that by losing your old self, you would also lose the demons that you believe are possessing you?'
'Yes.'
'And?'
'I believe there's another world, the world of the spirit, or soul, and that this world, which modern man has lost touch with, is a very real and accessible world to those who've remained closer to nature than the people I come from.'
'You mean more primitive people, such as we Amazonian Indians.'
'If you care to put it that way.'
Peruche nodded, not offended, then fixed his eyes on the small stone amulet around Alex's neck. Satisfied that the amulet was still there, he returned his eyes to Laura.
'So you felt that by finding this other world, you would set yourself free?'
'Yes, Peruche, I did – and still do. I feel that if what I believe to be true *is* true – that indeed I've been possessed by Satan or the powers of darkness – then I can only free myself from this evil by finding out exactly what it is.'
'You wish to know the nature of this evil?'
'And then cast it out.'
There was silence for a moment, distant thunder, more silence, then Peruche bowed his head and breathed deeply before looking up again.
'Why, when you arrived here, did you feel that you had been destined to come here?'
'Because wherever I go, I'm accompanied by death and destruction – '
'Alex told me.'
' – and when I stepped off the boat into Manaus, a man, a priest, fell dead at my feet.'
'You give importance to a natural event.'
'Maybe. But then I heard the Yano drums, saw the lights rise and fall, and was told of the Gateway over which the Yano Indians stand guard: the place

where time and space have no meaning and good battles with evil. So when I discovered that I'd come to a place like this, apparently by accident, I knew that I'd actually been *drawn* here for some special purpose.'
'To learn the nature of true evil?'
'That's part of it, certainly. As far as I'm concerned, the forces of darkness possessed me, and now, thousands of miles from my home, I'm close to their source. I don't think it's an accident.'
'Have you thought to question your sanity?'
'I've questioned it, but haven't yet come up with an answer.'
Laura's voice was steady, matching her unwavering gaze, and Peruche, after studying her for some time, nodded judiciously.
'There may be a purpose,' he said, 'but what it might be, I cannot say. Yet we dreamed of a ball of fire in the heavens, an umbrella of light… and then you, who felt haunted by that bomb, arrived here as expected.'
'As… *expected*?'
'We expected something,' Peruche said. 'We thought it might be an event. It was not an event, but an individual – and clearly you are that individual. Why you are here, I cannot say. It's for you to discover.'
'How will I discover it?'
'You will do so. One way or another.'
'I'm afraid.'
'Fear, also, is natural. It exists to be conquered.'
He raised his right hand, fingers outstretched like a fan, then waved it gently to and fro and lowered it back to his lap. Laura's eyes turned downward, widening in horror as they focused on her own left foot and saw the Goliath bird-eater spider. The largest spider in the world, it had been hidden beneath the fern leaves, but was now rising groggily, its long legs spread widely around its lightly-furred body, bending in and out with scissor-like movements as it shook the leaves off. Laura was mesmerised, drawing in her breath, too terrified to actually move, then she stopped breathing as the leaves fell of the spider's dark back and it advanced on her unprotected foot.
'Fear is natural,' Peruche reminded her. 'It exists to be conquered. Now face it and conquer it.'
The spider straddled Laura's foot, the urticating hairs on its fat body grazing her bare skin, its legs jerking in irregular, hypnotic movements until it settled upon her. She bit her lower lip, let her breath out, stared in horror at the

spider's eight eyes, then flicked her own eyes to her other foot and saw a giant anaconda snake.
The snake's jaws opened and closed, its forked tongue tentatively exploring her foot, and then its thick, pulsating body coiled over her legs.
Alex watched, not disturbed – or disturbed only for Laura – as the snake slid over her right leg, curved under her left, then arched back to slide over her trembling thighs and then leave the hut, passing between him and Laura to slip under the curtain. When he returned his gaze to Laura's other foot, the spider also had vanished.
Laura heaved a lengthy sigh, wiped the sweat from her forehead, then, her whole body still trembling, looked at Peruche.
'I didn't conquer my fear,' she said. 'I was virtually paralysed.'
'No, you did well.'
Laura gave Alex a nervous smile, let her trembling body settle, then returned her attention to Peruche, her voice, when she finally managed to speak, sounding firmer than usual.
'Do the Yano actually exist?'
'Yes.'
'How do I find them?'
'That is not for me to say.'
'Am I *supposed* to go and find them?'
'Only you can decide that.'
'Can you tell me about them?'
'What do you wish to know?'
'I'm told you were their prisoner long ago. I'd like to know about that.'
'There is little to tell. As you say, it was long ago. I was then but a child, a member of the Yanoama tribe, and I was taken by my father on a hunting expedition far north in the jungle where no Yanoama Indian had ever been before. It was the forbidden territory of the Yano – those who had been cast out of their original tribe and had, since their exile, been enslaved by the forces of darkness and compelled to take part in the most barbaric and corrupt of activities, outside normal humanity. The Yano captured our hunting party and had much pleasure with them, instantly beheading some, torturing the others for days on end, torturing them to death, until finally only my father and I were left, me being the only child captured. They had left us to the end for that very reason, and now, with the others in our hunting party all dead,

they wanted the finest, most diabolical sport of all: to skin my father alive, taking three days to do so, removing his flesh from the bone in countless thin strips; and I, at ten years old, was forced to pull those strips off, one after the other, my ears filled with my father's awful screaming, my hands soaked in his blood…'

He paused, watching Laura intently, then nodded, satisfied that she was listening, and started talking again.

'Yes, three days and nights, and the Yano greatly enjoyed my tears, and then later, when I was starving, they made me eat his stripped flesh… And then there were many months – how many I can't remember – when I lived in a world of nightmares and insanity, wanting only to die. But the Yano gave me *epena*, the drug I have in this bowl, and under its influence my mind expanded and beheld wondrous things. I saw heaven and hell, the faces of good and evil, that place where space curves down into a funnel and opens out into another world, known as the Otherworld. There I saw beauty and horror, knew exultation and terror, and then, when I had lost my former self, when the child in me had died, I was drawn back through the funnel on wings of song and returned to the Yano camp. Drums played and voices shrieked, lights rose and fell in the sky, there was human sacrifice and mass fornication under the moon and stars. I bore witness and survived, hearing the bedlam give way to silence, watching as the lights that rose and fell disappeared and the dawnlight, giving shape back to the jungle, wiped the stars from the sky. After that, I became their slave, to be used as they saw fit, as labour, as sport, as a repository for their seed, and yet I never became one of them – what they'd made me do had turned me even more against them – and so, when I was full grown, and had learned much of their magic, I escaped and made my way back here to await my time of returning.'

'You mean you intend going back there?'

'My heart tells me I must.'

'When?'

'Before I die.'

'And when will that be?'

'When my dreams give me warning.'

So saying, he leaned forward and sniffed deeply of the *epena*, the hallucinogenic drug in the clay bowl, then sat upright again, closed his hands, and started taking deep, rhythmic breaths as if exercising. Alex nodded at

Laura, indicating that they should leave, and as she rose onto her haunches and began inching backwards, Peruche started rocking to and fro while making a weird humming sound. He was clearly in a trance, exploring his liberated mind, and Laura stopped, fascinated, and might have remained that way for hours, but was encouraged by Alex, by way of pushing and prodding, to turn away, brush the curtain aside and then leave the hut.

The sun, which had been sinking, was now completely hidden behind black clouds which, low and boiling, seemed to be touching the forest canopy and had made the grey air sultry and humid. Thunder rumbled in spasms as the first of the raindrops fell, making remarkably loud splashing sounds on the languid papaya leaves. Laura shivered and glanced around her, obviously looking for the spider and snake, then, seeing nothing, shook her head from side to side in relief and took hold of Alex's hand.

'God,' she said, 'it's a lot later than I thought. How long were we in there?'

'A long time,' Alex said.

'Did I fall asleep?'

'No.'

'What about that giant spider and the snake?'

'They came and went through our minds.'

'They were real!'

'What we perceive through our senses we tend to think of as being real. I saw them, you saw them, Peruche saw them, so they must have been real.'

'Was I drunk? Did I drink too much whiskey? No, I don't think so. I know what I saw and felt in there: they were real and they *touched* me.'

'Then of course they were real.'

Thunder rumbled again and the rain fell more heavily, so Alex, entwining his fingers with Laura's, walked her away, back into the darkness of the forest which already, with the falling of the rain, was dripping constantly, noisily. Laura kept looking around her, rubbing her eyes and blinking repeatedly, but they soon emerged from the forest, into the dimming afternoon light, and then headed away from the *porto*, toward the shacks of the workers. By the time they had passed the shacks and reached the jeep in the parking lot, both of them were absolutely soaked and feeling the cold.

Mengrire was in the jeep, his forehead resting on the steering wheel, but he sat up when they approached, his brown eyes filled with grief. Alex blushed and avoided his gaze, turning aside to face Laura, his shame over his father

only eased by the love he felt for her. Something broke in him that instant: the last of his pride or adolescent inhibitions. He wanted to tell Laura just how much he needed her with him, but with Mengrire's wounded eyes fixed upon him, he could only squeeze her hand harder.
'I'll go straight back to the mission,' she said. 'Right now, I couldn't possibly face your dad. I think dinner with Father Benedict, if more sober, will be easier to handle.'
'Give him my regards.'
'I'll do that. Now look after yourself.'
She climbed into the jeep, resting her hand on his shoulder, and then, when she sat down, slid her hand lightly along his body to take hold of his wrist. He was filled with her, drowning in her, torn with love and despair, actually jealous that his good friend, Father Benedict, would soon be sharing his table with her while he, Alex, would spend another evening listening to the drunken revels of his father and, no doubt, Rollie Thatcher.
The thunder rumbled again, the rain suddenly became ferocious, and Laura, with the raindrops exploding in silvery spray off her body, making the darkness bright around her curvaceous, sensual form, reached out and took hold of the blackstone amulet hanging from Alex's neck.
'What is it?' she asked him.
'It's just an amulet,' he replied.
'No,' she said, 'you're lying. It's more than that. Peruche kept staring at it.'
'It's a sacred amulet,' Alex confessed. 'He told me to wear it always. He said that as long as I wore it, no harm would befall me. Here…' He did it impulsively, out of love and concern, his beating heart making him remove the amulet from his neck and press it into her hands. 'Take it. It's yours. Other than this, I've nothing of value to give you, so more than anything else in the world, I want you to have it.'
'No, Alex, no…' She opened the fist he had clenched, her upturned palm framing the amulet, the rain, as if being forced down by the rolling thunder, pouring onto her trembling fingers and spraying up around the amulet in a miniature fountain that splashed Alex's face. 'I can't… Really, I can't… I don't think I should.'
'Take it, Laura! Please take it! For me! It's all I have to give you!'
He closed her hand again, held it tightly and shook it vigorously, then turned to Mengrire and waved his free hand, indicating that the Indian should start

the jeep and drive Laura away. Raindrops glistened on Mengrire's brown face, rolled around his bright brown eyes, and he nodded, suppressing every thought and feeling, and took hold of the steering wheel. Alex held Laura's hand, hearing the thunder and hissing rain, kept holding it as the jeep roared into life, wheels churning up the mud around it, then started moving, dragging her hand out of his, and then carrying her away into the semi-darkness of ferocious rain and dusk's dim light.

The thunder roared and the lightning flashed as Alex walked back across the broad lawn and up the steps to the veranda of his father's large house. He felt bereaved and lost, his heart bursting out of his chest, and the world, which before had been God's gift, now seemed infinitely threatening. The rain fell in a torrent, drumming relentlessly on the floor of the veranda, as he opened the mesh-wire door and entered the house, the gloom further depressing him. *I love her*, he thought. *I love her and feel anguished. If love is good, where is the joy that this goodness should bring?*

The question was like a bell tolling sepulchrally in his mind, making its pronouncements with arrogant gravity, but offering no answer. He clenched his fists and kept walking, passing the rooms of this long, dark corridor, keeping his eyes fixed on the floor and silently praying for privacy. Thankfully, no one stopped him – he swallowed dryly with relief – and when he entered his own room, closing the door behind him with excessive care, he stretched out on the bed, closed his eyes and fell asleep almost instantly.

Had he slept? He wasn't sure. The rain was hammering on the roof. The thunder rumbled and the room was illuminated by flickering mosaics of lightning.

He saw Laura hovering above him, her green gaze enigmatic, her red hair hanging down around him as her voluptuous lips opened. He reached up to her, yearningly, in his mind if not his body, and then heard his father's laughter, at first ghostly, then clear, emanating from the main lounge just along the central corridor and entering his hearing with the brutality of a knife penetrating his heart.

The main lounge was not far away, just three doors down from his bedroom, and he heard, through the rumbling thunder, through the crackling sound

made by the lightning, someone weeping – a girl weeping – other laughter, loud and crude, then the weeping again, this time a little louder, and then his father's laughter once more, clearly drunken and salacious, mingling with the other laughter to form a joyless, mocking, ghastly chorus.

It was his father and Rollie Thatcher. They were both enjoying themselves. The person weeping, being the object of their sport, was obviously the Indian girl.

Mengrire's sweetheart.
Alex didn't know what to do. A child again, he felt afraid. The thunder roared, the lightning flashed, his ears were stung by that awful revelry, and then he also wept, crying aloud in helpless anguish, and rolled over on the bed, burying his face in the feathered pillow, his heart breaking as he surrendered completely to the image of Laura, spending himself in the stormy night.

Chapter Six

She broke his heart because she drank too much, favouring the deadly *caipirinha* cane alcohol, usually taking the first one just before noon and then continuing with shameless regularity until she retired to bed, regardless of how early or late that might be. Her drunkenness was not overt, but rather a condition of being, displayed only in her lovely eyes, which gradually developed a mild pink hue, and in her conversation which, as the day wore on, would become quicker and more compulsive, invariably wrapped possessively around her past with its demons, imaginary or otherwise, and mostly tragic events: her mother's insanity and suicide; her father's wealth and self-interest; Aleister Crowley and the *Lusitania*; her vivid dreams and horrible nightmares; her tenuous connection to disastrous events – Pearl Harbour and Hiroshima – and her single, childless marriage which, in its failure, had possibly contributed to her sensitive husband's premature passing.

Fact or fabrication? Possibly a little of each? Alex spent a lot of time wondering (and lost a lot of sleep doing so) but could neither find a

comprehensible answer nor subdue his deepening love and fascination.

He knew she was drunk when she talked too much, and at such times he felt real pain, but he also felt seduced and rendered helpless by what she was saying. Her words conjured up another world, a world totally alien to him, peopled with the rich and the powerful, with the rare and the exotic. Hollywood, Los Angeles, with its film studios and famous stars, its exclusive clubs and magnificent hotels, with its cinemas and restaurants and swimming pools and automobiles, and all the other luxuries of civilization. He heard about them from her ruby lips, constantly thought of them with wonder, and gradually, though her drinking broke his heart, sensed the sly growth of corruption in himself, wanting to fly back to America with her.

'Of *course* I'd take you back,' she said. 'You're my treasure and delight. And also because, dear Alex, your purity might help me to defeat the demons trying to possess me.'

'Stop talking about that,' he said.
'I *have* to talk about it,' she retorted. 'I can't let my guard down for a minute. I must constantly remind myself of what I'm about.'

'Don't have another drink.'
'Stop hectoring me. You sound just like Saint

Paul.'
'Saint Paul' was Father Benedict who had also disapproved, his brow wrinkling as he narrowed his eyes to watch her downing a fresh glass. Laura rarely missed such glances and actually appeared to take pleasure from them, almost defiantly drinking even more in his presence and, as far as Alex could see, deliberately exaggerating the degree of her inebriation. It was clear that they liked one another and were in constant conflict for that very reason, Father Benedict concerned that Laura was ruining herself because of the drinking, Laura resenting his repeated insinuations

that she could not look after herself.
‘God, you’re well named,’ she said to him. ‘Paul Benedict! Saint Paul! A puritan who drinks a fair bit himself while trying to stop others from doing it.’ ‘Don’t blaspheme,’ he replied. ‘And I only drink beer. I don’t drink *caipirinha* all day and retire to bed in a stupor.’
‘A *stupor*? When have you ever seen *me* in a stupor? I’ve never been in a stupor in my life, so your remark is insulting. And even if it *was* true, you should, as a priest, have some respect for the fact that I’m a lady and keep your mouth shut.’
The arguments, which were frequent, sometimes good-natured, sometimes not, took place all over the mission at any time of the day – over the breakfast table, in the crowded medical hut, in the small school at the edge of the clearing, in the jeep on the road to Manaus, often over dinner in the evenings – but mostly when Laura was on the move with her cameras, following the priest as he engaged in his numerous activities and was under pressure. They also occurred in the small boat, during those long stretches on the river, when the jungle was sliding past as a solid wall of tangled greenery and the sky directly above was dark with low, black storm clouds, about to unleash another rainfall and send the humidity soaring.
‘Please, Laura, not another one.’
‘Dammit, Father, it’s so hot!’
‘That rain’s going to fall any minute now and it’s more cooling than alcohol.’
‘Very funny, I’m sure.’
‘All that drinking won’t help you.’
‘It does. It helps me sleep at night. It keeps the nightmares at bay.’
‘Did you ever stop to think that it might be the other way around? That it’s the drink that might be *causing* the nightmares?’

‘Nonsense.’
‘Then prove it’s nonsense. Stop drinking for a few days. I’m sure that if you do, you’ll actually gain a few nights of good sleep. That drink has your head spinning.’
Alex bore witness to it, but through love’s dazzling prism, every gesture and inflexion being coloured dramatically by his inflamed and untrustworthy senses. His mind was a hall of mirrors, his perceptions distorted, turning his former grasp on reality into something more dangerous: shadows, reflections, odd words becoming echoes which, reverberating through his emotions, rebounded as something else.
‘You’re pretty cute when you furrow your brow in that ferocious manner, Father Benedict. You are, in fact, pretty attractive in a primitive way.’
‘Stop talking like that.’
‘Why?’
‘You’ll embarrass Alex.’
‘No, Father, not Alex – it’s *you* I embarrass.’ When they scowled at one another, Alex often felt
that they were actually smiling; when they smiled, he was sure he saw great tension hiding deep in their eyes. Laura mocked and teased the priest, sometimes shocked and outraged him, and the priest, in his turn, would be slyly mocking or brutally frank, either accepting her words or batting them back with no pretence of mercy. Sometimes Alex felt that the priest detested her, other times that he was fond of her, and occasionally, with a guilt that made him writhe, he was convinced that the priest, like his father, was secretly attracted to her. The jealousy, which for Alex was a totally new emotion, quietly stripped him of dignity and pride and made him squirm with selfloathing.
‘You embarrass me, Laura, only because of your

intemperance.’
‘Say no more, Father Benedict.’
They traversed the river a lot, using canoes or paddle steamers, visiting riverside shacks, floating villages, jungle *portos,* where Laura took countless photographs, frequently changing cameras, and filled one notebook after another with her urgent, almost frantically scribbled thoughts, usually biting her lower lip as she did so, her elegant brow wrinkling when she frowned. The floating villages were on great platforms, wooden shacks on enormous rafts, the esoteric foliage of the jungle actually grazing the thatched roofs – and Laura climbed the rickety ladders, and wandered amongst the impoverished tenants, with an enthusiasm that melted all resistance and opened all doors. The Indians thought her a glamorous alien – her long red hair fascinated them – and often, when she raised her camera to take a photo, they reached out tentatively to touch her, giggled like children when they did so, and then touched her again. She responded with similar wonder, apparently touching them with her spirit, and at such moments even Father Benedict could find little to criticise. Alex always carried her camera bag, only too pleased to assist her, glad to be away from the plantation, from the debaucheries of his father, and more comfortable under the oppressive sky above the wide, sullen river.
The river was a world apart, supporting a floating population, its immensely wide, calm surface either mud brown or black, bending and curving around the forest that came right to the water’s edge, then lapping and splashing against the wooden struts of small single-family jetties or the much higher, imposingly large floating villages that thrust out from green inlets, the forest foliage forming umbrellas over the clutter of shacks, shops and cafés, dropping white flowers and fern leaves over the numerous small boats that bobbed together on all sides of the great platforms. The

floating villages were near Manaus, not too far from its many *portos*, and the villages, like the *portos*, were a hive of activity, the Indians buying and selling, or bartering, their wares – *assai* berries, *plantains*, mangoes and papaya, cashew nuts and pineapples, *jenipapo* and *maracuja*, the fruit piled high on the stalls that swayed rhythmically on the floating platform, while from other stalls the varied fish –

pirarucu , *jaraqui*, *tambaqui*, *tucunare* and even the dreaded *piranha* – filled the air with a nostril-tuning aroma that encouraged either nausea or delicious hunger.

If Laura enjoyed the floating villages, she enjoyed the many *portos* even more, often laughing with delight as she and Alex, usually dropped off by Father Benedict, wandered along the narrow, sloping streets that led straight down to the river, past the openfronted shops stacked ceiling-high with boxes, past the children and dogs playing around the stalls soaked with wet fish, past the raised shacks that opened out to frame the *portos* where, between the battered boats, bobbing up and down in the splashing mud-brown water, rotten fruit and dead fish formed large carpets of brightly coloured and foul-smelling vomitus. The boats themselves were a gift to photography, mostly old and incredibly battered, many used as permanent homes as well as floating warehouses, these packed with large families, most of which could scarcely move, the cabins decorated with Virgin Marys and photographs of various popes, and with *Umbanda* and *Quimbanda* statues and trinkets, others with what seemed like hundreds of well used votive candles of countless colours. Here, also, in the *portos*, were a wide variety of nationalities – Argentinians and Venezuelans, Peruvians and Bolivians, Malays and Chinese and West Indians and Europeans, Jews and Syrians and Libyans – and in the melting pot of the bars and cafés, surrounded by noise and stench, Laura drank her *caipirinha* and stroked Alex’s hand and talked to him, her voice musical and seductive, about all she had seen.

‘It’s so *real* to me, Alex! So elemental and natural.

It’s so different, it completely overwhelms me at times, and yet I also feel I’ve known it all my life, as if born and raised here. I think I was meant to come here, Alex. Not *think* it: I *know* it! I felt it from the moment I set foot on the floating dock, and I’ve been more convinced of it every day, as I see more and more. I was here in another time, maybe the past, perhaps the future, but somehow, though I can’t quite explain it, I’ve had a separate existence here. I *belong* to this place; I’m part of it. I’m the river and sky.’

She was Alex’s river and sky, completely permeating his consciousness, flowing endlessly like a river through his thoughts, her face the ravishing sky of his erotic dreams. He wanted her – and her world – he wanted all that she represented; and ironically, the more she romanced about the Amazon, the more he romanced about America and the glamorous world she had sprung from. He had formerly loved the mighty river and felt at home in the boundless forest, but now, as Laura explored them both and let them weave their spell around her, he found himself drawing farther away from them and wanting what she had left behind her.

‘You’ll soon be going back,’ he said.
‘Don’t count on it,’ she responded. ‘The fact that I’ve only another week left in the mission doesn’t necessarily mean I’m going home.’
‘You might stay?’
‘I think I will. I can’t bear the thought of leaving. And, more important, I can’t leave until I’ve been to the place where the lights rise and fall when the Yano drums pound.’
‘You must never go there, Laura. Either you’d get lost or the Yano would kill you. And even if neither of those happened, we don’t know what you’d find there.’
‘I’d find release, Alex. I know it. I’d find the forces of light and darkness. When I heard about that so-called Gateway, about what the Yano are guarding, I knew that I’d been destined to come here and learn what my fate is.’
‘Promise me you won’t go into the jungle, that you’ll never do that.’
‘I can’t promise you anything.’
‘Your love?’
‘Not the kind you mean.’

‘I want everything. *All of it!*’
His own intensity could sometimes shock him – he was still getting used to it – and much of it sprang from his inability to gauge what she felt for him. His declaration of love amused her, but also clearly touched her, and when she wasn’t trying to let him down gently, she was actively flirting with him. He had previously noticed her need to touch – to touch objects and people – but with him, the touching seemed to be tied to her need to repeatedly excite him and then cool him down again. She would run her fingers along his bare arm, press his hand to her lips, stroke the blade of his sweating spine. If she did this with affection, she also did it to arouse him, after which she would mock his burning cheeks and ask him, with whole armies of innuendo in her tone, what it was in his thoughts that had made him blush. He didn’t know what to think, felt despair and glory at once, and in the end was convinced that she loved him but didn’t dare show it.
‘Of *course* I love you, Alex, but not like that. I’m too old for you, dearest.’
‘That doesn’t matter. I love you.’
‘You don’t know what love is. You just love the idea of *being* in love, which is something quite different. Oh, God, Alex, don’t talk to me of love. Love’s the dream that destroys us all. It’s an impulse that makes mockery of intelligence and renders pride obsolete. I had enough of it when I was young, in your beloved Hollywood, in my adolescence, because at that time, right up to when I married at twenty-one, I really was an exceptional beauty and looked more mature than my age. Men didn’t just think of me as attractive, they went crazy over me, and though they all called it love, they turned my life into hell on Earth with their lovelorn demands.’
For Alex it was hell to listen – or heaven and hell at once – one part of him in despair at the rejection of his love, the other part of him melting into ecstasy just because he was near her.
He saw the river dividing the jungle, seven kilometres from bank to bank, the dense forest hanging over the muddy water as if trying to claim it. They were on a boat south of Manaus, near the Meeting of the Waters, where the humus-blackened Rio Negro met the mud-brown Rio Solimoes and both flowed side by side without mingling, as if a thin line divided them. The effect was surrealistic, as if nature had been defeated, making another river of two distinct colours, flowing in parallel streams. And like the river, so his mind: his dark and bright visions of Laura, one vision offering the promise of

pleasure everlasting, the other offering a glimpse into the hell of bottomless anguish.

‘That was during the early 1930s, during the real heyday of the movies, when my father was filthy rich and too powerful to talk to mere mortals, and I was just about your age, if built a bit differently – God, yes, the men wanted me; they fell like dominoes at my feet – but all I ever felt was their sweaty hands, all I saw was their greed. Was it love or just lust? I don’t recall if I even thought about it. But I know that the only reason I went out with those men was that I couldn’t sleep at night because of my nightmares and so I desperately needed company during the day. I actually thought that love might save me – and that explains why I rushed into the marriage. But then, as I became even more in demand, I gradually realized just what they were after: a piece of prime steak beneath them.’

Alex studied the river, staring along the Rio Negro, seeing that limpid black surface ending sharply at a thin white beach that seemed to run for miles in either direction. A beach? No. As the boat moved nearer, he saw the Rio Solimoes, the striking sun making its brown surface grey where it ran, side by side, without mingling, with the vitreous water through which the boat was cruising. It was like the end of the world – the Rio Negro marked World’s End

– and there, where the black water appeared to abruptly end, the grey water, sometimes almost silvery, resembled the empty, sun-brightened haze over the mouth of a canyon – nothing but space beyond. The effect was weird, disorientating, like an optical illusion, but reflected, with terrible irony and accuracy, what he was feeling.

‘And so, Alex, I never knew real love – or, at least, your concept of love – and instead buried my fears in various affairs that brought me, if not tender feelings, a temporary oblivion. And then eventually I married. He was a good man, a decent man, but my fear of the darkness, my recurrent nightmares and premonitions, refused to let me lose myself in his embrace, and so even that ended. Love? Oh, yes, Alex, I love you – but not in that way!’

His need for her increased, making his nights long and sleepless, forcing him to writhe alone in his bed and drain himself in fraught silence. The shame of this was overwhelming, laying siege to his breaking heart, and he wondered how men lived with themselves when this dark desire tortured them. He wanted to talk to someone about it, particularly Father Benedict, but the

priest, in the wisdom of his age, already knew what was happening.
‘It’s madness, Alex. Madness! You must try to understand what’s happening. Laura Wellman is attractive, but she’s also twice your age – and, if I may say so without malice, she may not be all there. You comprehend what I’m saying, Alex? In every way your romance is pointless. The woman is twice your age, she’s unhappy and drinks too much, she’ll be leaving sooner or later to return to America, and no matter what you may think to the contrary, she’ll be going home alone. You’re not a man yet, Alex – a young man, but not a man – and at your age, particularly in a place like this, your growing passion is dangerous. Forget it, Alex. Don’t be hurt later. Accept the truth of this now.’
But Alex could not accept it, all his logic dissolved in passion, his desire for her blinding him to everything except the need to possess her. He thought about her night and day, his mind inflamed, his body burning, losing his old self in the corruption of his lust and tormented constantly by his new, adult yearnings. He tried to explain such yearnings to her, with a naive, impulsive frankness, shamelessly employing every form of emotional blackmail to break down her resistance. Yet resist she did, stroking his face but shaking her head, kissing him on the cheek but then laughing at him, embracing him but then pushing him away when his body responded.
‘Oh, God, Alex, you’re really so attractive… but you’re just too young for me.’
What was he to think? He had no way of knowing. She led him on to put him down, offered histrionic remorse, then embraced him and pushed him away again, whispering, ‘No, Alex! *No!*’ He was bewildered and wounded, now hopeful, now crushed, bouncing from the very heights to the depths and then back up again. Yet his pride knew no depths; he would sink as low as needs be; he closed his eyes to the possibility that he was shaming himself and only opened them long enough to shed the tears that she could lick from his burning cheeks. Yes, she licked and kissed his tears away, whispering, ‘Alex! Oh, Alex!’, her voice tremulous with compassion and despair at the extent of his need for her.
‘Don’t condescend to me,’ he said. ‘I’m nearly eighteen years old. I may not be experienced, but I know what I feel and my feeling for you is a pain that only you can ease for me. I want to hold you and touch you, to know you in that way, and I can’t stop myself from thinking about it and wanting it

desperately. You're all I care about, Laura. There's no one else. You've become my whole world.'
'You'll find someone else, Alex. Someone much more suitable. Next year, when you go to England, you'll meet friends your own age, and when you do, you'll probably find a young lady for whom you'll feel what you feel now, but even more so. What you feel for me can't possibly last. You need someone your own age.'
'Stop talking about my age all the time. Age has nothing to do with it.'
'Age is everything, Alex. I know… because I was once your age.'

Chapter Seven

She told him more about her past, about her numerous love affairs, wounding him deeply with each fresh revelation and bewildering him further. She'd had so many affairs and yet had never been in love, claiming to have remained virtually untouched in that particular manner. He could not understand that, not in someone so emotional, and her claims about her fear of the darkness struck him as facile. No, there had to be another reason, something more directly personal, and Alex, in the pain of his own unrequited love, stumbled like a drunkard in the night, trying to fathom the answers.

'I always felt like a whore,' she said. 'I couldn't give myself to it. I always felt that it was basically disgusting, not romantic at all. In fact, I thought it was not only disgusting but pretty ridiculous: two sweaty bodies heaving at one another in that singularly undignified manner, as mindless as two dogs in heat, and certainly not much more graceful. Was that love? Not for me. I wanted something more pure and gentle
– something that no man has so far been able to give me.'

He looked to the rainforest for consolation, staring across the wide river, his spirit sinking into the oppressive humidity and sullen grey sky. The Amazon was too quiet, its silence preying on the mind, drawing out of it buried doubts and fears, draining strength and volition. He reached out to Laura, taking her hand in his own, and then pressed his lips yearningly to her wrist, trying to suck up her tender skin. They were on a raft in a wide lake, not too far from the mission, and the sun, sinking slowly behind some clouds, turned the sky

into drifting pools of flame, with multicoloured grottoes and arches hovering over the burnished trees.

‘I’ll have to tell you,’ she continued. ‘I once had such an experience. It was as pure and tender as the moon and I’ll never forget it.’ Now she returned his gesture, holding his hand to her mouth, pressing her lips down on his naked wrist and letting her tongue set his blood on fire. ‘It was 1930,’ she said, ‘when I was sixteen years old and, already looking like a mature woman, being pursued constantly by older men. My mother encouraged such attentions – it was her ticket to those same men – but I always felt that I was being used as a commodity and I retreated accordingly. So, if I was attractive to them, doubtless I was even more so because I was so difficult to move, either emotionally or sexually. Am I shocking you, Alex?’

Yes, he was shocked, his cup of pain running over, but he shook his head in denial and avoided her gaze.
‘Of all the Hollywood friends of my parents, the one I most liked was an actress who shall go unnamed, but who, at that time, had acquired a fame of almost legendary proportions; and that actress, then twenty-five years old and at the pinnacle of her success, visited our home frequently and gave me a lot of badly needed attention.’
She stared steadily at him, not blinking for once, and he found himself looking down at the raft to avoid returning her gaze. The raft swayed slightly, turned a little, trying to drift away from its restraining rope. He took a deep breath, sucking in the warm air, feeling as if he was choking in the oppressive humidity.
‘Yes, Alex, she was twenty-five and I was sixteen, a disturbed and lonely adolescent who desperately needed the attention she gave me as she insinuated herself into the void left by my self-centred parents. Already, by then, I found the desires of men gross and was suffering my nightmares. Desperately needing someone to lean on, I found that person in my friend – the only friend I’d had so far – and so over the next two years our relationship subtly altered: at first she was a surrogate parent, then a friend and confidante, and finally, when I was eighteen years old, she became… my lover.’
The shock was considerable, making Alex’s heart leap, briefly stopping the

breath in his throat while his burning skin froze. A tremor or revulsion shook him, then passed away, leaving numbness, a great emptiness into which his mind was dropping as he silently screamed. Then he saw her long, fine fingers, curving gently around his wrist, shaking it lightly and then raising it up until his hand grazed her cheek.

'Oh, God,' Alex whispered, 'I can't stand this. You're not…?'

'No, Alex, I'm not. Believe me, I'm not. If my friend lived with that secret, I myself had no such secret: I didn't surrender to her out of sexual desire, but out of the need to take comfort from the only human being who had, up to that point, understood me and tried to comfort me. She didn't believe in black magic, didn't believe I was possessed, but feared that *my* belief in those things would do me great damage. And so, she supported me, and encouraged me to ignore my mother, and eventually taught me that love

– yes, Alex, *love* – could, no matter how it was expressed, help me transcend my deepest fears and make life seem worth living. She could have saved me, Alex – I thought she would – but it wasn't to be.'

Finishing off her *caipirinha*, she put the empty glass down, then took hold of his other wrist with her free hand and pulled him slightly into her.

'No, Alex, it wasn't to be. The forces of darkness would have their day. I sometimes think they actually used her in an attempt to destroy me. She taught me how to love, a love that briefly changed my life, but then, over a period of time, the pleasure we'd gained turned to guilt – my natural adolescent guilt; her guilt at having seduced me – and a feeling of shame which, because she was basically a puritan, she couldn't bear for long.'

As she stared intently at him, he felt his hands being pressed down on her thighs, and her warmth, coursing up between his fingers, soon flooded his loins. His senses scattered, his will dissolved, and he started losing himself.

'Am I tied to destructive events? Yes, Alex, I believe so. I was sure of it from a tender age and was even more sure of it when, during one of my parents' famous all-night parties, my mother found my friend and I in bed together. We hadn't meant to do it, we hadn't planned it at all, but something took hold of us

– desperation mixed with excitement; the knowledge that those people making pigs of themselves at that party would have reviled us as lesbian lovers – and so, in that atmosphere, and knowing that soon we'd have to part, we convinced ourselves that it would be perfectly safe and sneaked into my

bedroom. Then my mother came in and found us, and being drunk became hysterical, and soon half of the guests were crowding around her, staring down at the pair of us. Can you imagine it, Alex? Can you imagine our humiliation? My friend knew what that town was like; knew she'd never survive the scandal, and so the very next day, when in defiance of my parents I went to her home to console her, I found her draped, dead, over her bath… She had slit her own wrists.'

Alex looked down at his hands, saw the fingers outspread, one hand resting on each of Laura's thighs, her hands pressing on top of them. He felt cold and then hot, his fear consumed by his desire, and he couldn't prevent his fingers from curling down and digging, softly but demandingly, into her flesh. Startled, he looked up and saw the tears in her eyes, glistening as they dribbled down her high cheekbones to make damp spots on her blouse. She lifted her hands from his, slid them up his bare arms, took hold of the sleeves of his shirt and whispered her words with great passion.

'It's true, Alex! All true! And I can never forget it! I still dream about her body draped over that bloody bath and when I do, I waken up screaming. Do you understand what I've told you? Do you think I'm just drunk? She was dead and I was sick for years after and still haven't recovered. I need magic in my life – the sort of magic you possess – and I look for some such magic to rescue me from the nightmare I live in. Is it you, Alex? *Show me!'*

Alex saw her wild eyes, her trembling, sensual lips, then lowered his gaze to look at the amulet that now lay on her pulsating throat. Peruche's gift, a black stone, imbued with magical and protective properties, it drew him towards it and then into it, his lips tasting the smooth skin around it while Laura, her hands pressed to the nape of his neck, repeatedly kissed the top of his head, her lips pliant and moist. He felt the power coursing through him, as if coming from her body, then heard himself groaning in rapture when her tongue slid around his earlobe and down his neck until, with her wet, scalding lips, she sucked up his skin.

Something snapped and whipped through the air, making him jerk his head up, and he followed Laura's wandering gaze to see the restraining rope of the raft, obviously broken for no good reason, flying mysteriously above their heads and splashing into the water.

'Magic!' Laura hissed. '*Magic!*'

He drew the power from her body, through the amulet and into himself,

calling upon it as Peruche had taught him and letting it work by his faith. He was shaking, bathed in sweat, saw the streaming crimson sky, the sun an enormous ball of flame that set fire to the clouds. Magic: all magic. The whole of the natural world was magical. He breathed deeply as Laura's hands trailed over his body and then tugged at his shirt. He closed his eyes and then opened them again, fixing his gaze on the distant shore, and then the whole lake started moving, the water swirling around the raft, until eventually the raft itself started turning in slow, languid circles.

Laura glanced around, gasping. The limpid lake had become a whirlpool. The black water was swirling around them in a gentle but regular manner, sinking down a little in the middle and making the raft also turn as if on a revolving base that was invisibly supporting them.

'Oh, my God!' Laura whispered.

Alex pulled his shirt off, hardly knowing what he was doing, then lay down on his back on the raft and felt himself turning round and round. Glancing up, he saw the spinning sky, streams of colour, a kaleidoscope, until Laura's face, her red hair falling about him, filled his whole line of sight. Her eyes were like the forest, deeply green and impenetrable, and then he felt her breasts grazing his bare chest as she lowered herself on bent arms.

'Oh, my Alex,' she crooned. 'My strange, magical Alex. I can't let you make love to me. It just wouldn't be right. Oh, you poor boy, I know how you feel, but I can't let you do that.'

'*Please*, Laura…' He heard his own voice faraway. 'Don't leave me like this.'

'Oh, my Alex. Poor Alex…'

He closed his eyes as she undressed him, ashamed, terrified, his heart pounding and his body ethereal as the lake, now a vast, lazy whirlpool, made the raft slowly spin. There was noise, the rushing water, bulrushes and branches breaking free, but it all seemed distant and unreal, muffled behind his own harsh breathing. He was naked and erect, his quivering loins now the centre of his being, his every nerve and sensation concentrated on that member being stroked and massaged by her light fingers. Opening his eyes, he saw the sky, a kaleidoscope spinning above him, then her unravelled hair fell over him, covering his eyes and nose, while her tongue, sliding between his burning lips, explored the roof of his mouth.

He sucked her tongue, trying to swallow it, feeling her nipples against his

chest, first grazing it, then pressing firmly into it as her breasts flattened on top of him. Heat. Sublime softness. Silken skin against his skin, first warm, then hot, then sweat-slicked as breasts and thighs permeated him. He wanted to cleave to her, to enter her and become her, but when he tried to roll over she pressed him back with the delicious weight of her body. His own body was all sensation, rivulets and streams of feeling, the pores of his skin like grains of sand blowing over each other. The raft was hard against his spine, but still turning, and turning him, and he felt that he was drifting in space with heat and light passing through him.

He just drifted there, imprisoned, turning repeatedly in the sun, his fingers pressing and probing, relaying messages from her flesh, as if her blood, pouring out of her veins, was racing up through his own. The lake swirled around them with a soft rushing sound, their bodies turning as they intertwined, and that sound, which matched the rhythm of their beating hearts, became a strange, distant symphony. He went with the music, following its primal, hypnotic beat, its melody, *mezzo forte* all around him, raising his spirit on high. Laura's tongue was on his neck, licking his throat, sliding lower, her lips pressing upon and sucking at his chest and belly as his quivering spine arched. He shrank down to his centre, his whole being that aching member which, a pulsating shaft that defined his being, was thrusting up through her fingers. All that was, was in her fingers, being rhythmically squeezed and stroked, and then her soft hair fell upon him, covering his loins like a silken sheet, and her lips, following a lightly flicking tongue, drew him out of her fingers.

'God, yes!' he gasped. '*Please!*'

She drew him into her scalding breath, into the juices of her mouth, her tongue light as a feather as it licked him, her contracting lips making sensual sounds. She was swallowing him, all of him, ingesting him deliciously, melting his very marrow and bone to make him part of her substance: softness and heat, coursing blood, pounding heart, pores of flesh lapping in gentle waves over all that he was – pure feeling, sensation, chaotic impulses clashing, the raft turning beneath him, the sky spinning above, all quivering, breaking apart, his centre exploding out into her, an almost painfully intense excitation and pleasure, a jolting discharge of recurrent spasms – then he cried out – something meaningless – his voice reverberating within him, and reached down to clasp her rocking head in his hands, imprisoning her face at

his groin while she drained him completely, rendering him, in that moment of anguished ecstasy, a slave to her fantasy.

Chapter Eight

‘Oh, God!’ Laura cried. ‘What have I done? What have I *done*?’

She had rolled away from Alex and was propped up on an elbow, tugging the tangled hair out of her eyes and blinking repeatedly. The lake was still swirling magically, forming a whirlpool around them, but the rate of flow was slowing down, with the bulrushes and broken branches that had been torn free by the water now drifting freely around the raft. Alex was still flat on his back, not believing what had occurred, his body glowing in ecstatic renewal, a great dread and wonder in his soul. He flicked his eyes toward Laura, saw the curves of her reclining form, the dying rays of the sun casting black and crimson patterns on her white shirt and slacks and golden skin. She was not looking at him, but at the lake’s circular motion, and she kept her gaze fixed on that miracle until the water had ceased to flow. Only then, when the lake was still and the black water was reflecting the moonlight, did she turned her face towards him, her expression revealing bewilderment, her limbs visibly shaking.

‘I love you,’ Alex told her.
‘Oh, God,’ she said, ‘what happened?’
‘Did you hear me, Laura? I said I love you. I love

you, I want you, I need you, and I can’t let you go.’ ‘Was it a dream? Did it really happen? Did you
make it happen, Alex? Oh, Alex, what I did… I didn’t
mean to… It was the way the lake was moving – I
couldn’t believe what was happening – and then, you
seemed so unhappy, so much in need of me, and I
really felt compelled – yes, a compulsion – to make
you feel better.’ She glanced around her again, visibly
distraught, her hands fluttering in the air like wounded
birds, the darkness deepening about her. ‘But what a

terrible thing to do. And with someone your age! Oh, God, I don't know what got into me. *I don't know what I'm saying!*'

Her speech was indeed hysterical, springing randomly from her scattered thoughts, and listening to her, Alex felt love and pain in equal measure, the latter coiling tightly around the former like thorns strangling an orchid.

'Please, Laura, calm down. What I did was nothing special. All of nature is magical, *all* of it, and I simply use nature. Such powers aren't unusual, but are in fact within us all, but most men, through lack of faith, have lost such powers and cut themselves off from nature. What I showed you was nothing special; what you showed me was. I can still feel and smell you all over me, and my body is singing.'

'Please, Alex, don't talk like that. It was madness. *Madness!* Oh, God, I can't bear to even talk about it. What must you think of me?'

'I've already told you what I think. I love you, Laura, and always will. And now I want to make love to *you*. I'm not a child; I'm a man.'

'No, Alex, you don't love me. You can't *possibly* love me. You're confusing sex with love, physical desire with emotion, and if you didn't live here, isolated from those your own age, you'd soon know the difference between the two and love me a lot less.' 'You're insulting me by saying that.'

'I'm not insulting you; I'm trying to help you. Oh, Alex, my Alex, please forget what we did here today and don't mention it to anyone.'

He felt betrayed when she said that, his love turning to ashes, but then, when she sat upright and covered her mouth with her hands, he felt his heart going out to her again in compassion and love. Still lying there, he reached up through the darkness and

stroked her bare arm.
‘It’s our secret,’ he said. ‘I promise you, I won’t tell anyone – but I can’t promise that I’ll be able to forget it. And I want you to know that if I loved you before, I love you even more after this.’
Picking his shirt up off the raft, which had stopped turning in circles, she handed it to him in an abrupt manner. ‘Let’s go,’ she said. ‘I’m scared of this place. I don’t like it in darkness.’
The lake did look mysterious, its black surface reflecting the moonlight, the trees surrounding it a deeper darkness than the night and, in its eerie manner, gradually letting its diurnal silence surrender to the varied and exotic clamour of its hidden wild life: the twanging sound of *seringueiro* birds, the chattering of monkeys, a mass rustling as the branches came alive with creatures that slithered and crawled. Laura shivered and stared at him, offering a nervous smile, then gently placed her fingers on his hand and pushed it away from her arm. Her face, framed by her long red hair, was also framed by the stars, and he felt the pain of sorrow and love as he sat up beside her.
‘Kiss me,’ he said.
He was kneeling right in front of her, feeling her breath on his face as she stared back intently. She seemed hesitant and sober, lost in some private domain, but eventually she smiled – not too confidently, her lips shivering – and leaned forward and pressed her lips to his in a very light, nonprovocative manner. Nevertheless, the kiss aroused him, instantly filling his loins with heat, and he wanted to press her back onto the raft and then sink down on top of her. Doubtless she sensed his mood, because she abruptly stood up, running her fingers through her hair and then stepping back, the starbright

sky streaming over her.
‘Please, Alex, let’s go. I’m really quite frightened. After what I’ve just experienced, I don’t want to be on this raft in the darkness. This lake now scares me.’ ‘Of course,’ Alex said. Since the restraining rope had been snapped, the raft was drifting freely, but Alex took hold of Laura’s hand and helped her off, then guided her up the short, sloping bank to the jeep parked under the trees. They drove off immediately, following the crude, narrow track, ducking as foliage materialized out of the darkness and whipped over their heads. Laura was visibly nervous now, frightened of spiders or snakes falling onto her head, but the track soon opened out into a minor road where the cool air, making a low moaning sound, rushed past them on both sides. The road, which ran parallel to the river, would lead them back to the mission, and Alex, handling the car with practised ease, had only to keep his eyes peeled for straying animals, since no humans, either Indian or otherwise, would likely be out walking at night. He did not speak to Laura, not knowing what he could say, so was relieved when he heard her voice after a very long silence.
‘Alex, it was madness. Really, just *madness*. I feel so depraved, so… *ashamed*… and can’t believe that I did that.’
‘It was wonderful.’
‘*Please*, Alex!’
‘It was beautiful. I won’t ever forget it.’
Laura sighed and shook her head, then placed her hand on his shoulder, digging her fingers lightly into his skin, then letting the hand slide away. ‘Oh, dear God,’ she exclaimed, ‘you’re impossible! I just can’t believe this!’ She sighed again, looking left and right as the jungle slipped past them. ‘I was frightened back there,’ she said. ‘It was really terrifying. I was drunk at first, when I asked you to give me magic, but then, when I felt the raft sinking into that swirling water, the fear sobered me up and then dissolved my senses in

another way, making me feel part of the lake, of the raft, part of *you* – I mean part of you, Alex, flesh, blood and spirit. I felt that we were one, and as one were part of the elements, part of the water and the forest and the sky and the moon and stars, part of the whole. And only when it was over, when the swirling water was slowing down, did I realize just what I'd been doing and came back down to earth. God, it was frightening!' She inhaled and exhaled her breath. 'Tell me truthfully, Alex… How *did* you do that?' 'Do what?'
'The whirlpool. The spinning raft.'
'I willed it,' he replied. 'That's all. I simply willed it to happen.'
'And did it happen? Did it *actually* happen?' 'What do you think?'
'It happened.'
'You've just answered your own question.' He kept looking straight ahead, feeling secretive and vain, both of which vices were unexpected and slightly tainted the purity of his love. The forest road was completely dark, illuminated only by the jeep's headlights, the tops of the trees forming a narrow, starstudded avenue that appeared to run through the night sky, curving away and vanishing not far ahead, approximately over the mission camp.
'You learnt that magic from the Indians?' Laura asked him.
'Yes. From Peruche.'
'Was he *really* a prisoner of the Yano?'
'Yes. A long time ago.'
'And no one else has ever escaped from them?' 'Not as far as we know.'
'Peruche must have been incredibly lucky.' 'Or incredibly smart.'
He ducked to avoid some overhanging branches and saw Laura leaning forward, her hands crossed on the back of her head to form modest protection from the spiders, snakes or insects that could, she imagined, fall out of the trees. He smiled to see that, watched the

road where it curved right, then saw the silhouetted shapes of the mission's buildings at the end of the straight stretch.
'How much power do you really have?' Laura asked him. 'A lot? Or a little?'
'It's not *power*,' he replied. 'It's merely the faith that humans had long ago and have long since discarded.'
'Faith?'
'Faith in ones self as part of nature, able to make nature do our bidding just like our limbs.'
'But just how much can you work what we call miracles? I repeat: a lot or a little?'
'A little,' he replied. 'At least compared to Peruche. What you saw me do tonight was about as much as I can do – and even that I hadn't planned at all. I didn't know what would happen.'
'But you said you *willed* it to happen.'
'I willed *something* to happen. I didn't know what it would be. It's just that I love you so much and wanted you so desperately, I tried to impress myself upon you with all of my being. If I moved you, I also moved the water, but I hadn't expected that.'
'That was the first time you ever managed something like that?'
'Yes. Normally my gift is quite modest. I can make flowers open their petals, make inanimate objects move, let poisonous snakes and spiders rest upon me without fear of being harmed. According to Peruche, what I'm actually doing is hypnotizing them.'
'The snakes and spiders?'
'Yes.'
'And the flowers? The inanimate objects?' 'What I will, will be done.'
Laura visibly shivered as he drove into the mission camp, passing the medical hut and Father Benedict's

place, then braking in front of Laura's hut. He turned the jeep's headlights and ignition off, then started to climb down, but Laura's hand fell on his wrist and
held it firmly.
'*Please,* Alex,' she said, when he had turned back to face her, 'no matter what happens, don't tell anyone what went on today. I didn't want it to happen, I didn't plan for it to happen, and when it happened I was just as surprised as you. And today of all days, please believe me, I didn't want that of all things. So, Alex, *please* don't say anything to anyone. It's your secret – and mine.'
Wondering just what she was really saying, unable to turn away from her, he desperately wanted to pull her to him and hug her. He felt her fingers around his wrist, her grip tightening and relaxing repeatedly, skin against skin, bone on bone, her blood warming his blood.
'God, I love you,' he whispered.
Letting go of his wrist, she pressed her fingers to his lips, smiling at him with what seemed to be her former assurance before letting the hand fall away. He reached out to pull her to him, feeling dizzy from her proximity, but she quickly, gracefully, slid away from him, swung her legs out of the jeep and then rushed to her hut. She went up the few steps, opened the door and turned back briefly, blew him a kiss and stepped inside, letting the door slam behind her. Alex looked at the closed door for a long time, then he sighed and climbed down.
The night was blessedly cool, the stars gloriously abundant, and as he walked to Father Benedict's hut he glanced up at the pock-marked moon. It was like a single eye staring down at him, seeming to follow his forward movement, and he felt its mysterious,
magnetic pull on his body and mind. Nature was magical, both without and

within, and within him he was reaching out for Laura and her transcendent presence. She was doubtful, afraid, constantly anxious about her age, but he knew that without the years between them, she would have had no such doubts, that she would have more confidently felt for him the same as he felt for her. No, he was not a child – he was a man and knew himself – and now, when he lowered his gaze, blinking against the light of Father Benedict's hut, he let his spirit soar to the stars on the wings of his faith.

Chapter Nine

The priest was sitting behind a small desk at the far side of his bed, a cigarette in one hand, a bottle of beer in the other, a pair of spectacles balanced precariously on his nose, scribbling some notes. He glanced up when Alex entered, dropped his pen and smiled, then clasped his hands high above his head and cracked his knuckles.

'Ah,' he said, 'Miss Wellman's guide has returned.

Did you have a good day?'
'Yes.'
'And Miss Wellman?'
'I think she enjoyed herself.'
Father Benedict lowered his hands back to the

desk and picked up his bottle of beer. 'Well,' he said, holding up the bottle, 'here's to you. And I bless you for this wonderful excuse to stop doing my homework.'

'What are you writing?'
'More begging letters. It's how the mission survives.' He had a sip of beer, inhaled on his cigarette, blew a cloud of smoke to the room and settled back in his chair. 'You're looking fairly sombre,' he said. 'Do you wish to confess?'

'Pardon?'
'Only joking, my son. You just don't seem your normal calm self, so I made

a small joke. Don’t look so startled, my young friend; I know you’ve no sins to worry about.’ He stubbed his cigarette out in an earthen ashtray and then settled back again. ‘On the other hand,’ he continued, ‘I can see there’s little doubt that once more the proximity of Miss Wellman has caused you great pain. You haven’t listened to a word I’ve said, have you? You still pine for that woman, no matter how much older than you she is. You still hope to win her heart.’

‘I love her, Father.’ Alex couldn’t say much more. Everyone knew what he felt for Laura – Father Benedict, Antonio Bozzano, even, God help him, his own father – so there was little point in trying to hide it now. Yet what had happened earlier, that delirious dalliance on the raft, was something he had promised not to mention, though he was bursting to shout it out to the whole world. ‘You all think it’ll pass, but that’s just because you’re older. You can’t appreciate what I’m feeling – and what I’m feeling simply can’t be false. I’ll love her forever.’

‘I repeat: you’re too young to fully understand yourself; and your feelings for Miss Wellman, no matter how intense right now, will gradually fade when she leaves here.’

‘She isn’t leaving yet. We already know that. She sent her resignation to the magazine she works for and is going to stay on here indefinitely.’

‘Indefinite, dear Alex, is not forever – and sooner or later, when she’s rid of her foolish notions about the jungle, she’ll pack her bags and returned to America, where she truly belongs.’

‘By that time she’ll understand that she also loves me.’

‘I’d seriously doubt that.’ The priest shook his head sadly from side to side and then sipped some more beer. ‘She *does* love you in a certain way, Alex. It’s known as affection. It’s not – do you hear me? – it’s emphatically not the kind of love you so vividly imagine.’

‘You’re making fun of me.’

‘No, Alex, I’m not. I’m trying to save you from future grief.’

Realizing that he was still standing, Alex sat on the edge of the canvas camp bed, clasping his hands and sliding them down between his knees to rest on the floor. He felt hot and flustered, his mind reeling from the day’s events, all the pain and glory of love churning inside him and making him suffer like a condemned man repeatedly offered the hope of life.

‘I can’t work out what you really think of her,’ he said. ‘Sometimes you seem

so considerate and helpful; other times you become rather distant and even, unusually, downright rude.'
'I don't approve of her constant, heavy drinking,' the priest said, 'and of course it gets my blood boiling.'
'It's her business if she drinks.'
'We're all one another's business. Besides which, when Miss Wellman drinks too much, she tends to be far too risqué.'
'You mean all that talk about Hollywood?'
'Yes, I suppose I do. I'm not at all sure that I approve of you listening to her countless tales of promiscuity in the Hollywood hills. Nor, come to think of it, do I care for her belief that she's possessed by evil spirits and requires her own peculiar form of exorcism, namely, since she's here, via the intervention of the possibly mythical Yano Indians.'
'The Yano Indians aren't mythical, Father, and it's possible that Laura *has* been sent here to find them.'
'Sent by whom? And for what purpose?'
'I don't know.'
'No, my son, you don't know. And neither does old Peruche. And I really do think that to suggest such an idea to Miss Wellman, who's possibly already unstable, is to run the risk of incalculable damage – certainly to her and possibly in other ways that we can't understand.'
'I love her. That's all that matters to me. The rest doesn't interest me.'
Father Benedict lit another cigarette, then blew more smoke in Alex's direction. 'Thank God,' he said, 'you'll soon be going to England to further your sadly lacking education. You might also learn something of the real world and meet young ladies your own age.'
'I'm hoping to persuade Laura to come with me. And I'm sure she will.'
'You're daydreaming, Alex. This passion has surely turned your head. She wouldn't even consider it, because she knows you're too young for her. Besides, your father would never permit it, which means it won't happen.'
'You're all against me,' Alex said.
'We are not. As you'll learn in due course.'
Alex shifted uncomfortably, feeling horribly guilty, realizing that he had changed over the past few weeks and probably not for the better. Jealousy, suspicion, resentment and rage – all of these had manifested themselves at one time or another, and all of them, prior to the arrival of Laura, had been

totally alien to him. Now, in the presence of Father Benedict, his guilt increased tenfold, because he knew that the priest, his good friend, was only concerned for his future.

Yet what did the priest, a celibate, know of passionate love? And was not Antonio Bozzano too old to still believe in it? And how could his own father, with his degenerate ways, have the nerve to make suggestive remarks, as he had done so often recently, intimating that Laura was a woman of exotic tastes and dubious morals?

Indeed, his father was the worst offender, mocking him with relentless zeal, either embarrassing him or inciting him to anger with his acidulous humour. Alex had hated him for it, particularly when it took place at home, usually in the presence of the revolting Rollie Thatcher and the unfortunate Indian girl, Mengrire's sweetheart, who always seemed to be in the room. But he hated him even more when, in Manaus or here at the mission, he came out with the same sort of suggestive remarks to Laura herself. Alex's loathing, at such times, was considerably more complex, being based, as it certainly was, not only on his father's sarcasm, but on the fact that Laura too often returned the sarcasm with her own brand of equally sarcastic wit, which was, however, at least in Alex's imagination, also flirtatious. There were, in fact, times when he thought that Laura found his father attractive

– and this possibility, more than any other, made him writhe in sheer torment.

'You all criticise her,' he said, despising himself even as he spoke, but needing to strike out. 'You complain about her drinking and about the way she talks, but really, you're just jealous that she gives me so much attention. I hate to say this, Father, but it's true – and it applies even to you.'

He expected the priest to explode, but instead he just smiled gently, raising his bottle of beer in a mock toast.

'Well, Alex,' he said, 'if you believe it, I won't try denying it. But you should be comforted by the fact, at least regarding myself, that the new priest, Father Symonds' replacement, arrives in two days time, after which Miss Wellman will to vacate her hut and take leave of the mission.'

'Good,' Alex said, feeling ashamed of his own vindictiveness. 'I can see her alone in her chosen hotel in Manaus, well away from your prying eyes.'

Clearly startled by that remark, Father Benedict jerked upright, leaning forward in his chair with his sunburnt brow furrowing.

'Good God, Alex,' he said, 'do you mean you haven't heard? Are you saying

that Laura hasn't even told you yet?'
'Told me what?' Alex replied, now sitting upright himself, automatically clenching his fists and feeling his heart race. '*Told me what?*'
'Laura's not going to a hotel in Manaus. She decided she didn't want to be alone, so she had words with your father and he's agreed to let her stay in the plantation. He's offered her a room in your house and that's where she'll be staying.'
'In my *father's* house? She'll be staying with *us*?'
'That's what's been arranged, my son.'
Alex recoiled with shock, scarcely able to believe it, then his shock changed to joy and returned to shock and kept bouncing to and fro, from one to the other. He stood up and went outside and remained there for a long time, gazing up through the towering trees to the pale moon and stars, letting the chattering of the forest fill his ears and distract his mind from its torments. She had surprised him again.

Chapter Ten

Something had changed in Laura after the incident on the raft, and that change became even more apparent when she moved into the plantation, staying in a room in the modest guest wing and otherwise having the run of the main house. She seemed more intense, more distracted and remote, and to Alex's dismay she drank even more than usual, encouraged in this activity by his father, with whom she spent many evenings, sometimes just with him and Alex, other times with his father and Rollie Thatcher, though not with the unfortunate Indian girl who had become their plaything. And now, when Laura was drinking, during the interminable evenings in that decaying lounge, she became more visibly drunk, her speech slurred and repetitive, her eyes blinking repeatedly and her hands weaving arabesques in the dimly lit, yellowish, smoke-filled air.

'Another drink, Laura? It's delightful to have you here. A real pleasure to once more have a lady in this sad house, particularly one with such a colourful background.'

'Not all that colourful, Frank.'

‘Oh, no, I beg to differ. Any woman whose mother had carnal knowledge of Aleister Crowley must surely be painted in certain colours, all of them bright.’
‘I’m not sure how to take that statement.’
‘A compliment, I assure you, Laura, I merely mean that your chequered past, which you unravel with such eloquence, constitutes the finest entertainment that I’ve had for a considerable time.’
For Alex the whole world changed, turning itself inside out, Laura’s presence in the same house, and her familiarity with his father, destroying the remnants of his innocence and filling him with possessiveness and jealousy, resentment and anger. He did not know how to respond to Laura’s move into the big house, on the one hand filled with joy that he would be seeing her every day, on the other filled with suspicion and dread that she would also be sharing the same house as his father to whom, not matter how she was behaving to the contrary, she was clearly attracted in an odd, slightly competitive manner. So, he was thrilled to have Laura so close to him; not so thrilled when, after dinner every evening, she joined his father, and sometimes Rollie Thatcher, in that large and very gloomy main room, where they all drank and talked too much.
Nevertheless, Laura’s daily proximity had a dramatic effect on him, laying waste to his senses, further inflaming his already feverish imagination, and forcing him to lie on a bed of nails during his long, anguished nights. She had not touched him seriously since that evening on the raft, and his hurt at this apparent neglect, and his confusion about what the day had meant to her, made him leap back and forth between the belief that she secretly loved him and the conviction that in truth she was playing with him and quietly mocking him.
Yet he was convinced that she had changed, that he had lost some part of her, but that she might have returned his love had it not been for the fear that was making her drink more every day and deliberately keeping him at arm’s length, doing so (he convinced himself) by spending most of her evenings with his father, drinking heavily in that dim room, trading anecdotes, reminiscences and *bon mots* with an ambiguous flirtatiousness. She talked far too much, recounting the history she had given Alex, making him feel oddly betrayed and painfully wounded, his heart breaking when his father responded to Laura’s anxieties with his customary sarcasm.

‘So you think you’re possessed, Laura? And can’t sleep at nights? Might I offer the suggestion that you might in fact be suffering from that perfectly commonplace itch which, in all we pitiful mortals, occasionally needs to be scratched?’
‘May I suggest, Frank, that that sounds like wishful thinking. I can’t sleep because of my bad dreams and I *know* what’s causing them.’
‘You’re simply a dissatisfied woman. Your whole history attests to that. You had an unhappy childhood, you matured far too early, you received too many unwanted attentions from too many older men, and this, alas, made you suspicious of the whole rotten male species.’
‘No, Frank, it was really much more than that. It was – ’
‘Then of course there was your father, who should have loved you and cherished you, but instead methodically drove your mother crazy and then, when she passed on, brought his numerous women back home and thus increased your already well entrenched antagonism towards all base men. After that, in a kind of panic, perhaps to prove to yourself that you were normal, you married a man you didn’t love, and naturally, when the marriage failed, you had to find an excuse for it, doing so by retreating further behind your colourful story of demonic possession, escaping into this elaborate fantasy like a nun entering a convent.’
‘I wasn’t entering *anything*. I was trying to escape from the demons possessing me. I was trying to find protection from my fear of what the darkness might bring to me.’
‘An elaborate fantasy, Laura. What you suffer from, my dear, isn’t fear of the forces of darkness, but fear of your own helpless dependency on the sex you despise. The devil you fear is within yourself – and I could help you get rid of that.’
Alex sat with them too often, hardly knowing what he was doing there, enduring heartache and confusion as he glanced from one to the other and tried to work out what was going on between them, his speculations destroying him.
As it was with Father Benedict, so it was in that awful room: his father sneered constantly at Laura, poured relentless sarcasm upon her – mocking her ‘spoilt’ Hollywood childhood, her ‘pitiful belief in the occult’, her failed marriage and various love affairs and ‘demented retreat’ to the Amazon – and Laura took it all from him, sparring with him, but not seriously, actually

responding to him with what seemed, at least to Alex's tortured perceptions, helpless admiration and even affection, coming alive with him.
'So, Laura my dear, let me get the picture straight. You were divorced from your husband, you moved back to Hollywood, and then, still convinced that you'd been possessed, you started sliding into promiscuity, started drinking too much – as both of us, of course, are doing right now – and then you went to work for a New York newspaper, photographed the aftermath of the attack on Pearl Harbour, and after that, being finally convinced that, as your mother had formerly intimated, you were in some way connected to destructive events, you became even more neurotic and drifted into a life of depressing degeneracy, by which I mean alcohol and sex.'
'Yes, Frank, that's right. By that time I'd come to understand that I'd only married in the hope of escaping my fear of the darkness, and that I would only know genuine love when I'd been exorcised of the demons that were surely possessing me.'
'This is truly the most wonderfully ludicrous story. You should put it in writing.'
If Alex had previously forgiven his father for his distasteful and vicious activities, he could not, in those obliquely squalid hours, forgive him for anything. Indeed, he came to despise his father, perhaps even to hate him, sensing in every word, in every smirk and innuendo, a contempt that Laura appeared to be blind to, or simply ignored. Their rapport bewildered him, cutting the ground from under his feet, making him feel immature and insecure, his former levelheadedness deserting him and leaving him dizzy with rage.
'I doubt that you'll understand this, Frank, but my promiscuity – which is clearly what thrills you – was not for sexual satisfaction, but instead was a means of avoiding having to spend my nights alone – '
'You were frightened of the bogey men.'
' – and of finding, if not sexual satisfaction, at least a temporary oblivion. Naturally this didn't work
– you don't find oblivion, or escape, in loveless sex – and so I started suffering a great deal of self-disgust as I became less choosy about my lovers and increasingly indiscriminate in the way I went about picking them up. I woke up once too often in a strange bed with a stranger beside me, hardly knowing how I'd got there or what we'd done together. I rarely went after

decent men – I didn't want a lasting relationship
– and so I found myself with selfish, self-centred men, some of whom was positively dangerous.'
'And that's why you happily came to the Amazon? To get away from your sordid self?'
'Yes, Frank, I suppose so. In fact, shortly after we dropped the bombs on Hiroshima and Nagasaki – and, incidentally, shortly after my divorce was finalized – one of my casual pick-ups beat me so badly that I had to be hospitalized for a few days. That was when, to put it mildly, I knew it was time for a change, so when my father visited me in the hospital and chastised me for the social embarrassment my activities were causing him, I told him I wanted to leave the country and go far away – from away from him, from America, from civilization in general. Subsequently, after my brief stint with the newspaper that sent me to Pearl Harbour, my well-connected father got me the assignment with *National Geographic*… the assignment that brought me to the Amazon, the Yano drumming, and those strange lights that rise and fall in the night sky. Now you know all there is to know.'
Drunk, they forgot Alex, talking as if he wasn't there, unaware of the pain they were causing him as Laura's past was unravelled. Laura talked as if in a trance, sparred enthusiastically with Alex's father, and often drank until she could hardly stand up, her eyes becoming bloodshot and distracted, her movements unsteady.
Alex listened and watched, in despair at what was said, understanding that his father was physically attracted to Laura and sometimes believing, if reluctantly, that she returned that attraction. This realization shocked him further, tainting his image of her, throwing a different kind of light on the stories she told and bringing his bewilderment to the boil when his love turned to resentment.
'Do you have to drink so much?' he asked her. 'And especially with *him*?'
'I *like* to drink,' she replied. 'And now you're sounding like Father Benedict. And further, young man, since I'm actually staying in your house, I can't see how I could actually *avoid* talking to your father. You think I should spend every evening in my goddamned bedroom?'
'He makes fun of you. He sneers at you. He insults you and you just take it. And not only do you take it: you actually seem to enjoy his abuse. It's embarrassing just being here.'

‘It’s not as bad as you make it sound. And you shouldn’t talk that way about your father. I know he drinks too much, as I do, and can be cruel and sarcastic, but it’s possible he’s that way because he’s lonely and misunderstood, hiding behind his cruelties because he doesn’t know how to express his finer feelings. It’s just possible, Alex.’
‘That’s ridiculous and you know it!’
‘Stop shouting at me, Alex!’
‘The very fact that you’re making stupid excuses for him just proves that you like him!’
‘I just think he needs some sympathy.’
‘That’s nonsense! Utter rubbish! The ones who need sympathy are those poor Indians who had to endure his constant abuse.’
‘Alex! He’s your father!’
‘I don’t want reminding of it! And I don’t want to see you ending up like him, which you will if you stay here.’
‘You exaggerate, Alex. He’s not that bad. And he *doesn’t* despise me.’
‘Of course he does! Are you deaf and blind?’
Was she indeed deaf and blind? He sometimes thought this must be so. Clearly she did not see the same sneering that he saw, the same cynical raising of eyebrows, the same sidelong glances at Rollie Thatcher when that buffoon was present. And how could he tell her what was said behind her back? What his father said to him or to Rollie Thatcher when she walked unsteadily from the room. Sarcasm, innuendo and blunt character assassination. Alex, if he happened to be present, would be tormented by all of it.
‘For such a spiritual lady,’ his father once said, ‘she appears to have a certain flair for debauchery. I think she’s well worth considering.’
‘A neurotic,’ Rollie Thatcher said, lolling phlegmatically on the sofa, his piggish eyes fixed on the Indian girl who, wearing only a dressing gown, was cowering on the floor by his feet, her eyes as dead as the moon. ‘All that talk of possession and black magic and dark forces is only an excuse to hide the fact that she can’t do without it. Alcohol and sex, first in Hollywood and then New York, so much so that she had to flee to the Amazon to get away from the scandals. I bet you that bitch has had more than we could count, and now, with the lines of age beginning to show, she’s going a little bit potty. Pass the brandy, old boy.’

Alex hated that room anyway, too aware of its fading elegance, actually able to smell the damp rot, the stale beer and cigarette ash. He avoided it during the day – its musky gloom was too depressing – but at night, after dinner, which was taken in an adjoining room, there was little choice, as Laura had noted, but to while away the hours in there. He would do it with heavy heart, as he had done for years, sitting in a chair near the antique fireplace, watching the bizarre shadows cast on the walls that in the flickering yellow light of the oil lamps seemed to be in constant, shivery motion.
That room, he now knew, would live forever in his mind: a refuge for his mother's ghost, her ethereal, ageless beauty, and for his vision of his father, slim, handsome, dissipated and dishevelled, slouching in his 17th century late baroque Venetian armchair with his booted feet resting on his velvet upholstered footrest, both of which museum relics were badly abused and dust-covered; and sometimes even (and his feeling of revulsion indicated that this, also, would haunt him) the shadowy figure of Rollie Thatcher, bloated, eyes bleary, constantly drinking, often farting, as unreal as the faded paintings hung haphazardly on the rotting walls beneath one of which, on her knees, her head bowed to hide dead brown eyes, was the Indian girl, Mengrire's sweetheart, whose father had died and who was, though it was never discussed, now paying her father's debts with her body.
Alex despised it and was glad to be away from it, always sighing with relief when he opened the door and stepped outside, either into the enlivening light of day or the night's soothing freshness, usually to rush straight to Peruche and take comfort from him.

The old Indian was rapidly becoming more frail and very rarely left his hut, spending most of his time in meditation and prayer, physically surviving on the food and drink brought to him by other Indians and sniffing the hallucinogenic drug, *epena*, at frequent intervals throughout the day. He was usually outside his hut, sitting cross-legged on the earth, his head bowed as he ventured down through his inner self, the lake glittering behind him, the white flowers of the cauliforous trees raining gently upon him; but always, when Alex arrived, Peruche would raise his nodding head, work his lips experimentally, then stare at Alex out of his rheumy eyes, a small smile on his lips.

They talked about everything – about good and evil, about God and the devil, about the empathy between forest and river and sky – but most of all they talked about recent events: the death of the *seringueiro*; his daughter's enslavement to Alex's father and the resentment it was causing amongst the other Indians, particularly Mengrire; the arrival of Laura Wellman and what it might represent; and the fact that the mysterious lights, accompanied by the nerve-shredding Yano drumming, were being seen more often than previously. So, they talked of these things, but mostly they talked of Laura, whom Alex, in his love and despair, could not forget for one moment.

'I can't help you,' Peruche said. 'This is between you and her. Either your love was written or it was not and only time can reveal that. You must not let this obsess you, but accept it with dignity, showing your faith in He who guides our fate and suppressing resentment or anger.'

'But I *feel* resentment and anger. I can't help it. It eats at me night and day.'
'You never felt such emotions before. Not until this woman came here. You were innocent and lived in the purity of one newly born. Yet I sense a purpose to this: I have dreamt and seen strange things. You may have to lose your innocence, to suffer guilt and shame, to endure the fires of penance and know redemption for some larger purpose. There is something in you and in this woman that is one and the same.'
Peruche leaned closer, trying to focus his almost blind eyes, then reached out and scraped at Alex's bare chest with his long, uncut fingernails. Finding nothing, he sighed and straightened up, his rib cage clearly visible.
'Where is the sacred amulet?' he asked. 'The one I gave you some time ago.'
Now it was Alex's turn to lower his head, hoping to hide his embarrassment.
'I gave it to the American woman,' he confessed. 'I'm not really sure why.'
Showing no anger at all, the old Indian just nodded, displaying a sad understanding.
'You wanted to show her how much you loved her?'
'Yes, I suppose so.'
'You may have sacrificed a lot in doing so – much more than you realize. Yet now, more than ever, I feel there may be a purpose to this. The amulet was your protection against evil forces, those forces which, because of your occult powers, might specifically seek you out to destroy you. You, my child, have

always represented the good, and now, without the amulet, and with your protective innocence already under threat, you may be reaching that stage where you'll be forced to suffer hell in order to regain your lost faith and become a light through life's darkness.'

'But why me?' Alex asked. 'What's so special about *me*?'

'There's nothing special about you. Don't let your vanity deceive you. There are many just like you, those chosen to represent their fellow men, but most of them, never looking into themselves, don't know they were chosen. You only know because I've shown you. Now you must learn through suffering, and you do so because in time and space all men are the one man, all souls the one soul. You may be here this moment, kneeling before me in guilt and shame, because the suffering of which I have spoken is already beginning. Now go away. I must meditate.'

Alex always left regretfully, feeling teased and confused, and often took himself down to the *porto* to sit and gaze out over the river. Still and silent, vast and dark, it curved away into the distance, dividing the jungle that grew right up to the edge of both banks and, with its lush, dense, green forest seemed impenetrable, mysterious and uninviting.

He often saw Mengrire there, usually fishing from one of the small boats, his net stretched out like a fan on the water, his muscles tightening to pull it in. He never spoke to the Indian, feeling too shy to approach him, his cheeks burning even to think of that poor girl in his father's house, the one who had brought tears to Mengrire's eyes and killed something within him. Aware of this, Alex rarely watched the Indian for long, but usually crept quietly away, feeling sordid and criminal.

'He worries me,' Antonio said. 'Mengrire's not the man we knew. He wanted that girl a lot – indeed, I believe he was going to marry here – and since the day your father took her into his house, Mengrire certainly hasn't been the same. He's polite, but not friendly, obedient but sullen with it, and I think he's nurturing a resentment that grows every day. I'm worried about it, Alex, and not just about Mengrire. There's a general feeling among the Indians, widespread and growing stronger, that your father and that bastard Rollie Thatcher are going too far. And that antagonism, Alex, which as I say is growing daily, has reached a dangerous high ever since the death of the *seringueiro* and, worse, since your father took Mengrire's girl into his house on the farcical pretence that she has to work off her late father's debts, when

in truth, as everyone from here to Manaus knows, she's being used, like a lot of girls before her, as a sexual plaything. I shudder to think of what Mengrire really feels – and if what he feels is shared by the other Indians, then we could be in trouble.'

'I feel so helpless, Antonio. What can I do? If I say anything to my father, he'll just laugh me out of the house. Already he calls me an Indian lover and despises me for it.'

'You *are* an Indian lover, my young friend.'

'Yes – and proud of it. But what can I *do*?'

'You can't do a damned thing.'

The plantation, normally somnolent, now seemed tense to the point of bursting, and Alex walked beneath its trees, between its shabby shacks and thatched huts, convinced that as Antonio had said, something evil was brewing. He felt nervous and frustrated, thrashing about in his rejected love for Laura, and spent a lot of time thinking about what Peruche had said and wondering what it meant.

All things were the one thing, all events the one event – the death of the *seringueiro*, then the death of Father Symonds, the arrival of Laura, the beating drums and the wondrous lights – and he sensed that they were all coming together to explode in some manner he could not define.

'Fear,' he said to Father Benedict, during a visit to the mission. 'I live with fear every night and day and I can't shake it off. Is it all to do with Laura? Do I love her too much? Am I simply letting my own doubts rise up and take me over completely?'

'Your doubts about your love for her?'

'No, about her love for me. I love her more than anything in the world and I want it returned.'

'You feel rejected?'

'Yes.'

'If she rejects you, it's out of kindness. I've said it before and I repeat it: she's too old for you, Alex.'

'I simply can't accept that.'

'Unfortunately Laura does.'

'I'm not interested in what she thinks she feels; it's something else that frightens me.'

'What?'

‘The Yano. She’s becoming obsessed with them. Every time she hears the drums and sees the lights, her obsession grows stronger.’
‘She won’t be able to do anything about it because no one will take her into the jungle. And I doubt that even Laura would be mad enough to go in there alone.’
‘I’m not so sure about that.’
If, as Peruche had said, there was a time of penance coming, the mysterious lights and the drums of the elusive Yano seemed to be part of it. Once an occasional manifestation, they now materialized with disturbing frequency, the lights illuminating the night sky above the jungle’s distant interior while the drums, sounding louder and more frantic than ever, seemed to make the very earth shake and the nocturnal air to vibrate.
At such times the world changed, or at least appeared to do so: the sky darkening, the air becoming sultry, the relentless drumming making the head reel and slightly distorting reality; while for the Indian plantation workers the effects were even more dramatic, causing hysteria and convulsions, religious ecstasy and violence, drawing them out of their humble homes and making them dance wildly on the lawns, sobbing and shrieking, sometimes foaming at the mouth, their bodies jerking in violent, epileptic movements, their eyes closed in a trance.
There was something terrifying about it, something relentlessly aggressive, and if it affected the Indians dramatically, it also affected those with white skin, stretching nerves to breaking point, putting tempers on a short fuse, forcing them out of the big house to the long, narrow veranda where, grouped together, they would either stare at the hysterical workers or at the lights that rose and fell like silent flares high above the dark jungle.

Laura was always fascinated, almost speechless with wonder, her large green eyes reflecting the distant lights in the black, star-flecked sky. She would grip the veranda railing, her head jerking up and down, her gaze shifting from the distant lights to the dancing Indians and then back to the lights again. ‘Oh, God!’ she would exclaim. ‘It’s so unreal! I can’t believe it! And look how those Indians are behaving: those drums are *controlling* them!’

She was almost like a child then, her face radiant with excitement, whereas Alex’s father, slim and handsome and dishevelled, would merely raise his

clenched fist and shake it at the dancing Indians, shouting, ‘What can you do with these ignorant bastards? They’re no better than monkeys!’ He usually shouted this at Antonio, his venom encouraged by familiarity, enabling him to ignore the fact that Antonio was part Indian and might conceivably be wounded by such remarks. However, if Antonio was offended, he certainly never showed it, but merely nodded in a non-committal manner, a slight smile on his face. ‘We can’t stop it,’ he would say. ‘Not unless we stop the Yano drums. And there’s no way to stop the Yano drums, since we can’t find the Yano.’ Then he would glance at Laura, at her upturned, ecstatic face, before shrugging and returning his attention to his Indian brothers: those dancing in crazed abandon around the shacks at the other side of the dark lawn.

‘Bloody Indians!’ Alex’s father exclaimed. ‘They make life hell on earth!’
‘I have to find them,’ Laura said. ‘I have to go into the jungle and face them. When I hear those drums and look at those lights I know they’re calling out to me. I’ll have to find them. *I’ll have to!*’
Her determination frightened Alex and preyed constantly on his mind, more so because he had no way of knowing what she might do and, even more disturbing, felt that he was increasingly losing touch with her. She was dividing her time equally between the plantation and the mission, taking photographs, writing notes, talking a lot to the Indians, and even, on occasion, venturing alone into Manaus where, after too much to drink, she would spend the night alone, or possibly with company, in some shabby hotel.
Alex hated it when she did that, thinking it stupid and dangerous, so bluntly informed her, more than once and apparently in vain, that she was solving none of her problems with such behaviour, but was instead merely making the locals think her crazy or shameless.
‘Oh, I know, Alex. I know! But I just can’t help myself. I get depressed and drink a bit too much and then have to sleep – right away, on the spot. Nothing ever happens, Alex. I just drink myself to sleep. I always know when I’m going to have one of my nightmares, and because I don’t want you or your father to hear my screaming, I book myself into a hotel in town and then – because it’s the only way I can sleep at such times – drink myself into oblivion wherever I’m staying. I *know* it looks bad, Alex, but I simply can’t

help that. If I must scream in the night, I'd rather do it alone; and if that means spending a night in Manaus, then so be it, I'll do it.'

She was indeed growing more distant to Alex, metaphorically and in fact, hiding behind a smokescreen of frantic, incoherent stories, even as she spent more and more time with his father or, to his despair, removed herself from the plantation altogether, usually on the pretext of taking photographs when in truth, as Alex knew, she was drinking more every day and was no longer interested in her work.

She often drove herself to town, staying away for days, leaving the plantation without telling Alex where she was going and returning only to hide out in that awful room with her father and Rollie Thatcher, the sound of their drunken laughter reverberating along the corridor and entering Alex's bedroom with hideous clarity, making him toss and turn on his tormented bed.

Did she care about the Indian girl? Did she simply ignore all the others? Could she not hear, even from the guest wing, the girl sobbing and the men laughing, the music from the phonograph blaring loudly to hide the sounds of debauchery? Of *course* she knew – there was no way she couldn't know – and Alex, being ashamed of his father's behaviour and, more humiliating, of his inability to stop it, lay on his bed of nails, on burning coals, to think of Laura ignoring it.

He wanted her to revile his father, to pack her suitcase and walk out, and yet, because he loved her, because his love was fierce and greedy, he also dreaded that she might actually do that, perhaps to disappear into the jungle in search of the Yano. That fear, more than anything else, broke the last of his will and pride, making him finally behave just as Laura was behaving: closing his eyes to the shamed defeat in the eyes of the Indian girl, shutting his ears to the sounds of his father's frequent late-evening debauchery, and generally acting as if everything was normal.

Yet nothing was normal, nor would ever be again. Everything was wrong, disjointed, out of kilter, and surrounding his personal traumas, rising out of his growing awareness, building up (he was convinced) to some catastrophic event, were the lights in the sky, the drums pounding deep in the jungle, the eyes of Mengrire, nut brown and increasingly secretive, the girl about whom he brooded, her head bowed in hopeless shame, Alex's father and Rollie Thatcher, each egging the other on to further debauchery, Father Benedict

and Peruche with their warnings and reproofs, and finally, most vividly, his beloved Laura Wellman, her green eyes like gemstones, her tongue spinning tales of insane truth or wild imagining – all of them, all of it, swimming around in his head with a relentless, dazzling and unavoidable luminosity, convincing him that he would soon be seeing his world go up in smoke, the ordered structure of his life turning to ash and disappearing forever – which is exactly what happened.

Chapter Eleven

The day was approaching when Alex would have to return to the school in Manaus for his last three months there, after which he would be taking the boat to England for his further education, staying there for at least four or five years. Knowing this, he became increasingly fixated on Laura and was constantly trying to keep his eyes on her, not only in the plantation grounds but, even more so, when she made one of her many trips either to Father Benedict's mission camp or, more disturbingly, to Manaus for another night on her own.

Now inflamed by unrequited desire for her, he was blinded to everything but the need to possess her, to touch her and be touched in return, letting the flesh have dominion. There was no end to this yearning, no respite from his burning loins, and he suffered both the body's betrayals and his heart's anguished beating.

'It's madness,' Father Benedict said. 'You're making a spectacle of yourself. Everyone's talking about how you moon after an older woman, no longer taking an interest in anything and simply following her about all day. You must stop it, Alex. It will serve no good purpose. You're only causing yourself more pain, causing Laura embarrassment, and letting people like your father and Rollie Thatcher have a good laugh at you. Accept the fact, Alex, that you're much too young for her, and that sooner or later she'll leave here and never return.'

'I won't accept anything. If she leaves, I'll go with her. And if I can't persuade my father to let me stay here, I'll persuade Laura to come with me.'

‘What are you talking about, Alex? What new insanity is this? You’ll soon be going back to school in Manaus and then on to England; you simply can’t take her with you.’

‘Why not, Father? What makes you so sure? She already spends lots of nights in Manaus, staying in cheap hotels. All I want is for her to move into somewhere more decent, somewhere in one of the better areas close to my school.’

‘You mean you want her available.’
‘I just – ’
‘Don’t bother answering, Alex. Clearly, almost

deranged by Laura Wellman, you’re now fantasizing. Miss Wellman would never be a party to such an arrangement – and your father will not, as you might be hoping, let you forget school and remain here in the plantation. Indeed, your father wants you to continue your education in England and that’s all there is to it.’

‘I love her. I can’t live without her.’
‘You’ll forget her in England.’

‘You’re beginning to sound as if you want me to leave as well.’
‘Maybe I do. Your fixation on Miss Wellman is unhealthy in the extreme. It’s obviously a hopeless passion that can lead to no good, and it might be that the only way you’ll be cured is to send you away.’
‘I’d rather kill myself than go,’ Alex said.
If Laura was putting a distance between herself and Alex, there was also an increasing distance between Alex and Father Benedict, most of which was caused, he assumed, by his helpless fixation on Laura and his increasing inability to communicate with anything remotely resembling his former lightheartedness. This knowledge truly pained him, since the priest had been like a father to him, but think about it as he might, he could do little about it, some part of him, as if bent on destroying his former self, filling him with almost pathological insecurity and fear.
‘I can’t help it,’ he told Peruche. ‘I love her and want her. No matter what she

is – sane or insane, one of the wise or a fool, an habitual drunkard or simply a woman temporarily unhappy – no matter, I can't help myself, and I long for her night and day.'
'You have lost faith in yourself. You gave the sacred amulet away. When you did that, you discarded your protection from those who would prey on you. Now, you are like other men, your will weak, your thoughts disordered, and you leave your childhood innocence behind and give yourself to corrupt ways. This woman has been called here. I believe she truly is possessed. And if this be the case, then you surely must be in great danger. For this reason, I cannot guide you. All decisions are now your own. Whether you turn to the darkness or the light, I cannot hold you back. Whatever will be, will be.'
'You think she's corrupting me?'
'Yes. She asks you to perform miracles, to demonstrate your occult powers, and you, in your vanity, your need to impress her, perform what should only be performed in silence and secrecy. The powers are not to be revealed to those uninitiated, and by weakening before the attractions of this woman, you have opened your arms to the powers of darkness and invited them in.'
'She's just curious, that's all. She simply can't believe her own eyes. What harm can there be in simply showing her what I can do?'
'It's a breach of faith. You betray me and my teachings. You demonstrate your powers out of vanity and for personal gain – you clearly wish to gain the woman – and both motives contravene faith and goodness, thus rendering you sinful.'
'Damn you, Peruche, I don't care!'
'You damn yourself with those words.'
He knew that Peruche spoke the truth, that vanity and personal gain now drove him, yet he could not stop himself from lusting for Laura and trying to seduce her with miracles.
He would take her into the rainforest, usually to some várzea lake, close his eyes and raise his hand above the still, black water and will it to move. The silent forest would start rustling, shedding its leaves in a sudden breeze, then the clouds would gather above, turning the grey light darker, and the grass around them would bend, the flowers opening their petals and bowing, and then, while Alex sweated, his brow furrowed in concentration, the water would bubble or swirl, become a cauldron or a whirlpool, and then a snake might surface, a giant and dangerous anaconda, and would curl itself around

his legs and body with the most gentle, loving care.
Minor miracles, but impressive, making Laura stare in awe: he could lure the birds out of the trees, have them flapping their wings upon him, sitting side by side on his bare shoulders with the Goliath birdeater spiders, which, enormous and normally dangerous, would be remarkably passive. And he could stroke the deadly crocodilian caimans, wade through shoals of piranha fish, make rain fall out of the trees on a sunny day, their branches bending down towards him as if alive, trying to stroke his blond hair. Yes, he showed her his powers, wanting to impress her and succeeding – but what he could not succeed in doing was having his love returned.
'No, Alex, I won't. I don't care how much it hurts you. What happened on the raft should never have happened and certainly will not be repeated, no matter how much you remind me about it. It was a moment of madness, I hardly knew what I was doing, and I've felt ashamed of myself ever since for what I seem to have started. Believe me, Alex, I love you, but I'm not *in love* with you, and I'd rather hurt you now than make it worse later by leading you on. So please don't remind me of that particular day, because that's not being fair to me.'
'Fair? What's *fair*? To do it once and never again? Yes, Laura, you started it, you encouraged me to love you, and now, when I'm helpless without you, you pretend to not care.'
'I don't pretend to not care. That's a crude exaggeration. I'm simply saying that I care deeply for you, but not in that particular way; that I'm simply too old for you, Alex, so it would never work out.'
'Age has nothing to do with feelings.'
'Feelings change as we get older. And at your age, young man, your feelings will change quicker than mine.'
'What I feel for you won't change.'
'Yes, Alex, it will. When you meet a girl your own age in England, you'll soon forget me.'
But he didn't believe her. (How could he? He hurt too much.) And he brooded with growing bitterness over the amount of times she spent away from him, sometimes at the mission, other times in Manaus, and too often, during the evenings, in the main room of the family home, getting drunk with his father and Rollie Thatcher, abasing herself in their presence. He sometimes joined them in desperation, frightened of how they might be

influencing her, and had, more than once, because of his clearly unwanted intrusion, found himself the focal point for his father's sarcasm and barely concealed contempt.

'You want to find the Yano, Laura? Then get Alex to take you to them. My good son, if not too bright, has great empathy for the Indians, and might possibly lead you through that miserable jungle without getting you lost. Then, when you find the Yano, if indeed they exist, you'll have someone who understands not only their language but their obscene hocus-pocus.'

'Sometimes, Frank, I swear, you can be really disgusting, displaying an extraordinary lack of feeling for your own son. You should be proud of Alex instead of making fun of him; he's a lovely and very remarkable young man.'

'Lovely, indeed! Remarkable? Bear with me while I disagree. The only thing remarkable about that boy, my dear, is the size of his eyes when he looks at you.'

'I find that remark singularly tasteless, even coming from you, Frank.'

'You know as well as I do that the boy worships the ground you walk on, seeing you through rosecoloured glasses, as befits his tender young age.'

'If that's the case, you should be happy that he's normal and stop sneering at him.'

'Normal? Did you say *normal*? This boy is *normal*? This boy is seventeen, has lived his whole life in the Amazon, knows hardly a thing about civilized society, and only feels truly at home with those bloody Indians and their primitive ways. Hardly *normal*, my dear!'

The nights went on a long time, continuing after Alex had left, the drunken laughter of his father, Rollie Thatcher and Laura echoing in the corridor outside his bedroom and breaking his heart.

Her regular presence there bewildered him, her apparent enjoyment even more so, adding more contradictions to the already confused vision he had of her. She defended him rigorously against his father's sarcasm, yet stayed on when he left the room; clearly despised the obese and morally disgusting Rollie Thatcher, yet laughed merrily at his terrible jokes. She knew that in her absence both disgraced themselves with the Indian girl, yet she did no more than voice her repugnance to Alex, but otherwise continued to spend her evenings in that awful room, being insulted and offering insults in return, filling her glass up repeatedly. Alex didn't understand because she seemed to be comfortable with it, oblivious to the fact that her willingness to banter

with them was encouraging his father and Rollie Thatcher to think her cheap. ‘My son’s in love with her,’ his father once said to the chortling Rollie Thatcher. ‘She behaves like a tart with we gentlemen, but still he’s in love with her.’

‘Such is youth,’ Thatcher said. ‘All sweetness and light. You get a woman like that, quite clearly a shopsoiled creature, but youth can only view her in virgin white, wanting to hold her nimble, expert fingers, not thinking what they’ve been up to.’

‘You’re both pigs,’ Alex said. ‘You don’t respect anyone. You try to drag everyone down to your own level and then spit upon them. She’s not a tart and you know it.’

‘*Pigs*, did you say, Alex? My God, watch your tongue, boy! I’d remind you that I’m your father and that Rollie here is one of my guests. Lucky for you, we’re both mature. We understand what you’re feeling. She talks so much about herself, about the debaucheries of her past, that you can’t sleep at night for thinking about it and wanting a piece of it. Well, a tart is a tart is a tart, so I don’t see what’s stopping you.’

Alex thought their talk revolting, their attitudes and actions base, and failed to understand how Laura could ignore it, more so because during those evenings when she wasn’t present (though she certainly knew it was happening) the Indian girl would be sent for and the sounds of revelry would change, becoming humourless and obscene, first his father laughing, then the revolting Rollie Thatcher, their contemptuous mirth sometimes broken up with periods of disturbing silence, occasionally with the sounds of the unfortunate girl’s weeping, the latter making Alex, in his bedroom, bury his head beneath his soft, sweat-stained pillow until, in a more blessed silence, he would drift into his troubled sleep.

He would dream about Laura, about drums beating in fury, about lights rising and falling above a large jungle clearing and illuminating the naked, brownskinned men who committed terrible blasphemies and cruelties. The lights rose from the ground – or from a swirling black hole in the ground – and he saw Laura’s face, her red hair streaming across her closed eyes, superimposed upon the vortex of the whirlpool and the stars in its awesome depths. Yes, the whirlpool’s vortex formed a tunnel, boring down through time and space, revealing the stars frozen in eternity, down there, in those dizzying depths, beneath Laura’s magnified, transparent face, the red hair

streaming across the closed eyes, forming a river of flames. Around the stars, which were benevolent, was the darkness, which was malignant, and Laura was sucked down, shrinking rapidly as she sank, and then went spinning into the black hole of eternity to be torn between the good and the bad. The lights rose and fell, the drums pounded, the Yano danced; there was hysterical laughter and screaming, pain and joy, a tremendous tumult and chaos. Alex dreamed it with a startling immediacy, tossed and turned and cried out, then woke to the pearly light of morning with his skin bathed in sweat and his heart beating rapidly.

He was building up to violence, to a blind and destructive rage, now feeling that he had, as Peruche had said, damned himself and let the bad consume his soul. Yes, slowly but surely his innocence had collapsed before the realization that love, which could ennoble, could also wound and even destroy; and so, ignorant about such violent and uncontrollable emotions, completely at the mercy of his recently released sexual desires, his passion for Laura was overwhelming him, his sense of futility enraging him, and he floundered like a fish on the riverbank, breathless and doomed.

When did his world explode?

He would never forget it as long as he lived. It began when Father Benedict, after complaining to Alex's father about his abuse of the Indian girl, left the big house in a rage and found Alex on the veranda where he was sitting in a rocking chair, his legs outstretched, watching the sun sinking over the river. Alex was steeped in gloom, his self-pity swamping his commonsense, and the priest, already enraged by his fight with Alex's father, erupted in the face of this fresh misery and made clear his disgust.

'What is it?' he said harshly. 'Are you going mad as well? Do I have to deal with your father, who exploits and degrades unfortunate Indian girls, and then deal with your increasingly senseless obsession with a much older woman? Is it living in this jungle? Is it this damned plantation? Can you really not see that your passion will fade and that sooner or later you'll feel the same for someone more suitable? Well, whatever, I won't stand for it! I'm fed up watching you brood like this. Either get control of yourself, stop your moping and complaining, or I'll tell your father to send you to England on the next boat out. Do you understand what I'm saying, Alex? Either get that woman out of your system or get ready to pack your bags. I won't let you make a fool of yourself any longer. I won't let you ruin yourself.'

Alex listened to no more. Instead, he simply stood up, brushed past the angry priest, and then, feeling sick to his stomach, hurried into the house. He walked past the main room, knowing that Laura wasn't there, and went along the gloomy corridor, past his own room, turning right at the end and passing through the door that led into the modest guest wing. He was quivering with rage, with despair and a kind of madness, convinced that everything was collapsing, his friendships, his former peace of mind, perhaps even his sanity, and wanting to sort it out once and for all, no matter the cost. He hammered on Laura's door, using his tightly clenched fist, and then heard his own voice, calling her name, as if coming from far away. The door opened almost immediately and Laura was there before him, holding a dressing gown around her body, her face sleepy and sensual.

'Alex!'

'I love you. I came here to confirm that. Tomorrow I have to go back to Manaus and I want you to come with me. You can stay in a hotel while I'm at school. After school, we can stay together in the hotel.'

'Sorry, Alex, *what* was that?'

'You heard me, Laura. You know you did. I want you to either come to Manaus or tell me right now that you don't love me.'

'Alex, this is ridiculous.'

'Damn it, Laura, I'm serious! I won't leave unless you come with me or tell me you love me.'

'You know I love you, Alex.'

'I don't mean it in that way.'

'No, Alex, I won't lie about the other – and I won't go with you to Manaus. Are you crazy? Do you know what you're suggesting? You know it's not possible.'

'You could come if you wanted to.'

'I won't – and that's final. Now leave me alone, Alex. This is silly. We'll talk it over tomorrow.'

'It's my *father*, isn't it?'

'Pardon? What are you – ?'

'You're rejecting me because of my father. You spend all your evenings in there, getting drunk with his and Rollie Thatcher, fascinated by his flair for debauchery and wanton cruelty. Yes, Laura, you pretend to despise him, but you really find him attractive. He insults you and humiliates you and makes

suggestive remarks to you, and all the time, no matter what you say to the contrary, you're actually enjoying it. You know what? I think my father's right: you behave like a tart!'

Laura slapped his face.

Startled, hardly believing it, Alex touched his stinging cheek, then stepped back and stared at her for some time, trying to hold in his tears. He was deeply wounded, speechless, in a state of shock that she had done it, but a part of him also felt shame because he knew he deserved it. Laura also looked shocked, and had placed a hand over her mouth, thus emphasizing the enlarging brilliance of her eyes as they repeatedly blinked and slid, with a stunned, stricken panic, away from his gaze.

The silence between them was terrible, resonant with their torn emotions, but then the Yano drums started beating and Laura jerked her head around, staring back across the room to the window and, obviously, the sky beyond.

'Oh, God,' she whispered, 'it's starting again. And there they are… those damned lights!'

Alex started crying. She had forgotten him already. The tears rolled down his cheeks as he turned away from her and, without further ado, walked out of the house. The sun was just sinking and the sky was turning dark, great pillars and streams of gold and crimson being swallowed by blackness. He hurried across the veranda, down the steps onto the mowed grass, and saw Father Benedict at the far side of the lawn, a cigarette in one hand, his head raised as he looked at a patch of sky beyond the workers' shacks. Alex turned away, now sobbing uncontrollably, and hurried along the front of the house, past the tall struts of the veranda, and across the open space at the end, heading straight for the forest. He glanced north as he crossed the clearing, in the direction of the pounding drums, and saw the lights rising and falling in gentle splendour, making a beautiful tapestry. Alex stared at them, fascinated, his tears making them seem hazy, but then, when he heard Father Benedict calling out to him, he wiped his eyes dry and hurried into the forest.

He soon found Peruche, squatting in front of his hut, swaying to and fro like a reed and chanting a bizarre, high-pitched litany. Alex sat down in front of him, hearing the drums, almost *feeling* them, the humid air seeming to press in upon him as if trying to smother him.

The old Indian stopped chanting, raised his head, opened his eyes, stared at Alex for a considerable time before eventually recognizing him and, with a

weak nodding of his head, acknowledged his presence. He told Alex he could speak and Alex did so, pouring his heart out, telling him about Laura and the pain she was causing him, saying that he felt like killing himself and didn't know what to do.

He could scarcely hear himself speaking, his words becoming lost in the sound of the drumming which, though coming from far away, seemed to be all around him. That noise was louder than ever before, seeming to hammer at him, but Peruche, nodding his head in a gentle manner, had obviously heard every word and proved it by giving his reply with softvoiced brutality.

'Why do you tell me this?' he said. 'What do you think I can do? When you gave the amulet away, you renounced your faith and lost your innocence and, in so doing, also lost the protection you once had. The drums beat, the lights live, and you come here in tears, claiming that you wish to kill yourself because of love's wounding passions. Well, my child, why tell me? Do you wish me to talk you out of it? Though pained, as I am, by your behaviour, I cannot interfere. Whatever will be, will be. What is written will be done. So what now happens, while the drums beat and the lights live, will happen no matter what I say or might foolishly attempt to do. I *cannot* interfere. I myself will soon be gone. You, my child, have made your own bed and must lie in it, tossing and turning as you will and suffering the consequences. The time of which I spoke, the time of penance, has come, and the form of the suffering, which you will choose, will give shape to the manner in which you change, for better or worse. I have my own penance to bear, and so, my child, whatever you decide, please decide it elsewhere. Now I must be alone.'

Alex stood up and hurried away from the old Indian, back through the forest. His pain was unbearable, like a blade scraping exposed nerves, and the forest, now in black, chattering night, suddenly seemed threatening to him. He walked faster, feeling frightened, wanting to reach the clearing quickly, and then, when he reached it, he looked up to see the lights in the sky, far away and spectacular.

The lights were like Catherine wheels, ascending and spinning rapidly, their brilliant outer rings swirling around a darker core, their silvery striations shooting out for miles and turning into great, glistening cobwebs. They were numbered in their hundreds, forming kaleidoscopes in the starry sky, shooting up from the jungle depths, far north, in the interior, and, equally mysteriously, exploding out of the sky itself, first as pinpricks of light, then

as dazzling, fluorescent flares that descended in slow, elegant arcs and disappeared back into the jungle.

He stared at them, fascinated, knowing that Laura was staring at them, and then, looking around him, seeing that Father Benedict had gone, he went furtively around the back of the big house in the expectation of tapping on Laura's bedroom window and talking to her again.

The light in her bedroom was still on, beaming out through the protective mesh wire, and he saw Laura framed by the window, wearing only the dressing gown, her red hair falling down to the base of her spine, a drink in her hand.

Alex tip-toed towards the window, raising his hand and preparing to call her, but then she threw her head back and laughed as his father stepped into the window frame. He reached out to put a hand on her shoulder and run it down to her breast. She chuckled in a throaty manner, then placed her free hand on his father's hand, and Alex, his world collapsing, becoming a cauldron of pain and suffering, stifled a broken sob and turned away and headed straight for the river.

At that moment he hated them all and wanted to use his powers to damage them. Recalling what Peruche had said, hating him more for having said it, he determined to test his powers to the limit and then use them for vengeance.

The drums were pounding relentlessly, in aggressive, hypnotic rhythms, and the Indian workers, drawn out of their humble shacks, were all dancing and shrieking on the roads beneath the papaya trees. Alex had to hurry through them, feeling as if he was dreaming, his head reeling from the insistent, almost violent rhythms of the drums, his body being pummelled by those jerking epileptically around him, some staring wildly at the magical lights, some with heads back and eyes closed, some foaming at the mouth and wriggling frantically on the ground, their shrieks demented and piercing.

He had seen all this before, but it had never been so hysterical, and he sensed that the distant drumming, which seemed to be inside his head, was not only louder but more deliberate, inciting the madness. Dazed, his heart pounding, he broke free from the crowd and then leaped over the low wall onto the steps that led down to the *porto*, turning right at the bottom and following a narrow path along the riverbank.

The pounding drums were like his feelings, tumultuous and chaotic, driving him onward into the darkness of the forest and deeper into his blinding rage.

He was momentarily insane, his thoughts spinning wildly, and when he came to a muddy inlet and saw a large group of crocodilian caimans, he waded into the inky-black water without hesitation. The water rippled and parted, forming silvery tapestries in the moonlight, as the caimans, sensing his presence, glided towards him. He shuddered, knowing fear, the pounding drums making his head tighten, and the caimans, like wet, rough-barked logs, started drifting around him. He watched them, wondering… Would he survive or die painfully? But the caimans just stared back, their frightful jaws opening and closing, and then, as if finding him distasteful, glided away.

He sobbed with relief, feeling close to insane, and then heard himself muttering demented, senseless words, and then waded across the inlet, following the rippling wake of the caimans, and saw them turning away and nosing out towards the centre of the river. He kept sobbing, shivering with cold, glanced up through the forest canopy, saw the rise and fall of the beautiful, magical lights and heard the incessant, violent drumming. He slashed his arm on a sharp stone, kept close to the bank, letting the blood drip down through the bulrushes and into the water.

The water bubbled and swirled. The piranha fish were beneath the bank. They came out in a large, greyish shoal, following the smell of his dripping blood, and churned the water up all around him as they surrendered to frenzy. He sank down, defying death, feeling the water boiling around him, his skin grazed by the rough bodies of the flesh-eating fish, but otherwise remaining untouched in that seething, ravenous mass. The piranhas were crazed with bloodlust, but miraculously did not touch him, instead turning against one another and tearing each other to pieces. The water around him was exploding, turning into a cauldron of blood, spitting dead fish and pieces of bloody meat into the darkness around him. He could scarcely credit what was happening – those razor teeth never touched him – and eventually, when the churning water had settled down, when the dead piranhas were floating around him in the steaming crimson water, he felt a mixture of triumph and despair, and climbed up to the bank.

He was dripping bloody water, shivering with cold and shock, and as he headed back into the dark forest he glanced up through the trees and saw, in a patch of brilliant stars, the rise and fall of the other lights. The drums were still pounding, filling his head, seeming to hammer at his racing heart, drawing him deeper into the rainforest – and into his madness – in search of

further proof that he was inviolable and could turn those same powers against all of them – those now viewed as enemies.
He saw the bush he had been seeking, the two gigantic bird-eater spiders, Goliaths, and he shoved his bloody arms into the foliage to let the spiders jump onto them. This they did, instantly, their fangs probing his skin, but then they wandered up and down, from his wrists to his shoulders, their urticating hairs tickling his hairs, their fangs pinching his skin, but eventually, as the caimans had done, they failed to attack him.
He felt triumphant and ashamed, the tears streaming down his cheeks, and then, in a rage such as he had never known before, he smacked the huge spiders off their branch and hurried on through the forest.
He no longer knew what he wanted, feeling only the shame of his helpless hatred, realizing that no matter what Peruche had said, the forces of good were still protecting him. Hearing the drums and seeing the lights, he was convinced they were part of it: that somehow or other he was tied to that distant place and was, in fact, being controlled by it, perhaps by the drumming. He sobbed, feeling wretched, hearing someone calling his name, ignored the distant voice and continued onward and reached a black, still várzea lake.
Not quite still: the water was rippling, the ripples forming large triangles, each one containing wavering lines of silvery moonlight… and then he saw the giant snakes, the anacondas, both about thirty feet long, and he stepped forward, hardly knowing what he was doing, and stood at the water's edge. The drumming was even louder, reaching a deafening crescendo, pounding relentlessly at his head, at his racing heart, and destroying the last of his sanity. He saw the giant snakes coming towards him, flat snouts parting the moonlit water, slithering up the bank to his feet, but then moving away again, as if undecided. If they attacked him, he would die – they would coil around him and crush him to death – but he sensed, in defiant rage and shameful pride, that they were not going to do so. He stood there, his tears flowing, his body shaking with cold and shock – and then the drumming stopped abruptly, the silence cut like a knife, and the giant snakes, as if sensing his sudden loss of his powers, came towards him again.
'*Alex!*'
Father Benedict grabbed him by the shoulders, pulled him away from the snakes, jerked him around and slapped him across the face and then, as he

heard the snakes slithering back into the water, grabbed his wrist and told him to run and dragged him into the forest. Alex did as he was told, still sobbing, drained of life, and ran as quickly as possible, crashing through the undergrowth, making leaves and flowers rain down, and eventually stopped, gasping for breath, his head lowered in shame, close to the road that led to the plantation.

No drumming. No strange lights. The forest chattered in a vast outer silence. Father Benedict grabbed Alex's arms, shook him vigorously, almost brutally, then pushed him against the trunk of a rubber tree and forced his chin up. He was still sobbing profusely, couldn't stop and was mortified, looking through a film of tears at his good friend's perspiring face.

'They've gone!' he cried. 'My occult powers have all gone! I wanted to use them in hatred, for revenge, and now they're all gone!'

'*No more!*' Father Benedict snapped. 'There's been enough of this! Give her up, Alex! Go away! Set yourself free from this madness and get your sanity back. Return to school tomorrow. Take the first boat to Manaus. Stay there until your father can arrange to have you shipped out to England. Are you listening to me, Alex? Will you do that? *Will you leave here tomorrow?*'

Alex's spirit broke completely, making him sob even louder, somehow managing to shake his head in a gesture of consent, falling forward into the arms of the priest and burying his face in his shoulder.

'Yes!' he cried. '*Yes!*'

They clung to one another, rocking back and forth together, the forest chattering all around them, ignoring their mutual grief, while high above their heads, above the canopy of the towering trees, the stars, multitudinous and bright, shone in cold, lifeless beauty.

Chapter Twelve

It was hard to accept that it had only been six weeks. As the twin-decked paddle-steamer inched slowly through the black water towards the modest *porto* of the plantation, Alex, standing on the upper deck with his hands on the steel railing, stared through the grey light of the early afternoon at the steps leading up to his father's plantation. He saw Antonio on the top step, looking just as he remembered him, but he still felt that he had been away for six years instead of six weeks.

His father was dead. That much he knew. The headmaster of the boarding school in Manaus had given him that sombre news, adding that he had no more specific information, but that his presence was required back on the plantation. Alex had responded strangely, not too sure of his feelings, still loathing his father for his relationship with Laura, still thinking too much of Laura to get a proper grip on any form of reality outside her. So, there had been shock, a quietly numbing blow to his system, but overall a constant, nagging pain and soul-crushing bewilderment.

The paddle-steamer bumped against the rubber tyres protecting the wooden jetty, and the steps upon which Antonio was standing shook visibly, making the overseer and the Indian bearers standing with him hold on to each other. When the jetty had steadied, Antonio waved, a sad smile on his face, and Alex waved back automatically, hardly aware of his action. He heard the deck crew shouting, saw the restraining ropes being thrown out, then glanced beyond the *porto* to the distant shacks of the *seringueiros*, saw the roof of the main house beyond them, then green forest and grey sky. The plantation did indeed look desolate, merely deepening his depression, and he clenched his fists tighter on the steel railing, ashamed of what he was thinking.

The six weeks in the boarding school had been interminable and miserable, each minute stretched to breaking point by the shame of what he had attempted, every day and especially every night filled with thoughts of Laura and how she had, in his eyes, betrayed him; thus it had seemed to go on forever, he felt aged overnight, and when the news of his father's death came, given to him by the grave headmaster, his bewilderment and curiosity had focused only on what might have happened.

Above his shock, even more severe than his pain, was the bitterness and love he felt for Laura, and, worse, the realization that he was more concerned with seeing her again than with grieving over the loss of his father. This knowledge, more than anything else, made him feel old and empty, so much as he wanted to see Laura, he picked his suitcase up with reluctance, feeling that he was living a bad dream from which he might never waken up.

Taking the steps down to the lower deck, he made his way through the milling bearers to the gangplank that sloped gently above the black water. Some bearers moved out ahead of him, carrying sacks and boxes on their bent backs, and he followed them down the narrow, swaying gangplank to the sun-bleached stone steps that led up from the jetty. Antonio was waiting there for him, wearing a white shirt and slacks, his smile sad, his brown eyes warm and welcoming. He stepped forward and embraced Alex, holding him for some time, then moved back a little to stare at him, his gaze open and steady.

'So,' he said, 'you don't look too bad. How are you feeling?'
'I'm all right, Antonio. Not too happy, but otherwise fine. You won't have to use kid gloves.'
'You seem older, which is strange, given that you've only been gone six weeks.'
'I feel a lot older. I'm not a child anymore.'
Antonio grinned. 'No, indeed you're not. Come on, let's get you back to the house. I'll fill you in there.'
The jeep was parked at the other side of the low wall bordering the *porto*, a new Indian driver, not Mengrire, sitting in the driver's seat. Alex wondered why Mengrire wasn't driving as usual, but he didn't bother asking, deciding to wait until they reached the big house before asking about anything.
After humping his small suitcase onto the front seat, beside the new driver, he took the back seat beside Antonio. He was starting to feel slightly nervous and disappointed, the former because he didn't know what he was about to hear, the latter because, as he had not been slow to notice, neither his good friend, Father Benedict, nor Laura Wellman had turned up to welcome him back.
'Right,' Antonio said to the new driver, speaking in Portuguese. 'Take us to the back of the master's house, to the door of the guest wing.'
'*Sim, Senhor.*'
Alex glanced at Antonio when the jeep growled into life and, as it lurched toward along the tarmaced road between the papaya and palmetto trees, saw that his Brazilian friend was uneasy, offering only a hesitant smile.
'You'll be staying in the guest wing,' he said. 'I'll explain why when we get there.'

‘Explain it now, Antonio. Why the guest wing? It really doesn’t bother me that my father’s lying at rest in the main house.’
‘It’s not that,’ Antonio said. ‘Your father’s body isn’t here at all. Your father’s lying at rest in the morgue of the hospital in Manaus.’
‘The morgue? What are you talking about? He should be lying at rest in his own house. That’s the custom, Antonio.’
‘I know, I know,’ Antonio said, waving his hand in an agitated manner. ‘I’ll explain when we’re inside.’
The drive only took a minute and soon they were climbing down to stand by the window where Alex had seen Laura with his father. He glanced at the window, perhaps hoping to see Laura inside again, but just as quickly looked away, his heart beating too fast.
The new Indian drove off, the jeep banging and coughing, and Antonio, carrying the single suitcase, led the way up the wooden steps and through the mesh-wire door, into the guest wing. It was gloomy inside and remarkably quiet, chilling Alex to the depths of his soul. He knew then, on the instant, that the house was completely empty and that something was therefore terribly wrong. Antonio led him to the room beside Laura’s and opened the door.
‘In here,’ he said.
Alex stepped into the small but comfortable room, glanced around at the antique furniture, then looked out the window to see the lawns running away to the thatched shacks of the *seringueiros* over which, low and foreboding, were dark, stormy clouds. He shivered and turned away, a part of him quietly retreating, and saw Antonio setting his suitcase on a rack in the mahogany wardrobe, after which he lit a cigarette, sat on the edge of the bed, and balanced an ashtray precariously on one knee.
‘Sit down,’ he said.
Alex did so, taking a chair near the window, still aware of the eerie silence of the house and wondering what was to come. Antonio inhaled nervously on his cigarette and then blew the smoke out.
‘This won’t be pleasant,’ he said. ‘Would you care for a drink?’
‘No.’
‘Fine. If you can do without one, then so can I.’ Antonio inhaled again on his cigarette, blew the smoke out, nicked the ash into the ashtray on his knee, then, looking directly at Alex, said, ‘Your father didn’t die of natural causes.

In fact, he was murdered.'
Alex stared steadily at him, not too sure of what he was hearing, certainly not too sure of what he was feeling, though his heartbeat seemed unsteady. *The silence*, he thought. *The empty house*. *Now I know why it's empty*… He kept staring at Antonio's anxious brown eyes, knowing how he was suffering, noticing that the hand holding the cigarette was shaking a little.
'Go on,' he said. 'I'm all right.'
Antonio sighed. 'That's why the house is empty and why I haven't put you in there, near the main room. You see… that's where he was murdered.' He inhaled on his cigarette, blew a smoke ring, watched it drifting away from him. 'I'm sorry, Alex, but you might as well have it straight… It was a regular slaughter: both your father and Rollie Thatcher were butchered with machetes. The whole room was splashed with their blood and, apart from that, was a terrible mess.'
'It was vandalized?'
'Yes, you might say that. As if done in a frenzy.'
Leaning forward in his chair, Alex covered his face with his hands. He sat like that for some time, drifting down through the silence, then, with a shudder, straightened up and stared again at Antonio.
'Do you know who did it?'
'We *think* it was the Indian girl, but we can't be too sure because she disappeared, with Mengrire, the night it happened and has not been seen since. Certainly she had a motive: it was your father's mistreatment that led to *her* father's death and, of course, as we all know, your father was making her pay off her father's debts by being his whore. I think you'd agree that she therefore had good reason to hate him.'
'Mengrire disappeared with her?'
'Yes.'
'That figures: she was his sweetheart.' Alex found himself gazing out the window, yearning for fresh air; there was no hope of having it right now, so he turned back to Antonio. 'I think I'll have that drink now,' he said.
Antonio nodded, placed his ashtray on the bed, stood up and pour some of the *caipirinha* that he had thoughtfully prepared for Alex's arrival. After handing the glass to Alex, he sat on the edge of the bed again, balanced the ashtray on his knee and continued his story.
'Anyway, we think it was the Indian girl, or, at least, something to do with

her. As I said, she disappeared with Mengrire the same night of the murders; and because Peruche disappeared that same night and has not been seen since, we're inclined to believe it was some kind of ritualized act of vengeance… Don't look at me that way, Alex – your friend Peruche's gone.'
Alex sipped his *caipirinha*, feeling it burn down to his stomach, subtly expanding his awareness of himself while easing the shock and pain of Antonio's gently spoken, but brutal, revelations. He already believed that his whole world had collapsed the night he lost his occult powers, but now, as he stood up to replenish his empty glass, he understood that the real, complete collapse was occurring this very moment. He felt hot and then cold, hot again, cold again, and as he sat back in his chair and sipped his drink, the horror crept insidiously over him.
'God,' he said, 'I can't get to grips with this. I think I must be imagining it…'
Then another thought came to him, more horrible than all the others, and as he felt a tremor ripple through him, he said, 'Laura! What about Laura? Was she here when it happened?'
'We're not sure, Alex. We – '
'What do you mean, you're not sure? Where *is* she? Oh, God, of course she's not here!' Alex glanced wildly about him, as if expecting her to materialize, his heart racing as he looked back at Antonio, his voice reverberating in his own ears, sounding shrill and demented. '*Damn it, where is she?*'
'Calm down! Calm down!' Antonio was waving his hands placatingly. 'She wasn't murdered as well – we *do* know that much – but she disappeared with the others and, like them, hasn't been seen since.'
'She disappeared the same night?'
'Yes.'
'Oh, Christ! Oh, my God…' Leaning forward again, Alex covered his face with his left hand, dropping down through some dark hole in himself and hoping to find there oblivion. Instead, he found only recollections, vivid images of them all: the Indian girl in his father's house, her face lowered in shame; Mengrire watching her from the lawn, his tears streaming down his cheeks; Rollie Thatcher on the sofa, belching and farting and laughing scornfully; old Peruche in front of his thatched hut, by the limpid várzea lake, rocking back and forth and meditating, his mind alight with *epena*; and finally, most vivid of all, like a glowing flame in a dark cave, Laura's beautiful face.

‘Oh, Christ!’ he said. ‘*No!*’
Feeling a hand on his head, pressing lightly, stroking gently, he looked up at Antonio’s brown eyes and saw his kind smile. ‘It’s all right, Alex. You’re all right.’ Antonio nodded affirmatively and took a step back. He sat down on the edge of the bed again, stubbed his cigarette out, and placed the ashtray back on the mahogany cabinet. Alex straightened up, sipped some more *caipirinha*, took a couple of deep, even breaths and fixed his gaze on Antonio. He wasn’t too sure of what he wanted to say, but the words came out anyway.
‘Okay,’ he said. ‘Why do you think Laura went as well?’
Antonio shrugged. ‘Who knows? We have a couple of theories. We certainly know she was on the plantation the night of the killings and unless she happened to be with Peruche, she had to be in the house. So, one way or the other, she had to know the slaughter was taking place.’
‘That doesn’t necessarily mean she was involved.’
‘No, Alex, it doesn’t. She spent nearly every evening in that room with those two men, your father and Rollie Thatcher, so it’s possible she was there when the killings occurred and that she, also, was killed and her body carried away for some reason – possibly to complete some ritual – or that she *wasn’t* killed, but was abducted, either to prevent her from reporting the crime or, I fear, to be killed later for the reasons already mentioned.’
‘But you don’t believe any of those theories.’
‘No, Alex, I don’t. If they killed her, they could have removed her body from the plantation without being seen, but if they abducted her… Well, that would have been more difficult.’
‘So she wasn’t killed and she wasn’t abducted, which means she was part of it.’
‘Well, it certainly seems that she knew about it and that she left of her own accord – and, of course, she was obsessed with the Indians’ various rituals, particularly those rumoured to be practised by the Yano. What we believe, then, is that Laura, if not directly involved in the killings, certainly knew they had occurred and left the plantation willingly with the perpetrators, presumably the Indian girl, Mengrire and Peruche. She was, you’ll agree, totally obsessed with the Yano, and since both Peruche and Mengrire believed in the existence of that tribe, I believe the killings were done in a ritualistic manner, that the killers then fled north in search of the Yano, and

that Laura, who'd been looking for someone to lead her to the Yano, saw her golden opportunity and went with them.'
'Oh, God,' Alex murmured.
'Right now,' Antonio said, 'they're probably heading for the region where those lights rise and fall… and if they actually manage to get there, given what's been widely reported about the Yano, God help them, particularly Laura.'
Alex shuddered and stood up and went to the window, pressing one hand against the mesh wire and looking down on the lawn. It was empty and silent, bathed in a sullen, greyish light, and he shuddered again and closed his eyes and thought about the Yano. Naturally, he had often dreamt about them, dreams so vivid they were almost real, and now, as he recalled the shocking contents of those dreams, he felt himself trembling uncontrollably with fear and revulsion.
Laura, whether sane or insane, might indeed soon find herself face to face with the forces of darkness… and what they might then inflict upon her was too unbearable to think about.
'So,' he said, 'what happens now?'
'It's all over,' Antonio said. 'We have to close the plantation. Your father left you money in London, but you have to go there to claim it. Apart from that, you've nothing left here except debts and a bad reputation. So, we'll sell this house and everything in it, use the proceeds to repay local debts, then pay off the workers, close the plantation for good, and then ship you to England to be educated in a civilized place.'
'How long will all that take?'
'About a month.'
'Then it's all really over?'
'Yes, Alex, it is.'
'And Laura?'
'You know about Laura: we can't do a damned thing. If my theory is wrong, she'll turn up sooner or later, but if my theory's correct – if she's gone with them to find the Yano – there's no way on earth we'll ever find her. She's not in the vicinity, Alex. We've already looked high and low. This suggests they've gone north toward the unexplored regions, and if so, they won't be coming back. I'm sorry, Alex. It's finished.'
Alex stayed at the window, keeping his back to Antonio, not wanting his

friend to see the shock and pain in his face.
‘Yes,’ he said, sighing. ‘I’m sure you’ve done all you can.’
‘So can I proceed with the sale of this house?’
‘Yes, Antonio, of course.’
‘And you’ll go and live in London as planned?’ ‘I see no point in staying.’
Now he heard Antonio sighing, an infinitely sad, weary sound, followed by the thump of glass against wood as Antonio put his drink down.
‘Do you want something to eat?’ Antonio asked him.
‘Not yet,’ Alex replied. ‘I think I’ll have a liedown. Try to sleep. All of this has exhausted me.’
‘The rest of the house is closed,’ Antonio said. ‘I’ve already let the staff go. When you’re rested, come to see me in my place and I’ll cook you a meal – a real Antonio Bozzano speciality. You know where I live.’
‘Yes, Antonio, I’ll do that.’
Antonio sighed again, the door opened and closed quickly, and then Alex was alone in the small room, staring out through the window. The afternoon was fading, the grey light turning darker. Looking down, he imagined each of them in turn, all wandering through that unreal pearly haze in a parade of the lost: the Indian girl, Mengrire, old Peruche, Rollie Thatcher, his father and, finally, Laura Wellman, his true love and catalyst.
He kept staring, in a trance, seeing ghosts on the lawn, and then blinked and saw his friend, Antonio Bozzano, walking toward the thatched huts. Antonio lived just beyond them, in a halfway decent house, and Alex, feeling desolate, watched him crossing the road, then turned away from the window and lay down, fully dressed, on the bed. He stared up at the ceiling for some time, then closed his eyes.

It was quiet… too quiet… He saw the damned parading past him. The silence of the house was like a ringing that was pitched beyond sound. He kept his eyes closed, feeling lonely and frightened, aware that the silence, like a palpable presence, was gradually pressing in on him.

It was quiet… too quiet. He could hear his heart beating… Then his heart almost missed a beat when he heard something moving in the main house.

Startled, he opened his eyes, concentrating, straining as he listened to the

silence and heard… another noise.

The soft squeak of wood on wood, a piece of furniture being moved, followed by silence, then a distant, indecipherable sound, then the squeaking of wood on wood again, then silence once more.

After that, there was nothing… No, a muffled sobbing… but brief, then trailing off into the silence that permeated the main house.

Yes, the noise had definitely come from the big house… It had come from the living room.

Alex shivered and sat upright, his imagination running riot. He reached out for the bottle of *caipirinha* on the mahogany cabinet beside the bed, drank it down, letting it burn away his fear, and then quietly stood up. He heard the noise again, a distant sobbing or choking, and instantly opened the room door and stepped out into the gloomy, dusty, uninviting corridor.

Laura's room was just behind him, empty, stirring memories, but he went through the doorway on his left and entered the main house. The corridor stretched out before him, high-ceilinged, semi-dark, and he went along it, passing his former bedroom, until he came to the living room. He heard the sobbing clearly now, thought of the murders and shivered, then, taking a deep breath, he stepped inside and stopped almost instantly.

It was truly a shocking sight. The carpets and curtains had been slashed, the antique furniture smashed to pieces, the floor strewn with broken vases and glassware and other ornaments, the walls and floor stained with numerous dark patches of what could only have been dried blood. And there, in the middle of the room, sitting in one of the antique chairs, bent forward and sniffing back his tears, was Father Paul Benedict.

He looked up when Alex entered the room, almost as startled as Alex, then wiped the tears from his eyes and sniffed again, not in the least embarrassed but clearly anguished, his eyes bloodshot and stricken.

'Oh, Alex, my son,' he said, 'you've returned. How awful. How terrible!' He shook his head from side to side, as if wanting to deny reality, then took a handkerchief out of his pocket and blew his nose and looked up again.

'Antonio told you?'

'Yes.'

‘A truly awful affair.’
‘Yes.’
‘You must try to be brave about it, Alex. You must try to forget it.’
‘I won’t *ever* forget it.’ Alex stared around the room, suddenly remembering his dead mother, imagining her ghost, her angelic presence, being forced to look with horrified eyes upon what had transpired here. A bloodbath. A punishment and hideous desecration, one due to, the other wrought by, his father and his rank, indecent ways. Alex shivered with grief and rage and a malignant, clinging sense of horror, then crossed the room to the priest and took the chair beside him. He was shocked when he saw his friend up close, because the priest had aged overnight.
‘My father deserved it,’ Alex said.
‘Don’t say that!’ the priest responded.
‘I’m saying it: my father deserved it. He only got what was coming to him.’
‘No, Alex, please stop this! You mustn’t say another word! No matter how you feel right now, you’ll only regret it later, so please say no more.’
‘He deserved it, Father. He degraded everything he touched. He broke my mother’s heart and drove her into an early grave, he treated his workers like slaves and their wives like common whores, he tried humiliating me to excuse his own failures, and finally
– and I’ll never forgive him for this – he encouraged Laura’s drinking, stole her from me and seduced her, and caused her to be in this house and get involved in this mess. Yes, Father, he deserved all he got – but not Laura. *Not Laura!*’
Shocked by his own vehemence, he turned away from the priest, his eyes roaming around that awful, blood-stained room and coming to rest on his feet. A shiver of revulsion passed through him, nausea ravaged his stomach, and then a choked sob broke from his throat as his rage found its target.
‘She left with them?’ he cried out. ‘She went willingly? How could she? How *could* she?’
He covered his face with his hands, feeling choked with grief and bitterness, then raised his head to stare wildly at Father Benedict and be reminded that his friend had aged terribly and was likewise griefstricken.
‘I can’t answer your question, Alex. Only God can do that. What happened that night remains largely unknown and will doubtless always remain so. Get out of here, my son. Out of this doomed plantation and then out of this

country. Go to England, to civilized society, and never come back. You've nothing left here and there'll be nothing here in the future. As for now, let's get out of this room and its painful memories.'

He reached out for Alex's shoulder, gripped it lightly and shook him consolingly, then together they stood up, took one last look at the room – at the 17th century Venetian armchair in which Alex's father had often reclined, at the now upended French *bergere* into which Rollie Thatcher had often been squeezed, at the slashed curtains and blood-stained carpets and trampled paintings and broken antiques, most of which, over the years, had been collected by Alex's mother – and then, without a word, they turned away and walked out, crossed the corridor and left by the front door, to the veranda outside.

The afternoon had grown darker, the cloudy sky threatening a rainstorm, and they stood together on the veranda, looking across the plantation, unable to see north where the lights usually rose and fell – the unexplored north to which Laura had possibly fled – because the house was facing south, but instead saw the thatched shacks, the intersecting roads between them, the extraordinary variety of trees that lined the roads and formed the outlying forest, and beyond the trees, flowing with the silent majesty of its agelessness, the wide Rio Negro, that mere part of the much vaster Amazon. Alex was shocked to realize that having grown up loving it, he now loathed it.

'We don't really know,' he said, refusing to let the subject go. 'I refuse to believe that we can't find her. There must be a way!'

Turning to the priest, he saw the horror on his face: doubtless horror at the realization that he, Alex, not yet eighteen years old, was more concerned about the loss of the American woman than he was about the death of his own father. The priest stared at him a long time, hardly moving at all, then eventually, as if putting Alex's attitude down to grief, he took hold of his elbow, guided him down the steps to the lawn, then turning around until they were facing the big house, he waved in the direction of the sky in the far north, the clouds drifting like sludge over that unexplored jungle where the lights normally rose and fell, within which were the mythical Yano Indians and the hell they were reported to represent.

'We tried repeatedly to find her,' Father Benedict said, lowering his

bloodshot eyes and looking defeated, ‘but she had disappeared completely. We went into that jungle as far as we could, but we didn’t find Laura or the Yano. We sometimes heard what we thought were the latter, but we never actually saw them. We saw the lights in the sky, but no matter how often we hiked towards them, they always appeared to be in a different area and slightly farther away. Believe me, Alex, this is true. Out there the senses deceive one. North gradually becomes south, east gradually becomes west, and fairly soon you think you’re walking in circles, doubling back on your own tracks. And as it was with the lights, so it was with the drums: we would head for the beating drums, always believing we were getting closer, but once we reached there, where the drumming had *seemed* to come from, they seemed to come from elsewhere, usually spread out all around us, and no matter which direction we then took, it was always the wrong one. Go one way and the drums would be directly behind you; turn back and they were behind you again, or perhaps off to the side, but never, *never* in front of you, once you got close to them. No, we never found the Yano. We never caught a glimpse of them. I’m convinced they were there and that they knew we were there, but I’m also certain they simply had no interest in us, one way or the other. So, it was useless. We just walked in endless circles. We tramped around there for many days, but we didn’t see anything. We ended up believing that the Yano had found the others – or that the others had found the Yano – because Peruche, who was possibly one of them, doubtless knew where they were and how to find them. And so, if this is true, the Yano might have captured Laura and if they did so, almost certainly they would have killed her. That’s possible, but we’ve no way of proving it. There’s only one thing to know, Alex, and fully accept. *Laura Wellman is gone for good!’*
The priest suddenly walked away, trying to stifle his own weeping, hurrying across the darkening lawn to the tarmacked car park, while Alex simply stood there, too shaken to move, staring at the big house, now empty and haunted, eerily silent with the echoes of the dead and the damned: his mother and father, the Indian girl and Mengrire, Rollie Thatcher and Laura Wellman, and, yes, even himself, at least the child that he had been. Then he looked at the sky above the jungle where the Yano beat their drums and the magical lights rose and fell, that unexplored, frightening region to which Laura might have fled, and then he suddenly turned away – turned away as quickly as the priest had done – and looked beyond the thatched shacks, at the mighty river

succumbing to darkness, and finally accepted that he would soon be on a boat that would, in its modest way, take him along that same river, on the first leg of his journey to England and a new kind of future.

A month later he was on that boat, the sun sinking behind the rainforest, turning the sky to blood, making the river seem like lava, and he gripped the railing tightly, looking down at the swaying jetty, his head filled with thoughts of the thirty days that had just passed – of his father's funeral in Manaus, of the furniture being auctioned, of the Indians paid off, filing forlornly out of the plantation, of solicitors and surveyors and contracts and deeds, of the keys being turned in the numerous doors of the big house and the silence of desolation coming down – everything coming down, drawing inexorably to a close, his own eyes looking down at his two friends on the jetty: Antonio trying to smile, his brown eyes filled with sadness, and Father Benedict, his once handsome face now grim and certainly older.

Alex held the railing tightly, the deck vibrating under his feet, watching his friends grow smaller, the jetty seeming to shrink with them, the plantation moving back to let the jungle move in around it while the sun, in its sinking, sent banners of fire across the forest, turning green into yellow, the yellow into gold, the gold into a deep, pulsating crimson that devoured all it touched. And then all of it was gone and only the mighty river remained, and Alex leaned forward, putting his forehead against the railing, looking down at the black water that now boiled in black night, and he wept, his body trembling with loss and grief, then turned his face to the wind.

To be continued…

Otherworld

W. A. Harbinson

Deep in the heart of the Amazon rainforest live the Yano Indians. A fierce, elusive tribe, they are
dedicated to the powers of darkness, their presence only revealed only by the hypnotic beating of drums… and by mysterious lights in the sky.

Laura Wellman , an American photojournalist, beautiful, sensual and deeply tormented… Believing herself to be possessed by evil spirits, she decides to

offer herself to the dreaded Yano in a final, desperate attempt to release her soul from torment.

Father Paul Benedict , a middle-aged Anglican priest who is starting to doubt his God and the meaning of life in general… Gradually becoming obsessed with Laura, he believes that in somehow saving her from

self-destruction he can find his own redemption.

Alex Poulson , adolescent son of a depraved rubber baron, an almost spiritual innocent born and raised in
Amazonia… Falling helplessly in love with Laura, despite being rejected by her, he follows her into the dangerous depths of the rainforest and is, in turn, followed by the concerned Father Benedict.

There, beyond the reach of civilization, even beyond the light of reason, all three are drawn into the Yano's alien 'Otherworld', where good collides with evil in a

titanic, earth-shattering confrontation…

Otherworld

Luminous with love and possibility, pulsing with eroticism, murder and dread. A powerful, haunting novel about the eternal conflict between primal, mysterious forces on the other side of existence.

By the internationally bestselling author of *Genesis* and *Revelation*.

Book Three
The River

Chapter One

A Cidade Maravilhosa : the Marvellous City. As the aircraft began its descent towards the Aeroporto Santos Dumont, Avril, even though she had never been here before, instantly recognized the ravishing blue sweep of Guanabara Bay, the long, thin white ribbon of Flamengo Beach, and the great rock of Pao de Acucar, or Sugar Loaf Mountain, towering high in the gold-streaked azure sky. She looked quickly at Alex, sitting beside her in the aisle seat, but he had his head back against a cushion, his eyes closed, his lips tight. Momentarily concerned, she reached out to touch him, changed her mind and looked again through the window. Now she saw the marvellous city, the fabled Rio de Janeiro, its buildings tall and off-white and embraced by the encircling mountains, its thousands of lights starting to wink on as the sun sank in splendour. Avril gave herself up to childish wonder as the sea filled her line of sight.

‘It’s beautiful,’ she said. ‘It’s everything they say it is. Everything I’ve heard and read about it is perfectly true. It’s just wonderful. Glorious!’

When Alex opened his eyes, turning his head towards her, she noticed how spiritually drained he was, how much older than his nineteen years he appeared to be, his face pale, cheeks sunken.

‘Yes,’ he said, ‘it’s beautiful – like you. But just a little bit older.’

She smiled, pleased by the compliment, knowing that he meant it, but more pleased that he was trying to retain his sense of humour at this particular moment. She knew how painful it must be for him, how he had dreaded this return, as she knew, when she studied him, how truly ill he was, the dark bags under his eyes revealing how often he had gone without sleep.

‘Thank you, kind sir, for comparing me to Rio, but I don’t think I’m quite in

the same class when it comes to either beauty or age.'

Now it was his turn to smile, but his eyes were still lustreless, as if focused inward upon himself – not with self-esteem, but with fear at what he might find where they were going. He had aged a lot during his year in London, the nightmares driving him to distraction, making him frightened to go to bed, his appetite failing along with his nerves, his health breaking down to the point where he could hardly make love to her – and so, even though they were here at her insistence, she wasn't at all sure that it would cure him. She actually feared it might make him worse.

'Are you all right?' she asked him.
'Yes, Avril, I'm fine.'
'You're too quiet.'
'I'm just tired – really tired. I just need a good

sleep.'
'Are you nervous?'
'Yes, a little bit. I don't know what I'm going to

find back here.'

The aircraft shuddered briefly, its engines roaring and subsiding again, then it turned and started descending toward the parallel lines of light that marked out the runway of Santos Dumont. The lights swung into view, then disappeared as the aircraft faced them, and Avril found herself looking at alluvial mountains and a bright-blue, white-flecked, rippling sea.

She felt tired but exhilarated, scarcely believing they were here at last, thinking back on the many days spent in many different aircraft – from war torn London to sunny Lisbon, from there on to the Canary Islands, spending a few days exploring the mountains, boating from one island to the next, drinking sweet wine in a waterfront bar in Santa Cruz de Tenerife, then on to Accra on the West African Gold Coast, entertained by her father's friends at the Achimota College, a few more days adjusting to the tropical monsoon climate (constant rain, sweltering heat), then across the South Atlantic, staying overnight on Ascension Island, volcanic rock and sea turtles, and

then, the next day, this very day, the last leg of the journey to the Tropic of Capricorn and the view now below her – and realizing that already the journey seemed unreal, something she had often dreamt about but not experienced until now.

‘We’re coming in to land,’ she said to Alex. ‘I caught a glimpse of the airport. It looks like a dangerously narrow strip of land stuck out there in the sea.’

‘That’s exactly what it is,’ Alex said. ‘In fact you’re going to land on the very soil where Rio de Janeiro was born. The birth of the city dates from the founding of a settlement on Morro do Castelo, or Castle Hill, by the Portuguese in 1565, after they’d driven out the French. A few years back that hill was demolished and poured as debris into the harbour to form the promontory on which the airport was constructed.’

‘They tore down an historic hill and poured it into the sea?’
‘That’s right,’ Alex said. ‘The *Cariocas*, always enthusiastic for change, aren’t concerned for their history, and the flattened remains of Castle Hill, which you might have seen a few minutes ago, are now covered with the skyscrapers of the city’s business area.’
‘Oh, my!’ Avril exclaimed softly.
The airplane was still descending, the graceful mountains growing larger, and Avril kept her eyes glued to the window, watching the sea race by below, and then the runway was there, a blur of distant hangars and hills, and then the airplane bounced a little, gradually slowed down, taxied along the runway and finally stopped.
‘Well, Alex, we made it,’ Avril said, ‘and we’re still in one piece.’
The airplane’s engines whined into silence, but the passengers were highly voluble, their uninhibited conversation again reminding Avril that she was a long way from England’s green fields and more restrained social habits. Glancing at Alex, an old man with a boy’s face, she felt a little uneasy.
‘Yes,’ Alex said. ‘Home sweet home.’
It didn’t take long to disembark and soon they were on the tarmac, walking through the early evening darkness to the linear block of the Panair terminal, its numerous windows casting beams of light over them as they reached the

wide entrance. The heat surprised Avril, being less humid than she had imagined, but she was still relieved to get inside the building where the air was much cooler. There were very few passengers, so they were processed quickly and amiably, the men at customs and passport control being unexpectedly casual, when not actually flirtatious, which some were. Alex didn't appear to mind, clearly accepting it as natural, but when they finally walked out, a *bagageiro* carrying their luggage, she could see that he was truly very nervous at being back on home ground.

Antonio Bozzano was waiting for them outside, stepping forward with both arms raised, his brown eyes as warm as his smile, his slightly plump, *café-aulait* face strikingly handsome, his well-fed stomach quivering over his trouser-belt. Avril knew it was Antonio (Alex had described him accurately and had told her he would be meeting them) and, also knowing how fond he and Alex were of one another, discreetly stepped back while they embraced. This done, Antonio straightened up and offered a broad grin.

'*Tudo bem?*' he asked, his voice low and melodious.

'*Tudo bem,*' Alex replied, jabbing his thumb in the air, trying to affect an ebullience that just wasn't there. Then turning to Avril, he added: 'And in English: all's well.'

'Ah, yes, your young lady!' Antonio stepped up to Avril, took hold of her right hand, turned it over as he raised it to his lips, then planted a kiss on the back of her wrist. He lowered the hand again, but kept holding it lightly, not in a remotely suggestive manner, but in genuine friendliness. '*Muito prazer em conhece-lo,*' he said. 'And now for you I will speak only English. I'm very pleased to meet you.' He nodded affirmatively and smiled, instantly making her feel good, stepped back and offered another broad grin, his eyes fixed directly upon her. 'Avril,' he said. 'A nice name… And the lady is beautiful.'

Above the grin, Avril noticed, Antonio's brown gaze was perceptive, only a slight wrinkling of his brow indicating to her that he had not failed to notice Alex's drawn appearance. Nevertheless, he didn't mention it and continued to act naturally, leading them across the pavement to the car parked at the kerb, then raising the lid of the trunk and jabbing his index finger at it, indicating to the *bagageiro* that he should put the suitcases in there.

'So, my young friend,' he said to Alex, 'how was your brief time in England?'

‘I’d hardly call a year a *brief* time, Antonio.’
‘Well, Alex, you were supposed to be staying for good, so given the fact that you’re back already, a year seems fairly brief. Anyway, how did it go?’
‘Not bad.’
‘By which you mean not good.’
‘That’s right, Antonio.’
The Brazilian grinned and nodded, paid off the *bagageiro*, then walked around the car and opened the rear door. ‘Well, at least,’ he said, ‘you found a most attractive young lady, so the year over there has done you *some* good.’ After smiling again at Avril, his brown eyes filled with warmth, he turned back to Alex. ‘I assume you’ll want to point the sights out to Avril, so it’s best you both sit in the rear. Now get in and we’ll go.’
‘Where are we staying?’ Alex asked him.
‘In a suite on the top floor of the Copacabana Palace. With what your father left you in England and the remaining money for the sale of the plantation, I figured you could afford a good hotel instead of a shack in a *favela*. I hope you agree.’
‘I agree,’ Alex said.
When Avril slid into the back seat, followed by Alex, Antonio closed the door behind them and took the driver’s seat. He drove off immediately, bypassing the business area, then driving around smooth green lawns and what appeared to be a marina (Avril could see lights beaming down on numerous masts) and finally along an almost imperceptibly curving boulevard that divided central Rio from Flamengo Beach and its now jet-black, bizarrely shaped rock formations.
The boulevard was surprisingly long, passing various residential areas, and as Alex pointed out the sights to her, his voice low and oddly flat, Avril felt increasingly confused: on the one hand enamoured by what he was showing her, on the other disturbed to be reminded once more that he was, for all she might love him, too far removed from her, locked inside that nightmare of his past and being ruined by it.
‘I was once in London,’ Antonio suddenly said, obviously wanting to lighten the leaden atmosphere, ‘but that was a long time ago, before the war began. I loved it then, but it must have changed a lot during the war. Did the air raids damage it badly?’
‘Yes,’ Avril said, ‘they did, but you’d still recognize it. It’s surprising, really,

how much is still standing when you think of how many bombing raids there were.'

'It must have been rough,' Antonio said. 'I think you all had a bad time.'

A bad time? Avril glanced out the windows of the speeding car, looking in both directions, and saw, as Antonio weaved around the buses, street-cars, private cars and taxis, the dark sea on one side of her, the lights of apartment buildings on the other, the colourful streets of Botafogo rising up to the candlelit hills, and realized, even as she thought of the difference between here and London, that the worst experience she'd had in her home city was dealing with Alex.

So, she told Antonio about the Blitz, answering his numerous questions, and as she talked (the car emerging from a noisy tunnel and taking a right turn into the beautiful boulevard of Copacabana Beach, the Atlantic on one side, its waves crashing down on the sand, ten-storey apartment buildings rising up on the other side), she thought of how she had first met Alex, of being struck by his remarkably gentle nature, of falling hopelessly in love with him and learning about his strangeness: his nightmares and visions and obsession with the Amazon rainforest, which, he claimed, was haunting him because of a woman who had disappeared after capturing his heart.

Yes, Avril loved him, but her love was under siege, threatened by the ghost of a woman whom Alex insisted he no longer loved or desired, but who obviously, in some way or another, still had him enslaved. It was in the hope of learning the nature and extent of his enslavement that Avril had come to Brazil with him.

'Well,' Antonio said, 'after the blackout and the Blitz, perhaps you'll really enjoy Brazil.'

'I hope so,' Avril said.

The car made another right turn, crossing the broad boulevard, and headed up to the front of the elegant hotel. A uniformed doorman opened the rear door, letting Avril and Alex step out. Avril glanced up at the towering building, at the canopied windows and railed-in balconies, then lowered her eyes to meet Alex's gaze. He was staring steadily at her, his eyes weary yet loving, a gentle smile turning his lips as he took hold of her arm.

'So,' he said, 'we're actually here. You must be awfully persuasive.'

'I'm persuasive because I love you,' Avril said, 'and know I'll have to fight for you.'

Antonio arranged their checking in, went up in the lift with them, showed them around the expansive suite with its tasteful decor, poured Alex a beer and Avril a chilled white wine, then sent them both out to the balcony while he received the bell hops bringing in their luggage. They were six stories up, overlooking Copacabana Beach, and they stood at the wrought-iron railing, leaning against one another, sipping their drinks and gazing down at the sea and the darkening, still crowded beach. The beach was actually filling up all the time and hundreds of candles were burning, making a smaller sea of yellow flames that moved back and forth restlessly.

'What's going on down there?' Avril asked.

'New Year's Eve,' Alex replied. 'At midnight it'll be 1947 and they're all there to celebrate.'

'I'll take you down later to see it,' Antonio said, stepping out onto the balcony with a drink in his hand. 'It's really quite an experience if you haven't seen it before. Every New Year's Eve here in Rio de Janeiro, thousands of *Umbanda* and *Quimbanda* believers gather together on all the major beaches – Copacabana, Leblon, Ipanema, Flamengo – and pay homage to Yemanja, goddess of the sea. There's no discrimination regarding age, sex or colour, and what you see down there, right now, are the first of the many thousands of believers bringing their candles, fresh flowers, portable altars, *caipirinha* drinks, and various gifts for the goddess. Pretty soon they'll be drawing numerous mystic symbols on the sand, indulging in various black and white magic rituals – *Umbanda* is white magic and *Quimbanda* is black – and then, a little later, white-costumed drummers will start playing, a lot of believers will go into trances, and at midnight they'll all rush into the sea to worship Yemanja.'

'It certain seems worth seeing,' Avril said.

'It is, Avril. Believe me.'

Alex finished off his glass of beer, set the glass down on the low table on the balcony, and then gave a weary, nervous smile that failed to brighten his eyes, which, a radiant blue beneath his blond hair, were blinking repeatedly. Studying him intently, Avril was again struck by his extraordinary appearance, by the fact that his face was almost beautiful – not merely handsome, but strangely beautiful – and that his beauty was to strong it could not be ruined by his ill health, even though it had hollowed out his cheeks, put dark bags under his eyes, turned his skin sallow and bloodless, and

generally worn him away. What it *had* done, she thought, was make him look young and old at the same time: almost ageless, in fact.
‘So,’ Antonio said, aware that silence was no blessing. ‘I want to know all about you two. Where and how did you meet?’
‘At school,’ Avril said.
‘That sounds distinctly unromantic.’
Avril smiled. ‘My father’s the head of the private school Alex was attending and, as an old friend of Alex’s mother, he invited Alex home for our regular Sunday roast dinner.’
‘Home, I assume, being a wing of the school.’
‘And your eyes met across the roast beef in that discreet English manner.’
‘That was it,’ Avril said.
Antonio smiled with delight, making Avril feel good again, but behind that more positive feeling was the fear that her love for Alex had brought to her. She had not fallen in love that first day, but gradually, with reluctance, first intrigued by his odd beauty, his romantic air of introspection, then moved by his silence – a silence resonant with unstated pain – and finally, after months of seeing him, of wandering the streets of London with him, of sitting with him in pubs, or in cinemas or theatres, often after an exhausting day with the Women’s Voluntary Service, in love with his unique sensitivity and almost feminine tenderness.
Yet it hadn’t been easy, had in all truth been hell, because as romantic yearning turned to physical desire, as she had drawn closer to him, she had learned about his nightmares, about the extraordinary events he had fled from, and, worst of all, although they finally made love, always in his rented apartment and not all that often, she had learned that he was not only sexually inexperienced, but also frequently impotent because of his fears and ill health. His nightmares, which were killing his spirit, were also destroying his body.
Now she shivered just to think about it, and took a sip of her white wine, glanced over the balcony at the people milling on the beach far below, then looked back at Alex as he smiled in that nervous manner at Antonio.
‘You’re being very polite, Antonio,’ he said, ‘but you know why I’ve returned.’
Antonio sighed forlornly. ‘Yes, I know. You have a mystery to solve.’
‘She never came back?’

‘No, Alex, Laura hasn’t been seen since.’
Just hearing that name made Avril feel deep pain, arising from the fragile web of the past year to bite her again. She glanced over the balcony, at the people milling on the beach below, trying to distract herself from the doubts that constantly gnawed at her.
Did Alex really love her? Or did he truly love Laura Wellman? Those questions had haunted Avril for most of the past year, scrawled on the clouds in her mind by an unsteady, ghostly hand – as ghostly and yet as real as that other woman who had disappeared into the rainforest. Now Avril felt like crying – for Alex’s pain, for her own doubts – but instead rubbed her eyes, observing the beach through a slight haze, the hundreds of flickering candles moving to and fro like the waves of a fiery sea.
‘Forget it, Alex,’ Antonio said. ‘It’s in the past and should be buried. You have a lovely lady here, you have money in the bank, you stand the chance of a good life in England – so don’t keep looking back at the past and tormenting yourself.’
‘You don’t understand, Antonio. It’s not a matter of choice. Whether I want it or not, those nightmares make me look back.’
‘You won’t stop the nightmares by returning here. In fact, as far as the nightmares go, the farther you are from the Amazon, the better.’
‘I *had* to come back. The nightmares brought me back. And Avril *insisted* that I come back. If there’s a cure, it’s right here.’
‘You mean the Amazon?’
Antonio sighed with mock despair and then went into the suite, returning with a fresh *caipirinha.* He swirled the drink lightly in the glass, glanced at Avril and then turned back to Alex. Down below, on the now dark, crowded beach, the first of the Indian drummers had started playing.
‘Okay,’ he said, ‘I’ll ask the dreaded question. Do you really intend going into the rainforest to find Laura Wellman?’
‘Yes.’
There was a lingering silence between them, disturbed only by the drums below, and Avril felt the tension quivering around her in an almost palpable way. Her wine was finished and she wanted some more, but she didn’t dare move.
‘Laura’s dead, Alex,’ Antonio said eventually. ‘I’m sorry, but you’ll just have to face that fact. Either she perished in the rainforest or she was killed by the

Yano; no way could she have managed to survive both of them.'
'That may or may not be true,' Alex said, 'but in this case it hasn't any relevance. It's not really Laura I'm looking for, but what *she* was looking for.'
'You mean the Yano?'
'Yes.'
'You haven't a hope in hell of finding the Yano, even if they exist. And if indeed they exist and if you find them, given what's widely believed about them, you won't get out alive.'
'I believe they exist. I don't believe that I won't be able to find them. I think quite a few people have found them – or the Yano found them. What *is* true, of course, is that those unfortunates were never seen again.'
'Correct. And now you want to be one of them?'
'I think it may be different in my case: that I'm *meant* to find the Yano – just as Laura was meant to go to them – and that there's some kind of meaning to all this.'
'I should never have let you listen to old Peruche.'
'No, maybe not. But at least Peruche *knew* that the Yano exist, because he was once captured by them, he was once their prisoner.'
The drumming on the beach below had become much louder, carrying clearly up to them, and Avril leaned over the railing to look down on that mass of flickering candles. There were thousands of people down there now, packed along the enormous length of the beach, and when she looked left, at Leme, she saw even more candles, repeatedly surging towards the sea and returning in that warm, cloudy darkness. She straightened up when she heard Alex speaking, quietly but firmly.
'And what about Father Benedict? Have you heard any more about him?'
'Please, Alex,' Antonio replied, 'leave this alone. Leave the past back where it belongs.'
'I *can't* leave the past back where it belongs. I'm *part* of that past. Now what about Father Benedict?'
'What I wrote you in my letter still stands. Father Benedict has gone, too. He disappeared four weeks ago and hasn't been seen since.'
Alex stared hard at Antonio, his eyes repeatedly blinking and unfocused, then he wiped the sweat off his furrowed brow with a shaky right hand.
'It gets worse,' he said. '*Worse!*'

Turning aside, he gripped the wrought-iron railing of the balcony and stared down at the beach. Avril followed his gaze and saw the thousands massed below, all obviously agitated, surging back and forth in waves, the countless burning candles forming an alluvial sea of yellow flame that illuminated wildly shaking heads, waving hands and kicking legs, white robes and feathered headbands and fluttering banners and illuminated altars, the drummers who were making an ear-splitting racket of mesmeric ferocity. Then Antonio stepped up to the railing and stood beside Alex, resting a hand on his shoulder and, likewise looking down on the teeming beach, spoke quietly to him.

'Listen to me,' he said. 'Try to put this thing into perspective. To be suffering from nightmares isn't particularly odd after what you've been through. You were completely inexperienced with women, Laura Wellman drove you almost crazy, then you nearly got yourself killed in a moment of suicidal grief, and then, shortly after, your father was brutally murdered and Laura Wellman, along with your father's killers, disappeared without trace. Of *course* you're suffering from nightmares, Alex – you've had a series of terrible shocks – but you're not going to cure yourself by returning to the scene of all that unhappiness.'

'I'm sorry, Antonio,' Alex said, 'but you're wrong: I *have* to return to there. You don't understand: my nightmares aren't ordinary. They began that first night on the boat to Belem, they worsened during the first few days I spent here in Rio, and by the time I finally reached England, they were a living part of me. No, they're not ordinary nightmares. They're the same nightmares that Laura had. I dream repeatedly about dark-skinned barbarians, about lights rising and falling, about a conflict between good and evil, with myself, and sometimes Laura, caught in the middle. It was our destiny, Antonio! Peruche said so – and he was right. There's some sort of purpose behind everything that's happened, and since leaving the Amazon, I've felt that my continuing nightmares have been designed to compel me to return. I feel *haunted*, Antonio, – just as Laura felt haunted – and, just like Laura, I now have to go into the rainforest to find out what the cause is.'

Antonio sighed again. 'I simply can't believe it. However, let's not waste Avril's first night in Rio with this glum conversation. Come on: let's go down to the beach for a real Brazilian New Year's Eve.'

Avril appreciated what he was doing, smiling at him when he glanced at her,

then she put her glass down on the low table and took hold of Alex's hand.
'A wonderful idea,' she said. 'I want to feel like a tourist.'
'Right,' Alex said. 'Naturally.'
He smiled at her, with love, but also with infinite weariness, as if some part of him, his life-giving centre, had died long ago. Once more she felt crushed, defeated by his crumbling spirit, but she squeezed his hand tighter and walked with him across the suite, curtsying to Antonio when he opened the door and waved them both out. They took the lift down, crossed the lobby and left the hotel, and the noise from the beach, like an unexpected clap of thunder, suddenly exploded out of the silence and made Avril's heart leap.

The boulevard was packed with celebrating people, many dancing to the pounding drums, a lot of the men smoking cigars, their women gyrating sensually. Avril held on to Alex, her blood stirred by the relentless drumming, her senses aroused by the smells of incense and cigar smoke, her eyes bedazzled by the countless burning candles and blazing torches and wavering torchlights. She felt unreal as she crossed the road, glancing sideways at Alex, had time to note his tension, his almost contagious fear, before she found herself standing on the sand, hemmed in on all sides by the thousands she had seen from the balcony as no more than a sea of yellow flames and gyrating limbs.

Up close they were a multitude of contrasting faces: a blend of Portuguese and African, Negro and Moor, European and Indian, pure Tupi-Guarani and light-skinned Mullato, *Mesticos* and *Caboclos* and *Cafusos*, excited *mestizo* children and simply curious *Caraibas*, all generating an exotic blend of garlic, cloves, cinnamon and scent, this enriched with the aromas of incense and *caipirinha* – and Avril, feeling dazed, the polyrhythms of the many drummers and chanting groups making her head reel, saw the *Umbanda* and *Quimbanda* believers, the witch doctors and the mediums, gyrating and wailing, prostrating themselves or dancing crazily, their gymnastics quite incredible, kissing the forked tongues of snakes, extending their hands over the lapping sea, falling down in what appeared to be epileptic fits, foaming at the mouth and shrieking wildly and plunging their hands and feet into blazing fires.

She squeezed Alex's hand tighter, glanced at him, saw his tension, turned the other way and saw Antonio smiling at her, his head framed by a patch of sky. There were a few stars in that sky, surrounded by black clouds, and the light of the candles burning all around her lent a glow to the darkness.

'Is this the sort of magic that Alex practised?' she asked of Antonio.
'No,' he replied. 'Everything here relates to black and white magic, to *Umbanda* and *Quimbanda*, both deriving from African Negro practises, but one, *Umbanda*, standing for Jesus and Christianity, the other, *Quimbanda*, standing for the *Exus*: those spirits considered to be lowest on the astral ladder and therefore used by the worshippers to do evil.'
'Does that relate to what Alex told me about the Yano?'
'No. As I said, both *Umbanda* and *Quimbanda* are African-derived, whereas the Yano, reportedly springing from pure Tupi-Guarani Indians, have a religion that's uniquely their own.'
'A religion that originates from the forces of darkness,' Alex said. 'Those forces that are now haunting me – and once haunted Laura.'
Avril glared at him, feeling angry, hardly realizing what was causing it, but Alex suddenly cried out, a breathless, anguished sound, and clasped his hands over his head as he fell to his knees. Avril looked down, startled, her senses numbed by the relentless drumming, as Alex rocked back and forth on the sand, still clasping his head in his hands. She glanced at Antonio, saw his brown eyes widening, then she, too, dropped to her knees, slid her arms around Alex, and drew him to her as the sand swirled around them.
'What's wrong, Alex? Why…?'
He turned his head in her direction, but the swirling sand obscured his face, and the wind, which had built up with a startling, unnatural speed, suddenly howled and raced across the beach like a minor tornado. There was shouting and screaming, tumbling bodies and flying debris, and Avril found herself rolling like a log across the beach, being pummelled by similarly rolling bodies and numerous hard objects
– smashed altars and broken chairs, candle-holders and bottles – before coming to rest in a tangle of kicking limbs, her dazed eyes trying to focus on the sky above the dense, sweeping sand. She twisted around, gasping for breath, hearing only howling wind and screaming, to see Alex on hands and knees, the sand sweeping fiercely across him as he struggled forward and

reached out for her hand and then pulled her towards him. They fell against one another, spitting out sand, gasping for breath, and then managed to clamber back to their feet with the wind still hammering at them.

The wind howled, the sand hissed, men bawled, women screamed, and Avril caught a glimpse of sky, a few stars, obscured clouds, and then raced, or was pulled forward by Alex, towards the broad boulevard. More debris flew past her – lots of candles and pieces of plaster – and then a human torch crossed her path, screaming dementedly, shuddering and jerking, fell down and rolled frantically away, the flames leaping off arms and legs to curl through the acrid smoke. Avril stopped, wanting to help, momentarily thinking she was back in war-torn London, during an air-raid, the bombs falling about her, smoke and flame everywhere, but she was instantly tugged onward, saw Alex, then Antonio, and followed them across the boulevard to the brightly lit hotel.

More screaming, more burning bodies, roaring wind and biting sand, shadowy forms racing to and fro, others rolling along the pavement, the air filled with flapping hats and fluttering flags and extinguished candles, with plaster torn off portable altars and feathers swept off countless headbands, with bits of clothing and cigars and spinning bottles – and then Avril saw the light, a blinding radiance in that debris-filled darkness, and stumbled onward, or was pulled, to fall through opening doors, and then into the arms of Alex and Antonio in the hotel's grand lobby.

She choked, almost vomiting, her throat filled with sand and dust, and looked up, first at Antonio, his brown eyes concerned, then at Alex, his blue eyes wide and luminous with wonder and fear.

'What's happening?' Alex asked of Antonio. '*What kind of storm is this?*'

And then it suddenly died away, fading as fast as it had come, and they turned around and looked back out, across the boulevard, to the beach, and saw the stars in the sky, the clouds drifting languidly, letting them shine their benevolent light on the gently curving waves, on the sand as it settled down, on the people who were staggering about in a daze, or sitting with heads bowed, or stretched out as if unconscious, on the debris that covered every visible stretch of beach as if, with the wanton rage of a petulant child, some god had scattered his toys.

'I believe you,' Antonio said.

Chapter Two

‘Maybe I’m losing my senses,’ Antonio said, ‘but I’m beginning to believe that there could be something in what you’ve told me.’

‘There is!’ Alex retorted passionately, sitting beside Avril in the rear of the car and staring at the back of Antonio’s head as he drove them along Avenida Rio Branco on the way to the dock area. ‘That storm wasn’t natural – not at this time of the year nor any other – so it must have been some kind of warning to us.’

‘A *warning*?’ Avril said, exasperated. ‘A warning about *what*?’
‘A warning that we shouldn’t interfere with the forces of darkness by going in search of the Yano.’
‘Oh, God,’ Avril said, lighting a cigarette and inhaling deeply, hoping to steady her shaky nerves. ‘I just can’t believe what you two are discussing so seriously: demonic possession, powers of darkness, a violent storm as the manifestation of the forces of evil, which forces are watching us right now. I’m an educated, middle-class English girl and I think it’s ridiculous.’
She blew a cloud of cigarette smoke, watched it spiralling in front of her, then rolled the window down to let fresh air in. The car was passing through the business area of the city which was, at this early hour of the morning, almost deserted, the windows of the buildings reflecting the street lights and the darkness surrounding them.
